“VRIL”

Die Kosmische Urkraft

Wiedergeburt von

JOHANNES TAUFER

„Das kommende Deutschland“
Zentralbüro Berlin W 57, Pallasstr. 7

Germany, wake up!

Germany ... your power is a spiritual deed!
If you want to be recognized by the nations -
then reflect on your glory –
ours is the "light" – so be ready!

Be ready – spread out your wings –
your father's house lies as far as the sun!
Soar up to the firmament rejoicing,
your homeland calls from the eternal world!

Germany ... your word is Faith and Loyalty!
Make these weapons sword-new!
Do not let yourself be blinded by vile gold, so
that your man's word will be heard again! –

Repel what breaks your power,
practice Nordic renunciation again!
You shall be a man, listen to God's will
in the eloquent silence of the earth!

Away with all vain lies,
Your pledge rests in the depths of truth.
If you bring this fairytale treasure to light,
then your fathers' words will be fulfilled!

Wait with bated breath for the near hour of destiny
For your goodness is above the earth's round!
Nibelung's faithfulness and Nibelung's word ...
Germany... Germany is your word!

Johannes Taufer.

To the reader !

Do not put this writing aside carelessly-doubtingly, think *twice* in order to be able to *understand*, since the fate of a *new* world depends on your decision!

Your "Yes!" is the will of the whole – and of Germany's future! This depends on the *will of* individuals, because *individual egos* form the German people!

Your "No!" makes you complicit in *the "days to come"*!

This publication is not intended as a *technical* publication, and it is emphasized in the introduction that all technical aids for the evaluation of the "*primal force*" are already constructively available and that the primal force elements have been experimentally tested in their mode of action!

The purpose of this little work *is* therefore *not* to recruit technical workers, who are, however, always welcome as striving *people* and "Germans"! Understanding the *technical* details requires in-depth study, and we will gladly give scientific circles the opportunity to obtain fundamental information in a "*People's College for Dynamo Technology*", where our technical helpers will also have their say.

With this publication, we are addressing all *thinking* people and giving them the opportunity to immerse themselves in cosmic contexts. Here, however, we are primarily concerned with the *ethical* justification of our *demand* for the creation of a special-purpose association of *the greatest* magnitude to safeguard the elemental force and its effects!

All letters should be addressed to the Central Office!

Atlantis.

It was another time...

Once upon a time – !

More than ten thousand years ago, between the continents of America and Europe stretched a mainland of immense size, which was destroyed by a terrible natural catastrophe. Where at present the tides of the Atlantic Ocean sing their ancient song of the coming and passing of all earthly things to mankind's restless struggle for mastery of nature, a grandiose civilization lies buried in the depths of this ocean.

Atlantis, the legendary empire of a gray prehistory far superior to us in every respect, awaits the hour of its uplifting from the waters of the Orcus. For truly – a self-created *hell* once devoured the proud children of this pre-world in primeval days, as they presumed in godless exaltation to abuse the "*life force*" given to them by the All-Spirit! From those long-gone times, Mrs. Saga whispers the tale of the Atlanteans' demise to the ears of the sober present inhabitants of the earth and passes on the secret doctrine to the "knowing" wonders of the skill of those sacrilegious sons of the gods.

Once upon a time – !

So listen to the story of the destruction of a huge cultural site, which was once mother earth for countless generations! -

In the struggle for existence – in suffering and joy!

The Atlantids had completely conquered All-Nature. *Seers* had succeeded in seeing through the last mysteries of the active forces of life. In the ever deeper penetration

and grasping the cosmic connections of "being", they had finally penetrated to the "*universal power* of the forces of nature" and were able to technically exploit this *primal force* – the *vril*! The Secret Doctrine passes on the *essence* of the Vril to us real humans of today

as the power that was extracted from the seed.

This is, of course, only a paraphrase of the true facts! Adapted to the state of our present knowledge, we would have to refer to this all-power as the "*life*" creating *primordial* or *vital electricity*! Vril was therefore a "*magical*" energy, not to be compared with the purely *physical* forces that currently serve us in technology. The Atlantids *were psycho-physical* dynamo technicians and not mechano-machinists like us. Their responsibility for the effects of "*life energy*" was immense, especially in ethical and moral terms. They were aware of this for thousands of years, living happily and contentedly under the guidance of their magical priesthood.

Nature was completely subservient to them.

As long as they faithfully served the "All-Mother Nature" and led a moral life based on the constant support of the *people* as a whole, – as long as they upheld moral dignity and comprehensive love above all else, the Vril-power fronted them as an endlessly blessing-giving, never-ending creative universal energy. A paradise on earth was "home" to the children of Atlantis – until they forgot their dignity and put the elemental force at the service of mutual destruction. Now all hell broke loose!

The Vril shook the foundations of the entire continent and might have shattered the globe if divine providence had not decreed otherwise.

So "Atlantis" sank and the ocean poured into the resulting depths of the earth.

Destroyed by their own hatred, the whole creature, which had presumptuously sinned against the All-Spirit, plunged into the jaws of death and the waves of the Atlantic Ocean roared their primeval storm song of "*Die and Become*" over the sites of horror.

Once upon a time – !

*

We contemporary humans stand in awe before the gigantic structures of Egyptian and Mexican prehistory. The pyramids arouse the amazement of our technicians, and it seems incomprehensible how the creators of these enormous cult buildings were able to pile up the house-high blocks to such overwhelming heights. The blocks, made of hard primary rock, are fitted together so seamlessly without the aid of a binding agent (mortar) that it is barely possible to slide a fine knife blade into the gaps. Today, even with our advanced technology, it would be difficult to master this construction work *mechanically*. We can observe the same thing in the imposing cult buildings of the Mayas and Toltecs in Central America. Again and again this gigantic labor of the primitive peoples gives us food for thought and we cannot come to terms with the fact that these prehistoric people built their colossal markers, as we can still see them today in temples, tombs and the like, without *special* technical aids.

The assumption that the pyramids were built using only simple levers and possibly even flake hoists seems absurd when we consider the *weight of* the building blocks. Human power alone could not have been at work. The question now arises as to what kind of energy source those

artists were using. According to the results of modern historical research, we must refer to the Egyptians and ancient Mexicans as the guardians of the most ancient knowledge, who drew their insights from the Atlantean prehistory. The priest-magicians of those ancient civilizations were apparently still able to master the Vril technically and guarded their secret as descendants of the sunken Atlanteans.

After these clarifications, there should no longer be any doubt that the ancient Egyptians, Mayans, Incas and Toltecs in Central America had gigantic forces at their disposal to transport huge stones, even entire rocks, from far away and pile them up in their cult buildings. Captain Campbell Bosloy undertook a research trip through Peru in 1913 and found there – to mention just one example – a stone that weighed around *3000 tons* and had obviously been brought from a great distance. This stone had been carefully worked, hewn and cut and clearly indicated that technical equipment must have been used to cut it that far surpassed the performance of today's stone saws. There is no need to say more at this point! There is extensive literature on this subject, from which more details can be gleaned. We refer to *Scott-Elliot*, whose work "Atlantis" provides more detailed data. *Karl Wachtelborn* and *Karl Georg Zschaetzsch* also wrote two books with the same title. Finally, we would like to make special reference to the well-known scholar *Herman Wirth* – Marburg, who has made an extremely valuable contribution to Atlantis research.

*

And once again a time cycle of ten thousand years has come full circle! The secrets of the faded

Atlantis period are waiting to be unveiled. The floor of the Atlantic Ocean is slowly beginning to rise in many places, as has been clearly established by deep-sea research. At the beginning of 1930, the daily press carried a report about London, which we would like to quote here verbatim:

"Old city ruins on an island that has emerged from the ocean! London, December 28, 1929.

According to a New York report, three torpedo boat destroyers sent out by the American Navy Department have confirmed the rumor that a new island has been created by seaquakes near the island of New Providence, which belongs to the Bahama group. On the island, which is not shown on any sea chart, there are ruins of an old town, which must have had a large number of inhabitants and probably existed before the discovery of America. A scientific expedition is now being prepared to investigate these ruins."

The following should be noted:

These Bahama Islands are located off the Florida peninsula – in the area of the Gulf of *Mexico*. According to old esoteric traditions, we are therefore looking at the elevated new land (highlands!) of the sunken Atlantis. The Canary Islands must also be addressed as *mountain peaks* of the sunken continent. The coming years will certainly confront people with the fact of new uplifts. It remains to be seen what new discoveries science will make in these areas of uplift. In any case, it should be noted here that the island mentioned in the newspaper report is home to a cultural site that must have existed well before the discovery of America. It may even date back to prehistoric times in the Atlantic. However, research should not be prejudged here.

It has already been said that we seem to have much more extensive uplifts to present, which should astonish the world.

A new cultural cycle is about to begin!

Achievements of the human spirit from ancient times are to become common property of the present again. The vril-power has been rediscovered, the emerald tablets of the great Hermes Trismegistos shine in the green-blue light of the dawning morning of the Uranidian mastery of nature, – and subsequently the attempt will be made to awaken the interest of the broad masses for the cosmic universal energy.

The dynamo technology of the Atlantids awaits its incorporation into the German people as a whole!

World dynamism.

The news that a small circle of scientific researchers has succeeded in solving a problem whose implications seem likely to herald a socially and ethically happier era has prompted us to comment on this epoch-making matter in the German public sphere. By way of introduction, it should be noted that the whole complex of questions must first be approached from a purely humanistic point of view, as we unfortunately lack almost all empirical bases for the problem in question for the time being. It is therefore pointed out that, unfortunately, empirical physics and its representatives cannot be taken into consideration when assessing the validity and feasibility of our completely new ideas. This is by no means meant to be an attack on the science of physics, which is to be taken seriously and is in good standing. But since, as already noted, it is an innovation that lacks almost any basis in experience, physics must reject it or at least take a cautious wait-and-see attitude.

We will now examine the problem of the utilization and harnessing of so-called ⁽¹⁾ "*vital energy*" from a purely humanistic point of view. Let us begin with the ancient religious concepts and esoteria of the ancient Indian culture!

In the Vedanta teachings, the Upanishads – the sacred books of the ancient Indians – we find a primary source of the oldest human wisdom. Let us first look at *the duality* of the eternally destructive and constructive world principle

¹

For *Shiva*, the Christian-religious symbol "Holy Spirit" (Logos!) – For *Vishnu*, as the "principle of incarnation", the Logos incarnation "Christ" can be used!

Shiva, the all-dissolving, dispersing space, and *Vishnu*, the loving, merciful, *ever-binding* principle of creation and the constant will to build!) In Shiva we see the timeless, free radiation of a primordial force that is indifferent in itself, the vital energy already mentioned. This radiation is the *primordial basis* of life, because *life* is only possible through constant movement. The *center of radiation* is to be sought everywhere and nowhere, for space is to be thought of merely as the *effect* of the principle of Shiva. The *causative* principle Shiva must always be understood *outside*, or rather: *free from* the space caused, as pure spiritual power without space. Wherever there is any resistance to free radiation, a *relative* center of radiation is immediately created. Accordingly, the radiation center Shiva cannot be assumed to exist *absolutely*. The free radiation Shiva only appears as vital energy and is therefore only empirically detectable and analyzable when a braking resistance – an inhibiting moment – appears somewhere and in some way. This braking resistor arises in the binding principle *Vishnu*.

From a *dynamic* point of view, Vishnu thus becomes the creative motive for construction; from *an ethical* point of view, we must value it in the same way as the primordial principle of binding "all-love". We have originally placed these two conflicting and yet necessarily wonderfully complementary primal motifs of world-becoming in the cross symbol. The vertically strutting longitudinal "beam" represents timeless, free radiation – Shiva! The horizontal crossbeam, "boundary", thus the appearance-stepping

of the constructive creative love motif – Vishnu!

The creative in the *center* enters into *appearance* the intersection of the two beams. *This is where* the above-mentioned "braking resistor" is located, which transforms the indifferent space radiation "Shiva" into an effective, creatively constructive force! (*Indifference* in all fuel-related references such as magnets etc.).

In this way, a *relative* center of radiation appears to be born. Thus the simple cross symbol is at the same time the sign of constant $\frac{N}{+} \frac{S}{-}$ *positive* construction! It is absolutely necessary that "free-radiating" and "binding" complement each other, – "unlimited" and "limited", – "not dwelling – timeless" and "dwelling – temporal", – always "*wanting to dissolve*" the world's separation and always "*creatively binding*" the world of appearances – precisely: *Shiva and Vishnu* to the creative unity of power! The world is only *positive* through Vishnu's bond of love.

An attempt will now be made to clarify the dynamism of the material world. In the ancient Indian Vedic teachings, we are told of an inherently free, ever-changing "pranic elemental force". From a purely *dynamic* point of view, "*prana*" can therefore be equated with the religious symbol Shiva. What the *religious* conception of the ancient Indians makes understandable in the interpretation we have already given is illuminated from the metaphysical *dynamic* point of view in the esoteria of the Vedas, the Upanishads.

And this "prana" is a primal force, indeed *the* primal force itself, with which the down-to-earth empirical school and empirical physics knows nothing about. Here it lacks all the facts of experience that can only be deduced purely from spiritual science!

Empirical science has already got as far as atomic physics! Empiricism can only go as far as it

cannot go. We already *know* today that the entire "*matter*" that has entered into appearance is actually non-existent in itself! Force vibrations and force fields around us form the purely sensory material world view. When we perceive "*matter*", we must first realize that this perception is conditioned by the "*binding*" of a basic force acting in *the opposite direction*. Positive and negative bonds (anions and cations) as the two components of this basic force oscillate in ordered basic ratios at approximately the speed of light.

They can therefore be equated with light according to the rhythm of oscillation. In speculative physics, we already speak of "*coagulated light*" and imagine the world of matter as a strictly law-ordered "*light*" that appears in the form of *light*. – "*life of light*" appearing in a strictly lawful order!

Free radiation, "*shiva-prana*", *bound* by the creative laws of Vishnu, shapes the material illusory world! However, the intuitively working ancient Indians went a little further than our scientific empirical physicists. *Prana*, free radiation, was for them the indifferent *primal force* of the entire phenomenal world. Here we also have the *vril* of the Atlantids before our eyes!

According to Indian knowledge, the atomic world of our modern relativity physicists is based on a primary world of "*Primordial atoms*". This is already suspected by contemporary physicists. For the time being, we know next to nothing about the *nature* of the so-called atomic *nuclei* (protons) around which the bound electrons oscillate, or rather *span*. However, these primitive atoms are the indifferent radiation centers – "*Shiva*" – in primary power space binding – "*Vishnu*" – and in the symbol negative – active, according to absolutely creative $\ominus$ with a drawing and exciting function! However, *our* atom, which shapes the world of matter, has a positive-negative charge! In Bohr's atomic model we see, according to the intuitive insight of the researcher,

that he represents the electron oscillations as being tensed by a locked clock spring, striving outwards. It is not attraction force (attraction!) but extension (striving) that underlies the material creation in its atomic units. Shiva here too! And Shiva-prana is bound by Vishnu's creative love. The primal problem of creation itself!

Prana, the absolute, free force, the basis of creation dynamism, has not yet been found by empirical physics. However, this prana, the *vril*, the primordial force, equated with *spatial force*, is already enlightening the intuitive brains of many physicists. The pranic radiation dynamism will now be illuminated from the point of view of a practical utilization that may occur in the near future.

Humanity must slowly spiritualize and approach the symbol of the creative, free-radiating, loving divine entity Shiva-Vishnu. First of all, we want to fall back on the gray primeval times of human development, from which we unfortunately have no historical traditions. Here again, only secret science can be our guide on impassable intellectual paths! This knowledge is a way of *seeing*, it grasps world events *intuitively*, not intellectually! We can then examine the precipitation of the "knowing-seeing" in the secret teachings.

There are various reports that the rational beings living on earth had tremendous insights into the laws of nature in prehistoric times and were able to master nature in a completely different way than we do today in "crowns of creation". However, these primordial beings were observant and not intellectual humans! Lemuria, the lost Atlantis – are such legendary cultural sites. There, the mastery of nature by the mankind living there had reached a fabulous level. We are told of the Atlanteans that they *mastered the power of vril*

and thereby made themselves completely independent of the laws of nature that bind us. In our eyes they are omnipotent gods! However, we are also told that one day they misused this power egotistically and put it at the service of human destruction, which led to their self-destruction.

A portent for our time too!

But what was that ominous vril force of the Atlanteans other than the *spatial force* that is now also becoming topical in our cultural development! And here we want to take a closer look at the *scientific* side of our problem and – as far as possible based on the facts of physical experience – develop the concept of space force.

Mechanotechnics and bio-dynamics.

Current modern machine technology is mechanistically based. Let us try to make this a little clearer.

We have power machines that only react to mechanical impact or pressure forces. Either the pure impact and pressure force is converted directly into rotation, as in water turbines and wind engines, or some fuel is first converted into a different aggregate state, as in steam engines and explosion engines. In the former case, a great deal of energy is lost during energy utilization *without* molecular unbinding, but in the latter case, more energy is released by unbinding the material molecules. This released binding force (cohesive force) is in turn converted purely mechanically into torque. To generate electricity, we again need mechanical rotation in the dynamo. In the best case, therefore, only force releases of the substance in the form of molecular relaxation (dissolution) come into question for energy conversion in today's technology.

However, this is not the case with the dynamism that is knocking at the gates of our future and the dynamic technology that is based on it.

Here we first want to become fundamentally clear about the following.

The apparent matter of our world of experience is built up from a *trinity*. Electron forces form atomic structures, atomic structures form molecular compounds and these form the specific materiality of the phenomenal world. So: *atom, molecule,*

substance! Contemporary technology only uses the substance or the released molecular force to generate energy and converts the released energy mechanically into rotation. The secret of dynamism and dynamic technology lies hidden in the *atom*. Let us now try to clarify the nature of the dynamic structure of the atom.

As already explained, the atom is a primal force field of tension. Let's stay at the molecular level of the substance for the time being and see how energy can be released here, i.e. how force effects can occur!

If we change the aggregate state of a substance, e.g. transforming "water-liquid" into "vapor-gaseous", the *molecular* bonds *relax* because they are overstressed and force is released. In this case, energy is generated by relaxing a material molecular structure. If we relax the molecular bonds of carbon *chemically* (combustion!), energy is released in the form of heat and so on. However, this state of tension in a material can also be artificially created by overstressing, i.e. overpressure, in order to recover energy. If air is compressed by overpressure (Linde process!), it first *becomes liquid*, then even *solid*. If the artificial overpressure is released and this compressed air is again exposed to the normal environmental tension, it changes from the solid to the liquid and then back to the gaseous state of aggregation. Energy is again released at the transition boundaries as the molecular structure relaxes.

In this way, all gases – carbon dioxide, etc. – can be artificially overstressed, compressed and then relaxed in order to release force. However, *every* substance is already calibrated to a certain tension in its molecular bonds. If the molecular structure is loosened too much, the solid aggregate state of a substance may be transformed into a gaseous state,

and the sensible appearance of the specific substance is lost. As we can see, every technique actually only works with the useful effect of different stress equilibria.

And this is where the problem of the problems of spatial force evaluation – of pure *dynamism* – begins!

When the world emerged from the *indifferent* radiation pressure

"Shiva" and the creative love bond "Vishnu" *coalesced* into the original forms of the atoms of our specific elements – and in the *differentiation of* various oscillation and bonding ratios (Logos aggregation!) the material world view was formed, each element atom has received its imprint under very specific force-tension and pressure ratios. Thus, in the hydrogen, helium and radium atoms, the tension ratio of the bound electrons has been precisely determined and adapted to the respective pressure conditions of the environment in those distant days of creation. The material world then slowly emerged over time through the various states of aggregation.

Now, however, it is already happening that our matter (the earth) appears to be entering into increasing environmental pressure conditions (tensions!), because elements that are usually described as radioactive begin to decay into the pranic basic force of their own accord when this environmental *overpressure* (overtension!) occurs. One can speak here metaphorically of an "obsolescence" of matter. The death of matter occurs, the bound elemental force becomes free, thus radiant, which must also be interpreted here only as a transformation to higher levels of force, just as the physical death of the bound material human being also only means the liberation of the spiritual human being to a freer spiritual life.

If we think of this increase in environmental pressure as extending to the older elements of matter, then we can visualize the grandiose picture of a radiant, new life.

creation in the mind. Basically, we only have to adopt the idea that the oldest elements were concentrated under the strongest environmental pressure (tension) and must therefore also have the smallest electron tensions (atomic weights – as suction, or cohesion of the proton vacuums!) in the atomic structure of their protons to balance the bond. The problem of radiating matter, as we can empirically determine in the case of radioactive substances, provides us with completely new insights.

Future science is currently exploring the idea of breaking up atomic structures in order to release electron energies of this kind. Here, too, dynamism is on the advance. In order to make atom-busting possible, technology would have to have enormous energies at its disposal, since – as has already been noted several times – electric voltages are bound to the atomic nucleus at almost *the speed of light (light force)*. So far, this path seems only theoretically feasible, as mankind does not have the necessary colossal electrical charges. It is also completely ruled out that such atomic energies can be utilized in a practical way in technology. Should our technicians nevertheless succeed in having the enormous charge energies at hand to stimulate magnetic fields through electrical induction (Gaussian charging!) until the material atoms explode, then the *useful effect* would be zero and the electron forces released would only cause unimaginable destruction.

The *second* way of releasing atomic energies, in which the problem is not solved energetically (by overvoltage of magnetic fields), but *statically* – by purposefully undervolting the proton vacuums, still seems unfeasible to our physicists at present. And yet this is the only way to make elementary energy usable.

And again it is spiritual science that points us to the greatest teacher of all time, *nature* itself. Why work with light-blasting energies when nature teaches us that a simple change in the environmental pressure of matter produces positive results? (s. The energizing of radioactive substances!) Not the overstressing of atomic structures (overpressure), *but a change in the material-environmental pressure* and the resulting understressing of the proton vacuums (break-up of fuel indifference in a vacuum) is the slogan of the dawning dynamism. The atomic decay of radioactive elements shows us the *new* path!

Now let us ask ourselves how such a change in environmental pressure could be achieved in practice! If we create above all natural conditions, we arrive at the installation of a relative vacuum of space, a matter-free cavity, in the power units of dynamic technology. An absolute vacuum is not conceivable, because every matter-free empty space must be imagined as filled with force (tensioned). The free radiation "Shiva" penetrates every vacuum, therefore we can only speak of an absolute vacuum in material terms. Now we come to the conceptualization of our dynamic *spherical cell*, which can be described as an "artificial earth". Our Mother Earth is in fact such an aggregate of spatial forces on a large scale. If we imagine the globe placed in the power vacuum of the universe, then we are looking at the model space-power machine!

Space is filled with indifferent free radiation (negative activity). Pranic force radiation flows around and around, wants to be dispersed and bound again. At the boundaries of our material globe (including its atmosphere!) we practically have the environmental pressure change. There the atomistic structure of the oldest and lightest of all elements, hydrogen and helium, is constantly being released, since the relative vacuum of space

as environmental pressure no longer holds the electron tensions of all elements and elemental force units become free-radiating.

Hörbiger's world-ice theory speaks of the "heating" of the sun by "ice" (hydrogen in energetic form!), so that it can be claimed that the sun is the host, whose guests (the planets and moons of the solar system) have to pay their bill in the form of hydrogen (world ice) (entropy). From the vacuum of outer space, the earth is flooded with cosmic energies (solar radiation, electromagnetic waves!) from the vacuum of space. In the atom-debonded, *negatively* active indifferential zone of the world vacuum, space force is reborn as world and *specific* earth force with different transformations (entropy) and flows as the universal energy we are already familiar with, "vital electricity" (equal to light) to the earth's south pole (cathode). – The released radiating *negatively active* ions (cations) of the hydrogen are paired as factors of the indifferent free space radiation to *new* power centers – symbolically to negative power spheroids $\ominus$. (Shiva-Vishnu!) – and thus pratoms, negative activity, are constantly regenerated.

The "dynamic perpetuum mobile" – mechanically it was unfortunately not possible!

Thus the universal All-Force always remains absolutely negative-active through radiation (tension) and bonding (suction) $\ominus$ and creates the material worlds. The negative force pole (negative activity) as a tensioning electron in the *bipolar* bond of the substance is only *apparently* present in the "atomic bond" as a *secondary* matter building block and must only be addressed as a supplementary dynamic tension of the sucking primordial atom vacuum (atomic nucleus). The primordial all-force is always radiantly effective in its negative activity (Shiva!). We have to expect a constant loosening of the atomic structures of all the elements that form our illusory material world

which appears to be caused by the *variable* environmental pressures of the atomic structure tensions created and set by the creative duality of God over great periods of time. This is why those elements that physics describes as radioactive disintegrate – into released elemental force. "As above – so below!" The great initiate Hermes Trismegistos is timelessly right.

There is a change in environmental pressure, matter dissolves in the specific elements and becomes power-active – radiant! In this way, our illusory world of matter is likely to become more and more ethereal in substance. In the end, everything transforms into radiant power and the material world is then *redeemed*.

The dynamo-technical primal force elements.

Now we come to the explanation of the power units of dynamic technology!

"An earth in miniature" – this has already been suggested by us!

How could this problem be solved technically? – Analogously at the top!

Let's create a relative vacuum *at the bottom*! According to our findings, a hollow sphere made empty of material (Magdeburg sphere!) is not *pressed* together by the air pressure, which actually has a tensioning effect, but the function of the vacuum pulls the two matched halves of the sphere together – in other words: every vacuum has a suction effect on its material boundary! We then speak of the *cohesive force*. This is seemingly difficult to understand, but nevertheless relative – very correct! And here we come back to the secret of the atomic nucleus!

Many years ago, the Greek philosopher *Demokritos*, in his profound understanding of existing natural relationships, correctly recognized the essence of every fuel basis – in its original form, the atom. The word atom describes the concept of an "intrinsic essence". Democritus said:

"Everything comes only from existing beginnings and the beginning in matter is an *atom* (intrinsic essential). This A-T-O-M is the alpha and omega, the beginning and end of the material world and bound *elemental force* (condensed electricity). An atom is a "*dense*

being" whose space is empty, and this being must be called the dictator of all forces in space!"

In the proton (atomic nucleus), we therefore see a vital, electrically charged force space, which functions as a *vacuum in absolute* suction towards the negative electron circulating voltage (atmosphere of the atom). This is the *concentrically* acting force component of the universal primordial force, as it is presented to us again as gravity *in* its fuel-like mass expression. The negative electron conversion voltage represents the *externally* directed force component (centrifugal force)! It strives to radiate (vital energy) and symbolizes the concept of *negative activity*. These two force components – concentration and extension – are in a well-balanced dynamic equilibrium, which enables the binding of this force duality to the material apparent physics. In the material atom we see an inversion of macrocosmic relationships.

The *macrocosmic* vacuum functions, as already mentioned several times, negatively active – towards the fuel balances (planets, suns) – sucking in – wanting to dissolve! In the macrocosmic vacuole, therefore, the *outside* of the atom (the negative activity, electron voltage!) is *on the inside*. Here we refer to the preliminary remarks in the chapter "World Dynamism" on the problem of Shiva-Vishnu. If Vishnu settles in limiting force centers, a microcosm is *materially* (force-materially) born into the macrocosmic force world! The material bipolarity with its binding function "negative-positive" is not present in the macro-vacuole and yet we can also see the effective force double component of *suction* $\oplus$ (pull – concentration – binding: Vishnu) and *tension* $\ominus$ (pressure – extension – radiation: Shiva) in action here. *Spatial energy* (spatial force),

the apolar (exciting) endeavor of the creative primal force, which is only radiant with *vitality* (Shiva), always prevails in the world dynamic. *In terms of fuel* (force space), however, the world dynamic works in a bipolar function (Vishnu), *binding energy*, i.e. creating illusory matter. The negative activity in the basic units of matter (atmospheric tension) is always the primary factor that makes every physical expression of life possible. Without atmosphere (negative activity), a physis is not conceivable at all.

The atom has its *negative activity*, the biological cell as the basic unit of life likewise, in the earth globe it appears before our eyes in the form of the atmosphere, in the solar system we must think of it as limited by the outermost planet, in a central solar system – as the tension of all the associated solar systems – etc., until finally we have the whole of space energetically "negative-active", vital-creative work. Having arrived here, the universe appears to us as a living creative unity breathing back through all specific atmospheres.

The entire creation rests in the breast of the "energetic All-God". This macrocosm breathes within itself; its atmosphere lies in the universe, with which it is identical – decided. It *has* no "negative activity" – but represents the *cause* (the essence!) of this creative principle. The microcosmic, fuel-based units of creation (atoms, cells, cell states, planets, solar systems, central solar systems, etc.) breathe *through* the creative macrocosm. We have thus clearly visualized the process of inversion. Only through this arrangement of the highest wisdom has physical life been made possible. The active forces – attraction – ex- tension – in the force space are thus completely identical and, according to our ideas, there is actually only a *quasi* (equal) double polarity in the bipolarity of matter.

This is the secret of the material world, of the inherently unified, creative and divine world force in general!

("negative activity" indifference)

Expressed numerically: 1 is 2 and 2 is only one!

Perhaps the reader will now be able to understand this deepest mystery after all. Shiva is Vishnu and Vishnu is Shiva. Here the *dualistic* monomism, the basis of all magic, has been subjected to a dynamic justification. This dualistic monomism becomes the ultimate mystery of the *Trinity* in the world physics. The substance encloses the mystery of the divine freedom of creation. 1 is 2-3 – and 3-2 is one! -

The dual function of the fuel is only guaranteed trinitarian. Every dual polarity (2-3) has an indifference (1) as an unavoidable prerequisite. This indifference always tips the scales of dynamic world harmony. This is where the essence, the creative being of the "force deity" lies hidden! The creative impulses of our elemental force flow from the *indifferential zones* of all fuel units. Every magnetic field prefigures this deep mystery with its lines of force. The peripheral *outer poles* are always active. The causative principle *rests* in the indifferent *center*! This is where Vishnu has placed itself in a constructive manner (cross symbol!). The above can be verified on each *staff magnet*:

$$(+)2 - \text{---} \text{---} \text{---} 3(-)$$

In order to get to the essence of the *elemental force*, we would also have to succeed in lending negative activity to the indifferent *center* zone of accumulation

of material *force* to negative activity. Here Hermes Trismegistos should be referred to again: "As above - so below!" Our "energetic God" is dynamically present in his microcosmic units just as fully as in the macrocosmic world reference! Substance is concentrated world energy of tremendous tension (condensed vital electricity – coagulated light). According to the latest research in relativity physics, one kilogram of this fuel represents no less than 90,000 trillion meters/kilograms of energy (energy = mass x speed of light squared)!

We are talking about the omnipresence of the gravitational constant, even in the microcosmic world building blocks of matter, the atoms and cells. Therefore, if technology succeeds in actively shaping material indifference zones through the "differentiation of indifference", it has advanced to the gravitational constant and is able to work with *psychophysical* energies – in other words: to be active in a vital-energetic-creative way! The doctrine of the *entropy principle* (second heat theorem), which can be found in any physics textbook, states: "Entropy (physical deterioration of energy – heat death) has the property of leading to the final temperature equalization in non-reversible circular processes in a directionally determined manner, since "*heat*" can never flow from the colder to the warmer place (physical component of the elemental force)!" 

For the time being, our science *only* ever assumes an *entropy* of energies that constantly deteriorate in the cycle of different transformations, finally arriving at "fuel death". This entropy effect – which constantly deteriorates every energy – has a certain size, which is thought to be constant and therefore always constantly deteriorating, moving from the heat pole to the cold pole. Every energetic

shift has an effect on the transformation process (e.g. radium decay!) and we would have to consistently conclude that final material death will occur. However, "*God-nature*" (psychophysics) works exclusively in *reversible* double-circuit processes

and thus gives back *vital* energy, which in the form of ectropy becomes effective *in creating life and culture*, thus possessing "vital growth functions" (psychic component of the elemental force!). In this way, entropy – creatively active ectropically – is returned, the material world is timelessly guaranteed as a *psychophysical* "perpetuum mobile"!

"*Primordial force-life*" created a world of matter; – death of matter brings forth life of force, life of force again sets itself vital-creatively (Vishnu!) as indifference and begets new fuel agglomeration, which again entropically leads to death of matter in order to become ectropically vital-energetically creative – in the endless course of time!

By differentiating material indifference, we are able to put ectropic energy at the service of dynamic technology in a practically usable way, just like nature. The dynamic technique created a magnetic aggregate consisting of a spherical – and a bar magnet built into this sphere. The bar magnet fixes the north-south pole of the spherical magnet. As already mentioned, the magnetic sphere *is hollow* inside. If the built-in bar magnet is now cut out in its indifferent zone (bar magnet center in the equatorial zone of the hollow sphere magnet), we now actually obtain *two* bar magnets in the sphere cavity and a bar magnet *south* pole appears opposite the peripheral sphere north pole in the sphere center, but a bar magnet north pole appears opposite the peripheral sphere south pole.

This actually *solves* the problem of differentiating magnetic indifference (fuel indifference)!

If this sphere is now set up as a *vacuum*, i.e. made empty of material, and provided with an electrical capacitor (voltage), which is earthed with *a* voltage potential via a specific element in order to be able to be closed with the opposite-pole electrical potential in the sphere center between the two magnetic rod poles, then we only need an electrovital filling mass, which guarantees the closing effect of this current circuit in the sphere center. The spherical charge is also activated when a *specific external* excitation impulse is applied to the peripheral magnetic spherical poles.

The vital closing conductor (filling mass!) as a specific resistor (Ohm) is built into the hollowed out central bar magnet poles and works analogously to the coherer (binder) of our radio transmission technology! If this fritter is closed by the aforementioned specific, radio-technically transmitted short-wave magnetic impulse, the electrical voltages (volts!) are activated and can be tapped from the center of the sphere in a technically usable way in a constant flow of amperes in order to drive specific motors, generate light, achieve heating effects, in short: to electrify the entire economy.

The initial charging voltage of these dynamic elements remains timelessly guaranteed in its volts, as the tapped consumption energy (ampere flow current) is immediately and permanently replenished from the earth's force field (see earthing!). Practically speaking: such an element constantly supplies the charged energy (result of "volts" divided by ohms, see Ohm's law) and if we have electrically indexed *ten* horsepower, then these 10 horsepower can always be drawn from the unit.

The specific magnetic excitation impulse of the dynamic spherical cells is generated by the *original machine* which

the original machine, which only needs to be present once on earth (analogous to the Nauen transmitter!), is delivered in radio transmission form and keeps all spherical elements working for the first time. The construction of the original machine will not be discussed in detail here, but it should only be said that it consists of seven similarly constructed spherical elements, five of which rotate around a sixth fixed central sphere and, during this rotation, tear off specific magnetic rays from a seventh dynamic spherical cell arranged outside the circling spherical ring in order to concentrate them on the central sphere. If this sphere is overlaid, it emits the aforementioned specific magnetic short waves, which in peripheral form stimulate all working elements to generate energy. The two stationary spherical cells as the anode and cathode poles of the original machine are earthed with their electrical charges *with unequal polarity*.

The number of dynamic working cells is unlimited and can be in the millions, the ectropic-technically utilizable vital electricity is always taken from the earth in the secondary circuit on the spot. However, our specific magnetic transmission technology still requires the creation of amplification systems which, according to current experience, have a range of 10 km in a radius (5 km radial transmission), in which range all working elements are then able to respond. Perhaps this range can still be extended – but at the moment these amplifiers must be reckoned with and represent only completely analog dynamic elements of larger dimensions.

If the vital closing conductor in the spherical cells, which are all built uniformly in our dynamo technology, is closed, an alchemical process actually takes place in the spherical vacuums, which we cannot describe in more detail here, as this knowledge is not generally accessible. All we can say here is that through our created

three preconditions: "technical establishment of the vacuum function, differentiation of the indifference, vital closing conductor", a biogenetically functioning, dynamic aggregate was built, which performs biotechnical work, i.e. is able to supply vital-electric, ectropic energy. In the innumerable spheres, the primordial light, secretly scientifically described as "hermetic fire", flares up when the specific magnetic impulse of the primordial machine begins to take effect and a current is generated. In this way, we close the top and bottom of the dynamic creation in our dynamic cells to the uniform world element, whereby the macro- and microscopic, free-energetic (space force) and fuel (force space) components are equal to two vital-electrical potentials, which are closed by an artificially generated lightning (hermetic fire)! This "lightning" (see sphere) is a "lightning" (see also ball lightning) is generated by the vital binder – it makes the spherical vacuum *glow*, and since this vacuum inside the sphere magnet is actually a *magnetic* vacuum, it can also be referred to as "glowing magnetism". These terms only describe a purely energetic *state*, which technically appears to us in the form of an energetic voltage, which appears to be dependent on the charge of the spherical element.

This voltage reacts automatically to the respective energy withdrawal of the aggregate and represents the "*tip of the scales*" of the dynamo-technical balance within our spherical elements! It should also be noted here that our earth is constructed in exactly the same way as the spherical cell and the interior of the earth is also in an energetic state which we have described as "glowing magnetism". Our dynamic cells are given their own atmosphere at the moment of becoming active, which is stored around the magnetic sphere and has its vital function, as we have already described in detail. These working elements provide humanity with *psychophysical*

universal energy. They represent biotechnical, vital-energetically working aggregates and as such are also *psychically* working apparatuses. We therefore actually have *magical creations* before us which produce the *vril* of the Atlantids. It is impossible to misuse the power gained as long as the "primordial machine" is in responsible hands, because no cell is able to work without impulses from the primordial machine. The secret of the vital binder and our specific capacitors with their filling mass, which we refer to as The secret of the vital binder and our specific capacitors with their filling mass, referred to by us as "electret mass", cannot be fathomed, as this installation automatically destroys itself completely if the spheres are broken open by force.

The psycho-physical world "Perpetuum mobile".

The force striving of all atomic structures in their force units, the ions and electrons, is extensively and attractively directed. We have already explained this in detail. All matter always wants to evaporate in space. The bonding force is only guaranteed by "Vishnu", the life-sustainer, who, together with "Shiva", the radiating one, makes the physical illusory world possible as an *identity*.

If a specific vacuum is created in the material world, the enclosing shell (atmosphere) can never *press*, as its force striving is directed extensively as a tension force. However, this relative material vacuum is always absolutely negatively charged (Shiva). Every vacuum has a fuel shell. This consists of atomic structures. Outside the fuel shell is the atomically structured environment. Now, in a substance-free vacuum charged with absolute radiation force, vital-electrical binding and induction phenomena occur in such a way that the suction component of the vacuum, apparently acting positively, tries to dissolve the atomic structures of the environmental substance in the negative electrons, i.e. to suck them in, or at least to *bind them*. In this way, *every* vacuum functions concentrically – and the vacuum force as a "cohesive force" primarily attracts, thus causing *gravity* in the fuel!

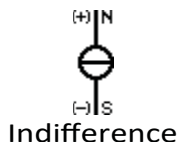

If the vacuum force-space suction changes in relation to its *tension*, as it appears everywhere in the form of the specific atmospheres as "negative activity", the moment will come when the balancing balance of this negative active tension – whether it is called

electron voltage or the magnetostatic field of the earth (atmosphere) – no longer plays a role. Then the energy acting in the fuel must be released as a result of one-sided overvoltage, space force is released and the atomic structure disintegrates (radioactivity!). In this way a constant, enormous, cosmic energy flow is achieved.

We see the problem of specific material vacuums in the structure of the world, in the atomic structure of all elements, practically in effect everywhere. The mysterious atomic nucleus, the basic nature of which has not yet been recognized by empirical physicists, only represents such an empty space, as has already been explained in detail. Atoms are always made up of the purely metaphysical, energetic primordial atoms (approximately: ions!) of the Indian secret doctrine. In other words, the universal *basic force* of the entire world dynamism Shiva-Vishnu in primordial bonding – encompassing "all-love-bonding, free radiation" – as the basic unit of material creation everywhere!

These primordial atoms in their symbol of negative activity $\ominus$ always *have an apolar* effect and yet are already essentially an energetic binding unit. They initially form a purely ethereal world and finally bring up the physical world of appearance known to us in ever-increasing energy condensation. The sustaining principle Vishnu, however, has already bound itself in space as a creative primal unity in the *fluidic state* with its free-radiating complement Shiva and is therefore the primal law of the dynamic world.

We have already noted that the basic units, i.e. the primordial atoms, always appear to be charged with the same polarity and therefore repel each other – according to the basic law of apolarity! They are therefore *neither force-extensive* nor *radiant* in space. They only become *attractive* through

the already mentioned inversion, through its, as it were, outwardly displaced opposite polarity! The summation of all energetic primordial vacuums, as they appear to us as "ions" in the atomic structure, form the term: "matter-free space"!

In this way, the vacuum of outer space can be imagined as free of matter and substance, but eternally filled with power. As has often been mentioned, this world force can be thought of as having a completely indifferent effect, i.e. as being free-radiating. The superordinate atom of our atomic physicists, if we imagine the energetic primordial atom as the world-dynamic basic force, is a dynamic unit set in a *higher bond*. The *atomic nucleus* is a vacuolar force space, charged with primordial atoms, i.e. the creative radiation bonding concept of world dynamism. As a relative micro-vacuumole, it is identical to the relative macro-vacuumole of the world void and as such has an absolute binding effect, i.e. it sucks in! Symbolically, it can be represented as a closed circle with a central cross: $\oplus$ In matter, every relative vacuum, as has often been explained, acts as a pure cohesive force – and causes the heaviness of matter, *attracting it*.

In the physical atom, we see "quasi-negative" energetic units *bound* by "quasi-positive" atomic vacuoles, i.e. set in tension. However, the negative electron can only be interpreted as a dynamic superposition (overvoltage) of the quasi-positive atomic vacuum (atomic nucleus!).

The electrons are minus *force units* of the atomic void, which is uniformly charged with *plus* force. In the days of primordial creation, Vishnu's creative "all-love impulse" became so strong, i.e. *over-dynamic*, that it set itself up microcosmically in the macrocosm – its identity – as a creative unity and then manifested itself again, as it were, *outside* its essence in a balanced equilibrium. In this way he remained as a creative

micro-vacuum in the bonding units of the primordial atoms and was born as a physical antipole.

The unity vibration was differentiated and material "quasi-negativity" and "quasi-positivity" were brought up, whereby in the bonding the "negative activity" of the sucking fuel micro-vacuums (atomic nuclei!) with their originally extensive force striving – was set in pondering balance with the absolutely materially eccentric (dissolving!) acting suction force of the primordial vacuum. Now the material and gross material world creation could begin. The "world-becoming" of matter began. A dynamic *relaxation* of macrocosmic empty spaces (force spaces) charged with energetic primordial atoms was a necessary prerequisite for this. This relaxation then took place in the fuel, as already mentioned, only ever in a *balanced equilibrium* with the absolutely attractive, sucking (attracting) forces of the vacuolar, negative primordial atoms.

In this way, the primordial force outside the vacuoles remained bound to the central vacuum in a free-radiating endeavor. The becoming of the material world took its course! According to measure and number, the units of force – always in a balanced equilibrium – were further concentrated into the foundations of matter – the different atoms – in order to then be welded together in grandiose spatial arrangements – the "space lattices" known to empirical physics – to form *molecules*, which ultimately shape the specific substances of the materialized world around us. In his esoteric teachings, the Indian calls this the "breathing out of the world soul" – Atman (Brahman); – a world creation, a Manvantara comes up!

Breathing out is to be equated with our dynamic term "relaxing" the world vacuum.

After immense time lapses, we have in the present period of creation reached beyond the so-called "*involution*", which is visibly documented in the fact that the planet Uranus, the signifier of technology and electricity, was discovered by the astronomer Herschel in 1781 –

since then, the technical achievements of mankind have grown enormously and the secret of radioactive substances was revealed to us by Curie. The *evolution* has begun, the moment has already arrived when everything that has become material is irradiated again, or rather: *radiates back* into Atman, thus becoming energetic!

In this way, the creative principle Shiva-Vishnu (Atman, Brahman) breathes in everything that has become material again. Matter becomes radiantly free, the material world view disappears into the purely spiritual in order to be breathed out anew – to be re-created. Of course, eons may still pass before the dawning of that *state of unity* which the Indians call "*Pralaya*" and the Gnostics call "*Nunc stans*". This state of "*absolute rest*" and material-worldly "non-existence" is immediately followed by a new Manvantara! However, a new world creation does not necessarily have to be identical with the present one. Under changed dynamic conditions it may result in a completely different appearance with unimaginable possibilities of experience for the *then* living physical beings of reason.

And now a main factor of world dynamism comes into view!

The exhalation *of* Atman, i.e., the "setting aside" of the "primal force principle", is analogous to the relaxation of the uratomic force vacuoles and can only be conceived in its microcosmic "fuel units", which are then all enclosed in the cosmic macro-vacuole (everything related to this is evident from the previous explanations!).

This exhalation, however, *automatically* causes in an inconceivably long time in all created relative micro vacuums, which we can equate with "absolute radiation, uratom, shiva-Vishnu, prana or atman", the *variable*

tension of all the relative microvacuoles manifested in the material and the so-called environmental pressure of the material also change as a result. The negative activities of the bipolar material bond must then adapt their tension to the changed vacuum pull of their central nuclei, i.e. they must release energy units – because the atomic unit appears to be disturbed in its dynamic equilibrium. Thus these *excess* negative bonding units are *released* and fuel becomes radioactive, energetically radiating.

As a grandiose final apotheosis, the following image may be permitted and the world-dynamic, psycho-physical perpetuum mobile brought before the readers' eyes!

Atman exhales, creation begins, – the atomic structures are dynamically weighed up with the circulating voltages (electrospheres) of the specific material vacuums, i.e. set in their exact measure of force. The forces represented by the symbol of *The all-power* characterized by "breathing out", which can only be thought of as a uniform constant quantity, is transferred from microcosmic reference points to the "*outside*", as it were. Then the time dawns when that which has become of creation as a result of re-entering the "space-vacuum-voltage overpressure" is released from the material bond during the inhalation act. This overpressure is easy to imagine in further explanations. If we make *constant* world force effective to the *outside*, a force under-tension must occur *within* the created relative space vacuum limitations. However, the counterbalanced tension of the electron forces in the atomic structures keeps this variable environmental pressure in equilibrium only until *the vacuum overpressure* occurs again (inhalation). In the time sequence of the creation of the individual elements, these then become *dynamically* effective again in their atoms. And logically, this happens *first* with the elements that came into existence *last*, because *they* have

atomic vacuoles, which are the most energetically *understressed*, maintain the highest electron voltages for the purpose of preserving dynamic equilibrium. If the deepest negative pressure is reached, figuratively speaking: if Atman has exhaled completely, then the *entire* material world created bipolar from atomic structures must equalize itself again as a result of the tension overpressure of its electrons – in consideration of the resulting environmental overpressure – and force becomes free-radiating. In this way, the entire material world becomes progressively dematerialized. Atman sucks its material creation back into the vacuum of space, which again stretches long with its uniform, energetic primordial atoms. *He breathes in!*

Finally, the oldest elements with the lowest electron voltage, hydrogen and helium, would have to relax – dynamize! This also agrees with empirical research, because "glowing hydrogen" (hermetic fire) has always been found *first* in the structure of creation when the world emerged from primordial nebulae. It should now be noted that the wonderful insight of Hermes Trismegistos: "As above – so below!" also applies to the variable world vacuum tension. In the core vacuoles of the earth, atoms, cells, etc., analogous relationships always prevail. All creative vacuums of matter correspond to each other and build up the material creation – "as above so below" – in such a way that their forces keep the entire fuel in dynamic equilibrium. Changes in tension are always equalized from the macrocosmic vacuum of space in the microcosmic material voids, the atoms etc., or rather: they always remain *identical!*

The radioactivity of the elements on our globe has already set in (see radium), Atman visibly takes back the material world – he breathes *in!*

The space vacuole is recharged with omnipotent force released from the substance, which is tantamount to an overvoltage of the atomic structures.

Matter becomes relaxed (because it is overstretched), i.e. radiant, and we therefore enter the era of "radiant world dynamism"! Dynamic future technology was born from this knowledge and the mysterious

Vril or space power

of the ancient Atlantis was brought back to contemporary humanity! Inexhaustible energies will soon be available to the human race.

Ethical prerequisites and "radiant humanity".

Now we come to *the ethical* significance of the previously explained *Vril space-power problem*!

Enormous dangers threaten the whole of humanity today if the achievements of a dynamic technology are abused! According to the traditions of the secret sciences, the cultural world of the legendary Atlanteans also perished from the misuse of "vril power". "Radiant technology" has "radiant people" as a necessary prerequisite!

We emphasize this again and again in our proclamations to the public. What do we have to imagine under the coming radiant humanity?

Vishnu-Shiva is bound All-Radiance-Love and timeless construction, in short: it is continuous *evolution*! The coming human race must therefore become radiant in *all-love* in order to be able to partake of the gods' gift of the "radiant machine". The will to annihilation must be overcome at all costs, which is why we speak of "new human discipline" and "security organization"! God is in himself *only* creative love. The All-Spirit radiates *eternally* bound in *love*! Only in this way is the great world becoming possible.

Today, people are deeply selfish, even when they think they are giving "love" and "kindness". Do they not usually ask themselves in such "*love transactions*" what "good" comes out of it for *him*? If he thinks *very* nobly, then he is at least tormented by the thought of whether "good" might *not be* repaid by "bad"!

That should *be different*! Man is not "good" and "loving" for the sake of personal advantage, he will radiate "goodness" and "love" completely for the sake of these constructive ideas. If man radiates in this way, then he slowly becomes free – and ripe for the coming superman. But let him not believe that such selfless giving will not bear him *fruit*! Glorious wreaths will be woven for him in the realm of the *spirit*! The *great* "giver" becomes the gigantic "*recipient*" – the creatively graced one!

Transcendental possibilities of action are his own.

If man as a spiritual being is completely bound to the material, his earthly body, then he resembles a joyless prisoner in a dark dungeon; cuboid after cuboid surrounds him, light and sun are rarely his guests. Therefore, let him first build himself an airy lattice cage, here he may still have limits to his freedom, but bright day is then at home with him!

So he gives light, *radiates* – so that his body structure can open up to the cosmic currents of power – and he rearranges the cellular body; – *bars* – his earthly dwelling becomes wide. But the ashlar dungeon – be destroyed!

For: all *material life* is "*frozen love*", sings the great seer *Hebbel* in his wonderful poem "The Poet's Testament".

Spiritual life, however, is the radiant, loving embrace of all creation, is creative *fire*! The outflow into the All-Soul, into the "*Pleroma*" allows man to be found again as a "microcosm" – in the "macrocosm"! He is then everywhere – and yet nowhere, when *all boundaries* have fallen! A bright "seeing" is bestowed upon him. His knowledge becomes "*seeing*"; – he no longer enriches himself intellectually with abstractions from the sensual world of matter!

For the time being, however, it is important to be modest!

A *path* must be walked systematically so that a great goal can be achieved! First the "deed" of *wanting to go* must be set, then courageous progress must be made! To train *plastic* thinking will be man's further beginning. Let him learn to think "*love*" plastically in consecrated contemplation, thus becoming a "*magical lover*"! Now he climbs from step to step until he learns to radiate himself in the "Pleroma" – in the "love-tension-fullness".

That is his ultimate goal!

But first be more *practically-earthly* oriented! We are bound to the material and have to build *it* up. The ethical side of spirit-world dynamism is slowly becoming active. Radiation – means liberation from the material!

If the human being "*wants*" to transform himself into the "love-atman" that radiates out of himself, *if he wants to become a force of action*, then he prepares himself for a *relaxed* environmental pressure and freedom of creation, all the more so as his "body" (force-space) is evacuated – (materially loosened!) becomes the flow channel of cosmic elemental force and spiritually *radiates* love (space-force). *It sucks in vital electricity!*

To the same extent as it gives in this way, the unimagined is given back to it. This is precisely the mystery of the coming Uranian radiation man. The spirit's shell, his apparent material body, becomes *light* and ever *more ethereal*. – But it transforms itself into an absolutely positive, creative spiritual force that can do what it wants and knows the truth of things.

The deception of the senses is everything around him, he alone as a *spiritual being* is the formative power, is the "master" of the dynamic whole of the world – formed in solar systems and atomic structures!

The most ancient esoteric wisdom knows ways and means to unfold him into that radiant, creative God-man. If he treads these paths in faithful trust

in his divine *strength*, then he will be *free* from the power-laden bonds!

"Act" – alone can redeem us! Not sleepy dreaming and waiting for help from *outside*. If man helps *himself*, *God* helps him; but God rests within him, he can *find* him if he only *searches* properly!

A *little flame* is kindled to light his way. And he can only become a rewarding *beacon of sunlight himself*, because to want to "divinize" himself means to strive to *do* like *HIM*! Nothing can be given here! Man must do the deed *himself*! And this great deed is called "radiating all-loving".

If he *finds* the "All-Spirit", then he sees it *only* as "Light", – *light* without *restraint* – absolute radiation of love!

"Deed" stood above the gates of the temples of all mystery cults; the "word" must also become a *creative* deed. And the word of words is called "all-love"!

Christ-Logos has creatively shaped this word for us, he has *lived* it! "*For the Word has become flesh!*"

So let man also unfold the Christ-Word in himself creatively, and become a doer, let the Logos in himself creatively, and become a doer, let the Logos in himself *shine* – in order to be able to radiate – "pure love – without liability"!

Attitude is *always* evil, – teaches the "Bhagavadgita", as the "Bible" of the ancient Indians. Therefore, man *does not* cling to *anything*, does not himself cling to the "deed", then "*nirvana*", the "Being in the substance-bound free love radiation Atman" – become his blessed final home! As such a bringer of love, however, he becomes a "cross bearer"! The "Ankh cross" has always been the symbol of the absolutely positive will. He takes *this* cross upon himself with pride; it is considered to be *the highest* decoration, bestowed by the *All-Spirit* itself!

Now the beginning is made with the *realization* – *because the time has come!*

Paths and goals.

Since the cosmic elemental force is to become the property of the German people as soon as possible, we must begin to find ways to make the installation of dynamic technology possible.

From all that has been said so far, it is clear that this is not a new "invention" in the common sense, but a world-changing matter that will bring mankind final mastery over nature. If the power of Vril falls into irresponsible hands, the stakes are monstrous!

In the possession of a capitalist interest group, which would make use of the elemental force for the purpose of its "financial strengthening", this enormous factor could be a curse for the people as a *whole*.

The harnessing of the elemental force ushers in a whole new age of mankind and gives its masters an insurmountable power. *This power* cannot be handed over to existing economic organizations as long as there is no *protection* to prevent its abuse. State patents are out of the question here, for reasons that every sensible person must admit from the outset. Patents may protect every invention in *monetary terms*, but they in no way guarantee the *secrecy of technical constructions*.

The secret of the vital binder (coherer), which produces the specific "glowing magnetism" in the spheres, must remain absolutely guaranteed, and therefore the "*original machine*" can never be given into irresponsible hands. As a weapon of war, the elemental force would cause unimaginable

destruction. The efforts of the existing powers, however, still go beyond examining every technological innovation for its usability for war purposes. The elemental force should only *be* a *blessing* for the German people! It creates unimagined opportunities for development and guarantees the German people a new future free of all economic hardship and worries.

Economically and technically, the new power brings a complete turnaround, a revaluation of all values! There is hardly a machine or technical apparatus that will not be influenced or even put out of action in terms of its efficiency and economy by the new technology. Large electric power stations, complicated turbine plants and the like are becoming superfluous! The entire fuel supply, such as coal, oil production, etc. is slowly becoming unnecessary. This naturally has consequences for the owners of these natural resources. The capitalist economy has no real interest in bringing up the elemental force, insofar as it is a matter of protecting *its own* economic means of power. It can therefore not be expected that the elemental force will be desired by those economic circles with power politics, as it will inevitably result in a redistribution of existing power relations.

If the German people as a whole do not back our demands, the introduction of dynamic technology will probably be a long time coming. We ourselves are in no way interested in whether the original machine is put into operation today – or only in the coming decades, as long as its unconditional protection is not guaranteed. A new Germany is about to dawn – with completely new economic and social structures! Responsible people must, however, prevent any misuse of the power of the virus, as otherwise the most dreadful things could happen.

In the future, the new dynamic technology will be able to produce electric locomotives and automobiles without expensive fittings and will be able to be operated anywhere by connecting them to the atmospheric voltage network. The prerequisite, however, is the installation of a sufficient number of amplification systems (control centers), which transfer the specific "magneto impulse" given by the original machine to the dynamic ball elements. New types of aircraft with magnetostatic propulsion and control, which are absolutely crash and collision-proof, can be built at a fraction of the cost of today's aircraft – and can be operated by anyone without lengthy training.

Due to their alternating circuitry, the amplification systems form a power network of tremendous effect over the terrain they cover. They serve to excite countless dynamic elements distributed across the country and to connect them dynamically to the original machine. Since vital electricity is available in unlimited quantities, it is also possible to *fertilize* the soil (clod) with vital electricity, i.e. *to stimulate* vitality. Under these circumstances, it should be possible to achieve two harvests a year. Furthermore, since the central units are able to influence the magnetostatic field of the earth (atmosphere) with the help of their extraordinarily strong and appropriately tuned voltage, mankind will also be able to shape the *weather* according to its own will. The lighting of houses and towns will become independent of external power stations. Every house, every community, every business will generate the electricity it needs itself if it is in possession of the specifically charged dynamo elements!

Since vital electricity can actually be generated *free of charge*, the entire national economy can be electrified down to the last detail. This in turn means that the heating and lighting of homes can only be done *in this* way. The telephone

and telex systems will also be reorganized. The personal telephone, specifically *tuned*, makes it possible for people to be connected at any time if they wish to hear each other alone, no matter where they happen to be. The transmission of images and processes of any kind, at any distance, is also guaranteed. The new telephone and tele-video apparatuses can be taken anywhere and put into operation immediately.

Socio-ethically, the new technology should bring about fundamental changes for our entire nation. In future, it will be possible for the state to reduce taxes and duties on the basis of its new monopoly income and also to guarantee every citizen housing, food and clothing and an adequate pension. In return, however, the state as a whole will require *every* citizen to perform the work that is appropriate to his profession and disposition in the new state. Labor subsidies will become superfluous, as there will be work in abundance. Work will become the moral duty of every citizen and those who do not work will have to bear the consequences themselves. Since the work in mines is no longer necessary, which prematurely wears down our workers, a humane and health-promoting change is also initiated here by the elemental force.

The working man is increasingly brought to his true destiny of being a creator of culture and the ground is prepared for a higher ethic. There is also no doubt that religion and the administration of justice can be influenced to a great extent by the new great ideas from which dynamic technology was born. It must never be overlooked that we are not dealing here with a new *physical* energy, but actually with the "*psycho-physical elemental force*", which in the days to come can no longer be surpassed by anything.

Politically and culturally, a new era is also dawning! Here again it should be clearly pointed out that there is absolutely no thought of *forcibly* incorporating dynamo technology into the German state. The economic transformation of the German people is to take place only through the well-balanced dismantling of existing conditions and the long-term *evolutionary* integration of the new. We are always willing to cooperate with *all* insightful factors and personalities in German economic life, but under no circumstances can we step back from our ethical demands. The elemental force must serve the people as a whole and will *never* be handed over to any power group for its benefit! There is always the possibility of decentralizing our domestic industry to a large extent and making even the small manufacturer, indeed every craftsman, competitive with large-scale industry again, and in this way the increasingly untenable problem of our large and giant industrial cities with their culture-destroying effects can be solved.

The working population can be made permanent in healthy, village-like settlements around the newly built factories. In this way, they can be removed from the chaotic daily hustle and bustle and the corrosive influence of the class struggle, and family life on their home turf can be promoted in the most favorable sense. Centers for the cultivation of German art and culture can be established everywhere and maintained on a permanent basis with the help of the resources gained through the new power.

The new age needs *new* people!

This has already been sufficiently characterized. But these new people cannot be brought up overnight. If that were *the only thing that* mattered, the possibilities for installing dynamic technology would only be available in the coming decades.

But the German people can hardly wait that much longer, and our technology should actually be put at the service of the people's welfare tomorrow, an attempt is being made here to enlighten all people suffering under the present conditions and to induce them to take a stand on our proposals in some way. A great mass will must first be generated in order to create a basis for negotiation on which beneficial agreements can be reached with the current power groups.

These negotiations should then lead us to our goal in the shortest possible time and provide legislative protection for the *primal machine*! However, the *state*, as a national community, is the *beneficiary* of the elemental force! In this way, the *state* should be given all the means to get out of the deplorable circumstances as quickly as possible. The entire German people now has to decide whether it wants the blessings of the elemental force.

According to our preliminary remarks, it would actually be in the very own interest of the present state power to immediately initiate all paths that would lead the entirety to the goal as quickly as possible, and we emphasize once again that we are ready to contact all competent authorities immediately at any time while guaranteeing the protection of the original machine. If this protection is in place and guaranteed by legislation, then the installation of the dynamic technology can begin immediately and the original machine can be set up. In this respect, we have an installation program that has been worked out down to the last detail and can be presented immediately upon request.

The coming technology should also be able to build that mighty bridge (*Pontifex maximus*) between religion and science which must lead to the final reconciliation of these two opposites. *This* dream of mankind, too, as a millennia-old aspiration of all

the insightful, creative development of mankind can be realized in *the near future*! The "energetic God" with his blessing-giving effects will be visibly omnipresent on earth and will no longer be a mere *abstract* concept of religious dogma. Vital electricity as *life energy* will also herald a new era in the development of human health. What the ancient Romans symbolically understood by their "*penates*" (benevolent household stars) is now tangibly before our eyes in the form of the primal force elements! The *psychic* component of the vril – as a vital, creative function – guarantees us the inevitable initiation of new ethics and morals.

"God" in all his power and glory – as the "elemental force" – wants to initiate the "perfection in the spirit" with his sons of man. Thus it is to be fulfilled what was predicted many centuries ago, that "when heaven and earth kiss, (touch!) the kingdom of God will be born on earth!" – This mysterious prophecy has already been realized by dynamic technology, as macrocosmic, dynamic effects appear microcosmically in our dynamic elements!

Existing economic grievances are violently driving towards catastrophe! The misery is on the rise and no time must be lost to banish the spectre of imminent collapse without delay!

It must be clear to any perceptive German that our efforts are to be taken completely seriously and that we are not out to capitalize personally on our discovery. On reflection, one will have to admit that we are not trying to bluff mankind – and that we are not giving any opportunity to possible perpetrators to accuse us of selfish, self-serving motives. Bluffing is always based on deception – and every deception is always intended to somehow "make money"! However, we do not make any monetary demands, on the contrary, we reject any offer "for the purpose of *industrial* exploitation"

of the elemental force and offer our discovery as a *gift* to the German people! *More* altruism cannot be demanded. Our aim is to bring the Vril back to mankind for the *benefit of* the entire globe and to make it useful to them.

As Germans, however, we consider it our foremost duty to make the achievements of the "German spirit" available first and foremost for *German reconstruction*! In due course, however, the vril will be of service to all mankind and also realize the great reconciliation *of all* nations and peoples!

Reich working group "The coming Germany".

A great helping community of action is coming up in the German Reich!

The creative human being is being initiated – and "wise men" are showing practicable ways for the practical education of the Uranian radiation people!

The time of the Uranids is about to dawn! –

Working cells will be created in all German cities and these cells will be merged into a central unit in the Reich capital. Every German is welcome to work with us and *no* German-feeling person seems too small!

The community itself is absolutely *apolitical* and *impartial* and works creatively in the sense of constantly *promoting the good deeds of all religions* to bring about the superman.

Every "seeker", regardless of gender or social status, is welcome and should contact our central office in Berlin W 57, Pallasstraße 7/1.

Now we extend to you the hand of a brother to the spiritual alliance and would like to *work* with you as "*servants*" to build you up!

Thus we all have to see ourselves only as "*servants*" of the community of deeds, who are in the service of "the most sublime of all radiant servants" – the *All-Spirit*.

Now let the seed of deed sown in the human breast grow root-driving into the "deed-world-tree", which – if the All-Power wills – will soon shade over a great community of deeds in a blessing-giving way! On our banners the "Rune of Action" shines in flaming letters of light and leads us to the noble victory of the nature-dominating Uranids!

And our slogan is:

"Through work-radiation – freedom!!!"

But the maintenance of the radiating "primal force cells" to the radiant-wanting people!

So let what countless "*seekers*" *cherish* as the holiest premonition in the deepest breast soon *become reality*!

And *God* is *spirit*, is creative radiant power! But above all: "All-forgiving – because all-knowing love!"

"The coming Germany"**

1930

Foreword / Please note!

The following explanations are an attempt to introduce interested parties who are not technically trained to the problems of breaking dynamic technology in an understandable way.

The "space force disciplines" are completely new and cannot be explained in detail in this brief framework!

However, we are happy to provide technical and scientific circles with more in-depth explanations.

We would also like to point out that a supplementary brochure is available for further information under the title:

**" VRIL, the cosmic elemental force:
Rebirth of Atlantis"**

has been published.¹

Reference should also be made to the fundamental neo-philosophical work "Logos and Bios" by Fritz Klein, which can also be obtained from the publisher of this brochure.

SYMBOLS OF THE TIME

A chapter on "Closing" and "Shooting".

Ever since Berthold Schwan invented gunpowder, the subsequent cultural epoch has obviously been symbolized by "destruction". The more than deplorable conditions of the present are perhaps the culmination of our reservations. Everywhere we look we see the decline, disintegration and destruction of our economic, social and scientific community structures. The smell of decay rises breathtakingly from the tombs of decay and settles paralyzingly and oppressively on the minds of humanity. We are so immensely proud of the achievements of our technology and it is here that the evil spirit of destruction celebrates its greatest triumphs. What use is the boldest endeavor of the human spirit if it is completely focused on testing all achievements first and foremost to see whether and how they can be used as lucratively as possible for war?

Man is degraded to a slave of the machine! It won't be too much longer, and "Moloch Machine" will devour the masses of people who operate it. America, as always, – where it is a matter of beating so-called cultural records – is at the forefront here. Taylorism turns the worker into a dull workhorse who has to carry out nothing but mechanical tasks without thinking. This already clearly shows how the unfeeling apparatus, which crushes all mental impulses, has become the master of the "human spirit". The gray realities of the past world war have shown us in practice where our mechanical and chemical engineering is actually heading. We will not talk about future events here; anyone interested can find out more about this in any newspaper.

In any case, gas and germ warfare are vividly described to us and the devil is already painted on the wall with terrible clarity. Family, kinship structures and the state are visibly decaying, everywhere the bonds are being loosened, dissolution is in the offing. New explosives are constantly on the march, every invention is constantly being tested for its use in war, phosgene and other horrific poisonous gases are on the horizon in the event of a new war – in short, it is a pleasure to live!

Atomic physics has also paved the way for new ways of generating energy, thankfully only speculatively for the time being, and the idea of releasing atomic energy by breaking up atomic structures is being seriously considered. Here, too, the old recipe is being followed and the aim is to "break up" the elements. The effect is tried to be achieved by charging magnetic fields by means of enormous electrical energies. The final result, if such a result is achieved at all, is unlikely to be very pleasing. Here, too, there can only be tremendous explosive effects and this danger is already being argued in all seriousness by responsible people against nuclear disintegration.

If we look around in the universal household of nature, we must admit that it works with unimaginable vital-energetic tensions without breaking up the material agglomerations of force! It achieves every energy effect through the "welding" of two different charged potentials and presents us with the secret of "only wanting to build up life" in flaming letters!

When radioactive substances such as uranium, thorium and the like are energetically released (dematerialized) to the outside, the physicist characteristically speaks of "Aging phenomena of matter", which must necessarily lead to the final "death of matter". Nevertheless, one wants to "smash" atoms, i.e. artificially initiate precisely that which is otherwise rejected as a "dying process". Acceptation always requires life! Here we find ourselves in the middle of the contradictions of our "time of need". Death smells

to our incessant materialists like the devil smells of sulphur, and only a few of our glorious human race long for the fourth dimension – the land of spirits. It has already been said that All-Nature achieves its constructive work through constant energy-splitting effects, so it does not normally smash fuel (physical matter) by force.

Contemporary technology will feel compelled to work as soon as possible in the sense of constructive natural law if it does not want to bring about a cultural catastrophe. It is easy to swim against the current, but the human spirit will always struggle against the laws of nature. Either we drift in the current of "nature's will to build" or the sphinx of life will pass over our corpses with an indifferent smile!

"Shilling" must become the motto of future generations! A completely new technology is knocking at the gates of our time. We will have to biotechnically reorient ourselves so that we can achieve real mastery of nature. "Closing" is the basic principle of every chemoelectric element! Here too, force is generated by balancing the voltage of two differently charged (atomically charged) material potentials. The dynamo works according to a similar principle; the coming reindynamic technology will provide us with the ultimate perfection of energy generation based on the laws of nature by virtually merging the potential gradient "ether voltage of outer space" – "earth" into a uniform element.

Our earth's atmosphere (the earth's magnetostatic force field) functions as a closing field, in which an "artificial lightning" makes the current closure possible. Let us visualize a ball lightning, which we would describe as a ball charged with "condensed electricity", then we have a tremendous vital-electrical voltage before our eyes. Such a voltage is achieved in the dynamic spherical cells, which are set up as a vacuum, by installing a chemo-vital closing conductor.

It should only be noted here that dynamic technology does not construct mechanically operating machines, but biochemically functioning machines charged with permanent (accumulated) electricity, which are excited with specific magnetism through the magnetostatic atmosphere from a transmission point.

The tapped vital-electrical energies will be constantly replenished from the reservoir of all forces, the solid earth. In any case, the coming technology will only heal our cultural and economic wounds under the symbol of reconciliation, not achieving, but lovingly!

Why Oberth's space rocket did not take off

The big excitement is over. It has become noticeably quiet in the forest of leaves and Prof. Oberth has not launched his space rocket!

Was it financial difficulties that at the last moment prevented the realization of the launch announced with great fanfare, or were there perhaps sober considerations of possibility that caused the plan to be abandoned? After all, the project had cost quite a tidy sum of money – and money is rather scarce in our country at the moment! It can certainly be better invested, because – and this is a clarification of principle. – Valier and Oberth have left a piece out of the picture. Their plans are based on false assumptions; a rocket built by them will never be able to penetrate the hypothetical 'emptiness' of space!²

² These and the following conclusions are based on a refutation of the old ether theory of space. The extent to which the authors, contrary to current appearances, are right in central points cannot be discussed here. The conclusions presented here should be seen as an attempt to explain the humanities' theory of space.

Why – asks the astonished layman – perhaps also the thoroughly experienced expert, if we are allowed to speak of 'experts' in this field at all, because every technical work is based on practical experience! But what do we have in the way of empirical experience about the so-called emptiness of space? Actually almost nothing at all! As is well known, physics has not yet become clear about what that mysterious medium – the space-filling world ether ³- is to be addressed as.

The idea was to bring its findings into the then current discussion and to practice its impartiality.

³ In the 19th century, it was believed that light waves and other rays propagate in a medium called "ether". This old term still haunts our language today in the form of 'ether waves'. This ether ensured that the universe was filled with an invisible medium. About a hundred years ago, the ether theory was buried by the theory of relativity. Rays can propagate in empty space and do not require a medium. The unthinkable spectre of emptiness was back. The vacuum then became an object of research. People tried to imagine a space in which neither matter nor energy existed. – In the vacuum-energy concept of modern physics, the ancient concept of the "ether" celebrates a contemporary resurrection. The "Akasha" of the Indians was the "quintessence" of the 5 elements and also stood for empty space and for a subtle primordial energy or primordial substance. The concept of the ether, also familiar to the ancient Greeks, played a role in physics, philosophy, biology and medicine in the West in ever-changing forms and under various names right up to the physics of the 19th century. In physics, it was represented by Isaac Newton as well as later by Maxwell and many others, for whom the ether was the carrier of all electromagnetic waves (Cantor & Hodge, 1981). According to general opinion, the ether theory was refuted in physics at the end of the last century when the American physicists Albert A. Michelson and E.W. Morley in a famous series of experiments 1881-1889 were unable to prove the movement of the earth relative to a space ether that was imagined to be stationary, the "ether drift". In his "Special Theory of Relativity", which was based on this result, Albert Einstein then rejected the idea of an ether in 1905 and only used space itself as the carrier of the electro-magnetic field.

In reality, the existence of the aether had by no means been refuted, as Einstein himself admitted in 1920 when he said that "to deny the aether would ultimately mean assuming that space itself is the carrier of the electro-magnetic field".

Space must be filled with 'something', because in an 'absolute nothing' the ray of light sent from the sun to the orbiting globes could not propagate. If the sun is seen as a cosmic energy anode (positive pole), and science will inevitably have to accept this view in the future, then this huge radioactive energy donor constantly emits (radiates) ions or electrons through space – which are only converted on the spot, i.e. in the atmospheric envelopes of the individual planets as 'light' and 'heat'. This tremendous

empty space would have no physical properties whatsoever" (Einstein, 1920). One had only freed oneself from the dead end of the mechanical ether, which had blocked the physics of the 19th century, and had returned to an ether that was no longer too far removed from the Indian Akasha. – In the meantime, the tide has turned once again. 'Science' has once again said goodbye to nothingness, as an omnipresent "Higgs field", which gives the universe its mass, is needed to explain the origin of matter. The currently proclaimed idea of the universe depends on a particle called the "Higgs boson" actually exists. The first vague reports,

Some media have already reported that the Higgs particle, also known as the "creative particle" or "particle of God" (!), has been discovered. If this particle were to be detected, the universe would not have any empty spaces but would be full of light quanta, neutrinos and Higgs particles. Whether one calls the imaginary object a cosmic energy field, "gravitational field", "tachyon field", "zero-point energy field" or, again, ether or even vril force, is not very enlightening at first, before one can properly distinguish the different forms. – However, this does not mean that the phenomena can now be better explained. Rather, starting from the phenomena themselves, the concept of the aetherial space in the sense of non-Euclidean geometry can and must be taken as a basis for a satisfactory explanation. This was at least partially clear to the authors, as can be seen from the context. However, this work is written in a popular scientific style, which is why they did not want to do without the ether hypothesis, which was still known and discussed at the time, in order to name the problem. Otherwise, however, a coherent theory of the ether is not recognizable here. [For more details, see: "Der Raum des Lichtes und der Finsternis, Beiträge zu einer neuen Lichtlehre" by E. A. Karl Stockmeyer, Stuttgart 1935.]

electron emanation in must have a conductor in the world matter void, which we can possibly analogize roughly to the coherer (closing conductor) of radio transmission technology, or the radiation energy must be a conductor itself, in that it is constantly present as a connection in an unfilled state.

Now the aether physicists claim that their mysterious, mysterious world aether must surpass the hardest steel in 'density' due to the calculated space pressure, which was described as 'thronic radiation'! But how do the globes oscillate unchecked around the central star, indeed how can they penetrate this dense medium at all? The average density of all known solar satellites is far below the related ether density – and nobody has ever been able to run through a wall with their head!

But this ether must be absolutely permeable in the extreme of the preconception and there is no way out of this dead-end alley of materialistic ideas!

But what then fills outer space?

There cannot be a 'nothing' in the whole of creation, consequently there must also be a 'something' in the eternal 'darkness' of cosmic space, which is at most 'something' that can at most be referred to as a 'real' 'nothing'!⁴

Now the well-known Viennese physicist and then president of the Austrian Association of Engineers and Architects, Prof. Joseph Klaudy, has coined a new axiom in his work 'Der dimensionale Weltenbau', which postulates:

"Space is energy, but matter is space"

⁴ Here the concept of 'negative mass', 'less than nothing' or 'sucking ether space' is missing, which can be fully developed as an idea with the help of non-Euclidean geometry and used to explain planetary motion as well as the propagation of light and plant growth.

Space would therefore be an unimaginable energy store of immense density, which the one-sidedly materialistically oriented physicist only sees as 'density'. Since the materialist always equates 'density' with 'mass', the logical conclusion is 'harder than the densest steel'!

And now a small instructive example from the university classroom of nature!

Everyone is familiar with the 'candle flame'. The biochemical burning process is initiated by 'heat charging' (induction) of the burning body (lighting the wick). The deforming flame then shows in the atmospheric air surrounding it; it is therefore lighter than the material medium surrounding it! If you now slide a finger through the width of the flame, you can clearly feel a 'resistance'; the flame space is therefore thicker than the air environment. Explained in purely materialistic terms, the flame, as it is much wider than the air, should depend on the wick – it should burn downwards! But it does not! The flame space is also a material space, but energetically filled and tense. The final application in analogy to the 'empty space' may the reader draw his own conclusions!

We therefore have a tremendous energetic charge – equal to 'filling' and 'tension' – before us in ether space! This 'charge' is to be thought of as pure 'tension' according to the laws of material polarity a polar, i.e. equal – polar – opposite. As a material space, however, the empty force space functions as a 'vacuum' in relation to the material agglomerations (planets). As a banal analogy, we are permitted to name the vacuum! Since, however, according to the findings of atomic physics, we are forced to address 'substance' only as 'energy binding' in bipolar effect, we have in 'energy agglomeration' (substance!) the corresponding component to 'force space' – i.e. bound (latent) 'space'. These two components can then be effectively and functionally interchanged – i.e. in dynamic terms, the vacuum is home to physical 'space force', which is the material 'space force'.

'Power room' as a secondary factor absolutely pervasive – in the 'second act' performs bio-dynamic work. This work is available to us in the physical (material) 'life' for assessment!

Breathing is living! Breathing is 'two-stroke'! ... off – on – off – on ... in endless succession! Breathing, however, always requires an 'atmosphere' – a 'sphere' (spherical space), which is always interposed between two energetic potentials (voltage gradients), and then, as a resilient 'field of tension' capable of modulation, makes life in the physical sense possible in the first place. Every atmosphere is a 'springboard of life' and where there is no such springboard, material (physical) life always breaks its neck. The result is then always dead in physical terms! We find this atmosphere in all basic units of fuel bonds.

The reader must not want to misunderstand the following – here we can only proceed in a 'spiritual-scientific' way in terms of analogies; the following explanations must therefore be understood as such 'pure analogies'!

Let us consider the physical atom! Here we find the 'Proton' (atomic nucleus), which must be seen as a material empty space, only tremendously energetically charged (tense)! Positively charged, i.e. having an anode-like effect, it is assumed to consist of hydrogen according to the latest state of physics. This in itself does not contradict our reservation of an energetic material void! This is because, according to our private research, the aggregate state of this hydrogen charge is still completely unknown to present-day technology! This hydrogen charge of the 'proton' is found in a different aggregate state – which we can possibly refer to as 'fiery'.⁵ This 'cold fire' is now to be understood as a purely energetic state – and this has been known to every secret science since time immemorial as the 'hermetic fire' (fire of life!). The atom – as an 'intrinsic essence' – therefore has

⁵ A 'fourth aggregate state' is familiar to materialistic physics today as the 'plasma state'.

its 'proton' and a surrounding 'electron voltage field' – analogous to 'its own atmosphere'.

Through this negative life activity of catalytic (substance-building) effect, it enters into a relationship with the environment.

The biological 'cell' has its 'cell nucleus' and negative 'life activity' 'protoplasm' (cell viability). The 'cell state' plant – animal – and in the last perfection the 'human being' as a life-conscious becoming being (individual) receives a superior 'atmosphere'; he is surrounded in his outermost shell – his specific 'form' – by a 'vital radiation', the 'aura' – 'odhülle' – psychic radiation. This shell is to be thought of as a closed 'egg-form' (eidolon). But further! – The earth has its atmosphere, the sun too, but this extends to the limits of its system – and so it goes on!

In conclusion – without these specific atmospheres, which appear in ever higher integrations (levels), there is no physical (substance-bound) life! These specific atmospheres of all atomoses (entities) are always under 'tension' in a well-considered balance with the environmental atmospheres piled up in steps! That is why every 'proper being' (atomos) has its own special 'life zone', its 'possible living space'. 'Changes in tension', which can exist – for the afflicted 'proper being', going beyond the maximum of the respective 'individuality' means destruction, giving up the form (individuality), ... 'physical death'. In the long run, however, 'abandonment of the material physical character' in general, dispersion (release) of the bipolar energy agglomeration – stepping out of 'appearance' – energy death! This all the more, the more 'empty of matter' the environment' – the more energy-filled (energy-tensed!) the surrounding 'medium'!

The heavy metals: radium, thorium, uranium become force-active (radioactive) and 'charge active' (de-materialized) because they are no longer in 'tension balance' with the 'environment'.

The Indians already had the last secret 6000 years ago! The energetic primordial god 'Shiva' of their god-duality Shiva-Vishnu, the symbol of the 'radiant', the 'substance-empty-space-filling', – for all his children are Matter; he is the eternal destroyer of matter, but through this very 'substance redeemer'!

That is why we will never be able to penetrate 'vacuum space' with Oberth's spaceship rockets!

The cosmic space-energy tensions have not grown into a 'substance' without an enveloping atmosphere! Only this makes 'physical existence' possible. Out there in the space cold is actually the 'hell' that burns every 'dead thing' – thus eats – consumes! And this is, according to our preliminary explanations, everything that does not possess an atmosphere of its own that enables breathing as a primary, physical life process.

'Breath' is, after all, merely a state of mind, just as 'heat', which closes in infinity tangentially to the uniform tension ring.⁶ In the energetic balance of these two 'poles', however, every physical two-stroke life process unfolds, whereby an atmospheric tension field must necessarily be present as a current converter or commutator. Without this integrated negative activity there is no respiration – and without respiration there is no life – because the latter remains in motion, i.e. it remains in 'motion'! However, physical life is inconceivable without 'movement'!

In conclusion! Every fuel, thus also the rocket spaceship, – without its own atmosphere enveloping the fuel aggregate disperses (shatters) into energy as it leaves the last boundary of the physical atmospheric environment which gave birth to it ages ago.

Oberth and Max Valier together with possible co-passengers could therefore only experience outer space in the fourth dimension – thus as 'spirits', which are indeed there.

⁶ The idea of the curved space structure offered here follows logically from the non-Euclidean, projective geometry of etheric space.

should be at home. No one should be advised against such a space voyage, because 'trial and error' is always better than 'study'!

Our task, however, must be to realize the spaceship problem according to new findings! Here is the final postulate:

'Spherical spaceship with its own atmosphere – i.e. the technical creation of a small planet with world-dynamic propulsion and lift!

Will this be possible? –

In any case, the greatest things are currently being prepared in the world – but especially in Germany!

The secret of the flame

The world around us is full of wonders! If we manage to walk through this wonderful world with open eyes, we can find and unravel the deepest mysteries in the simplest natural phenomena. For the "ordinary mortal", the candle flame is a self-evident fact that he hardly ever thinks about and yet this flickering light reveals to us the deepest secrets of cosmic connections! The purpose of the following explanations is to give the reader an insight into the universal workshop of nature.

To create a flame, we first need fuel. This is then visible to us in the wax or steaming mass of the candle. The wick works as a fuel suction cup and when we use a burning match to make it burn, we charge it with heat. This heat charge (induction) shapes the fuel into a "fiery-energetic" state, which appears in the form of a flame. The atmospheric environment of this flame can be understood as a magnetostatic charge, which interacts with the flame body during the burning process in such a way that the negative electrons of the element

Oxygen – like magnetic force fields – cause further induction effects in the flame space!

It will certainly sound surprising if the assertion is made here that this spherical flame space must be addressed as an empty space of matter, i.e. as a pure vacuum! This vacuum, however, is filled with force tension (energy) and has an effect on the atmospheric environment. Here we have before us in a wonderfully simple way the explanation of empty space, and can derive all relationships to the cosmic space vacuum from it!

This matter-less space is currently giving our science a lot of headaches. It is well known that the density of this mysterious medium (ether), which fills empty space, has to be set equal to that of the "hardest steel" on the basis of perfectly correct calculations! But since the average density of all planets orbiting the sun is far below the relative strength of steel, they could not penetrate the "ether" either. On the contrary, we are forced to assume that this ether is absolutely permeable, since the globes have been swinging their solar cycles unchecked for eons. How can this contradiction be explained?

Our one-sidedly materialistically oriented science always equates the concept of density with "material mass". The "heaviness" of the substance is therefore derived from the concept of mass. Following purely materialistic lines of thought, we then inevitably arrive at the aforementioned assumption that the mysterious mass that fills outer space is the "gravity" of matter, "materially" conceived world ether must be denser than steel! But what would it be like if we were to accept this concept of density purely energetically as a pressure, which expresses itself in relation to the material world globes as pressure (thronic radiation pressure!)?

We come to a surprising conclusion! The flame space, i.e. also the candle flame, for example, is smoldering in the atmospheric environment. This is a perfectly established fact. The flame is lighter than the air, otherwise it would have to

burn underneath! If you glide a moistened finger through the width of a flame, you can clearly feel a pressure. The medium that fills the cavity is thus, in purely materialistic, materialistic terms, denser (heavier) than the surrounding air environment. Here we are confronted with the same contradictions as we found with regard to the hypothetical world ether! The hollow space of the flame is to be understood as an empty space of matter (vacuum) energetically tensed and this tension deceives us according to materialistic ideologies of material density.

But further! The flame vacuum is to be addressed as a "force space" in energetic tension, around which "force space" can be excited by induction (charging of heat) from the material latency (bonding) surrounding this material void. In this way, "force space" can be equated with the positive – "space force" with the negative potential (force gradient) of an electrodynamic unit (dynamo). The magnetostatic potential (in the dynamo the "stator") is the negative electron voltage field of the oxygen atomic structure of the atmosphere, which forms the suction environment of the flame vacuum! This vitalizes the positive energy voltage in the flame power space and activates the "current flow".

The potential difference (voltage difference) "force-space – space-force" (energetic void – material atmosphere) is current-closed, the "essence" of this conclusion then visibly appears in the lighting up of the flame – into "life". Accordingly, in retrospect, all "life" can only be understood as an "appearance of light" (light event). At the lower end of the flame, the fuel fan suction cup (wick!), we have to look for the atomizer (positive) of an electrodynamic generator in purely technical terms. The tip of the flame, however, is to be regarded as a pure catalyst (negative) with a catalytic effect.

Now, as is well known, everything positive, chemically speaking, reacts as acid (oxygen) on litmus paper, while the negative pole, chemically expressed, gives the base – blue litmus reagent. It is certainly

characteristic of the candle flame that we find the same analogy. The wick pole shimmers in reddish light as a positive anode, while the tip of the flame, like a negative cathode, lights up in a bluish glow. Now it also becomes clear why the tip of the flame "glows". This is where we have to look for the catalyst that produces carbon black (soot) in the biochemical combustion process, which has a purely material-building effect!

We have visualized a biodynamically operating Aggregate in each flame. The rotation ("Rotor") – the mechanical stimulation of rotation in the dynamo to strengthen and further charge the magnetostatic potential (atmospheric flame environment) – appears unnecessary, as the mechanical impulse is replaced by a bio-dynamic effect (the Nernst effect). The flame is with Stator and Rotor! As is well known, Nernst achieves a purely dynamic effect of movement (Nernst lamp!) that can otherwise only be produced mechanically by incorporating the cold and heat poles. The clarification of the biodynamic candle flame opens up tremendous perspectives which, if used correctly, will soon guarantee the development of "dynamic technology"!

The world bottle train

Mechanical or dynamic technology?

"Give me a fixed point and I will unhinge the world for you!" This principle was coined by none other than the great physicist and mathematician Archimedes, who lost his life at the hands of a Roman legionnaire in Syracuse. Archimedes is known to be the inventor of the pulley block. This pulley works according to the principle of the unequal-armed lever and its physical mode of operation should be familiar to the inclined reader from their school days.

Theoretically, it would be possible to achieve a tremendous pulling effect by interlocking countless pulleys. Now there is

but such an aggregate consists of two end rollers, which must necessarily be attached to two fixed reference points, on which a pulling action can take place. As a great thinker, Archimedes was certainly aware that he would not be able to unhinge the globe with the help of the mechanical apparatus described above, because it seems practically impossible to find the two necessary material reference points in cosmic space!

Since it would hardly be possible to install this tension hook at the earth's pole, and it is even less possible to establish the sun's reference point, the famous thing has its "own hook"! Such a world train will have to remain an eternal dream.

But if Archimedes spoke his postulate anyway, then perhaps, as a "great knower", he may have understood something else by it. Perhaps we will succeed in discovering the secrets of his ideas!"

Above all, we must realize that the "Bottle" train is actually a "Roll" train! Our language has its secrets and it is up to us to discover the meaning of the word symbols. A bottle is always a hollow space. If such a cavity is to exert a draught effect, then we have to evacuate it, i.e. make it airless. Every airless space has suction power. That should be common knowledge! Has the roller hoist perhaps been deliberately renamed a pulley block? That at least makes one sit up and take notice! We want to therefore try both the "mechano-physical" points of reference to be interpreted "force-energetically"!

Empty space can be addressed as a macro-vacuum. Here we would therefore have a point of reference that has a suction effect on the material environment (the planets). However, this cosmic void is filled with vital energy and therefore also has the function of a tremendous tension, which we can equate to a "pressure". We must look for the second missing reference point. Now we want to examine the substance (matter) and arrive at the surprising result that such an energetic "pressure" actually exists,

a point of attack can be found in the basic units of the elements – the atoms. Every atom has its proton (atomic nucleus), which, according to the latest state of atomic science, is positively charged and must therefore be thought of as tremendously energetic. There is still much speculation today about the true composition of this nucleus. The atomic nucleus is imagined as a positive hydrogen charge. This would not be contradictory in itself! However, this hydrogen charge must be understood in terms of energy rather than material. This hydrogen is in a fiery aggregate state, which is to be understood as a pure energetic charge of a vital-electric nature.

The vacuum of space is cold! It is referred to as the space cold and absolute zero is set at around minus 273 degrees. But cold and heat are special concepts! Relatively cold and warm can only ever be found in the physical world, as every substance must have a double-pole effect as a concentration of force. We would now have found the cold pole more in the cosmic empty space, the opposite pole "warm" must therefore be found in matter. It stands before our eyes in the proton vacuum. The two dynamic reference points have thus been determined! "In the beginning God created the solid!" According to materialistic trains of thought, this solid can only be addressed materially – dynamically, however, a strong solid is at our disposal for evaluation. Every substance was born from the infinite energetically filled (charged) cosmic void ages ago. The biblical "feast" was a force and not a material feast. This can be read in the story of creation. There it is explicitly stated that the sun, moon and stars were materially created "out of nothing". The Creator was a "dynamo-technician" and he created the world according to his own principles. Our technology only ever works according to materialistic, mechano-technical principles and therefore completely lacks anything truly creative.

If we build the heat-cold pole into our dynamic world cylinder, then we have two fixed reference points that can act on each other. We must add a warm inner vacuum on earth to the cold outer vacuum of space, whereupon suction = train working can occur. The coming dynamo technology allows

and creates devices based on new findings that are primarily built on the principles of cold macro- and warm micro-vacuum suction. Nature around us works completely dynamically, nowhere do we see levers and screws or rotating wheels! In the great balance of nature, all work is carried out in a well-balanced energetic tension equalization. The vital-electrical flow of force always reaches its effect from the higher potential to the lower potential. The heat-cold balance always plays the first role in physical life. Physical life is inconceivable without it. The magnetic and electric force fields can only ever be activated by a cold pole heat pole!

So, according to our preliminary explanations, we have found the energetic reference points for our world plane train. Archimedes therefore retains his "Bottle" train right, and it will certainly be possible for a future dynamic technology to practically evaluate the gravitational constant of "speed of light squared per one kilogram of mass" (90,000 trillion meters/kilogram of energy!) if it biotechnically realizes its apparatus according to the aforementioned principles! We are undoubtedly at the turning point of a new era and mankind will soon be faced with the enormous fact that cosmic energies will be practically available in its energy economy to an unlimited extent. And Archimedes may well be right!

The apple of the world

Why were Adam and Eve not allowed to pick the apple from the tree of knowledge?

If we take the Bible to hand and immerse ourselves in the secret meaning of its hidden truths, then we notice above all that the devil, as the tempter of mankind in the form of a serpent, tempted the first human couple, Adam and Eve, to enjoy the fruits of the paradisiacal life,

the center of the apple tree of knowledge. Since this was strictly forbidden to them by God, they had to cross the threshold of their blissful original home and were driven into the wasteland of a suffering-laden plan of existence. To this day, this mystery has been understood and interpreted in sexual symbolic terms. The deeper meaning, however, has been lost to mankind! It should be said right at the beginning that those primitive humans were to be given a "knowledge" of the plan of creation by divine providence according to the counsel of infinite wisdom, since every knowledge requires "responsibility" – and therefore also the possibility of possible errors (sins)!

Because primitive mankind transgressed the benevolent commandment of the Father out of their own will, they necessarily had to follow paths of their own choosing and later went astray in abundance. Through these observations, the symbol of the breaking of the apple has actually been elucidated in its entirety and it shall now be the purpose of further considerations to shed final light on the mystery of the Fall of Man.

Whoever is able to correctly unravel the mystery of the "apple of the world" has truly broken the fruit from the tree of knowledge and is able to gain insight into the cosmic interrelationships of divine creation. And now let us use an apple to examine this last knowledge in order to arrive at the astonishing result that God-Nature really does create in the same way in the smallest as in the largest – and that the world spirit, according to the saying of the great initiate Hermes Trismegistos, works its plan according to the principle: "As above, so below!" has realized its plan.

Let's start by looking at an apple from the outside! We find the fruit stalk with which it was originally connected to the mother tree. The fruit had a blossom as a prerequisite and was dormant in "nothing" at the beginning. The base of the flower bore a pistil whose stigma first had to be fertilized so that an apple could develop from the apparent "nothing". – This is how the whole world, especially our earth, came into being ages ago as the product of a spiritual blossom according to the will of the Creator.

The original spirit was first born materially, i.e. it was formed! All physical life has come from a negative activity (force indifference), which we can refer to as the "apple or world force – cathode" of substance-building (catalytic) effect – and it was always the creative power of the spirit (Logos) that made this construction possible. Opposite the stem pole on the apple is the withered pistil scar, which originally brought about "fertilization". The primer was fertile soil (cathode) and stigma (anode) completely one and the same (apolarity, creative, vital-energetic tension)! Only when growth began did the paternal pole (stigma) move away from the maternal primordial soil (stem – bipolarity of every material phenomenon!) and the fruit grew into an ever larger apple. This scar, which we can also commonly refer to as the "navel", had to detach itself from the mother soil and grow upwards so that a new being – the apple – could "become" in its specific form. We can also observe the same process when animal individuals come to life, because the new offspring (child) is only physically born as an individual when the maternal principle – the primordial soil – expels it and "self-essentiality" sets in. But back to the apple! The scar pole is the same as the apple's dynamic pole. In vegetable life, the fruit remains constantly connected to the maternal principle, the tree that nourishes and enables growth – through the stem (umbilical cord!). Through it, the vital energies pulsate to the apple heart and create the fruit until it is ripe.

How wonderfully the dynamic, creative primal principle always repeats itself in its working methods! The stem pole – like a catalyst – always acts in the sense of a biochemical new substance generator (aspirator) and actually causes the apple to ripen through this function. This negative authorization policy pushes through the center of the fruit (heart!) to the stigma, where it finds its positive conclusion (anode).

Now we take a knife and cut the apple vertically. This cut is made in the direction of the stem to the stigma. Polar (bipolar)

force field whose lines of force strive from an indifferent zone (connecting line between stem and stigma!) towards the periphery (apple circumference) in a double circle. The flesh of the apple demonstrates this clearly in its structure! Again and again, as the fruit continues to develop from the indifferent center point, the line of growth force joins the line of growth force in a figure-eight loop and the apple becomes steadily larger until it has reached maturity.

A closer look at the apple force field reveals the secret of "life" – of vitality! The otherwise indifferent center of the field appears symbolically expanded (differentiated) to form the indifferent (power-inactive) "south-north outer pole" – on the circumference of the apple (stem-scar pole)! In this way, the creative elemental force (vital electricity) works from within the vital-energetic force field center of every "life form" and we must search for the two differentiated, creatively active poles in the apple center. "Differentiation of the indifference!" is the leitmotif of sovereign, creatively active life! We can read this from the vital force lines of our apple cross-section.

But further on! Inside the pulp is the seed case, which as a mark in the fruit section again represents a closed spherical space that forms around the center of the apple (indifference). We therefore want to analogize the pulp envelope surrounding the core to an atmosphere (breathing space). Without this pulp envelope, the vital energetically charged seeds could not develop at all. It can therefore be said that these seeds breathe through the atmosphere of the pulp, which is actually self-evident, since any living development can only come about through the function of breathing. The seed compartments are arranged in the shape of a heart, as anyone can see for themselves from the sectional view. Thus the pulsation in its active elements: up-down, up-down, (heart-breath) is also glyphically determined.

But if we cut open an apple in the direction of the equator – horizontally – we find the arrangement of the seed chambers in the shape of a pentagram!

Here again the noble mystery of creative life shines out to us symbolically and speaks with clear eloquence! Again we can observe the center sphere around which the pulp is arranged in a ring (atmosphere). In the seed chambers lie the fruit seeds, which harbor the miracle of creative new formation. In each seed pulsates vital-electrical energy, which, closed into a unified ring of creation, gives rise to the tree from the seedling and the fruit with new seeds from the tree!

Is it not significant that at the time of the Atlantean epoch, the Atlanteans, who dominated nature, had an energy at their disposal which is handed down to us as "vril" by the secret sciences? The vril was supposedly an energy that was released from the germinal forces of the seed. In any case, this must only be understood symbolically, and the Atlantids were able to put the dormant electrovital power sources of nature at the service of their technology. Hermes Trismegistos speaks of the "hermetic fire", which is also nothing other than a word symbol for tremendous vital energies.

Now we are ready to advance from the secrets of the "fruit of the tree of knowledge" in analogies up to the last cosmic connections.

Our Earth globe has the same structure as we see in the vertically sliced apple. World – pulp ... is the atmospheric globe envelope! The stigma and stem pole are analogous to the north and south poles of the Earth's magnetic axis, with the north pole representing the anode (positive) and the south pole the cathode (negative). As discussed at the beginning of this chapter, the physical creation of our world was made possible from a "relative nothingness" ages ago. This "nothing" is the cosmic material void filled with psycho-physical energies, from which all worlds were born in their material bipolarity through the impulse of the creative All-Spirit (Logos). Here again we refer to our previous explanations!

In axial section, the earth's atmosphere is equal to an apple.

The two magnetic indifferent poles of the earth can be thought of as a force field with a south-north pole (fruit stalk-fruit navel), just as the apple average showed. Now we can also understand the phenomenon of the northern lights, which can only be observed in the northernmost latitudes of our planet, close to the poles. Science has long established that the atmosphere is significantly thinner at the poles than at the equator. Until we have achieved better results in polar research, more detailed investigations should confirm our reservations even more conclusively. At the north and south poles of our globe, the axis of force from the energetic cosmic void pushes forward close to the solid earth's crust (see the apple parable!). This axis of force represents the dynamic rotational fixation of our globe. In the northernmost latitudes it is therefore possible for us to gain an insight into the shell-shaped stratification of our atmosphere; this explains the typical, band-shaped arrangement of the aurora borealis, which is caused by the vital-electric equalization of the differently tensioned atmospheric stratifications.

The further we move away from the poles, the less insight we can gain into the transverse stratification of our earth's atmosphere, which is why the northern lights can only be observed near the poles.

We have to think of the ending as a creative, vital-energetic state of tension (seed). The vital fire (life fire – hermetic fire) is also enclosed here! This is why our Mother Earth is the eternal rebirth of all physical life and why the cycle of every organic event in the form of "seed, individual, maturity (death), new life" is also evident in her! A creative spiritual power is always a necessary prerequisite as a superior power factor. Without Logos (spirit-creative impulse), physical life is impossible even in its smallest units – from the atom and the cell to the cell state and the cellular state. A "spirit-conscious" intelligence of Man, – inconceivable.

In conclusion, we would like to describe the inner energetic state of tension of our solid earth as a "glowing

magnetic charge", which is equivalent to the vital energetic state, "hermetic fire". We can also speak of a "glowing vacuum" (material void) with tremendous vital-electrical tension!

After our clarifications, which have lifted the last veils of hidden cosmic secrets, we now understand the symbol of the "fall of man" of the first humans. At the very moment when man, of his own free will, wanted to take the path of knowledge of the mystery of creation (serpent's lure: "You can become like God!"), he was completely focused on himself and had to accept the errors of this desire for knowledge on his own responsibility. In this way, he drove himself out of the naïve state of existence of paradisiacal self-awareness and must now find his way back to the lost Eden through a hell of cognitive errors, gathering the most painful experiences.

Then, however, he has become a self-confident "master" of magical and almost divine omniscience and, standing above the material, is able to act magically and creatively!

The secret of material indifference

Vital-electrical energy by beating the Artesian fountain of power into indifference.

The infinite wants to become!

Once again, a developmental time circle of humanity has closed and something never imagined is to be realized. Centuries-old prejudices of knowledge collapse – and the flame phoenix of the spirit rises triumphantly from the smoldering ashes of the pyre of dogmatic school wisdom. Already there is light in the

coming morning. The hour of Uranidian mastery of nature is approaching!

We are living in an age of accelerating inventions. The resigned "Impossible!" is disappearing more and more from the dictionaries of our technicians. We are seriously thinking of practically mastering the problem of atom smashing in order to obtain "free fuel energy". After all, matter can only be understood as an "energetic concentration", as the miracles of radioactive substances have already clearly demonstrated. But our contemporary technology still does not want to free itself from the shackles of its purely materialistic, mechanistic ideas. It works according to the vaunted, tried and tested principle of the fuel blaster. The energy material at its disposal must be smashed, shattered and destroyed – the results of such practice are more than depressing. Destruction characterizes the basic trait of our time. Let all the "blessings" of our technology in the past world war be a screaming example to mankind!

What is to become?

Well, a future war that will certainly not be long in coming is likely to prove most terrible. Enough has been written about it in the trade journals and daily newspapers. And here, finally, the responsible question of fate is put to all professional circles as to how they actually envisage the triumph of technology in the future. Should man really be made a slave to the machine? He is no longer a slave to them today, but following the logical development of the recipe used so far, he will soon fall victim to the man-killing juggernaut of "technology"! New paths must be taken to prevent this.

First of all, the current energy mismanagement must be thoroughly changed. In view of the immense concentration of energy as we see it in fuel, it is deeply saddening that we are only able to achieve very limited results with the current means of advanced technical energy utilization. We must realize for once that the human spirit will gradually find new ways

when the currently available sources of raw materials are exhausted. This is to be expected for coal and oil in the near future. What then? In the following remarks, a path is indicated which opens up completely new possibilities for us through insights into the secrets of energetic creation. We know that our current technology is only capable of working with the poles of the bipolar fuel.

If we now consider a bar magnet, it has a force-active north and south pole. The center zone of this magnet is force-inactive, i.e. indifferent! Such a bar magnet has its magnetic force field and we can follow the lines of force precisely using loose iron filings. The lines of force flow from the indifferent center zone to the pole ends of the bar in a circular pattern. From the arrangement of these lines of force alone, we must conclude that the indifferent center zone actually determines the magnetic force activity appearing at the poles of the rod. The force-inducing principle thus originates from indifference.

In every bipolar force field, we have to look for the force-causing power factor in the indifferent center, which in itself is force-inactive, however, and exhibits activity in the periphery, i.e. the polar end points. The relationships of the positive and negative bonding potential are based on the central influence. This is where all the energy that determines the bipolarity of the substance and thus holds the material structure together resides.

Atomic physics already suspects the tremendous dormant energies of the atomic material structure and a formula has already been found that shows us this latent energy. If we address the atomic nuclei (protons) as energetic charges, then we inevitably come to the realization that the material energy in their bonding units – the atoms – must be identical with the world force, the so-called gravitational constant. Newton formulated the long-distance forces (gravity) acting between the individual bodies of the world as units of mass. Quite independently of Newton, the physicist Coulomb discovered experimentally in 1784 that

Coulomb discovered experimentally in 1784 that electrical charges behave in exactly the same way in their action at a distance as the mass relationships found by Newton.

Coulomb's law states that the attractive or repulsive force which two electrical particles (conductors) exert on each other is directly proportional to the two charged quantities of electricity (charge potentials) and inversely proportional to the square of their distance. This law on the behavior of electric charges in relation to each other therefore corresponds exactly to Newton's law on general mass attraction. This leads to the inevitable conclusion that the phenomenon of matter (mass!) must actually be addressed as an electric charge phenomenon, and that therefore matter is nothing other than the bipolar voltage ratio of two electric potentials (charges). The atomic electric potential energies are therefore to be equated with the gravitational force (world force, Urkraft).⁷

If we succeed in technically dealing with the energetic power factor slumbering in the indifference zone, then we have the gravitational force in our own hands. The concept of dormant atomic energy can be expressed in the formula: "Primordial energy equals unit mass times the speed of light squared". Energy is measured in meters/kilograms, mass units in kilograms and the speed of light in meters/seconds. Expressed numerically, one kilogram of mass – such as one kilogram of lead – corresponds to a force of 90000 trillion meters*kilograms. That is an unimaginable magnitude. We see that gravity, light and electricity – in the form of electrical charges in the basic units of matter, the atoms – are actually quite identical!

In order to arrive at the indifferent zone of a bipolar force field, we would have to succeed in finding this force indifference.

⁷ Nobel Prize winner Werner Heisenberg (1901-1976) had already said around 1950 that it must be possible to use magnetism as a source of energy. He added: "But we scientific idiots can't do it; it has to come from outsiders".

i.e. to differentiate them. Then we would have four poles in each material reference, as far as it is magnetically visible to us, whereby the two peripheral outer poles could be transformed into indifferent poles, while the indifferent poles in the middle zone would become creative. To use a play on words: the whole endeavor is actually aimed at transforming force indifference into force indifference.

By solving the problem of differentiating a magnetic indifference, we are able to advance to the aforementioned gravitational constant. Dynamo technology has taken the necessary steps to achieve the desired effect. It solves the problem by adding a bar magnet to a spherical magnet consisting of two hemispheres (spherical magnets), which is located in the spherical cavity and connects the north-south pole of the sphere with a north-south pole of the bar magnet to form a magnetic aggregate. If the indifferent center zone is now cut out of these built-in bar magnets, then we have actually solved the problem of "differentiation of the indifference" in the magnetic sphere-bar aggregate.

At the periphery of the spherical magnet, we obtain two in-difference poles (north-south pole) and in the interior of the aggregate – two differentiated indifference poles on the bar magnets. The peripheral spherical poles then respond exactly like our magnetic earth poles only to already polarized (differentiated) iron, as we see in the compass needle, for example, while the central spherical poles only respond to polarized iron, "differentiated indifference poles" also attract any ordinary iron (indifferent I.)! If this spherical magnet is now set up as a vacuum (emptied of air), we thereby create the possibility of obtaining electrical energy from the opened indifference zone for technical utilization. If our sphere is charged with an electrical potential (accumulated electricity) and the accumulator is earthed in its circuit, whereby the circuit is only established by closing the "chemical mass" – the vital-electric closing conductor (coherer) built into the two hollow bar magnet poles, then only a specific magnetic field is required for this.

The "Urmachine" is to constantly and automatically replenish the energy taken from the earth's force field.

- Reich working group "The coming Germany"

Aeons have risen and fallen in the course of eternity and have found their material manifestations. Before man was, there was the "LAW". And this law was "love", that love, however, which turned from unity into multiplicity by manifesting and separating itself for the sake of unification. This is the great cosmic course of time, that cosmic love, the primal energy, the primal principle, Atma, God or whatever else you want to call it, is good and evil in one.

Our world was born from the womb of the mother-giantess as one of many cosmic children. And the law of love also stands over this, our world.

Our earth is a spark of this world, arranged in the center of the golden ratio in the planetary chain, and therefore of special cosmic significance. In all phases of development on this earth, the one and same law was and is the law of love.

And it was on this earth that man was born. How deeply anchored we are in cosmic events. For all the aforementioned phases of development are anchored as reflexes in the spark or Fohat, the God within us, which is the only and absolute truth. Finding and recognizing this truth within us is the only goal of all cosmic and human evolution. This love, this truth, is the will, the primal will, -

THE PRIMAL FORCE OF THE ANCIENT.

This will, my brother, is manifested in you as a human being. There have been many an age in which people have not understood that love equals will. Now you will understand why "love is the law" and "love under will".

This love, purified from purpose, is neither good nor evil. And it must never be confused with the concept that expresses human feelings.

FRATER JOHANNES

1929
