The settlers’ domain was now menaced with terrible danger. Evidently the island, with its water, its harbor, its resources of all kinds so increased in value by the colonists, and the concealment afforded by Granite House, could not but be convenient for the convicts; in their hands it would become an excellent place of refuge, and, being unknown, it would assure them, for a long time perhaps, impunity and security. Evidently, also, the lives of the settlers would not be respected, and Bob Harvey and his accomplices’ first care would be to massacre them without mercy. Harding and his companions had, therefore, not even the choice of flying and hiding themselves in the island, since the convicts intended to reside there, and since, in the event of the “Speedy” departing on an expedition, it was probable that some of the crew would remain on shore, so as to settle themselves there. Therefore, it would be necessary to fight, to destroy every one of these scoundrels, unworthy of pity, and against whom any

means would be right. So thought Ayrton, and he well knew that Cyrus Harding would be of his way of thinking.

But was resistance and, in the last place, victory possible? That would depend on the equipment of the brig, and the number of men which she carried.

This Ayrton resolved to learn at any cost, and as an hour after his arrival the vociferations had begun to die away, and as a large number of the convicts were already buried in a drunken sleep, Ayrton did not hesitate to venture onto the “Speedy’s” deck, which the extinguished lanterns now left in total darkness. He hoisted himself onto the cutwater, and by the bowsprit arrived at the forecastle. Then, gliding among the convicts stretched here and there, he made the round of the ship, and found that the “Speedy” carried four guns, which would throw shot of from eight to ten pounds in weight. He found also, on touching them that these guns were breech-loaders. They were therefore, of modern make, easily used, and of terrible effect.

As to the men lying on the deck, they were about ten in number, but it was to be supposed that more were sleeping down below. Besides, by listening to them, Ayrton had understood that there were fifty on board. That was a large number for the six settlers of Lincoln Island to contend with! But now, thanks to Ayrton’s devotion, Cyrus Harding would not be surprised, he would know the strength of his adversaries, and would make his arrangements accordingly.

There was nothing more for Ayrton to do but to return, and render to his companions an account of the mission with which he had charged himself, and he prepared to regain the bows of the brig, so that he might let himself down into the water. But to this man, whose wish was, as he had said, to do more than his duty, there came an heroic thought. This was to sacrifice his own life, but save the island and the colonists. Cyrus Harding evidently could not resist fifty ruffians, all well armed, who, either by penetrating by main force into Granite House, or by starving out the besieged, could obtain from them what they wanted. And then he thought of his preservers — those who had made him again a man, and an honest mm, those to whom he owed all — murdered without pity, their works destroyed, their island turned into a pirates’ den! He said to himself that he, Ayrton, was the principal cause of so many disasters, since his old companion, Bob Harvey, had but realized his own plans, and a feeling of horror took possession of him. Then he was seized with an irresistible desire to blow up the brig and with her, all

whom she had on board. He would perish in the explosion, but he would have done his duty.

Ayrton did not hesitate. To reach the powder-room, which is always situated in the after-part of a vessel, was easy. There would be no want of powder in a vessel which followed such a trade, and a spark would be enough to destroy it in an instant.

Ayrton stole carefully along the between-decks, strewn with numerous sleepers, overcome more by drunkenness than sleep. A lantern was lighted at the foot of the mainmast, round which was hung a gun-rack, furnished with weapons of all sorts.

Ayrton took a revolver from the rack, and assured himself that it was loaded and primed. Nothing more was needed to accomplish the work of destruction. He then glided towards the stern, so as to arrive under the brig's poop at the powder-magazine.

It was difficult to proceed along the dimly lighted deck without stumbling over some half-sleeping convict, who retorted by oaths and kicks. Ayrton was, therefore, more than once obliged to halt. But at last he arrived at the partition dividing the aftercabin, and found the door opening into the magazine itself.

Ayrton, compelled to force it open, set to work. It was a difficult operation to perform without noise, for he had to break a padlock. But under his vigorous hand, the padlock broke, and the door was open.

At that moment a hand was laid on Ayrton's shoulder.

"What are you doing here?" asked a tail man, in a harsh voice, who, standing in the shadow, quickly threw the light of a lantern in Ayrton's face.

Ayrton drew beck. In the rapid flash of the lantern, he had recognized his former accomplice, Bob Harvey, who could not have known him, as he must have thought Ayrton long since dead.

"What are you doing here?" again said Bob Harvey, seizing Ayrton by the waistband.

But Ayrton, without replying, wrenched himself from his grasp and attempted to rush into the magazine. A shot fired into the midst of the powder-casks, and all would be over!

“Help, lads!” shouted Bob Harvey.

At his shout two or three pirates awoke, jumped up, and, rushing on Ayrton, endeavored to throw him down. He soon extricated himself from their grasp. He fired his revolver, and two of the convicts fell, but a blow from a knife which he could not ward off made a gash in his shoulder.

Ayrton perceived that he could no longer hope to carry out his project. Bob Harvey had reclosed the door of the powder-magazine, and a movement on the deck indicated a general awakening of the pirates. Ayrton must reserve himself to fight at the side of Cyrus Harding. There was nothing for him but flight!

But was flight still possible? It was doubtful, yet Ayrton resolved to dare everything in order to rejoin his companions.

Four barrels of the revolver were still undischarged. Two were fired — one, aimed at Bob Harvey, did not wound him, or at any rate only slightly, and Ayrton, profiting by the momentary retreat of his adversaries, rushed towards the companion-ladder to gain the deck. Passing before the lantern, he smashed it with a blow from the butt of his revolver. A profound darkness ensued, which favored his flight. Two or three pirates, awakened by the noise, were descending the ladder at the same moment.

A fifth shot from Ayrton laid one low, and the others drew back, not understanding what was going on. Ayrton was on deck in two bounds, and three seconds later, having discharged his last barrel in the face of a pirate who was about to seize him by the throat, he leaped over the bulwarks into the sea.

Ayrton had not made six strokes before shots were splashing around him like hail.

What were Pencroft’s feelings, sheltered under a rock on the islet! What were those of Harding, the reporter, Herbert, and Neb, crouched in the Chimneys, when they heard the reports on board the brig! They rushed out on to the beach, and, their guns shouldered, they stood ready to repel any attack.

They had no doubt about it themselves! Ayrton, surprised by the pirates, had been murdered, and, perhaps, the wretches would profit by the night to make a descent on the island!

Half an hour was passed in terrible anxiety. The firing had ceased, and yet neither Ayrton nor Pencroft had reappeared. Was the islet invaded? Ought they not to fly to the help of Ayrton and Pencroft? But how? The tide being high at that time, rendered the channel impassable. The boat was not there! We may imagine the horrible anxiety which took possession of Harding and his companions!

At last, towards half-past twelve, a boat, carrying two men, touched the beach. It was Ayrton, slightly wounded in the shoulder, and Pencroft, safe and sound, whom their friends received with open arms.

All immediately took refuge in the Chimneys. There Ayrton recounted all that had passed, even to his plan for blowing up the brig, which he had attempted to put into execution.

All hands were extended to Ayrton, who did not conceal from them that their situation was serious. The pirates had been alarmed. They knew that Lincoln Island was inhabited. They would land upon it in numbers and well armed. They would respect nothing. Should the settlers fall into their hands, they must expect no mercy!

“Well, we shall know how to die!” said the reporter.

“Let us go in and watch,” answered the engineer.

“Have we any chance of escape, captain?” asked the sailor.

“Yes, Pencroft.”

“Hum! six against fifty!”

“Yes! six! without counting — ”

“Who?” asked Pencroft.

Cyrus did not reply, but pointed upwards.

CHAPTER 3

The night passed without incident. The colonists were on the qui vive, and did not leave their post at the Chimneys. The pirates, on their side, did not appear to have made any attempt to land. Since the last shots fired at Ayrton not a report, not even a sound, had betrayed the presence of the brig in the neighborhood of the island. It might have been fancied that she had weighed anchor, thinking that she had to deal with her match, and had left the coast.

But it was no such thing, and when day began to dawn the settlers could see a confused mass through the morning mist. It was the “Speedy.”

“These, my friends,” said the engineer, “are the arrangements which appear to me best to make before the fog completely clears away. It hides us from the eyes of the pirates, and we can act without attracting their attention. The most important thing is, that the convicts should believe that the inhabitants of the island are numerous, and consequently capable of resisting them. I therefore propose that we divide into three parties. The first of which shall be posted at the Chimneys, the second at the mouth of the Mercy. As to the third, I think it would be best to place it on the islet, so as to prevent, or at all events delay, any attempt at landing. We have the use of two rifles and four muskets. Each of us will be armed, and, as we are amply provided with powder and shot, we need not spare our fire. We have nothing to fear from the muskets nor even from the guns of the brig. What can they do against these rocks? And, as we shall not fire from the windows of Granite House, the pirates will not think of causing irreparable damage by throwing shell against it. What is to be feared is, the necessity of meeting hand-to-hand, since the convicts have numbers on their side. We must therefore try to prevent them from landing, but without discovering ourselves. Therefore, do not economize the ammunition. Fire often, but with a sure aim. We have each eight or ten enemies to kill, and they must be killed!”

Cyrus Harding had clearly represented their situation, although he spoke in the calmest voice, as if it was a question of directing a piece of work and not ordering a battle. His companions approved these arrangements without even uttering a word. There was nothing more to be done but for each to take his place before the fog should be completely dissipated. Neb and Pencroft immediately ascended to Granite House and brought back a sufficient quantity of ammunition. Gideon Spilett and Ayrton, both very

good marksmen, were armed with the two rifles, which carried nearly a mile. The four other muskets were divided among Harding, Neb, Pencroft, and Herbert.

The posts were arranged in the following manner: —

Cyrus Harding and Herbert remained in ambush at the Chimneys, thus commanding the shore to the foot of Granite House.

Gideon Spilett and Neb crouched among the rocks at the mouth of the Mercy, from which the drawbridges had been raised, so as to prevent any one from crossing in a boat or landing on the opposite shore.

As to Ayrton and Pencroft, they shoved off in the boat, and prepared to cross the channel and to take up two separate stations on the islet. In this way, shots being fired from four different points at once, the convicts would be led to believe that the island was both largely peopled and strongly defended.

In the event of a landing being effected without their having been able to prevent it, and also if they saw that they were on the point of being cut off by the brig's boat, Ayrton and Pencroft were to return in their boat to the shore and proceed towards the threatened spot.

Before starting to occupy their posts, the colonists for the last time wrung each other's hands.

Pencroft succeeded in controlling himself sufficiently to suppress his emotion when he embraced Herbert, his boy! and then they separated.

In a few moments Harding and Herbert on one side, the reporter and Neb on the other, had disappeared behind the rocks, and five minutes later Ayrton and Pencroft, having without difficulty crossed the channel, disembarked on the islet and concealed themselves in the clefts of its eastern shore.

None of them could have been seen, for they themselves could scarcely distinguish the brig in the fog.

It was half-past six in the morning.

Soon the fog began to clear away, and the topmasts of the brig issued from the vapor. For some minutes great masses rolled over the surface of the sea, then a breeze sprang up, which rapidly dispelled the mist.

The “Speedy” now appeared in full view, with a spring on her cable, her head to the north, presenting her larboard side to the island. Just as Harding had calculated, she was not more than a mile and a quarter from the coast.

The sinister black flag floated from the peak.

The engineer, with his telescope, could see that the four guns on board were pointed at the island. They were evidently ready to fire at a moment’s notice.

In the meanwhile the “Speedy” remained silent. About thirty pirates could be seen moving on the deck. A few more on the poop; two others posted in the shrouds, and armed with spyglasses, were attentively surveying the island.

Certainly, Bob Harvey and his crew would not be able easily to give an account of what had happened during the night on board the brig. Had this half-naked man, who had forced the door of the powder-magazine, and with whom they had struggled, who had six times discharged his revolver at them, who had killed one and wounded two others, escaped their shot? Had he been able to swim to shore? Whence did he come? What had been his object? Had his design really been to blow up the brig, as Bob Harvey had thought? All this must be confused enough to the convicts’ minds. But what they could no longer doubt was that the unknown island before which the “Speedy” had cast anchor was inhabited, and that there was, perhaps, a numerous colony ready to defend it. And yet no one was to be seen, neither on the shore, nor on the heights. The beach appeared to be absolutely deserted. At any rate, there was no trace of dwellings. Had the inhabitants fled into the interior? Thus probably the pirate captain reasoned, and doubtless, like a prudent man, he wished to reconnoiter the locality before he allowed his men to venture there.

During an hour and a half, no indication of attack or landing could be observed on board the brig. Evidently Bob Harvey was hesitating. Even with his strongest telescopes he could not have perceived one of the settlers crouched among the rocks. It was not even probable that his attention had been awakened by the screen of green branches and creepers hiding the windows of Granite House, and showing rather conspicuously on

the bare rock. Indeed, how could he imagine that a dwelling was hollowed out, at that height, in the solid granite? From Claw Cape to the Mandible Capes, in all the extent of Union Bay, there was nothing to lead him to suppose that the island was or could be inhabited.

At eight o'clock, however, the colonists observed a movement on board the "Speedy." A boat was lowered, and seven men jumped into her. They were armed with muskets; one took the yoke-lines, four others the oars, and the two others, kneeling in the bows, ready to fire, reconnoitered the island. Their object was no doubt to make an examination but not to land, for in the latter case they would have come in larger numbers. The pirates from their look-out could have seen that the coast was sheltered by an islet, separated from it by a channel half a mile in width. However, it was soon evident to Cyrus Harding, on observing the direction followed by the boat, that they would not attempt to penetrate into the channel, but would land on the islet.

Pencroft and Ayrton, each hidden in a narrow cleft of the rock, saw them coming directly towards them, and waited till they were within range.

The boat advanced with extreme caution. The oars only dipped into the water at long intervals. It could now be seen that one of the convicts held a lead-line in his hand, and that he wished to fathom the depth of the channel hollowed out by the current of the Mercy. This showed that it was Bob Harvey's intention to bring his brig as near as possible to the coast. About thirty pirates, scattered in the rigging, followed every movement of the boat, and took the bearings of certain landmarks which would allow them to approach without danger. The boat was not more than two cables-lengths off the islet when she stopped. The man at the tiller stood up and looked for the best place at which to land.

At that moment two shots were heard. Smoke curled up from among the rocks of the islet. The man at the helm and the man with the lead-line fell backwards into the boat. Ayrton's and Pencroft's balls had struck them both at the same moment.

Almost immediately a louder report was heard, a cloud of smoke issued from the brig's side, and a ball, striking the summit of the rock which sheltered Ayrton and Pencroft, made it fly in splinters, but the two marksmen remained unhurt.

Horrible imprecations burst from the boat, which immediately continued its way. The man who had been at the tiller was replaced by one of his comrades, and the oars were rapidly plunged into the water. However, instead of returning on board as might have been expected, the boat coasted along the islet, so as to round its southern point. The pirates pulled vigorously at their oars that they might get out of range of the bullets.

They advanced to within five cables-lengths of that part of the shore terminated by Flotsam Point, and after having rounded it in a semicircular line, still protected by the brig's guns, they proceeded towards the mouth of the Mercy.

Their evident intention was to penetrate into the channel, and cut off the colonists posted on the islet, in such a way, that whatever their number might be, being placed between the fire from the boat and the fire from the brig, they would find themselves in a very disadvantageous position.

A quarter of an hour passed while the boat advanced in this direction. Absolute silence, perfect calm reigned in the air and on the water.

Pencroft and Ayrton, although they knew they ran the risk of being cut off, had not left their post, both that they did not wish to show themselves as yet to their assailants, and expose themselves to the "Speedy's" guns, and that they relied on Neb and Gideon Spilett, watching at the mouth of the river, and on Cyrus Harding and Herbert, in ambush among the rocks at the Chimneys.

Twenty minutes after the first shots were fired, the boat was less than two cables-lengths off the Mercy. As the tide was beginning to rise with its accustomed violence, caused by the narrowness of the straits, the pirates were drawn towards the river, and it was only by dint of hard rowing that they were able to keep in the middle of the channel. But, as they were passing within good range of the mouth of the Mercy, two balls saluted them, and two more of their number were laid in the bottom of the boat. Neb and Spilett had not missed their aim.

The brig immediately sent a second ball on the post betrayed by the smoke, but without any other result than that of splintering the rock.

The boat now contained only three able men. Carried on by the current, it shot through the channel with the rapidity of an arrow, passed before Harding and Herbert, who, not

thinking it within range, withheld their fire, then, rounding the northern point of the islet with the two remaining oars, they pulled towards the brig.

Hitherto the settlers had nothing to complain of. Their adversaries had certainly had the worst of it. The latter already counted four men seriously wounded if not dead; they, on the contrary, unwounded, had not missed a shot. If the pirates continued to attack them in this way, if they renewed their attempt to land by means of a boat, they could be destroyed one by one.

It was now seen how advantageous the engineer's arrangements had been. The pirates would think that they had to deal with numerous and well-armed adversaries, whom they could not easily get the better of.

Half an hour passed before the boat, having to pull against the current, could get alongside the "Speedy." Frightful cries were heard when they returned on board with the wounded, and two or three guns were fired with no results.

But now about a dozen other convicts, maddened with rage, and possibly by the effect of the evening's potations, threw themselves into the boat. A second boat was also lowered, in which eight men took their places, and while the first pulled straight for the islet, to dislodge the colonists from thence the second maneuvered so as to force the entrance of the Mercy.

The situation was evidently becoming very dangerous for Pencroft and Ayrton, and they saw that they must regain the mainland.

However, they waited till the first boat was within range, when two well-directed balls threw its crew into disorder. Then, Pencroft and Ayrton, abandoning their posts, under fire from the dozen muskets, ran across the islet at full speed, jumped into their boat, crossed the channel at the moment the second boat reached the southern end, and ran to hide themselves in the Chimneys.

They had scarcely rejoined Cyrus Harding and Herbert, before the islet was overrun with pirates in every direction. Almost at the same moment, fresh reports resounded from the Mercy station, to which the second boat was rapidly approaching. Two, out of the eight men who manned her, were mortally wounded by Gideon Spilett and Neb, and the boat herself, carried irresistibly onto the reefs, was stove in at the mouth of the Mercy. But the six survivors, holding their muskets above their heads to preserve them

from contact with the water, managed to land on the right bank of the river. Then, finding they were exposed to the fire of the ambush there, they fled in the direction of Flotsam Point, out of range of the balls.

The actual situation was this: on the islet were a dozen convicts, of whom some were no doubt wounded, but who had still a boat at their disposal; on the island were six, but who could not by any possibility reach Granite House, as they could not cross the river, all the bridges being raised.

“Hallo,” exclaimed Pencroft as he rushed into the Chimneys, “hallo, captain! What do you think of it, now?”

“I think,” answered the engineer, “that the combat will now take a new form, for it cannot be supposed that the convicts will be so foolish as to remain in a position so unfavorable for them!”

“They won’t cross the channel,” said the sailor. “Ayrton and Mr. Spilett’s rifles are there to prevent them. You know that they carry more than a mile!”

“No doubt,” replied Herbert; “but what can two rifles do against the brig’s guns?”

“Well, the brig isn’t in the channel yet, I fancy!” said Pencroft.

“But suppose she does come there?” said Harding.

“That’s impossible, for she would risk running aground and being lost!”

“It is possible,” said Ayrton. “The convicts might profit by the high tide to enter the channel, with the risk of grounding at low tide, it is true; but then, under the fire from her guns, our posts would be no longer tenable.”

“Confound them!” exclaimed Pencroft, “it really seems as if the blackguards were preparing to weigh anchor.”

“Perhaps we shall be obliged to take refuge in Granite House!” observed Herbert.

“We must wait!” answered Cyrus Harding.

“But Mr. Spilett and Neb?” said Pencroft.

“They will know when it is best to rejoin us. Be ready, Ayrton. It is yours and Spilett’s rifles which must speak now.”

It was only too true. The “Speedy” was beginning to weigh her anchor, and her intention was evidently to approach the islet. The tide would be rising for an hour and a half, and the ebb current being already weakened, it would be easy for the brig to advance. But as to entering the channel, Pencroft, contrary to Ayrton’s opinion, could not believe that she would dare to attempt it.

In the meanwhile, the pirates who occupied the islet had gradually advanced to the opposite shore, and were now only separated from the mainland by the channel.

Being armed with muskets alone, they could do no harm to the settlers, in ambush at the Chimneys and the mouth of the Mercy; but, not knowing the latter to be supplied with long-range rifles, they on their side did not believe themselves to be exposed. Quite uncovered, therefore, they surveyed the islet, and examined the shore.

Their illusion was of short duration. Ayrton’s and Gideon Spilett’s rifles then spoke, and no doubt imparted some very disagreeable intelligence to two of the convicts, for they fell backwards.

Then there was a general helter-skelter. The ten others, not even stopping to pick up their dead or wounded companions, fled to the other side of the islet, tumbled into the boat which had brought them, and pulled away with all their strength.

“Eight less!” exclaimed Pencroft. “Really, one would have thought that Mr. Spilett and Ayrton had given the word to fire together!”

“Gentlemen,” said Ayrton, as he reloaded his gun, “this is becoming more serious. The brig is making sail!”

“The anchor is weighed!” exclaimed Pencroft.

“Yes, and she is already moving.”

In fact, they could distinctly hear the creaking of the windlass. The “Speedy” was at first held by her anchor; then, when that had been raised, she began to drift towards the shore. The wind was blowing from the sea; the jib and the foretopsail were hoisted, and the vessel gradually approached the island.

From the two posts of the Mercy and the Chimneys they watched her without giving a sign of life, but not without some emotion. What could be more terrible for the colonists than to be exposed, at a short distance, to the brig's guns, without being able to reply with any effect? How could they then prevent the pirates from landing?

Cyrus Harding felt this strongly, and he asked himself what it would be possible to do. Before long, he would be called upon for his determination. But what was it to be? To shut themselves up in Granite House, to be besieged there, to remain there for weeks, for months even, since they had an abundance of provisions? So far good! But after that? The pirates would not the less be masters of the island, which they would ravage at their pleasure, and in time, they would end by having their revenge on the prisoners in Granite House.

However, one chance yet remained; it was that Bob Harvey, after all, would not venture his ship into the channel, and that he would keep outside the islet. He would be still separated from the coast by half a mile, and at that distance his shot could not be very destructive.

"Never!" repeated Pencroft, "Bob Harvey will never, if he is a good seaman, enter that channel! He knows well that it would risk the brig, if the sea got up ever so little! And what would become of him without his vessel?"

In the meanwhile the brig approached the islet, and it could be seen that she was endeavoring to make the lower end. The breeze was light, and as the current had then lost much of its force, Bob Harvey had absolute command over his vessel.

The route previously followed by the boats had allowed her to reconnoiter the channel, and she boldly entered it.

The pirate's design was now only too evident; he wished to bring her broadside to bear on the Chimneys and from there to reply with shell and ball to the shot which had till then decimated her crew.

Soon the "Speedy" reached the point of the islet; she rounded it with ease; the mainsail was braced up, and the brig hugging the wind, stood across the mouth of the Mercy.

"The scoundrels! they are coming!" said Pencroft.

At that moment, Cyrus Harding, Ayrton, the sailor, and Herbert, were rejoined by Neb and Gideon Spilett.

The reporter and his companion had judged it best to abandon the post at the Mercy, from which they could do nothing against the ship, and they had acted wisely. It was better that the colonists should be together at the moment when they were about to engage in a decisive action. Gideon Spilett and Neb had arrived by dodging behind the rocks, though not without attracting a shower of bullets, which had not, however, reached them.

“Spilett! Neb!” cried the engineer. “You are not wounded?”

“No,” answered the reporter, “a few bruises only from the ricochet! But that cursed brig has entered the channel!”

“Yes,” replied Pencroft, “and in ten minutes she will have anchored before Granite House!”

“Have you formed any plan, Cyrus?” asked the reporter.

“We must take refuge in Granite House while there is still time, and the convicts cannot see us.”

“That is, my opinion, too,” replied Gideon Spilett, “but once shut up — ”

“We must be guided by circumstances,” said the engineer.

“Let us be off, then, and make haste!” said the reporter.

“Would you not wish, captain, that Ayrton and I should remain here?” asked the sailor.

“What would be the use of that, Pencroft?” replied Harding. “No. We will not separate!”

There was not a moment to be lost. The colonists left the Chimneys. A bend of the cliff prevented them from being seen by those in the brig, but two or three reports, and the crash of bullets on the rock, told them that the “Speedy” was at no great distance.

To spring into the lift, hoist themselves up to the door of Granite House, where Top and Jup had been shut up since the evening before, to rush into the large room, was the work of a minute only.

It was quite time, for the settlers, through the branches, could see the “Speedy,” surrounded with smoke, gliding up the channel. The firing was incessant, and shot from the four guns struck blindly, both on the Mercy post, although it was not occupied, and on the Chimneys. The rocks were splintered, and cheers accompanied each discharge. However, they were hoping that Granite House would be spared, thanks to Harding’s precaution of concealing the windows when a shot, piercing the door, penetrated into the passage.

“We are discovered!” exclaimed Pencroft.

The colonists had not, perhaps, been seen, but it was certain that Bob Harvey had thought proper to send a ball through the suspected foliage which concealed that part of the cliff. Soon he redoubled his attack, when another ball having torn away the leafy screen, disclosed a gaping aperture in the granite.

The colonists’ situation was desperate. Their retreat was discovered. They could not oppose any obstacle to these missiles, nor protect the stone, which flew in splinters around them. There was nothing to be done but to take refuge in the upper passage of Granite House, and leave their dwelling to be devastated, when a deep roar was heard, followed by frightful cries!

Cyrus Harding and his companions rushed to one of the windows —

The brig, irresistibly raised on a sort of water-spout, had just split in two, and in less than ten seconds she was swallowed up with all her criminal crew!

CHAPTER 4

“She has blown up!” cried Herbert.

“Yes! blown up, just as if Ayrton had set fire to the powder!” returned Pencroft, throwing himself into the lift together with Neb and the lad.

“But what has happened?” asked Gideon Spilett, quite stunned by this unexpected catastrophe.

“Oh! this time, we shall know — ” answered the engineer quickly.

“What shall we know? — ”

“Later! later! Come, Spilett. The main point is that these pirates have been exterminated!”

And Cyrus Harding, hurrying away the reporter and Ayrton, joined Pencroft, Neb, and Herbert on the beach.

Nothing could be seen of the brig, not even her masts. After having been raised by the water-spout, she had fallen on her side, and had sunk in that position, doubtless in consequence of some enormous leak. But as in that place the channel was not more than twenty feet in depth, it was certain that the sides of the submerged brig would reappear at low water.

A few things from the wreck floated on the surface of the water, a raft could be seen consisting of spare spars, coops of poultry with their occupants still living, boxes and barrels, which gradually came to the surface, after having escaped through the hatchways, but no pieces of the wreck appeared, neither planks from the deck, nor timber from the hull, — which rendered the sudden disappearance of the “Speedy” perfectly inexplicable.

However, the two masts, which had been broken and escaped from the shrouds and stays came up, and with their sails, some furled and the others spread. But it was not necessary to wait for the tide to bring up these riches, and Ayrton and Pencroft jumped into the boat with the intention of towing the pieces of wreck either to the beach or to

the islet. But just as they were shoving off, an observation from Gideon Spilett arrested them.

“What about those six convicts who disembarked on the right bank of the Mercy?” said he.

In fact, it would not do to forget that the six men whose boat had gone to pieces on the rocks had landed at Flotsam Point.

They looked in that direction. None of the fugitives were visible. It was probable that, having seen their vessel engulfed in the channel, they had fled into the interior of the island.

“We will deal with them later,” said Harding. “As they are armed, they will still be dangerous; but as it is six against six, the chances are equal. To the most pressing business first.”

Ayrton and Pencroft pulled vigorously towards the wreck.

The sea was calm and the tide very high, as there had been a new moon but two days before. A whole hour at least would elapse before the hull of the brig could emerge from the water of the channel.

Ayrton and Pencroft were able to fasten the masts and spars by means of ropes, the ends of which were carried to the beach. There, by the united efforts of the settlers the pieces of wreck were hauled up. Then the boat picked up all that was floating, coops, barrels, and boxes, which were immediately carried to the Chimneys.

Several bodies floated also. Among them, Ayrton recognized that of Bob Harvey, which he pointed out to his companion, saying with some emotion, —

“That is what I have been, Pencroft.”

“But what you are no longer, brave Ayrton!” returned the sailor warmly.

It was singular enough that so few bodies floated. Only five or six were counted, which were already being carried by the current towards the open sea. Very probably the convicts had not had time to escape, and the ship lying over on her side, the greater number of them had remained below. Now the current, by carrying the bodies of these

miserable men out to sea, would spare the colonists the sad task of burying them in some corner of their island.

For two hours, Cyrus Harding and his companions were solely occupied in hauling up the spars on to the sand, and then in spreading the sails which were perfectly uninjured, to dry. They spoke little, for they were absorbed in their work, but what thoughts occupied their minds!

The possession of this brig, or rather all that she contained, was a perfect mine of wealth. In fact, a ship is like a little world in miniature, and the stores of the colony would be increased by a large number of useful articles. It would be, on a large scale, equivalent to the chest found at Flotsam Point.

“And besides,” thought Pencroft, “why should it be impossible to refloat the brig? If she has only a leak, that may be stopped up; a vessel from three to four hundred tons, why she is a regular ship compared to our ‘Bonadventure’! And we could go a long distance in her! We could go anywhere we liked! Captain Harding, Ayrton and I must examine her! She would be well worth the trouble!”

In fact, if the brig was still fit to navigate, the colonists’ chances of returning to their native land were singularly increased. But, to decide this important question, it was necessary to wait until the tide was quite low, so that every part of the brig’s hull might be examined.

When their treasures had been safely conveyed on shore, Harding and his companions agreed to devote some minutes to breakfast. They were almost famished; fortunately, the larder was not far off, and Neb was noted for being an expeditious cook. They breakfasted, therefore, near the Chimneys, and during their repast, as may be supposed, nothing was talked of but the event which had so miraculously saved the colony.

“Miraculous is the word,” repeated Pencroft, “for it must be acknowledged that those rascals blew up just at the right moment! Granite House was beginning to be uncomfortable as a habitation!”

“And can you guess, Pencroft,” asked the reporter, “how it happened, or what can have occasioned the explosion?”

“Oh! Mr. Spilett, nothing is more simple,” answered Pencroft. “A convict vessel is not disciplined like a man-of-war! Convicts are not sailors. Of course the powder-magazine was open, and as they were firing incessantly, some careless or clumsy fellow just blew up the vessel!”

“Captain Harding,” said Herbert, “what astonishes me is that the explosion has not produced more effect. The report was not loud, and besides there are so few planks and timbers torn out. It seems as if the ship had rather foundered than blown up.”

“Does that astonish you, my boy?” asked the engineer.

“Yes, captain.”

“And it astonishes me also, Herbert,” replied he, “but when we visit the hull of the brig, we shall no doubt find the explanation of the matter.”

“Why, captain,” said Pencroft, “you don’t suppose that the ‘Speedy’ simply foundered like a ship which has struck on a rock?”

“Why not,” observed Neb, “if there are rocks in the channel?”

“Nonsense, Neb,” answered Pencroft, “you did not look at the right moment. An instant before she sank, the brig, as I saw perfectly well, rose on an enormous wave, and fell back on her larboard side. Now, if she had only struck, she would have sunk quietly and gone to the bottom like an honest vessel.”

“It was just because she was not an honest vessel!” returned Neb.

“Well, we shall soon see, Pencroft,” said the engineer.

“We shall soon see,” rejoined the sailor, “but I would wager my head there are no rocks in the channel. Look here, captain, to speak candidly, do you mean to say that there is anything marvelous in the occurrence?”

Cyrus Harding did not answer.

“At any rate,” said Gideon Spilett, “whether rock or explosion, you will agree, Pencroft, that it occurred just in the nick of time!”

“Yes! yes!” replied the sailor, “but that is not the question. I ask Captain Harding if he sees anything supernatural in all this.”

“I cannot say, Pencroft,” said the engineer. “That is all the answer I can make.”

A reply which did not satisfy Pencroft at all. He stuck to “an explosion,” and did not wish to give it up. He would never consent to admit that in that channel, with its fine sandy bed, just like the beach, which he had often crossed at low water, there could be an unknown rock.

And besides, at the time the brig foundered, it was high water, that is to say, there was enough water to carry the vessel clear over any rocks which would not be uncovered at low tide. Therefore, there could not have been a collision. Therefore, the vessel had not struck. So she had blown up.

And it must be confessed that the sailor’s arguments were reasonable.

Towards half-past one, the colonists embarked in the boat to visit the wreck. It was to be regretted that the brig’s two boats had not been saved; but one, as has been said, had gone to pieces at the mouth of the Mercy, and was absolutely useless; the other had disappeared when the brig went down, and had not again been seen, having doubtless been crushed.

The hull of the “Speedy” was just beginning to issue from the water. The brig was lying right over on her side, for her masts being broken, pressed down by the weight of the ballast displaced by the shock, the keel was visible along her whole length. She had been regularly turned over by the inexplicable but frightful submarine action, which had been at the same time manifested by an enormous water-spout.

The settlers rowed round the hull, and in proportion as the tide went down, they could ascertain, if not the cause which had occasioned the catastrophe, at least the effect produced.

Towards the bows, on both sides of the keel, seven or eight feet from the beginning of the stem, the sides of the brig were frightfully torn. Over a length of at least twenty feet there opened two large leaks, which would be impossible to stop up. Not only had the copper sheathing and the planks disappeared, reduced, no doubt, to powder, but also the ribs, the iron bolts, and treenails which united them. From the entire length of the hull

to the stern the false keel had been separated with an unaccountable violence, and the keel itself, torn from the carline in several places, was split in all its length.

“I’ve a notion!” exclaimed Pencroft, “that this vessel will be difficult to get afloat again.”

“It will be impossible,” said Ayrton.

“At any rate,” observed Gideon Spilett to the sailor, “the explosion, if there has been one, has produced singular effects! It has split the lower part of the hull, instead of blowing up the deck and topsides! These great rents appear rather to have been made by a rock than by the explosion of a powder-magazine.”

“There is not a rock in the channel!” answered the sailor. “I will admit anything you like, except the rock.”

“Let us try to penetrate into the interior of the brig,” said the engineer; “perhaps we shall then know what to think of the cause of her destruction.”

This was the best thing to be done, and it was agreed, besides, to take an inventory of all the treasures on board, and to arrange their preservation.

Access to the interior of the brig was now easy. The tide was still going down and the deck was practicable. The ballast, composed of heavy masses of iron, had broken through in several places. The noise of the sea could be heard as it rushed out at the holes in the hull.

Cyrus Harding and his companions, hatchets in hand, advanced along the shattered deck. Cases of all sorts encumbered it, and, as they had been but a very short time in the water, their contents were perhaps uninjured.

They then busied themselves in placing all this cargo in safety. The water would not return for several hours, and these hours must be employed in the most profitable way. Ayrton and Pencroft had, at the entrance made in the hull, discovered tackle, which would serve to hoist up the barrels and chests. The boat received them and transported them to the shore. They took the articles as they came, intending to sort them afterwards.

At any rate, the settlers saw at once, with extreme satisfaction, that the brig possessed a very varied cargo — an assortment of all sorts of articles, utensils, manufactured goods, and tools — such as the ships which make the great coasting-trade of Polynesia are usually laden with. It was probable that they would find a little of everything, and they agreed that it was exactly what was necessary for the colony of Lincoln Island.

However — and Cyrus Harding observed it in silent astonishment — not only, as has been said, had the hull of the brig enormously suffered from the shock, whatever it was, that had occasioned the catastrophe, but the interior arrangements had been destroyed, especially towards the bows. Partitions and stanchions were smashed, as if some tremendous shell had burst in the interior of the brig. The colonists could easily go fore and aft, after having removed the cases as they were extricated. They were not heavy bales, which would have been difficult to remove, but simple packages, of which the stowage, besides, was no longer recognizable.

The colonists then reached the stern of the brig — the part formerly surmounted by the poop. It was there that, following Ayrton's directions, they must look for the powder-magazine. Cyrus Harding thought that it had not exploded; that it was possible some barrels might be saved, and that the powder, which is usually enclosed in metal coverings might not have suffered from contact with the water.

This, in fact, was just what had happened. They extricated from among a large number of shot twenty barrels, the insides of which were lined with copper. Pencroft was convinced by the evidence of his own eyes that the destruction of the "Speedy" could not be attributed to an explosion. That part of the hull in which the magazine was situated was, moreover, that which had suffered least.

"It may be so," said the obstinate sailor; "but as to a rock, there is not one in the channel!"

"Then, how did it happen?" asked Herbert.

"I don't know," answered Pencroft, "Captain Harding doesn't know, and nobody knows or ever will know!"

Several hours had passed during these researches, and the tide began to flow. Work must be suspended for the present. There was no fear of the brig being carried away by the sea, for she was already fixed as firmly as if moored by her anchors.

They could, therefore, without inconvenience, wait until the next day to resume operations; but, as to the vessel itself, she was doomed, and it would be best to hasten to save the remains of her hull, as she would not be long in disappearing in the quicksands of the channel.

It was now five o'clock in the evening. It had been a hard day's work for the men. They ate with good appetite, and notwithstanding their fatigue, they could not resist, after dinner, their desire of inspecting the cases which composed the cargo of the "Speedy."

Most of them contained clothes, which, as may be believed, was well received. There were enough to clothe a whole colony — linen for every one's use, shoes for every one's feet.

"We are too rich!" exclaimed Pencroft, "But what are we going to do with all this?"

And every moment burst forth the hurrahs of the delighted sailor when he caught sight of the barrels of gunpowder, firearms and sidearms, balls of cotton, implements of husbandry, carpenter's, joiner's, and blacksmith's tools, and boxes of all kinds of seeds, not in the least injured by their short sojourn in the water. Ah, two years before, how these things would have been prized! And now, even though the industrious colonists had provided themselves with tools, these treasures would find their use.

There was no want of space in the store-rooms of Granite House, but that daytime would not allow them to stow away the whole. It would not do also to forget that the six survivors of the "Speedy's" crew had landed on the island, for they were in all probability scoundrels of the deepest dye, and it was necessary that the colonists should be on their guard against them. Although the bridges over the Mercy were raised, the convicts would not be stopped by a river or a stream and, rendered desperate, these wretches would be capable of anything.

They would see later what plan it would be best to follow; but in the meantime it was necessary to mount guard over cases and packages heaped up near the Chimneys, and thus the settlers employed themselves in turn during the night.

The morning came, however, without the convicts having attempted any attack. Master Jup and Top, on guard at the foot of Granite House, would have quickly given the alarm. The three following days — the 19th, 20th, and 21st of October — were

employed in saving everything of value, or of any use whatever, either from the cargo or rigging of the brig. At low tide they overhauled the hold — at high tide they stowed away the rescued articles. A great part of the copper sheathing had been torn from the hull, which every day sank lower. But before the sand had swallowed the heavy things which had fallen through the bottom, Ayrton and Pencroft, diving to the bed of the channel, recovered the chains and anchors of the brig, the iron of her ballast, and even four guns, which, floated by means of empty casks, were brought to shore.

It may be seen that the arsenal of the colony had gained by the wreck, as well as the storerooms of Granite House. Pencroft, always enthusiastic in his projects, already spoke of constructing a battery to command the channel and the mouth of the river. With four guns, he engaged to prevent any fleet, “however powerful it might be,” from venturing into the waters of Lincoln Island!

In the meantime, when nothing remained of the brig but a useless hulk, bad weather came on, which soon finished her. Cyrus Harding had intended to blow her up, so as to collect the remains on the shore, but a strong gale from the northeast and a heavy sea compelled him to economize his powder.

In fact, on the night of the 23rd, the hull entirely broke up, and some of the wreck was cast up on the beach.

As to the papers on board, it is useless to say that, although he carefully searched the lockers of the poop, Harding did not discover any trace of them. The pirates had evidently destroyed everything that concerned either the captain or the owners of the “Speedy,” and, as the name of her port was not painted on her counter, there was nothing which would tell them her nationality. However, by the shape of her boats Ayrton and Pencroft believed that the brig was of English build.

A week after the castrophe — or, rather, after the fortunate, though inexplicable, event to which the colony owed its preservation — nothing more could be seen of the vessel, even at low tide. The wreck had disappeared, and Granite House was enriched by nearly all it had contained.

However, the mystery which enveloped its strange destruction would doubtless never have been cleared away if, on the 30th of November, Neb, strolling on the beach, had not found a piece of a thick iron cylinder, bearing traces of explosion. The edges of this

cylinder were twisted and broken, as if they had been subjected to the action of some explosive substance.

Neb brought this piece of metal to his master, who was then occupied with his companions in the workshop of the Chimneys.

Cyrus Harding examined the cylinder attentively, then, turning to Pencroft, —

“You persist, my friend,” said he, “in maintaining that the ‘Speedy’ was not lost in consequence of a collision?”

“Yes, captain,” answered the sailor. “You know as well as I do that there are no rocks in the channel.”

“But suppose she had run against this piece of iron?” said the engineer, showing the broken cylinder.

“What, that bit of pipe!” exclaimed Pencroft in a tone of perfect incredulity.

“My friends,” resumed Harding, “you remember that before she foundered the brig rose on the summit of a regular waterspout?”

“Yes, captain,” replied Herbert.

“Well, would you like to know what occasioned that waterspout? It was this,” said the engineer, holding up the broken tube.

“That?” returned Pencroft.

“Yes! This cylinder is all that remains of a torpedo!”

“A torpedo!” exclaimed the engineer’s companions.

“And who put the torpedo there?” demanded Pencroft, who did not like to yield.

“All that I can tell you is, that it was not I,” answered Cyrus Harding; “but it was there, and you have been able to judge of its incomparable power!”

CHAPTER 5

So, then, all was explained by the submarine explosion of this torpedo. Cyrus Harding could not be mistaken, as, during the war of the Union, he had had occasion to try these terrible engines of destruction. It was under the action of this cylinder, charged with some explosive substance, nitro-glycerine, picrate, or some other material of the same nature, that the water of the channel had been raised like a dome, the bottom of the brig crushed in, and she had sunk instantly, the damage done to her hull being so considerable that it was impossible to refloat her. The “Speedy” had not been able to withstand a torpedo that would have destroyed an ironclad as easily as a fishing-boat!

Yes! all was explained, everything — except the presence of the torpedo in the waters of the channel!

“My friends, then,” said Cyrus Harding, “we can no longer be in doubt as to the presence of a mysterious being, a castaway like us, perhaps, abandoned on our island, and I say this in order that Ayrton may be acquainted with all the strange events which have occurred during these two years. Who this beneficent stranger is, whose intervention has, so fortunately for us, been manifested on many occasions, I cannot imagine. What his object can be in acting thus, in concealing himself after rendering us so many services, I cannot understand: But his services are not the less real, and are of such a nature that only a man possessed of prodigious power, could render them. Ayrton is indebted to him as much as we are, for, if it was the stranger who saved me from the waves after the fall from the balloon, evidently it was he who wrote the document, who placed the bottle in the channel, and who has made known to us the situation of our companion. I will add that it was he who guided that chest, provided with everything we wanted, and stranded it on Flotsam Point; that it was he who lighted that fire on the heights of the island, which permitted you to land; that it was he who fired that bullet found in the body of the peccary; that it was he who plunged that torpedo into the channel, which destroyed the brig; in a word, that all those inexplicable events, for which we could not assign a reason, are due to this mysterious being. Therefore, whoever he may be, whether shipwrecked, or exiled on our island, we shall be ungrateful, if we think ourselves freed from gratitude towards him. We have contracted a debt, and I hope that we shall one day pay it.”

“You are right in speaking thus, my dear Cyrus,” replied Gideon Spilett. “Yes, there is an almost all-powerful being, hidden in some part of the island, and whose influence

has been singularly useful to our colony. I will add that the unknown appears to possess means of action which border on the supernatural, if in the events of practical life the supernatural were recognizable. Is it he who is in secret communication with us by the well in Granite House, and has he thus a knowledge of all our plans? Was it he who threw us that bottle, when the vessel made her first cruise? Was it he who threw Top out of the lake, and killed the dugong? Was it he, who as everything leads us to believe, saved you from the waves, and that under circumstances in which any one else would not have been able to act? If it was he, he possesses a power which renders him master of the elements."

The reporter's reasoning was just, and every one felt it to be so.

"Yes," rejoined Cyrus Harding, "if the intervention of a human being is not more questionable for us, I agree that he has at his disposal means of action beyond those possessed by humanity. There is a mystery still, but if we discover the man, the mystery will be discovered also. The question, then, is, ought we to respect the incognito of this generous being, or ought we to do everything to find him out? What is your opinion on the matter?"

"My opinion," said Pencroft, "is that, whoever he may be, he is a brave man, and he has my esteem!"

"Be it so," answered Harding, "but that is not an answer, Pencroft."

"Master," then said Neb, "my idea is, that we may search as long as we like for this gentleman whom you are talking about, but that we shall not discover him till he pleases."

"That's not bad, what you say, Neb," observed Pencroft.

"I am of Neb's opinion," said Gideon Spilett, "but that is no reason for not attempting the adventure. Whether we find this mysterious being or not, we shall at least have fulfilled our duty towards him."

"And you, my boy, give us your opinion," said the engineer, turning to Herbert.

"Oh," cried Herbert, his countenance full of animation, "how I should like to thank him, he who saved you first, and who has now saved us!"

“Of course, my boy,” replied Pencroft, “so would I and all of us. I am not inquisitive, but I would give one of my eyes to see this individual face to face! It seems to me that he must be handsome, tall, strong, with a splendid beard, radiant hair, and that he must be seated on clouds, a great ball in his hands!”

“But, Pencroft,” answered Spilett, “you are describing a picture of the Creator.”

“Possibly, Mr. Spilett,” replied the sailor, “but that is how I imagine him!”

“And you, Ayrton?” asked the engineer.

“Captain Harding,” replied Ayrton, “I can give you no better advice in this matter. Whatever you do will be best; when you wish me to join you in your researches, I am ready to follow you.

“I thank you, Ayrton,” answered Cyrus Harding, “but I should like a more direct answer to the question I put to you. You are our companion; you have already endangered your life several times for us, and you, as well as the rest, ought to be consulted in the matter of any important decision. Speak, therefore.”

“Captain Harding,” replied Ayrton, “I think that we ought to do everything to discover this unknown benefactor. Perhaps he is alone. Perhaps he is suffering. Perhaps he has a life to be renewed. I, too, as you said, have a debt of gratitude to pay him. It was he, it could be only he who must have come to Tabor Island, who found there the wretch you knew, and who made known to you that there was an unfortunate man there to be saved. Therefore it is, thanks to him, that I have become a man again. No, I will never forget him!”

“That is settled, then,” said Cyrus Harding. “We will begin our researches as soon as possible. We will not leave a corner of the island unexplored. We will search into its most secret recesses, and will hope that our unknown friend will pardon us in consideration of our intentions!”

For several days the colonists were actively employed in haymaking and the harvest. Before putting their project of exploring the yet unknown parts of the island into execution, they wished to get all possible work finished. It was also the time for collecting the various vegetables from the Tabor Island plants. All was stowed away, and happily there was no want of room in Granite House, in which they might have

housed all the treasures of the island. The products of the colony were there, methodically arranged, and in a safe place, as may be believed, sheltered as much from animals as from man.

There was no fear of damp in the middle of that thick mass of granite. Many natural excavations situated in the upper passage were enlarged either by pick-axe or mine, and Granite House thus became a general warehouse, containing all the provisions, arms, tools, and spare utensils — in a word, all the stores of the colony.

As to the guns obtained from the brig, they were pretty pieces of ordnance, which, at Pencroft's entreaty, were hoisted by means of tackle and pulleys, right up into Granite House; embrasures were made between the windows, and the shining muzzles of the guns could soon be seen through the granite cliff. From this height they commanded all Union Bay. It was like a little Gibraltar, and any vessel anchored off the islet would inevitably be exposed to the fire of this aerial battery.

"Captain," said Pencroft one day, it was the 8th of November, "now that our fortifications are finished, it would be a good thing if we tried the range of our guns."

"Do you think that is useful?" asked the engineer.

"It is more than useful, it is necessary! Without that how are we to know to what distance we can send one of those pretty shot with which we are provided?"

"Try them, Pencroft," replied the engineer. "However, I think that in making the experiment, we ought to employ, not the ordinary powder, the supply of which, I think, should remain untouched, but the pyroxyle which will never fail us."

"Can the cannon support the shock of the pyroxyle?" asked the reporter, who was not less anxious than Pencroft to try the artillery of Granite House.

"I believe so. However," added the engineer, "we will be prudent." The engineer was right in thinking that the guns were of excellent make. Made of forged steel, and breech-loaders, they ought consequently to be able to bear a considerable charge, and also have an enormous range. In fact, as regards practical effect, the transit described by the ball ought to be as extended as possible, and this tension could only be obtained under the condition that the projectile should be impelled with a very great initial velocity.

“Now,” said Harding to his companions, “the initial velocity is in proportion to the quantity of powder used. In the fabrication of these pieces, everything depends on employing a metal with the highest possible power of resistance, and steel is incontestably that metal of all others which resists the best. I have, therefore, reason to believe that our guns will bear without risk the expansion of the pyroxyle gas, and will give excellent results.”

“We shall be a great deal more certain of that when we have tried them!” answered Pencroft.

It is unnecessary to say that the four cannons were in perfect order. Since they had been taken from the water, the sailor had bestowed great care upon them. How many hours he had spent, in rubbing, greasing, and polishing them, and in cleaning the mechanism! And now the pieces were as brilliant as if they had been on board a frigate of the United States Navy.

On this day, therefore, in presence of all the members of the colony, including Master Jup and Top, the four cannon were successively tried. They were charged with pyroxyle, taking into consideration its explosive power, which, as has been said, is four times that of ordinary powder: the projectile to be fired was cylindroconic.

Pencroft, holding the end of the quick-match, stood ready to fire.

At Harding’s signal, he fired. The shot, passing over the islet, fell into the sea at a distance which could not be calculated with exactitude.

The second gun was pointed at the rocks at the end of Flotsam Point, and the shot striking a sharp rock nearly three miles from Granite House, made it fly into splinters. It was Herbert who had pointed this gun and fired it, and very proud he was of his first shot. Pencroft only was prouder than he! Such a shot, the honor of which belonged to his dear boy.

The third shot, aimed this time at the downs forming the upper side of Union Bay, struck the sand at a distance of four miles, then having ricocheted: was lost in the sea in a cloud of spray.

For the fourth piece Cyrus Harding slightly increased the charge, so as to try its extreme range. Then, all standing aside for fear of its bursting, the match was lighted by means

of a long cord.

A tremendous report was heard, but the piece had held good, and the colonists rushing to the windows, saw the shot graze the rocks of Mandible Cape, nearly five miles from Granite House, and disappear in Shark Gulf.

“Well, captain,” exclaimed Pencroft, whose cheers might have rivaled the reports themselves, “what do you say of our battery? All the pirates in the Pacific have only to present themselves before Granite House! Not one can land there now without our permission!”

“Believe me, Pencroft,” replied the engineer, “it would be better not to have to make the experiment.”

“Well,” said the sailor, “what ought to be done with regard to those six villains who are roaming about the island? Are we to leave them to overrun our forests, our fields, our plantations? These pirates are regular jaguars, and it seems to me we ought not to hesitate to treat them as such! What do you think, Ayrton?” added Pencroft, turning to his companion.

Ayrton hesitated at first to reply, and Cyrus Harding regretted that Pencroft had so thoughtlessly put this question. And he was much moved when Ayrton replied in a humble tone, —

“I have been one of those jaguars, Mr. Pencroft. I have no right to speak.”

And with a slow step he walked away.

Pencroft understood.

“What a brute I am!” he exclaimed. “Poor Ayrton! He has as much right to speak here as any one!”

“Yes,” said Gideon Spilett, “but his reserve does him honor, and it is right to respect the feeling which he has about his sad past.”

“Certainly, Mr. Spilett,” answered the sailor, “and there is no fear of my doing so again. I would rather bite my tongue off than cause Ayrton any pain! But to return to the

question. It seems to me that these ruffians have no right to any pity, and that we ought to rid the island of them as soon as possible."

"Is that your opinion, Pencroft?" asked the engineer.

"Quite my opinion."

"And before hunting them mercilessly, you would not wait until they had committed some fresh act of hostility against us?"

"Isn't what they have done already enough?" asked Pencroft, who did not understand these scruples.

"They may adopt other sentiments!" said Harding, "and perhaps repent."

"They repent!" exclaimed the sailor, shrugging his shoulders.

"Pencroft, think of Ayrton!" said Herbert, taking the sailor's hand. "He became an honest man again!"

Pencroft looked at his companions one after the other. He had never thought of his proposal being met with any objection. His rough nature could not allow that they ought to come to terms with the rascals who had landed on the island with Bob Harvey's accomplices, the murderers of the crew of the "Speedy," and he looked upon them as wild beasts which ought to be destroyed without delay and without remorse.

"Come!" said be. "Everybody is against me! You wish to be generous to those villains! Very well; I hope we mayn't repent it!"

"What danger shall we run," said Herbert, "if we take care to be always on our guard?"

"Hum!" observed the reporter, who had not given any decided opinion. "They are six and well armed. If they each lay hid in a corner, and each fired at one of us, they would soon be masters of the colony!"

"Why have they not done so?" said Herbert. "No doubt because it was not their interest to do it. Besides, we are six also."

“Well, well!” replied Pencroft, whom no reasoning could have convinced. “Let us leave these good people to do what they like, and don’t think anything more about them!”

“Come, Pencroft,” said Neb, “don’t make yourself out so bad as all that! Suppose one of these unfortunate men were here before you, within good range of your guns, you would not fire.”

“I would fire on him as I would on a mad dog, Neb,” replied Pencroft coldly.

“Pencroft,” said the engineer, “you have always shown much deference to my advice; will you, in this matter, yield to me?”

“I will do as you please, Captain Harding,” answered the sailor, who was not at all convinced.

“Very well, wait, and we will not attack them unless we are attacked first.”

Thus their behavior towards the pirates was agreed upon, although Pencroft augured nothing good from it. They were not to attack them, but were to be on their guard. After all, the island was large and fertile. If any sentiment of honesty yet remained in the bottom of their hearts, these wretches might perhaps be reclaimed. Was it not their interest in the situation in which they found themselves to begin a new life? At any rate, for humanity’s sake alone, it would be right to wait. The colonists would no longer as before, be able to go and come without fear. Hitherto they had only wild beasts to guard against, and now six convicts of the worst description, perhaps, were roaming over their island. It was serious, certainly, and to less brave men, it would have been security lost! No matter! At present, the colonists had reason on their side against Pencroft. Would they be right in the future? That remained to be seen.

CHAPTER 6

However, the chief business of the colonists was to make that complete exploration of the island which had been decided upon, and which would have two objects: to discover the mysterious being whose existence was now indisputable, and at the same time to find out what had become of the pirates, what retreat they had chosen, what sort of life they were leading, and what was to be feared from them. Cyrus Harding wished to set out without delay; but as the expedition would be of some days duration, it appeared best to load the cart with different materials and tools in order to facilitate the organization of the encampments. One of the onagers, however, having hurt its leg, could not be harnessed at present, and a few days' rest was necessary. The departure was, therefore, put off for a week, until the 20th of November. The month of November in this latitude corresponds to the month of May in the northern zones. It was, therefore, the fine season. The sun was entering the tropic of Capricorn, and gave the longest days in the year. The time was, therefore, very favorable for the projected expedition, which, if it did not accomplish its principal object, would at any rate be fruitful in discoveries, especially of natural productions, since Harding proposed to explore those dense forests of the Far West, which stretched to the extremity of the Serpentine Peninsula.

During the nine days which preceded their departure, it was agreed that the work on Prospect Heights should be finished off.

Moreover, it was necessary for Ayrton to return to the corral, where the domesticated animals required his care. It was decided that he should spend two days there, and return to Granite House after having liberally supplied the stables.

As he was about to start, Harding asked him if he would not like one of them to accompany him, observing that the island was less safe than formerly. Ayrton replied that this was unnecessary, as he was enough for the work, and that besides he apprehended no danger. If anything occurred at the corral, or in the neighborhood, he could instantly warn the colonists by sending a telegram to Granite House.

Ayrton departed at dawn on the 9th, taking the cart drawn by one onager, and two hours after, the electric wire announced that he had found all in order at the corral.

During these two days Harding busied himself in executing a project which would completely guard Granite House against any surprise. It was necessary to completely

conceal the opening of the old outlet, which was already walled up and partly hidden under grass and plants, at the southern angle of Lake Grant. Nothing was easier, since if the level of the lake was raised two or three feet, the opening would be quite beneath it. Now, to raise this level they had only to establish a dam at the two openings made by the lake, and by which were fed Creek Glycerine and Falls River.

The colonists worked with a will, and the two dams which besides did not exceed eight feet in width by three in height, were rapidly erected by means of well-cemented blocks of stone.

This work finished, it would have been impossible to guess that at that part of the lake, there existed a subterranean passage through which the overflow of the lake formerly escaped.

Of course the little stream which fed the reservoir of Granite House and worked the lift, had been carefully preserved, and the water could not fail. The lift once raised, this sure and comfortable retreat would be safe from any surprise.

This work had been so quickly done, that Pencroft, Gideon Spilett, and Herbert found time to make an expedition to Port Balloon, The sailor was very anxious to know if the little creek in which the “Bonadventure” was moored, had been visited by the convicts.

“These gentlemen,” he observed, “landed on the south coast, and if they followed the shore, it is to be feared that they may have discovered the little harbor, and in that case, I wouldn’t give half-a-dollar for our ‘Bonadventure.’”

Pencroft’s apprehensions were not without foundation, and a visit to Port Balloon appeared to be very desirable. The sailor and his companions set off on the 10th of November, after dinner, well armed. Pencroft, ostentatiously slipping two bullets into each barrel of his rifle, shook his head in a way which betokened nothing good to any one who approached too near him, whether “man or beast,” as he said. Gideon Spilett and Herbert also took their guns, and about three o’clock all three left Granite House.

Neb accompanied them to the turn of the Mercy, and after they had crossed, he raised the bridge. It was agreed that a gunshot should announce the colonists’ return, and that at the signal Neb should return and reestablish the communication between the two banks of the river.

The little band advanced directly along the road which led to the southern coast of the island. This was only a distance of three miles and a half, but Gideon Spilett and his companions took two hours to traverse it. They examined all the border of the road, the thick forest, as well as Tabor Marsh. They found no trace of the fugitives who, no doubt, not having yet discovered the number of the colonists, or the means of defense which they had at their disposal, had gained the less accessible parts of the island.

Arrived at Port Balloon, Pencroft saw with extreme satisfaction that the "Bonadventure" was tranquilly floating in the narrow creek. However, Port Balloon was so well hidden among high rocks, that it could scarcely be discovered either from the land or the sea.

"Come," said Pencroft, "the blackguards have not been there yet. Long grass suits reptiles best, and evidently we shall find them in the Far West."

"And it's very lucky, for if they had found the 'Bonadventure'," added Herbert, "they would have gone off in her, and we should have been prevented from returning to Tabor Island."

"Indeed," remarked the reporter, "it will be important to take a document there which will make known the situation of Lincoln Island, and Ayrton's new residence, in case the Scotch yacht returns to fetch him."

"Well, the 'Bonadventure' is always there, Mr. Spilett," answered the sailor. "She and her crew are ready to start at a moment's notice!"

"I think, Pencroft, that that is a thing to be done after our exploration of the island is finished. It is possible after all that the stranger, if we manage to find him, may know as much about Tabor Island as about Lincoln Island. Do not forget that he is certainly the author of the document, and he may, perhaps, know how far we may count on the return of the yacht!"

"But!" exclaimed Pencroft, "who in the world can he be? The fellow knows us and we know nothing about him! If he is a simple castaway, why should he conceal himself! We are honest men, I suppose, and the society of honest men isn't unpleasant to any one. Did he come here voluntarily? Can he leave the island if he likes? Is he here still? Will he remain any longer?"

Chatting thus, Pencroft, Gideon Spilett, and Herbert got on board and looked about the deck of the “Bonadventure.” All at once, the sailor having examined the bitts to which the cable of the anchor was secured, —

“Hallo,” he cried, “this is queer!”

“What is the matter, Pencroft?” asked the reporter.

“The matter is, that it was not I who made this knot!”

And Pencroft showed a rope which fastened the cable to the bitt itself.

“What, it was not you?” asked Gideon Spilett.

“No! I can swear to it. This is a reef knot, and I always make a running bowline.”

“You must be mistaken, Pencroft.”

“I am not mistaken!” declared the sailor. “My hand does it so naturally, and one’s hand is never mistaken!”

“Then can the convicts have been on board?” asked Herbert.

“I know nothing about that,” answered Pencroft, “but what is certain, is that some one has weighed the ‘Bonadventure’s’ anchor and dropped it again! And look here, here is another proof! The cable of the anchor has been run out, and its service is no longer at the hawse-hole. I repeat that some one has been using our vessel!”

“But if the convicts had used her, they would have pillaged her, or rather gone off with her.”

“Gone off! where to — to Tabor Island?” replied Pencroft. “Do you think, they would risk themselves in a boat of such small tonnage?”

“We must, besides, be sure that they know of the islet,” rejoined the reporter.

“However that may be,” said the sailor, “as sure as my name is Bonadventure Pencroft, of the Vineyard, our ‘Bonadventure’ has sailed without us!”

The sailor was positive that neither Gideon Spilett nor Herbert could dispute his statement. It was evident that the vessel had been moved, more or less, since Pencroft had brought her to Port Balloon. As to the sailor, he had not the slightest doubt that the anchor had been raised and then dropped again. Now, what was the use of these two maneuvers, unless the vessel had been employed in some expedition?

“But how was it we did not see the ‘Bonadventure’ pass in the sight of the island?” observed the reporter, who was anxious to bring forward every possible objection.

“Why, Mr. Spilett,” replied the sailor, “they would only have to start in the night with a good breeze, and they would be out of sight of the island in two hours.”

“Well,” resumed Gideon Spilett, “I ask again, what object could the convicts have had in using the ‘Bonadventure,’ and why, after they had made use of her, should they have brought her back to port?”

“Why, Mr. Spilett,” replied the sailor, “we must put that among the unaccountable things, and not think anything more about it. The chief thing is that the ‘Bonadventure’ was there, and she is there now. Only, unfortunately, if the convicts take her a second time, we shall very likely not find her again in her place!”

“Then, Pencroft,” said Herbert, “would it not be wisest to bring the ‘Bonadventure’ off to Granite House?”

“Yes and no,” answered Pencroft, “or rather no. The mouth of the Mercy is a bad place for a vessel, and the sea is heavy there.”

“But by hauling her up on the sand, to the foot of the Chimneys?”

“Perhaps yes,” replied Pencroft. “At any rate, since we must leave Granite House for a long expedition, I think the ‘Bonadventure’ will be safer here during our absence, and we shall do best to leave her here until the island is rid of these blackguards.”

“That is exactly my opinion,” said the reporter. “At any rate in the event of bad weather, she will not be exposed here as she would be at the mouth of the Mercy.”

“But suppose the convicts pay her another visit,” said Herbert.

“Well, my boy,” replied Pencroft, “not finding her here, they would not be long in finding her on the sands of Granite House, and, during our absence, nothing could hinder them from seizing her! I agree, therefore, with Mr. Spilett, that she must be left in Port Balloon. But, if on our return we have not rid the island of those rascals, it will be prudent to bring our boat to Granite House, until the time when we need not fear any unpleasant visits.”

“That’s settled. Let us be off,” said the reporter.

Pencroft, Herbert, and Gideon Spilett, on their return to Granite House, told the engineer all that had passed, and the latter approved of their arrangements both for the present and the future. He also promised the sailor that he would study that part of the channel situated between the islet and the coast, so as to ascertain if it would not be possible to make an artificial harbor there by means of dams. In this way, the “Bonadventure” would be always within reach, under the eyes of the colonists, and if necessary, under lock and key.

That evening a telegram was sent to Ayrton, requesting him to bring from the corral a couple of goats, which Neb wished to acclimatize to the plateau. Singularly enough, Ayrton did not acknowledge the receipt of the despatch, as he was accustomed to do. This could not but astonish the engineer. But it might be that Ayrton was not at that moment in the corral, or even that he was on his way back to Granite House. In fact, two days had already passed since his departure, and it had been decided that on the evening of the 10th or at the latest the morning of the 11th, he should return. The colonists waited, therefore, for Ayrton to appear on Prospect Heights. Neb and Herbert even watched at the bridge so as to be ready to lower it the moment their companion presented himself.

But up to ten in the evening, there were no signs of Ayrton. It was, therefore, judged best to send a fresh despatch, requiring an immediate reply.

The bell of the telegraph at Granite House remained mute.

The colonists’ uneasiness was great. What had happened? Was Ayrton no longer at the corral, or if he was still there, had he no longer control over his movements? Could they go to the corral in this dark night?

They consulted. Some wished to go, the others to remain.

“But,” said Herbert, “perhaps some accident has happened to the telegraphic apparatus, so that it works no longer?”

“That may be,” said the reporter.

“Wait till to-morrow,” replied Cyrus Harding. “It is possible, indeed, that Ayrton has not received our despatch, or even that we have not received his.”

They waited, of course not without some anxiety.

At dawn of day, the 11th of November, Harding again sent the electric current along the wire and received no reply.

He tried again: the same result.

“Off to the corral,” said he.

“And well armed!” added Pencroft.

It was immediately decided that Granite House should not be left alone and that Neb should remain there. After having accompanied his friends to Creek Glycerine, he raised the bridge; and waiting behind a tree he watched for the return of either his companions or Ayrton.

In the event of the pirates presenting themselves and attempting to force the passage, he was to endeavor to stop them by firing on them, and as a last resource he was to take refuge in Granite House, where, the lift once raised, he would be in safety.

Cyrus Harding, Gideon Spilett, Herbert, and Pencroft were to repair to the corral, and if they did not find Ayrton, search the neighboring woods.

At six o’clock in the morning, the engineer and his three companions had passed Creek Glycerine, and Neb posted himself behind a small mound crowned by several dragon trees, on the left bank of the stream.

The colonists, after leaving the plateau of Prospect Heights, immediately took the road to the corral. They shouldered their guns, ready to fire on the slightest hostile demonstration. The two rifles and the two guns had been loaded with ball.

The wood was thick on each side of the road and might easily have concealed the convicts, who owing to their weapons would have been really formidable.

The colonists walked rapidly and in silence. Top preceded them, sometimes running on the road, sometimes taking a ramble into the wood, but always quiet and not appearing to fear anything unusual. And they could be sure that the faithful dog would not allow them to be surprised, but would bark at the least appearance of danger.

Cyrus Harding and his companions followed beside the road the wire which connected the corral with Granite House. After walking for nearly two miles, they had not as yet discovered any explanation of the difficulty. The posts were in good order, the wire regularly extended. However, at that moment the engineer observed that the wire appeared to be slack, and on arriving at post No. 74, Herbert, who was in advance stopped, exclaiming, —

“The wire is broken!”

His companions hurried forward and arrived at the spot where the lad was standing. The post was rooted up and lying across the path. The unexpected explanation of the difficulty was here, and it was evident that the despatches from Granite House had not been received at the corral, nor those from the corral at Granite House.

“It wasn’t the wind that blew down this post,” observed Pencroft.

“No,” replied Gideon Spilett. “The earth has been dug up round its foot, and it has been torn up by the hand of man.”

“Besides, the wire is broken,” added Herbert, showing that the wire had been snapped.

“Is the fracture recent?” asked Harding.

“Yes,” answered Herbert, “it has certainly been done quite lately.”

“To the corral! to the corral!” exclaimed the sailor.

The colonists were now half way between Granite House and the corral, having still two miles and a half to go. They pressed forward with redoubled speed.

Indeed, it was to be feared that some serious accident had occurred in the corral. No doubt, Ayrton might have sent a telegram which had not arrived, but this was not the reason why his companions were so uneasy, for, a more unaccountable circumstance, Ayrton, who had promised to return the evening before, had not reappeared. In short, it was not without a motive that all communication had been stopped between the corral and Granite House, and who but the convicts could have any interest in interrupting this communication?

The settlers hastened on, their hearts oppressed with anxiety. They were sincerely attached to their new companion. Were they to find him struck down by the hands of those of whom he was formerly the leader?

Soon they arrived at the place where the road led along the side of the little stream which flowed from the Red Creek and watered the meadows of the corral. They then moderated their pace so that they should not be out of breath at the moment when a struggle might be necessary. Their guns were in their hands ready cocked. The forest was watched on every side. Top uttered sullen groans which were rather ominous.

At last the palisade appeared through the trees. No trace of any damage could be seen. The gate was shut as usual. Deep silence reigned in the corral. Neither the accustomed bleating of the sheep nor Ayrton’s voice could be heard.

“Let us enter,” said Cyrus Harding.

And the engineer advanced, while his companions, keeping watch about twenty paces behind him, were ready to fire at a moment’s notice.

Harding raised the inner latch of the gate and was about to push it back, when Top barked loudly. A report sounded and was responded to by a cry of pain.

Herbert, struck by a bullet, lay stretched on the ground.

CHAPTER 7

At Herbert's cry, Pencroft, letting his gun fall, rushed towards him.

"They have killed him!" he cried. "My boy! They have killed him!"

Cyrus Harding and Gideon Spilett ran to Herbert.

The reporter listened to ascertain if the poor lad's heart was still beating.

"He lives," said he, "but he must be carried — "

"To Granite House? that is impossible!" replied the engineer.

"Into the corral, then!" said Pencroft.

"In a moment," said Harding.

And he ran round the left corner of the palisade. There he found a convict, who aiming at him, sent a ball through his hat. In a few seconds, before he had even time to fire his second barrel, he fell, struck to the heart by Harding's dagger, more sure even than his gun.

During this time, Gideon Spilett and the sailor hoisted themselves over the palisade, leaped into the enclosure, threw down the props which supported the inner door, ran into the empty house, and soon, poor Herbert was lying on Ayrton's bed. In a few moments, Harding was by his side.

On seeing Herbert senseless, the sailor's grief was terrible.

He sobbed, he cried, he tried to beat his head against the wall.

Neither the engineer nor the reporter could calm him. They themselves were choked with emotion. They could not speak.

However, they knew that it depended on them to rescue from death the poor boy who was suffering beneath their eyes. Gideon Spilett had not passed through the many incidents by which his life had been checkered without acquiring some slight knowledge of medicine. He knew a little of everything, and several times he had been

obliged to attend to wounds produced either by a sword-bayonet or shot. Assisted by Cyrus Harding, he proceeded to render the aid Herbert required.

The reporter was immediately struck by the complete stupor in which Herbert lay, a stupor owing either to the hemorrhage, or to the shock, the ball having struck a bone with sufficient force to produce a violent concussion.

Herbert was deadly pale, and his pulse so feeble that Spilett only felt it beat at long intervals, as if it was on the point of stopping.

These symptoms were very serious.

Herbert's chest was laid bare, and the blood having been stanched with handkerchiefs, it was bathed with cold water.

The contusion, or rather the contused wound appeared, — an oval below the chest between the third and fourth ribs. It was there that Herbert had been hit by the bullet.

Cyrus Harding and Gideon Spilett then turned the poor boy over; as they did so, he uttered a moan so feeble that they almost thought it was his last sigh.

Herberts back was covered with blood from another contused wound, by which the ball had immediately escaped.

"God be praised!" said the reporter, "the ball is not in the body, and we shall not have to extract it."

"But the heart?" asked Harding.

"The heart has not been touched; if it had been, Herbert would be dead!"

"Dead!" exclaimed Pencroft, with a groan.

The sailor had only heard the last words uttered by the reporter.

"No, Pencroft," replied Cyrus Harding, "no! He is not dead. His pulse still beats. He has even uttered a moan. But for your boy's sake, calm yourself. We have need of all our self-possession."

"Do not make us lose it, my friend."

Pencroft was silent, but a reaction set in, and great tears rolled down his cheeks.

In the meanwhile, Gideon Spilett endeavored to collect his ideas, and proceed methodically. After his examination he had no doubt that the ball, entering in front, between the seventh and eighth ribs, had issued behind between the third and fourth. But what mischief had the ball committed in its passage? What important organs had been reached? A professional surgeon would have had difficulty in determining this at once, and still more so the reporter.

However, he knew one thing, this was that he would have to prevent the inflammatory strangulation of the injured parts, then to contend with the local inflammation and fever which would result from the wound, perhaps mortal! Now, what styptics, what antiphlogistics ought to be employed? By what means could inflammation be prevented?

At any rate, the most important thing was that the two wounds should be dressed without delay. It did not appear necessary to Gideon Spilett that a fresh flow of blood should be caused by bathing them in tepid water, and compressing their lips. The hemorrhage had been very abundant, and Herbert was already too much enfeebled by the loss of blood.

The reporter, therefore, thought it best to simply bathe the two wounds with cold water.

Herbert was placed on his left side, and was maintained in that position.

“He must not be moved.” said Gideon Spilett. “He is in the most favorable position for the wounds in his back and chest to suppurate easily, and absolute rest is necessary.”

“What! can’t we carry him to Granite House?” asked Pencroft.

“No, Pencroft,” replied the reporter.

“I’ll pay the villains off!” cried the sailor, shaking his fist in a menacing manner.

“Pencroft!” said Cyrus Harding.

Gideon Spilett had resumed his examination of the wounded boy. Herbert was still so frightfully pale, that the reporter felt anxious.

“Cyrus,” said he, “I am not a surgeon. I am in terrible perplexity. You must aid me with your advice, your experience!”

“Take courage, my friend,” answered the engineer, pressing the reporter’s hand. “Judge coolly. Think only of this: Herbert must be saved!”

These words restored to Gideon Spilett that self-possession which he had lost in a moment of discouragement on feeling his great responsibility. He seated himself close to the bed. Cyrus Harding stood near. Pencroft had torn up his shirt, and was mechanically making lint.

Spilett then explained to Cyrus Harding that he thought he ought first of all to stop the hemorrhage, but not close the two wounds, or cause their immediate cicatrization, for there had been internal perforation, and the suppuration must not be allowed to accumulate in the chest.

Harding approved entirely, and it was decided that the two wounds should be dressed without attempting to close them by immediate coaptation.

And now did the colonists possess an efficacious agent to act against the inflammation which might occur?

Yes. They had one, for nature had generously lavished it. They had cold water, that is to say, the most powerful sedative that can be employed against inflammation of wounds, the most efficacious therapeutic agent in grave cases, and the one which is now adopted by all physicians. Cold water has, moreover, the advantage of leaving the wound in absolute rest, and preserving it from all premature dressing, a considerable advantage, since it has been found by experience that contact with the air is dangerous during the first days.

Gideon Spilett and Cyrus Harding reasoned thus with their simple good sense, and they acted as the best surgeon would have done. Compresses of linen were applied to poor Herbert’s two wounds, and were kept constantly wet with cold water.

The sailor had at first lighted a fire in the hut, which was not wanting in things necessary for life. Maple sugar, medicinal plants, the same which the lad had gathered on the banks of Lake Grant, enabled them to make some refreshing drinks, which they

gave him without his taking any notice of it. His fever was extremely high, and all that day and night passed without his becoming conscious.

Herbert's life hung on a thread, and this thread might break at any moment. The next day, the 12th of November, the hopes of Harding and his companions slightly revived. Herbert had come out of his long stupor. He opened his eyes, he recognized Cyrus Harding, the reporter, and Pencroft. He uttered two or three words. He did not know what had happened. They told him, and Spilett begged him to remain perfectly still, telling him that his life was not in danger, and that his wounds would heal in a few days. However, Herbert scarcely suffered at all, and the cold water with which they were constantly bathed, prevented any inflammation of the wounds. The suppuration was established in a regular way, the fever did not increase, and it might now be hoped that this terrible wound would not involve any catastrophe. Pencroft felt the swelling of his heart gradually subside. He was like a sister of mercy, like a mother by the bed of her child.

Herbert dozed again, but his sleep appeared more natural.

"Tell me again that you hope, Mr. Spilett," said Pencroft. "Tell me again that you will save Herbert!"

"Yes, we will save him!" replied the reporter. "The wound is serious, and, perhaps, even the ball has traversed the lungs, but the perforation of this organ is not fatal."

"God bless you!" answered Pencroft.

As may be believed, during the four-and-twenty hours they had been in the corral, the colonists had no other thought than that of nursing Herbert. They did not think either of the danger which threatened them should the convicts return, or of the precautions to be taken for the future.

But on this day, while Pencroft watched by the sick-bed, Cyrus Harding and the reporter consulted as to what it would be best to do.

First of all they examined the corral. There was not a trace of Ayrton. Had the unhappy man been dragged away by his former accomplices? Had he resisted, and been overcome in the struggle? This last supposition was only too probable. Gideon Spilett, at the moment he scaled the palisade, had clearly seen some one of the convicts running

along the southern spur of Mount Franklin, towards whom Top had sprung. It was one of those whose object had been so completely defeated by the rocks at the mouth of the Mercy. Besides, the one killed by Harding, and whose body was found outside the enclosure, of course belonged to Bob Harvey's crew.

As to the corral, it had not suffered any damage. The gates were closed, and the animals had not been able to disperse in the forest. Nor could they see traces of any struggle, any devastation, either in the hut, or in the palisade. The ammunition only, with which Ayrton had been supplied, had disappeared with him.

"The unhappy man has been surprised," said Harding, "and as he was a man to defend himself, he must have been overpowered."

"Yes, that is to be feared!" said the reporter. "Then, doubtless, the convicts installed themselves in the corral where they found plenty of everything, and only fled when they saw us coming. It is very evident, too, that at this moment Ayrton, whether living or dead, is not here!"

"We shall have to beat the forest," said the engineer, "and rid the island of these wretches. Pencroft's presentiments were not mistaken, when he wished to hunt them as wild beasts. That would have spared us all these misfortunes!"

"Yes," answered the reporter, "but now we have the right to be merciless!"

"At any rate," said the engineer, "we are obliged to wait some time, and to remain at the corral until we can carry Herbert without danger to Granite House."

"But Neb?" asked the reporter.

"Neb is in safety."

"But if, uneasy at our absence, he would venture to come?"

"He must not come!" returned Cyrus Harding quickly. "He would be murdered on the road!"

"It is very probable, however, that he will attempt to rejoin us!"

“Ah, if the telegraph still acted, he might be warned! But that is impossible now! As to leaving Pencroft and Herbert here alone, we could not do it! Well, I will go alone to Granite House.”

“No, no! Cyrus,” answered the reporter, “you must not expose yourself! Your courage would be of no avail. The villains are evidently watching the corral, they are hidden in the thick woods which surround it, and if you go we shall soon have to regret two misfortunes instead of one!”

“But Neb?” repeated the engineer. “It is now four-and-twenty hours since he has had any news of us! He will be sure to come!”

“And as he will be less on his guard than we should be ourselves,” added Spilett, “he will be killed!”

“Is there really no way of warning him?”

While the engineer thought, his eyes fell on Top, who, going backwards and forwards seemed to say, —

“Am not I here?”

“Top!” exclaimed Cyrus Harding.

The animal sprang at his master’s call.

“Yes, Top will go,” said the reporter, who had understood the engineer.

“Top can go where we cannot! He will carry to Granite House the news of the corral, and he will bring back to us that from Granite House!”

“Quick!” said Harding. “Quick!”

Spilett rapidly tore a leaf from his note-book, and wrote these words: —

“Herbert wounded. We are at the corral. Be on your guard. Do not leave Granite House. Have the convicts appeared in the neighborhood? Reply by Top.”

This laconic note contained all that Neb ought to know, and at the same time asked all that the colonists wished to know. It was folded and fastened to Top’s collar in a

conspicuous position.

“Top, my dog,” said the engineer, caressing the animal, “Neb, Top! Neb! Go, go!”

Top bounded at these words. He understood, he knew what was expected of him. The road to the corral was familiar to him. In less than an hour he could clear it, and it might be hoped that where neither Cyrus Harding nor the reporter could have ventured without danger, Top, running among the grass or in the wood, would pass unperceived.

The engineer went to the gate of the corral and opened it.

“Neb, Top! Neb!” repeated the engineer, again pointing in the direction of Granite House.

Top sprang forwards, then almost immediately disappeared.

“He will get there!” said the reporter.

“Yes, and he will come back, the faithful animal!”

“What o’clock is it?” asked Gideon Spilett.

“Ten.”

“In an hour he may be here. We will watch for his return.”

The gate of the corral was closed. The engineer and the reporter re-entered the house. Herbert was still in a sleep. Pencroft kept the compresser always wet. Spilett, seeing there was nothing he could do at that moment, busied himself in preparing some nourishment, while attentively watching that part of the enclosure against the hill, at which an attack might be expected.

The settlers awaited Top’s return with much anxiety. A little before eleven o’clock, Cyrus Harding and the reporter, rifle in hand, were behind the gate, ready to open it at the first bark of their dog.

They did not doubt that if Top had arrived safely at Granite House, Neb would have sent him back immediately.

They had both been there for about ten minutes, when a report was heard, followed by repeated barks.

The engineer opened the gate, and seeing smoke a hundred feet off in the wood, he fired in that direction.

Almost immediately Top bounded into the corral, and the gate was quickly shut.

“Top, Top!” exclaimed the engineer, taking the dog’s great honest head between his hands.

A note was fastened to his neck, and Cyrus Harding read these words, traced in Neb’s large writing: — ”No pirates in the neighborhood of Granite House. I will not stir. Poor Mr. Herbert!”

CHAPTER 8

So the convicts were still there, watching the corral, and determined to kill the settlers one after the other. There was nothing to be done but to treat them as wild beasts. But great precautions must be taken, for just now the wretches had the advantage on their side, seeing, and not being seen, being able to surprise by the suddenness of their attack, yet not to be surprised themselves. Harding made arrangements, therefore, for living in the corral, of which the provisions would last for a tolerable length of time. Ayrton's house had been provided with all that was necessary for existence, and the convicts, scared by the arrival of the settlers, had not had time to pillage it. It was probable, as Gideon Spilett observed, that things had occurred as follows:

The six convicts, disembarking on the island, had followed the southern shore, and after having traversed the double shore of the Serpentine Peninsula, not being inclined to venture into the Far West woods, they had reached the mouth of Falls River. From this point, by following the right bank of the watercourse, they would arrive at the spurs of Mount Franklin, among which they would naturally seek a retreat, and they could not have been long in discovering the corral, then uninhabited. There they had regularly installed themselves, awaiting the moment to put their abominable schemes into execution. Ayrton's arrival had surprised them, but they had managed to overpower the unfortunate man, and — the rest may be easily imagined!

Now, the convicts, — reduced to five, it is true, but well armed, — were roaming the woods, and to venture there was to expose themselves to their attacks, which could be neither guarded against nor prevented.

"Wait! There is nothing else to be done!" repeated Cyrus Harding. "When Herbert is cured, we can organize a general battle of the island, and have satisfaction of these convicts. That will be the object of our grand expedition at the same time — "

"As the search for our mysterious protector," added Gideon Spilett, finishing the engineer's sentence. "And it must be acknowledged, my dear Cyrus, that this time his protection was wanting at the very moment when it was most necessary to us!"

"Who knows?" replied the engineer.

"What do you mean?" asked the reporter.

“That we are not at the end of our trouble yet, my dear Spilett, and that his powerful intervention may have another opportunity of exercising itself. But that is not the question now. Herbert’s life before everything.”

This was the colonists’ saddest thought. Several days passed, and the poor boy’s state was happily no worse. Cold water, always kept at a suitable temperature, had completely prevented the inflammation of the wounds. It even seemed to the reporter that this water, being slightly sulphurous, — which was explained by the neighborhood of the volcano, had a more direct action on the healing. The suppuration was much less abundant, and thanks to the incessant care by which he was surrounded! — Herbert returned to life, and his fever abated. He was besides subjected to a severe diet, and consequently his weakness was and would be extreme; but there was no want of refreshing drinks, and absolute rest was of the greatest benefit to him. Cyrus Harding, Gideon Spilett, and Pencroft had become very skilful in dressing the lad’s wounds. All the linen in the house had been sacrificed. Herbert’s wounds, covered with compresses and lint, were pressed neither too much nor too little, so as to cause their cicatrization without effecting any inflammatory reaction. The reporter used extreme care in the dressing, knowing well the importance of it, and repeating to his companions that which most surgeons willingly admit, that it is perhaps rarer to see a dressing well done than an operation well performed.

In ten days, on the 22nd of November, Herbert was considerably better. He had begun to take some nourishment.

The color was returning to his cheeks, and his bright eyes smiled at his nurses. He talked a little, notwithstanding Pencroft’s efforts, who talked incessantly to prevent him from beginning to speak, and told him the most improbable stories. Herbert had questioned him on the subject of Ayrton, whom he was astonished not to see near him, thinking that he was at the corral. But the sailor, not wishing to distress Herbert, contented himself by replying that Ayrton had rejoined Neb, so as to defend Granite House.

“Humph!” said Pencroft, “these pirates! they are gentlemen who have no right to any consideration! And the captain wanted to win them by kindness! I’ll send them some kindness, but in the shape of a good bullet!”

“And have they not been seen again?” asked Herbert.

“No, my boy,” answered the sailor, “but we shall find them, and when you are cured we shall see if the cowards who strike us from behind will dare to meet us face to face!”

“I am still very weak, my poor Pencroft!”

“Well! your strength will return gradually! What’s a ball through the chest? Nothing but a joke! I’ve seen many, and I don’t think much of them!”

At last things appeared to be going on well, and if no complication occurred, Herbert’s recovery might be regarded as certain. But what would have been the condition of the colonists if his state had been aggravated, — if, for example, the ball had remained in his body, if his arm or his leg had had to be amputated?

“No,” said Spilett more than once, “I have never thought of such a contingency without shuddering!”

“And yet, if it had been necessary to operate,” said Harding one day to him, “you would not have hesitated?”

“No, Cyrus!” said Gideon Spilett, “but thank God that we have been spared this complication!”

As in so many other conjectures, the colonists had appealed to the logic of that simple good sense of which they had made use so often, and once more, thanks to their general knowledge, it had succeeded! But might not a time come when all their science would be at fault? They were alone on the island. Now, men in all states of society are necessary to each other. Cyrus Harding knew this well, and sometimes he asked if some circumstance might not occur which they would be powerless to surmount. It appeared to him besides, that he and his companions, till then so fortunate, had entered into an unlucky period. During the two years and a half which had elapsed since their escape from Richmond, it might be said that they had had everything their own way. The island had abundantly supplied them with minerals, vegetables, animals, and as Nature had constantly loaded them, their science had known how to take advantage of what she offered them.

The wellbeing of the colony was therefore complete. Moreover, in certain occurrences an inexplicable influence had come to their aid!... But all that could only be for a time.

In short, Cyrus Harding believed that fortune had turned against them.

In fact, the convicts' ship had appeared in the waters of the island, and if the pirates had been, so to speak, miraculously destroyed, six of them, at least, had escaped the catastrophe. They had disembarked on the island, and it was almost impossible to get at the five who survived. Ayrton had no doubt been murdered by these wretches, who possessed firearms, and at the first use that they had made of them, Herbert had fallen, wounded almost mortally. Were these the first blows aimed by adverse fortune at the colonists? This was often asked by Harding. This was often repeated by the reporter; and it appeared to him also that the intervention, so strange, yet so efficacious, which till then had served them so well, had now failed them. Had this mysterious being, whatever he was, whose existence could not be denied, abandoned the island? Had he in his turn succumbed?

No reply was possible to these questions. But it must not be imagined that because Harding and his companions spoke of these things, they were men to despair. Far from that. They looked their situation in the face, they analyzed the chances, they prepared themselves for any event, they stood firm and straight before the future, and if adversity was at last to strike them, it would find in them men prepared to struggle against it.

CHAPTER 9

The convalescence of the young invalid was regularly progressing. One thing only was now to be desired, that his state would allow him to be brought to Granite House. However well built and supplied the corral house was, it could not be so comfortable as the healthy granite dwelling. Besides, it did not offer the same security, and its tenants, notwithstanding their watchfulness, were here always in fear of some shot from the convicts. There, on the contrary, in the middle of that impregnable and inaccessible cliff, they would have nothing to fear, and any attack on their persons would certainly fail. They therefore waited impatiently for the moment when Herbert might be moved without danger from his wound, and they were determined to make this move, although the communication through Jacamar Wood was very difficult.

They had no news from Neb, but were not uneasy on that account. The courageous Negro, well entrenched in the depths of Granite House, would not allow himself to be surprised. Top had not been sent again to him, as it appeared useless to expose the faithful dog to some shot which might deprive the settlers of their most useful auxiliary.

They waited, therefore, although they were anxious to be reunited at Granite House. It pained the engineer to see his forces divided, for it gave great advantage to the pirates. Since Ayrton's disappearance they were only four against five, for Herbert could not yet be counted, and this was not the least care of the brave boy, who well understood the trouble of which he was the cause.

The question of knowing how, in their condition, they were to act against the pirates, was thoroughly discussed on the 29th of November by Cyrus Harding, Gideon Spilett, and Pencroft, at a moment when Herbert was asleep and could not hear them.

"My friends," said the reporter, after they had talked of Neb and of the impossibility of communicating with him, "I think, — like you, that to venture on the road to the corral would be to risk receiving a gunshot without being able to return it. But do you not think that the best thing to be done now is to openly give chase to these wretches?"

"That is just what I was thinking," answered Pencroft. "I believe we're not fellows to be afraid of a bullet, and as for me, if Captain Harding approves, I'm ready to dash into the forest! Why, hang it, one man is equal to another!"

“But is he equal to five?” asked the engineer.

“I will join Pencroft,” said the reporter, “and both of us, well-armed and accompanied by Top — ”

“My dear Spilett, and you, Pencroft,” answered Harding, “let us reason coolly. If the convicts were hid in one spot of the island, if we knew that spot, and had only to dislodge them, I would undertake a direct attack; but is there not occasion to fear, on the contrary, that they are sure to fire the first shot?”

“Well, captain,” cried Pencroft, “a bullet does not always reach its mark.”

“That which struck Herbert did not miss, Pencroft,” replied the engineer. “Besides, observe that if both of you left the corral I should remain here alone to defend it. Do you imagine that the convicts will not see you leave it, that they will not allow you to enter the forest, and that they will not attack it during your absence, knowing that there is no one here but a wounded boy and a man?”

“You are right, captain,” replied Pencroft, his chest swelling with sullen anger. “You are right; they will do all they can to retake the corral, which they know to be well stored; and alone you could not hold it against them.”

“Oh, if we were only at Granite House!”

“If we were at Granite House,” answered the engineer, “the case would be very different. There I should not be afraid to leave Herbert with one, while the other three went to search the forests of the island. But we are at the corral, and it is best to stay here until we can leave it together.”

Cyrus Harding’s reasoning was unanswerable, and his companions understood it well.

“If only Ayrton was still one of us!” said Gideon Spilett. “Poor fellow! his return to social life will have been but of short duration.”

“If he is dead,” added Pencroft, in a peculiar tone.

“Do you hope, then, Pencroft, that the villains have spared him?” asked Gideon Spilett.

“Yes, if they had any interest in doing so.”

“What! you suppose that Ayrton finding his old companions, forgetting

all that he owes us — ”

“Who knows?” answered the sailor, who did not hazard this shameful supposition without hesitating.

“Pencroft,” said Harding, taking the sailor’s arm, “that is a wicked idea of yours, and you will distress me much if you persist in speaking thus. I will answer for Ayrton’s fidelity.”

“And I also,” added the reporter quickly.

“Yes, yes, captain, I was wrong,” replied Pencroft; “it was a wicked idea indeed that I had, and nothing justifies it. But what can I do? I’m not in my senses. This imprisonment in the corral wearies me horribly, and I have never felt so excited as I do now.

“Be patient, Pencroft,” replied the engineer. “How long will it be, my dear Spilett, before you think Herbert may be carried to Granite House?”

“That is difficult to say, Cyrus,” answered the reporter, “for any imprudence might involve terrible consequences. But his convalescence is progressing, and if he continues to gain strength, in eight days from now — well, we shall see.”

Eight days! That would put off the return to Granite House until the first days of December. At this time two months of spring had already passed. The weather was fine, and the heat began to be great. The forests of the island were in full leaf, and the time was approaching when the usual crops ought to be gathered. The return to the plateau of Prospect Heights would, therefore, be followed by extensive agricultural labors, interrupted only by the projected expedition through the island.

It can, therefore, be well understood how injurious this seclusion in the corral must have been to the colonists.

But if they were compelled to bow before necessity, they did not do so without impatience.

Once or twice the reporter ventured out into the road and made the tour of the palisade. Top accompanied him, and Gideon Spilett, his gun cocked, was ready for any emergency.

He met with no misadventure and found no suspicious traces. His dog would have warned him of any danger, and, as Top did not bark, it might be concluded that there was nothing to fear at the moment at least, and that the convicts were occupied in another part of the island.

However, on his second sortie, on the 27th of November, Gideon Spilett, who had ventured a quarter of a mile into the woods, towards the south of the mountain, remarked that Top scented something. The dog had no longer his unconcerned manner; he went backwards and forwards, ferreting among the grass and bushes as if his smell had revealed some suspicious object to him.

Gideon Spilett followed Top, encouraged him, excited him by his voice, while keeping a sharp look-out, his gun ready to fire, and sheltering himself behind the trees. It was not probable that Top scented the presence of man, for in that case, he would have announced it by half-uttered, sullen, angry barks. Now, as he did not growl, it was because danger was neither near nor approaching.

Nearly five minutes passed thus, Top rummaging, the reporter following him prudently when, all at once, the dog rushed towards a thick bush, and drew out a rag.

It was a piece of cloth, stained and torn, which Spilett immediately brought back to the corral. There it was examined by the colonists, who found that it was a fragment of Ayrton’s waistcoat, a piece of that felt, manufactured solely by the Granite House factory.

“You see, Pencroft,” observed Harding, “there has been resistance on the part of the unfortunate Ayrton. The convicts have dragged him away in spite of himself! Do you still doubt his honesty?”

“No, captain,” answered the sailor, “and I repented of my suspicion a long time ago! But it seems to me that something may be learned from the incident.”

“What is that?” asked the reporter.

“It is that Ayrton was not killed at the corral! That they dragged him away living, since he has resisted. Therefore, perhaps, he is still living!”

“Perhaps, indeed,” replied the engineer, who remained thoughtful.

This was a hope, to which Ayrton’s companions could still hold. Indeed, they had before believed that, surprised in the corral, Ayrton had fallen by a bullet, as Herbert had fallen. But if the convicts had not killed him at first, if they had brought him living to another part of the island, might it not be admitted that he was still their prisoner? Perhaps, even, one of them had found in Ayrton his old Australian companion Ben Joyce, the chief of the escaped convicts. And who knows but that they had conceived the impossible hope of bringing back Ayrton to themselves? He would have been very useful to them, if they had been able to make him turn traitor!

This incident was, therefore, favorably interpreted at the corral, and it no longer appeared impossible that they should find Ayrton again. On his side, if he was only a prisoner, Ayrton would no doubt do all he could to escape from the hands of the villains, and this would be a powerful aid to the settlers!

“At any rate,” observed Gideon Spilett, “if happily Ayrton did manage to escape, he would go directly to Granite House, for he could not know of the attempted assassination of which Herbert has been a victim, and consequently would never think of our being imprisoned in the corral.”

“Oh! I wish that he was there, at Granite House!” cried Pencroft, “and that we were there, too! For, although the rascals can do nothing to our house, they may plunder the plateau, our plantations, our poultry-yard!”

Pencroft had become a thorough farmer, heartily attached to his crops. But it must be said that Herbert was more anxious than any to return to Granite House, for he knew how much the presence of the settlers was needed there. And it was he who was keeping them at the corral! Therefore, one idea occupied his mind — to leave the corral, and when! He believed he could bear removal to Granite House. He was sure his strength would return more quickly in his room, with the air and sight of the sea!

Several times he pressed Gideon Spilett, but the latter, fearing, with good reason, that Herbert’s wounds, half healed, might reopen on the way, did not give the order to start.

However, something occurred which compelled Cyrus Harding and his two friends to yield to the lad’s wish, and God alone knew that this determination might cause them grief and remorse.

It was the 29th of November, seven o’clock in the evening. The three settlers were talking in Herbert’s room, when they heard Top utter quick barks.

Harding, Pencroft, and Spilett seized their guns and ran out of the house. Top, at the foot of the palisade, was jumping, barking, but it was with pleasure, not anger.

“Some one is coming.”

“Yes.”

“It is not an enemy!”

“Neb, perhaps?”

“Or Ayrton?”

These words had hardly been exchanged between the engineer and his two companions when a body leaped over the palisade and fell on the ground inside the corral.

It was Jup, Master Jup in person, to whom Top immediately gave a most cordial reception.

“Jup!” exclaimed Pencroft.

“Neb has sent him to us,” said the reporter.

“Then,” replied the engineer, “he must have some note on him.”

Pencroft rushed up to the orang. Certainly if Neb had any important matter to communicate to his master he could not employ a more sure or more rapid messenger, who could pass where neither the colonists could, nor even Top himself.

Cyrus Harding was not mistaken. At Jup’s neck hung a small bag, and in this bag was found a little note traced by Neb’s hand.

The despair of Harding and his companions may be imagined when they read these words: —

“Friday, six o’clock in the morning.

“Plateau invaded by convicts.

“Neb.”

They gazed at each other without uttering a word, then they re-entered the house. What were they to do? The convicts on Prospect Heights! that was disaster, devastation, ruin.

Herbert, on seeing the engineer, the reporter, and Pencroft re-enter, guessed that their situation was aggravated, and when he saw Jup, he no longer doubted that some misfortune menaced Granite House.

“Captain Harding,” said he, “I must go; I can bear the journey. I must go.”

Gideon Spilett approached Herbert; then, having looked at him, —

“Let us go, then!” said he.

The question was quickly decided whether Herbert should be carried on a litter or in the cart which had brought Ayrton to the corral. The motion of the litter would have been more easy for the wounded lad, but it would have necessitated two bearers, that is to say, there would have been two guns less for defense if an attack was made on the road. Would they not, on the contrary, by employing the cart leave every arm free? Was it impossible to place the mattress on which Herbert was lying in it, and to advance with so much care that any jolt should be avoided? It could be done.

The cart was brought. Pencroft harnessed the onager. Cyrus Harding and the reporter raised Herbert’s mattress and placed it on the bottom of the cart. The weather was fine. The sun’s bright rays glanced through the trees.

“Are the guns ready?” asked Cyrus Harding.

They were. The engineer and Pencroft, each armed with a double-barreled gun, and Gideon Spilett carrying his rifle, had nothing to do but start.

“Are you comfortable, Herbert?” asked the engineer.

“Ah, captain,” replied the lad, “don’t be uneasy, I shall not die on the road!”

While speaking thus, it could be seen that the poor boy had called up all his energy, and by the energy of a powerful will had collected his failing strength.

The engineer felt his heart sink painfully. He still hesitated to give the signal for departure; but that would have driven Herbert to despair — killed him perhaps.

“Forward!” said Harding.

The gate of the corral was opened. Jup and Top, who knew when to be silent, ran in advance. The cart came out, the gate was reclosed, and the onager, led by Pencroft, advanced at a slow pace.

Certainly, it would have been safer to have taken a different road than that which led straight from the corral to Granite House, but the cart would have met with great difficulties in moving under the trees. It was necessary, therefore, to follow this way, although it was well known to the convicts.

Cyrus Harding and Gideon Spilett walked one on each side of the cart, ready to answer to any attack. However, it was not probable that the convicts would have yet left the plateau of Prospect Heights.

Neb’s note had evidently been written and sent as soon as the convicts had shown themselves there. Now, this note was dated six o’clock in the morning, and the active orang, accustomed to come frequently to the corral, had taken scarcely three quarters of an hour to cross the five miles which separated it from Granite House. They would, therefore, be safe at that time, and if there was any occasion for firing, it would probably not be until they were in the neighborhood of Granite House. However, the colonists kept a strict watch. Top and Jup, the latter armed with his club, sometimes in front, sometimes beating the wood at the sides of the road, signalized no danger.

The cart advanced slowly under Pencroft’s guidance. It had left the corral at half-past seven. An hour after, four out of the five miles had been cleared, without any incident having occurred. The road was as deserted as all that part of the Jacamar Wood which

lay between the Mercy and the lake. There was no occasion for any warning. The wood appeared as deserted as on the day when the colonists first landed on the island.

They approached the plateau. Another mile and they would see the bridge over Creek Glycerine. Cyrus Harding expected to find it in its place; supposing that the convicts would have crossed it, and that, after having passed one of the streams which enclosed the plateau, they would have taken the precaution to lower it again, so as to keep open a retreat.

At length an opening in the trees allowed the sea-horizon to be seen. But the cart continued its progress, for not one of its defenders thought of abandoning it.

At that moment Pencroft stopped the onager, and in a hoarse voice, —

“Oh! the villains!” he exclaimed.

And he pointed to a thick smoke rising from the mill, the sheds, and the buildings at the poultry-yard.

A man was moving about in the midst of the smoke. It was Neb.

His companions uttered a shout. He heard, and ran to meet them.

The convicts had left the plateau nearly half-an-hour before, having devastated it!

“And Mr. Herbert?” asked Neb.

Gideon Spilett returned to the cart.

Herbert had lost consciousness!

CHAPTER 10

Of the convicts, the dangers which menaced Granite House, the ruins with which the plateau was covered, the colonists thought no longer. Herbert's critical state outweighed all other considerations. Would the removal prove fatal to him by causing some internal injury? The reporter could not affirm it, but he and his companions almost despaired of the result. The cart was brought to the bend of the river. There some branches, disposed as a liner, received the mattress on which lay the unconscious Herbert. Ten minutes after, Cyrus Harding, Spilett, and Pencroft were at the foot of the cliff, leaving Neb to take the cart on to the plateau of Prospect Heights. The lift was put in motion, and Herbert was soon stretched on his bed in Granite House.

What cares were lavished on him to bring him back to life! He smiled for a moment on finding himself in his room, but could scarcely even murmur a few words, so great was his weakness. Gideon Spilett examined his wounds. He feared to find them reopened, having been imperfectly healed. There was nothing of the sort. From whence, then, came this prostration? why was Herbert so much worse? The lad then fell into a kind of feverish sleep, and the reporter and Pencroft remained near the bed. During this time, Harding told Neb all that had happened at the corral, and Neb recounted to his master the events of which the plateau had just been the theater.

It was only during the preceding night that the convicts had appeared on the edge of the forest, at the approaches to Creek Glycerine. Neb, who was watching near the poultry-yard, had not hesitated to fire at one of the pirates, who was about to cross the stream; but in the darkness he could not tell whether the man had been hit or not. At any rate, it was not enough to frighten away the band, and Neb had only just time to get up to Granite House, where at least he was in safety.

But what was he to do there? How prevent the devastations with which the convicts threatened the plateau? Had Neb any means by which to warn his master? And, besides, in what situation were the inhabitants of the corral themselves? Cyrus Harding and his companions had left on the 11th of November, and it was now the 29th. It was, therefore, nineteen days since Neb had had other news than that brought by Top — disastrous news: Ayrton disappeared, Herbert severely wounded, the engineer, reporter, and sailor, as it were, imprisoned in the corral!

What was he to do? asked poor Neb. Personally he had nothing to fear, for the convicts could not reach him in Granite House. But the buildings, the plantations, all their arrangements at the mercy of the pirates! Would it not be best to let Cyrus Harding judge of what he ought to do, and to warn him, at least, of the danger which threatened him?

Neb then thought of employing Jup, and confiding a note to him. He knew the orang's great intelligence, which had been often put to the proof. Jup understood the word corral, which had been frequently pronounced before him, and it may be remembered, too, that he had often driven the cart thither in company with Pencroft. Day had not yet dawned. The active orang would know how to pass unperceived through the woods, of which the convicts, besides, would think he was a native.

Neb did not hesitate. He wrote the note, he tied it to Jup's neck, he brought the ape to the door of Granite House, from which he let down a long cord to the ground; then, several times he repeated these words, —

"Jup Jup! corral, corral!"

The creature understood, seized the cord, glided rapidly down the beach, and disappeared in the darkness without the convicts' attention having been in the least excited.

"You did well, Neb," said Harding, "but perhaps in not warning us you would have done still better!"

And, in speaking thus, Cyrus Harding thought of Herbert, whose recovery the removal had so seriously checked.

Neb ended his account. The convicts had not appeared at all on the beach. Not knowing the number of the island's inhabitants, they might suppose that Granite House was defended by a large party. They must have remembered that during the attack by the brig numerous shot had been fired both from the lower and upper rocks, and no doubt they did not wish to expose themselves. But the plateau of Prospect Heights was open to them, and not covered by the fire of Granite House. They gave themselves up, therefore, to their instinct of destruction, — plundering, burning, devastating everything, — and only retiring half an hour before the arrival of the colonists, whom they believed still confined in the corral.

On their retreat, Neb hurried out. He climbed the plateau at the risk of being perceived and fired at, tried to extinguish the fire which was consuming the buildings of the poultry-yard, and had struggled, though in vain, against it until the cart appeared at the edge of the wood.

Such had been these serious events. The presence of the convicts constituted a permanent source of danger to the settlers in Lincoln Island, until then so happy, and who might now expect still greater misfortunes.

Spilett remained in Granite House with Herbert and Pencroft, while Cyrus Harding, accompanied by Neb, proceeded to judge for himself of the extent of the disaster.

It was fortunate that the convicts had not advanced to the foot of Granite House. The workshop at the Chimneys would in that case not have escaped destruction. But after all, this evil would have been more easily reparable than the ruins accumulated on the plateau of Prospect Heights. Harding and Neb proceeded towards the Mercy, and ascended its left bank without meeting with any trace of the convicts; nor on the other side of the river, in the depths of the wood, could they perceive any suspicious indications.

Besides, it might be supposed that in all probability either the convicts knew of the return of the settlers to Granite House, by having seen them pass on the road from the corral, or, after the devastation of the plateau, they had penetrated into Jacamar Wood, following the course of the Mercy, and were thus ignorant of their return.

In the former case, they must have returned towards the corral, now without defenders, and which contained valuable stores.

In the latter, they must have regained their encampment, and would wait on opportunity to recommence the attack.

It was, therefore, possible to prevent them, but any enterprise to clear the island was now rendered difficult by reason of Herbert’s condition. Indeed, their whole force would have been barely sufficient to cope with the convicts, and just now no one could leave Granite House.

The engineer and Neb arrived on the plateau. Desolation reigned everywhere. The fields had been trampled over; the ears of wheat, which were nearly full-grown, lay on the ground. The other plantations had not suffered less.

The kitchen-garden was destroyed. Happily, Granite House possessed a store of seed which would enable them to repair these misfortunes.

As to the wall and buildings of the poultry-yard and the onagers stable, the fire had destroyed all. A few terrified creatures roamed over the plateau. The birds, which during the fire had taken refuge on the waters of the lake, had already returned to their accustomed spot, and were dabbling on the banks. Everything would have to be reconstructed.

Cyrus Harding's face, which was paler than usual, expressed an internal anger which he commanded with difficulty, but he did not utter a word. Once more he looked at his devastated fields, and at the smoke which still rose from the ruins, then he returned to Granite House.

The following days were the saddest of any that the colonists had passed on the island! Herbert's weakness visibly increased. It appeared that a more serious malady, the consequence of the profound physiological disturbance he had gone through, threatened to declare itself, and Gideon Spilett feared such an aggravation of his condition that he would be powerless to fight against it!

In fact, Herbert remained in an almost continuous state of drowsiness, and symptoms of delirium began to manifest themselves. Refreshing drinks were the only remedies at the colonists' disposal. The fever was not as yet very high, but it soon appeared that it would probably recur at regular intervals. Gideon Spilett first recognized this on the 6th of December.

The poor boy, whose fingers, nose, and ears had become extremely pale, was at first seized with slight shiverings, horripilations, and tremblings. His pulse was weak and irregular, his skin dry, his thirst intense. To this soon succeeded a hot fit; his face became flushed; his skin reddened; his pulse quick; then a profuse perspiration broke out after which the fever seemed to diminish. The attack had lasted nearly five hours.

Gideon Spilett had not left Herbert, who, it was only too certain, was now seized by an intermittent fever, and this fever must be cured at any cost before it should assume a

more serious aspect.

“And in order to cure it,” said Spilett to Cyrus Harding, “we need a febrifuge.”

“A febrifuge — ” answered the engineer. “We have neither Peruvian bark, nor sulphate of quinine.”

“No,” said Gideon Spilett, “but there are willows on the border of the lake, and the bark of the willow might, perhaps, prove to be a substitute for quinine.”

“Let us try it without losing a moment,” replied Cyrus Harding.

The bark of the willow has, indeed, been justly considered as a succedaneum for Peruvian bark, as has also that of the horse-chestnut tree, the leaf of the holly, the snake-root, etc. It was evidently necessary to make trial of this substance, although not so valuable as Peruvian bark, and to employ it in its natural state, since they had no means for extracting its essence.

Cyrus Harding went himself to cut from the trunk of a species of black willow, a few pieces of bark; he brought them back to Granite House, and reduced them to a powder, which was administered that same evening to Herbert.

The night passed without any important change. Herbert was somewhat delirious, but the fever did not reappear in the night, and did not return either during the following day.

Pencroft again began to hope. Gideon Spilett said nothing. It might be that the fever was not quotidian, but tertian, and that it would return next day. Therefore, he awaited the next day with the greatest anxiety.

It might have been remarked besides that during this period Herbert remained utterly prostrate, his head weak and giddy. Another symptom alarmed the reporter to the highest degree. Herbert’s liver became congested, and soon a more intense delirium showed that his brain was also affected.

Gideon Spilett was overwhelmed by this new complication. He took the engineer aside.

“It is a malignant fever,” said he.

“A malignant fever!” cried Harding. “You are mistaken, Spilett. A malignant fever does not declare itself spontaneously; its germ must previously have existed.”

“I am not mistaken,” replied the reporter. “Herbert no doubt contracted the germ of this fever in the marshes of the island. He has already had one attack; should a second come on and should we not be able to prevent a third, he is lost.”

“But the willow bark?”

“That is insufficient,” answered the reporter, “and the third attack of a malignant fever, which is not arrested by means of quinine, is always fatal.”

Fortunately, Pencroft heard nothing of this conversation or he would have gone mad.

It may be imagined what anxiety the engineer and the reporter suffered during the day of the 7th of December and the following night.

Towards the middle of the day the second attack came on. The crisis was terrible. Herbert felt himself sinking. He stretched his arms towards Cyrus Harding, towards Spilett, towards Pencroft. He was so young to die! The scene was heart-rending. They were obliged to send Pencroft away.

The fit lasted five hours. It was evident that Herbert could not survive a third.

The night was frightful. In his delirium Herbert uttered words which went to the hearts of his companions. He struggled with the convicts, he called to Ayrton, he poured forth entreaties to that mysterious being, — that powerful unknown protector, — whose image was stamped upon his mind; then he again fell into a deep exhaustion which completely prostrated him. Several times Gideon Spilett thought that the poor boy was dead.

The next day, the 8th of December, was but a succession of the fainting fits. Herbert’s thin hands clutched the sheets. They had administered further doses of pounded bark, but the reporter expected no result from it.

“If before tomorrow morning we have not given him a more energetic febrifuge,” said the reporter, “Herbert will be dead.”

Night arrived — the last night, it was too much to be feared, of the good, brave, intelligent boy, so far in advance of his years, and who was loved by all as their own child. The only remedy which existed against this terrible malignant fever, the only specific which could overcome it, was not to be found in Lincoln Island.

During the night of the 8th of December, Herbert was seized by a more violent delirium. His liver was fearfully congested, his brain affected, and already it was impossible for him to recognize any one.

Would he live until the next day, until that third attack which must infallibly carry him off? It was not probable. His strength was exhausted, and in the intervals of fever he lay as one dead.

Towards three o’clock in the morning Herbert uttered a piercing cry. He seemed to be torn by a supreme convulsion. Neb, who was near him, terrified, ran into the next room where his companions were watching.

Top, at that moment, barked in a strange manner.

All rushed in immediately and managed to restrain the dying boy, who was endeavoring to throw himself out of his bed, while Spilett, taking his arm, felt his pulse gradually quicken.

It was five in the morning. The rays of the rising sun began to shine in at the windows of Granite House. It promised to be a fine day, and this day was to be poor Herbert’s last!

A ray glanced on the table placed near the bed.

Suddenly Pencroft, uttering a cry, pointed to the table.

On it lay a little oblong box, of which the cover bore these words: — ”SULPHATE OF QUININE.”

CHAPTER 11

Gideon Spilett took the box and opened it. It contained nearly two hundred grains of a white powder, a few particles of which he carried to his lips. The extreme bitterness of the substance precluded all doubt; it was certainly the precious extract of quinine, that pre-eminent antifebrile.

This powder must be administered to Herbert without delay. How it came there might be discussed later.

“Some coffee!” said Spilett.

In a few moments Neb brought a cup of the warm infusion. Gideon Spilett threw into it about eighteen grains of quinine, and they succeeded in making Herbert drink the mixture.

There was still time, for the third attack of the malignant fever had not yet shown itself. How they longed to be able to add that it would not return!

Besides, it must be remarked, the hopes of all had now revived. The mysterious influence had been again exerted, and in a critical moment, when they had despaired of it.

In a few hours Herbert was much calmer. The colonists could now discuss this incident. The intervention of the stranger was more evident than ever. But how had he been able to penetrate during the night into Granite House? It was inexplicable, and, in truth, the proceedings of the genius of the island were not less mysterious than was that genius himself. During this day the sulphate of quinine was administered to Herbert every three hours.

The next day some improvement in Herbert’s condition was apparent. Certainly, he was not out of danger, intermittent fevers being subject to frequent and dangerous relapses, but the most assiduous care was bestowed on him. And besides, the specific was at hand; nor, doubtless, was he who had brought it far distant! And the hearts of all were animated by returning hope.

This hope was not disappointed. Ten days after, on the 20th of December, Herbert’s convalescence commenced.

He was still weak, and strict diet had been imposed upon him, but no access of fever supervened. And then, the poor boy submitted with such docility to all the prescriptions ordered him! He longed so to get well!

Pencroft was as a man who has been drawn up from the bottom of an abyss. Fits of joy approaching delirium seized him. When the time for the third attack had passed by, he nearly suffocated the reporter in his embrace. Since then, he always called him Dr. Spilett.

The real doctor, however, remained undiscovered.

“We will find him!” repeated the sailor.

Certainly, this man, whoever he was, might expect a somewhat too energetic embrace from the worthy Pencroft!

The month of December ended, and with it the year 1867, during which the colonists of Lincoln Island had of late been so severely tried. They commenced the year 1868 with magnificent weather, great heat, and a tropical temperature, delightfully cooled by the sea-breeze. Herbert’s recovery progressed, and from his bed, placed near one of the windows of Granite House, he could inhale the fresh air, charged with ozone, which could not fail to restore his health. His appetite returned, and what numberless delicate, savory little dishes Neb prepared for him!

“It is enough to make one wish to have a fever oneself!” said Pencroft.

During all this time, the convicts did not once appear in the vicinity of Granite House. There was no news of Ayrton, and though the engineer and Herbert still had some hopes of finding him again, their companions did not doubt but that the unfortunate man had perished. However, this uncertainty could not last, and when once the lad should have recovered, the expedition, the result of which must be so important, would be undertaken. But they would have to wait a month, perhaps, for all the strength of the colony must be put into requisition to obtain satisfaction from the convicts.

However, Herbert’s convalescence progressed rapidly. The congestion of the liver had disappeared, and his wounds might be considered completely healed.

During the month of January, important work was done on the plateau of Prospect Heights; but it consisted solely in saving as much as was possible from the devastated crops, either of corn or vegetables. The grain and the plants were gathered, so as to provide a new harvest for the approaching half-season. With regard to rebuilding the poultry-yard, wall, or stables, Cyrus Harding preferred to wait. While he and his companions were in pursuit of the convicts, the latter might very probably pay another visit to the plateau, and it would be useless to give them an opportunity of recommencing their work of destruction. When the island should be cleared of these miscreants, they would set about rebuilding. The young convalescent began to get up in the second week of January, at first for one hour a day, then two, then three. His strength visibly returned, so vigorous was his constitution. He was now eighteen years of age. He was tall, and promised to become a man of noble and commanding presence. From this time his recovery, while still requiring care, — and Dr. Spilett was very strict, — made rapid progress. Towards the end of the month, Herbert was already walking about on Prospect Heights, and the beach.

He derived, from several sea-baths, which he took in company with Pencroft and Neb, the greatest possible benefit. Cyrus Harding thought he might now settle the day for their departure, for which the 15th of February was fixed. The nights, very clear at this time of year, would be favorable to the researches they intended to make all over the island.

The necessary preparations for this exploration were now commenced, and were important, for the colonists had sworn not to return to Granite House until their twofold object had been achieved; on the one hand, to exterminate the convicts, and rescue Ayrton, if he was still living; on the other, to discover who it was that presided so effectually over the fortunes of the colony.

Of Lincoln Island, the settlers knew thoroughly all the eastern coast from Claw Cape to the Mandible Capes, the extensive Tadorn Marsh, the neighborhood of Lake Grant, Jacamar Wood, between the road to the corral and the Mercy, the courses of the Mercy and Red Creek, and lastly, the spurs of Mount Franklin, among which the corral had been established.

They had explored, though only in an imperfect manner, the vast shore of Washington Bay from Claw Cape to Reptile End, the woody and marshy border of the west coast, and the interminable downs, ending at the open mouth of Shark Gulf. But they had in

no way surveyed the woods which covered the Serpentine Peninsula, all to the right of the Mercy, the left bank of Falls River, and the wilderness of spurs and valleys which supported three quarters of the base of Mount Franklin, to the east, the north, and the west, and where doubtless many secret retreats existed. Consequently, many millions of acres of the island had still escaped their investigations.

It was, therefore, decided that the expedition should be carried through the Far West, so as to include all that region situated on the right of the Mercy.

It might, perhaps, be better worth while to go direct to the corral, where it might be supposed that the convicts had again taken refuge, either to pillage or to establish themselves there. But either the devastation of the corral would have been an accomplished fact by this time, and it would be too late to prevent it, or it had been the convicts' interest to entrench themselves there, and there would be still time to go and turn them out on their return.

Therefore, after some discussion, the first plan was adhered to, and the settlers resolved to proceed through the wood to Reptile End. They would make their way with their hatchets, and thus lay the first draft of a road which would place Granite House in communication with the end of the peninsula for a length of from sixteen to seventeen miles.

The cart was in good condition. The onagers, well rested, could go a long journey. Provisions, camp effects, a portable stove, and various utensils were packed in the cart, as also weapons and ammunition, carefully chosen from the now complete arsenal of Granite House. But it was necessary to remember that the convicts were, perhaps, roaming about the woods, and that in the midst of these thick forests a shot might quickly be fired and received. It was therefore resolved that the little band of settlers should remain together and not separate under any pretext whatever.

It was also decided that no one should remain at Granite House. Top and Jup themselves were to accompany the expedition; the inaccessible dwelling needed no guard. The 14th of February, eve of the departure, was consecrated entirely to repose, and — thanksgiving addressed by the colonists to the Creator. A place in the cart was reserved for Herbert, who, though thoroughly convalescent, was still a little weak. The next morning, at daybreak, Cyrus Harding took the necessary measures to protect Granite House from any invasion. The ladders, which were formerly used for the

ascent, were brought to the Chimneys and buried deep in the sand, so that they might be available on the return of the colonists, for the machinery of the lift had been taken to pieces, and nothing of the apparatus remained. Pencroft stayed the last in Granite House in order to finish this work, and he then lowered himself down by means of a double rope held below, and which, when once hauled down, left no communication between the upper landing and the beach.

The weather was magnificent.

“We shall have a warm day of it,” said the reporter, laughing.

“Pooh! Dr. Spilett,” answered Pencroft, “we shall walk under the shade of the trees and shan’t even see the sun!”

“Forward!” said the engineer.

The cart was waiting on the beach before the Chimneys. The reporter made Herbert take his place in it during the first hours at least of the journey, and the lad was obliged to submit to his doctor’s orders.

Neb placed himself at the onagers’ heads. Cyrus Harding, the reporter, and the sailor, walked in front. Top bounded joyfully along. Herbert offered a seat in his vehicle to Jup, who accepted it without ceremony. The moment for departure had arrived, and the little band set out.

The cart first turned the angle of the mouth of the Mercy, then, having ascended the left bank for a mile, crossed the bridge, at the other side of which commenced the road to Port Balloon, and there the explorers, leaving this road on their left, entered the cover of the immense woods which formed the region of the Far West.

For the first two miles the widely scattered trees allowed the cart to pass with ease; from time to time it became necessary to cut away a few creepers and bushes, but no serious obstacle impeded the progress of the colonists.

The thick foliage of the trees threw a grateful shade on the ground. Deodars, Douglas firs, casuarinas, banksias, gum-trees, dragon-trees, and other well-known species, succeeded each other far as the eye could reach. The feathered tribes of the island were all represented — grouse, jacamars, pheasants, lories, as well as the chattering

cockatoos, parrots, and paroquets. Agouties, kangaroos, and capybaras fled swiftly at their approach; and all this reminded the settlers of the first excursions they had made on their arrival at the island.

“Nevertheless,” observed Cyrus Harding, “I notice that these creatures, both birds and quadrupeds, are more timid than formerly. These woods have, therefore, been recently traversed by the convicts, and we shall certainly find some traces of them.”

And, in fact, in several places they could distinguish traces, more or less recent, of the passage of a band of men — here branches broken off the trees, perhaps to mark out the way; there the ashes of a fire, and footprints in clayey spots; but nothing which appeared to belong to a settled encampment.

The engineer had recommended his companions to refrain from hunting. The reports of the firearms might give the alarm to the convicts, who were, perhaps, roaming through the forest. Moreover, the hunters would necessarily ramble some distance from the cart, which it was dangerous to leave unguarded.

In the afterpart of the day, when about six miles from Granite House, their progress became much more difficult. In order to make their way through some thickets, they were obliged to cut down trees. Before entering such places Harding was careful to send in Top and Jup, who faithfully accomplished their commission, and when the dog and orang returned without giving any warning, there was evidently nothing to fear, either from convicts or wild beasts, two varieties of the animal kingdom, whose ferocious instincts placed them on the same level. On the evening of the first day the colonists encamped about nine miles from Granite House, on the border of a little stream falling into the Mercy, and of the existence of which they had till then been ignorant; it evidently, however, belonged to the hydiographical system to which the soil owed its astonishing fertility. The settlers made a hearty meal, for their appetites were sharpened, and measures were then taken that the night might be passed in safety. If the engineer had had only to deal with wild beasts, jaguars or others, he would have simply lighted fires all around his camp, which would have sufficed for its defense; but the convicts would be rather attracted than terrified by the flames, and it was, therefore, better to be surrounded by the profound darkness of night.

The watch was, however, carefully organized. Two of the settlers were to watch together, and every two hours it was agreed that they should be relieved by their

comrades. And so, notwithstanding his wish to the contrary, Herbert was exempted from guard. Pencroft and Gideon Spilett in one party, the engineer and Neb in another, mounted guard in turns over the camp.

The night, however, was but of few hours. The darkness was due rather to the thickness of the foliage than to the disappearance of the sun. The silence was scarcely disturbed by the howling of jaguars and the chattering of the monkeys, the latter appearing to particularly irritate Master Jup. The night passed without incident, and on the next day, the 15th of February, the journey through the forest, tedious rather than difficult, was continued. This day they could not accomplish more than six miles, for every moment they were obliged to cut a road with their hatchets.

Like true settlers, the colonists spared the largest and most beautiful trees, which would besides have cost immense labor to fell, and the small ones only were sacrificed, but the result was that the road took a very winding direction, and lengthened itself by numerous detours.

During the day Herbert discovered several new specimens not before met with in the island, such as the tree-fern, with its leaves spread out like the waters of a fountain, locust-trees, on the long pods of which the onagers browsed greedily, and which supplied a sweet pulp of excellent flavor. There, too, the colonists again found groups of magnificent kauries, their cylindrical trunks, crowded with a cone of verdure, rising to a height of two hundred feet. These were the tree-kings of New Zealand, as celebrated as the cedars of Lebanon.

As to the fauna, there was no addition to those species already known to the hunters. Nevertheless, they saw, though unable to get near them, a couple of those large birds peculiar to Australia, a sort of cassowary, called emu, five feet in height, and with brown plumage, which belong to the tribe of waders. Top darted after them as fast as his four legs could carry him, but the emus distanced him with ease, so prodigious was their speed.

As to the traces left by the convicts, a few more were discovered. Some footprints found near an apparently recently extinguished fire were attentively examined by the settlers. By measuring them one after the other, according to their length and breadth, the marks of five men’s feet were easily distinguished. The five convicts had evidently camped on this spot; but, — and this was the object of so minute an examination, —

a sixth footprint could not be discovered, which in that case would have been that of Ayrton.

“Ayrton was not with them!” said Herbert.

“No,” answered Pencroft, “and if he was not with them, it was because the wretches had already murdered him! but then these rascals have not a den to which they may be tracked like tigers!”

“No,” replied the reporter, “it is more probable that they wander at random, and it is their interest to rove about until the time when they will be masters of the island!”

“The masters of the island!” exclaimed the sailor; “the masters of the island!...” he repeated, and his voice was choked, as if his throat was seized in an iron grasp. Then in a calmer tone, “Do you know, Captain Harding,” said he, “what the ball is which I have rammed into my gun?”

“No, Pencroft!”

“It is the ball that went through Herbert’s chest, and I promise you it won’t miss its mark!”

But this just retaliation would not bring Ayrton back to life, and from the examination of the footprints left in the ground, they must, alas! conclude that all hopes of ever seeing him again must be abandoned.

That evening they encamped fourteen miles from Granite House, and Cyrus Harding calculated that they could not be more than five miles from Reptile Point.

And indeed, the next day the extremity of the peninsula was reached, and the whole length of the forest had been traversed; but there was nothing to indicate the retreat in which the convicts had taken refuge, nor that, no less secret, which sheltered the mysterious unknown.

CHAPTER 12

The next day, the 18th of February, was devoted to the exploration of all that wooded region forming the shore from Reptile End to Falls River. The colonists were able to search this forest thoroughly, for, as it was comprised between the two shores of the Serpentine Peninsula, it was only from three to four miles in breadth. The trees, both by their height and their thick foliage, bore witness to the vegetative power of the soil, more astonishing here than in any other part of the island. One might have said that a corner from the virgin forests of America or Africa had been transported into this temperate zone. This led them to conclude that the superb vegetation found a heat in this soil, damp in its upper layer, but warmed in the interior by volcanic fires, which could not belong to a temperate climate. The most frequently occurring trees were knaries and eucalypti of gigantic dimensions.

But the colonists' object was not simply to admire the magnificent vegetation. They knew already that in this respect Lincoln Island would have been worthy to take the first rank in the Canary group, to which the first name given was that of the Happy Isles. Now, alas! their island no longer belonged to them entirely; others had taken possession of it, miscreants polluted its shores, and they must be destroyed to the last man.

No traces were found on the western coast, although they were carefully sought for. No more footprints, no more broken branches, no more deserted camps.

"This does not surprise me," said Cyrus Harding to his companions. "The convicts first landed on the island in the neighborhood of Flotsam Point, and they immediately plunged into the Far West forests, after crossing Tadorn Marsh. They then followed almost the same route that we took on leaving Granite House. This explains the traces we found in the wood. But, arriving on the shore, the convicts saw at once that they would discover no suitable retreat there, and it was then that, going northwards again, they came upon the corral."

"Where they have perhaps returned," said Pencroft.

"I do not think so," answered the engineer, "for they would naturally suppose that our researches would be in that direction. The corral is only a storehouse to them, and not a definitive encampment."

“I am of Cyrus’ opinion,” said the reporter, “and I think that it is among the spurs of Mount Franklin that the convicts will have made their lair.”

“Then, captain, straight to the corral!” cried Pencroft. “We must finish them off, and till now we have only lost time!”

“No, my friend,” replied the engineer; “you forget that we have a reason for wishing to know if the forests of the Far West do not contain some habitation. Our exploration has a double object, Pencroft. If, on the one hand, we have to chastise crime, we have, on the other, an act of gratitude to perform.”

“That was well said, captain,” replied the sailor, “but, all the same, it is my opinion that we shall not find the gentleman until he pleases.”

And truly Pencroft only expressed the opinion of all. It was probable that the stranger’s retreat was not less mysterious than was he himself.

That evening the cart halted at the mouth of Falls River. The camp was organized as usual, and the customary precautions were taken for the night. Herbert, become again the healthy and vigorous lad he was before his illness, derived great benefit from this life in the open air, between the sea breezes and the vivifying air from the forests. His place was no longer in the cart, but at the head of the troop.

The next day, the 19th of February, the colonists, leaving the shore, where, beyond the mouth, basalts of every shape were so picturesquely piled up, ascended the river by its left bank. The road had been already partly cleared in their former excursions made from the corral to the west coast. The settlers were now about six miles from Mount Franklin.

The engineer’s plan was this: — To minutely survey the valley forming the bed of the river, and to cautiously approach the neighborhood of the corral; if the corral was occupied, to seize it by force; if it was not, to entrench themselves there and make it the center of the operations which had for their object the exploration of Mount Franklin.

This plan was unanimously approved by the colonists, for they were impatient to regain entire possession of their island.

They made their way then along the narrow valley separating two of the largest spurs of Mount Franklin. The trees, crowded on the river's bank, became rare on the upper slopes of the mountain. The ground was hilly and rough, very suitable for ambushes, and over which they did not venture without extreme precaution. Top and Jup skirmished on the flanks, springing right and left through the thick brushwood, and emulating each other in intelligence and activity. But nothing showed that the banks of the stream had been recently frequented — nothing announced either the presence or the proximity of the convicts. Towards five in the evening the cart stopped nearly 600 feet from the palisade. A semicircular screen of trees still hid it.

It was necessary to reconnoiter the corral, in order to ascertain if it was occupied. To go there openly, in broad daylight, when the convicts were probably in ambush, would be to expose themselves, as poor Herbert had done, to the firearms of the ruffians. It was better, then, to wait until night came on.

However, Gideon Spilett wished without further delay to reconnoiter the approaches to the corral, and Pencroft, who was quite out of patience, volunteered to accompany him.

"No, my friends," said the engineer, "wait till night. I will not allow one of you to expose himself in open day."

"But, captain — " answered the sailor, little disposed to obey.

"I beg of you, Pencroft," said the engineer.

"Very well!" replied the sailor, who vented his anger in another way, by bestowing on the convicts the worst names in his maritime vocabulary.

The colonists remained, therefore, near the cart, and carefully watched the neighboring parts of the forest.

Three hours passed thus. The wind had fallen, and absolute silence reigned under the great trees. The snapping of the smallest twig, a footstep on the dry leaves, the gliding of a body among the grass, would have been heard without difficulty. All was quiet. Besides, Top, lying on the grass, his head stretched out on his paws, gave no sign of uneasiness. At eight o'clock the day appeared far enough advanced for the reconnaissance to be made under favorable conditions. Gideon Spilett declared himself ready to set out accompanied by Pencroft. Cyrus Harding consented. Top and Jup were

to remain with the engineer, Herbert, and Neb, for a bark or a cry at a wrong moment would give the alarm.

“Do not be imprudent,” said Harding to the reporter and Pencroft, “you have not to gain possession of the corral, but only to find out whether it is occupied or not.”

“All right,” answered Pencroft.

And the two departed.

Under the trees, thanks to the thickness of their foliage, the obscurity rendered any object invisible beyond a radius of from thirty to forty feet. The reporter and Pencroft, halting at any suspicious sound, advanced with great caution.

They walked a little distance apart from each other so as to offer a less mark for a shot. And, to tell the truth, they expected every moment to hear a report. Five minutes after leaving the cart, Gideon Spilett and Pencroft arrived at the edge of the wood before the clearing beyond which rose the palisade.

They stopped. A few straggling beams still fell on the field clear of trees. Thirty feet distant was the gate of the corral, which appeared to be closed. This thirty feet, which it was necessary to cross from the wood to the palisade, constituted the dangerous zone, to borrow a ballistic term: in fact, one or more bullets fired from behind the palisade might knock over any one who ventured on to this zone. Gideon Spilett and the sailor were not men to draw back, but they knew that any imprudence on their part, of which they would be the first victims, would fall afterwards on their companions. If they themselves were killed, what would become of Harding, Neb, and Herbert?

But Pencroft, excited at feeling himself so near the corral where he supposed the convicts had taken refuge, was about to press forward, when the reporter held him back with a grasp of iron.

“In a few minutes it will be quite dark,” whispered Spilett in the sailor’s ear, “then will be the time to act.”

Pencroft, convulsively clasping the butt-end of his gun, restrained his energies, and waited, swearing to himself.

Soon the last of the twilight faded away. Darkness, which seemed as if it issued from the dense forest, covered the clearing. Mount Franklin rose like an enormous screen before the western horizon, and night spread rapidly over all, as it does in regions of low latitudes. Now was the time.

The reporter and Pencroft, since posting themselves on the edge of the wood, had not once lost sight of the palisade. The corral appeared to be absolutely deserted. The top of the palisade formed a line, a little darker than the surrounding shadow, and nothing disturbed its distinctness. Nevertheless, if the convicts were there, they must have posted one of their number to guard against any surprise.

Spilett grasped his companion’s hand, and both crept towards the corral, their guns ready to fire.

They reached the gate without the darkness being illuminated by a single ray of light.

Pencroft tried to push open the gate, which, as the reporter and he had supposed, was closed. However, the sailor was able to ascertain that the outer bars had not been put up. It might, then, be concluded that the convicts were there in the corral, and that very probably they had fastened the gate in such a way that it could not be forced open.

Gideon Spilett and Pencroft listened.

Not a sound could be heard inside the palisade. The musmons and the goats, sleeping no doubt in their huts, in no way disturbed the calm of night.

The reporter and the sailor hearing nothing, asked themselves whether they had not better scale the palisades and penetrate into the corral. This would have been contrary to Cyrus Harding’s instructions.

It is true that the enterprise might succeed, but it might also fail. Now, if the convicts were suspecting nothing, if they knew nothing of the expedition against them, if, lastly, there now existed a chance of surprising them, ought this chance to be lost by inconsiderately attempting to cross the palisades?

This was not the reporter’s opinion. He thought it better to wait until all the settlers were collected together before attempting to penetrate into the corral. One thing was certain, that it was possible to reach the palisade without being seen, and also that it did

not appear to be guarded. This point settled, there was nothing to be done but to return to the cart, where they would consult.

Pencroft probably agreed with this decision, for he followed the reporter without making any objection when the latter turned back to the wood.

In a few minutes the engineer was made acquainted with the state of affairs.

“Well,” said he, after a little thought, “I now have reason to believe that the convicts are not in the corral.”

“We shall soon know,” said Pencroft, “when we have scaled the palisade.”

“To the corral, my friends!” said Cyrus Harding.

“Shall we leave the cart in the wood?” asked Neb.

“No,” replied the engineer, “it is our wagon of ammunition and provisions, and, if necessary, it would serve as an entrenchment.”

“Forward, then!” said Gideon Spilett.

The cart emerged from the wood and began to roll noiselessly towards the palisade. The darkness was now profound, the silence as complete as when Pencroft and the reporter crept over the ground. The thick grass completely muffled their footsteps. The colonists held themselves ready to fire. Jup, at Pencroft’s orders, kept behind. Neb led Top in a leash, to prevent him from bounding forward.

The clearing soon came in sight. It was deserted. Without hesitating, the little band moved towards the palisade. In a short space of time the dangerous zone was passed. Neb remained at the onagers’ heads to hold them. The engineer, the reporter, Herbert, and Pencroft, proceeded to the door, in order to ascertain if it was barricaded inside. It was open!

“What do you say now?” asked the engineer, turning to the sailor and Spilett.

Both were stupefied.

“I can swear,” said Pencroft, “that this gate was shut just now!”

The colonists now hesitated. Were the convicts in the corral when Pencroft and the reporter made their reconnaissance? It could not be doubted, as the gate then closed could only have been opened by them. Were they still there, or had one of their number just gone out?

All these questions presented themselves simultaneously to the minds of the colonists, but how could they be answered?

At that moment, Herbert, who had advanced a few steps into the enclosure, drew back hurriedly, and seized Harding's hand.

"What's the matter?" asked the engineer.

"A light!"

"In the house?"

"Yes!"

All five advanced and indeed, through the window fronting them, they saw glimmering a feeble light. Cyrus Harding made up his mind rapidly. "It is our only chance," said he to his companions, "of finding the convicts collected in this house, suspecting nothing! They are in our power! Forward!" The colonists crossed through the enclosure, holding their guns ready in their hands. The cart had been left outside under the charge of Jup and Top, who had been prudently tied to it.

Cyrus Harding, Pencroft, and Gideon Spilett on one side, Herbert and Neb on the other, going along by the palisade, surveyed the absolutely dark and deserted corral.

In a few moments they were near the closed door of the house.

Harding signed to his companions not to stir, and approached the window, then feebly lighted by the inner light.

He gazed into the apartment.

On the table burned a lantern. Near the table was the bed formerly used by Ayrton.

On the bed lay the body of a man.

Suddenly Cyrus Harding drew back, and in a hoarse voice, — ”Ayrton!” he exclaimed.

Immediately the door was forced rather than opened, and the colonists rushed into the room.

Ayrton appeared to be asleep. His countenance showed that he had long and cruelly suffered. On his wrists and ankles could be seen great bruises.

Harding bent over him.

“Ayrton!” cried the engineer, seizing the arm of the man whom he had just found again under such unexpected circumstances.

At this exclamation Ayrton opened his eyes, and, gazing at Harding, then at the others, —

“You!” he cried, “you?”

“Ayrton! Ayrton!” repeated Harding.

“Where am I?”

“In the house in the corral!”

“Alone?”

“Yes!”

“But they will come back!” cried Ayrton. “Defend yourselves! defend yourselves!”

And he fell back exhausted.

“Spilett,” exclaimed the engineer, “we may be attacked at any moment. Bring the cart into the corral. Then, barricade the door, and all come back here.”

Pencroft, Neb, and the reporter hastened to execute the engineer’s orders. There was not a moment to be lost. Perhaps even now the cart was in the hands of the convicts!

In a moment the reporter and his two companions had crossed the corral and reached the gate of the palisade behind which Top was heard growling sullenly.

The engineer, leaving Ayrton for an instant, came out ready to fire. Herbert was at his side. Both surveyed the crest of the spur overlooking the corral. If the convicts were lying in ambush there, they might knock the settlers over one after the other.

At that moment the moon appeared in the east, above the black curtain of the forest, and a white sheet of light spread over the interior of the enclosure. The corral, with its clumps of trees, the little stream which watered it, its wide carpet of grass, was suddenly illuminated. From the side of the mountain, the house and a part of the palisade stood out white in the moonlight. On the opposite side towards the door, the enclosure remained dark. A black mass soon appeared. This was the cart entering the circle of light, and Cyrus Harding could hear the noise made by the door, as his companions shut it and fastened the interior bars.

But, at that moment, Top, breaking loose, began to bark furiously and rush to the back of the corral, to the right of the house.

“Be ready to fire, my friends!” cried Harding.

The colonists raised their pieces and waited the moment to fire.

Top still barked, and Jup, running towards the dog, uttered shrill cries.

The colonists followed him, and reached the borders of the little stream, shaded by large trees. And there, in the bright moonlight, what did they see? Five corpses, stretched on the bank!

They were those of the convicts who, four months previously, had landed on Lincoln Island!

CHAPTER 13

How had it happened? who had killed the convicts? Was it Ayrton? No, for a moment before he was dreading their return.

But Ayrton was now in a profound stupor, from which it was no longer possible to rouse him. After uttering those few words he had again become unconscious, and had fallen back motionless on the bed.

The colonists, a prey to a thousand confused thoughts, under the influence of violent excitement, waited all night, without leaving Ayrton's house, or returning to the spot where lay the bodies of the convicts. It was very probable that Ayrton would not be able to throw any light on the circumstances under which the bodies had been found, since he himself was not aware that he was in the corral. But at any rate he would be in a position to give an account of what had taken place before this terrible execution. The next day Ayrton awoke from his torpor, and his companions cordially manifested all the joy they felt, on seeing him again, almost safe and sound, after a hundred and four days separation.

Ayrton then in a few words recounted what had happened, or, at least, as much as he knew.

The day after his arrival at the corral, on the 10th of last November, at nightfall, he was surprised by the convicts, who had scaled the palisade. They bound and gagged him; then he was led to a dark cavern, at the foot of Mount Franklin, where the convicts had taken refuge.

His death had been decided upon, and the next day the convicts were about to kill him, when one of them recognized him and called him by the name which he bore in Australia. The wretches had no scruples as to murdering Ayrton! They spared Ben Joyce!

But from that moment Ayrton was exposed to the importunities of his former accomplices. They wished him to join them again, and relied upon his aid to enable them to gain possession of Granite House, to penetrate into that hitherto inaccessible dwelling, and to become masters of the island, after murdering the colonists!

Ayrton remained firm. The once convict, now repentant and pardoned, would rather die than betray his companions. Ayrton — bound, gagged, and closely watched — lived in this cave for four months.

Nevertheless the convicts had discovered the corral a short time after their arrival in the island, and since then they had subsisted on Ayrton's stores, but did not live at the corral.

On the 11th of November, two of the villains, surprised by the colonists' arrival, fired at Herbert, and one of them returned, boasting of having killed one of the inhabitants of the island; but he returned alone. His companion, as is known, fell by Cyrus Harding's dagger.

Ayrton's anxiety and despair may be imagined when he learned the news of Herbert's death. The settlers were now only four, and, as it seemed, at the mercy of the convicts. After this event, and during all the time that the colonists, detained by Herbert's illness, remained in the corral, the pirates did not leave their cavern, and even after they had pillaged the plateau of Prospect Heights, they did not think it prudent to abandon it.

The ill-treatment inflicted on Ayrton was now redoubled. His hands and feet still bore the bloody marks of the cords which bound him day and night. Every moment he expected to be put to death, nor did it appear possible that he could escape.

Matters remained thus until the third week of February. The convicts, still watching for a favorable opportunity, rarely quitted their retreat, and only made a few hunting excursions, either to the interior of the island, or the south coast.

Ayrton had no further news of his friends, and relinquished all hope of ever seeing them again. At last, the unfortunate man, weakened by ill-treatment, fell into a prostration so profound that sight and hearing failed him. From that moment, that is to say, since the last two days, he could give no information whatever of what had occurred.

"But, Captain Harding," he added, "since I was imprisoned in that cavern, how is it that I find myself in the corral?"

"How is it that the convicts are lying yonder dead, in the middle of the enclosure?" answered the engineer.

“Dead!” cried Ayrton, half rising from his bed, notwithstanding his weakness.

His companions supported him. He wished to get up, and with their assistance he did so. They then proceeded together towards the little stream.

It was now broad daylight.

There, on the bank, in the position in which they had been stricken by death in its most instantaneous form, lay the corpses of the five convicts!

Ayrton was astounded. Harding and his companions looked at him without uttering a word. On a sign from the engineer, Neb and Pencroft examined the bodies, already stiffened by the cold.

They bore no apparent trace of any wound.

Only, after carefully examining them, Pencroft found on the forehead of one, on the chest of another, on the back of this one, on the shoulder of that, a little red spot, a sort of scarcely visible bruise, the cause of which it was impossible to conjecture.

“It is there that they have been struck!” said Cyrus Harding.

“But with what weapon?” cried the reporter.

“A weapon, lightning-like in its effects, and of which we have not the secret!”

“And who has struck the blow?” asked Pencroft.

“The avenging power of the island,” replied Harding, “he who brought you here, Ayrton, whose influence has once more manifested itself, who does for us all that which we cannot do for ourselves, and who, his will accomplished, conceals himself from us.”

“Let us make search for him, then!” exclaimed Pencroft.

“Yes, we will search for him,” answered Harding, “but we shall not discover this powerful being who performs such wonders, until he pleases to call us to him!”

This invisible protection, which rendered their own action unavailing, both irritated and piqued the engineer. The relative inferiority which it proved was of a nature to wound a haughty spirit. A generosity evinced in such a manner as to elude all tokens of

gratitude, implied a sort of disdain for those on whom the obligation was conferred, which in Cyrus Harding's eyes marred, in some degree, the worth of the benefit.

"Let us search," he resumed, "and God grant that we may some day be permitted to prove to this haughty protector that he has not to deal with ungrateful people! What would I not give could we repay him, by rendering him in our turn, although at the price of our lives, some signal service!"

From this day, the thoughts of the inhabitants of Lincoln Island were solely occupied with the intended search. Everything incited them to discover the answer to this enigma, an answer which would only be the name of a man endowed with a truly inexplicable, and in some degree superhuman power.

In a few minutes, the settlers re-entered the house, where their influence soon restored to Ayrton his moral and physical energy. Neb and Pencroft carried the corpses of the convicts into the forest, some distance from the corral, and buried them deep in the ground.

Ayrton was then made acquainted with the facts which had occurred during his seclusion. He learned Herbert's adventures, and through what various trials the colonists had passed. As to the settlers, they had despaired of ever seeing Ayrton again, and had been convinced that the convicts had ruthlessly murdered him.

"And now," said Cyrus Harding, as he ended his recital, "a duty remains for us to perform. Half of our task is accomplished, but although the convicts are no longer to be feared, it is not owing to ourselves that we are once more masters of the island."

"Well!" answered Gideon Spilett, "let us search all this labyrinth of the spurs of Mount Franklin. We will not leave a hollow, not a hole unexplored! Ah! if ever a reporter found himself face to face with a mystery, it is I who now speak to you, my friends!"

"And we will not return to Granite House until we have found our benefactor," said Herbert.

"Yes," said the engineer, "we will do all that it is humanly possible to do, but I repeat we shall not find him until he himself permits us."

"Shall we stay at the corral?" asked Pencroft.

“We shall stay here,” answered Harding. “Provisions are abundant, and we are here in the very center of the circle we have to explore. Besides, if necessary, the cart will take us rapidly to Granite House.”

“Good!” answered the sailor. “Only I have a remark to make.”

“What is it?”

“Here is the fine season getting on, and we must not forget that we have a voyage to make.”

“A voyage?” said Gideon Spilett.

“Yes, to Tabor Island,” answered Pencroft. “It is necessary to carry a notice there to point out the position of our island and say that Ayrton is here in case the Scotch yacht should come to take him off. Who knows if it is not already too late?”

“But, Pencroft,” asked Ayrton, “how do you intend to make this voyage?”

“In the ‘Bonadventure.’”

“The ‘Bonadventure!’” exclaimed Ayrton. “She no longer exists.”

“My ‘Bonadventure’ exists no longer!” shouted Pencroft, bounding from his seat.

“No,” answered Ayrton. “The convicts discovered her in her little harbor only eight days ago, they put to sea in her — ”

“And?” said Pencroft, his heart beating.

“And not having Bob Harvey to steer her, they ran on the rocks, and the vessel went to pieces.”

“Oh, the villains, the cutthroats, the infamous scoundrels!” exclaimed Pencroft.

“Pencroft,” said Herbert, taking the sailor’s hand, “we will build another ‘Bonadventure’ — a larger one. We have all the ironwork — all the rigging of the brig at our disposal.”

“But do you know,” returned Pencroft, “that it will take at least five or six months to build a vessel of from thirty to forty tons?”

“We can take our time,” said the reporter, “and we must give up the voyage to Tabor Island for this year.”

“Oh, my ‘Bonadventure!’ my poor ‘Bonadventure!’” cried Pencroft, almost broken-hearted at the destruction of the vessel of which he was so proud.

The loss of the “Bonadventure” was certainly a thing to be lamented by the colonists, and it was agreed that this loss should be repaired as soon as possible. This settled, they now occupied themselves with bringing their researches to bear on the most secret parts of the island.

The exploration was commenced at daybreak on the 19th of February, and lasted an entire week. The base of the mountain, with its spurs and their numberless ramifications, formed a labyrinth of valleys and elevations. It was evident that there, in the depths of these narrow gorges, perhaps even in the interior of Mount Franklin itself, was the proper place to pursue their researches. No part of the island could have been more suitable to conceal a dwelling whose occupant wished to remain unknown. But so irregular was the formation of the valleys that Cyrus Harding was obliged to conduct the exploration in a strictly methodical manner.

The colonists first visited the valley opening to the south of the volcano, and which first received the waters of Falls River. There Ayrton showed them the cavern where the convicts had taken refuge, and in which he had been imprisoned until his removal to the corral. This cavern was just as Ayrton had left it. They found there a considerable quantity of ammunition and provisions, conveyed thither by the convicts in order to form a reserve.

The whole of the valley bordering on the cave, shaded by fir and other trees, was thoroughly explored, and on turning the point of the southwestern spur, the colonists entered a narrower gorge similar to the picturesque columns of basalt on the coast. Here the trees were fewer. Stones took the place of grass. Goats and musmons gambolled among the rocks. Here began the barren part of the island. It could already be seen that, of the numerous valleys branching off at the base of Mount Franklin, three only were wooded and rich in pasturage like that of the corral, which bordered on the west on the

Falls River valley, and on the east on the Red Creek valley. These two streams, which lower down became rivers by the absorption of several tributaries, were formed by all the springs of the mountain and thus caused the fertility of its southern part. As to the Mercy, it was more directly fed from ample springs concealed under the cover of Jacamar Wood, and it was by springs of this nature, spreading in a thousand streamlets, that the soil of the Serpentine Peninsula was watered.

Now, of these three well-watered valleys, either might have served as a retreat to some solitary who would have found there everything necessary for life. But the settlers had already explored them, and in no part had they discovered the presence of man.

Was it then in the depths of those barren gorges, in the midst of the piles of rock, in the rugged northern ravines, among the streams of lava, that this dwelling and its occupant would be found?

The northern part of Mount Franklin was at its base composed solely of two valleys, wide, not very deep, without any appearance of vegetation, strewn with masses of rock, paved with lava, and varied with great blocks of mineral. This region required a long and careful exploration. It contained a thousand cavities, comfortless no doubt, but perfectly concealed and difficult of access.

The colonists even visited dark tunnels, dating from the volcanic period, still black from the passage of the fire, and penetrated into the depths of the mountain. They traversed these somber galleries, waving lighted torches; they examined the smallest excavations; they sounded the shallowest depths, but all was dark and silent. It did not appear that the foot of man had ever before trodden these ancient passages, or that his arm had ever displaced one of these blocks, which remained as the volcano had cast them up above the waters, at the time of the submersion of the island.

However, although these passages appeared to be absolutely deserted, and the obscurity was complete, Cyrus Harding was obliged to confess that absolute silence did not reign there.

On arriving at the end of one of these gloomy caverns, extending several hundred feet into the interior of the mountain, he was surprised to hear a deep rumbling noise, increased in intensity by the sonorousness of the rocks.

Gideon Spilett, who accompanied him, also heard these distant mutterings, which indicated a revivification of the subterranean fires. Several times both listened, and they agreed that some chemical process was taking place in the bowels of the earth.

“Then the volcano is not totally extinct?” said the reporter.

“It is possible that since our exploration of the crater,” replied Cyrus Harding, “some change has occurred. Any volcano, although considered extinct, may evidently again burst forth.”

“But if an eruption of Mount Franklin occurred,” asked Spilett, “would there not be some danger to Lincoln Island?”

“I do not think so,” answered the reporter. “The crater, that is to say, the safety-valve, exists, and the overflow of smoke and lava, would escape, as it did formerly, by this customary outlet.”

“Unless the lava opened a new way for itself towards the fertile parts of the island!”

“And why, my dear Spilett,” answered Cyrus Harding, “should it not follow the road naturally traced out for it?”

“Well, volcanoes are capricious,” returned the reporter.

“Notice,” answered the engineer, “that the inclination of Mount Franklin favors the flow of water towards the valleys which we are exploring just now. To turn aside this flow, an earthquake would be necessary to change the mountain’s center of gravity.”

“But an earthquake is always to be feared at these times,” observed Gideon Spilett.

“Always,” replied the engineer, “especially when the subterranean forces begin to awake, as they risk meeting with some obstruction, after a long rest. Thus, my dear Spilett, an eruption would be a serious thing for us, and it would be better that the volcano should not have the slightest desire to wake up. But we could not prevent it, could we? At any rate, even if it should occur, I do not think Prospect Heights would be seriously threatened. Between them and the mountain, the ground is considerably depressed, and if the lava should ever take a course towards the lake, it would be cast on the downs and the neighboring parts of Shark Gulf.”

“We have not yet seen any smoke at the top of the mountain, to indicate an approaching eruption,” said Gideon Spilett.

“No,” answered Harding, “not a vapor escapes from the crater, for it was only yesterday that I attentively surveyed the summit. But it is probable that at the lower part of the chimney, time may have accumulated rocks, cinders, hardened lava, and that this valve of which I spoke, may at any time become overcharged. But at the first serious effort, every obstacle will disappear, and you may be certain, my dear Spilett, that neither the island, which is the boiler, nor the volcano, which is the chimney, will burst under the pressure of gas. Nevertheless, I repeat, it would be better that there should not be an eruption.”

“And yet we are not mistaken,” remarked the reporter. “Mutterings can be distinctly heard in the very bowels of the volcano!”

“You are right,” said the engineer, again listening attentively. “There can be no doubt of it. A commotion is going on there, of which we can neither estimate the importance nor the ultimate result.”

Cyrus Harding and Spilett, on coming out, rejoined their companions, to whom they made known the state of affairs.

“Very well!” cried Pencroft, “The volcano wants to play his pranks! Let him try, if he likes! He will find his master!”

“Who?” asked Neb.

“Our good genius, Neb, our good genius, who will shut his mouth for him, if he so much as pretends to open it!”

As may be seen, the sailor’s confidence in the tutelary deity of his island was absolute, and, certainly, the occult power, manifested until now in so many inexplicable ways, appeared to be unlimited; but also it knew how to escape the colonists’ most minute researches, for, in spite of all their efforts, in spite of the more than zeal, — the obstinacy, — with which they carried on their exploration, the retreat of the mysterious being could not be discovered.

From the 19th to the 20th of February the circle of investigation was extended to all the northern region of Lincoln Island, whose most secret nooks were explored. The colonists even went the length of tapping every rock. The search was extended to the extreme verge of the mountain. It was explored thus to the very summit of the truncated cone terminating the first row of rocks, then to the upper ridge of the enormous hat, at the bottom of which opened the crater.

They did more; they visited the gulf, now extinct, but in whose depths the rumbling could be distinctly heard. However, no sign of smoke or vapor, no heating of the rock, indicated an approaching eruption. But neither there, nor in any other part of Mount Franklin, did the colonists find any traces of him of whom they were in search.

Their investigations were then directed to the downs. They carefully examined the high lava-cliffs of Shark Gulf from the base to the crest, although it was extremely difficult to reach even the level of the gulf. No one! — nothing!

Indeed, in these three words was summed up so much fatigue uselessly expended, so much energy producing no results, that somewhat of anger mingled with the discomfiture of Cyrus Harding and his companions.

It was now time to think of returning, for these researches could not be prolonged indefinitely. The colonists were certainly right in believing that the mysterious being did not reside on the surface of the island, and the wildest fancies haunted their excited imaginations. Pencroft and Neb, particularly, were not contented with the mystery, but allowed their imaginations to wander into the domain of the supernatural.

On the 25th of February the colonists re-entered Granite House, and by means of the double cord, carried by an arrow to the threshold of the door, they re-established communication between their habitation and the ground.

A month later they commemorated, on the 25th of March, the third anniversary of their arrival on Lincoln Island.

CHAPTER 14

Three years had passed away since the escape of the prisoners from Richmond, and how often during those three years had they spoken of their country, always present in their thoughts!

They had no doubt that the civil war was at an end, and to them it appeared impossible that the just cause of the North had not triumphed. But what had been the incidents of this terrible war? How much blood had it not cost? How many of their friends must have fallen in the struggle? They often spoke of these things, without as yet being able to foresee the day when they would be permitted once more to see their country. To return thither, were it but for a few days, to renew the social link with the inhabited world, to establish a communication between their native land and their island, then to pass the longest, perhaps the best, portion of their existence in this colony, founded by them, and which would then be dependent on their country, was this a dream impossible to realize?

There were only two ways of accomplishing it — either a ship must appear off Lincoln Island, or the colonists must themselves build a vessel strong enough to sail to the nearest land.

“Unless,” said Pencroft, “our good genius, himself provides us with the means of returning to our country.”

And, really, had any one told Pencroft and Neb that a ship of 300 tons was waiting for them in Shark Gulf or at Port Balloon, they would not even have made a gesture of surprise. In their state of mind nothing appeared improbable.

But Cyrus Harding, less confident, advised them to confine themselves to fact, and more especially so with regard to the building of a vessel — a really urgent work, since it was for the purpose of depositing, as soon as possible, at Tabor Island a document indicating Ayrton’s new residence.

As the “Bonadventure” no longer existed, six months at least would be required for the construction of a new vessel. Now winter was approaching, and the voyage would not be made before the following spring.

“We have time to get everything ready for the fine season,” remarked the engineer, who was consulting with Pencroft about these matters. “I think, therefore, my friend, that since we have to rebuild our vessel it will be best to give her larger dimensions. The arrival of the Scotch yacht at Tabor Island is very uncertain. It may even be that, having arrived several months ago, she has again sailed after having vainly searched for some trace of Ayrton. Will it not then be best to build a ship which, if necessary, could take us either to the Polynesian Archipelago or to New Zealand? What do you think?”

“I think, captain,” answered the sailor; “I think that you are as capable of building a large vessel as a small one. Neither the wood nor the tools are wanting. It is only a question of time.”

“And how many months would be required to build a vessel of from 250 to 300 tons?” asked Harding.

“Seven or eight months at least,” replied Pencroft. “But it must not be forgotten that winter is drawing near, and that in severe frost wood is difficult to work. We must calculate on several weeks delay, and if our vessel is ready by next November we may think ourselves very lucky.”

“Well,” replied Cyrus Harding, “that will be exactly the most favorable time for undertaking a voyage of any importance, either to Tabor Island or to a more distant land.”

“So it will, captain,” answered the sailor. “Make out your plans then; the workmen are ready, and I imagine that Ayrton can lend us a good helping hand.”

The colonists, having been consulted, approved the engineer’s plan, and it was, indeed, the best thing to be done. It is true that the construction of a ship of from two to three hundred tons would be great labor, but the colonists had confidence in themselves, justified by their previous success.

Cyrus Harding then busied himself in drawing the plan of the vessel and making the model. During this time his companions employed themselves in felling and carting trees to furnish the ribs, timbers, and planks. The forest of the Far West supplied the best oaks and elms. They took advantage of the opening already made on their last excursion to form a practicable road, which they named the Far West Road, and the trees were carried to the Chimneys, where the dockyard was established. As to the road

in question, the choice of trees had rendered its direction somewhat capricious, but at the same time it facilitated the access to a large part of the Serpentine Peninsula.

It was important that the trees should be quickly felled and cut up, for they could not be used while yet green, and some time was necessary to allow them to get seasoned. The carpenters, therefore, worked vigorously during the month of April, which was troubled only by a few equinoctial gales of some violence. Master Jup aided them dexterously, either by climbing to the top of a tree to fasten the ropes or by lending his stout shoulders to carry the lopped trunks.

All this timber was piled up under a large shed, built near the Chimneys, and there awaited the time for use.

The month of April was tolerably fine, as October often is in the northern zone. At the same time other work was actively continued, and soon all trace of devastation disappeared from the plateau of Prospect Heights. The mill was rebuilt, and new buildings rose in the poultry-yard. It had appeared necessary to enlarge their dimensions, for the feathered population had increased considerably. The stable now contained five onagers, four of which were well broken, and allowed themselves to be either driven or ridden, and a little colt. The colony now possessed a plow, to which the onagers were yoked like regular Yorkshire or Kentucky oxen. The colonists divided their work, and their arms never tired. Then who could have enjoyed better health than these workers, and what good humor enlivened the evenings in Granite House as they formed a thousand plans for the future!

As a matter of course Ayrton shared the common lot in every respect, and there was no longer any talk of his going to live at the corral. Nevertheless he was still sad and reserved, and joined more in the work than in the pleasures of his companions. But he was a valuable workman at need — strong, skilful, ingenious, intelligent. He was esteemed and loved by all, and he could not be ignorant of it.

In the meanwhile the corral was not abandoned. Every other day one of the settlers, driving the cart or mounted on an onager, went to look after the flock of musmons and goats and bring back the supply of milk required by Neb. These excursions at the same time afforded opportunities for hunting. Therefore Herbert and Gideon Spilett, with Top in front, traversed more often than their companions the road to the corral, and with the capital guns which they carried, capybaras, agouties, kangaroos, and wild pigs for large

game, ducks, grouse, jacamars, and snipe for small game, were never wanting in the house. The produce of the warren, of the oyster-bed, several turtles which were taken, excellent salmon which came up the Mercy, vegetables from the plateau, wild fruit from the forest, were riches upon riches, and Neb, the head cook, could scarcely by himself store them away.

The telegraphic wire between the corral and Granite House had of course been repaired, and it was worked whenever one or other of the settlers was at the corral and found it necessary to spend the night there. Besides, the island was safe now and no attacks were to be feared, at any rate from men.

However, that which had happened might happen again. A descent of pirates, or even of escaped convicts, was always to be feared. It was possible that companions or accomplices of Bob Harvey had been in the secret of his plans, and might be tempted to imitate him. The colonists, therefore, were careful to observe the sea around the island, and every day their telescope covered the horizon enclosed by Union and Washington Bays. When they went to the corral they examined the sea to the west with no less attention, and by climbing the spur their gaze extended over a large section of the western horizon.

Nothing suspicious was discerned, but still it was necessary for them to be on their guard.

The engineer one evening imparted to his friends a plan which he had conceived for fortifying the corral. It appeared prudent to him to heighten the palisade and to flank it with a sort of blockhouse, which, if necessary, the settlers could hold against the enemy. Granite House might, by its very position, be considered impregnable; therefore the corral with its buildings, its stores, and the animals it contained, would always be the object of pirates, whoever they were, who might land on the island, and should the colonists be obliged to shut themselves up there they ought also to be able to defend themselves without any disadvantage. This was a project which might be left for consideration, and they were, besides, obliged to put off its execution until the next spring.

About the 15th of May the keel of the new vessel lay along the dockyard, and soon the stem and stern-post, mortised at each of its extremities, rose almost perpendicularly. The keel, of good oak, measured 110 feet in length, this allowing a width of five-and-

twenty feet to the midship beam. But this was all the carpenters could do before the arrival of the frosts and bad weather. During the following week they fixed the first of the stern timbers, but were then obliged to suspend work.

During the last days of the month the weather was extremely bad. The wind blew from the east, sometimes with the violence of a tempest. The engineer was somewhat uneasy on account of the dockyard shed — which besides, he could not have established in any other place near to Granite House — for the islet only imperfectly sheltered the shore from the fury of the open sea, and in great storms the waves beat against the very foot of the granite cliff.

But, very fortunately, these fears were not realized. The wind shifted to the southeast, and there the beach of Granite House was completely covered by Flotsam Point.

Pencroft and Ayrton, the most zealous workmen at the new vessel, pursued their labor as long as they could. They were not men to mind the wind tearing at their hair, nor the rain wetting them to the skin, and a blow from a hammer is worth just as much in bad as in fine weather. But when a severe frost succeeded this wet period, the wood, its fibers acquiring the hardness of iron, became extremely difficult to work, and about the 10th of June shipbuilding was obliged to be entirely discontinued.

Cyrus Harding and his companions had not omitted to observe how severe was the temperature during the winters of Lincoln Island. The cold was comparable to that experienced in the States of New England, situated at almost the same distance from the equator. In the northern hemisphere, or at any rate in the part occupied by British America and the north of the United States, this phenomenon is explained by the flat conformation of the territories bordering on the pole, and on which there is no intumescence of the soil to oppose any obstacle to the north winds; here, in Lincoln Island, this explanation would not suffice.

“It has even been observed,” remarked Harding one day to his companions, “that in equal latitudes the islands and coast regions are less tried by the cold than inland countries. I have often heard it asserted that the winters of Lombardy, for example, are not less rigorous than those of Scotland, which results from the sea restoring during the winter the heat which it received during the summer. Islands are, therefore, in a better situation for benefiting by this restitution.”

“But then, Captain Harding,” asked Herbert, “why does Lincoln Island appear to escape the common law?”

“That is difficult to explain,” answered the engineer. “However, I should be disposed to conjecture that this peculiarity results from the situation of the island in the Southern Hemisphere, which, as you know, my boy, is colder than the Northern Hemisphere.”

“Yes,” said Herbert, “and icebergs are met with in lower latitudes in the south than in the north of the Pacific.”

“That is true,” remarked Pencroft, “and when I have been serving on board whalers I have seen icebergs off Cape Horn.”

“The severe cold experienced in Lincoln Island,” said Gideon Spilett, “may then perhaps be explained by the presence of floes or icebergs comparatively near to Lincoln Island.”

“Your opinion is very admissible indeed, my dear Spilett,” answered Cyrus Harding, “and it is evidently to the proximity of icebergs that we owe our rigorous winters. I would draw your attention also to an entirely physical cause, which renders the Southern colder than the Northern Hemisphere. In fact, since the sun is nearer to this hemisphere during the summer, it is necessarily more distant during the winter. This explains then the excess of temperature in the two seasons, for, if we find the winters very cold in Lincoln Island, we must not forget that the summers here, on the contrary, are very hot.”

“But why, if you please, captain,” asked Pencroft, knitting his brows, “why should our hemisphere, as you say, be so badly divided? It isn’t just, that!”

“Friend Pencroft,” answered the engineer, laughing, “whether just or not, we must submit to it, and here lies the reason for this peculiarity. The earth does not describe a circle around the sun, but an ellipse, as it must by the laws of rational mechanics. Now, the earth occupies one of the foci of the ellipse, and so at one point in its course is at its apogee, that is, at its farthest from the sun, and at another point it is at its perigee, or nearest to the sun. Now it happens that it is during the winter of the southern countries that it is at its most distant point from the sun, and consequently, in a situation for those regions to feel the greatest cold. Nothing can be done to prevent that, and men,

Pencroft, however learned they may be, can never change anything of the cosmographical order established by God Himself."

"And yet," added Pencroft, "the world is very learned. What a big book, captain, might be made with all that is known!"

"And what a much bigger book still with all that is not known!" answered Harding.

At last, for one reason or another, the month of June brought the cold with its accustomed intensity, and the settlers were often confined to Granite House. Ah! how wearisome this imprisonment was to them, and more particularly to Gideon Spilett.

"Look here," said he to Neb one day, "I would give you by notarial deed all the estates which will come to me some day, if you were a good enough fellow to go, no matter where, and subscribe to some newspaper for me! Decidedly the thing that is most essential to my happiness is the knowing every morning what has happened the day before in other places than this!"

Neb began to laugh.

"'Pon my word," he replied, "the only thing I think about is my daily work!"

The truth was that indoors as well as out there was no want of work.

The colony of Lincoln Island was now at its highest point of prosperity, achieved by three years of continued hard work. The destruction of the brig had been a new source of riches. Without speaking of the complete rig which would serve for the vessel now on the stocks, utensils and tools of all sorts, weapons and ammunition, clothes and instruments, were now piled in the storerooms of Granite House. It had not even been necessary to resort again to the manufacture of the coarse felt materials. Though the colonists had suffered from cold during their first winter, the bad season might now come without their having any reason to dread its severity. Linen was plentiful also, and besides, they kept it with extreme care. From chloride of sodium, which is nothing else than sea salt, Cyrus Harding easily extracted the soda and chlorine. The soda, which it was easy to change into carbonate of soda, and the chlorine, of which he made chloride of lime, were employed for various domestic purposes, and especially in bleaching linen. Besides, they did not wash more than four times a year, as was done by families

in the olden times, and it may be added, that Pencroft and Gideon Spilett, while waiting for the postman to bring him his newspaper, distinguished themselves as washermen.

So passed the winter months, June, July, and August. They were severe, and the average observations of the thermometer did not give more than eight degrees of Fahrenheit. It was therefore lower in temperature than the preceding winter. But then, what splendid fires blazed continually on the hearths of Granite House, the smoke marking the granite wall with long, zebra-like streaks! Fuel was not spared, as it grew naturally a few steps from them. Besides, the chips of the wood destined for the construction of the ship enabled them to economize the coal, which required more trouble to transport.

Men and animals were all well. Master Jup was a little chilly, it must be confessed. This was perhaps his only weakness, and it was necessary to make him a well-padded dressing-gown. But what a servant he was, clever, zealous, indefatigable, not indiscreet, not talkative, and he might have been with reason proposed as a model for all his biped brothers in the Old and New Worlds!

“As for that,” said Pencroft, “when one has four hands at one’s service, of course one’s work ought to be done so much the better!”

And indeed the intelligent creature did it well.

During the seven months which had passed since the last researches made round the mountain, and during the month of September, which brought back fine weather, nothing was heard of the genius of the island. His power was not manifested in any way. It is true that it would have been superfluous, for no incident occurred to put the colonists to any painful trial.

Cyrus Harding even observed that if by chance the communication between the unknown and the tenants of Granite House had ever been established through the granite, and if Top’s instinct had as it were felt it, there was no further sign of it during this period. The dog’s growling had entirely ceased, as well as the uneasiness of the orang. The two friends — for they were such — no longer prowled round the opening of the inner well, nor did they bark or whine in that singular way which from the first the engineer had noticed. But could he be sure that this was all that was to be said about this enigma, and that he should never arrive at a solution? Could he be

certain that some conjuncture would not occur which would bring the mysterious personage on the scene? who could tell what the future might have in reserve?

At last the winter was ended, but an event, the consequences of which might be serious occurred in the first days of the returning spring.

On the 7th of September, Cyrus Harding, having observed the crater, saw smoke curling round the summit of the mountain, its first vapors rising in the air.

CHAPTER 15

The colonists, warned by the engineer, left their work and gazed in silence at the summit of Mount Franklin.

The volcano had awoke, and the vapor had penetrated the mineral layer heaped at the bottom of the crater. But would the subterranean fires provoke any violent eruption? This was an event which could not be foreseen. However, even while admitting the possibility of an eruption, it was not probable that the whole of Lincoln Island would suffer from it. The flow of volcanic matter is not always disastrous, and the island had already undergone this trial, as was shown by the streams of lava hardened on the northern slopes of the mountain. Besides, from the shape of the crater — the opening broken in the upper edge — the matter would be thrown to the side opposite the fertile regions of the island.

However, the past did not necessarily answer for the future. Often, at the summit of volcanoes, the old craters close and new ones open. This had occurred in the two hemispheres — at Etna, Popocatepetl, at Orizabaand on the eve of an eruption there is everything to be feared. In fact, an earthquake — a phenomenon which often accompanies volcanic eruption — is enough to change the interior arrangement of a mountain, and to open new outlets for the burning lava.

Cyrus Harding explained these things to his companions, and, without exaggerating the state of things, he told them all the pros and cons. After all, they could not prevent it. It did not appear likely that Granite House would be threatened unless the ground was shaken by an earthquake. But the corral would be in great danger should a new crater open in the southern side of Mount Franklin.

From that day the smoke never disappeared from the top of the mountain, and it could even be perceived that it increased in height and thickness, without any flame mingling in its heavy volumes. The phenomenon was still concentrated in the lower part of the central crater.

However, with the fine days work had been continued. The building of the vessel was hastened as much as possible, and, by means of the waterfall on the shore, Cyrus Harding managed to establish an hydraulic sawmill, which rapidly cut up the trunks of trees into planks and joists. The mechanism of this apparatus was as simple as those

used in the rustic sawmills of Norway. A first horizontal movement to move the piece of wood, a second vertical movement to move the saw — this was all that was wanted; and the engineer succeeded by means of a wheel, two cylinders, and pulleys properly arranged. Towards the end of the month of September the skeleton of the vessel, which was to be rigged as a schooner, lay in the dockyard. The ribs were almost entirely completed, and, all the timbers having been sustained by a provisional band, the shape of the vessel could already be seen. The schooner, sharp in the bows, very slender in the after-part, would evidently be suitable for a long voyage, if wanted; but laying the planking would still take a considerable time. Very fortunately, the iron work of the pirate brig had been saved after the explosion. From the planks and injured ribs Pencroft and Ayrton had extracted the bolts and a large quantity of copper nails. It was so much work saved for the smiths, but the carpenters had much to do.

Shipbuilding was interrupted for a week for the harvest, the haymaking, and the gathering in of the different crops on the plateau. This work finished, every moment was devoted to finishing the schooner. When night came the workmen were really quite exhausted. So as not to lose any time they had changed the hours for their meals; they dined at twelve o’clock, and only had their supper when daylight failed them. They then ascended to Granite House, when they were always ready to go to bed.

Sometimes, however, when the conversation bore on some interesting subject the hour for sleep was delayed for a time. The colonists then spoke of the future, and talked willingly of the changes which a voyage in the schooner to inhabited lands would make in their situation. But always, in the midst of these plans, prevailed the thought of a subsequent return to Lincoln Island. Never would they abandon this colony, founded with so much labor and with such success, and to which a communication with America would afford a fresh impetus. Pencroft and Neb especially hoped to end their days there.

“Herbert,” said the sailor, “you will never abandon Lincoln Island?”

“Never, Pencroft, and especially if you make up your mind to stay there.”

“That was made up long ago, my boy,” answered Pencroft. “I shall expect you. You will bring me your wife and children, and I shall make jolly chaps of your youngsters!”

“That’s agreed,” replied Herbert, laughing and blushing at the same time.

“And you, Captain Harding,” resumed Pencroft enthusiastically, “you will be still the governor of the island! Ah, how many inhabitants could it support? Ten thousand at least!”

They talked in this way, allowing Pencroft to run on, and at last the reporter actually started a newspaper — the New Lincoln Herald!

So is man’s heart. The desire to perform a work which will endure, which will survive him, is the origin of his superiority over all other living creatures here below. It is this which has established his dominion, and this it is which justifies it, over all the world.

After that, who knows if Jup and Top had not themselves their little dream of the future.

Ayrton silently said to himself that he would like to see Lord Glenarvan again and show himself to all restored.

One evening, on the 15th of October, the conversation was prolonged later than usual. It was nine o’clock. Already, long badly concealed yawns gave warning of the hour of rest, and Pencroft was proceeding towards his bed, when the electric bell, placed in the dining-room, suddenly rang.

All were there, Cyrus Harding, Gideon Spilett, Herbert, Ayrton, Pencroft, Neb. Therefore none of the colonists were at the corral.

Cyrus Harding rose. His companions stared at each other, scarcely believing their ears.

“What does that mean?” cried Neb. “Was it the devil who rang it?”

No one answered.

“The weather is stormy,” observed Herbert. “Might not its influence of electricity — ”

Herbert did not finish his phrase. The engineer, towards whom all eyes were turned, shook his head negatively.

“We must wait,” said Gideon Spilett. “If it is a signal, whoever it may be who has made it, he will renew it.”

“But who do you think it is?” cried Neb.

“Who?” answered Pencroft, “but he — ”

The sailor’s sentence was cut short by a new tinkle of the bell.

Harding went to the apparatus, and sent this question to the corral: —

“What do you want?”

A few moments later the needle, moving on the alphabetic dial, gave this reply to the tenants of Granite House: —

“Come to the corral immediately.”

“At last!” exclaimed Harding.

Yes! At last! The mystery was about to be unveiled. The colonists’ fatigue had disappeared before the tremendous interest which was about to urge them to the corral, and all wish for rest had ceased. Without having uttered a word, in a few moments they had left Granite House, and were standing on the beach. Jup and Top alone were left behind. They could do without them.

The night was black. The new moon had disappeared at the same time as the sun. As Herbert had observed, great stormy clouds formed a lowering and heavy vault, preventing any star rays. A few lightning flashes, reflections from a distant storm, illuminated the horizon.

It was possible that a few hours later the thunder would roll over the island itself. The night was very threatening.

But however deep the darkness was, it would not prevent them from finding the familiar road to the corral.

They ascended the left bank of the Mercy, reached the plateau, passed the bridge over Creek Glycerine, and advanced through the forest.

They walked at a good pace, a prey to the liveliest emotions. There was no doubt but that they were now going to learn the long-searched-for answer to the enigma, the name of that mysterious being, so deeply concerned in their life, so generous in his influence, so powerful in his action! Must not this stranger have indeed mingled with their

existence, have known the smallest details, have heard all that was said in Granite House, to have been able always to act in the very nick of time?

Every one, wrapped up in his own reflections, pressed forward. Under the arch of trees the darkness was such that even the edge of the road could not be seen. Not a sound in the forest. Both animals and birds, influenced by the heaviness of the atmosphere, remained motionless and silent. Not a breath disturbed the leaves. The footsteps of the colonists alone resounded on the hardened ground.

During the first quarter of an hour the silence was only interrupted by this remark from Pencroft: —

“We ought to have brought a torch.”

And by this reply from the engineer: —

“We shall find one at the corral.”

Harding and his companions had left Granite House at twelve minutes past nine. At forty-seven minutes past nine they had traversed three out of the five miles which separated the mouth of the Mercy from the corral.

At that moment sheets of lightning spread over the island and illumined the dark trees. The flashes dazzled and almost blinded them. Evidently the storm would not be long in bursting forth.

The flashes gradually became brighter and more rapid. Distant thunder growled in the sky. The atmosphere was stifling.

The colonists proceeded as if they were urged onwards by some irresistible force.

At ten o’clock a vivid flash showed them the palisade, and as they reached the gate the storm burst forth with tremendous fury.

In a minute the corral was crossed, and Harding stood before the hut.

Probably the house was occupied by the stranger, since it was from thence that the telegram had been sent. However, no light shone through the window.

The engineer knocked at the door.

No answer.

Cyrus Harding opened the door, and the settlers entered the room, which was perfectly dark. A light was struck by Neb, and in a few moments the lantern was lighted and the light thrown into every corner of the room.

There was no one there. Everything was in the state in which it had been left.

“Have we been deceived by an illusion?” murmured Cyrus Harding.

No! that was not possible! The telegram had clearly said, —

“Come to the corral immediately.”

They approached the table specially devoted to the use of the wire. Everything was in order — the pile on the box containing it, as well as all the apparatus.

“Who came here the last time?” asked the engineer.

“I did, captain,” answered Ayrton.

“And that was — ”

“Four days ago.”

“Ah! a note!” cried Herbert, pointing to a paper lying on the table.

On this paper were written these words in English: —

“Follow the new wire.”

“Forward!” cried Harding, who understood that the despatch had not been sent from the corral, but from the mysterious retreat, communicating directly with Granite House by means of a supplementary wire joined to the old one.

Neb took the lighted lantern, and all left the corral. The storm then burst forth with tremendous violence. The interval between each lightning-flash and each thunder-clap

diminished rapidly. The summit of the volcano, with its plume of vapor, could be seen by occasional flashes.

There was no telegraphic communication in any part of the corral between the house and the palisade; but the engineer, running straight to the first post, saw by the light of a flash a new wire hanging from the isolator to the ground.

“There it is!” said he.

This wire lay along the ground, and was surrounded with an isolating substance like a submarine cable, so as to assure the free transmission of the current. It appeared to pass through the wood and the southern spurs of the mountain, and consequently it ran towards the west.

“Follow it!” said Cyrus Harding.

And the settlers immediately pressed forward, guided by the wire.

The thunder continued to roar with such violence that not a word could be heard. However, there was no occasion for speaking, but to get forward as fast as possible.

Cyrus Harding and his companions then climbed the spur rising between the corral valley and that of Falls River, which they crossed at its narrowest part. The wire, sometimes stretched over the lower branches of the trees, sometimes lying on the ground, guided them surely. The engineer had supposed that the wire would perhaps stop at the bottom of the valley, and that the stranger’s retreat would be there.

Nothing of the sort. They were obliged to ascend the south-western spur, and re-descend on that arid plateau terminated by the strangely-wild basalt cliff. From time to time one of the colonists stooped down and felt for the wire with his hands; but there was now no doubt that the wire was running directly towards the sea. There, to a certainty, in the depths of those rocks, was the dwelling so long sought for in vain.

The sky was literally on fire. Flash succeeded flash. Several struck the summit of the volcano in the midst of the thick smoke. It appeared there as if the mountain was vomiting flame. At a few minutes to eleven the colonists arrived on the high cliff overlooking the ocean to the west. The wind had risen. The surf roared 500 feet below.

Harding calculated that they had gone a mile and a half from the corral.

At this point the wire entered among the rocks, following the steep side of a narrow ravine. The settlers followed it at the risk of occasioning a fall of the slightly-balanced rocks, and being dashed into the sea. The descent was extremely perilous, but they did not think of the danger; they were no longer masters of themselves, and an irresistible attraction drew them towards this mysterious place as the magnet draws iron.

Thus they almost unconsciously descended this ravine, which even in broad daylight would have been considered impracticable.

The stones rolled and sparkled like fiery balls when they crossed through the gleams of light. Harding was first — Ayrton last. On they went, step by step. Now they slid over the slippery rock; then they struggled to their feet and scrambled on.

At last the wire touched the rocks on the beach. The colonists had reached the bottom of the basalt cliff.

There appeared a narrow ridge, running horizontally and parallel with the sea. The settlers followed the wire along it. They had not gone a hundred paces when the ridge by a moderate incline sloped down to the level of the sea.

The engineer seized the wire and found that it disappeared beneath the waves.

His companions were stupefied.

A cry of disappointment, almost a cry of despair, escaped them! Must they then plunge beneath the water and seek there for some submarine cavern? In their excited state they would not have hesitated to do it.

The engineer stopped them.

He led his companions to a hollow in the rocks, and there —

“We must wait,” said he. “The tide is high. At low water the way will be open.”

“But what can make you think-” asked Pencroft.

“He would not have called us if the means had been wanting to enable us to reach him!”

Cyrus Harding spoke in a tone of such thorough conviction that no objection was raised. His remark, besides, was logical. It was quite possible that an opening, practicable at low water, though hidden now by the high tide, opened at the foot of the cliff.

There was some time to wait. The colonists remained silently crouching in a deep hollow. Rain now began to fall in torrents. The thunder was re-echoed among the rocks with a grand sonorousness.

The colonists' emotion was great. A thousand strange and extraordinary ideas crossed their brains, and they expected some grand and superhuman apparition, which alone could come up to the notion they had formed of the mysterious genius of the island.

At midnight, Harding carrying the lantern, descended to the beach to reconnoiter.

The engineer was not mistaken. The beginning of an immense excavation could be seen under the water. There the wire, bending at a right angle, entered the yawning gulf.

Cyrus Harding returned to his companions, and said simply, —

"In an hour the opening will be practicable."

"It is there, then?" said Pencroft.

"Did you doubt it?" returned Harding.

"But this cavern must be filled with water to a certain height," observed Herbert.

"Either the cavern will be completely dry," replied Harding, "and in that case we can traverse it on foot, or it will not be dry, and some means of transport will be put at our disposal."

An hour passed. All climbed down through the rain to the level of the sea. There was now eight feet of the opening above the water. It was like the arch of a bridge, under which rushed the foaming water.

Leaning forward, the engineer saw a black object floating on the water. He drew it towards him. It was a boat, moored to some interior projection of the cave. This boat was iron-plated. Two oars lay at the bottom.

“Jump in!” said Harding.

In a moment the settlers were in the boat. Neb and Ayrton took the oars, Pencroft the rudder. Cyrus Harding in the bows, with the lantern, lighted the way.

The elliptical roof, under which the boat at first passed, suddenly rose; but the darkness was too deep, and the light of the lantern too slight, for either the extent, length, height, or depth of the cave to be ascertained. Solemn silence reigned in this basaltic cavern. Not a sound could penetrate into it, even the thunder peals could not pierce its thick sides.

Such immense caves exist in various parts of the world, natural crypts dating from the geological epoch of the globe. Some are filled by the sea; others contain entire lakes in their sides. Such is Fingal’s Cave, in the island of Staffa, one of the Hebrides; such are the caves of Morgat, in the bay of Douarnenez, in Brittany, the caves of Bonifacio, in Corsica, those of Lyse-Fjord, in Norway; such are the immense Mammoth caverns in Kentucky, 500 feet in height, and more than twenty miles in length! In many parts of the globe, nature has excavated these caverns, and preserved them for the admiration of man.

Did the cavern which the settlers were now exploring extend to the center of the island? For a quarter of an hour the boat had been advancing, making detours, indicated to Pencroft by the engineer in short sentences, when all at once, —

“More to the right!” he commanded.

The boat, altering its course, came up alongside the right wall. The engineer wished to see if the wire still ran along the side.

The wire was there fastened to the rock.

“Forward!” said Harding.

And the two oars, plunging into the dark waters, urged the boat onwards.

On they went for another quarter of an hour, and a distance of half-a-mile must have been cleared from the mouth of the cave, when Harding’s voice was again heard.

“Stop!” said he.

The boat stopped, and the colonists perceived a bright light illuminating the vast cavern, so deeply excavated in the bowels of the island, of which nothing had ever led them to suspect the existence.

At a height of a hundred feet rose the vaulted roof, supported on basalt shafts. Irregular arches, strange moldings, appeared on the columns erected by nature in thousands from the first epochs of the formation of the globe. The basalt pillars, fitted one into the other, measured from forty to fifty feet in height, and the water, calm in spite of the tumult outside, washed their base. The brilliant focus of light, pointed out by the engineer, touched every point of rocks, and flooded the walls with light.

By reflection the water reproduced the brilliant sparkles, so that the boat appeared to be floating between two glittering zones. They could not be mistaken in the nature of the irradiation thrown from the glowing nucleus, whose clear rays were shattered by all the angles, all the projections of the cavern. This light proceeded from an electric source, and its white color betrayed its origin. It was the sun of this cave, and it filled it entirely.

At a sign from Cyrus Harding the oars again plunged into the water, causing a regular shower of gems, and the boat was urged forward towards the light, which was now not more than half a cable’s length distant.

At this place the breadth of the sheet of water measured nearly 350 feet, and beyond the dazzling center could be seen an enormous basaltic wall, blocking up any issue on that side. The cavern widened here considerably, the sea forming a little lake. But the roof, the side walls, the end cliff, all the prisms, all the peaks, were flooded with the electric fluid, so that the brilliancy belonged to them, and as if the light issued from them.

In the center of the lake a long cigar-shaped object floated on the surface of the water, silent, motionless. The brilliancy which issued from it escaped from its sides as from two kilns heated to a white heat. This apparatus, similar in shape to an enormous whale, was about 250 feet long, and rose about ten or twelve above the water.

The boat slowly approached it, Cyrus Harding stood up in the bows. He gazed, a prey to violent excitement. Then, all at once, seizing the reporter’s arm, —

“It is he! It can only be he!” he cried, “he! — ”

Then, falling back on the seat, he murmured a name which Gideon Spilett alone could hear.

The reporter evidently knew this name, for it had a wonderful effect upon him, and he answered in a hoarse voice, —

“He! an outlawed man!”

“He!” said Harding.

At the engineer’s command the boat approached this singular floating apparatus. The boat touched the left side, from which escaped a ray of light through a thick glass.

Harding and his companions mounted on the platform. An open hatchway was there. All darted down the opening.

At the bottom of the ladder was a deck, lighted by electricity. At the end of this deck was a door, which Harding opened.

A richly-ornamented room, quickly traversed by the colonists, was joined to a library, over which a luminous ceiling shed a flood of light.

At the end of the library a large door, also shut, was opened by the engineer.

An immense saloon — a sort of museum, in which were heaped up, with all the treasures of the mineral world, works of art, marvels of industry — appeared before the eyes of the colonists, who almost thought themselves suddenly transported into a land of enchantment.

Stretched on a rich sofa they saw a man, who did not appear to notice their presence.

Then Harding raised his voice, and to the extreme surprise of his companions, he uttered these words, —

“Captain Nemo, you asked for us! We are here. — ”

CHAPTER 16

At these words the reclining figure rose, and the electric light fell upon his countenance; a magnificent head, the forehead high, the glance commanding, beard white, hair abundant and falling over the shoulders.

His hand rested upon the cushion of the divan from which he had just risen. He appeared perfectly calm. It was evident that his strength had been gradually undermined by illness, but his voice seemed yet powerful, as he said in English, and in a tone which evinced extreme surprise, —

“Sir, I have no name.”

“Nevertheless, I know you!” replied Cyrus Harding.

Captain Nemo fixed his penetrating gaze upon the engineer, as though he were about to annihilate him.

Then, falling back amid the pillows of the divan, —

“After all, what matters now?” he murmured; “I am dying!”

Cyrus Harding drew near the captain, and Gideon Spilett took his hand — it was of a feverish heat. Ayrton, Pencroft, Herbert, and Neb stood respectfully apart in an angle of the magnificent saloon, whose atmosphere was saturated with the electric fluid.

Meanwhile Captain Nemo withdrew his hand, and motioned the engineer and the reporter to be seated.

All regarded him with profound emotion. Before them they beheld that being whom they had styled the “genius of the island,” the powerful protector whose intervention, in so many circumstances, had been so efficacious, the benefactor to whom they owed such a debt of gratitude! Their eyes beheld a man only, and a man at the point of death, where Pencroft and Neb had expected to find an almost supernatural being!

But how happened it that Cyrus Harding had recognized Captain Nemo? why had the latter so suddenly risen on hearing this name uttered, a name which he had believed known to none? —

The captain had resumed his position on the divan, and leaning on his arm, he regarded the engineer, seated near him.

“You know the name I formerly bore, sir?” he asked.

“I do,” answered Cyrus Harding, “and also that of this wonderful submarine vessel — ”

“The ‘Nautilus’?” said the captain, with a faint smile.

“The ‘Nautilus.’”

“But do you — do you know who I am?”

“I do.”

“It is nevertheless many years since I have held any communication with the inhabited world; three long years have I passed in the depth of the sea, the only place where I have found liberty! Who then can have betrayed my secret?”

“A man who was bound to you by no tie, Captain Nemo, and who, consequently, cannot be accused of treachery.”

“The Frenchman who was cast on board my vessel by chance sixteen years since?”

“The same.”

“He and his two companions did not then perish in the maelstrom, in the midst of which the ‘Nautilus’ was struggling?”

“They escaped, and a book has appeared under the title of ‘Twenty Thousand Leagues Under the Sea,’ which contains your history.”

“The history of a few months only of my life!” interrupted the captain impetuously.

“It is true,” answered Cyrus Harding, “but a few months of that strange life have sufficed to make you known.”

“As a great criminal, doubtless!” said Captain Nemo, a haughty smile curling his lips. “Yes, a rebel, perhaps an outlaw against humanity!”

The engineer was silent.

“Well, sir?”

“It is not for me to judge you, Captain Nemo,” answered Cyrus Harding, “at any rate as regards your past life. I am, with the rest of the world, ignorant of the motives which induced you to adopt this strange mode of existence, and I cannot judge of effects without knowing their causes; but what I do know is, that a beneficent hand has constantly protected us since our arrival on Lincoln Island, that we all owe our lives to a good, generous, and powerful being, and that this being so powerful, good and generous, Captain Nemo, is yourself!”

“It is I,” answered the captain simply.

The engineer and the reporter rose. Their companions had drawn near, and the gratitude with which their hearts were charged was about to express itself in their gestures and words.

Captain Nemo stopped them by a sign, and in a voice which betrayed more emotion than he doubtless intended to show.

“Wait till you have heard all,” he said.

And the captain, in a few concise sentences, ran over the events of his life.

His narrative was short, yet he was obliged to summon up his whole remaining energy to arrive at the end. He was evidently contending against extreme weakness. Several times Cyrus Harding entreated him to repose for a while, but he shook his head as a man to whom the morrow may never come, and when the reporter offered his assistance, —

“It is useless,” he said; “my hours are numbered.”

Captain Nemo was an Indian, the Prince Dakkar, son of a rajah of the then independent territory of Bundelkund. His father sent him, when ten years of age, to Europe, in order that he might receive an education in all respects complete, and in the hopes that by his talents and knowledge he might one day take a leading part in raising his long degraded and heathen country to a level with the nations of Europe.

From the age of ten years to that of thirty Prince Dakkar, endowed by Nature with her richest gifts of intellect, accumulated knowledge of every kind, and in science, literature, and art his researches were extensive and profound.

He traveled over the whole of Europe. His rank and fortune caused him to be everywhere sought after; but the pleasures of the world had for him no attractions. Though young and possessed of every personal advantage, he was ever grave — somber even — devoured by an unquenchable thirst for knowledge, and cherishing in the recesses of his heart the hope that he might become a great and powerful ruler of a free and enlightened people.

Still, for long the love of science triumphed over all other feelings. He became an artist deeply impressed by the marvels of art, a philosopher to whom no one of the higher sciences was unknown, a statesman versed in the policy of European courts. To the eyes of those who observed him superficially he might have passed for one of those cosmopolitans, curious of knowledge, but disdaining action; one of those opulent travelers, haughty and cynical, who move incessantly from place to place, and are of no country.

The history of Captain Nemo has, in fact, been published under the title of “Twenty Thousand Leagues Under the Sea.” Here, therefore, will apply the observation already made as to the adventures of Ayrton with regard to the discrepancy of dates. Readers should therefore refer to the note already published on this point.

This artist, this philosopher, this man was, however, still cherishing the hope instilled into him from his earliest days.

Prince Dakkar returned to Bundelkund in the year 1849. He married a noble Indian lady, who was imbued with an ambition not less ardent than that by which he was inspired. Two children were born to them, whom they tenderly loved. But domestic happiness did not prevent him from seeking to carry out the object at which he aimed. He waited an opportunity. At length, as he vainly fancied, it presented itself.

Instigated by princes equally ambitious and less sagacious and more unscrupulous than he was, the people of India were persuaded that they might successfully rise against their English rulers, who had brought them out of a state of anarchy and constant

warfare and misery, and had established peace and prosperity in their country. Their ignorance and gross superstition made them the facile tools of their designing chiefs.

In 1857 the great sepoy revolt broke out. Prince Dakkar, under the belief that he should thereby have the opportunity of attaining the object of his long-cherished ambition, was easily drawn into it. He forthwith devoted his talents and wealth to the service of this cause. He aided it in person; he fought in the front ranks; he risked his life equally with the humblest of the wretched and misguided fanatics; he was ten times wounded in twenty engagements, seeking death but finding it not, but at length the sanguinary rebels were utterly defeated, and the atrocious mutiny was brought to an end.

Never before had the British power in India been exposed to such danger, and if, as they had hoped, the sepoys had received assistance from without, the influence and supremacy in Asia of the United Kingdom would have been a thing of the past.

The name of Prince Dakkar was at that time well known. He had fought openly and without concealment. A price was set upon his head, but he managed to escape from his pursuers.

Civilization never recedes; the law of necessity ever forces it onwards. The sepoys were vanquished, and the land of the rajahs of old fell again under the rule of England.

Prince Dakkar, unable to find that death he courted, returned to the mountain fastnesses of Bundelkund. There, alone in the world, overcome by disappointment at the destruction of all his vain hopes, a prey to profound disgust for all human beings, filled with hatred of the civilized world, he realized the wreck of his fortune, assembled some score of his most faithful companions, and one day disappeared, leaving no trace behind.

Where, then, did he seek that liberty denied him upon the inhabited earth? Under the waves, in the depths of the ocean, where none could follow.

The warrior became the man of science. Upon a deserted island of the Pacific he established his dockyard, and there a submarine vessel was constructed from his designs. By methods which will at some future day be revealed he had rendered subservient the illimitable forces of electricity, which, extracted from inexhaustible sources, was employed for all the requirements of his floating equipage, as a moving, lighting, and heating agent. The sea, with its countless treasures, its myriads of fish, its

numberless wrecks, its enormous mammalia, and not only all that nature supplied, but also all that man had lost in its depths, sufficed for every want of the prince and his crew — and thus was his most ardent desire accomplished, never again to hold communication with the earth. He named his submarine vessel the “Nautilus,” called himself simply Captain Nemo, and disappeared beneath the seas.

During many years this strange being visited every ocean, from pole to pole. Outcast of the inhabited earth in these unknown worlds he gathered incalculable treasures. The millions lost in the Bay of Vigo, in 1702, by the galleons of Spain, furnished him with a mine of inexhaustible riches which he devoted always, anonymously, in favor of those nations who fought for the independence of their country.

(This refers to the resurrection of the Candiotes, who were, in

fact, largely assisted by Captain Nemo.)

For long, however, he had held no communication with his fellow-creatures, when, during the night of the 6th of November, 1866, three men were cast on board his vessel. They were a French professor, his servant, and a Canadian fisherman. These three men had been hurled overboard by a collision which had taken place between the “Nautilus” and the United States frigate “Abraham Lincoln,” which had chased her.

Captain Nemo learned from this professor that the “Nautilus,” taken now for a gigantic mammal of the whale species, now for a submarine vessel carrying a crew of pirates, was sought for in every sea.

He might have returned these three men to the ocean, from whence chance had brought them in contact with his mysterious existence. Instead of doing this he kept them prisoners, and during seven months they were enabled to behold all the wonders of a voyage of twenty thousand leagues under the sea.

One day, the 22nd of June, 1867, these three men, who knew nothing of the past history of Captain Nemo, succeeded in escaping in one of the “Nautilus’s” boats. But as at this time the “Nautilus” was drawn into the vortex of the maelstrom, off the coast of Norway, the captain naturally believed that the fugitives, engulfed in that frightful whirlpool, found their death at the bottom of the abyss. He was unaware that the Frenchman and his two companions had been miraculously cast on shore, that the fishermen of the Lofoten Islands had rendered them assistance, and that the professor,

on his return to France, had published that work in which seven months of the strange and eventful navigation of the “Nautilus” were narrated and exposed to the curiosity of the public.

For a long time after this, Captain Nemo continued to live thus, traversing every sea. But one by one his companions died, and found their last resting-place in their cemetery of coral, in the bed of the Pacific. At last Captain Nemo remained the solitary survivor of all those who had taken refuge with him in the depths of the ocean.

He was now sixty years of age. Although alone, he succeeded in navigating the “Nautilus” towards one of those submarine caverns which had sometimes served him as a harbor.

One of these ports was hollowed beneath Lincoln Island, and at this moment furnished an asylum to the “Nautilus.”

The captain had now remained there six years, navigating the ocean no longer, but awaiting death, and that moment when he should rejoin his former companions, when by chance he observed the descent of the balloon which carried the prisoners of the Confederates. Clad in his diving dress he was walking beneath the water at a few cables’ length from the shore of the island, when the engineer had been thrown into the sea. Moved by a feeling of compassion the captain saved Cyrus Harding.

His first impulse was to fly from the vicinity of the five castaways; but his harbor refuge was closed, for in consequence of an elevation of the basalt, produced by the influence of volcanic action, he could no longer pass through the entrance of the vault. Though there was sufficient depth of water to allow a light craft to pass the bar, there was not enough for the “Nautilus,” whose draught of water was considerable.

Captain Nemo was compelled, therefore, to remain. He observed these men thrown without resources upon a desert island, but had no wish to be himself discovered by them. By degrees he became interested in their efforts when he saw them honest, energetic, and bound to each other by the ties of friendship. As if despite his wishes, he penetrated all the secrets of their existence. By means of the diving dress he could easily reach the well in the interior of Granite House, and climbing by the projections of rock to its upper orifice he heard the colonists as they recounted the past, and studied the present and future. He learned from them the tremendous conflict of America with

America itself, for the abolition of slavery. Yes, these men were worthy to reconcile Captain Nemo with that humanity which they represented so nobly in the island.

Captain Nemo had saved Cyrus Harding. It was he also who had brought back the dog to the Chimneys, who rescued Top from the waters of the lake, who caused to fall at Flotsam Point the case containing so many things useful to the colonists, who conveyed the canoe back into the stream of the Mercy, who cast the cord from the top of Granite House at the time of the attack by the baboons, who made known the presence of Ayrton upon Tabor Island, by means of the document enclosed in the bottle, who caused the explosion of the brig by the shock of a torpedo placed at the bottom of the canal, who saved Herbert from certain death by bringing the sulphate of quinine; and finally, it was he who had killed the convicts with the electric balls, of which he possessed the secret, and which he employed in the chase of submarine creatures. Thus were explained so many apparently supernatural occurrences, and which all proved the generosity and power of the captain.

Nevertheless, this noble misanthrope longed to benefit his proteges still further. There yet remained much useful advice to give them, and, his heart being softened by the approach of death, he invited, as we are aware, the colonists of Granite House to visit the “Nautilus,” by means of a wire which connected it with the corral. Possibly he would not have done this had he been aware that Cyrus Harding was sufficiently acquainted with his history to address him by the name of Nemo.

The captain concluded the narrative of his life. Cyrus Harding then spoke; he recalled all the incidents which had exercised so beneficent an influence upon the colony, and in the names of his companions and himself thanked the generous being to whom they owed so much.

But Captain Nemo paid little attention; his mind appeared to be absorbed by one idea, and without taking the proffered hand of the engineer, —

“Now, sir,” said he, “now that you know my history, your judgment!”

In saying this, the captain evidently alluded to an important incident witnessed by the three strangers thrown on board his vessel, and which the French professor had related in his work, causing a profound and terrible sensation. Some days previous to the flight of the professor and his two companions, the “Nautilus,” being chased by a frigate in

the north of the Atlantic had hurled herself as a ram upon this frigate, and sunk her without mercy.

Cyrus Harding understood the captain's allusion, and was silent.

"It was an enemy's frigate," exclaimed Captain Nemo, transformed for an instant into the Prince Dakkar, "an enemy's frigate! It was she who attacked me — I was in a narrow and shallow bay — the frigate barred my way — and I sank her!"

A few moments of silence ensued; then the captain demanded, —

"What think you of my life, gentlemen?"

Cyrus Harding extended his hand to the ci-devant prince and replied gravely, "Sir, your error was in supposing that the past can be resuscitated, and in contending against inevitable progress. It is one of those errors which some admire, others blame; which God alone can judge. He who is mistaken in an action which he sincerely believes to be right may be an enemy, but retains our esteem. Your error is one that we may admire, and your name has nothing to fear from the judgment of history, which does not condemn heroic folly, but its results."

The old man's breast swelled with emotion, and raising his hand to heaven, —

"Was I wrong, or in the right?" he murmured.

Cyrus Harding replied, "All great actions return to God, from whom they are derived. Captain Nemo, we, whom you have succored, shall ever mourn your loss."

Herbert, who had drawn near the captain, fell on his knees and kissed his hand.

A tear glistened in the eyes of the dying man. "My child," he said, "may God bless you!"

CHAPTER 17

Day had returned. No ray of light penetrated into the profundity of the cavern. It being high-water, the entrance was closed by the sea. But the artificial light, which escaped in long streams from the skylights of the “Nautilus” was as vivid as before, and the sheet of water shone around the floating vessel.

An extreme exhaustion now overcame Captain Nemo, who had fallen back upon the divan. It was useless to contemplate removing him to Granite House, for he had expressed his wish to remain in the midst of those marvels of the “Nautilus” which millions could not have purchased, and to wait there for that death which was swiftly approaching.

During a long interval of prostration, which rendered him almost unconscious, Cyrus Harding and Gideon Spilett attentively observed the condition of the dying man. It was apparent that his strength was gradually diminishing. That frame, once so robust, was now but the fragile tenement of a departing soul. All of life was concentrated in the heart and head.

The engineer and reporter consulted in whispers. Was it possible to render any aid to the dying man? Might his life, if not saved, be prolonged for some days? He himself had said that no remedy could avail, and he awaited with tranquillity that death which had for him no terrors.

“We can do nothing,” said Gideon Spilett.

“But of what is he dying?” asked Pencroft.

“Life is simply fading out,” replied the reporter.

“Nevertheless,” said the sailor, “if we move him into the open air, and the light of the sun, he might perhaps recover.”

“No, Pencroft,” answered the engineer, “it is useless to attempt it. Besides, Captain Nemo would never consent to leave his vessel. He has lived for a dozen years on board the ‘Nautilus,’ and on board the ‘Nautilus’ he desires to die.”

Without doubt Captain Nemo heard Cyrus Harding's reply, for he raised himself slightly, and in a voice more feeble, but always intelligible, —

"You are right, sir," he said. "I shall die here — it is my wish; and therefore I have a request to make of you."

Cyrus Harding and his companions had drawn near the divan, and now arranged the cushions in such a manner as to better support the dying man.

They saw his eyes wander over all the marvels of this saloon, lighted by the electric rays which fell from the arabesques of the luminous ceiling. He surveyed, one after the other, the pictures hanging from the splendid tapestries of the partitions, the chef-d'oeuvres of the Italian, Flemish, French, and Spanish masters; the statues of marble and bronze on their pedestals; the magnificent organ, leaning against the after-partition; the aquarium, in which bloomed the most wonderful productions of the sea — marine plants, zoophytes, chaplets of pearls of inestimable value; and, finally, his eyes rested on this device, inscribed over the pediment of the museum — the motto of the "Nautilus" —

"Mobilis in mobile."

His glance seemed to rest fondly for the last time on these masterpieces of art and of nature, to which he had limited his horizon during a sojourn of so many years in the abysses of the seas.

Cyrus Harding respected the captain's silence, and waited till he should speak.

After some minutes, during which, doubtless, he passed in review his whole life, Captain Nemo turned to the colonists and said,

"You consider yourselves, gentlemen, under some obligations to me?"

"Captain, believe us that we would give our lives to prolong yours."

"Promise, then," continued Captain Nemo, "to carry out my last wishes, and I shall be repaid for all I have done for you."

"We promise," said Cyrus Harding.

And by this promise he bound both himself and his companions.

“Gentlemen,” resumed the captain, “to-morrow I shall be dead.”

Herbert was about to utter an exclamation, but a sign from the captain arrested him.

“To-morrow I shall die, and I desire no other tomb than the ‘Nautilus.’ It is my grave! All my friends repose in the depths of the ocean; their resting-place shall be mine.”

These words were received with profound silence.

“Pay attention to my wishes,” he continued. “The ‘Nautilus’ is imprisoned in this grotto, the entrance of which is blocked up; but, although egress is impossible, the vessel may at least sink in the abyss, and there bury my remains.”

The colonists listened reverently to the words of the dying man.

“To-morrow, after my death, Mr. Harding,” continued the captain, “yourself and companions will leave the ‘Nautilus,’ for all the treasures it contains must perish with me. One token alone will remain with you of Prince Dakkar, with whose history you are now acquainted. That coffer yonder contains diamonds of the value of many millions, most of them mementoes of the time when, husband and father, I thought happiness possible for me, and a collection of pearls gathered by my friends and myself in the depths of the ocean. Of this treasure at a future day, you may make good use. In the hands of such men as yourself and your comrades, Captain Harding, money will never be a source of danger. From on high I shall still participate in your enterprises, and I fear not but that they will prosper.”

After a few moments’ repose, necessitated by his extreme weakness, Captain Nemo continued, —

“To-morrow you will take the coffer, you will leave the saloon, of which you will close the door; then you will ascend on to the deck of the ‘Nautilus,’ and you will lower the mainhatch so as entirely to close the vessel.”

“It shall be done, captain,” answered Cyrus Harding.

“Good. You will then embark in the canoe which brought you hither; but, before leaving the ‘Nautilus,’ go to the stern and there open two large stop-cocks which you will find

upon the water-line. The water will penetrate into the reservoirs, and the ‘Nautilus’ will gradually sink beneath the water to repose at the bottom of the abyss.”

And comprehending a gesture of Cyrus Harding, the captain added, —

“Fear nothing! You will but bury a corpse!”

Neither Cyrus Harding nor his companions ventured to offer any observation to Captain Nemo. He had expressed his last wishes, and they had nothing to do but to conform to them.

“I have your promise, gentlemen?” added Captain Nemo.

“You have, captain,” replied the engineer.

The captain thanked the colonists by a sign, and requested them to leave him for some hours. Gideon Spilett wished to remain near him, in the event of a crisis coming on, but the dying man refused, saying, “I shall live until to-morrow, sir.”

All left the saloon, passed through the library and the dining-room, and arrived forward, in the machine-room where the electrical apparatus was established, which supplied not only heat and light, but the mechanical power of the “Nautilus.”

The “Nautilus” was a masterpiece containing masterpieces with itself, and the engineer was struck with astonishment.

The colonists mounted the platform, which rose seven or eight feet above the water. There they beheld a thick glass lenticular covering, which protected a kind of large eye, from which flashed forth light. Behind this eye was apparently a cabin containing the wheels of the rudder, and in which was stationed the helmsman, when he navigated the “Nautilus” over the bed of the ocean, which the electric rays would evidently light up to a considerable distance.

Cyrus Harding and his companions remained for a time silent, for they were vividly impressed by what they had just seen and heard, and their hearts were deeply touched by the thought that he whose arm had so often aided them, the protector whom they had known but a few hours, was at the point of death.

Whatever might be the judgment pronounced by posterity upon the events of this, so to speak, extra-human existence, the character of Prince Dakkar would ever remain as one of those whose memory time can never efface.

“What a man!” said Pencroft. “Is it possible that he can have lived at the bottom of the sea? And it seems to me that perhaps he has not found peace there any more than elsewhere!”

“The ‘Nautilus,’” observed Ayrton, “might have enabled us to leave Lincoln Island and reach some inhabited country.”

“Good Heavens!” exclaimed Pencroft, “I for one would never risk myself in such a craft. To sail on the seas, good, but under the seas, never!”

“I believe, Pencroft,” answered the reporter, “that the navigation of a submarine vessel such as the ‘Nautilus’ ought to be very easy, and that we should soon become accustomed to it. There would be no storms, no lee-shore to fear. At some feet beneath the surface the waters of the ocean are as calm as those of a lake.”

“That may be,” replied the sailor, “but I prefer a gale of wind on board a well-found craft. A vessel is built to sail on the sea, and not beneath it.”

“My friends,” said the engineer, “it is useless, at any rate as regards the ‘Nautilus,’ to discuss the question of submarine vessels. The ‘Nautilus’ is not ours, and we have not the right to dispose of it. Moreover, we could in no case avail ourselves of it. Independently of the fact that it would be impossible to get it out of this cavern, whose entrance is now closed by the uprising of the basaltic rocks, Captain Nemo’s wish is that it shall be buried with him. His wish is our law, and we will fulfil it.”

After a somewhat prolonged conversation, Cyrus Harding and his companions again descended to the interior of the “Nautilus.” There they took some refreshment and returned to the saloon.

Captain Nemo had somewhat rallied from the prostration which had overcome him, and his eyes shone with their wonted fire. A faint smile even curled his lips.

The colonists drew around him.

“Gentlemen,” said the captain, “you are brave and honest men. You have devoted yourselves to the common weal. Often have I observed your conduct. I have esteemed you — I esteem you still! Your hand, Mr. Harding.”

Cyrus Harding gave his hand to the captain, who clasped it affectionately.

“It is well!” he murmured.

He resumed, —

“But enough of myself. I have to speak concerning yourselves, and this Lincoln Island, upon which you have taken refuge. You now desire to leave it?”

“To return, captain!” answered Pencroft quickly.

“To return, Pencroft?” said the captain, with a smile. “I know, it is true, your love for this island. You have helped to make it what it now is, and it seems to you a paradise!”

“Our project, captain,” interposed Cyrus Harding, “is to annex it to the United States, and to establish for our shipping a port so fortunately situated in this part of the Pacific.”

“Your thoughts are with your country, gentlemen,” continued the captain; “your toils are for her prosperity and glory. You are right. One’s native land! — there should one live! there die! And I die far from all I loved!”

“You have some last wish to transmit,” said the engineer with emotion, “some souvenir to send to those friends you have left in the mountains of India?”

“No, Captain Harding; no friends remain to me! I am the last of my race, and to all whom I have known I have long been as are the dead. — But to return to yourselves. Solitude, isolation, are painful things, and beyond human endurance. I die of having thought it possible to live alone! You should, therefore, dare all in the attempt to leave Lincoln Island, and see once more the land of your birth. I am aware that those wretches have destroyed the vessel you have built.”

“We propose to construct a vessel,” said Gideon Spilett, “sufficiently large to convey us to the nearest land; but if we should succeed, sooner or later we shall return to Lincoln Island. We are attached to it by too many recollections ever to forget it.”

“It is here that we have known Captain Nemo,” said Cyrus Harding.

“It is here only that we can make our home!” added Herbert.

“And here shall I sleep the sleep of eternity, if — ” replied the captain.

He paused for a moment, and, instead of completing the sentence, said simply, —

“Mr. Harding, I wish to speak with you — alone!”

The engineer’s companions, respecting the wish, retired.

Cyrus Harding remained but a few minutes alone with Captain Nemo, and soon recalled his companions; but he said nothing to them of the private matters which the dying man had confided to him.

Gideon Spilett now watched the captain with extreme care. It was evident that he was no longer sustained by his moral energy, which had lost the power of reaction against his physical weakness.

The day closed without change. The colonists did not quit the “Nautilus” for a moment. Night arrived, although it was impossible to distinguish it from day in the cavern.

Captain Nemo suffered no pain, but he was visibly sinking. His noble features, paled by the approach of death, were perfectly calm. Inaudible words escaped at intervals from his lips, bearing upon various incidents of his checkered career. Life was evidently ebbing slowly and his extremities were already cold.

Once or twice more he spoke to the colonists who stood around him, and smiled on them with that last smile which continues after death.

At length, shortly after midnight, Captain Nemo by a supreme effort succeeded in folding his arms across his breast, as if wishing in that attitude to compose himself for death.

By one o’clock his glance alone showed signs of life. A dying light gleamed in those eyes once so brilliant. Then, murmuring the words, “God and my country!” he quietly expired.

Cyrus Harding, bending low closed the eyes of him who had once been the Prince Dakkar, and was now not even Captain Nemo.

Herbert and Pencroft sobbed aloud. Tears fell from Ayrton's eyes. Neb was on his knees by the reporter's side, motionless as a statue.

Then Cyrus Harding, extending his hand over the forehead of the dead, said solemnly, "May his soul be with God!" Turning to his friends, he added, "Let us pray for him whom we have lost!"

Some hours later the colonists fulfilled the promise made to the captain by carrying out his dying wishes.

Cyrus Harding and his companions quitted the "Nautilus," taking with them the only memento left them by their benefactor, the coffer which contained wealth amounting to millions.

The marvelous saloon, still flooded with light, had been carefully closed. The iron door leading on deck was then securely fastened in such a manner as to prevent even a drop of water from penetrating to the interior of the "Nautilus."

The colonists then descended into the canoe, which was moored to the side of the submarine vessel.

The canoe was now brought around to the stern. There, at the water-line, were two large stop-cocks communicating with the reservoirs employed in the submersion of the vessel.

The stop-cocks were opened, the reservoirs filled, and the "Nautilus," slowly sinking, disappeared beneath the surface of the lake.

But the colonists were yet able to follow its descent through the waves. The powerful light it gave forth lighted up the translucent water, while the cavern became gradually obscure. At length this vast effusion of electric light faded away, and soon after the "Nautilus," now the tomb of Captain Nemo, reposed in its ocean bed.

CHAPTER 18

At break of day the colonists regained in silence the entrance of the cavern, to which they gave the name of “Dakkar Grotto,” in memory of Captain Nemo. It was now low-water, and they passed without difficulty under the arcade, washed on the right by the sea.

The canoe was left here, carefully protected from the waves. As additional precaution, Pencroft, Neb, and Ayrton drew it up on a little beach which bordered one of the sides of the grotto, in a spot where it could run no risk of harm.

The storm had ceased during the night. The last low mutterings of the thunder died away in the west. Rain fell no longer, but the sky was yet obscured by clouds. On the whole, this month of October, the first of the southern spring, was not ushered in by satisfactory tokens, and the wind had a tendency to shift from one point of the compass to another, which rendered it impossible to count upon settled weather.

Cyrus Harding and his companions, on leaving Dakkar Grotto, had taken the road to the corral. On their way Neb and Herbert were careful to preserve the wire which had been laid down by the captain between the corral and the grotto, and which might at a future time be of service.

The colonists spoke but little on the road. The various incidents of the night of October 15th had left a profound impression on their minds. The unknown being whose influence had so effectually protected them, the man whom their imagination had endowed with supernatural powers, Captain Nemo, was no more. His “Nautilus” and he were buried in the depths of the abyss. To each one of them their existence seemed even more isolated than before. They had been accustomed to count upon the intervention of that power which existed no longer, and Gideon Spilett, and even Cyrus Harding, could not escape this impression. Thus they maintained a profound silence during their journey to the corral.

Towards nine in the morning the colonists arrived at Granite House.

It had been agreed that the construction of the vessel should be actively pushed forward, and Cyrus Harding more than ever devoted his time and labor to this object. It was impossible to divine what future lay before them. Evidently the advantage to the

colonists would be great of having at their disposal a substantial vessel, capable of keeping the sea even in heavy weather, and large enough to attempt, in case of need, a voyage of some duration. Even if, when their vessel should be completed, the colonists should not resolve to leave Lincoln Island as yet, in order to gain either one of the Polynesian Archipelagoes of the Pacific or the shores of New Zealand, they might at least, sooner or later, proceed to Tabor Island, to leave there the notice relating to Ayrton. This was a precaution rendered indispensable by the possibility of the Scotch yacht reappearing in those seas, and it was of the highest importance that nothing should be neglected on this point.

The works were then resumed. Cyrus Harding, Pencroft, and Ayrton, assisted by Neb, Gideon Spilett, and Herbert, except when unavoidably called off by other necessary occupations, worked without cessation. It was important that the new vessel should be ready in five months — that is to say, by the beginning of March — if they wished to visit Tabor Island before the equinoctial gales rendered the voyage impracticable. Therefore the carpenters lost not a moment. Moreover, it was unnecessary to manufacture rigging, that of the “Speedy” having been saved entire, so that the hull only of the vessel needed to be constructed.

The end of the year 1868 found them occupied by these important labors, to the exclusion of almost all others. At the expiration of two months and a half the ribs had been set up and the first planks adjusted. It was already evident that the plans made by Cyrus Harding were admirable, and that the vessel would behave well at sea.

Pencroft brought to the task a devouring energy, and would even grumble when one or the other abandoned the carpenter’s axe for the gun of the hunter. It was nevertheless necessary to keep up the stores of Granite House, in view of the approaching winter. But this did not satisfy Pencroft. The brave, honest sailor was not content when the workmen were not at the dockyard. When this happened he grumbled vigorously, and, by way of venting his feelings, did the work of six men.

The weather was very unfavorable during the whole of the summer season. For some days the heat was overpowering, and the atmosphere, saturated with electricity, was only cleared by violent storms. It was rarely that the distant growling of the thunder could not be heard, like a low but incessant murmur, such as is produced in the equatorial regions of the globe.

The 1st of January, 1869, was signalized by a storm of extreme violence, and the thunder burst several times over the island. Large trees were struck by the electric fluid and shattered, and among others one of those gigantic nettle-trees which had shaded the poultry-yard at the southern extremity of the lake. Had this meteor any relation to the phenomena going on in the bowels of the earth? Was there any connection between the commotion of the atmosphere and that of the interior of the earth? Cyrus Harding was inclined to think that such was the case, for the development of these storms was attended by the renewal of volcanic symptoms.

It was on the 3rd of January that Herbert, having ascended at daybreak to the plateau of Prospect Heights to harness one of the onagers, perceived an enormous hat-shaped cloud rolling from the summit of the volcano.

Herbert immediately apprised the colonists, who at once joined him in watching the summit of Mount Franklin.

“Ah!” exclaimed Pencroft, “those are not vapors this time! It seems to me that the giant is not content with breathing; he must smoke!”

This figure of speech employed by the sailor exactly expressed the changes going on at the mouth of the volcano. Already for three months had the crater emitted vapors more or less dense, but which were as yet produced only by an internal ebullition of mineral substances. But now the vapors were replaced by a thick smoke, rising in the form of a grayish column, more than three hundred feet in width at its base, and which spread like an immense mushroom to a height of from seven to eight hundred feet above the summit of the mountain.

“The fire is in the chimney,” observed Gideon Spilett.

“And we can’t put it out!” replied Herbert.

“The volcano ought to be swept,” observed Neb, who spoke as if perfectly serious.

“Well said, Neb!” cried Pencroft, with a shout of laughter; “and you’ll undertake the job, no doubt?”

Cyrus Harding attentively observed the dense smoke emitted by Mount Franklin, and even listened, as if expecting to hear some distant muttering. Then, turning towards his

companions, from whom he had gone somewhat apart, he said, —

“The truth is, my friends, we must not conceal from ourselves that an important change is going forward. The volcanic substances are no longer in a state of ebullition, they have caught fire, and we are undoubtedly menaced by an approaching eruption.”

“Well, captain,” said Pencroft, “we shall witness the eruption; and if it is a good one, we’ll applaud it. I don’t see that we need concern ourselves further about the matter.”

“It may be so,” replied Cyrus Harding, “for the ancient track of the lava is still open; and thanks to this, the crater has hitherto overflowed towards the north. And yet — ”

“And yet, as we can derive no advantage from an eruption, it might be better it should not take place,” said the reporter.

“Who knows?” answered the sailor. “Perhaps there may be some valuable substance in this volcano, which it will spout forth, and which we may turn to good account!”

Cyrus Harding shook his head with the air of a man who augured no good from the phenomenon whose development had been so sudden. He did not regard so lightly as Pencroft the results of an eruption. If the lava, in consequence of the position of the crater, did not directly menace the wooded and cultivated parts of the island, other complications might present themselves. In fact, eruptions are not unfrequently accompanied by earthquakes; and an island of the nature of Lincoln Island, formed of substances so varied, basalt on one side, granite on the other, lava on the north, rich soil on the south, substances which consequently could not be firmly attached to each other, would be exposed to the risk of disintegration. Although, therefore, the spreading of the volcanic matter might not constitute a serious danger, any movement of the terrestrial structure which should shake the island might entail the gravest consequences.

“It seems to me,” said Ayrton, who had reclined so as to place his ear to the ground, “it seems to me that I can hear a dull, rumbling sound, like that of a wagon loaded with bars of iron.”

The colonists listened with the greatest attention, and were convinced that Ayrton was not mistaken. The rumbling was mingled with a subterranean roar, which formed a sort of rinforzando, and died slowly away, as if some violent storm had passed through the profundities of the globe. But no explosion properly so termed, could be heard. It might

therefore be concluded that the vapors and smoke found a free passage through the central shaft; and that the safety-valve being sufficiently large, no convulsion would be produced, no explosion was to be apprehended.

“Well, then!” said Pencroft, “are we not going back to work? Let Mount Franklin smoke, groan, bellow, or spout forth fire and flame as much as it pleases, that is no reason why we should be idle! Come, Ayrton, Neb, Herbert, Captain Harding, Mr. Spilett, every one of us must turn to at our work to-day! We are going to place the keelson, and a dozen pair of hands would not be too many. Before two months I want our new ‘Bonadventure’ — for we shall keep the old name, shall we not? — to float on the waters of Port Balloon! Therefore there is not an hour to lose!”

All the colonists, their services thus requisitioned by Pencroft, descended to the dockyard, and proceeded to place the keelson, a thick mass of wood which forms the lower portion of a ship and unites firmly the timbers of the hull. It was an arduous undertaking, in which all took part.

They continued their labors during the whole of this day, the 3rd of January, without thinking further of the volcano, which could not, besides, be seen from the shore of Granite House. But once or twice, large shadows, veiling the sun, which described its diurnal arc through an extremely clear sky, indicated that a thick cloud of smoke passed between its disc and the island. The wind, blowing on the shore, carried all these vapors to the westward. Cyrus Harding and Gideon Spilett remarked these somber appearances, and from time to time discussed the evident progress of the volcanic phenomena, but their work went on without interruption. It was, besides, of the first importance from every point of view, that the vessel should be finished with the least possible delay. In presence of the eventualities which might arise, the safety of the colonists would be to a great extent secured by their ship. Who could tell that it might not prove some day their only refuge?

In the evening, after supper, Cyrus Harding, Gideon Spilett, and Herbert again ascended the plateau of Prospect Heights. It was already dark, and the obscurity would permit them to ascertain if flames or incandescent matter thrown up by the volcano were mingled with the vapor and smoke accumulated at the mouth of the crater.

“The crater is on fire!” said Herbert, who, more active than his companion, first reached the plateau.

Mount Franklin, distant about six miles, now appeared like a gigantic torch, around the summit of which turned fuliginous flames. So much smoke, and possibly scoriae and cinders were mingled with them, that their light gleamed but faintly amid the gloom of the night. But a kind of lurid brilliancy spread over the island, against which stood out confusedly the wooded masses of the heights. Immense whirlwinds of vapor obscured the sky, through which glimmered a few stars.

“The change is rapid!” said the engineer.

“That is not surprising,” answered the reporter. “The reawakening of the volcano already dates back some time. You may remember, Cyrus, that the first vapors appeared about the time we searched the sides of the mountain to discover Captain Nemo’s retreat. It was, if I mistake not, about the 15th of October.”

“Yes,” replied Herbert, “two months and a half ago!”

“The subterranean fires have therefore been smoldering for ten weeks,” resumed Gideon Spilett, “and it is not to be wondered at that they now break out with such violence!”

“Do not you feel a certain vibration of the soil?” asked Cyrus Harding.

“Yes,” replied Gideon Spilett, “but there is a great difference between that and an earthquake.”

“I do not affirm that we are menaced with an earthquake,” answered Cyrus Harding, “may God preserve us from that! No; these vibrations are due to the effervescence of the central fire. The crust of the earth is simply the shell of a boiler, and you know that such a shell, under the pressure of steam, vibrates like a sonorous plate. It is this effect which is being produced at this moment.”

“What magnificent flames!” exclaimed Herbert.

At this instant a kind of bouquet of flames shot forth from the crater, the brilliancy of which was visible even through the vapors. Thousands of luminous sheets and barbed tongues of fire were cast in various directions. Some, extending beyond the dome of smoke, dissipated it, leaving behind an incandescent powder. This was accompanied by successive explosions, resembling the discharge of a battery of machine-guns.

Cyrus Harding, the reporter, and Herbert, after spending an hour on the plateau of Prospect Heights, again descended to the beach, and returned to Granite House. The engineer was thoughtful and preoccupied, so much so, indeed, that Gideon Spilett inquired if he apprehended any immediate danger, of which the eruption might directly or indirectly be the cause.

“Yes, and no,” answered Cyrus Harding.

“Nevertheless,” continued the reporter, “would not the greatest misfortune which could happen to us be an earthquake which would overturn the island? Now, I do not suppose that this is to be feared, since the vapors and lava have found a free outlet.”

“True,” replied Cyrus Harding, “and I do not fear an earthquake in the sense in which the term is commonly applied to convulsions of the soil provoked by the expansion of subterranean gases. But other causes may produce great disasters.”

“How so, my dear Cyrus?’

“I am not certain. I must consider. I must visit the mountain. In a few days I shall learn more on this point.”

Gideon Spilett said no more, and soon, in spite of the explosions of the volcano, whose intensity increased, and which were repeated by the echoes of the island, the inhabitants of Granite House were sleeping soundly.

Three days passed by — the 4th, 5th, and 6th of January. The construction of the vessel was diligently continued, and without offering further explanations the engineer pushed forward the work with all his energy. Mount Franklin was now hooded by a somber cloud of sinister aspect, and, amid the flames, vomiting forth incandescent rocks, some of which fell back into the crater itself. This caused Pencroft, who would only look at the matter in the light of a joke, to exclaim, —

“Ah! the giant is playing at cup and ball; he is a conjurer.”

In fact, the substances thrown up fell back again in to the abyss, and it did not seem that the lava, though swollen by the internal pressure, had yet risen to the orifice of the crater. At any rate, the opening on the northeast, which was partly visible, poured out no torrent upon the northern slope of the mountain.

Nevertheless, however pressing was the construction of the vessel, other duties demanded the presence of the colonists on various portions of the island. Before everything it was necessary to go to the corral, where the flocks of musmons and goats were enclosed, and replenish the provision of forage for those animals. It was accordingly arranged that Ayrton should proceed thither the next day, the 7th of January; and as he was sufficient for the task, to which he was accustomed, Pencroft and the rest were somewhat surprised on hearing the engineer say to Ayrton —

“As you are going to-morrow to the corral I will accompany you.”

“But, Captain Harding,” exclaimed the sailor, “our working days will not be many, and if you go also we shall be two pair of hands short!”

“We shall return to-morrow,” replied Cyrus Harding, “but it is necessary that I should go to the corral. I must learn how the eruption is progressing.”

“The eruption! always the eruption!” answered Pencroft, with an air of discontent. “An important thing, truly, this eruption! I trouble myself very little about it.”

Whatever might be the sailor’s opinion, the expedition projected by the engineer was settled for the next day. Herbert wished to accompany Cyrus Harding, but he would not vex Pencroft by his absence.

The next day, at dawn, Cyrus Harding and Ayrton, mounting the cart drawn by two onagers, took the road to the corral and set off at a round trot.

Above the forest were passing large clouds, to which the crater of Mount Franklin incessantly added fuliginous matter. These clouds, which rolled heavily in the air, were evidently composed of heterogeneous substances. It was not alone from the volcano that they derived their strange opacity and weight. Scoriae, in a state of dust, like powdered pumice-stone, and grayish ashes as small as the finest feculae, were held in suspension in the midst of their thick folds. These ashes are so fine that they have been observed in the air for whole months. After the eruption of 1783 in Iceland for upwards of a year the atmosphere was thus charged with volcanic dust through which the rays of the sun were only with difficulty discernible.

But more often this pulverized matter falls, and this happened on the present occasion. Cyrus Harding and Ayrton had scarcely reached the corral when a sort of black snow

like fine gunpowder fell, and instantly changed the appearance of the soil. Trees, meadows, all disappeared beneath a covering several inches in depth. But, very fortunately, the wind blew from the northeast, and the greater part of the cloud dissolved itself over the sea.

“This is very singular, Captain Harding,” said Ayrton.

“It is very serious,” replied the engineer. “This powdered pumice-stone, all this mineral dust, proves how grave is the convulsion going forward in the lower depths of the volcano.”

“But can nothing be done?”

“Nothing, except to note the progress of the phenomenon. Do you, therefore, Ayrton, occupy yourself with the necessary work at the corral. In the meantime I will ascend just beyond the source of Red Creek and examine the condition of the mountain upon its northern aspect. Then — ”

“Well, Captain Harding?”

“Then we will pay a visit to Dakkar Grotto. I wish to inspect it. At any rate I will come back for you in two hours.”

Ayrton then proceeded to enter the corral, and, while awaiting the engineer’s return, busied himself with the musmons and goats which seemed to feel a certain uneasiness in presence of these first signs of an eruption.

Meanwhile Cyrus Harding ascended the crest of the eastern spur, passed Red Creek, and arrived at the spot where he and his companions had discovered a sulphurous spring at the time of their first exploration.

How changed was everything! Instead of a single column of smoke he counted thirteen, forced through the soil as if violently propelled by some piston. It was evident that the crust of the earth was subjected in this part of the globe to a frightful pressure. The atmosphere was saturated with gases and carbonic acid, mingled with aqueous vapors. Cyrus Harding felt the volcanic tufa with which the plain was strewn, and which was but pulverized cinders hardened into solid blocks by time, tremble beneath him, but he could discover no traces of fresh lava.

The engineer became more assured of this when he observed all the northern part of Mount Franklin. Pillars of smoke and flame escaped from the crater; a hail of scoriae fell on the ground; but no current of lava burst from the mouth of the volcano, which proved that the volcanic matter had not yet attained the level of the superior orifice of the central shaft.

“But I would prefer that it were so,” said Cyrus Harding to himself. “At any rate, I should then know that the lava had followed its accustomed track. Who can say that it may not take a new course? But the danger does not consist in that! Captain Nemo foresaw it clearly! No, the danger does not lie there!”

Cyrus Harding advanced towards the enormous causeway whose prolongation enclosed the narrow Shark Gulf. He could now sufficiently examine on this side the ancient channels of the lava. There was no doubt in his mind that the most recent eruption had occurred at a far-distant epoch.

He then returned by the same way, listening attentively to the subterranean mutterings which rolled like long-continued thunder, interrupted by deafening explosions. At nine in the morning he reached the corral.

Ayrton awaited him.

“The animals are cared for, Captain Harding,” said Ayrton.

“Good, Ayrton.”

“They seem uneasy, Captain Harding.”

“Yes, instinct speaks through them, and instinct is never deceived.”

“Are you ready?”

“Take a lamp, Ayrton,” answered the engineer; “we will start at once.”

Ayrton did as desired. The onagers, unharnessed, roamed in the corral. The gate was secured on the outside, and Cyrus Harding, preceding Ayrton, took the narrow path which led westward to the shore.

The soil they walked upon was choked with the pulverized matter fallen from the cloud. No quadruped appeared in the woods. Even the birds had fled. Sometimes a passing breeze raised the covering of ashes, and the two colonists, enveloped in a whirlwind of dust, lost sight of each other. They were then careful to cover their eyes and mouths with handkerchiefs, for they ran the risk of being blinded and suffocated.

It was impossible for Cyrus Harding and Ayrton, with these impediments, to make rapid progress. Moreover, the atmosphere was close, as if the oxygen had been partly burned up, and had become unfit for respiration. At every hundred paces they were obliged to stop to take breath. It was therefore past ten o'clock when the engineer and his companion reached the crest of the enormous mass of rocks of basalt and porphyry which composed the northwest coast of the island.

Ayrton and Cyrus Harding commenced the descent of this abrupt declivity, following almost step for step the difficult path which, during that stormy night, had led them to Dakkar Grotto. In open day the descent was less perilous, and, besides, the bed of ashes which covered the polished surface of the rock enabled them to make their footing more secure.

The ridge at the end of the shore, about forty feet in height, was soon reached. Cyrus Harding recollected that this elevation gradually sloped towards the level of the sea. Although the tide was at present low, no beach could be seen, and the waves, thickened by the volcanic dust, beat upon the basaltic rocks.

Cyrus Harding and Ayrton found without difficulty the entrance to Dakkar Grotto, and paused for a moment at the last rock before it.

"The iron boat should be there," said the engineer.

"It is here, Captain Harding," replied Ayrton, drawing towards him the fragile craft, which was protected by the arch of the vault.

"On board, Ayrton!"

The two colonists stepped into the boat. A slight undulation of the waves carried it farther under the low arch of the crypt, and there Ayrton, with the aid of flint and steel, lighted the lamp. He then took the oars, and the lamp having been placed in the bow of

the boat, so that its rays fell before them, Cyrus Harding took the helm and steered through the shades of the grotto.

The “Nautilus” was there no longer to illuminate the cavern with its electric light. Possibly it might not yet be extinguished, but no ray escaped from the depths of the abyss in which reposed all that was mortal of Captain Nemo.

The light afforded by the lamp, although feeble, nevertheless enabled the engineer to advance slowly, following the wall of the cavern. A deathlike silence reigned under the vaulted roof, or at least in the anterior portion, for soon Cyrus Harding distinctly heard the rumbling which proceeded from the bowels of the mountain.

“That comes from the volcano,” he said.

Besides these sounds, the presence of chemical combinations was soon betrayed by their powerful odor, and the engineer and his companion were almost suffocated by sulphurous vapors.

“This is what Captain Nemo feared,” murmured Cyrus Harding, changing countenance. “We must go to the end, notwithstanding.”

“Forward!” replied Ayrton, bending to his oars and directing the boat towards the head of the cavern.

Twenty-five minutes after entering the mouth of the grotto the boat reached the extreme end.

Cyrus Harding then, standing up, cast the light of the lamp upon the walls of the cavern which separated it from the central shaft of the volcano. What was the thickness of this wall? It might be ten feet or a hundred feet — it was impossible to say. But the subterranean sounds were too perceptible to allow of the supposition that it was of any great thickness.

The engineer, after having explored the wall at a certain height horizontally, fastened the lamp to the end of an oar, and again surveyed the basaltic wall at a greater elevation.

There, through scarcely visible clefts and joinings, escaped a pungent vapor, which infected the atmosphere of the cavern. The wall was broken by large cracks, some of which extended to within two or three feet of the water’s edge.

Cyrus Harding thought for a brief space. Then he said in a low voice, —

“Yes! the captain was right! The danger lies there, and a terrible danger!”

Ayrton said not a word, but, upon a sign from Cyrus Harding, resumed the oars, and half an hour later the engineer and he reached the entrance of Dakkar Grotto.

CHAPTER 19

The next day, the 8th day of January, after a day and night passed at the corral, where they left all in order, Cyrus Harding and Ayrton arrived at Granite House.

The engineer immediately called his companions together, and informed them of the imminent danger which threatened Lincoln Island, and from which no human power could deliver them.

“My friends,” he said, and his voice betrayed the depth of his emotion, “our island is not among those which will endure while this earth endures. It is doomed to more or less speedy destruction, the cause of which it bears within itself, and from which nothing can save it.”

The colonists looked at each other, then at the engineer. They did not clearly comprehend him.

“Explain yourself, Cyrus!” said Gideon Spilett.

“I will do so,” replied Cyrus Harding, “or rather I will simply afford you the explanation which, during our few minutes of private conversation, was given me by Captain Nemo.”

“Captain Nemo!” exclaimed the colonists.

“Yes, and it was the last service he desired to render us before his death!”

“The last service!” exclaimed Pencroft, “the last service! You will see that though he is dead he will render us others yet!”

“But what did the captain say?” inquired the reporter.

“I will tell you, my friends,” said the engineer. “Lincoln Island does not resemble the other islands of the Pacific, and a fact of which Captain Nemo has made me cognizant must sooner or later bring about the subversion of its foundation.”

“Nonsense! Lincoln Island, it can’t be!” cried Pencroft, who, in spite of the respect he felt for Cyrus Harding, could not prevent a gesture of incredulity.

“Listen, Pencroft,” resumed the engineer, “I will tell you what Captain Nemo communicated to me, and which I myself confirmed yesterday, during the exploration of Dakkar Grotto.

“This cavern stretches under the island as far as the volcano, and is only separated from its central shaft by the wall which terminates it. Now, this wall is seamed with fissures and clefts which already allow the sulphurous gases generated in the interior of the volcano to escape.”

“Well?” said Pencroft, his brow suddenly contracting.

“Well, then, I saw that these fissures widen under the internal pressure from within, that the wall of basalt is gradually giving way and that after a longer or shorter period it will afford a passage to the waters of the lake which fill the cavern.”

“Good!” replied Pencroft, with an attempt at pleasantry. “The sea will extinguish the volcano, and there will be an end of the matter!”

“Not so!” said Cyrus Harding, “should a day arrive when the sea, rushing through the wall of the cavern, penetrates by the central shaft into the interior of the island to the boiling lava, Lincoln Island will that day be blown into the air — just as would happen to the island of Sicily were the Mediterranean to precipitate itself into Mount Etna.”

The colonists made no answer to these significant words of the engineer. They now understood the danger by which they were menaced.

It may be added that Cyrus Harding had in no way exaggerated the danger to be apprehended. Many persons have formed an idea that it would be possible to extinguish volcanoes, which are almost always situated on the shores of a sea or lake, by opening a passage for the admission of the water. But they are not aware that this would be to incur the risk of blowing up a portion of the globe, like a boiler whose steam is suddenly expanded by intense heat. The water, rushing into a cavity whose temperature might be estimated at thousands of degrees, would be converted into steam with a sudden energy which no enclosure could resist.

It was not therefore doubtful that the island, menaced by a frightful and approaching convulsion, would endure only so long as the wall of Dakkar Grotto itself should

endure. It was not even a question of months, nor of weeks, but of days; it might be of hours.

The first sentiment which the colonists felt was that of profound sorrow. They thought not so much of the peril which menaced themselves personally, but of the destruction of the island which had sheltered them, which they had cultivated, which they loved so well, and had hoped to render so flourishing. So much effort ineffectually expended, so much labor lost.

Pencroft could not prevent a large tear from rolling down his cheek, nor did he attempt to conceal it.

Some further conversation now took place. The chances yet in favor of the colonists were discussed; but finally it was agreed that there was not an hour to be lost, that the building and fitting of the vessel should be pushed forward with their utmost energy, and that this was the sole chance of safety for the inhabitants of Lincoln Island.

All hands, therefore, set to work on the vessel. What could it avail to sow, to reap, to hunt, to increase the stores of Granite House? The contents of the storehouse and outbuildings contained more than sufficient to provide the ship for a voyage, however long might be its duration. But it was imperative that the ship should be ready to receive them before the inevitable catastrophe should arrive.

Their labors were now carried on with feverish ardor. By the 23rd of January the vessel was half-decked over. Up to this time no change had taken place on the summit of the volcano. Vapor and smoke mingled with flames and incandescent stones were thrown up from the crater. But during the night of the 23rd, in consequence of the lava attaining the level of the first stratum of the volcano, the hat-shaped cone which formed over the latter disappeared. A frightful sound was heard. The colonists at first thought the island was rent asunder, and rushed out of Granite House.

This occurred about two o’clock in the morning.

The sky appeared on fire. The superior cone, a mass of rock a thousand feet in height, and weighing thousands of millions of pounds, had been thrown down upon the island, making it tremble to its foundation. Fortunately, this cone inclined to the north, and had fallen upon the plain of sand and tufa stretching between the volcano and the sea. The aperture of the crater being thus enlarged projected towards the sky a glare so intense

that by the simple effect of reflection the atmosphere appeared red-hot. At the same time a torrent of lava, bursting from the new summit, poured out in long cascades, like water escaping from a vase too full, and a thousand tongues of fire crept over the sides of the volcano.

“The corral! the corral!” exclaimed Ayrton.

It was, in fact, towards the corral that the lava was rushing as the new crater faced the east, and consequently the fertile portions of the island, the springs of Red Creek and Jacamar Wood, were menaced with instant destruction.

At Ayrton’s cry the colonists rushed to the onagers’ stables. The cart was at once harnessed. All were possessed by the same thought — to hasten to the corral and set at liberty the animals it enclosed.

Before three in the morning they arrived at the corral. The cries of the terrified musmons and goats indicated the alarm which possessed them. Already a torrent of burning matter and liquefied minerals fell from the side of the mountain upon the meadows as far as the side of the palisade. The gate was burst open by Ayrton, and the animals, bewildered with terror, fled in all directions.

An hour afterwards the boiling lava filled the corral, converting into vapor the water of the little rivulet which ran through it, burning up the house like dry grass, and leaving not even a post of the palisade to mark the spot where the corral once stood.

To contend against this disaster would have been folly — nay, madness. In presence of Nature’s grand convulsions man is powerless.

It was now daylight — the 24th of January. Cyrus Harding and his companions, before returning to Granite House, desired to ascertain the probable direction this inundation of lava was about to take. The soil sloped gradually from Mount Franklin to the east coast, and it was to be feared that, in spite of the thick Jacamar Wood, the torrent would reach the plateau of Prospect Heights.

“The lake will cover us,” said Gideon Spilett.

“I hope so!” was Cyrus Harding’s only reply.

The colonists were desirous of reaching the plain upon which the superior cone of Mount Franklin had fallen, but the lava arrested their progress. It had followed, on one side, the valley of Red Creek, and on the other that of Falls River, evaporating those watercourses in its passage. There was no possibility of crossing the torrent of lava; on the contrary, the colonists were obliged to retreat before it. The volcano, without its crown, was no longer recognizable, terminated as it was by a sort of flat table which replaced the ancient crater. From two openings in its southern and eastern sides an unceasing flow of lava poured forth, thus forming two distinct streams. Above the new crater a cloud of smoke and ashes, mingled with those of the atmosphere, massed over the island. Loud peals of thunder broke, and could scarcely be distinguished from the rumblings of the mountain, whose mouth vomited forth ignited rocks, which, hurled to more than a thousand feet, burst in the air like shells. Flashes of lightning rivaled in intensity the volcano’s eruption.

Towards seven in the morning the position was no longer tenable by the colonists, who accordingly took shelter in the borders of Jacamar Wood. Not only did the projectiles begin to rain around them, but the lava, overflowing the bed of Red Creek, threatened to cut off the road to the corral. The nearest rows of trees caught fire, and their sap, suddenly transformed into vapor, caused them to explode with loud reports, while others, less moist, remained unhurt in the midst of the inundation.

The colonists had again taken the road to the corral. They proceeded but slowly, frequently looking back; but, in consequence of the inclination of the soil, the lava gained rapidly in the east, and as its lower waves became solidified others, at boiling heat, covered them immediately.

Meanwhile, the principal stream of Red Creek Valley became more and more menacing. All this portion of the forest was on fire, and enormous wreaths of smoke rolled over the trees, whose trunks were already consumed by the lava.

The colonists halted near the lake, about half a mile from the mouth of Red Creek. A question of life or death was now to be decided.

Cyrus Harding, accustomed to the consideration of important crises, and aware that he was addressing men capable of hearing the truth, whatever it might be, then said, —

“Either the lake will arrest the progress of the lava, and a part of the island will be preserved from utter destruction, or the stream will overrun the forests of the Far West, and not a tree or plant will remain on the surface of the soil. We shall have no prospect but that of starvation upon these barren rocks — a death which will probably be anticipated by the explosion of the island.”

“In that case,” replied Pencroft, folding his arms and stamping his foot, “what’s the use of working any longer on the vessel?”

“Pencroft,” answered Cyrus Harding, “we must do our duty to the last!”

At this instant the river of lava, after having broken a passage through the noble trees it devoured in its course, reached the borders of the lake. At this point there was an elevation of the soil which, had it been greater, might have sufficed to arrest the torrent.

“To work!” cried Cyrus Harding.

The engineer’s thought was at once understood. It might be possible to dam, as it were, the torrent, and thus compel it to pour itself into the lake.

The colonists hastened to the dockyard. They returned with shovels, picks, axes, and by means of banking the earth with the aid of fallen trees they succeeded in a few hours in raising an embankment three feet high and some hundreds of paces in length. It seemed to them, when they had finished, as if they had scarcely been working more than a few minutes.

It was not a moment too soon. The liquefied substances soon after reached the bottom of the barrier. The stream of lava swelled like a river about to overflow its banks, and threatened to demolish the sole obstacle which could prevent it from overrunning the whole Far West. But the dam held firm, and after a moment of terrible suspense the torrent precipitated itself into Grant Lake from a height of twenty feet.

The colonists, without moving or uttering a word, breathlessly regarded this strife of the two elements.

What a spectacle was this conflict between water and fire! What pen could describe the marvelous horror of this scene — what pencil could depict it? The water hissed as it evaporated by contact with the boiling lava. The vapor whirled in the air to an

immeasurable height, as if the valves of an immense boiler had been suddenly opened. But, however considerable might be the volume of water contained in the lake, it must eventually be absorbed, because it was not replenished, while the stream of lava, fed from an inexhaustible source, rolled on without ceasing new waves of incandescent matter.

The first waves of lava which fell in the lake immediately solidified and accumulated so as speedily to emerge from it. Upon their surface fell other waves, which in their turn became stone, but a step nearer the center of the lake. In this manner was formed a pier which threatened to gradually fill up the lake, which could not overflow, the water displaced by the lava being evaporated. The hissing of the water rent the air with a deafening sound, and the vapor, blown by the wind, fell in rain upon the sea. The pier became longer and longer, and the blocks of lava piled themselves one on another. Where formerly stretched the calm waters of the lake now appeared an enormous mass of smoking rocks, as if an upheaving of the soil had formed immense shoals. Imagine the waters of the lake aroused by a hurricane, then suddenly solidified by an intense frost, and some conception may be formed of the aspect of the lake three hours after the eruption of this irresistible torrent of lava.

This time water would be vanquished by fire.

Nevertheless it was a fortunate circumstance for the colonists that the effusion of lava should have been in the direction of Lake Grant. They had before them some days' respite. The plateau of Prospect Heights, Granite House, and the dockyard were for the moment preserved. And these few days it was necessary to employ in planking and carefully calking the vessel, and launching her. The colonists would then take refuge on board the vessel, content to rig her after she should be afloat on the waters. With the danger of an explosion which threatened to destroy the island there could be no security on shore. The walls of Granite House, once so sure a retreat, might at any moment fall in upon them.

During the six following days, from the 25th to the 30th of January, the colonists accomplished as much of the construction of their vessel as twenty men could have done. They hardly allowed themselves a moment's repose, and the glare of the flames which shot from the crater enabled them to work night and day. The flow of lava continued, but perhaps less abundantly. This was fortunate, for Lake Grant was almost

entirely choked up, and if more lava should accumulate it would inevitably spread over the plateau of Prospect Heights, and thence upon the beach.

But if the island was thus partially protected on this side, it was not so with the western part.

In fact, the second stream of lava, which had followed the valley of Falls River, a valley of great extent, the land on both sides of the creek being flat, met with no obstacle. The burning liquid had then spread through the forest of the Far West. At this period of the year, when the trees were dried up by a tropical heat, the forest caught fire instantaneously, in such a manner that the conflagration extended itself both by the trunks of the trees and by their higher branches, whose interlacement favored its progress. It even appeared that the current of flame spread more rapidly among the summits of the trees than the current of lava at their bases.

Thus it happened that the wild animals, jaguars, wild boars, capybaras, koalas, and game of every kind, mad with terror, had fled to the banks of the Mercy and to the Tadorn Marsh, beyond the road to Port Balloon. But the colonists were too much occupied with their task to pay any attention to even the most formidable of these animals. They had abandoned Granite House, and would not even take shelter at the Chimneys, but encamped under a tent, near the mouth of the Mercy.

Each day Cyrus Harding and Gideon Spilett ascended the plateau of Prospect Heights. Sometimes Herbert accompanied them, but never Pencroft, who could not bear to look upon the prospect of the island now so utterly devastated.

It was, in truth, a heart-rending spectacle. All the wooded part of the island was now completely bare. One single clump of green trees raised their heads at the extremity of Serpentine Peninsula. Here and there were a few grotesque blackened and branchless stumps. The side of the devastated forest was even more barren than Tadorn Marsh. The eruption of lava had been complete. Where formerly sprang up that charming verdure, the soil was now nothing but a savage mass of volcanic tufa. In the valleys of the Falls and Mercy rivers no drop of water now flowed towards the sea, and should Lake Grant be entirely dried up, the colonists would have no means of quenching their thirst. But, fortunately the lava had spared the southern corner of the lake, containing all that remained of the drinking water of the island. Towards the northwest stood out the rugged and well-defined outlines of the sides of the volcano, like a gigantic claw

hovering over the island. What a sad and fearful sight, and how painful to the colonists, who, from a fertile domain covered with forests, irrigated by watercourses, and enriched by the produce of their toils, found themselves, as it were, transported to a desolate rock, upon which, but for their reserves of provisions, they could not even gather the means of subsistence!

“It is enough to break one’s heart!” said Gideon Spilett, one day.

“Yes, Spilett,” answered the engineer. “May God grant us the time to complete this vessel, now our sole refuge!”

“Do not you think, Cyrus, that the violence of the eruption has somewhat lessened? The volcano still vomits forth lava, but somewhat less abundantly, if I mistake not.”

“It matters little,” answered Cyrus Harding. “The fire is still burning in the interior of the mountain, and the sea may break in at any moment. We are in the condition of passengers whose ship is devoured by a conflagration which they cannot extinguish, and who know that sooner or later the flames must reach the powder-magazine. To work, Spilett, to work, and let us not lose an hour!”

During eight days more, that is to say until the 7th of February, the lava continued to flow, but the eruption was confined within the previous limits. Cyrus Harding feared above all lest the liquefied matter should overflow the shore, for in that event the dockyard could not escape. Moreover, about this time the colonists felt in the frame of the island vibrations which alarmed them to the highest degree.

It was the 20th of February. Yet another month must elapse before the vessel would be ready for sea. Would the island hold together till then? The intention of Pencroft and Cyrus Harding was to launch the vessel as soon as the hull should be complete. The deck, the upperworks, the interior woodwork and the rigging might be finished afterwards, but the essential point was that the colonists should have an assured refuge away from the island. Perhaps it might be even better to conduct the vessel to Port Balloon, that is to say, as far as possible from the center of eruption, for at the mouth of the Mercy, between the islet and the wall of granite, it would run the risk of being crushed in the event of any convulsion. All the exertions of the voyagers were therefore concentrated upon the completion of the hull.

Thus the 3rd of March arrived, and they might calculate upon launching the vessel in ten days.

Hope revived in the hearts of the colonists, who had, in this fourth year of their sojourn on Lincoln island, suffered so many trials. Even Pencroft lost in some measure the somber taciturnity occasioned by the devastation and ruin of his domain. His hopes, it is true, were concentrated upon his vessel.

“We shall finish it,” he said to the engineer, “we shall finish it, captain, and it is time, for the season is advancing and the equinox will soon be here. Well, if necessary, we must put in to Tabor island to spend the winter. But think of Tabor island after Lincoln Island. Ah, how unfortunate! Who could have believed it possible?”

“Let us get on,” was the engineer’s invariable reply.

And they worked away without losing a moment.

“Master,” asked Neb, a few days later, “do you think all this could have happened if Captain Nemo had been still alive?”

“Certainly, Neb,” answered Cyrus Harding.

“I, for one, don’t believe it!” whispered Pencroft to Neb.

“Nor I!” answered Neb seriously.

During the first week of March appearances again became menacing. Thousands of threads like glass, formed of fluid lava, fell like rain upon the island. The crater was again boiling with lava which overflowed the back of the volcano. The torrent flowed along the surface of the hardened tufa, and destroyed the few meager skeletons of trees which had withstood the first eruption. The stream, flowing this time towards the southwest shore of Lake Grant, stretched beyond Creek Glycerine, and invaded the plateau of Prospect Heights. This last blow to the work of the colonists was terrible. The mill, the buildings of the inner court, the stables, were all destroyed. The affrighted poultry fled in all directions. Top and Jup showed signs of the greatest alarm, as if their instinct warned them of an impending catastrophe. A large number of the animals of the island had perished in the first eruption. Those which survived found no refuge but Tadorn Marsh, save a few to which the plateau of Prospect Heights afforded asylum.

But even this last retreat was now closed to them, and the lava-torrent, flowing over the edge of the granite wall, began to pour down upon the beach its cataracts of fire. The sublime horror of this spectacle passed all description. During the night it could only be compared to a Niagara of molten fluid, with its incandescent vapors above and its boiling masses below.

The colonists were driven to their last entrenchment, and although the upper seams of the vessel were not yet calked, they decided to launch her at once.

Pencroft and Ayrton therefore set about the necessary preparations for the launching, which was to take place the morning of the next day, the 9th of March.

But during the night of the 8th an enormous column of vapor escaping from the crater rose with frightful explosions to a height of more than three thousand feet. The wall of Dakkar Grotto had evidently given way under the pressure of gases, and the sea, rushing through the central shalt into the igneous gulf, was at once converted into vapor. But the crater could not afford a sufficient outlet for this vapor. An explosion, which might have been heard at a distance of a hundred miles, shook the air. Fragments of mountains fell into the Pacific, and, in a few minutes, the ocean rolled over the spot where Lincoln island once stood.

CHAPTER 20

An isolated rock, thirty feet in length, twenty in breadth, scarcely ten from the water’s edge, such was the only solid point which the waves of the Pacific had not engulfed.

It was all that remained of the structure of Granite House! The wall had fallen headlong and been then shattered to fragments, and a few of the rocks of the large room were piled one above another to form this point. All around had disappeared in the abyss; the inferior cone of Mount Franklin, rent asunder by the explosion; the lava jaws of Shark Gulf, the plateau of Prospect Heights, Safety Islet, the granite rocks of Port Balloon, the basalts of Dakkar Grotto, the long Serpentine Peninsula, so distant nevertheless from the center of the eruption. All that could now be seen of Lincoln Island was the narrow rock which now served as a refuge to the six colonists and their dog Top.

The animals had also perished in the catastrophe; the birds, as well as those representing the fauna of the island — all either crushed or drowned, and the unfortunate Jup himself had, alas! found his death in some crevice of the soil.

If Cyrus Harding, Gideon Spilett, Herbert, Pencroft, Neb, and Ayrton had survived, it was because, assembled under their tent, they had been hurled into the sea at the instant when the fragments of the island rained down on every side.

When they reached the surface they could only perceive, at half a cable’s length, this mass of rocks, towards which they swam and on which they found footing.

On this barren rock they had now existed for nine days. A few provisions taken from the magazine of Granite House before the catastrophe, a little fresh water from the rain which had fallen in a hollow of the rock, was all that the unfortunate colonists possessed. Their last hope, the vessel, had been shattered to pieces. They had no means of quitting the reef; no fire, nor any means of obtaining it. It seemed that they must inevitably perish.

This day, the 18th of March, there remained only provisions for two days, although they limited their consumption to the bare necessaries of life. All their science and intelligence could avail them nothing in their present position. They were in the hand of God.

Cyrus Harding was calm, Gideon Spilett more nervous, and Pencroft, a prey to sullen anger, walked to and fro on the rock. Herbert did not for a moment quit the engineer's side, as if demanding from him that assistance he had no power to give. Neb and Ayrton were resigned to their fate.

"Ah, what a misfortune! what a misfortune!" often repeated Pencroft. "If we had but a walnut-shell to take us to Tabor Island! But we have nothing, nothing!"

"Captain Nemo did right to die," said Neb.

During the five ensuing days Cyrus Harding and his unfortunate companions husbanded their provisions with the most extreme care, eating only what would prevent them from dying of starvation. Their weakness was extreme. Herbert and Neb began to show symptoms of delirium.

Under these circumstances was it possible for them to retain even the shadow of a hope? No! What was their sole remaining chance? That a vessel should appear in sight of the rock? But they knew only too well from experience that no ships ever visited this part of the Pacific. Could they calculate that, by a truly providential coincidence, the Scotch yacht would arrive precisely at this time in search of Ayrton at Tabor Island? It was scarcely probable; and, besides, supposing she should come there, as the colonists had not been able to deposit a notice pointing out Ayrton's change of abode, the commander of the yacht, after having explored Tabor Island without results, would again set sail and return to lower latitudes.

No! no hope of being saved could be retained, and a horrible death, death from hunger and thirst, awaited them upon this rock.

Already they were stretched on the rock, inanimate, and no longer conscious of what passed around them. Ayrton alone, by a supreme effort, from time to time raised his head, and cast a despairing glance over the desert ocean.

But on the morning of the 24th of March Ayrton's arms were extended toward a point in the horizon; he raised himself, at first on his knees, then upright, and his hand seemed to make a signal.

A sail was in sight off the rock. She was evidently not without an object. The reef was the mark for which she was making in a direct line, under all steam, and the unfortunate

colonists might have made her out some hours before if they had had the strength to watch the horizon.

“The ‘Duncan’!” murmured Ayrton — and fell back without sign of life.

When Cyrus Harding and his companions recovered consciousness, thanks to the attention lavished upon them, they found themselves in the cabin of a steamer, without being able to comprehend how they had escaped death.

A word from Ayrton explained everything.

“The ‘Duncan’!” he murmured.

“The ‘Duncan’!” exclaimed Cyrus Harding. And raising his hand to Heaven, he said, “Oh! Almighty God! mercifully hast Thou preserved us!”

It was, in fact, the “Duncan,” Lord Glenarvan’s yacht, now commanded by Robert, son of Captain Grant, who had been despatched to Tabor Island to find Ayrton, and bring him back to his native land after twelve years of expiation.

The colonists were not only saved, but already on the way to their native country.

“Captain Grant,” asked Cyrus Harding, “who can have suggested to you the idea, after having left Tabor Island, where you did not find Ayrton, of coming a hundred miles farther northeast?”

“Captain Harding,” replied Robert Grant, “it was in order to find, not only Ayrton, but yourself and your companions.”

“My companions and myself?”

“Doubtless, at Lincoln Island.”

“At Lincoln Island!” exclaimed in a breath Gideon Spilett, Herbert, Neb, and Pencroft, in the highest degree astonished.

“How could you be aware of the existence of Lincoln Island?” inquired Cyrus Harding, “it is not even named in the charts.”

“I knew of it from a document left by you on Tabor Island,” answered Robert Grant.

“A document!” cried Gideon Spilett.

“Without doubt, and here it is,” answered Robert Grant, producing a paper which indicated the longitude and latitude of Lincoln Island, “the present residence of Ayrton and five American colonists.”

“It is Captain Nemo!” cried Cyrus Harding, after having read the notice, and recognized that the handwriting was similar to that of the paper found at the corral.

“Ah!” said Pencroft, “it was then he who took our ‘Bonadventure’ and hazarded himself alone to go to Tabor Island!”

“In order to leave this notice,” added Herbert.

“I was then right in saying,” exclaimed the sailor, “that even after his death the captain would render us a last service.”

“My friends,” said Cyrus Harding, in a voice of the profoundest emotion, “may the God of mercy have had pity on the soul of Captain Nemo, our benefactor.”

The colonists uncovered themselves at these last words of Cyrus Harding, and murmured the name of Captain Nemo.

Then Ayrton, approaching the engineer, said simply, “Where should this coffer be deposited?”

It was the coffer which Ayrton had saved at the risk of his life, at the very instant that the island had been engulfed, and which he now faithfully handed to the engineer.

“Ayrton! Ayrton!” said Cyrus Harding, deeply touched. Then, addressing Robert Grant, “Sir,” he added, “you left behind you a criminal; you find in his place a man who has become honest by penitence, and whose hand I am proud to clasp in mine.”

Robert Grant was now made acquainted with the strange history of Captain Nemo and the colonists of Lincoln Island. Then, observation being taken of what remained of this shoal, which must henceforward figure on the charts of the Pacific, the order was given to make all sail.

A few weeks afterwards the colonists landed in America, and found their country once more at peace after the terrible conflict in which right and justice had triumphed.

Of the treasures contained in the coffer left by Captain Nemo to the colonists of Lincoln Island, the larger portion was employed in the purchase of a vast territory in the State of Iowa. One pearl alone, the finest, was reserved from the treasure and sent to Lady Glenarvan in the name of the castaways restored to their country by the “Duncan.”

There, upon this domain, the colonists invited to labor, that is to say, to wealth and happiness, all those to whom they had hoped to offer the hospitality of Lincoln Island. There was founded a vast colony to which they gave the name of that island sunk beneath the waters of the Pacific. A river there was called the Mercy, a mountain took the name of Mount Franklin, a small lake was named Lake Grant, and the forests became the forests of the Far West. It might have been an island on terra firma.

There, under the intelligent hands of the engineer and his companions, everything prospered. Not one of the former colonists of Lincoln Island was absent, for they had sworn to live always together. Neb was with his master; Ayrton was there ready to sacrifice himself for all; Pencroft was more a farmer than he had ever been a sailor; Herbert, who completed his studies under the superintendence of Cyrus Harding, and Gideon Spilett, who founded the New Lincoln Herald, the best-informed journal in the world.

There Cyrus Harding and his companions received at intervals visits from Lord and Lady Glenarvan, Captain John Mangles and his wife, the sister of Robert Grant, Robert Grant himself, Major McNab, and all those who had taken part in the history both of Captain Grant and Captain Nemo.

There, to conclude, all were happy, united in the present as they had been in the past; but never could they forget that island upon which they had arrived poor and friendless, that island which, during four years had supplied all their wants, and of which there remained but a fragment of granite washed by the waves of the Pacific, the tomb of him who had borne the name of Captain Nemo.

THE SURVIVORS OF THE CHANCELLOR

Translated by George M. Towle

This 1875 novel concerns the final and imperilled voyage of the British sailing ship, the Chancellor, told from the perspective of one of its passengers in the form of a diary.

CHAPTER I THE CHANCELLOR

CHARLESTON, September 27, 1898. — It is high tide, and three o’clock in the afternoon when we leave the Battery quay; the ebb carries us off shore, and as Captain Huntly has hoisted both main and top sails, the north- erly breeze drives the Chancellor briskly across the bay. Fort Sumter ere long is doubled, the sweeping batteries of the mainland on our left are soon passed, and by four o’clock the rapid current of the ebbing tide has carried us through the harbor mouth.

But as yet we have not reached the open sea we have still to thread our way through the narrow channels which the surge has hollowed out amongst the sand-banks. The captain takes a southwest course, rounding the lighthouse at the corner of the fort; the sails are closely trimmed; the last sandy point is safely coasted, and at length, at seven o’clock in the evening, we are out free upon the wide At- lantic.

The Chancellor is a fine square-rigged three-master, of 900 tons burden, and belongs to the wealthy Liverpool firm of Laird Brothers. She is two years old, is sheathed and secured with copper, her decks being of teak, and the base of all her masts, except the mizzen, with all their fittings, being of iron. She is registered first class, A 1, and is now on her third voyage between Charleston and Liverpool. As she wended her way through the channels of Charleston harbor, it was the British flag that was lowered from her mast-head; but without colors at all, no sailor could have hesitated for a moment in telling her nationality, — for Eng- lish she was, and nothing but English from her water-line upward to the truck of her masts.

I must now relate how it happens that I have taken my passage on board the Chancellor on her return voyage to England.

At present there is no direct steamship service between South Carolina and Great Britain, and all who wish to cross must go either northward to New York or southward to New Orleans. It is quite true that if I had chosen a start from New York I might have found plenty of vessels be- longing to English, French, or Hamburg lines, any of which would have conveyed me by a rapid voyage to my destina- tion; and it is equally true that if I had selected New Or- leans for my embarkation I could readily have reached Europe by one of the vessels of the National Steam Naviga- tion Company, which join the French transatlantic line of Colon and Aspinwall. But it was fated to be otherwise.

One day, as I was loitering about the Charleston quays, my eye lighted on this vessel. There was something about the Chancellor that pleased me, and a kind of involuntary impulse took me on board, where I found the internal ar- rangements perfectly comfortable. Yielding to the idea that a voyage in a sailing vessel had certain charms beyond the transit in a steamer, and reckoning that with wind and wave in my favor there would be little material difference in time; considering, moreover, that in these low latitudes the weather in early autumn is fine and unbroken, I came to my decision, and proceeded forthwith to secure my pas- sage by this route to Europe.

Have I done right or wrong? Whether I shall have rea- son to regret my determination is a problem to be solved in the future. However, I will begin to record the incidents of our daily experience, dubious as I feel whether the lines of my chronicle will ever find a reader.

CHAPTER II CREW AND PASSENGERS

SEPTEMBER 28. — John Silas Huntly, the captain of the Chancellor, has the reputation of being a most experienced navigator of the Atlantic. He is a Scotchman by birth, a native of Dundee, and is about fifty years of age. He is of the middle height and slight build, and has a small head, which he has a habit of holding a little over his left shoulder. I do not pretend to be much of a physiognomist, but I am inclined to believe that my few hours' acquaintance with our captain has given me considerable insight into his charac- ter. That he is a good seaman and thoroughly understands his duties I could not for a moment venture to deny; but that he is a man of resolute temperament, or that he pos- sesses the amount of courage that would render him, phy- sically or morally, capable of coping with any great emer- gency, I confess I cannot believe. I observed a certain heaviness and dejection about his whole carriage. His wavering glances, the listless motion of his hands, and his slow, unsteady gait, all seem to me to indicate a weak and sluggish disposition. He does not appear as though he could be energetic enough ever to be stubborn; he never frowns, sets his teeth, or clenches his fists. There is some- thing enigmatical about him; however, I shall study him closely, and do what I can to understand the man who, as commander of a vessel, should be to those around him "second only to God."

Unless I am greatly mistaken there is another man on board who, if circumstances should require it, would take the more prominent position — I mean the mate. I have hitherto, however, had so little opportunity of observing his character, that I must defer saying more about him at pres- ent.

Besides the captain and this mate, whose name is Robert Curtis, our crew consists of Walter, the lieutenant, the boat- swain, and fourteen sailors, all English or Scotch, making eighteen altogether, a number quite sufficient for working a vessel of 900 tons burden. Up to this time my sole ex- perience of their capabilities is, that under the command of the mate, they brought us skillfully enough through the narrow channels of Charleston; and I have no reason to doubt that they are well up to their work.

My list of the ship's officials is incomplete unless I men- tion Hobart the steward and Jynxstrop the negro cook.

In addition to these, the Chancellor carries eight pas- sengers, including myself. Hitherto, the bustle of em- barkation, the arrangement of cabins, and all the variety of

preparations inseparable from starting on a voyage for at least twenty or five-and-twenty days have precluded the formation of any acquaintanceships; but the monotony of the voyage, the close proximity into which we must be thrown, and the natural curiosity to know something of each other's affairs, will doubtless lead us in due time to an ex- change of ideas. Two days have elapsed and I have not even seen all the passengers. Probably sea-sickness has prevented some of them from making an appearance at the common table. One thing, however, I do know; namely, that there are two ladies occupying the stern cabin, the win- dows of which are in the aft-board of the vessel.

I have seen the ship's list, and subjoin a list of the pas- sengers. They are as follows:

Mr. and Mrs. Kear, Americans, of Buffalo.

Miss Herbey, a young English lady, companion to Mrs.

Kear.

M. Letourneur and his son Andre, Frenchmen, of Havre.

William Falsten, a Manchester engineer.

John Ruby, a Cardiff merchant; and myself, J. R. Kazal-

lon, of London.

CHAPTER III BILL OF LADING

SEPTEMBER 29. — Captain Huntly’s bill of lading, that is to say, the document that describes the Chancellor’s cargo and the conditions of transport, is couched in the following terms:

Bronsfield and Co. Agents, Charleston:

I, John Silas Huntly, of Dundee, Scotland, commander of the ship Chancellor, of about 900 tons burden, now at Charleston, do purpose, by the blessing of God, at the earli- est convenient season, and by the direct route, to sail for the port of Liverpool, where I shall obtain my discharge. I do hereby acknowledge that I have received from you, Messrs. Bronsfield and Co. Commission Agents, Charles- ton, and have placed the same under the gun-deck of the aforesaid ship, seventeen hundred bales of cotton, of the estimated value of 26,000 L. all in good condition, marked and numbered as in the margin; which goods I do undertake to transport to Liverpool, and there to deliver, free from injury (save only such injury as shall have been caused by the chances of the sea), to Messrs. Laird Brothers, or to their order, or to their representatives, who shall on due delivery of the said freight pay me the sum of 2,000 L. inclu- sive, according to the charter-party, and damages in addi- tion, according to the usages and customs of the sea.

And for the fulfillment of the above covenant, I have pledged and do pledge my person, my property, and my interest in the vessel aforesaid, with all its appurtenances. In witness whereof, I have signed three agreements all of the same purport, on the condition that when the terms of one are accomplished, the other two shall be absolutely null and void.

Given at Charleston, September 13th, 1869.

J. S. HUNTLY.

From the foregoing document it will be understood that the Chancellor is conveying 1,700 bales of cotton to Liver- pool; that the shippers are Bronsfield, of Charleston, and the consignees are Laird Brothers of Liverpool. The ship was constructed with the especial design of carrying cotton, and the entire hold, with the exception of a very limited space reserved for passenger’s luggage, is closely packed with the bales. The lading was performed with the utmost care, each bale being pressed into its proper place

by the aid of screw-jacks, so that the whole freight forms one solid and compact mass; not an inch of space is wasted, and the vessel is thus made capable of carrying her full complement of cargo.

CHAPTER IV SOMETHING ABOUT MY FELLOW PASSENGERS

SEPTEMBER 30 to October 6. — The Chancellor is a rapid sailer, and more than a match for many a vessel of the same dimensions. She scuds along merrily in the freshen- ing breeze, leaving in her wake, far as the eye can reach, a long white line of foam as well defined as a delicate strip of lace stretched upon an azure ground.

The Atlantic is not visited by many gales, and I have every reason to believe that the rolling and pitching of the vessel no longer incommode any of the passengers, who are all more or less accustomed to the sea. A vacant seat at our table is now very rare; we are beginning to know some- thing about each other, and our daily life, in consequence, is becoming somewhat less monotonous.

M. Letourneur, our French fellow-passenger, often has a chat with me. He is a fine tall man, about fifty years of age, with white hair and a grizzly beard. To say the truth, he looks older than he really is: his drooping head, his de- jected manner, and his eye, ever and again suffused with tears, indicate that he is haunted by some deep and abiding sorrow. He never laughs; he rarely even smiles, and then only on his son; his countenance ordinarily bearing a look of bitterness tempered by affection, while his general ex- pression is one of caressing tenderness. It excites an invol- untary commiseration to learn that M. Letourneur is con- suming himself by exaggerated reproaches on account of the infirmity of an afflicted son.

Andre Letourneur is about twenty years of age, with a gentle, interesting countenance, but, to the irrepressible grief of his father, is a hopeless cripple. His left leg is miserably deformed, and he is quite unable to walk without the assistance of a stick. It is obvious that the father’s life is bound up with that of his son; his devotion is unceas- ing; every thought, every glance is for Andre; he seems to anticipate his most trifling wish, watches his slightest move- ment, and his arm is ever ready to support or otherwise assist the child whose sufferings he more than shares.

M. Letourneur seems to have taken a peculiar fancy to myself, and constantly talks about Andre. This morning, in the course of conversation, I said:

“You have a good son, M. Letourneur. I have just been talking to him. He is a most intelligent young man.”

“Yes, Mr. Kazallon,” replied M. Letourneur, brighten- ing up into a smile, “his afflicted frame contains a noble mind. He is like his mother, who died at his birth.”

“He is full of reverence and love for you, sir,” I re- marked.

“Dear boy!” muttered the father half to himself. “Ah, Mr. Kazallon,” he continued, “you do not know what it is to a father to have a son a cripple, beyond hope of cure.”

“M. Letourneur,” I answered, “you take more than your share of the affliction which has fallen upon you and your son. That M. Andre is entitled to the very greatest com- miseration no one can deny; but you should remember, that after all a physical infirmity is not so hard to bear as mental grief. Now, I have watched your son pretty closely, and unless I am much mistaken there is nothing that troubles him so much as the sight of your own sorrow.”

“But I never let him see it,” he broke in hastily. “My sole thought is how to divert him. I have discovered that, in spite of his physical weakness, he delights in traveling; so for the last few years we have been constantly on the move. We first went all over Europe, and are now re- turning from visiting the principal places in the United States. I never allowed my son to go to college, but in- structed him entirely myself, and these travels, I hope, will serve to complete his education. He is very intelligent, and has a lively imagination, and I am sometimes tempted to hope that in contemplating the wonders of nature he forgets his own infirmity.”

“Yes, sir, of course he does,” I assented.

“But,” continued M. Letourneur, taking my hand, “al- though, perhaps, HE may forget, I can never forget. Ah, sir, do you suppose that Andre can ever forgive his parents for bringing him into the world a cripple?”

The remorse of the unhappy father was very distressing, and I was about to say a few kind words of sympathy when Andre himself made his appearance. M. Letourneur has- tened toward him and assisted him up the few steep steps that led to the poop.

As soon as Andre was comfortably seated on one of the benches, and his father had taken his place by his side, I joined them, and we fell into conversation upon ordinary topics, discussing the various points of the Chancellor, the probable length of the passage, and the different details of our life on board. I find that M. Letourneur’s

estimate of Captain Huntly's character very much coincides with my own, and that, like me, he is impressed with the man's un- decided manner and sluggish appearance. Like me, too, he has formed a very favorable opinion of Robert Curtis, the mate, a man of about thirty years of age, of great muscular power, with a frame and a will that seem ever ready for action.

While we were still talking of him, Curtis himself came on deck, and as I watched his movements I could not help being struck with his physical development; his erect and easy carriage, his fearless glance and slightly contracted brow all betoken a man of energy, thoroughly endowed with the calmness and courage that are indispensable to the true sailor. He seems a kind-hearted fellow, too, and is al- ways ready to assist and amuse young Letourneur, who evi- dently enjoys his company. After he had scanned the weather and examined the trim of the sails, he joined our party and proceeded to give us some information about those of our fellow-passengers with whom at present we have made but slight acquaintance.

Mr. Kear, the American, who is accompanied by his wife, has made a large fortune in the petroleum springs in the United States. He is a man of about fifty, a most uninter- esting companion, being overwhelmed with a sense of his own wealth and importance, and consequently supremely indifferent to all around him. His hands are always in his pockets, and the chink of money seems to follow him wherever he goes. Vain and conceited, a fool as well as an egotist, he struts about like a peacock showing its plumage, and to borrow the words of the physiognomist Gratiolet, "il se flaire, il se savoure, il se goute." Why he should have taken his passage on board a mere merchant vessel instead of enjoying the luxuries of a transatlantic steamer, I am altogether at a loss to explain.

The wife is an insignificant, insipid woman, of about forty years of age. She never reads, never talks, and I believe I am not wrong in saying, never thinks. She seems to look without seeing, and listen without hearing, and her sole occupation consists in giving her orders to her com- panion, Miss Herbey, a young English girl of about twenty.

Miss Herbey is extremely pretty. Her complexion is fair and her eyes deep blue, while her pleasing countenance is altogether free from that insignificance of feature which is not unfrequently alleged to be characteristic of English beauty. Her mouth would be charming if she ever smiled, but, exposed as she is to the ridiculous whims and fancies

of a capricious mistress, her lips rarely relax from their ordinary grave expression. Yet, humiliating as her posi- tion must be, she never utters a word of open complaint, but quietly and gracefully performs her duties, accepting without a murmur the paltry salary which the bumptious petroleum-merchant condescends to allow her.

The Manchester engineer, William Falsten, looks like a thorough Englishman. He has the management of some extensive hydraulic works in South Carolina, and is now on his way to Europe to obtain some improved apparatus, and more especially to visit the mines worked by centrifugal force, belonging to the firm of Messrs. Cail. He is forty-five years of age, with all his interests so entirely absorbed by his machinery that he seems to have neither a thought nor a care beyond his mechanical calculations. Once let him engage you in conversation, and there is no chance of escape; you have no help for it but to listen as patiently as you can until he has completed the explanation of his designs.

The last of our fellow-passengers, Mr. Ruby, is the type of a vulgar tradesman. Without any originality or magnanimity in his composition, he has spent twenty years of his life in mere buying and selling, and as he has gener- ally contrived to do business at a profit, he has realized a considerable fortune. What he is going to do with the money, he does not seem able to say: his ideas do not go beyond retail trade, his mind having been so long closed to all other impressions that it appears incapable of thought or reflection on any subject besides. Pascal says, “L’homme est visiblement fait pour penser. C’est toute sa dignite et tout son merite;” but to Mr. Ruby the phrase seems altogether inapplicable.

CHAPTER V AN UNUSUAL ROUTE

OCTOBER 7. — This is the tenth day since we left Charles- ton, and I should think our progress has been very rapid. Robert Curtis, the mate, with whom I continue to have many a friendly chat, informed me that we could not be far off the Bermudas; the ship's bearings, he said, were lat. 32 deg. 20' N. and long. 64 deg. 50' W. so that he had every reason to believe that we should sight St. George's Island before night.

"The Bermudas!" I exclaimed. "But how is it we are off the Bermudas? I should have thought that a vessel sail- ing from Charleston to Liverpool, would have kept north- ward, and have followed the track of the Gulf Stream."

"Yes, indeed, sir," replied Curtis, "that is the usual course; but you see that this time the captain hasn't chosen to take it."

"But why not?" I persisted.

"That's not for me to say, sir; he ordered us eastward, and eastward we go."

"Haven't you called his attention to it?" I inquired.

Curtis acknowledged that he had already pointed out what an unusual route they were taking, but that the cap- tain had said that he was quite aware what he was about. The mate made no further remark; but the knit of his brow, as he passed his hand mechanically across his forehead, made me fancy that he was inclined to speak out more strongly.

"All very well, Curtis," I said, "but I don't know what to think about trying new routes. Here we are at the 7th of October, and if we are to reach Europe before the bad weather sets in, I should suppose there is not a day to be lost."

"Right, sir, quite right; there is not a day to be lost."

Struck by his manner, I ventured to add, "Do you mind,

Curtis, giving me your honest opinion of Captain Huntly?"

He hesitated a moment, and then replied shortly, "He is my captain, sir."

This evasive answer of course put an end to any further interrogation on my part.

Curtis was not mistaken. At about three o'clock the look-out man sung out that there was land to windward, and descried what seemed as if it might be a line of smoke in the northeast horizon. At six, I went on deck with M. Letourneur and his son, and we could then distinctly make out the low group of the Bermudas, encircled by their formidable chain of breakers.

"There," said Andre Letourneur to me, as we stood gaz- ing at the distant land, "there lies the enchanted archipel- ago, sung by your poet Moore. The exile Waller, too, as long ago as 1643, wrote an enthusiastic panegyric on the islands, and I have been told that at one time English ladies would wear no other bonnets than such as were made of the leaves of the Bermuda palm."

"Yes," I replied, "the Bermudas were all the rage in the seventeenth century, although latterly they have fallen into comparative oblivion."

"But let me tell you, M. Andre," interposed Curtis, who had as usual joined our party, "that although poets may rave, and be as enthusiastic as they like about these islands, sailors will tell a different tale. The hidden reefs that lie in a semicircle about two or three leagues from shore make the attempt to land a very dangerous piece of business. And another thing, I know. Let the natives boast as they will about their splendid climate, they are visited by the most frightful hurricanes. They get the fag-end of the storms that rage over the Antilles; and the fag-end of a storm is like the tail of a whale; it's just the strongest bit of it. I don't think you'll find a sailor listening much to your poets — your Moores, and your Wallers."

"No doubt you are right, Mr. Curtis," said Andre, smil- ing, "but poets are like proverbs; you can always find one to contradict another. Although Waller and Moore have chosen to sing the praises of the Bermudas, it has been sup- posed that Shakspeare was depicting them in the terrible scenes that are found in 'The Tempest.'"

I may mention that there was not another of our fellow- passengers who took the trouble to come on deck and give a glance at this strange cluster of islands. Miss Herbey, it is true, was making an attempt to join us, but she had barely reached the poop, when Mrs. Kear's languid voice was heard recalling her for some trifling service to her side.

CHAPTER VI THE SARGASSO SEA

OCTOBER 8 to October 13. — The wind is blowing hard from the northeast, and the Chancellor, under low-reefed top-sail and fore-sail, and laboring against a heavy sea, has been obliged to be brought ahull. The joists and girders all creak again until one's teeth are set on edge. I am the only passenger not remaining below; but I prefer being on deck notwithstanding the driving rain, fine as dust, which penetrates to the very skin. We have been driven along in this fashion for the best part of two days; the "stiffish breeze" has gradually freshened into "a gale"; the top- gallants have been lowered, and, as I write, the wind is blowing with a velocity of fifty or sixty miles an hour. Al- though the Chancellor has many good points, her drift is considerable, and we have been carried far to the south; we can only guess at our precise position, as the cloudy at- mosphere entirely precludes us from taking the sun's alti- tude.

All along, throughout this period, my fellow-passengers are totally ignorant of the extraordinary course that we are taking. England lies to the northeast, yet we are sailing directly southeast, and Robert Curtis owns that he is quite be- wildered; he cannot comprehend why the captain, ever since this northeasterly gale has been blowing, should persist in allowing the ship to drive to the south, instead of tacking to the northwest until she gets into better quarters.

I was alone with Robert Curtis to-day upon the poop, and could not help saying to him, "Curtis, is your captain mad?"

"Perhaps, sir, I might be allowed to ask what YOU think upon that matter," was his cautious reply.

"Well, to say the truth," I answered. "I can hardly tell; but I confess there is every now and then a wandering in his eye, and an odd look on his face that I do not like. Have you ever sailed with him before?"

"No; this is our first voyage together. Again last night I spoke to him about the route we were taking, but he only said he knew all about it, and that it was all right."

"What do Lieutenant Walter and your boatswain think of it all?" I inquired.

"Think; why, they think just the same as I do," replied the mate; "but if the captain chooses to take the ship to China we should obey his orders."

“But surely,” I exclaimed, “there must be some limit to your obedience! Suppose the man is actually mad, what then?”

“If he should be mad enough, Mr. Kazallon, to bring the vessel into any real danger, I shall know what to do.”

With this assurance I am forced to be content. Matters, however, have taken a different turn to what I bargained for when I took my passage on board the Chancellor. The weather has become worse and worse. As I have already said, the ship under her large low-reefed top-sail and fore stay-sail has been brought ahull, that is to say, she copes directly with the wind, by presenting her broad bows to the sea; and so we go on still drift, drift, continually to the south.

How southerly our course has been is very apparent; for upon the night of the 11th we fairly entered upon that por- tion of the Atlantic which is known as the Sargasso Sea. An extensive tract of water is this, inclosed by the warm current of the Gulf Stream, and thickly covered with the wrack, called by the Spaniards “sargasso,” the abundance of which so seriously impeded the progress of Columbus’s vessel on his first voyage.

Each morning at daybreak the Atlantic has presented an aspect so remarkable, that at my solicitation, M. Letourneur and his son have ventured upon deck to witness the unusual spectacle. The squally gusts make the metal shrouds vibrate like harp-strings; and unless we were on our guard to keep our clothes wrapped tightly to us, they would have been torn off our backs in shreds. The scene presented to our eyes is one of strangest interest. The sea, carpeted thickly with masses of prolific fucus, is a vast unbroken plain of vegetation, through which the vessel makes her way as a plow. Long strips of seaweed caught up by the wind become entangled in the rigging, and hang between the masts in festoons of verdure; while others, varying from two to three hundred feet in length, twine themselves up to the very mast-head, from whence they float like streaming pennants. For many hours now, the Chancellor has been contending with this formidable accumulation of algae; her masts are circled with hydrophytes; her rigging is wreathed everywhere with creepers, fantastic as the untrammeled ten- drils of a vine, and as she works her arduous course, there are times when I can only compare her to an animated grove of verdure making its mysterious way over some illimitable prairie.

CHAPTER VII VOICES IN THE NIGHT

OCTOBER 14. — At last we are free from the sea of vegeta- tion, the boisterous gale has moderated into a steady breeze, the sun is shining brightly, the weather is warm and genial, and thus, two reefs in her top-sails, briskly and merrily sails the Chancellor.

Under conditions so favorable, we have been able to take the ship’s bearings: our latitude, we find, is 21 deg. 33’ N. our longitude, 50 deg. 17’ W.

Incomprehensible altogether is the conduct of Captain Huntly. Here we are, already more than ten degrees south of the point from which we started, and yet still we are per- sistently following a southeasterly course! I cannot bring myself to the conclusion that the man is mad. I have had various conversations with him: he has always spoken rationally and sensibly. He shows no tokens of insanity. Perhaps his case is one of those in which insanity is partial, and where the mania is of a character which extends only to the matters connected with his profession. Yet it is un- accountable.

I can get nothing out of Curtis; he listens coldly when- ever I allude to the subject, and only repeats what he has said before, that nothing short of an overt act of madness on the part of the captain could induce him to supersede the captain’s authority, and that the imminent peril of the ship could alone justify him in taking so decided a measure.

Last evening I went to my cabin about eight o’clock, and after an hour’s reading by the light of my cabin-lamp, I retired to my berth and was soon asleep. Some hours later I was aroused by an unaccustomed noise on deck. There were heavy footsteps hurrying to and fro, and the voices of the men were loud and eager, as if the crew were agitated by some strange disturbance. My first impression was, that some tacking had been ordered which rendered it needful to fathom the yards; but the vessel continuing to lie to star- board convinced me that this was not the origin of the com- motion. I was curious to know the truth, and made all haste I could to go on deck; but before I was ready, the noise had ceased. I heard Captain Huntly return to his cabin, and accordingly I retired again to my own berth. Whatever may have been the meaning of the maneuver, I cannot tell; it did not seem to result in any improvement in the ship’s pace; still it must be owned there was not much wind to speed us along.

At six o’clock this morning I mounted the poop and made as keen a scrutiny as I could of everything on board. Everything appeared as usual. The Chancellor was run- ning on

the larboard tack, and carried low-sails, top-sails, and gallant-sails. Well braced she was; and under a fresh, but not uneasy breeze, was making no less than eleven knots an hour.

Shortly afterward M. Letourneur and Andre came on deck. The young man enjoyed the early morning air, laden with its briny fragrance, and I assisted him to mount the poop. In answer to my inquiry as to whether they had been disturbed by any bustle in the night, Andre replied that he did not wake at all, and had heard nothing.

“I am glad, my boy,” said the father, “that you have slept so soundly. I heard the noise of which Mr. Kazallon speaks. It must have been about three o’clock this morning, and it seemed to me as though they were shouting. I thought I heard them say; ‘Here, quick, look to the hatches!’ but as nobody was called up, I presumed that nothing serious was the matter.”

As he spoke I cast my eye at the panel-slides, which fore and aft of the main-mast open into the hold. They seemed to be all close as usual, but I now observed for the first time that they were covered with heavy tarpauling. Wondering in my own mind what could be the reason for these ex- tra precautions I did not say anything to M. Letourneur, but determined to wait until the mate should come on watch, when he would doubtless give me, I thought, an explanation of the mystery.

The sun rose gloriously, with every promise of a fine dry day. The waning moon was yet above the western horizon, for as it still wants three days to her last quarter she does not set until 10:57 A. M. On consulting my al- manac, I find that there will be a new moon on the 24th, and that on that day, little as it may affect us here in mid- ocean, the phenomenon of the high sygyzian tides will take place on the shores of every continent and island.

At the breakfast hour M. Letourneur and Andre went below for a cup of tea, and I remained on the poop alone. As I expected, Curtis appeared, that he might relieve Lieu- tenant Walter of the watch. I advanced to meet him, but be- fore he even wished me good morning, I saw him cast a quick and searching glance upon the deck, and then, with a slightly contracted brow, proceed to examine the state of the weather and the trim of the sails.

“Where is Captain Huntly?” he said to Walter.

“I have seen nothing of him,” answered the lieutenant; “is there anything fresh up?”

“Nothing whatever,” was the curt reply.

They then conversed for a few moments in an undertone, and I could see that Walter by his gesture gave a negative answer to some question which the mate had asked him. “Send me the boatswain, Walter,” said Curtis aloud as the lieutenant moved away.

The boatswain immediately appeared, and another con- versation was carried on in whispers. The man repeatedly shook his head as he replied to Curtis’s inquiries, and then, in obedience to orders, called the men who were on watch, and made them plentifully water the tarpauling that covered the great hatchway.

Curious to fathom the mystery I went up to Curtis and began to talk with him upon ordinary topics, hoping that he would himself introduce the subject that was uppermost in my mind; finding, however, that he did not allude to it, I asked him point blank:

“What was the matter in the night, Curtis?”

He looked at me steadily, but made no reply.

“What was it?” I repeated. “M. Letourneur and my- self were both of us disturbed by a very unusual commotion overhead.”

“Oh, a mere nothing,” he said at length; “the man at the helm had made a false move, and we had to pipe hands to brace the ship a bit; but it was soon all put to rights. It was nothing, nothing at all.”

I said no more; but I can not resist the impression that Robert Curtis has not acted with me in his usual straight- forward manner.

CHAPTER VIII FIRE ON BOARD

OCTOBER 15 to October 18. — The wind is still in the northeast. There is no change in the Chancellor's course, and to an unprejudiced eye all would appear to be going on as usual. But I have an uneasy consciousness that some- thing is not quite right. Why should the hatchways be so hermetically closed as though a mutinous crew was im- prisoned between decks? I can not help thinking too that there is something in the sailors so constantly standing in groups and breaking off their talk so suddenly whenever we approach; and several times I have caught the word "hatches" which arrested M. Letourneur's attention on the night of the disturbance.

On the 15th, while I was walking on the forecastle, I over- heard one of the sailors, a man named Owen, say to his mates:

"Now I just give you all warning that I am not going to wait until the last minute. Everyone for himself, say I."

"Why, what do you mean to do?" asked Jynxstrop, the cook.

"Pshaw!" said Owen, "do you suppose that longboats were only made for porpoises?"

Something at that moment occurred to interrupt the con- versation, and I heard no more. It occurred to me whether there was not some conspiracy among the crew, of which probably Curtis had already detected the symptoms. I am quite aware that some sailors are most rebelliously disposed, and required to be ruled with a rod of iron.

Yesterday and to-day I have observed Curtis remonstrat- ing somewhat vehemently with Captain Huntly, but there is no obvious result arising from their interviews; the cap- tain apparently being bent upon some purpose, of which it is only too manifest that the mate decidedly disapproves.

Captain Huntly is undoubtedly laboring under strong nervous excitement; and M. Letourneur has more than once remarked how silent he has become at meal-times; for al- though Curtis continually endeavors to start some subject of general interest, yet neither Mr. Falsten, Mr. Kear, nor Mr. Ruby are the men to take it up, and consequently the conversation flags hopelessly, and soon drops. The pas- sengers too are now, with good cause, beginning to murmur at the length of the voyage, and Mr. Kear, who

considers that the very elements ought to yield to his convenience, lets the captain know by his consequential and haughty manner that he holds him responsible for the delay.

During the course of yesterday the mate gave repeated orders for the deck to be watered again and again, and al- though as a general rule this is a business which is done, once for all, in the early morning, the crew did not utter a word of complaint at the additional work thus imposed upon them. The tarpaulins on the hatches have thus been kept con- tinually wet, so that their close and heavy texture is rendered quite impervious to the air. The Chancellor's pumps afford a copious supply of water, so that I should not suppose that even the daintiest and most luxurious craft belonging to an aristocratic yacht club was ever subject to a more thorough scouring. I tried to reconcile myself to the belief that it was the high temperature of the tropical regions upon which we are entering, that rendered such extra sousings a neces- sity, and recalled to my recollection how, during the night of the 13th, I had found the atmosphere below deck so stifling, that in spite of the heavy swell I was obliged to open the porthole of my cabin, on the starboard side, to get a breath of air.

This morning at daybreak I went on deck. The sun had scarcely risen, and the air was fresh and cool, in strange con- trast to the heat which below the poop had been quite op- pressive. The sailors as usual were washing the deck. A great sheet of water, supplied continuously by the pumps, was rolling in tiny wavelets, and escaping now to starboard, now to larboard through the scupper-holes. After watch- ing the men for a while as they ran about bare-footed, I could not resist the desire to join them, so taking off my shoes and stockings, I proceeded to dabble in the flowing water.

Great was my amazement to find the deck perfectly hot to my feet! Curtis heard my exclamation of surprise, and be- fore I could put my thoughts into words, said:

"Yes! there is fire on board!"

CHAPTER IX CURTIS EXPLAINS THE SITUATION

OCTOBER 19. — Everything, then, is clear. The uneas- iness of the crew, their frequent conferences, Owen's mys- terious words, the constant scourings of the deck and the oppressive heat of the cabins which had been noticed even by my fellow-passengers, all are explained.

After his grave communication, Curtis remained silent. I shivered with a thrill of horror; a calamity the most ter- rible that can befall a voyager stared me in the face, and it was some seconds before I could recover sufficient com- posure to inquire when the fire was first discovered.

"Six days ago," replied the mate.

"Six days ago!" I exclaimed; "why, then, it was that night."

"Yes," he said, interrupting me; "it was the night you heard the disturbance upon deck. The men on watch no- ticed a slight smoke issuing from the large hatchway and immediately called Captain Huntly and myself. We found beyond all doubt, that the cargo was on fire, and what was worse, that there was no possibility of getting at the seat of the combustion. What could we do? Why, we took the only precaution that was practicable under the circumstances, and resolved most carefully to exclude every breath of air from penetrating into the hold. For some time I hoped that we had been successful. I thought that the fire was stifled; but during the last three days there is every reason to make us know that it has been gaining strength. Do what we will, the deck gets hotter and hotter, and unless it were kept constantly wet, it would be unbearable to the feet. But I am glad, Mr. Kazallon," he added; "that you have made the discovery. It is better that you should know it." I listened in silence. I was now fully aroused to the gravity of the situation and thoroughly comprehended how we were in the very face of a calamity which it seemed that no human power could avert.

"Do you know what has caused the fire?" I presently inquired.

"It probably arose," he answered, "from the sponta- neous combustion of the cotton. The case is rare, but it is far from unknown. Unless the cotton is perfectly dry when it is shipped, its confinement in a damp or ill-ventilated hold will sometimes cause it to ignite; and I have no doubt it is this that has brought about our misfortune."

“But after all,” I said, “the cause matters very little.

Is there no remedy? Is there nothing to be done?”

“Nothing, Mr. Kazallon,” he said. “As I told you be- fore, we have adopted the only possible measure within our power to check the fire. At one time I thought of knock- ing a hole in the ship’s timbers just on her water-line, and letting in just as much water as the pumps could afterward get rid of again; but we found the combustion was right in the middle of the cargo and that we should be obliged to flood the entire hold before we could get at the right place. That scheme consequently was no good. During the night, I had the deck bored in various places and water poured down through the holes; but that again seemed of no use. There is only one thing that can be done; we must persevere in excluding most carefully every breath of outer air, so that perhaps the conflagration, deprived of oxygen, may smoulder itself out. That is our only hope.”

“But, you say the fire is increasing?”

“Yes; and that shows that in spite of all our care there is some aperture which we have not been able to discover, by which, somehow or other, air gets into the hold.”

“Have you ever heard of a vessel surviving such cir- cumstances?” I asked.

“Yes, Mr. Kazallon,” said Curtis; “it is not at all an unusual thing for ships laden with cotton to arrive at Liver- pool or Havre with a portion of their cargo consumed; and I have myself known more than one captain run into port with his deck scorching his very feet, and who, to save his vessel and the remainder of his freight has been compelled to un- load with the utmost expedition. But, in such cases, of course the fire has been more or less under control through- out the voyage; with us, it is increasing day by day, and I tell you I am convinced there is an aperture somewhere which has escaped our notice.”

“But would it not be advisable for us to retrace our course, and make for the nearest land?”

“Perhaps it would,” he answered. “Walter and I, and the boatswain, are going to talk the matter over seriously with the captain to-day. But, between ourselves, I have taken the responsibility upon myself; I have already changed the tack to the southwest; we are now straight be- fore the wind, and consequently we are sailing toward the coast.”

“I need hardly ask,” I added; “whether any of the other passengers are at all aware of the imminent danger in which we are placed.”

“None of them,” he said; “not in the least; and I hope you will not enlighten them. We don’t want terrified women and cowardly men to add to our embarrassment; the crew are under orders to keep a strict silence on the subject. Silence is indispensable.”

I promised to keep the matter a profound secret, as I fully entered into Curtis’s views as to the absolute necessity for concealment.

CHAPTER X PICRATE OF POTASH ON BOARD

OCTOBER 20 and 21. — The Chancellor is now crowded with all the canvas she can carry, and at times her topmasts threaten to snap with the pressure. But Curtis is ever on the alert; he never leaves his post beside the man at the helm, and without compromising the safety of the vessel, he contrives, by tacking to the breeze, to urge her on at her utmost speed.

All day long on the 20th the passengers were assembled on the poop. Evidently they found the heat of the cabins painfully oppressive, and most of them lay stretched upon benches and quietly enjoyed the gentle rolling of the vessel. The increasing heat of the deck did not reveal itself to their well-shod feet, and the constant scouring of the boards did not excite any suspicion in their torpid minds. M. Letourneur, it is true, did express his surprise that the crew of an ordinary merchant vessel should be distinguished by such extraordinary cleanliness; but as I replied to him in a very casual tone, he passed no further remark. I could not help regretting that I had given Curtis my pledge of silence, and longed intensely to communicate the melancholy secret to the energetic Frenchman; for at times when I re- flect upon the eight-and-twenty victims who may probably, only too soon, be a prey to the relentless flames, my heart seems ready to burst.

The important consultation between captain, mate, lieuten- ant and boatswain has taken place. Curtis has confided the result to me. He says that Huntly, the captain, is com- pletely demoralized; he has lost all power and energy; and practically leaves the command of the ship to him. It is now certain the fire is beyond control, and that sooner or later it will burst out in full violence. The temperature of the crew’s quarters has already become almost unbearable. One solitary hope remains; it is that we may reach the shore before the final catastrophe occurs. The Lesser Antilles are the nearest land; and although they are some five or six hundred miles away, if the wind remains northeast there is yet a chance of reaching them in time.

Carrying royals and studding-sails, the Chancellor during the last four-and-twenty hours has held a steady course. M. Letourneur is the only one of all the passengers who has re- marked the change of tack; Curtis, however, has set all speculation on his part at rest by telling him that he wanted to get ahead of the wind, and that he was tacking to the west to catch a favorable current.

To-day, the 21st, all has gone on as usual; and as far as the observation of the passengers has reached, the ordinary routine has been undisturbed. Curtis indulges the hope even yet that by excluding the air the fire may be stifled be- fore it ignites the general cargo; he has hermetically closed every accessible aperture, and has even taken the precaution of plugging the orifices of the pumps, under the impression that their suction-tubes, running as they do to the bottom of the hold, may possibly be channels for conveying some molecules of air. Altogether, he considers it a good sign that the combustion has not betrayed itself by some external issue of smoke.

The day would have passed without any incident worth recording, if I had not chanced to overhear a fragment of a conversation which demonstrated that our situation, hitherto precarious enough, had now become most appalling.

As I was sitting on the poop, two of my fellow-passengers, Falsten, the engineer, and Ruby, the merchant, whom I had observed to be often in company, were engaged in conversa- tion almost close to me. What they said was evidently not intended for my hearing, but my attention was directed to- ward them by some very emphatic gestures of dissatisfaction on the part of Falsten, and I could not forbear listening to what followed.

“Preposterous! shameful!” exclaimed Falsten; “nothing could be more imprudent.”

“Pooh! pooh!” replied Ruby, “it’s all right; it is not the first time I have done it.”

“But don’t you know that any shock at any time might cause an explosion?”

“Oh, it’s all properly secured,” said Ruby, “tight enough;

I have no fears on that score, Mr. Falsten.”

“But why,” asked Falsten, “did you not inform the cap- tain?”

“Just because if I had informed him, he would not have taken the case on board.”

The wind dropped for a few seconds; and for a brief in- terval I could not catch what passed; but I could see that Falsten continued to remonstrate, while Ruby answered by shrugging his shoulders. At length I heard Falsten say.

“Well, at any rate, the captain must be informed of this, and the package shall be thrown overboard. I don’t want to be blown up.”

I started. To what could the engineer be alluding? Evi- dently he had not the remotest suspicion that the cargo was already on fire. In another moment the words “picrate of potash” brought me to my feet, and with an involuntary impulse I rushed up to Ruby, and seized him by the shoulder.

“Is there picrate of potash on board?” I almost shrieked.

“Yes,” said Falsten, “a case containing thirty pounds.”

“Where is it?” I cried.

“Down in the hold, with the cargo.”

CHAPTER XI THE PASSENGERS DISCOVER THEIR DANGER

WHAT my feelings were I cannot describe; but it was hardly in terror so much as with a kind of resignation that I made my way to Curtis on the forecastle, and made him aware that the alarming character of our situation was now complete, as there was enough explosive matter on board to blow up a mountain. Curtis received the information as coolly as it was delivered, and after I had made him ac- quainted with all the particulars said, “Not a word of this must be mentioned to anyone else, Mr. Kazallon. Where is Ruby, now?”

“On the poop,” I said.

“Will you then come with me, sir?”

Ruby and Falsten were sitting just as I had left them. Curtis walked straight up to Ruby, and asked him whether what he had been told was true.

“Yes, quite true,” said Ruby, complacently, thinking that the worst that could befall him would be that he might be convicted of a little smuggling.

I observed that Curtis was obliged for a moment or two to clasp his hands tightly together behind his back to pre- vent himself from seizing the unfortunate passenger by the throat; but suppressing his indignation, he proceeded quietly, though sternly, to interrogate him about the facts of the case. Ruby only confirmed what I had already told him. With characteristic Anglo-Saxon incautiousness he had brought on board, with the rest of his baggage, a case con- taining no less than thirty pounds of picrate, and had allowed the explosive matter to be stowed in the hold with as little compunction as a Frenchman would feel in smuggling a single bottle of wine. He had not informed the captain of the dangerous nature of the contents of the package, because he was perfectly aware that he would have been refused per- mission to bring the package on board.

“Anyway,” he said, with a shrug of his shoulders, “you can’t hang me for it; and if the package gives you so much concern, you are quite at liberty to throw it into the sea. My luggage is insured.”

I was beside myself with fury; and not being endowed with Curtis’s reticence and self-control, before he could in- terfere to stop me, I cried out:

“You fool! don’t you know that there is fire on board?”

In an instant I regretted my words. Most earnestly I wished them unuttered. But it was too late — their effect upon Ruby was electrical. He was paralyzed with terror; his limbs stiffened convulsively; his eye was dilated; he gasped for breath, and was speechless. All of a sudden he threw up his arms, and, as though he momentarily expected an explosion, he darted down from the poop, and paced frantically up and down the deck, gesticulating like a mad- man, and shouting:

“Fire on board! Fire! Fire!”

On hearing the outcry, all the crew, supposing that the fire had now in reality broken out, rushed on deck; the rest of the passengers soon joined them, and the scene that ensued was one of the utmost confusion. Mrs. Kear fell down senseless on the deck, and her husband, occupied in looking after himself, left her to the tender mercies of Miss Herbey. Curtis endeavored to silence Ruby’s ravings, whilst I, in as few words as I could, made M. Letourneur aware of the extent to which the cargo was on fire. The father’s first thought was for Andre, but the young man preserved an ad- mirable composure, and begged his father not to be alarmed, as the danger was not immediate. Meanwhile the sailors had loosened all the tacklings of the long-boat, and were pre- paring to launch it, when Curtis’s voice was heard peremp- torily bidding them to desist; he assured them that the fire had made no further progress; that Mr. Ruby had been unduly excited and not conscious of what he had said; and he pledged his word that when the right moment should ar- rive he would allow them all to leave the ship; but that mo- ment, he said, had not yet come.

At the sound of a voice which they had learned to honor and respect, the crew paused in their operations, and the long-boat remained suspended in its place. Fortunately, even Ruby himself in the midst of his ravings, had not dropped a word about the picrate that had been deposited in the hold; for although the mate had a power over the sailors that Captain Huntly had never possessed, I feel cer- tain that if the true state of the case had been known, noth- ing on earth would have prevented some of them, in their consternation, from effecting an escape. As it was, only Curtis, Falsten, and myself were cognizant of the terrible secret.

As soon as order was restored, the mate and I joined Falsten on the poop, where he had remained throughout the panic, and where we found him with folded arms, deep in thought, as it might be, solving some hard mechanical prob- lem. He promised, at my request, that he would reveal nothing of the new danger to which we were exposed through Ruby’s imprudence. Curtis himself took the re- sponsibility of informing Captain Huntly of our critical situation.

In order to insure complete secrecy, it was necessary to secure the person of the unhappy Ruby, who, quite beside himself, continued to rave up and down the deck with the incessant cry of “Fire! fire!” Accordingly Curtis gave or- ders to some of his men to seize him and gag him; and before he could make any resistance the miserable man was captured and safely lodged in confinement in his own cabin.

CHAPTER XII CURTIS BECOMES CAPTAIN

OCTOBER 22. — Curtis has told the captain everything; for he persists in ostensibly recognizing him as his superior officer, and refuses to conceal from him our true situation. Captain Huntly received the communication in perfect silence, and merely passing his hand across his forehead as though to banish some distressing thought, re-entered his cabin without a word.

Curtis, Lieutenant Walter, Falsten, and myself have been discussing the chances of our safety, and I am surprised to find with how much composure we can all survey our anxious predicament.

“There is no doubt,” said Curtis, “that we must abandon all hope of arresting the fire; the heat toward the bow has already become well-nigh unbearable, and the time must come when the flames will find a vent through the deck. If the sea is calm enough for us to make use of the boats, well and good; we shall of course get quit of the ship as quietly as we can; if, on the other hand the weather should be adverse, or the wind be boisterous, we must stick to our place, and contend with the flames to the very last; perhaps, after all, we shall fare far better with the fire as a declared enemy than as a hidden one.”

Falsten and I agreed with what he said, and I pointed out to him that he had quite overlooked the fact of there being thirty pounds of explosive matter in the hold.

“No,” he gravely replied, “I have not forgotten it, but it is a circumstance of which I do not trust myself to think. I dare not run the risk of admitting air into the hold by going down to search for the powder, and yet I know not at what moment it may explode. No; it is a matter that I can- not take at all into my reckoning; it must remain in higher hands than mine.”

We bowed our heads in a silence which was solemn. In the present state of the weather, immediate flight was, we knew, impossible.

After considerable pause, Mr. Falsten, as calmly as though he were delivering some philosophic dogma, quietly observed:

“The explosion, if I may use the formula of science, is not necessary, but contingent.”

“But tell me, Mr. Falsten,” I asked, “is it possible for picrate of potash to ignite without concussion?”

“Certainly it is,” replied the engineer. “Under ordinary circumstances, picrate of potash although not MORE inflam- mable than common powder, yet possesses the SAME degree of inflammability.”

We now prepared to go on deck. As we left the saloon, in which we had been sitting, Curtis seized my hand.

“Oh, Mr. Kazallon,” he exclaimed, “if you only knew the bitterness of the agony I feel at seeing this fine vessel doomed to be devoured by flames, and at being so powerless to save her.” Then quickly recovering himself, he continued: “But I am forgetting myself; you, if no other, must know what I am suffering. It is all over now,” he said more cheerfully.

“Is our condition quite desperate?” I asked.

“It is just this,” he answered deliberately, “we are over a mine, and already the match has been applied to the train. How long that train may be, ‘tis not for me to say.”

And with these words he left me.

The other passengers, in common with the crew, are still in entire ignorance of the extremity of peril to which we are exposed, although they are all aware that there is fire in the hold. As soon as the fact was announced, Mr. Kear, after communicating to Curtis his instructions that he thought he should have the fire immediately extinguished, and intimat- ing that he held him responsible for all contingencies that might happen, retired to his cabin, where he has remained ever since, fully occupied in collecting and packing together the more cherished articles of his property and without the semblance of a care or a thought for his unfortunate wife, whose condition, in spite of her ludicrous complaints, was truly pitiable. Miss Herbey, however, is unrelaxing in her attentions, and the unremitted diligence with which she fulfills her offices of duty, commands my highest ad- miration.

OCTOBER 23. — This morning, Captain Huntly sent for Curtis into his cabin, and the mate has since made me ac- quainted with what passed between them.

“Curtis,” began the captain, his haggard eye betraying only too plainly some mental derangement, “I am a sailor, am I not?”

“Certainly, captain,” was the prompt acquiescence of the mate.

“I do not know how it is,” continued the captain, “but I seem bewildered; I can not recollect anything. Are we not bound for Liverpool? Ah! yes! of course. And have we kept a northeasterly direction since we left?”

“No, sir, according to your orders we have been sailing southeast, and here we are in the tropics.”

“And what is the name of the ship?”

“The Chancellor, sir.”

“Yes, yes, the Chancellor, so it is. Well, Curtis, I really can’t take her back to the north. I hate the sea, the very sight of it makes me ill, I would much rather not leave my cabin.”

Curtis went on to tell me how he had tried to persuade him that with a little time and care he would soon recover his indisposition, and feel himself again; but the captain had in- terrupted him by saying:

“Well, well; we shall see by-and-by; but for the present you must take this for my positive order; you must, from this time, at once take the command of the ship, and act just as if I were not on board. Under present circum- stances, I can do nothing. My brain is all in a whirl, you can not tell what I am suffering;” and the unfortunate man pressed both his hands convulsively against his forehead.

“I weighed the matter carefully for a moment,” added Curtis, “and seeing what his condition too truly was, I ac- quiesced in all that he required and withdrew, promising him that all his orders should be obeyed.”

After hearing these particulars, I could not help remark- ing how fortunate it was that the captain had resigned of his own accord, for although he might not be actually in- sane, it was very evident that his brain was in a very morbid condition.

“I succeeded him at a very critical moment,” said Curtis thoughtfully; “but I shall endeavor to do my duty.”

A short time afterward he sent for his boatswain and or- dered him to assemble the crew at the foot of the main-mast. As soon as the men were together, he addressed them very calmly, but very firmly.

“My men,” he said, “I have to tell you that Captain Huntly, on account of the dangerous situation in which cir- cumstances have placed us, and for other reasons known to myself, has thought right to resign his command to me. From this time forward, I am captain of this vessel.”

Thus quietly and simply was the change effected, and we have the satisfaction of knowing that the Chancellor is now under the command of a conscientious, energetic man, who will shirk nothing that he believes to be for our common good. M. Letourneur, Andre, Mr. Falsten, and myself im- mediately offered him our best wishes, in which Lieutenant Walter and the boatswain most cordially joined.

The ship still holds her course southwest, and Curtis crowds on all sail and makes as speedily as possible for the nearest of the Lesser Antilles.

CHAPTER XIII BETWEEN FIRE AND WATER

OCTOBER 24 to 29. — For the last five days the sea has been very heavy, and although the Chancellor sails with wind and wave in her favor, yet her progress is considerably im- peded. Here on board this veritable fire-ship I cannot help contemplating with a longing eye this vast ocean that sur- rounds us. The water supply should be all we need.

“Why not bore the deck?” I said to Curtis. “Why not admit the water by tons into the hold? What could be the harm? The fire would be quenched; and what would be easier than to pump the water out again?”

“I have already told you, Mr. Kazallon,” said Curtis, “that the very moment we admit the air, the flames will rush forth to the very top of the masts. No; we must have cour- age and patience; we must wait. There is nothing whatever to be done, except to close every aperture.”

The fire continued to progress even more rapidly than we had hitherto suspected. The heat gradually drove the pas- sengers nearly all on deck, and the two stern cabins, lighted, as I said, by their windows in the aft-board were the only quarters below that were inhabitable. Of these Mrs. Kear occupied one, and Curtis reserved the other for Ruby, who, a raving maniac, had to be kept rigidly under restraint. I went down occasionally to see him, but invariably found him in a state of abject terror, uttering horrible shrieks, as though possessed with the idea that he was being scorched by the most excruciating heat.

Once or twice, too, I looked in upon the ex-captain. He was always calm and spoke quite rationally on any subject except his own profession; but in connection with that he prated away the merest nonsense. He suffered greatly, but steadily declined all my offers of attention, and pertina- ciously refused to leave his cabin.

To-day, an acrid, nauseating smoke made its way through the panelings that partition off the quarters of the crew. At once Curtis ordered the partition to be enveloped in wet tar- paulin, but the fumes penetrated even this, and filled the whole neighborhood of the ship’s bows with a reeking vapor that was positively stifling. As we listened, too, we could hear a dull rumbling sound, but we were as mystified as ever to comprehend where the air could have entered that was evidently fanning the flames. Only too

certainly, it was now becoming a question not of days nor even of hours before we must be prepared for the final catastrophe. The sea was still running high, and escape by the boats was plainly impossible. Fortunately, as I have said, the main- mast and the mizzen are of iron; otherwise the great heat at their base would long ago have brought them down and our chances of safety would have been very much imperiled; but by crowding on sail the Chancellor in the full northeast wind continued to make her way with undiminished speed.

It is now a fortnight since the fire was first discovered, and the proper working of the ship has gradually become a more and more difficult matter. Even with thick shoes any attempt to walk upon deck up to the forecastle was soon im- practicable, and the poop, simply because its floor is elevated somewhat above the level of the hold, is now the only avail- able standing-place. Water began to lose its effect upon the scorched and shriveling planks; the resin oozed out from the knots in the wood, the seams burst open, and the tar, melted by the heat, followed the rollings of the vessel, and formed fantastic patterns about the deck.

Then to complete our perplexity, the wind shifted sud- denly round to the northwest, whence it blew a perfect hur- ricane. To no purpose did Curtis do everything in his power to bring the ship ahull; every effort was in vain; the Chancellor could not bear her trysail, so there was nothing to be done but to let her go with the wind, and drift further and further from the land for which we are longing so eagerly.

To-day, the 29th, the tempest seemed to reach its height; the waves appeared to us mountains high, and dashed the spray most violently across the deck. A boat could not live a moment in such a sea.

Our situation is terrible. We all wait in silence, some few on the forecastle, the great proportion of us on the poop. As for the picrate, for the time we have quite for- gotten its existence; indeed it might almost seem as though its explosion would come as a relief, for no catastrophe, how- ever terrible, could far exceed the torture of our suspense.

While he had still the remaining chance, Curtis rescued from the store-room such few provisions as the heat of the compartment allowed him to obtain; and a lot of cases of salt meat and biscuits, a cask of brandy, some barrels of fresh water, together with some

sails and wraps, a compass and other instruments are now lying packed in a mass all ready for prompt removal to the boats whenever we shall be obliged to leave the ship.

About eight o’clock in the evening, a noise is heard, dis- tinct even above the raging of the hurricane. The panels of the deck are upheaved, and volumes of black smoke issue up- ward as if from a safety-valve. A universal consternation seizes one and all; we must leave the volcano which is about to burst beneath our feet. The crew run to Curtis for or- ders. He hesitates; looks first at the huge and threatening waves; looks then at the boats. The long-boat is there, sus- pended right along the center of the deck; but it is impos- sible to approach it now; the yawl, however, hoisted on the starboard side, and the whale-boat suspended aft, are still available. The sailors make frantically for the yawl.

“Stop, stop,” shouts Curtis; “do you mean to cut off our last and only chance of safety? Would you launch a boat in such a sea as this?”

A few of them, with Owen at their head, give no heed to what he says. Rushing to the poop, and seizing a cutlass, Curtis shouts again:

“Touch the tackling of the davit, one of you; only touch it, and I’ll cleave your skull.”

Awed by his determined manner, the men retire, some clambering into the shrouds, while others mount to the very top of the masts.

At eleven o’clock, several loud reports are heard, caused by the bursting asunder of the partitions of the hold. Clouds of smoke issue from the front, followed by a long tongue of lambent flame that seems to encircle the mizzen-mast. The fire now reaches to the cabin of Mrs. Kear, who, shrieking wildly, is brought on deck by Miss Herbey. A moment more, and Silas Huntly makes his appearance, his face all blackened with the grimy smoke; he bows to Curtis, as he passes, and then proceeds in the calmest manner to mount the aft-shrouds, and installs himself at the very top of the mizzen.

The sight of Huntly recalls to my recollection the prisoner still below, and my first impulse is to rush to the staircase and do what I can to set him free. But the maniac has al- ready eluded his confinement, and with singed hair and his clothes already alight, rushes upon deck. Like a sal- amander he passes across the burning deck with unscathed feet, and glides through the stifling smoke with unchoked breath. Not a sound escapes his lips.

Another loud report; the long-boat is shivered into frag- ments; the middle panel bursts the tarpaulin that covered it, and a stream of fire, free at length from the restraint that had held it, rises half-mast high.

“The picrate! the picrate!” shrieks the madman; “we shall all be blown up! the picrate will blow us all up.”

And in an instant, before we can get near him, he has buried himself, through the open hatchway, down into the fiery furnace below.

CHAPTER XIV BREAKERS TO STARBOARD!

OCTOBER 20. — Night. — The scene, as night came on, was terrible indeed. Notwithstanding the desperateness of our situation, however, there was not one of us so paralyzed by fear, but that we fully realized the horror of it all.

Poor Ruby, indeed, is lost and gone, but his last words were productive of serious consequences. The sailors caught his cry of “Picrate, picrate!” and being thus for the first time made aware of the true nature of their peril, they resolved at every hazard to accomplish their escape. Beside themselves with terror, they either did not, or would not, see that no boat could brave the tremendous waves that were raging around, and accordingly they made a frantic rush to- ward the yawl. Curtis again made a vigorous endeavor to prevent them, but this time all in vain; Owen urged them on, and already the tackling was loosened, so that the boat was swung over to the ship’s side. For a moment it hung sus- pended in mid-air, and then, with a final effort from the sailors, it was quickly lowered into the sea. But scarcely had it touched the water, when it was caught by an enor- mous wave which, recoiling with resistless violence, dashed it to atoms against the Chancellor’s side.

The men stood aghast; they were dumbfounded. Long- boat and yawl both gone, there was nothing now remaining to us but a small whale-boat. Not a word was spoken; not a sound was heard but the hoarse whistling of the wind, and the mournful roaring of the flames. From the center of the ship, which was hollowed out like a furnace, there issued a column of sooty vapor that ascended to the sky. All the passengers, and several of the crew, took refuge in the aft-quarters of the poop. Mrs. Kear was lying sense- less on one of the hen-coops, with Miss Herbey sitting pas- sively at her side; M. Letourneur held his son tightly clasped to his bosom. I saw Falsten calmly consult his watch, and note down the time in his memorandum-book, but I was far from sharing his composure, for I was overcome by a nervous agitation that I could not suppress.

As far as we knew, Lieutenant Walter, the boatswain, and such of the crew as were not with us, were safe in the bow; but it was impossible to tell how they were faring, be- cause the sheet of fire intervened like a curtain, and cut off all communication between stem and stern.

I broke the dismal silence, saying, “All over now Curtis.”

“No, sir, not yet,” he replied, “now that the panel is open we will set to work, and pour water with all our might down into the furnace, and may be, we shall put it out, even yet.”

“But how can you work your pumps while the deck is burning? and how can you get at your men beyond that sheet of flame?”

He made no answer to my impetuous questions, and find- ing he had nothing more to say, I repeated that it was all over now.

After a pause, he said, “As long as a plank of the ship remains to stand on, Mr. Kazallon, I shall not give up my hope.”

But the conflagration raged with redoubled fury, the sea around us was lighted with a crimson glow, and the clouds above shone with a lurid glare. Long jets of fire darted across the hatchways, and we were forced to take refuge on the taffrail at the extreme end of the poop. Mrs. Kear was laid in the whale-boat that hung from the stern. Miss Herbey persisting to the last in retaining her post by her side.

No pen could adequately portray the horrors of this fear- ful night. The Chancellor under bare poles, was driven, like a gigantic fire-ship with frightful velocity across the raging ocean; her very speed as it were, making common cause with the hurricane to fan the fire that was consuming her. Soon there could be no alternative between throwing ourselves into the sea, or perishing in the flames.

But where, all this time, was the picrate? Perhaps, after all, Ruby had deceived us and there was no volcano, such as we dreaded, below our feet.

At half-past eleven, when the tempest seems at its very height, there is heard a peculiar roar distinguishable even above the crash of the elements. The sailors in an instant recognize its import.

“Breakers to starboard!” is the cry.

Curtis leaps on to the netting, casts a rapid glance at the snow-white billows, and turning to the helmsman shouts with all his might, “Starboard the helm!”

But it is too late. There is a sudden shock; the ship is caught up by an enormous wave; she rises upon her beam ends; several times she strikes the ground; the mizzen-mast

snaps short off level with the deck, falls into the sea, and the Chancellor is motionless.

CHAPTER XV SHIPWRECKED

THE night of the 29th continued. — It was not yet mid- night; the darkness was most profound, and we could see nothing. But was it probable that we had stranded on the coast of America?

Very shortly after the ship had thus come to a stand-still a clanking of chains was heard proceeding from her bows.

“That is well,” said Curtis; “Walter and the boatswain have cast both the anchors. Let us hope they will hold.”

Then, clinging to the netting, he clambered along the starboard side, on which the ship had heeled, as far as the flames would allow him. He clung to the holdfasts of the shrouds, and in spite of the heavy seas that dashed against the vessel he maintained his position for a considerable time, evidently listening to some sound that had caught his ear in the midst of the tempest. In about a quarter of an hour he returned to the poop.

“Heaven be praised!” he said, “the water is coming in, and perhaps may get the better of the fire.”

“True,” said I, “but what then?”

“That,” he replied, “is a question for bye-and-bye. We can think now only of the present.”

Already I fancied that the violence of the flames was somewhat abated, and that the two opposing elements were in fierce contention. Some plank in the ship’s side was evidently stove in, admitting free passage for the waves. But how, when the water had mastered the fire, should we be able to master the water? Our natural course would be to use the pumps, but these, in the very midst of the con- flagration, were quite unavailable.

For three long hours, in anxious suspense, we watched, and waited. Where we were we could not tell. One thing alone was certain; the tide was ebbing beneath us, and the waves were relaxing in their violence. Once let the fire be extinguished, and then, perhaps, there would be room to hope that the next high tide would set us afloat.

Toward half-past four in the morning the curtain of fire and smoke, which had shut off communication between the two extremities of the ship, became less dense, and we could faintly distinguish that party of the crew who had taken refuge in the forecastle; and before long, although it was impracticable to step upon the deck, the lieutenant and the boatswain contrived to clamber over the gunwale, along the rails, and joined Curtis on the poop.

Here they held a consultation, to which I was admitted. They were all of opinion that nothing could be done until daylight should give us something of an idea of our actual position. If we then found that we were near the shore, we would, weather permitting, endeavor to land, either in the boat or upon a raft. If, on the other hand, no land were in sight, and the Chancellor were ascertained to be stranded on some isolated reef, all we could do would be to get her afloat, and put her into condition for reaching the nearest coast. Curtis told us that it was long since he had been able to take any observation of latitude, but there was no doubt the northwest wind had driven us far to the south; and he thought, as he was ignorant of the existence of any reef in this part of the Atlantic, that it was just possible that we had been driven on to the coast of some portion of South America.

I reminded him that we were in momentary expectation of an explosion, and suggested that it would be advisable to abandon the ship and take refuge on the reef. But he would not hear of such a proceeding, said that the reef would probably be covered at high tide, and persisted in the original resolution, that no decided action could be taken before the daylight appeared.

I immediately reported this decision of the captain to my fellow-passengers. None of them seemed to realize the new danger to which the Chancellor may be exposed by be- ing cast upon an unknown reef, hundreds of miles it may be from land. All are for the time possessed with one idea, one hope; and that is, that the fire may now be quenched and the explosion averted.

And certainly their hopes seem in a fair way of being ful- filled. Already the raging flames that poured forth from the hatches have given place to dense black smoke, and al- though occasionally some fiery streaks dart across the dusky fumes, yet they are instantly extinguished. The waves are doing what pumps and buckets could never have effected; by their inundation they are steadily stifling the fire which was as steadily spreading to the whole bulk of the 1,700 bales of cotton.

CHAPTER XVI SILAS HUNTLY RESCUED FROM THE WAVES

OCTOBER 30. — At the first gleam of daylight we eagerly scanned the southern and western horizons, but the morn- ing mists limited our view. Land was nowhere to be seen. The tide was now almost at its lowest ebb, and the color of the few peaks of rock that jutted up around us showed that the reef on which we had stranded was of basaltic formation. There were now only about six feet of water around the Chancellor, though with a full freight she draws about fifteen. It was remarkable how far she had been carried on to the shelf of rock, but the number of times that she had touched the bottom before she finally ran aground left us no doubt that she had been lifted up and borne along on the top of an enormous wave. She now lies with her stern considerably higher than her bows, a position which renders walking upon the deck anything but an easy matter, moreover as the tide receded she heeled over so much to lar- board that at one time Curtis feared she would altogether capsize; that fear, however, since the tide has reached its lowest mark, has happily proved groundless.

At six o’clock some violent blows were felt against the ship’s side, and at the same time a voice was distinguished, shouting loudly, “Curtis! Curtis!” Following the direc- tion of the cries we saw that the broken mizzen-mast was being washed against the vessel, and in the dusky morning twilight we could make out the figure of a man clinging to the rigging. Curtis, at the peril of his life, hastened to bring the man on board. It proved to be none other than Silas Huntly, who, after being carried overboard with the mast, had thus, almost by a miracle, escaped a watery grave. Without a word of thanks to his deliverer, the ex-captain, passive, like an automaton, passed on and took his seat in the most secluded corner of the poop. The broken mizzen may, perhaps, be of service to us at some future time, and with that idea it has been rescued from the waves and lashed securely to the stern.

By this time it was light enough to see for a distance of three miles round; but as yet nothing could be discerned to make us think that we were near a coast. The line of breakers ran for about a mile from southwest to northeast, and two hundred fathoms to the north of the ship an ir- regular mass of rocks formed a small islet. This islet rose about fifty feet above the sea, and was consequently above the level of the highest tides; while a sort of causeway, available at low water, would enable us to reach the island, if necessity required. But there the reef ended; beyond it the sea again resumed its somber

hue, betokening deep water. In all probability, then, this was a solitary shoal, unattached to a shore, and the gloom of a bitter disappoint- ment began to weigh upon our spirits.

In another hour the mists had totally disappeared, and it was broad daylight. I and M. Letourneur stood watching Curtis as he continued eagerly to scan the western horizon. Astonishment was written on his countenance; to him it appeared perfectly incredible that, after our course for so long had been due south from the Bermudas, no land should be in sight. But not a speck, however minute, broke the clearly-defined line that joined sea and sky. After a time Curtis made his way along the netting to the shrouds, and swung himself quickly up to the top of the mainmast. For several minutes he remained there examining the open space around, then seizing one of the backstays he glided down and rejoined us on the poop.

“No land in sight,” he said, in answer to our eager looks.

At this point Mr. Kear interposed, and in a gruff, ill- tempered tone, asked Curtis where we were. Curtis replied that he did not know.

“You don’t know, sir? Then all I can say is that you ought to know!” exclaimed the petroleum merchant.

“That may be, sir; but at present I am as ignorant of our whereabouts as you are yourself,” said Curtis.

“Well,” said Mr. Kear, “just please to know that I don’t want to stay forever on your everlasting ship, so I beg you will make haste and start off again.”

Curtis condescended to make no other reply than a shrug of the shoulders, and turning away he informed M. Letour- neur and myself that if the sun came out he intended to take its altitude and find out to what part of the ocean we had been driven.

His next care was to distribute preserved meat and biscuit among the passengers and crew already half fainting with hunger and fatigue, and then he set to work to devise meas- ures for setting the ship afloat.

The conflagration was greatly abated; no flames now ap- peared, and although some black smoke still issued from the interior, yet its volume was far less than before. The first step was to discover how much water had entered the hold. The deck was still too

hot to walk upon; but after two hours' irrigation the boards became sufficiently cool for the boatswain to proceed to take some soundings, and he shortly afterward announced that there were five feet of water below. This the captain determined should not be pumped out at present, as he wanted it thoroughly to do its duty before he got rid of it.

The next subject for consideration was whether it would be advisable to abandon the vessel, and to take refuge on the reef. Curtis thought not; and the lieutenant and the boatswain agreed with him. The chances of an explosion were greatly diminished, as it had been ascertained that the water had reached that part of the hold in which Ruby's luggage had been deposited; while, on the other hand, in the event of rough weather, our position even upon the most elevated points of rock might be very critical. It was ac- cordingly resolved that both passengers and crew were saf- est on board.

Acting upon this decision we proceeded to make a kind of encampment on the poop, and a few mattresses that were rescued uninjured have been given up for the use of the two ladies. Such of the crew as had saved their hammocks have been told to place them under the forecastle where they would have to stow themselves as best they could, their ordinary quarters being absolutely uninhabitable.

Fortunately, although the store-room has been consider- ably exposed to the heat, its contents are not very seriously damaged, and all the barrels of water and the greater part of the provisions are quite intact. The stock of spare sails, which had been packed away in front, is also free from in- jury. The wind has dropped considerably since the early morning, and the swell in the sea is far less heavy. On the whole our spirits are reviving and we begin to think we may yet find a way out of our troubles.

M. Letourneur, his son, and I, have just had a long con- versation about the ship's officers. We consider their con- duct, under the late trying circumstances, to have been most exemplary, and their courage, energy, and endurance to have been beyond all praise. Lieutenant Walter, the boat- swain, and Dowlas the carpenter have all alike distinguished themselves, and made us feel that they are men to be relied on. As for Curtis, words can scarcely be found to express our admiration of his character; he is the same as he has ever been, the very life of his crew, cheering them on by word or gesture; finding an expedient for every difficulty, and always foremost in every action.

The tide turned at seven this morning, and by eleven all the rocks were submerged, none of them being visible ex- cept the cluster of those which formed the rim of a small

and almost circular basin from 230 to 300 feet in diameter, in the north angle of which the ship is lying. As the tide rose the white breakers disappeared, and the sea, fortunately for the Chancellor, was pretty calm; otherwise the dashing of the waves against her sides, as she lies motionless, might have been attended by serious consequences.

As might be supposed, the height of the water in the hold increased with the tide from five feet to nine; but this was rather a matter of congratulation, inasmuch as it sufficed to inundate another layer of cotton.

At half-past eleven the sun, which had been behind the clouds since ten o'clock, broke forth brightly. The captain, who had already in the morning been able to calculate an horary angle, now prepared to take the meridian altitude, and succeeded at midday in making his observation most satisfactorily. After retiring for a short time to calculate the result, he returned to the poop and announced that we are in lat. 18 deg. 5' N. and long. 45 deg. 53' W. but that the reef on which we are aground is not marked on the charts. The only explanation that can be given for the omission is that the islet must be of recent formation, and has been caused by some subterranean volcanic disturbance. But whatever may be the solution of the mystery, here we are 800 miles from land; for such, on consulting the map, we find to be the actual distance to the coast of Guiana, which is the near- est shore. Such is the position to which we have been brought, in the first place, by Huntly's senseless obstinacy, and, secondly, by the furious northwest gale.

Yet, after all, the captain's communication does not dis- hearten us. As I said before, our spirits are reviving. We have escaped the peril of fire; the fear of explosion is past and gone: and oblivious of the fact that the ship with a hold full of water is only too likely to founder when she puts out to sea, we feel a confidence in the future that for- bids us to despond.

Meanwhile Curtis prepares to do all that common sense demands. He proposes, when the fire is quite extinguished, to throw overboard the whole, or the greater portion of the cargo, including, of course, the picrate; he will next plug up the leak, and then, with a lightened ship, he will take ad- vantage of the first high tide to quit the reef as speedily as possible.

CHAPTER XVII M. LETOURNEUR IS PESSIMISTIC

OCTOBER 30. — Once again I talked to M. Letourneur about our situation, and endeavored to animate him with the hope that we should not be detained for long in our present pre- dicament; but he could not be brought to take a very san- guine view of our prospects.

“But surely,” I protested, “it will not be difficult to throw overboard a few hundred bales of cotton; two or three days at most will suffice for that.”

“Likely enough,” he replied, “when the business is once begun; but you must remember, Mr. Kazallon, that the very heart of the cargo is still smoldering, and that it will still be several days before anyone will be able to venture into the hold. Then the leak, too, that has to be caulked; and, un- less it is stopped up very effectually, we shall only be doomed most certainly to perish at sea. Don’t then, be deceiving yourself; it must be three weeks at least before you can ex- pect to put out to sea. I can only hope meanwhile that the weather will continue propitious; it wouldn’t take many storms to knock the Chancellor, shattered as she is, com- pletely into pieces.”

Here, then, was the suggestion of a new danger to which we were to be exposed; the fire might be extinguished, the water might be got rid of by the pumps, but, after all, we must be at the mercy of the wind and waves; and, although the rocky island might afford a temporary refuge from the tempest, what was to become of passengers and crew if the vessel should be reduced to a total wreck? I made no remonstrance, however, to this view of our case, but merely asked M. Letourneur if he had confidence in Robert Curtis?

“Perfect confidence,” he answered; “and I acknowledge it most gratefully, as a providential circumstance, that Cap- tain Huntly had given him the command in time. What- ever man can do I know that Curtis will not leave undone to extricate us from our dilemma.”

Prompted by this conversation with M. Letourneur I took the first opportunity of trying to ascertain from Curtis himself how long he reckoned we should be obliged to re- main upon the reef; but he merely replied, that it must de- pend upon circumstances, and that he hoped the weather would continue favorable. Fortunately the barometer is rising steadily, and there is every sign of a prolonged calm.

Meantime Curtis is taking active measures for totally extinguishing the fire. He is at no great pains to spare the cargo, and as the bales that lie just above the level of the water are still a-light he has resorted to the expedient of thoroughly saturating the upper layers of the cotton, in order that the combustion may be stifled between the mois- ture descending from above and that ascending from below. This scheme has brought the pumps once more into requisi- tion. At present the crew are adequate to the task of work- ing them, but I and some of our fellow-passengers are ready to offer our assistance whenever it shall be necessary.

With no immediate demand upon our labor, we are thrown upon our own resources for passing our time. M. Letourneur, Andre, and myself, have frequent conversa- tions; I also devote an hour or two to my diary. Falsten holds little communication with any of us, but remains ab- sorbed in his calculations, and amuses himself by tracing mechanical diagrams with ground-plan, section, elevation, all complete. It would be a happy inspiration if he could invent some mighty engine that could set us all afloat again. Mr. and Mrs. Kear, too, hold themselves aloof from their fellow-passengers, and we are not sorry to be relieved from the necessity of listening to their incessant grumbling; un- fortunately, however, they carry off Miss Herbey with them, so that we enjoy little or nothing of the young lady’s society. As for Silas Huntly, he has become a complete nonen- tity; he exists, it is true, but merely, it would seem, to vegetate.

Hobart, the steward, an obsequious, sly sort of fellow, goes through his routine of duties just as though the vessel were pursuing her ordinary course; and, as usual, is con- tinually falling out with Jynxstrop, the cook, an impudent, ill-favored negro, who interferes with the other sailors in a manner which, I think, ought not to be allowed.

Since it appears likely that we shall have abundance of time on our hands, I have proposed to M. Letourneur and his son that we shall together explore the reef on which we are stranded. It is not very probable that we shall be able to discover much about the origin of this strange accumula- tion of rocks, yet the attempt will at least occupy us for some hours, and will relieve us from the monotony of our confinement on board. Besides, as the reef is not marked in any of the maps, I could not but believe that it would be rendering a service to hydrography if we were to take an accurate plan of the rocks, of which Curtis could afterward verify the true position by a second observation made with a closer precision than the one he has already taken.

M. Letourneur agrees to my proposal, Curtis has promised to let us have the boat and some sounding-lines, and to allow one of the sailors to accompany us; so to-morrow morning, we hope to make our little voyage of investigation.

CHAPTER XVIII WE EXPLORE THE REEF

OCTOBER 31 to November 5. — Our first proceeding on the morning of the 31st was to make the proposed tour of the reef, which is about a quarter of a mile long. With the aid of our sounding-lines we found that the water was deep, right up to the very rocks, and that no shelving shores prevented us coasting along them. There was not a shadow of doubt as to the rock being of purely volcanic origin, up- heaved by some mighty subterranean convulsion. It is formed of blocks of basalt, arranged in perfect order, of which the regular prisms give the whole mass the effect of being one gigantic crystal; and the remarkable transparency of the sea enabled us plainly to observe the curious shafts of the prismatic columns that support the marvelous sub- structure.

“This is indeed a singular island,” said M. Letourneur; “evidently it is of quite recent origin.”

“Yes, father,” said Andre, “and I should think it has been caused by a phenomenon similar to those which pro- duced the Julia Island, off the coast of Sicily, or the group of the Santorini, in the Grecian Archipelago. One could almost fancy that it had been created expressly for the Chan- cellor to strand upon.”

“It is very certain,” I observed, “that some upheaving has lately taken place. This is by no means an unfrequented part of the Atlantic, so that it is not at all likely that it could have escaped the notice of sailors if it had been always in existence; yet it is not marked even in the most modern charts. We must try and explore it thoroughly and give future navigators the benefit of our observations.”

“But, perhaps, it will disappear as it came,” said Andre. “You are no doubt aware, Mr. Kazallon, that these volcanic islands sometimes have a very transitory existence. Not im- possibly, by the time it gets marked upon the maps it may no longer be here.”

“Never mind, my boy,” answered his father, “it is bet- ter to give warning of a danger that does not exist than overlook one that does. I dare say the sailors will not grumble much, if they don’t find a reef where we have marked one.”

“No, I dare say not, father,” said Andre, “and after all this island is very likely as firm as a continent. However, if it is to disappear, I expect Captain Curtis would be glad to

see it take its departure as soon as possible after he has finished his repairs; it would save him a world of trouble in getting his ship afloat."

"Why, what a fellow you are, Andre!" I said, laugh- ing; "I believe you would like to rule Nature with a magic wand, first of all, you would call up a reef from the depth of the ocean to give the Chancellor time to extinguish her flames, and then you would make it disappear just that the ship might be free again."

Andre smiled; then, in a more serious tone, he expressed his gratitude for the timely help that had been vouchsafed us in our hour of need.

The more we examined the rocks that formed the base of the little island, the more we became convinced that its formation was quite recent. Not a mollusk, not a tuft of seaweed was found clinging to the sides of the rocks; not a germ had the wind carried to its surface, not a bird had taken refuge amid the crags upon its summits. To a lover of natural history, the spot did not yield a single point of interest; the geologist alone would find subject of study in the basaltic mass.

When we reached the southern point of the island I pro- posed that we should disembark. My companions readily assented, young Letourneur jocosely observing that if the little island was destined to vanish, it was quite right that it should first be visited by human beings. The boat was accordingly brought alongside, and we set foot upon the reef, and began to ascend the gradual slope that leads to its highest elevation.

The walking was not very rough, and as Andre could get along tolerably well without the assistance of an arm, he led the way, his father and I following close behind. A quarter of an hour sufficed to bring us to the loftiest point in the islet, when we seated ourselves on the basaltic prism that crowned its summit.

Andre took a sketch-book from his pocket, and proceeded to make a drawing of the reef. Scarcely had he completed the outline when his father exclaimed:

"Why, Andre, you have drawn a ham!"

"Something uncommonly like it, I confess," replied Andre. "I think we had better ask Captain Curtis to let us call our island Ham Rock."

“Good,” said I; “though sailors will need to keep it at a respectful distance, for they will scarcely find that their teeth are strong enough to tackle it.”

M. Letourneur was quite correct; the outline of the reef as it stood clearly defined against the deep green water resembled nothing so much as a fine York ham, of which the little creek, where the Chancellor had been stranded, corresponded to the hollow place above the knuckle. The tide at this time was low, and the ship now lay heeled over very much to the starboard side, the few points of rock that emerged in the extreme south of the reef plainly marking the narrow passage through which she had been forced before she finally ran aground.

As soon as Andre had finished his sketch we descended by a slope as gradual as that by which we had come up, and made our way toward the west. We had not gone very far when a beautiful grotto, perfect as an architectural struc- ture, arrested our attention. M. Letourneur and Andre, who have visited the Hebrides, pronounced it to be a Fingal’s cave in miniature; a Gothic chapel that might form a fit vestibule for the cathedral cave of Staffa. The basaltic rocks had cooled down into the same regular concentric prisms; there was the same dark canopied roof with its in- terstices filled up with its yellow lutings; the same precision of outline in the prismatic angles, sharp as though chiseled by a sculptor’s hand; the same sonorous vibration of the air across the basaltic rocks, of which the Gaelic poets have feigned that the harps of the Fingal minstrelsy were made. But whereas at Staffa the floor of the cave is always covered with a sheet of water, here the grotto was beyond the reach of all but the highest waves, while the prismatic shafts them- selves formed quite a solid pavement.

After remaining nearly an hour in our newly-discovered grotto we returned to the Chancellor, and communicated the result of our explorations to Curtis, who entered the island upon his chart, by the name Andre Letourneur had pro- posed.

Since its discovery we have not permitted a day to pass without spending some time in our Ham Rock grotto. Curtis has taken an opportunity of visiting it, but he is too preoccupied with other matters to have much interest to spare for the wonders of nature. Falsten, too, came once and examined the character of the rocks, knocking and chipping them about with all the mercilessness of a geologist. Mr. Kear would not trouble himself to leave the ship; and although I asked his wife to join us in one of our excursions she declined, upon the plea that the fatigue, as well as the inconvenience of embarking in the boat, would be more than she could bear.

Miss Herbey, only to thankful to escape even for an hour from her capricious mistress, eagerly accepted M. Letour- neur's invitation to pay a visit to the reef, but to her great disappointment Mrs. Kear at first refused point-blank to allow her to leave the ship. I felt intensely annoyed, and re- solved to intercede in Miss Herbey's favor; and as I had already rendered that self-indulgent lady sundry services which she though she might probably be glad again to ac- cept, I gained my point, and Miss Herbey has several times been permitted to accompany us across the rocks, where the young girl's delight at her freedom has been a pleasure to behold.

Sometimes we fish along the shore, and then enjoy a luncheon in the grotto, while the basalt columns vibrate like harps to the breeze. This arid reef, little as it is, compared with the cramped limits of the Chancellor's deck is like some vast domain; soon there will be scarcely a stone with which we are not familiar, scarcely a portion of its surface which we have not trodden, and I am sure that when the hour of departure arrives we shall leave it with regret.

In the course of conversation, Andre Letourneur one day happened to say that he believed the island of Staffa be- longed to the Macdonald family, who let it for the small sum of L.12 a year.

"I suppose then," said Miss Herbey, "that we should hardly get more than half-a-crown a year for our pet little island."

"I don't think you would get a penny for it. Miss Herbey; but are you thinking of taking a lease?" I said laughing.

"Not at present," she said; then added, with a half-sup- pressed sigh, "and yet it is a place where I have seemed to know what it is to be really happy."

Andre murmured some expression of assent, and we all felt that there was something touching in the words of the orphaned, friendless girl who had found her long-lost sense of happiness on a lonely rock in the Atlantic.

CHAPTER XIX THE CARGO UNLOADED

NOVEMBER 6 to November 15. — For the first five days after the Chancellor had run aground, there was a dense black smoke continually rising from the hold; but it grad- ually diminished until the 6th of November, when we might consider that the fire was extinguished. Curtis, neverthe- less, deemed it prudent to persevere in working the pumps, which he did until the entire hull of the ship, right up to the deck, had been completely inundated.

The rapidity, however, with which the water, at every re- treat of the tide, drained off to the level of the sea, was an indication that the leak must be of considerable magnitude; and such, on investigation, proved to be the case. One of the sailors, named Flaypole, dived one day at low water to ex- amine the extent of the damage, and found that the hole was not much less than four feet square, and was situated thirty feet fore of the helm, and two feet above the rider of the keel; three planks had been stove in by a sharp point of rock and it was only a wonder that the violence with which the heavily-laden vessel had been thrown ashore did not result in the smashing in of many parts beside.

As it would be a couple of days or more before the hold would be in a condition for the bales of cotton to be removed for the carpenter to examine the damage from the interior of the ship, Curtis employed the interval in having the broken mizzen-mast repaired. Dowlas the carpenter, with con- siderable skill, contrived to mortise it into its former stump. and made the junction thoroughly secure by strong iron- belts and bolts. The shrouds, the stays and backstays, were then carefully refitted, some of the sails were changed, and the whole of the running rigging was renewed. Injury, to some extent, had been done to the poop and to the crew’s lockers in the front; but time and labor were all that were wanted to make them good; and with such a will did every- body set to work that it was not long before all the cabins were again available for use.

On the 8th the unlading of the ship commenced. Pulleys and tackling were put over the hatches, and passengers and crew together proceeded to haul up the heavy bales which had been deluged so frequently by water that the cotton was all but spoiled. One by one the sodden bales were placed in the boat to be transported to the reef. After the first layer of cotton had been removed it became necessary to drain off part of the water that filled the hold. For this purpose the leak in the side had somehow or other to be stopped, and this was an operation which was cleverly accomplished by Dowlas and Flaypole, who contrived to dive at low tide and nail a sheet of copper over the entire

hole. This, how- ever, of itself would have been utterly inadequate to sustain the pressure that would arise from the action of the pumps; so Curtis ordered that a number of the bales should be piled up inside against the broken planks. The scheme succeeded very well, and as the water got lower and lower in the hold the men were enabled to résumé their task of unlading.

Curtis thinks it quite probable that the leaks may be mended from the interior. By far the best way of repairing the damage would be to careen the ship, and to shift the planking, but the appliances are wanting for such an un- dertaking; moreover, any bad weather which might occur while the ship was on her flank would only too certainly be fatal to her altogether. But the captain has very little doubt that by some device or other he shall manage to patch up the hole in such a way as will insure our reaching land in safety.

After two days' toil the water was entirely reduced, and without further difficulty the unlading was completed. All of us, including even Andre Letourneur, have been taking our turn at the pumps, for the work is so extremely fatiguing that the crew require some occasional respite; arms and back soon become strained and weary with the incessant swing of the handles, and I can well understand the dislike which sailors always express to the labor.

One thing there is which is much in our favor; the ship lies on a firm and solid bottom, and we have the satisfaction of knowing that we are not contending with a flood that encroaches faster than it can be resisted. Heaven grant that we may not be called to make like efforts, and to make them hopelessly, for a foundering ship!

CHAPTER XX EXAMINATION OF THE HOLD

NOVEMBER 15 to 20. — The examination of the hold has at last been made. Among the first things that were found was the case of picrate, perfectly intact, having neither been injured by the water, nor of course reached by the flames. Why it was not at once pitched into the sea I cannot say; but it was merely conveyed to the extremity of the island, and there it remains.

While they were below, Curtis and Dowlas made them- selves acquainted with the full extent of the mischief that had been done by the conflagration. They found that the deck and the cross-beams that supported it had been much less injured than they expected, and the thick, heavy planks had only been scorched very superficially. But the action of the fire on the flanks of the ship had been of a much more serious character; a long portion of the inside boarding had been burned away, and the very ribs of the vessel were con- siderably damaged; the oakum caulkings had all started away from the butt-ends and seams; so much so that it was little short of a miracle that the whole ship had not long since gaped completely open.

The captain and the carpenter returned to the deck with anxious faces. Curtis lost no time in assembling pas- sengers and crew, and announcing to them the facts of the case.

“My friends,” he said, “I am here to tell you that the Chancellor has sustained far greater injuries than we sus- pected, and that her hull is very seriously damaged. If we had been stranded anywhere else than on a barren reef, that may at any time be overwhelmed by a tempestuous sea, I should not have hesitated to take the ship to pieces, and con- struct a smaller vessel that might have carried us safely to land; but I dare not run the risk of remaining here. We are now 800 miles from the coast of Paramaribo, the nearest portion of Dutch Guiana, and in ten or twelve days, if the weather should be favorable, I believe we could reach the shore. What I now propose to do is to stop the leak by the best means we can command, and make at once for the nearest port.”

As no better plan seemed to suggest itself, Curtis’s proposal was unanimously accepted. Dowlas and his assistants im- mediately set to work to repair the charred frame-work of the ribs, and to stop the leak; they took care thoroughly to calk from the outside all the seams that were above low water mark; lower than that they were unable to work, and had to content themselves with such repairs as they could effect in the interior. But after

all the pains there is no doubt the Chancellor is not fit for a long voyage, and would be condemned as unseaworthy at any port at which we might put in.

To-day the 20th, Curtis having done all that human power could do to repair his ship, determined to put her to sea.

Ever since the Chancellor had been relieved of her cargo, and of the water in her hold, she had been able to float in the little natural basin into which she had been driven. The basin was enclosed on either hand by rocks that remained uncovered even at high water, but was sufficiently wide to allow the vessel to turn quite round at its broadest part, and by means of hawsers fastened on the reef to be brought with her bows towards the south; while, to prevent her being carried back on to the reef, she has been anchored fore and aft.

To all appearance, then, it seemed as though it would be an easy matter to put the Chancellor to sea; if the wind were favorable the sails would be hoisted; if otherwise, she would have to be towed through the narrow passage. All seemed simple. But unlooked-for difficulties had yet to be surmounted.

The mouth of the passage is guarded by a kind of ridge of basalt, which at high tide we knew was barely covered with sufficient water to float the Chancellor, even when entirely unfreighted. To be sure she had been carried over the obstacle once before, but then, as I have already said, she had been caught up by an enormous wave, and might have been said to be LIFTED over the barrier into her pres- ent position. Besides, on that ever memorable night, there had not only been the ordinary spring-tide, but an equinoctial tide, such a one as could not be expected to occur again for many months. Waiting was out of the question; so Curtis determined to run the risk, and to take advantage of the spring-tide, which would occur to-day, to make an attempt to get the ship, lightened as she was, over the bar; after which, he might ballast her sufficiently to sail.

The wind was blowing from the northwest, and conse- quently right in the direction of the passage. The captain, however, after a consultation, preferred to tow the ship over the ridge, as he considered it was scarcely safe to allow a vessel of doubtful stability at full sail to charge an obstacle that would probably bring her to a dead lock. Before the operation was commenced, Curtis took the precaution of having an anchor ready in the stern, for, in the event of the attempt being unsuccessful, it would be necessary to bring

the ship back to her present moorings. Two more anchors were next carried outside the passage, which was not more than two hundred feet in length. The chains were attached to the windlass, the sailors worked at the hand-spikes, and at four o’clock in the afternoon the Chancellor was in mo- tion.

High tide would be at twenty minutes past four, and at ten minutes before that time the ship had been hauled as far as her sea-range would allow; her keel grazed the ridge, and her progress was arrested. When the lowest part of her stern, however, just cleared the obstruction, Curtis deemed that there was no longer any reason why the mechanical ac- tion of the wind should not be brought to bear and con- tribute its assistance. Without delay, all sails were unfurled and trimmed to the wind. The tide was exactly at its height, passengers and crew together were at the windlass, M. Letourneur, Andre, Falsten, and myself being at the star- board bar. Curtis stood upon the poop, giving his chief attention to the sails; the lieutenant was on the forecastle; the boatswain by the helm. The sea seemed propitiously calm and; as it swelled gently to and fro, lifted the ship several times.

“Now, my boys,” said Curtis, in his calm clear voice, “all together! Off!”

Round went the windlass; click, click, clanked the chains as link by link they were forced through the hawse-holes.

The breeze freshened, and the masts gave to the pressure of the sails, but round and round we went, keeping time in regular monotony to the sing-song tune hummed by one of the sailors.

We had gained about twenty feet, and were redoubling our efforts when the ship grounded again.

And now no effort would avail; all was in vain; the tide began to turn: and the Chancellor would not advance an inch. Was there time to go back? She would inevitably go to pieces if left balanced upon the ridge. In an instant the cap- tain has ordered the sails to be furled, and the anchor dropped from the stern.

One moment of terrible anxiety, and all is well.

The Chancellor tacks to stern, and glides back into the basin, which is once more her prison.

“Well, captain,” says the boatswain, “what’s to be done now?”

“I don’t know,” said Curtis, “but we shall get across somehow.”

CHAPTER XXI THE “CHANCELLOR” RELEASED FROM HER PRISON

NOVEMBER 21 TO 24. — There was assuredly no time to be lost before we ought to leave Ham Rock reef. The barom- eter had been falling ever since the morning, the sea was getting rougher, and there was every symptom that the weather, hitherto so favorable, was on the point of breaking; and in the event of a gale the Chancellor must inevitably be dashed to pieces on the rocks.

In the evening, when the tide was quite low, and the rocks uncovered, Curtis, the boatswain, and Dowlas went to exam- ine the ridge which had proved so serious an obstruction. Falsten and I accompanied them. We came to the conclu- sion that the only way of effecting a passage was by cutting away the rocks with pikes over a surface measuring ten feet by six. An extra depth of nine or ten inches would give a sufficient gauge, and the channel might be accurately marked out by buoys; in this way it was conjectured the ship might be got over the ridge and so reach the deep water beyond.

“But this basalt is as hard as granite,” said the boatswain; “besides, we can only get at it at low water, and conse- quently could only work at it for two hours out of the twenty-four.”

“All the more reason why we should begin at once, boat- swain,” said Curtis.

“But if it is to take us a month, captain, perhaps by that time the ship may be knocked to atoms. Couldn’t we man- age to blow up the rock? we have got some powder aboard.”

“Not enough for that,” said the boatswain.

“You have something better than powder,” said Falsten.

“What’s that?” asked the captain.

“Picrate of potash,” was the reply.

And so the explosive substance with which poor Ruby had so grievously imperiled the vessel was now to serve her in good stead, and I now saw what a lucky thing it was that the case had been deposited safely on the reef, instead of be- ing thrown into the sea.

The sailors went off at once for their pikes, and Dowlas and his assistants, under the direction of Falsten, who, as an engineer, understood such matters, proceeded to hollow out a mine wherein to deposit the powder. At first we hoped that everything would be ready for the blasting to take place on the following morning, but when daylight appeared we found that the men, although they had labored with a will, had only been able to work for an hour at low water and that four tides must ebb before the mine had been sunk to the required depth.

Not until eight o'clock on the morning of the 23d was the work complete. The hole was bored obliquely in the rock, and was large enough to contain about ten pounds of explosive matter. Just as the picrate was being introduced into the aperture, Falsten interposed:

"Stop," he said, "I think it will be best to mix the picrate with common powder, as that will allow us to fire the mine with a match instead of the gun-priming which would be necessary to produce a shock. Besides, it is an understood thing that the addition of gunpowder renders picrate far more effective in blasting such rocks as this, as then the violence of the picrate prepares the way for the powder which, slower in its action, will complete the disseverment of the basalt."

Falsten is not a great talker, but what he does say is al- ways very much to the point. His good advice was imme- diately followed; the two substances were mixed together, and after a match had been introduced the compound was rammed closely into the hole.

Notwithstanding that the Chancellor was at a distance from the rocks that insured her from any danger of being injured by the explosion, it was thought advisable that the passengers and crew should take refuge in the grotto at the extremity of the reef, and even Mr. Kear, in spite of his many objections, was forced to leave the ship. Falsten, as soon as he had set fire to the match, joined us in our retreat.

The train was to burn for ten minutes, and at the end of that time the explosion took place; the report, on account of the depth of the mine, being muffled, and much less noisy than we had expected. But the operation had been perfectly successful. Before we reached the ridge we could see that the basalt had been literally reduced to powder, and that a little channel, already being filled by the rising tide, had been cut right through the obstacle. A loud hurrah rang through the air; our prison-doors were opened, and we were prison- ers no more.

At high tide the Chancellor weighed anchor and floated out into the sea, but she was not in a condition to sail until she had been ballasted; and for the next twenty-four hours the crew were busily employed in taking up blocks of stone, and such of the bales of cotton as had sustained the least amount of injury.

In the course of the day, M. Letourneur, Andre, Miss Herbey, and I took a farewell walk round the reef, and Andre, with artistic skill, carved on the wall of the grotto the word Chancellor — the designation of Ham Rock, which we had given to the reef — and the date of our running aground. Then we bade adieu to the scene of our three weeks' sojourn, where we had passed days that to some at least of our party will be reckoned as far from being the least happy of their lives.

At high tide this morning, the 24th, with low, top, and gallant sails all set, the Chancellor started on her onward way, and two hours later the last peak of Ham Rock had vanished below the horizon.

CHAPTER XXII A NEW DANGER

NOVEMBER 24 to December1. — Here we were then once more at sea, and although on board a ship of which the stability was very questionable, we had hopes, if the wind continued favorable, of reaching the coast of Guiana in the course of a few days.

Our way was southwest and consequently with the wind, and although Curtis would not crowd on all sail lest the extra speed should have a tendency to spring the leak afresh, the Chancellor made a progress that was quite satisfactory. Life on board began to fall back into its former routine; the feeling of insecurity and the consciousness that we were merely retracing our path doing much, however, to destroy the animated intercourse that would otherwise go on be- tween passenger and passenger.

The first few days passed without any incident worth re- cording, then on the 29th, the wind shifted to the north, and it became necessary to brace the yards, trim the sails, and take a starboard tack. This made the ship lurch very much on one side, and as Curtis felt that she was laboring far too heavily, he clewed up the top-gallants, prudently reckoning that, under the circumstances, caution was far more impor- tant than speed.

The night came on dark and foggy. The breeze fresh- ened considerably, and, unfortunately for us, hailed from the northwest. Although we carried no topsails at all, the ship seemed to heel over more than ever. Most of the passengers had retired to their cabins, but all the crew remained on deck, while Curtis never quitted his post upon the poop.

Toward two o’clock in the morning I was myself prepar- ing to go to my cabin, when Burke, one of the sailors who had been down into the hold, came on deck with the cry:

“Two feet of water below.”

In an instant Curtis and the boatswain had descended the ladder. The startling news was only too true; the sea-water was entering the hold, but whether the leak had sprung afresh, or whether the caulking in some of the seams was insufficient, it was then impossible to determine; all that could be done was to let the ship go with the wind, and wait for day.

At daybreak they sounded again — “Three feet of water!” was the report. I glanced at Curtis — his lips were white, but he had not lost his self-possession. He quietly in-

formed such of the passengers as were already on deck of the new danger that threatened us; it was better that they should know the worst, and the fact could not be long con- cealed. I told M. Letourneur that I could not help hoping that there might yet be time to reach the land before the last crisis came. Falsten was about to give vent to an expres- sion of despair, but he was soon silenced by Miss Herbey asserting her confidence that all would yet be well.

Curtis at once divided the crew into two sets, and made them work incessantly, turn and turn about, at the pumps. The men applied themselves to their task with resignation rather than with ardor; the labor was hard and scarcely re- paid them; the pumps were constantly getting out of order, the valves being choked up by the ashes and bits of cotton that were floating about in the hold, while every moment that was spent in cleaning or repairing them was so much time lost.

Slowly but surely the water continued to rise, and on the following morning the soundings gave five feet for its depth. I noticed that Curtis’s brow contracted each time that the boatswain or the lieutenant brought him their report. There was no doubt it was only a question of time, and not for an instant must the efforts for keeping down the level be re- laxed. Already the ship had sunk a foot lower in the water, and as her weight increased she no longer rose buoyantly with the waves, but pitched and rolled considerably.

All yesterday and last night the pumping continued, but still the sea gained upon us. The crew are weary and dis- couraged, but the second officer and the boatswain set them a fine example of endurance, and the passengers have now begun to take their turn at the pumps.

But all are conscious of toiling almost against hope; we are no longer secured firmly to the solid soil of the Ham Rock reef, but we are floating over an abyss which daily, nay hourly, threatens to swallow us into its depths.

CHAPTER XXIII AN ATTEMPT AT MUTINY

DECEMBER 2 and 3. — For four hours we have succeeded in keeping the water in the hold to one level; now, however, it is very evident that the time cannot be far distant when the pumps will be quite unequal to their task.

Yesterday Curtis, who does not allow himself a minute's rest, made a personal inspection of the hold. I, with the boatswain and carpenter, accompanied him. After dislodg- ing some of the bales of cotton we could hear a splashing, or rather gurgling sound; but whether the water was enter- ing at the original aperture, or whether it found its way in through a general dislocation of the seams, we were unable to discover. But, whichever might be the case, Curtis de- termined to try a plan which, by cutting off communication between the interior and exterior of the vessel, might, if only for a few hours, render her hull more water-tight. For this purpose he had some strong, well tarred sails drawn upward by ropes from below the keel, as high as the previous leak- ing place, and then fastened closely and securely to the side of the hull. The scheme was dubious, and the operation difficult, but for a time it was effectual, and at the close of the day the level of the water had actually been reduced by several inches. The diminution was small enough, but the consciousness that more water was escaping through the scupper-holes than was finding its way into the hold gave us fresh courage to persevere with our work.

The night was dark, but the captain carried all the sail he could, eager to take every possible advantage of the wind, which was freshening considerably. If he could have sighted a ship he would have made signals of distress, and would not have hesitated to transfer the passengers, and even have allowed the crew to follow, if they were ready to forsake him; for himself his mind was made up — he should remain on board the Chancellor until she foundered beneath his feet. No sail, however, hove in sight; consequently escape by such means was out of our power.

During the night the canvas covering yielded to the pres- sure of the waves, and this morning, after taking the sound- ing, the boatswain could not suppress an oath when he an- nounced, "Six feet of water in the hold!"

The ship, then, was filling once again, and already had sunk considerably below her previous water-line. With aching arms and bleeding hands we worked harder than ever

at the pumps, and Curtis makes those who are not pumping form a line and pass buckets, with all the speed they can, from hand to hand.

But all in vain! At half-past eight more water is re- ported in the hold, and some of the sailors, overcome by de- spair, refuse to work one minute longer.

The first to abandon his post was Owen, a man whom I have mentioned before as exhibiting something of a mu- tinous spirit. He is about forty years of age, and altogether unprepossessing in appearance; his face is bare, with the exception of a reddish beard, which terminates in a point; his forehead is furrowed with sinister looking wrinkles, his lips curl inward, and his ears protrude, while his bleared and bloodshot eyes are encircled with thick red rings.

Among the five or six other men who had struck work I noticed Jynxstrop, the cook, who evidently shared all Owen’s ill-feelings.

Twice did Curtis order the men back to the pumps, and twice did Owen, acting as spokesman for the rest, refuse; and when Curtis made a step forward as though to approach him, he said savagely:

“I advise you not to touch me,” and walked away to the forecastle.

Curtis descended to his cabin, and almost immediately re- turned with a loaded revolver in his hand.

For a moment Owen surveyed the captain with a frown of defiance; but at a sign from Jynxstrop he seemed to recollect himself, and, with the remainder of the men, he returned to his work.

CHAPTER XXIV CURTIS RESOLVES TO ABANDON THE SHIP

DECEMBER 4. — The first attempt at mutiny being thus

happily suppressed, it is to be hoped that Curtis will succeed

as well in future. An insubordinate crew would render us

powerless indeed.

Throughout the night the pumps were kept, without respite, steadily at work, but without producing the least sensible benefit. The ship became so water-logged and heavy that she hardly rose at all to the waves, which con- sequently often washed over the deck and contributed their part toward aggravating our case. Our situation was rapidly becoming as terrible as it had been when the fire was raging in the midst of us; and the prospect of being swallowed by the devouring billows was no less formidable than that of perishing in the flames.

Curtis kept the men up to the mark, and, willing or unwill- ing, they had no alternative but to work on as best they might; but in spite of all their efforts, the water perpetually rose, till, at length, the men in the hold who were passing the buckets found themselves immersed up to their waists, and were obliged to come on deck.

This morning, after a somewhat protracted consultation with Walter and the boatswain, Curtis resolved to abandon the ship. The only remaining boat was far too small to hold us all, and it would therefore be necessary to construct a raft that should carry those who could not find room in her. Dowlas, the carpenter, Mr. Falsten, and ten sailors were told off to put the raft in hand, the rest of the crew being ordered to continue their work assiduously at the pumps, until the time came and everything was ready for embarkation.

Hatchet or saw in hand, the carpenter and his assistants made a beginning without delay, by cutting and trimming the spare yards and extra spars to a proper length. These were then lowered into the sea — which was propitiously calm — so as to favor the operation (which otherwise would have been very difficult) of lashing them together into a firm framework, about forty feet long and twenty-five feet wide, upon which the platform was to be supported.

I kept my own place steadily at the pumps, and Andre Le- tourneur worked at my side. I often noticed his father glance at him sorrowfully, as though he wondered what would become of him if he had to struggle with waves to which even the strongest man could hardly fail to succumb. But come what may, his father will never forsake him, and I myself shall not be wanting in rendering him whatever assistance I can.

Mrs. Kear, who had been for some time in a state of drowsy unconsciousness, was not informed of the immediate danger; but when Miss Herbey, looking somewhat pale with fatigue, paid one of her flying visits to the deck, I warned her to take every precaution for herself, and to be ready for any emergency.

“Thank you, doctor, I am always ready,” she cheerfully replied, and returned to her duties below. I saw Andre follow the young girl with his eyes, and a look of melancholy interest passed over his countenance.

Toward eight o’clock in the evening the framework for the raft was almost complete, and the men were lower- ing empty barrels, which had first been securely bunged, and were lashing them to the woodwork to insure its floating.

Two hours later and suddenly there arose the startling cry, “We are sinking! we are sinking!”

Up to the poop rushed Mr. Kear, followed immediately by Falsten and Miss Herbey, who were bearing the inan- imate form of Mrs. Kear. Curtis ran to his cabin, instantly returning with a chart, a sextant, and a compass in his hand.

The scene that followed will ever be engraven in my memory; the cries of distress, the general confusion, the frantic rush of the sailors toward the raft that was not yet ready to support them, can never be forgotten. The whole period of my life seemed to be concentrated into that terrible moment when the planks bent below my feet and the ocean yawned beneath me.

Some of the sailors had taken their delusive refuge in the shrouds, and I was preparing to follow them when a hand was laid upon my shoulder.. Turning round I beheld M. Letourneur, with tears in his eyes, pointing toward his son. “Yes, my friend,” I said, pressing his hand, “we will save him, if possible.”

But Curtis had already caught hold of the young man, and was hurrying him to the main-mast shrouds, when the Chancellor, which had been scudding along rapidly with the wind, stopped suddenly, with a violent shock, and began to settle. The sea rose over my ankles, and almost instinc- tively I clutched at the nearest rope. All at once, when it seemed all over, the ship ceased to sink, and hung motionless in mid-ocean.

CHAPTER XXV WHILE THERE'S LIFE THERE'S HOPE

NIGHT of December 4. — Curtis caught young Letourneur again in his arms, and, running with him across the flooded deck, deposited him safely in the starboard shrouds, whither his father and I climbed up beside him.

I now had time to look about me. The night was not very dark, and I could see that Curtis had returned to his post upon the poop; while in the extreme aft near the taff- rail, which was still above water, I could distinguish the forms of Mr. and Mrs. Kear, Miss Herbey, and Mr. Fal- sten. The lieutenant and the boatswain were on the far end of the forecastle; the remainder of the crew in the shrouds and top-masts.

By the assistance of his father, who carefully guided his feet up the rigging, Andre was hoisted into the main-top. Mrs. Kear could not be induced to join him in his elevated position, in spite of being told that if the wind were to freshen she would inevitably be washed overboard by the waves; nothing could induce her to listen to remonstrances, and she insisted upon remaining on the poop — Miss Herbey, of course, staying by her side.

As soon as the captain saw the Chancellor was no longer sinking, he set to work to take down all the sails — yards and all — and the top-gallants, in the hope that by removing everything that could compromise the equilibrium of the ship he might diminish the chance of her capsizing alto- gether.

"But may she not founder at any moment?" I said to

Curtis, when I had joined him for a while upon the poop.

"Everything depends upon the weather," he replied, in his calmest manner; "that, of course, may change at any hour. One thing, however, is certain, the Chancellor pre- serves her equilibrium for the present."

"But do you mean to say," I further asked, "that she can sail with two feet of water over her deck?"

"No, Mr. Kazallon, she can't sail, but she can drift with the wind; and if the wind remains in its present quarter, in the course of a few days we might possibly sight the

coast. Besides, we shall have our raft as a last resource; in a few hours it will be ready, and at daybreak we can embark."

"You have not, then," I added, "abandoned all hope even yet?" I marveled at his composure.

"While there's life there's hope, you know, Mr. Kazallon; out of a hundred chances, ninety-nine may be against us, but perhaps the odd one may be in our favor. Besides, I believe that our case is not without precedent. In the year 1795, a three-master, the Juno, was precisely in the same half-sunk, water-logged condition as ourselves; and yet, with her passengers and crew clinging to her top-masts, she drifted for twenty days, until she came in sight of land, when those who had survived the deprivation and fatigue were saved. So let us not despair; let us hold on to the hope that the survivors of the Chancellor may be equally fortunate."

I was only too conscious that there was not much to be said in support of Curtis's sanguine view of things, and that the force of reason pointed all the other way; but I said nothing, deriving what comfort I could from the fact that the captain did not yet despond of an ultimate rescue.

As it was necessary to be prepared to abandon the ship almost at a moment's notice, Dowlas was making every exertion to hurry on the construction of the raft. A little before midnight he was on the point of conveying some planks for this purpose, when, to his astonishment and horror, he found that the framework had totally disap- peared. The ropes that had attached it to the vessel had snapped as she became vertically displaced, and probably it had been adrift for more than an hour.

The crew were frantic at this new misfortune, and shout- ing "Overboard with the masts!" they began to cut down the rigging preparatory to taking possession of the masts for a new raft.

But here Curtis interposed:

"Back to your places, my men; back to your places. The ship will not sink yet, so don't touch a rope until I give you leave."

The firmness of the captain's voice brought the men to their senses, and although some of them could ill disguise their reluctance, all returned to their posts.

When daylight had sufficiently advanced Curtis mounted the mast, and looked around for the missing raft; but it was nowhere to be seen. The sea was far too rough for the men to venture to take out the whale-boat in search of it, and there was no choice but to set to work and to construct a new raft immediately.

Since the sea has become so much rougher, Mrs. Kear has been induced to leave the poop, and has managed to join M. Letourneur and his son on the main-top, where she lies in a state of complete prostration. I need hardly add that Miss Herbey continues in her unwearied attendance. The space to which these four people are limited is necessarily very small, nowhere measuring twelve feet across: to prevent them losing their balance some spars have been lashed from shroud to shroud, and for the convenience of the two ladies Curtis has contrived to make a temporary awning of a sail. Mr. Kear has installed himself with Silas Huntly on the foretop.

A few cases of preserved meat and biscuit and some barrels of water, that floated between the masts after the submersion of the deck, have been hoisted to the top-mast and fastened firmly to the stays. These are now our only provisions.

CHAPTER XXVI MR. KEAR MAKES A BUSINESS DEAL

DECEMBER 5. — The day was very hot. December in lati- tude 16 deg. N. is a summer month, and unless a breeze should rise to temper the burning sun, we might expect to suffer from an oppressive heat.

The sea still remained very rough, and as the heavy waves broke over the ship as though she were a reef, the foam flew up to the very top-masts, and our clothes were perpetually drenched by the spray.

The Chancellor’s hull is three-fourths immerged; besides the three masts and the bowsprit, to which the whale-boat was suspended, the poop and the forecastle are the only por- tions that now are visible; and as the intervening section of the deck is quite below the water, these appear to be con- nected only by the framework of the netting that runs along the vessel’s sides. Communication between the top-masts is extremely difficult, and would be absolutely precluded, were it not that the sailors, with practiced dexterity, manage to hoist themselves about by means of the stays. For the pas- sengers, cowering on their narrow and unstable platform, the spectacle of the raging sea below was truly terrific; every wave that dashed over the ship shook the masts till they trembled again, and one could venture scarcely to look or to think lest he should be tempted to cast himself into the vast abyss.

Meanwhile, the crew worked away with all their remain- ing vigor at the second raft, for which the top-gallants and yards were all obliged to be employed; the planks, too, which were continually being loosened and broken away by the violence of the waves from the partitions of the ship, were rescued before they had drifted out of reach, and were brought into use. The symptoms of the ship foundering did not appear to be immediate; so that Curtis insisted upon the raft being made with proper care to insure its strength; we were still several hundred miles from the coast of Guiana, and for so long a voyage it was indispensable to have a struc- ture of considerable solidity. The reasonableness of this was self-apparent, and as the crew had recovered their as- surance they spared no pains to accomplish their work effec- tually.

Of all the number, there was but one, an Irishman, named O’Ready, who seemed to question the utility of all their toil. He shook his head with an oracular gravity. He is an old- ish man, not less than sixty, with his hair and beard bleached with the storms of

many travels. As I was making my way toward the poop, he came up to me and began talking.

“And why, bedad, I’d like to know, why is it that they’ll all be afther lavin’ the ship?”

He turned his quid with the most serene composure, and continued:

“And isn’t it me myself that’s been wrecked nine times already? and sure, poor fools are they that ever have put their trust in rafts or boats; sure and they found a wathery grave. Nay, nay; while the ould ship lasts, let’s stick to her, says I.”

Having thus unburdened his mind he relapsed into si- lence, and soon went away.

About three o’clock I noticed that Mr. Kear and Silas Huntly were holding an animated conversation in the fore- top. The petroleum merchant had evidently some difficulty in bringing the ex-captain round to his opinion, for I saw him several times shake his head as he gave long and scrutin- izing looks at the sea and sky. In less than an hour after- ward I saw Huntly let himself down by the forestays and clamber along to the fore- castle, where he joined the group of sailors, and I lost sight of him.

I attached little importance to the incident, and shortly afterward joined the party in the main-top, where we con- tinued talking for some hours. The heat was intense, and if it had not been for the shelter afforded by the sail-tent, would have been unbearable. At five o’clock we took as re- freshment some dried meat and biscuit, each individual be- ing also allowed half a glass of water. Mrs. Kear prostrate with fever, could not touch a mouthful; and nothing could be done by Miss Herbey to relieve her, beyond occasionally moistening her parched lips. The unfortunate lady suffers greatly, and sometimes I am inclined to think that she will succumb to the exposure and privation. Not once had her husband troubled himself about her; but when shortly after- ward I heard him hail some of the sailors on the fore-castle and ask them to help him down from the foretop, I began to think that the selfish fellow was coming to join his wife.

At first the sailors took no notice of his request, but on his repeating it with the promise of paying them handsomely for their services, two of them, Burke and Sandon, swung themselves along the netting into the shrouds, and were soon at his side.

A long discussion ensued. The men evidently were ask- ing more than Mr. Kear was inclined to give, and at one time it seemed as though the negotiation would fall through

altogether. But at length the bargain was struck, and I saw Mr. Kear take a bundle of paper dollars from his waistcoat pocket, and hand a number of them over to one of the men. The man counted them carefully, and from the time it took him, I should think that he could not have pocketed anything less than a hundred dollars.

The next business was to get Mr. Kear down from the foretop, and Burke and Sandon proceeded to tie a rope round his waist, which they afterward fastened to the fore- stay; then, in a way which provoked shouts of laughter from their mates, they gave the unfortunate man a shove, and sent him rolling down like a bundle of dirty clothes on to the forecastle.

I was quite mistaken as to his object. Mr. Kear had no intention of looking after his wife, but remained by the side of Silas Huntly until the gathering darkness hid them both from view.

As night drew on, the wind grew calmer, but the sea re- mained very rough. The moon had been up ever since four in the afternoon, though she only appeared at rare intervals between the clouds. Some long lines of vapor on the hori- zon were tinged with a rosy glare that foreboded a strong breeze for the morrow, and all felt anxious to know from which quarter the breeze would come, for any but a north- easter would bear the frail raft on which we were to embark far away from land.

About eight o’clock in the evening, Curtis mounted to the main-top, but he seemed preoccupied and anxious, and did not speak to anyone. He remained for a quarter of an hour, then after silently pressing my hand, he returned to his old post.

I laid myself down in the narrow space at my disposal, and tried to sleep; but my mind was filled with strange fore- bodings, and sleep was impossible. The very calmness of the atmosphere was oppressive; scarcely a breath of air vibrated through the metal rigging, and yet the sea rose with a heavy swell as though it felt the warnings of a coming tempest.

All at once, at about eleven o’clock, the moon burst brightly forth through a rift in the clouds, and the waves sparkled again as if illuminated by a submarine glimmer. I start up and look around me. Is it merely imagination? or do I really see a black speck floating, on the dazzling white- ness of the waters, a speck that cannot be a rock, because it rises and falls with the heaving motion of the billows? But the moon once

again becomes overclouded; the sea is darkened, and I return to my uneasy couch close to the lar- board shrouds.

CHAPTER XXVII THE WHALE-BOAT MISSING

DECEMBER 6. — I must have fallen asleep for a few hours, when, at four o'clock in the morning, I was rudely aroused by the roaring of the wind, and could distinguish Curtis's voice as he shouted in the brief intervals between the heavy gusts.

I got up, and holding tightly to the purlin — for the waves made the masts tremble with their violence — I tried to look around and below me. The sea was literally raging beneath, and great masses of livid-looking foam were dashing be- tween the masts, which were oscillating terrifically. It was still dark, and I could only faintly distinguish two figures in the stern, whom, by the sound of their voices, that I caught occasionally above the tumult, I made out to be Curtis and the boatswain.

Just at that moment a sailor, who had mounted to the main-top to do something to the rigging, passed close be- hind me.

"What's the matter?" I asked.

"The wind has changed," he answered, adding something which I could not hear distinctly, but which sounded like "dead against us."

Dead against us! then. thought I, the wind had shifted to the southwest, and my last night's forebodings had been correct.

When daylight at length appeared, I found the wind, al- though not blowing actually from the southwest, had veered round to the northwest, a change which was equally dis- astrous to us, inasmuch as it was carrying us away from land. Moreover, the ship had sunk considerably during the night, and there were now five feet of water above deck; the side netting had completely disappeared, and the fore- castle and the poop were now all but on a level with the sea, which washed over them incessantly. With all possible ex- pedition Curtis and his crew were laboring away at their raft, but the violence of the swell materially impeded their operations, and it became a matter of doubt as to whether the woodwork would not fall asunder before it could be properly fastened together.

As I watched the men at their work, M. Letourneur, with one arm supporting his son, came out and stood by my side.

“Don’t you think this main-top will soon give way?” he said, as the narrow platform on which we stood creaked and groaned with the swaying of the masts.

Miss Herbey heard his words and pointing toward Mrs. Kear, who was lying prostrate at her feet, asked what we thought ought to be done.

“We can do nothing but stay where we are,” I replied.

“No,” said Andre, “this is our best refuge; I hope you are not afraid.”

“Not for myself,” said the young girl quietly, “only for those to whom life is precious.”

At a quarter to eight we heard the boatswain calling to the sailors in the bows.

“Ay, ay, sir,” said one of the men — O’Ready, I think.

“Where’s the whale-boat?” shouted the boatswain in a loud voice.

“I don’t know, sir. Not with us,” was the reply.

“She’s gone adrift, then!”

And sure enough the whale-boat was no longer hanging from the bowsprit; and in a moment the discovery was made that Mr. Kear, Silas Huntly, and three sailors, — a Scotch- man and two Englishmen, — were missing. Afraid that the Chancellor would founder before the completion of the raft, Kear and Huntly had plotted together to effect their escape, and had bribed the three sailors to seize the only remaining boat.

This, then, was the black speck that I had seen during the night. The miserable husband had deserted his wife, the faithless captain had abandoned the ship that had once been under his command.

“There are five saved, then,” said the boatswain.

“Faith, an it’s five lost ye’ll be maning,” said O’Ready; and the state of the sea fully justified his opinion.

The crew were furious when they heard of the surrepti- tious flight, and loaded the fugitives with all the invectives they could lay their tongues to. So enraged were they at

the dastardly trick of which they had been made the dupes, that if chance should bring the deserters again on board I should be sorry to answer for the consequences.

In accordance with my advice, Mrs. Kear has not been in- formed of her husband’s disappearance. The unhappy lady is wasting away with a fever for which we are powerless to supply a remedy, for the medicine-chest was lost when the ship began to sink. Nevertheless, I do not think we have anything to regret on that score, feeling, as I do, that in a case like Mrs. Kear’s, drugs would be of no avail.

CHAPTER XXVIII MRS. KEAR SUCCUMBS TO FEVER

DECEMBER 6 continued. — The Chancellor no longer main- tained her equilibrium; we felt that she was gradually going down, and her hull was probably breaking up. The main- top was already only ten feet above water, while the bow- sprit, with the exception of the extreme end, that rose obliquely from the waves, was entirely covered.

The Chancellor’s last day, we felt, had come.

Fortunately the raft was all but finished, and unless Curtis preferred to wait till morning, we should be able to embark in the evening.

The raft is a very solid structure. The spars that form the framework are crossed one above another and lashed together with stout ropes, so that the whole pile rises a couple of feet above the water. The upper platform is con- structed from the planks that were broken from the ship’s sides by the violence of the waves, and which had not drifted away. The afternoon has been employed in charging the raft with such provisions, sails, tools, and instruments as we have been able to save.

And how can I attempt to give any idea of the feelings with which, one and all, we now contemplated the fate be- fore us? For my own part, I was possessed rather by a benumbed indifference than by any sense of genuine resigna- tion. M. Letourneur was entirely absorbed in his son, who, in his turn, thought only of his father, at the same time exhibiting a Christian fortitude, which was shown by no one else of the party except Miss Herbey, who faced her danger with the same brave composure. Incredible as it may seem, Falsten remained the same as ever, occupying himself with writing down figures and memoranda in his pocketbook. Mrs. Kear, in spite of all that Miss Herbey could do for her, was evidently dying.

With regard to the sailors, two or three of them were calm enough, but the rest had well-nigh lost their wits. Some of the more ill-disposed among them seemed inclined to run into excesses; and their conduct, under the bad in- fluence of Owen and Jynxstrop, made it doubtful whether they would submit to control when once we were limited to the narrow dimensions of the raft. Lieutenant Walter, al- though his courage never failed him, was worn out with bodily fatigue, and obliged to give up all active labor; but Curtis and the boatswain were resolute, energetic and firm as ever. To borrow an

expression from the language of metallurgic art, they were men “at the highest degree of hardness.”

At five o’clock one of our companions in misfortune was released from her sufferings. Mrs. Kear, after a most dis- tressing illness, through which her young companion tended her with the most devoted care, has breathed her last. A few deep sighs and all was over, and I doubt whether the sufferer was ever conscious of the peril of her situation.

The night passed on without further incident. Toward morning I touched the dead woman’s hand, and it was cold and stiff. The corpse could not remain any longer on the main-top, and after Miss Herbey and I had carefully wrapped the garments about it, with a few short prayers the body of the first victim of our miseries was committed to the deep.

As the sea closed over the body I heard one of the men in the shrouds say:

“There goes a carcass that we shall be sorry we have thrown away!”

I looked round sharply. It was Owen who had spoken. But horrible as were his words, the conviction was forced upon my mind that the day could not be far distant when we must want for food.

CHAPTER XXIX WE EMBARK ON THE RAFT

DECEMBER 7. — The ship was sinking rapidly; the water had risen to the fore-top; the poop and forecastle were completely submerged; the top of the bowsprit had disappeared, and only the three mast-tops projected from the waves.

But all was ready on the raft; an erection had been made on the fore to hold a mast, which was supported by shrouds fastened to the sides of the platform; this mast carried a large royal.

Perhaps, after all, these few frail planks will carry us to the shore which the Chancellor has failed to reach; at any rate, we cannot yet resign all hope.

We were just on the point of embarking at 7 A. M. when the Chancellor all at once began to sink so rapidly that the carpenter and men who were on the raft were obliged with all speed to cut the ropes that secured it to the vessel, to pre- vent it from being swallowed up in the eddying waters.

Anxiety, the most intense, took possession of us all. At the very moment when the ship was descending into the fathomless abyss, the raft, our only hope of safety, was drifting off before our eyes. Two of the sailors and an apprentice, beside themselves with terror, threw themselves headlong into the sea; but it was evident from the very first they were quite powerless to combat the winds and waves. Escape was impossible; they could neither reach the raft nor return to the ship. Curtis tied a rope round his waist and tried to swim to their assistance; but long be- fore he could reach them, the unfortunate men, after a vain struggle for life, sank below the waves and were seen no more. Curtis, bruised and beaten with the surf that raged about the mast-heads, was hauled back to the ship.

Meantime, Dowlas and his men, by means of some spars which they used as oars, were exerting themselves to bring back the raft, which had drifted about two cables'-lengths away; but, in spite of all their efforts, it was fully an hour — an hour which seemed to us, waiting as we were with the water up to the level of the top masts, like an eternity — be- fore they succeeded in bringing the raft alongside, and lash- ing it once again to the Chancellor's main-mast.

Not a moment was then to be lost. The waves were eddying like a whirlpool around the submerged vessel, and numbers of enormous airbubbles were rising to the surface of the water.

The time was come. At Curtis's word, "Embark!" we all hurried to the raft. Andre, who insisted upon seeing Miss Herbey go first, was helped safely on to the platform, where his father immediately joined him. In a very few minutes all except Curtis and old O'Ready had left the Chancellor.

Curtis remained standing on the main-top, deeming it not only his duty, but his right, to be the last to leave the vessel he had loved so well, and the loss of which he so much de- plored.

"Now then, old fellow, off of this!" cried the captain to the old Irishman, who did not move.

"And is it quite sure ye are that she's sinkin'?" he said.

"Ay, ay! sure enough, my man; and you'd better look sharp."

"Faith, then, and I think I will;" and not a moment too soon (for the water was up to his waist) he jumped on to the raft.

Having cast one last, lingering look around him, Curtis then left the ship; the rope was cut, and we went slowly adrift.

All eyes were fixed upon the spot where the Chancellor lay foundering. The top of the mizzen was the first to dis- appear, then followed the main-top; and soon, of what had been a noble vessel, not a vestige was to be seen.

CHAPTER XXX OUR SITUATION CRITICAL

WILL this frail boat, forty feet by twenty, bear us in safety? Sink it cannot; the material of which it is com- posed is of a kind that must surmount the waves. But it is questionable whether it will hold together. The cords that bind it will have a tremendous strain to bear in resist- ing the violence of the sea. The most sanguine among us trembles to face the future; the most confident dares to think only of the present. After the manifold perils of the last seventy-two days' voyage all are too agitated to look forward without dismay to what in all human probability must be a time of the direst distress.

Vain as the task may seem, I will not pause in my work of registering the events of our drama, as scene after scene they are unfolded before our eyes.

Of the twenty-eight persons who left Charleston in the Chancellor, only eighteen are left to huddle together upon this narrow raft; this number includes the five passengers, namely, M. Letourneur, Andre, Miss Herbey, Falsten, and myself; the ship's officers, Captain Curtis, Lieutenant Wal- ter, the boatswain, Hobart the steward, Jynxstrop the cook, and Dowlas the carpenter; and seven sailors, Austin, Owen, Wilson, O'Ready, Burke, Sandon, and Flaypole.

Such are the passengers on the raft; it is but a brief task to enumerate their resources.

The greater part of the provisions in the store-room were destroyed at the time when the ship's deck was submerged, and the small quantity that Curtis has been able to save will be very inadequate to supply the wants of eighteen people, who too probably have many days to wait ere they sight either land or a passing vessel. One cask of biscuit, an- other of preserved meat, a small keg of brandy, and two barrels of water complete our store, so that the utmost frugality in the distribution of our daily rations becomes absolutely necessary.

Of spare clothes we have positively none; a few sails will serve for shelter by day, and covering by night. Dowlas has his carpenter's tools, we have each a pocket- knife, and O'Ready an old tin pot, of which he takes the most tender care; in addition to these, we are in possession of a sextant, a compass, a chart, and a metal tea-kettle, everything else that was placed on deck in readiness for the first raft having been lost in the partial submersion of the vessel.

Such then is our situation; critical indeed, but after all perhaps not desperate. We have one great fear; some there are among us whose courage, moral as well as physical, may give way, and over failing spirits such as these we may have no control.

CHAPTER XXXI FIRST DAY ON THE RAFT

DECEMBER 7 continued. — Our first day on the raft has passed without any special incident. At eight o'clock this morning Curtis asked our attention for a moment.

"My friends," he said, "listen to me. Here on this raft, just as when we were on board the Chancellor, I consider myself your captain; and as your captain, I expect that all of you will strictly obey my orders. Let me beg of you, one and all, to think solely of our common welfare; let us work with one heart and with one soul, and may Heaven protect us!"

After delivering these few words with an emotion that evidenced their earnestness, the captain consulted his com- pass, and found that the freshening breeze was blowing from the north. This was fortunate for us, and no time was to be lost in taking advantage of it to speed us on our dubious way. Dowlas was occupied in fixing the mast into the socket that had already been prepared for its reception, and in order to support it more firmly he placed spurs of wood, forming arched buttresses, on either side. While he was thus employed the boatswain and the other seamen were stretching the large royal sail on the yard that had been reserved for that purpose.

By half-past nine the mast was hoisted, and held firmly in its place by some shrouds attached securely to the sides of the raft; then the sail was run up and trimmed to the wind, and the raft began to make a perceptible progress under the brisk breeze.

As soon as we had once started, the carpenter set to work to contrive some sort of a rudder, that would enable us to maintain our desired direction. Curtis and Falsten assisted him with some serviceable suggestions, and in a couple of hours' time he had made and fixed to the back of the raft a kind of paddle, very similar to those used by the Malays.

At noon, after the necessary preliminary observations, Curtis took the altitude of the sun. The result gave lat. 15 deg. 7' N. by long. 49 deg. 35' W. as our position, which, on consulting the chart, proved to be about 650 miles northeast of the coast of Paramaribo in Dutch Guiana.

Now even under the most favorable circumstances, with trade-winds and weather always in our favor, we can not by any chance hope to make more than ten or twelve

miles a day, so that the voyage cannot possibly be performed under a period of two months. To be sure there is the hope to be indulged that we may fall in with a passing vessel, but as the part of the Atlantic into which we have been driven is intermediate between the tracks of the French and English transatlantic steamers either from the Antilles or the Brazils, we cannot reckon at all upon a contingency happen- ing in our favor; while if a calm should set in, or worse still, if the wind were to blow from the east, not only two months, but twice, nay, three times that length of time will be required to accomplish the passage.

At best, however, our provisions, even though used with the greatest care, will barely last three months. Curtis has called us into consultation, and as the working of the raft does not require such labor as to exhaust our physical strength, all have agreed to submit to a regimen which, although it will suffice to keep us alive, will certainly not fully satisfy the cravings of hunger and thirst.

As far as we can estimate we have somewhere about 500 lbs. of meat and about the same quantity of biscuit. To make this last for three months we ought not to consume very much more than 5 lbs. a day of each, which, when divided among eighteen people, will make the daily ration 5 oz. of meat and 5 oz. of biscuit for each person. Of water we have certainly not more than 200 gallons, but by reduc- ing each person's allowance to a pint a day, we hope to eke out that, too, over the space of three months.

It is arranged that the food shall be distributed under the boatswain's superintendence every morning at ten o'clock. Each person will then receive his allowance of meat and bis- cuit, which may be eaten when and how he pleases. The water will be given out twice a day — at ten in the morn- ing and six in the evening; but as the only drinking-vessels in our possession are the teakettle and the old Irishman's tin pot, the water has to be consumed immediately on distribu- tion. As for the brandy, of which there are only five gallons, it will be doled out with the strictest limitation, and no one will be allowed to touch it except with the captain's express permission.

I should not forget that there are two sources from which we may hope to increase our store. First, any rain that may fall will add to our supply of water, and two empty barrels have been placed ready to receive it; secondly, we hope to do something in the way of fishing, and the sailors have already begun to prepare some lines.

All have mutually agreed to abide by the rules that have been laid down, for all are fully aware that by nothing but the most precise regimen can we hope to avert the horrors of famine, and forewarned by the fate of many who in similar circumstances have miserably perished, we are determined to do all that prudence can suggest for husbanding our stores.

CHAPTER XXXII WE CATCH A SUPPLY OF FISH

DECEMBER 8 to 17. — When night came we wrapped our- selves in our sails. For my own part, worn out with the fatigue of the long watch in the top-mast, I slept for several hours; M. Letourneur and Andre did the same, and Miss Herbey obtained sufficient rest to relieve the tired expression that her countenance had lately being wearing. The night passed quietly. As the raft was not very heavily laden the waves did not break over it at all, and we were consequently able to keep ourselves perfectly dry. To say the truth, it was far better for us that the sea should remain somewhat boisterous, for any diminution in the swell of the waves would indicate that the wind had dropped, and it was with a feeling of regret that when the morning came I had to note down "weather calm" in my journal.

In these low latitudes the heat in the day-time is so in- tense, and the sun burns with such an incessant glare, that the entire atmosphere becomes pervaded with a glowing vapor. The wind, too, blows only in fitful gusts, and through long intervals of perfect calm the sails flap idly and uselessly against the mast. Curtis and the boatswain, how- ever, are of opinion that we are not entirely dependent on the wind. Certain indications, which a sailor's eye alone could detect, make them almost sure that we are being carried along by a westerly current, that flows at the rate of three or four miles an hour. If they are not mistaken, this is a circumstance that may materially assist our pro- gress, and at which we can hardly fail to rejoice, for the high temperature often makes our scanty allowance of water quite inadequate to allay our thirst.

But with all our hardships I must confess that our con- dition is far preferable to what it was when we were still clinging to the Chancellor. Here at least we have a com- paratively solid platform beneath our feet, and we are re- lieved from the incessant dread of being carried down with a foundering vessel. In the day time we can move about with a certain amount of freedom, discuss the weather, watch the sea, and examine our fishing-lines; while at night we can rest securely under the shelter of our sails.

"I really think, Mr. Kazallon," said Andre Letourneur to me a few days after we had embarked, "that our time on board the raft passes as pleasantly as it did upon Ham Rock; and the raft has one advantage even over the reef, for it is capable of motion."

“Yes, Andre,” I replied, “as long as the wind continues favorable the raft has decidedly the advantage; but sup- posing the wind shifts; what then?”

“Oh, we mustn’t think about that,” he said; “let us keep up our courage while we can.”

I felt that he was right, and that the dangers we had escaped should make us more hopeful for the future; and I think that nearly all of us are inclined to share his opin- ion.

Whether the captain is equally sanguine I am unable to say. He holds himself very much aloof, and as he evi- dently feels that he has the great responsibility of saving other lives than his own, we are reluctant to disturb his silent meditations.

Such of the crew as are not on watch spend the greater portion of their time in dozing on the fore part of the raft. The aft, by the captain’s orders, has been reserved for the use of us passengers, and by erecting some uprights we have contrived to make a sort of tent, which affords some shelter from the sun. On the whole our bill of health is tolerably satisfactory. Lieutenant Walter is the only invalid, and he, in spite of all our careful nursing, seems to get weaker every day.

Andre Letourneur is the life of our party, and I have never appreciated the young man so well. His originality of perception makes his conversation both lively and in- teresting, and as he talks, his wan and suffering countenance lights up with an intelligent animation. His father seems to become more devoted to him than ever, and I have seen him sit for an hour at a time, with his hand resting on his son’s, listening eagerly to his every word.

Miss Herbey occasionally joins in our conversation, but although we all do our best to make her forget that she has lost those who should have been her natural protectors, M. Letourneur is the only one among us to whom she speaks without a certain reserve. To him, whose age gives him something of the authority of a father, she has told the his- tory of her life — a life of patience and self-denial such as not unfrequently falls to the lot of orphans. She had been, she said, two years with Mrs. Kear, and although now left alone in the world, homeless and without resources, hope for the future does not fail her. The young lady’s modest deportment and energy of character command the respect of all on board, and I do not think that even the coarsest of the sailors has either by word or gesture acted toward her in a way that she could deem offensive.

The 12th, 13th, and 14th of December passed away with- out any change in our condition. The wind continued to blow in irregular gusts, but always in the same direction, and the helm, or rather the paddle at the back of the raft, has never once required shifting; and the watch, who are posted on the fore, under orders to examine the sea with the most scrupulous attention, have had no change of any kind to report.

At the end of the week we found ourselves growing ac- customed to our limited diet, and as we had no manual exer- tion, and no wear and tear of our physical constitution, we managed very well. Our greatest deprivation was the short supply of water, for, as I said before, the unmitigated heat made our thirst at times very painful.

On the 15th we held high festival. A shoal of fish, of the sparus tribe, swarmed round the raft, and although our tackle consisted merely of long cords baited with morsels of dried meat stuck upon bent nails, the fish were so voracious that in the course of a couple of days we had caught as many as weighed almost 200 lbs. some of which were grilled, and others boiled in sea-water over a fire made on the fore part of the raft. This marvelous haul was doubly welcome, in- asmuch as it not only afforded us a change of diet, but enabled us to economize our stores; if only some rain had fallen at the same time we would have been more than satisfied.

Unfortunately the shoal of fish did not remain long in our vicinity. On the 17th they all disappeared, and some sharks, not less than twelve or fifteen feet long, belonging to the species of the spotted dog-fish, took their place. These horrible creatures have black backs and fins, covered with white spots and stripes. Here, on our low raft, we seemed almost on a level with them, and more than once their tails have struck the spars with terrible violence. The sailors manage to keep them at a distance by means of handspikes, but I shall not be surprised if they persist in following us, instinctively intelligent that we are destined to become their prey. For myself, I confess that they give me a feeling of uneasiness; they seem to me like monsters of ill-omen.

CHAPTER XXXIII MUTINY ON THE RAFT

DECEMBER 18 to 20. — On the 18th the wind freshened a little, but as it blew from the same favorable quarter we did not complain, and only took the precaution of putting an extra support to the mast, so that it should not snap with the tension of the sail. This done, the raft was carried along with something more than its ordinary speed, and left a long line of foam in its wake.

In the afternoon the sky became slightly over-clouded, and the heat consequently less oppressive. The swell made it more difficult for the raft to keep its balance, and we shipped two or three heavy seas; but the carpenter managed to make with some planks a kind of wall about a couple of feet high, which protected us from the direct action of the waves. Our casks of food and water were secured to the raft with double ropes, for we dared not run the risk of their being carried overboard, an accident that would at once have reduced us to the direst distress.

In the course of the day the sailors gathered some of the marine plants known by the name of sargassos, very similar to those we saw in such profusion between the Bermudas and Ham Rock. I advised my companions to chew the laminary tangles, which they would find contained a saccharine juice, affording considerable relief to their parched lips and throats.

The remainder of the day passed without incident. I should not, however, omit to mention that the frequent con- ferences held among the sailors, especially between Owen, Burke, Flaypole, Wilson, and Jynxstrop, the negro, aroused some uneasy suspicions in my mind. What was the sub- ject of their conversation I could not discover, for they became silent immediately that a passenger or one of the officers approached them. When I mentioned the matter to Curtis I found he had already noticed these secret in- terviews, and that they had given him enough concern to make him determined to keep a strict eye upon Jynxstrop and Owen, who, rascals as they were themselves, were evi- dently trying to disaffect their mates.

On the 19th the heat was again excessive. The sky was cloudless, and as there was not enough wind to fill the sail the raft lay motionless upon the surface of the water. Some of the sailors found a transient alleviation for their thirst by plunging into the sea, but as we were fully aware that the water all around was infested with sharks, none of us was rash enough to follow their example, though if, as seems likely, we remain long

becalmed, we shall probably in time overcome our fears, and feel constrained to indulge ourselves with a bath.

The health of Lieutenant Walter continues to cause us grave anxiety, the young man being weakened by attacks of intermittent fever. Except for the loss of the medicine-chest we might have temporarily reduced this by quinine; but it is only too evident that the poor fellow is consump- tive, and that that hopeless malady is making ravages upon him that no medicine could permanently arrest. His sharp, dry cough, his short breathing, his profuse perspirations, more especially in the morning; the pinched-in nose, the hollow cheeks, of which the general pallor is only relieved by a hectic flush, the contracted lips, the too brilliant eye and wasted form — all bear witness to a slow but sure de- cay.

To-day, the 20th, the temperature is as high as ever, and the raft still motionless. The rays of the sun penetrate even through the shelter of our tent, where we sit literally gasp- ing with the heat. The impatience with which we awaited the moment when the boatswain should dole out our meager allowance of water, and the eagerness with which those lukewarm drops were swallowed, can only be realized by those who for themselves have endured the agonies of thirst.

Lieutenant Walter suffers more than any of us from the scarcity of water, and I noticed that Miss Herbey reserved almost the whole of her own share for his use. Kind and compassionate as ever, the young girl does all that lies in her power to relieve the poor fellow’s sufferings.

“Mr. Kazallon,” she said to me this morning, “that young man gets manifestly weaker every day.”

“Yes, Miss Herbey,” I replied, “and how sorrowful it is that we can do nothing for him, absolutely nothing.”

“Hush!” she said, with her wonted consideration, “per- haps he will hear what we are saying.”

And then she sat down near the edge of the raft, where, with her head resting on her hands, she remained lost in thought.

An incident sufficiently unpleasant occurred to-day. For nearly an hour Owen, Flaypole, Burke and Jynxstrop had been engaged in close conversation and, although their voices were low, their gestures had betrayed that they were animated by some strong excitement. At the conclusion of the colloquy Owen got up and walked deliberately to the quarter of the raft that has been reserved for the use of the passengers.

“Where are you off to now, Owen?” said the boatswain.

“That’s my business,” said the man insolently, and pur- sued his course.

The boatswain was about to stop him, but before he could interfere Curtis was standing and looking Owen steadily in the face.

“Ah, captain, I’ve got a word from my mates to say to you,” he said, with all the effrontery imaginable.

“Say on, then,” said the captain coolly.

“We should like to know about that little keg of brandy.

Is it being kept for the porpoises or the officers?”

Finding that he obtained no reply, he went on:

“Look here, captain, what we want is to have our grog served out every morning as usual.”

“Then you certainly will not,” said the captain.

“What! what!” exclaimed Owen, “don’t you mean to let us have our grog?”

“Once and for all, no.”

For a moment, with a malicious grin upon his lips, Owen stood confronting the captain; then, as though thinking bet- ter of himself, he turned round and rejoined his companions, who were still talking together in an undertone.

When I was afterward discussing the matter with Curtis, I asked him whether he was sure he had done right in re- fusing the brandy.

“Right!” he cried, “to be sure I have. Allow those men to have brandy! I would throw it all overboard first.”

CHAPTER XXXIV A SQUALL

DECEMBER 21. — No further disturbance has taken place among the men. For a few hours the fish appeared again, and we caught a great many of them, and stored them away in an empty barrel. This addition to our stock of pro- visions makes us hope that food, at least, will not fail us.

Usually the nights in the tropics are cool, but to-day, as the evening drew on, the wonted freshness did not return, but the air remained stifling and oppressive, while heavy masses of vapor hung over the water.

There was no moonlight; there would be a new moon at half-past one in the morning, but the night was singularly dark, except for dazzling flashes of summer lightning that from time to time illuminated the horizon far and wide. There was, however, no answering roll of thunder, and the silence of the atmosphere seemed almost awful.

For a couple of hours, in the vain hope of catching a breath of air, Miss Herbey, Andre Letourneur, and I, sat watching the imposing struggle of the electric vapors. The clouds appeared like embattled turrets crested with flame, and the very sailors, coarse-minded men as they were, seemed struck with the grandeur of the spectacle, and re- garded attentively, though with an anxious eye, the pre- liminary tokens of a coming storm. Until midnight we kept our seats upon the stern of the raft, while the lightning ever and again shed around us a livid glare similar to that produced by adding salt to lighted alcohol.

“Are you afraid of a storm. Miss Herbey?” said Andre to the girl.

“No, Mr. Andre, my feelings are always rather those of

awe than of fear,” she replied. “I consider a storm one of

the sublimest phenomena that we can behold — don’t you

think so too?”

“Yes, and especially when the thunder is pealing,” he said; “that majestic rolling, far different to the sharp crash of artillery, rises and falls like the long-drawn notes of the

grandest music, and I can safely say that the tones of the most accomplished artiste have never moved me like that in- comparable voice of nature."

"Rather a deep bass, though," I said, laughing.

"That may be," he answered; "but I wish we might hear it now, for this silent lightning is somewhat unexpressive."

"Never mind that, Andre," I said; "enjoy a storm when it comes, if you like, but pray don't wish for it."

"And why not?" said he; "a storm will bring us wind, you know."

"And water, too," added Miss Herbey, "the water of which we are so seriously in need."

The young people evidently wished to regard the storm from their own point of view, and although I could have opposed plenty of common sense to their poetical sentiments, I said no more, but let them talk on as they pleased for fully an hour.

Meanwhile the sky was becoming quite over-clouded, and after the zodiacal constellations had disappeared in the mists that hung round the horizon, one by one the stars above our heads were veiled in dark rolling masses of vapor, from which every instant there issued forth sheets of electricity that formed a vivid background to the dark gray fragments of cloud that floated beneath.

Sleep, even if we wished it, would have been impossible in that stifling temperature. The lightning increased in brilliancy and appeared from all quarters of the horizon, each flash covering large arcs, varying from l00 deg. to 150 deg. leaving the atmosphere pervaded by one incessant phos- phorescent glow.

The thunder became at length more and more distinct, the reports, if I may use the expression, being "round," rather than rolling. It seemed almost as though the sky were padded with heavy clouds of which the elasticity muffled the sound of the electric bursts.

Hitherto, the sea had been calm, almost stagnant as a pond. Now, however, long undulations took place, which the sailors recognized, all too well, as being the rebound pro- duced by a distant tempest. A ship, in such a case, would have been instantly

brought ahull, but no maneuvering could be applied to our raft, which could only drift before the blast.

At one o’clock in the morning one vivid flash, followed, after the interval of a few seconds, by a loud report of thunder, announced that the storm was rapidly approaching. Suddenly the horizon was enveloped in a vaporous fog, and seemed to contract until it was close around us. At the same instant the voice of one of the sailors was heard shouting:

“A squall! a squall!”

CHAPTER XXXV TWO SAILORS WASHED OVERBOARD

DECEMBER 21, night. — The boatswain rushed to the halliards that supported the sail, and instantly lowered the yard; not a moment too soon, for with the speed of an arrow the squall was upon us, and if it had not been for the sailor’s timely warning we must all have been knocked down and probably precipitated into the sea; as it was, our tent on the back of the raft was carried away.

The raft itself, however, being so nearly level with the water, had little peril to encounter from the actual wind; but from the mighty waves now raised by the hurricane we had everything to dread. At first the waves had been crushed and flattened as it were by the pressure of the air, but now, as though strengthened by the reaction, they rose with the utmost fury. The raft followed the motions of the increasing swell, and was tossed up and down, to and fro, and from side to side with the most violent oscillations.

“Lash yourselves tight,” cried the boatswain, as he threw us some ropes; and in a few moments with Curtis’s assis- tance, M. Letourneur, and Andre, Falsten and myself were fastened so firmly to the raft, that nothing but its total dis- ruption could carry us away. Miss Herbey was bound by a rope passed round her waist to one of the uprights that had supported our tent, and by the glare of the lightning I could see that her countenance was as serene and composed as ever.

Then the storm began to rage indeed. Flash followed flash, peal followed peal in quick succession. Our eyes were blinded, our ears deafened, with the roar and glare. The clouds above, the ocean beneath, seemed verily to have taken fire, and several times I saw forked lightnings dart upward from the crest of the waves, and mingle with those that radiated from the fiery vault above. A strong odor of sulphur pervaded the air, but though thunderbolts fell thick around us, not one touched our raft.

By two o’clock the storm had reached its height. The hurricane had increased, and the heavy waves, heated to a strange heat by the general temperature, dashed over us until we were drenched to the skin. Curtis, Dowlas, the boatswain, and the sailors did what they could to strengthen the raft with additional ropes. M. Letourneur placed him- self in front of Andre, to shelter him from the waves. Miss Herbey stood upright and motionless as a statue.

Soon dense masses of lurid clouds came rolling up, and a crackling, like the rattle of musketry, resounded through the air. This was produced by a series of electrical concussions, in which volleys of hailstones were discharged from the cloud-batteries above. In fact, as the storm-sheet came in contact with a current of cold air, hail was formed with great rapidity, and hailstones, large as nuts, came pelt- ing down, making the platform of the raft re-echo with a metallic ring.

For about half an hour the meteoric shower continued to descend, and during that time the wind slightly abated in violence; but after having shifted from quarter to quar- ter, it once more blew with all its former fury. The shrouds were broken, but happily the mast, already bending almost double, was removed by the men from its socket be- fore it should be snapped short off.. One gust caught away the tiller, which went adrift beyond all power of recovery, and the same blast blew down several of the planks that formed the low parapet on the larboard side, so that the waves dashed in without hindrance through the breach.

The carpenter and his mates tried to repair the damage, but, tossed from wave to wave, the raft was inclined to an angle of more than forty-five degrees, making it impossible for them to keep their footing, and rolling one over another, they were thrown down by the violent shocks. Why they were not altogether carried away, why we were not all hurled into the sea, was to me a mystery. Even if the cords that bound us should retain their hold, it seemed perfectly incredible that the raft itself should not be overturned, so that we should be carried down and stifled in the seething waters.

At last, toward three in the morning, when the hurricane seemed to be raging more fiercely than ever, the raft, caught up on the crest of an enormous wave, stood literally per- pendicularly on its edge. For an instant, by the illumina- tion of the lightning, we beheld ourselves raised to an in- comprehensible height above the foaming breakers. Cries of terror escaped our lips. All must be over now! But no; another moment, and the raft had resumed its horizontal position. Safe, indeed, we were, but the tremendous up- heaval was not without its melancholy consequences.

The cords that secured the cases of provisions had burst asunder. One case rolled overboard, and the side of one of the water-barrels was staved in, so that the water which it contained was rapidly escaping. Two of the sailors rushed forward to rescue the case of preserved meat; but one of them caught his foot between the planks of the plat- form, and, unable to disengage it, the poor fellow stood uttering cries of distress.

I tried to go to his assistance, and had already untied the cord that was around me; but I was too late.

Another heavy sea dashed over us, and by the light of a dazzling flash I saw the unhappy man, although he had managed without assistance to disengage his foot, washed overboard before it was in my power to get near him. His companion had also disappeared.

The same ponderous wave laid me prostrate on the plat- form, and as my head came in collision with the corner of a spar, for a time I lost all consciousness.

CHAPTER XXXVI WE LOSE NEARLY ALL OUR PROVISIONS

DECEMBER 22. — Daylight came at length, and the sun broke through and dispersed the clouds that the storm had left behind. The struggle of the elements, while it lasted, had been terrific, but the swoon into which I was thrown by my fall prevented me from observing the final incidents of the visitation. All that I know is, that shortly after we had shipped the heavy sea, that I have mentioned, a shower of rain had the effect of calming the severity of the hurri- cane, and tended to diminish the electric tension of the atmosphere.

Thanks to the kind care of M. Letourneur and Miss Her- bey, I recovered consciousness, but I believe that it is to Robert Curtis that I owe my real deliverance, for he it was that prevented me from being carried away by a second heavy wave.

The tempest, fierce as it was, did not last more than a few hours; but even in that short space of time what an irrepar- able loss we have sustained, and what a load of misery seems stored up for us in the future!

Of the two sailors who perished in the storm, one was Austin, a fine active young man of about eight-and-twenty; the other was old O'Ready, the survivor of so many ship- wrecks. Our party is thus reduced to sixteen souls, leav- ing a total barely exceeding half the number of those who embarked on board the Chancellor at Charleston.

Curtis's first care had been to take a strict account of the remnant of our provisions. Of all the torrents of rain that fell in the night we were unhappily unable to catch a single drop; but water will not fail us yet, for about four- teen gallons still remain in the bottom of the broken barrel, while the second barrel has not been touched. But of food we have next to nothing. The cases containing the dried meat, and the fish that we had preserved, have both been washed away, and all that now remains to us is about sixty pounds of biscuit. Sixty pounds of biscuit between sixteen persons! Eight days, with half a pound a day apiece, will consume it all.

The day has passed away in silence. A general depres- sion has fallen upon all; the specter of famine has appeared among us, and each has remained wrapped in his own gloomy meditations, though each has doubtless but one idea dominant in his mind.

Once, as I passed near the group of sailors lying on the fore part of the raft, I heard Flaypole say with a sneer:

“Those who are going to die had better make haste about it.”

“Yes,” said Owen, “and leave their share of food to others.”

At the regular hour each person received his half-pound of biscuit. Some, I noticed, swallowed it ravenously; others reserved it for another time. Falsten divided his ration into several portions, corresponding, I believe, to the number of meals to which he was ordinarily accustomed. What prudence he shows! If any one survives this misery, I think it will be he.

CHAPTER XXXVII LIEUTENANT WALTER'S CONDITION

DECEMBER 23 to 30. — After the storm the wind settled back into its old quarter, blowing pretty briskly from the northeast. As the breeze was all in our favor it was important to make the most of it, and after Dowlas had care- fully readjusted the mast, the sail was once more hoisted, and we were carried along at the rate of two or two and a half knots an hour. A new rudder, formed of a spar and a good-sized plank, has been fitted in the place of the one we lost, but with the wind in its present quarter it is in little requisition. The platform of the raft has been re- paired, the disjointed planks have been closed by means of ropes and wedges, and that portion of the parapet that was washed away has been replaced, so that we are no longer wetted by the waves. In fact, nothing has been left undone to insure the solidity of our raft, and to render it capable of resisting the wear and tear of the wind and waves. But the dangers of wind and waves are not those which we have most to dread.

Together with the unclouded sky came a return of the tropical heat, which during the preceding days had caused us such serious inconvenience; fortunately on the 23d the excessive warmth was somewhat tempered by the breeze, and as the tent was once again put up, we were able to find shelter under it by turns.

But the want of food was beginning to tell upon us sadly, and our sunken cheeks and wasted forms were visible tokens of what we were enduring. With most of us hunger seemed to attack the entire nervous system, and the con- striction of the stomach produced an acute sensation of pain. A narcotic, such as opium or tobacco, might have availed to soothe, if not to cure, the gnawing agony; but of sedatives we had none, so the pain must be endured.

One alone there was among us who did not feel the pangs of hunger. Lieutenant Walter seemed as it were to feed upon the fever that raged within him; but then he was the victim of the most torturing thirst. Miss Herbey, besides reserving for him a portion of her own insufficient allowance, obtained from the captain a small extra supply of water with which every quarter of an hour she moistened the parched lips of the young man, who, almost too weak to speak, could only express his thanks by a grateful smile. Poor fellow! all our care cannot avail to save him now; he is doomed, most surely doomed to die.

On the 23d he seemed to be conscious of his condition, for he made a sign to me to sit down by his side, and then summoning up all his strength to speak, he asked me in a few broken words how long I thought he had to live?

Slight as my hesitation was, Walter noticed it immed- iately.

“The truth,” he said; “tell me the plain truth.”

“My dear fellow, I am not a doctor, you know,” I be- gan,” and I can scarcely judge —”

“Never mind,” he interrupted, “tell me just what you think.”

I looked at him attentively for some moments, then laid my ear against his chest. In the last few days his malady had made fearfully rapid strides, and it was only too evi- dent that one lung had already ceased to act, while the other was scarcely capable of performing the work of respiration. The young man was now suffering from the fever which is the sure symptom of the approaching end in all tuberculous complaints.

The lieutenant kept his eye fixed upon me with a look of eager inquiry. I knew not what to say, and sought to evade his question.

“My dear boy,” I said, “in our present circumstances not one of us can tell how long he has to live. Not one of us knows what may happen in the course of the next eight days.”

“The next eight days,” he murmured, as he looked eagerly into my face.

And then, turning away his head, he seemed to fall into a sort of doze.

The 24th, 25th, and 26th passed without any alteration in our circumstances, and strange, nay, incredible as it may sound, we began to get accustomed to our condition of star- vation. Often, when reading the histories of shipwrecks, I have suspected the accounts to be greatly exaggerated; but now I fully realize their truth, and marvel when I find on how little nutriment it is possible to exist for so long a time. To our daily half-pound of biscuit the captain has thought to add a few drops of brandy, and the stimulant helps con- siderably to sustain our strength. If we had the same pro- visions for two months, or even for one, there might be room for hope; but our supplies diminish rapidly, and the time is fast approaching when of food and drink there will be none.

The sea had furnished us with food once, and, difficult as the task of fishing had now become, at all hazards the attempt must be made again. Accordingly the carpenter and the boatswain set to work and made lines out of some untwisted hemp, to which they fixed some nails that they pulled out of the flooring of the raft, and bent into proper shape. The boatswain regarded his device with evident satisfaction.

“I don’t mean to say,” said he to me, “that these nails are first-rate fish-hooks; but, one thing I do know, and that is, with proper bait they will act as well as the best. But this biscuit is no good at all. Let me but just get hold of one fish, and I shall know fast enough how to use it to catch some more.”

And the true difficulty was how to catch the first fish. It was evident that fish were not abundant in these waters, nevertheless the lines were cast. But the biscuit with which they were baited dissolved at once in the water, and we did not get a single bite. For two days the attempt was made in vain, and as it only involved what seemed a lavish waste of our only means of subsistence, it was given up in de- spair.

To-day, the 30th, as a last resource, the boatswain tried what a piece of colored rag might do by way of attracting some voracious fish, and having obtained from Miss Her- bey a little piece of the red shawl she wears, he fastened it to his hook. But still no success; for when, after several hours, he examined his lines, the crimson shred was still hanging intact as he had fixed it. The man was quite dis- couraged at his failure.

“But there will be plenty of bait before long,” he said to me in a solemn undertone.

“What do you mean?” said I, struck by his significant manner.

“You’ll know soon enough,” he answered.

What did he insinuate? The words, coming from a man usually so reserved, have haunted me all night.

CHAPTER XXXVIII MUTINY AGAIN

JANUARY 1 to 5. — More than three months had elapsed since we left Charleston in the Chancellor, and for no less than twenty days had we now been borne along on our raft at the mercy of the wind and waves. Whether we were approaching the American coast, or whether we were drift- ing farther and farther to sea, it was now impossible to de- termine, for, in addition to the other disasters caused by the hurricane, the captain's instruments had been hopelessly smashed, and Curtis had no longer any compass by which to direct his course, nor a sextant by which he might make an observation.

Desperate, however, as our condition might be judged, hope did not entirely abandon our hearts, and day after day, hour after hour were our eyes strained toward the far horizon, and many and many a time did our imagination shape out the distant land. But ever and again the illusion vanished; a cloud, a mist, perhaps even a wave, was all that had deceived us; no land, no sail ever broke the gray line that united sea and sky, and our raft remained the center of the wide and dreary waste.

On the 1st of January, we swallowed our last morsel of biscuit. The first of January! New Year's Day! What a rush of sorrowful recollections overwhelmed our minds! Had we not always associated the opening of another year with new hopes, new plans, and coming joys? And now, where were we? Could we dare to look at one another, and breathe a New Year's greeting?

The boatswain approached me with a peculiar look on his countenance.

"You are surely not going to wish me a happy New

Year?" I said.

"No indeed, sir," he replied, "I was only going to wish you well through the first day of it; and that is pretty good assurance on my part, for we have not another crumb to eat."

True as it was, we scarcely realized the fact of there being actually nothing until on the following morning the hour came round for the distribution of the scanty ration, and then, indeed, the truth was forced upon us in a new and startling light. Toward evening I was seized with violent pains in the stomach, accompanied by a constant desire to yawn and gape that was most distressing; but in a couple of hours the extreme agony passed away, and on the 3d I was surprised to find that I did not suffer more. I felt, it is true,

that there was some great void within myself, but the sensation was quite as much moral as physical. My head was so heavy that I could not hold it up; it was swim- ming with giddiness, as though I were looking over a precipice.

My symptoms were not shared by all my companions, some of whom endured the most frightful tortures. Dow- las and the boatswain especially, who were naturally large eaters, uttered involuntary cries of agony, and were obliged to gird themselves tightly with ropes to subdue the excru- ciating pain that was gnawing their very vitals.

And this was only the second day of our misery! What would we not have given for half, nay, for a quarter of the meager ration which a few days back we deemed so inade- quate to supply our wants, and which now, eked out crumb by crumb, might, perhaps, serve for several days? In the streets of a besieged city, dire as the distress may be, some gutter, some rubbish-heap, some corner may yet be found that will furnish a dry bone or a scrap of refuse that may for a moment allay the pangs of hunger; but these bare planks, so many times washed clean by the relentless waves, offer nothing to our eager search, and after every fragment of food that the wind has carried into the interstices has been scraped out and devoured, our resources are literally at an end.

The nights seem even longer than the days. Sleep, when it comes, brings no relief; it is rather a feverish stupor, broken and disturbed by frightful nightmares. Last night, however, overcome by fatigue, I managed to rest for sev- eral hours.

At six o’clock this morning I was roused by the sound of angry voices, and, starting up, I saw Owen and Jynxstrop, with Flaypole, Wilson, Burke, and Sandon, standing in a threatening attitude. They had taken posses- sion of the carpenter’s tools, and now, armed with hatchets, chisels, and hammers, they were preparing to attack the captain, the boatswain, and Dowlas. I attached myself in a moment to Curtis’s party. Falsten followed my ex- ample, and although our knives were the only weapons at our disposal, we were ready to defend ourselves to the very last extremity.

Owen and his men advanced toward us. The miserable wretches were all drunk, for during the night they had knocked a hole in the brandy-barrel, and had recklessly swal- lowed its contents. What they wanted they scarcely seemed to know, but Owen and Jynxstrop, not quite so much intox- icated as the rest, seemed to be urging them on to massacre the captain and the officers.

“Down with the captain! Overboard with Curtis! Owen shall take the command!” they shouted from time to time in their drunken fury; and, armed as they were, they appeared completely masters of the situation.

“Now, then, down with your arms!” said Curtis sternly, as he advanced to meet them.

“Overboard with the captain!” howled Owen, as by word and gesture he urged on his accomplices.

Curtis pushed aside the excited rascals, and, walking straight up to Owen, asked him what he wanted.

“What do we want? Why, we want no more captains; we are all equals now.”

Poor stupid fool! as though misery and privation had not already reduced us all to the same level.

“Owen,” said the captain once again, “down with your arms!”

“Come on, all of you,” shouted Owen to his companions, without giving the slightest heed to Curtis’s words.

A regular struggle ensued. Owen and Wilson attacked Curtis, who defended himself with a piece of spar; Burke and Flaypole rushed upon Falsten and the boatswain, while I was left to confront the negro Jynxstrop, who attempted to strike me with the hammer which he brandished in his hand. I endeavored to paralyze his movements by pinioning his arms, but the rascal was my superior in muscular strength. After wrestling for a few minutes, I felt that he was getting the mastery over me, when all of a sudden he rolled over on to the platform, dragging me with him. Andre Letour- neur had caught hold of one of his legs, and thus saved my life. Jynxstrop dropped his weapon in his fall; I seized it instantly, and was about to cleave the fellow’s skull, when I was myself arrested by Andre’s hand upon my arm.

By this time the mutineers had been driven back to the forepart of the raft, and Curtis, who had managed to parry the blows which had been aimed at him, had caught hold of a hatchet, with which he was preparing to strike Owen. But Owen made a sidelong movement to avoid the blow, and the weapon caught Wilson full in the chest. The unfor- tunate man rolled over the side of the raft and instantly dis- appeared.

“Save him! save him!” shouted the boatswain.

“It’s too late; he’s dead!” said Dowlas.

“Ah, well! he’ll do for — ” began the boatswain; but he did not finish his sentence.

Wilson’s death, however, put an end to the fray. Flay- pole and Burke were lying prostrate in a drunken stupor, and Jynxstrop was soon overpowered, and lashed tightly to the foot of the mast. The carpenter and boatswain seized hold of Owen.

“Now then,” said Curtis, as he raised his blood-stained hatchet, “make your peace with God, for you have not a moment to live.”

“Oh, you want to eat me, do you?” sneered Owen, with the most hardened effrontery.

But the audacious reply saved his life; Curtis turned as pale as death, the hatchet dropped from his hand, and he went and seated himself moodily on the farthest corner of the raft.

CHAPTER XXXIX A FATHER'S LOVE

JANUARY 5 and 6. — The whole scene made a deep impres- sion on our minds, and Owen's speech coming as a sort of climax, brought before us our misery with a force that was well-nigh overwhelming.

As soon as I recovered my composure, I did not forget to thank Andre Letourneur for the act of intervention that had saved my life.

"Do you thank me for that, Mr. Kazallon?" he said; "it has only served to prolong your misery."

"Never mind, M. Letourneur," said Miss Herbey; "you did your duty."

Enfeebled and emaciated as the young girl is, her sense of duty never deserts her; and although her torn and be- draggled garments float dejectedly about her body, she never utters a word of complaint, and never loses courage.

"Mr. Kazallon," she said to me, "do you think we are fated to die of hunger?"

"Yes, Miss Herbey, I do," I replied, in a hard, cold tone.

"How long do you suppose we have to live?" she asked again.

"I cannot say; perhaps we shall linger on longer than we imagine."

"The strongest constitutions suffer the most, do they not?" she said.

"Yes; but they have one consolation — they die the soon- est," I replied, coldly.

Had every spark of humanity died out of my breast, that I thus brought the girl face to face with the terrible truth, without a word of hope or comfort? The eyes of Andre and his father, dilated with hunger, were fixed upon me, and I saw reproach and astonishment written in their faces.

Afterward, when we were quite alone, Miss Herbey asked me if I would grant her a favor.

"Certainly, Miss Herbey; anything you like to ask," I replied; and this time my manner was kinder and more genial.

“Mr. Kazallon,” she said, “I am weaker than you, and shall probably die first. Promise me that, if I do, you will throw me into the sea!”

“Oh, Miss Herbey,” I began, “it was very wrong of me to speak to you as I did!”

“No, no,” she replied, half smiling; “you were quite right. But it is a weakness of mine; I don’t mind what they do with me as long as I am alive, but when I am dead — ” She stopped and shuddered. “Oh, promise me that you will throw me into the sea!”

I gave her the melancholy promise, which she acknowl- edged by pressing my hand feebly with her emaciated fingers.

Another night passed away. At times my sufferings were so intense that cries of agony involuntarily escaped my lips; then I became calmer, and sank into a kind of lethargy. When I awoke, I was surprised to find my companions still alive.

The one of our party who seems to bear his privations the best is Hobart the steward, a man with whom hitherto I have had very little to do. He is small, with a fawning expression remarkable for its indecision, and has a smile which is incessantly playing round his lips; he goes about with his eyes half closed, as though he wished to conceal his thoughts, and there is something altogether false and hypocritical about his whole demeanor. I cannot say that he bears his privations without a murmur, for he sighs and moans incessantly; but, with it all, I cannot but think that there is a want of genuineness in his manner, and that the privation has not really told upon him as much as it has upon the rest of us. I have my suspicions about the man, and intend to watch him carefully.

To-day, the 6th, M. Letourneur drew me aside to the stern of the raft, saying he had a secret to communicate, but that he wished neither to be seen nor heard speaking to me. I withdrew with him to the larboard corner of the raft, and, as it was growing dusk, nobody observed what we were doing.

“Mr. Kazallon,” M. Letourneur began, in a low voice, “Andre is dying of hunger; he is growing weaker and weaker, and oh! I cannot, will not, see him die!”

He spoke passionately, almost fiercely, and I fully under- stood his feelings. Taking his hand, I tried to reassure him.

“We will not despair yet,” I said; “perhaps some pass- ing ship — ”

“Ship!” he cried, impatiently, “don’t try to console me with empty commonplaces; you know as well as I do that there is no chance of falling in with a passing ship.” Then, breaking off suddenly, he asked: “How long is it since my son and all of you have had anything to eat?”

Astonished at his question, I replied that it was now four days since the biscuit had failed.

“Four days,” he repeated; “well, then, it is eight since I have tasted anything. I have been saving my share for my son.”

Tears rushed to my eyes; for a few moments I was unable to speak, and could only once more grasp his hand in silence.

“What do you want me to do?” I asked, at length.

“Hush! not so loud; someone will hear us,” he said, low- ering his voice; “I want you to offer it to Andre as though it came from yourself. He would not accept it from me; he would think I had been depriving myself for him. Let me implore you to do me this service; and for your trouble,” — and here he gently stroked my hand — “for your trouble you shall have a morsel for yourself.”

I trembled like a child as I listened to the poor father’s words; and my heart was ready to burst when I felt a tiny piece of biscuit slipped into my hand.

“Give it him,” M. Letourneur went on under his breath, “give it him; but do not let anyone see you; the monsters would murder you if they knew it! This is only for to-day; I will give you some more to-morrow.”

The poor fellow did not trust me — and well he might not — for I had the greatest difficulty to withstand the tempta- tion to carry the biscuit to my mouth. But I resisted the impulse, and those alone who have suffered like me can know what the effort was.

Night came on with the rapidity peculiar to these low lati- tudes, and I glided gently up to Andre, and slipped the piece of biscuit into his hand as “a present from myself.”

The young man clutched at it eagerly.

“But my father?” he said, inquiringly.

I assured him that his father and I had each had our share, and that he must eat this now, and perhaps I should be able to bring him some more another time. Andre asked no more questions, and eagerly devoured the morsel of food.

So this evening at least, notwithstanding M. Letourneur’s offer, I have tasted nothing.

CHAPTER XL DEATH OF LIEUTENANT WALTER

JANUARY 7. — During the last few days, since the wind has freshened, the salt water constantly dashing over the raft has terribly punished the feet and legs of some of the sailors. Owen, whom the boatswain ever since the revolt has kept bound to the mast, is in a deplorable state, and, at our request, has been released from his restraint. Sandon and Burke are also suffering from the severe smarting caused in this way, and it is only owing to our more sheltered position on the aft-part of the raft, that we have not all shared the same inconvenience.

To-day the boatswain, maddened by starvation, laid hands upon everything that met his voracious eyes, and I could hear the grating of his teeth as he gnawed at fragments of sails and bits of wood, instinctively endeavoring to fill his stomach by putting the mucus into circulation. At length, by dint of an eager search, he came upon a piece of leather hanging to one of the spars that supported the platform. He snatched it off and devoured it greedily; and, as it was animal matter, it really seemed as though the absorption of the substance afforded him some temporary relief. In- stantly we all followed his example; a leather hat, the rims of caps, in short, anything that contained any animal matter at all, were gnawed and sucked with the utmost avidity. Never shall I forget the scene. We were no longer human — the impulses and instincts of brute beasts seemed to actuate our every movement.

For a moment the pangs of hunger were somewhat allayed; but some of us revolted against the loathsome food, and were seized either with violent nausea or absolute sick- ness. I must be pardoned for giving these distressing de- tails; but how otherwise can I depict the misery, moral and physical, which we are enduring? And with it all, I dare not venture to hope that we have reached the climax of our sufferings.

The conduct of Hobart, during the scene that I have just described, has only served to confirm my previous suspicions of him. He took no part in the almost fiendish energy with which we gnawed at our scraps of leather; and, although by his conduct of perpetual groanings, he might be considered to be dying of inanition, yet to me he has the appearance of being singularly exempt from the tortures which we are all enduring. But whether the hypocrite is being sustained by some secret store of food, I have been unable to discover.

Whenever the breeze drops the heat is overpowering; but although our allowance of water is very meager, at present the pangs of hunger far exceed the pain of thirst. It has often been remarked that extreme thirst is far less endurable than extreme hunger. Is it possible that still greater agonies are in store for us? I cannot, dare not, believe it. Fortunately, the broken barrel still contains a few pints of water, and the other one has not yet been opened. But I am glad to say that notwithstanding our diminished numbers, and in spite of some opposition, the captain has thought right to reduce the daily allowance to half a pint for each person. As for the brandy, of which there is only a quart now left, it has been stowed away safely in the stern of the raft.

This evening has ended the sufferings of another of our companions, making our number now only fourteen. My attentions and Miss Herbey's nursing could do nothing for Lieutenant Walter, and about half-past seven he expired in my arms.

Before he died, in a few broken words, he thanked Miss Herbey and myself for the kindness we had shown him. A crumpled letter fell from his hand, and in a voice that was scarcely audible from weakness, he said :

"It is my mother's letter; the last I had from her — she was expecting me home; but she will never see me more. Oh, put it to my lips — let me kiss it before I die. Mother! mother! Oh, my God!"

I placed the letter in his cold hand, and raised it to his lips; his eye lighted for a moment; we heard the faint sound of a kiss; and all was over!

CHAPTER XLI HUMAN FLESH FOR BAIT

JANUARY 8. — All night I remained by the side of the poor fellow's corpse, and several times Miss Herbey joined me in my mournful watch.

Before daylight dawned, the body was quite cold, and as I knew there must be no delay in throwing it overboard, I asked Curtis to assist me in the sad office. The body was frightfully emaciated, and I had every hope that it would not float.

As soon as it was quite light, taking every precaution that no one should see what we were about, Curtis and I pro- ceeded to our melancholy task. We took a few articles from the lieutenant's pockets, which we purposed, if either of us should survive, to remit to his mother. But as we wrapped him in his tattered garments that would have to suffice for his winding sheet, I started back with a thrill of horror. The right foot had gone, leaving the leg a bleeding stump.

No doubt that, overcome by fatigue, I must have fallen asleep for an interval during the night, and some one had taken advantage of my slumber to mutilate the corpse. But who could have been guilty of so foul a deed? Curtis looked around with anger flashing in his eye; but all seemed as usual, and the silence was only broken by a few groans of agony.

But there was no time to be lost; perhaps we were already observed, and more horrible scenes might be likely to occur. Curtis said a few short prayers, and we cast the body into the sea. It sank immediately.

"They are feeding the sharks well, and no mistake," said a voice behind me.

I turned round quickly, and found that it was Jynxstrop who had spoken.

As the boatswain now approached, I asked him whether he thought it possible that any of the wretched men could have taken the dead man's foot.

"Oh, yes, I dare say," he replied in a significant tone, "and perhaps they thought they were right."

"Right! what do you mean?" I exclaimed.

"Well, sir," he said coldly, "isn't it better to eat a dead man than a living one?"

I was at a loss to comprehend him, and, turning away, laid myself down at the end of the raft.

Toward eleven o’clock a most suspicious incident occurred. The boatswain, who had cast his lines early in the morning, caught three large cod, each more than thirty inches long, of the species which, when dried, is known by the name of stock-fish. Scarcely had he hauled them on board when the sailors made a dash at them, and it was with the utmost dif- ficulty that Curtis, Falsten and myself could restore order, so that we might divide the fish into equal portions. Three cod were not much among fourteen starving persons, but, small as the quantity was, it was allotted in strictly equal shares. Most of us devoured the food raw, almost I might say, alive; only Curtis, Andre, and Miss Herbey having the patience to wait until their allowance had been boiled at a fire which they made with a few scraps of wood. For my- self, I confess that I swallowed my portion of fish as it was — raw and bleeding. M. Letourneur followed my example; the poor man devoured his food like a famished wolf, and it is only a wonder to me how, after his lengthened fast, he came to be alive at all.

The boatswain’s delight at his success was excessive, and amounted almost to delirium. I went up to him, and en- couraged him to repeat his attempt.

“Oh, yes,” he said; “I’ll try again. I’ll try again.”

“And why not try at once?” I asked.

“Not now,” he said evasively; “the night is the best time for catching large fish. Besides, I must manage to get some bait, for we have been improvident enough not to save a single scrap.”

“But you have succeeded once without bait; why may you not succeed again?”

“Oh, I had some very good bait last night,” he said.

I stared at him in amazement. He steadily returned my gaze, but said nothing.

“Have you none left?” at last I asked.

“Yes!” he almost whispered, and left me without another word.

Our meal, meager as it had been, served to rally our shat- tered energies; our hopes were slightly raised; there was no reason why the boatswain should not have the same good luck again.

One evidence of the degree to which our spirits were re- vived was that our minds were no longer fixed upon the miserable present and hopeless future, but we began to recall and discuss the past; and M. Letourneur, Andre, Mr. Fal- sten and I, held a long conversation with the captain about the various incidents of our eventful voyage, speaking of our lost companions, of the fire, or the stranding of the ship, of our sojourn on Ham Rock, of the springing of the leak, of our terrible voyage in the top-masts, of the construction of the raft, and of the storm. All these things seemed to have happened so long ago, and yet we were living still. Living, did I say? Ay, if such an existence as ours could be called a life, fourteen of us were living still. Who would be the next to go? We should then be thirteen.

“An unlucky number!” said Andre, with a mournful smile.

During the night the boatswain cast his lines from the stern of the raft, and, unwilling to trust them to anyone else, remained watching them himself. In the morning I went to ascertain what success had attended his patience. It was scarcely light, and with eager eyes he was peering down into the water. He had neither seen nor heard me coming.

“Well, boatswain!” I said, touching him on the shoulder.

He turned round quickly.

“Those villainous sharks have eaten every morsel of my bait,” he said, in a desponding voice.

“And you have no more left?” I asked.

“No more,” he said. Then grasping my arm, he added, “and that only shows me that it is no good doing things by halves.”

The truth flashed upon me at once, and I laid my hand upon his mouth. Poor Walter!

CHAPTER XLII OXIDE OF COPPER POISONING

JANUARY 9 and10. — On the 9th the wind dropped, and there was a dead calm; not a ripple disturbed the surface of the long undulations as they rose and fell beneath us; and if it were not for the slight current which is carrying us we know not whither, the raft would be absolutely stationary.

The heat was intolerable; our thirst more intolerable still; and now it was that for the first time I fully realized how the insufficiency of drink could cause torture more unendurable than the pangs of hunger. Mouth, throat, pharynx, all alike were parched and dry, every gland becoming hard as horn under the action of the hot air we breathed. At my urgent solicitation, the captain was for once induced to double our allowance of water; and this relaxation of the ordinary rule enabled us to attempt to slake our thirst four times in the day, instead of only twice. I use the word “attempt” advisedly; for the water at the bottom of the barrel though kept covered by a sail, became so warm that it was perfectly flat and unrefreshing.

It was a most trying day, and the sailors relapsed into a condition of deep despondency. The moon was nearly full, but when she rose the breeze did not return. Continuance of high temperature in daytime is a sure proof that we have been carried far to the south, and here, on this illimitable ocean, we have long ceased even to look for land; it might almost seem as though this globe of ours had veritably be- come a liquid sphere!

To-day we are still becalmed, and the temperature is as high as ever. The air is heated like a furnace, and the sun scorches like fire. The torments of famine are all forgotten; our thoughts are concentrated with fevered expectation upon the longed-for moment when Curtis shall dole out the scanty measure of lukewarm water that makes up our ration. Oh for one good draught, even if it should exhaust the whole supply! At least, it seems as if we then could die in peace!

About noon we were startled by sharp cries of agony, and looking round, I saw Owen writhing in the most horrible convulsions. I went toward him, for, detestable as his con- duct had been, common humanity prompted me to see whether I could afford him any relief. But before I reached him, a shout from Flaypole arrested my attention. The man was up in the mast, and with great excitement pointing to the east.

“A ship! A ship!” he cried.

In an instant all were on their feet. Even Owen stopped his cries and stood erect. It was quite true that in the direc- tion indicated by Flaypole there was a white speck visible upon the horizon. But did it move? Would the sailors with their keen vision pronounce it to be a sail? A silence the most profound fell upon us all. I glanced at Curtis as he stood with folded arms intently gazing at the distant point. His brow was furrowed, and he contracted every fea- ture, as with half-closed eyes he concentrated his power of vision upon that one faint spot in the far off horizon.

But at length he dropped his arms and shook his head. I looked again, but the spot was no longer there. If it were a ship, that ship had disappeared; but probably it had been a mere reflection, or, more likely still, only the crest of some curling wave.

A deep dejection followed this phantom ray of hope. All returned to their accustomed places. Curtis alone remained motionless, but his eye no longer scanned the distant view.

Owen now began to shriek more wildly than ever. He presented truly a most melancholy sight; he writhed with the most hideous contortions, and had all the appearance of suffering from tetanus. His throat was contracted by re- peated spasms, his tongue was parched, his body swollen, and his pulse, though feeble, was rapid and irregular. The poor wretch's symptoms were precisely such as to lead us to sus- pect that he had taken some corrosive poison. Of course it was quite out of our power to administer any antidote; all that we could devise was to make him swallow something that might act as an emetic. I asked Curtis for a little of the lukewarm water. As the contents of the broken barrel were now exhausted, the captain, in order to comply with my request, was about to tap the other barrel, when Owen started suddenly to his knees, and with a wild, unearthly shriek, exclaimed:

"No! no! no! of that water I will not touch a drop."

I supposed he did not understand what we were going to do, and endeavored to explain; but all in vain; he persisted in refusing to taste the water in the second barrel. I then tried to induce vomiting by tickling his uvula, and he brought off some bluish secretion from his stomach, the character of which confirmed our previous suspicions — that he had been poisoned by oxide of copper. We now felt convinced that any effort on our part to save him would be of no avail. The vomiting, however, had for the time relieved him, and he was able to speak.

Curtis and I both implored him to let us know what he had taken to bring about consequences so serious. His reply fell upon us as a startling blow.

The ill-fated wretch had stolen several pints of water from the barrel that had been untouched, and that water had poisoned him!

CHAPTER XLIII OWEN'S DEATH

JANUARY 11 to 14. — Owen's convulsions returned with in- creased violence, and in the course of the night he expired in terrible agony. His body was thrown overboard almost directly, it had decomposed so rapidly that the flesh had not even consistency enough for any fragments of it to be re- served for the boatswain to use to bait his lines. A plague the man had been to us in his life; in his death he was now of no service!

And now, perhaps still more than ever, did the horror of our situation stare us in the face. There was no doubt that the poisoned barrel had at some time or other contained copperas; but what strange fatality had converted it into a water cask, or what fatality, stranger still, had caused it to be brought on board the raft, was a problem that none could solve. Little, however, did it matter now; the fact was evi- dent — the barrel was poisoned, and of water we had not a drop.

One and all, we fell into the gloomiest silence. We were too irritable to bear the sound of each other's voices; and it did not require a word — a mere look or gesture was enough — to provoke us to anger that was little short of madness. How it was that we did not all become raving maniacs, I can- not tell.

Throughout the 12th no drain of moisture crossed our lips, and not a cloud arose to warrant the expectation of a passing shower; in the shade, if shade it might be called, the thermometer would have registered at least 100 deg. and per- haps considerably more.

No change next day. The salt water began to chafe my legs, but although the smarting was at times severe, it was an inconvenience to which I gave little heed; others who had suffered from the same trouble had become no worse. Oh! if this water that surrounds us could be reduced to vapor or to ice! its particles of salt extracted, it would be available for drink. But no! we have no appliances, and we must suffer on.

At the risk of being devoured by the sharks, the boat- swain and two sailors took a morning bath, and as their plunge seemed to freshen them, I and three of my com- panions resolved to follow their example. We had never learned to swim, and had to be fastened to the end of a rope and lowered into the water, while Curtis, during the half hour of our bath, kept a sharp lookout to give warning of any danger from approaching sharks. No recommenda- tion, however, on our part, nor any representation of the

benefit we felt we had derived, could induce Miss Herbey to allay her sufferings in the same way.

At about eleven o’clock, the captain came up to me, and whispered in my ear:

“Don’t say a word, Mr. Kazallon; I do not want to raise false hopes, but I think I see a ship.”

It was as well that the captain had warned me; otherwise,

I should have raised an involuntary shout of joy; as it was

I had the greatest difficulty in restraining my expressions of

delight.

“Look behind to larboard,” he continued in an undertone.

Affecting an indifference which I was far from feeling, I cast an anxious glance to that quarter of the horizon of which he spoke, and there, although mine was not a nautical eye, I could plainly distinguish the outline of a ship under sail.

Almost at the same moment the boatswain who happened to be looking in the same direction, raised the cry, “Ship ahoy!”

Whether it was that no one believed it, or whether all energies were exhausted, certain it is that the announcement produced none of the effects that might have been expected. Not a soul exhibited the slightest emotion, and it was only when the boatswain had several times sung out his tidings that all eyes turned to the horizon. There, most undeniably, was the ship, but the question rose at once to the minds of all, and to the lips of many, “Would she see us?”

The sailors immediately began discussing the build of the vessel, and made all sorts of conjectures as to the direction she was taking. Curtis was far more deliberate in his judg- ment. After examining her attentively for some time, he said, “She is a brig running close upon the wind, on the star- board tack. If she keeps her course for a couple of hours, she will come right athwart our tracks.”

A couple of hours! The words sounded to our ears like a couple of centuries. The ship might change her course at any moment; closely trimmed as she was, it was very probable that she was only tacking about to catch the wind, in which case, as soon as she felt a breeze, she would résumé her larboard tack and make away again. On the other hand, if she was really sailing with the wind, she would come nearer to us, and there would be good ground for hope.

Meantime, no exertion must be spared, and no means left untried, to make our position known. The brig was about twelve miles to the east of us, so that it was out of the ques- tion to think of any cries of ours being overheard; but Curtis gave directions that every possible signal should be made. We had no firearms by which we could attract attention, and nothing else occurred to us beyond hoisting a flag of distress. Miss Herbey's red shawl, as being of a color most distin- guishable against the background of sea and sky, was run up to the mast-head, and was caught by the light breeze that just then was ruffling the surface of the water. As a drown- ing man clutches at a straw, so our hearts bounded with hope every time that our poor flag fluttered in the wind.

For an hour our feelings alternated between hope and despair. The ship was evidently making her way in the di- rection of the raft, but every now and then she seemed to stop, and then our hearts would almost stand still with agony lest she was going to put about. She carried all her canvas, even to her royals and stay-sails, but her hull was only partially visible above the horizon.

How slowly she advanced! The breeze was very, very feeble, and perhaps soon it would drop altogether! We felt that we would give years of our life to know the result of the coming hour.

At half past twelve the captain and the boatswain con- sidered that the brig was about nine miles away; she had, therefore, gained only three miles in an hour and a half, and it was doubtful whether the light breeze that had been passing over our heads had reached her at all. I fancied, too, that her sails were no longer filled, but were hanging loose against her masts. Turning to the direction of the wind, I tried to make out some chance of a rising breeze; but no, the waves were calm and torpid, and the little puff of air that had aroused our hopes had died away across the sea.

I stood aft with M. Letourneur, Andre and Miss Herbey, and our glances perpetually wandered from the distant ship to our captain's face. Curtis stood leaning against the

mast, with the boatswain by his side; their eyes seemed never for a moment to cease to watch the brig, but their countenances clearly expressed the varying emotions that passed through their minds. Not a word was uttered, nor was the silence broken, until the carpenter exclaimed, in accents of despair:

“She’s putting about!”

All started up — some to their knees, others to their feet. The boatswain dropped a frightful oath. The ship was still nine miles away, and at such a distance it was impossible for our signal to be seen; our tiny raft, a mere speck upon the waters, would be lost in the intense irradiation of the sun- beams. If only we could be seen, no doubt all would be well; no captain would have the barbarous inhumanity to leave us to our fate; but there had been no chance; only too well we knew that we had not been within range of sight.

“My friends,” said Curtis, “we must make a fire; it is our last and only chance.”

Some planks were quickly loosened and thrown into a heap upon the fore part of the raft. They were damp and troublesome to light; but the very dampness made the smoke more dense, and ere long a tall column of dusky fumes was rising straight upward in the air. If darkness should come on before the brig was completely out of view, the flames, we hoped might still be visible. But the hours passed on; the fire died out; and yet no signs of help.

The temper of resignation now deserted me entirely; faith, hope, confidence — all vanished from my mind, and, like the boatswain, I swore long and loudly. A gentle hand was laid upon my arm, and turning round I saw Miss Herbey with her finger pointing to the sky. I could stand it no longer, but gliding underneath the tent I hid my face in my hands and wept aloud.

Meanwhile the brig had altered her track, and was moving slowly to the east. Three hours later and the keenest eye could not have discerned her top-sails above the horizon.

CHAPTER XLIV THE DEPTHS OF DESPAIR

JANUARY 15. — After this further shattering of our ex- cited hopes, death alone now stares us in the face; slow and lingering as that death may be, sooner or later it must in- evitably come.

To-day some clouds that rose in the west have brought us a few puffs of wind; and in spite of our prostration, we ap- preciate the moderation, slight as it is, in the temperature. To my parched throat the air seemed a little less trying; but it is now seven days since the boatswain took his haul of fish, and during that period we had eaten nothing; even Andre Letourneur finished yesterday, the last morsel of the biscuit which his sorrowful and self-denying father had in- trusted to my charge.

Jynxstrop, the negro, has broken loose from his confine- ment, but Curtis has taken no measures for putting him again under restraint. It is not to be apprehended that the miserable fellow and his accomplices, weakened as they are by their protracted fast, will attempt to do us any mischief now.

Some huge sharks made their appearance to-day, cleaving the water rapidly with their great black fins. The monsters came up close to the edge of the raft, and Flaypole, who was leaning over, narrowly escaped having his arm snapped off by one of them. I could not help regarding them as living sepulchers, which ere long might swallow up our miserable carcasses; yet, withal, I profess that my feelings were those of fascination rather than horror.

The boatswain, who stood with clenched teeth and dilated eye, regarded these sharks from quite another point of view. He thought about devouring the sharks, not about the sharks devouring him; and if he could succeed in catching one, I doubt if one of us would reject the tough and untempting flesh. He determined to make the attempt, and as he had no whirl which he could fasten to his rope he set to work to find something that might serve as a substitute. Curtis and Dowlas were consulted, and after a short conversation, during which they kept throwing bits of rope and spars into the water in order to entice the sharks to remain by the raft, Dowlas went and fetched his carpenter’s tool, which is at once a hatchet and a hammer. Of this he proposed to make the whirl of which they were in need, under the hope that either the sharp edge of the adze or the pointed extremity opposite would stick firmly into the jaws of any shark that might

swallow it. The wooden handle of the hammer was secured to the rope, which, in its turn was tightly fastened to the raft.

With eager, almost breathless, excitement we stood watch- ing the preparations, at the same time using every means in our power to attract the attention of the sharks. As soon as the whirl was ready the boatswain began to think about bait, and, talking rapidly to himself, ransacked every corner of the raft, as though he expected to find some dead body coming opportunely to sight. But his search ended in noth- ing; and the only plan that suggested itself was again to have recourse to Miss Herbey's red shawl, of which a frag- ment was wrapped around the head of the hammer. After testing the strength of his line, and reassuring himself that it was fastened firmly both to the hammer and to the raft, the boatswain lowered it into the water.

The sea was quite transparent, and any object was clearly visible to a depth of two hundred feet below the surface. Leaning over the low parapet of the raft we looked on in breathless silence, as the scarlet rag, distinct as it was against the blue mass of water, made its slow descent. But one by one the sharks seemed to disappear. They could not, how- ever, have gone far away, and it was not likely that any- thing in the shape of bait dropped near them would long escape their keen voracity.

Suddenly, without speaking, the boatswain raised his hand and pointed to a dark mass skimming along the surface of the water, and making straight in our direction. It was a shark, certainly not less than twelve feet long. As soon as the creature was about four fathoms from the raft, the boatswain gently drew in his line until the whirl was in such a position that the shark must cross right over it; at the same time he shook the line a little, that he might give the whirl the appearance, if he could, of being something alive and moving. As the creature came near, my heart beat violently; I could see its eyes flashing above the waves; and its gaping jaws, as it turned half over on its back, exhibited long rows of pointed teeth.

I know not who it was, but some one at that moment uttered an involuntary cry of horror. The shark came to a standstill, turned about, and escaped quite out of sight. The boatswain was pale with anger.

"The first man who speaks," he said, "I will kill him on the spot."

Again he applied himself to his task. The whirl was again lowered, this time to the depth of twenty fathoms, but for half an hour or more not a shark could be distinguished; but as the waters far below seemed somehow to be troubled I could not help believing that some of the brutes at least were still there.

All at once, with a violent jerk, the cord was wrested from the boatswain's hands; firmly attached, however, as it was to the raft, it was not lost. The bait had been seized by a shark, and the iron had made good its hold upon the crea- ture's flesh.

"Now, then, my lads," cried the boatswain, "haul away!"

Passengers and sailors, one and all, put forth what strength they had to drag the rope, but so violent were the creature's struggles that it required all our efforts (and it is needless to say they were willing enough) to bring it to the surface. At length, after exertions that almost exhausted us, the water became agitated by the violent flappings of the tail and fins; and looking down I saw the huge carcass of the shark writhing convulsively amid waves that were stained with blood.

"Steady! steady!" said the boatswain, as the head ap- peared above

The whirl had passed right through the jaw into the mid- dle of the throat, so that no struggle on the part of the ani- mal could possibly release it. Dowlas seized the hatchet, ready to dispatch the brute the moment it should be landed on the raft. A short sharp snap was heard. The shark had closed its jaws, and bitten through the wooden handle of the hammer. Another moment and it had turned round and was completely gone.

A howl of despair burst from all our lips. All the labor and the patience, all had been in vain. Dowlas made a few more unsuccessful attempts, but as the whirl was lost, and they had no means of replacing it, there was no further room for hope. They did, indeed, lower some cords twisted into running knots, but (as might have been ex- pected) these only slipped over, without holding, the slimy bodies of the sharks. As a last resource the boatswain allowed his naked leg to hang over the side of the raft; the monsters, however, were proof even against this at- traction.

Reduced once again to a gloomy despondency, all turned to their places, to await the end that can not now be long deferred.

Just as I moved away I heard the boatswain say to

Curtis:

“Captain, when shall we draw lots?”

The captain made no reply.

CHAPTER XLV OUR THIRST RELIEVED

JANUARY 16. — If the crew of any passing vessel had caught sight of us as we lay still and inanimate upon our sail-cloth, they would scarcely, at first sight, have hesitated to pronounce us dead.

My sufferings were terrible; tongue, lips, and throat were so parched and swollen that if food had been at hand I question whether I could have swallowed it. So ex- asperated were the feelings of us all, however, that we glanced at each other with looks as savage as though we were about to slaughter and without delay eat up one an- other.

The heat was aggravated by the atmosphere being some- what stormy. Heavy vapors gathered on the horizon, and there was a look as if it were raining all around. Longing eyes and gasping mouths turned involuntarily toward the clouds, and M. Letourneur, on bended knee, was raising his hands, as it might be in supplication to the relentless skies.

It was eleven o'clock in the morning. I listened for dis- tant rumblings which might announce an approaching storm, but although the vapors had obstructed the sun's rays, they no longer presented the appearance of being charged with electricity. Thus our prognostications ended in disappointment; the clouds, which in the early morning had been marked by the distinctness of their outline, had melted one into another and assumed an uniform dull gray tint; in fact, we were enveloped in an ordinary fog. But was it not still possible that this fog might turn to rain?

Happily this hope was destined to be realized; for in a very short time, Dowlas, with a shout of delight, declared that rain was actually coming; and sure enough, not half a mile from the raft, the dark parallel streaks against the sky testified that there at least rain was falling. I fancied I could see the drops rebounding from the surface of the water. The wind was fresh and bringing the cloud right on toward us, yet we could not suppress our trepidation lest it should exhaust itself before it reached us.

But no; very soon large heavy drops began to fall, and the storm-cloud, passing over our heads, was outpouring its contents upon us. The shower, however, was very transient; already a bright streak of light along the horizon marked the limit of the cloud and warned us that we must be quick to make the most of what it had to give us. Curtis had placed the broken barrel in the position that was most exposed, and every sail was spread out to the fullest extent our dimensions would allow.

We all laid ourselves down flat upon our backs and kept our mouths wide open. The rain splashed into my face, wetted my lips, and trickled down my throat. Never can I describe the ecstasy with which I imbibed that renovat- ing moisture. The parched and swollen glands relaxed, I breathed afresh, and my whole being seemed revived with a strange and requickened life.

The rain lasted about twenty minutes, when the cloud, only half exhausted, passed quite away from over us.

We grasped each other's hands as we rose from the plat- form on which we had been lying, and mutual congratula- tions, mingled with gratitude, poured forth from our long silent lips. Hope, however evanescent it might be, for the moment had returned, and we yielded to the expectation that, ere long, other and more abundant clouds might come and replenish our store.

The next consideration was how to preserve and econo- mize what little had been collected by the barrel, or imbibed by the outspread sails. It was found that only a few pints of rain-water had fallen into the barrel; to this small quantity the sailors were about to add what they could by wringing out the saturated sails, when Curtis made them desist from their intention.

"Stop, stop!" he said "we must wait a moment; we must see whether this water from the sails is drinkable."

I looked at him in amazement. Why should not this be as drinkable as the other? He squeezed a few drops out of one of the folds of a sail into a tin pot, and put it to his lips. To my surprise, he rejected it immediately, and upon tasting it for myself I found it not merely brackish, but briny as the sea itself. The fact was that the canvas had been so long exposed to the action of the waves, that it had become thoroughly impregnated by salt, which of course was taken up again by the water that fell upon it. Dis- appointed we were; but with several pints of water in our possession, we were not only contented for the present, but sanguine in our prospect for the future.

CHAPTER XLVI MY FAST IS BROKEN

JANUARY 17. — As a natural consequence of the allevia- tion of our thirst, the pangs of hunger returned more vio- lently than ever. Although we had no bait, and even if we had we could not use it for want of a whirl, we could not help asking whether no possible means could be devised for securing one out of the many sharks that were still per- petually swarming about the raft. Armed with knives, like the Indians in the pearl fisheries, was it not practicable to attack the monsters in their own element? Curtis ex- pressed his willingness personally to make the attempt, but so numerous were the sharks that we would not for one moment hear of his risking his life in a venture of which the danger was as great as the success was doubtful.

By plunging into the sea, or by gnawing at a piece of metal, we could always, or at least often, do something that cheated us into believing that we were mitigating the pains of thirst; but with hunger it was different. The prospect, too, of rain seemed hopeful, while for getting food there appeared no chance; and, as we knew that nothing could compensate for the lack of nutritive matter, we were soon all cast down again. Shocking to confess, it would be untrue to deny that we surveyed each other with the eye of an eager longing; and I need hardly explain to what a degree of savageness the one idea that haunted us had re- duced our feelings.

Ever since the storm-cloud brought us the too transient shower the sky has been tolerably clear, and although at that time the wind had slightly freshened, it has since dropped, and the sail hangs idly against our mast. Except for the trifling relief it brings by modifying the tempera- ture, we care little now for any breeze. Ignorant as we are as to what quarter of the Atlantic we have been carried by the currents, it matters very little to us from what direc- tion the wind may blow if only it would bring, in rain or dew, the moisture of which we are so dreadfully in need.

My brain is haunted by most horrible nightmares; not that I suppose I am in anyway more distressed than my companions, who are lying in their usual places, vainly endeavoring to forget their sufferings in sleep.

After a time I fell into a restless, dreamy doze. I was neither asleep nor awake. How long I remained in that state of stupor I could hardly say, but at length a strange sensation brought me to myself. Was I dreaming, or was there not really some unaccustomed odor floating in the air? My nostrils became distended, and I could

scarcely suppress a cry of astonishment; but some instinct kept me quiet, and I laid myself down again with the puzzled sen- sation sometimes experienced when we have forgotten a word or name. Only a few minutes, however, had elapsed before another still more savory puff induced me to take several long inhalations. Suddenly, the truth seemed to flash across my mind. “Surely,” I muttered to myself, “this must be cooked meat that I can smell.”

Again and again I sniffed, and became more convinced than ever that my senses were not deceiving me. But from what part of the raft could the smell proceed? I rose to my knees, and having satisfied myself that the odor came from the front, I crept stealthily as a cat under the sails and between the spars in that direction. Following the promptings of my scent, rather than my vision, like a blood- hound in track of his prey. I searched everywhere I could, now finding, now losing, the smell according to my change of position, or the dropping of the wind. At length I got the true scent, once for all, so that I could go straight to the object for which I was in search.

Approaching the starboard angle of the raft, I came to the conclusion that the smell that had thus keenly ex- cited my cravings was the smell of smoked bacon; the mem- branes of my tongue almost bristled with the intenseness of my longing.

Crawling along a little farther, under a thick roll of sail-cloth, I was not long in securing my prize. Forcing my arm below the roll, I felt my hand in contact with some- thing wrapped up in paper. I clutched it up, and carried it off to a place where I could examine it by the help of the light of the moon that had now made its appearance above the horizon. I almost shrieked for joy. It was a piece of bacon. True, it did not weigh many ounces, but small as it was it would suffice to alleviate the pangs of hunger for one day at least. I was just on the point of raising it to my mouth, when a hand was laid upon my arm. It was only by a most determined effort that I kept myself from screaming out. One instant more, and I found myself face to face with Hobart.

In a moment I understood all. Plainly this rascal Ho- bart had saved some provisions from the wreck, upon which he had been subsisting ever since. The steward had pro- vided for himself, while all around him were dying of starvation. Detestable wretch! This accounts for the inconsistency of his well-to-do looks and his pitiable groans. Vile hypocrite!

Yet why, it struck me, should I complain? Was not I reaping the benefit of that secret store that he, for himself, had saved?

But Hobart had no idea of allowing me the peaceable possession of what he held to be his own. He made a dash at the fragment of bacon, and seemed determined to wrest it from my grasp. We struggled with each other, but although our wrestling was very violent, it was very noise- less.

We were both of us aware that it was absolutely neces- sary that not one of those on board should know anything at all about the prize for which we were contending. Nor was my own determination lessened by hearing him groan out that it was his last, his only morsel. “His!” I thought; “it shall be mine now!”

And still careful that no noise of commotion should arise, I threw him on his back, and grasping his throat so that he gurgled again, I held him down until, in rapid mouth- fuls, I had swallowed the last scrap of the food for which we had fought so hard.

I released my prisoner, and quietly crept back to my own quarters.

And not a soul is aware that I have broken my fast!

CHAPTER XLVII HOBART HANGS HIMSELF

JANUARY 18. — After this excitement I awaited the ap- proach of day with a strange anxiety. My conscience told me that Hobart had the right to denounce me in the pres- ence of all my fellow-passengers; yet my alarm was vain. The idea of my proceedings being exposed by him was quite absurd; in a moment he would himself be murdered without pity by the crew, if it should be revealed that, un- known to them, he had been living on some private store which, by clandestine cunning, he had reserved. But, in spite of my anxiety, I had a longing for day to come.

The bit of food that I had thus stolen was very small; but small as it was it had alleviated my hunger; and I was now tortured with remorse, because I had not shared the meager morsel with my fellow-sufferers. Miss Herbey, Andre, his father, all had been forgotten, and from the bot- tom of my heart I repented of my cruel selfishness.

Meantime the moon rose high in the heavens, and the first streaks of dawn appeared. There is no twilight in these low latitudes, and the full daylight came well nigh at once. I had not closed my eyes since my encounter with the steward, and ever since the first blush of day I had labored under the impression that I could see some unusual dark mass half way up the mast. But although it again and again caught my eye, it hardly roused my curiosity, and I did not rise from the bundle of sails on which I was lying to ascertain what it really was. But no sooner did the rays of the sun fall upon it than I saw at once that it was the body of a man, attached to a rope, and swinging to and fro with the motion of the raft.

A horrible presentiment carried me to the foot of the mast, and, just as I had guessed, Hobart had hanged him- self. I could not for a moment doubt that it was I myself that had impelled him to the suicide. A cry of horror had scarcely escaped my lips, when my fellow-passengers were at my side, and the rope was cut. Then came the sailors. And what was it that made the group gather so eagerly around the body? Was it a humane desire to see whether any sparks of life remained? No, indeed; the corpse was cold, and the limbs were rigid; there was no chance that animation should be restored. What then was it that kept them lingering so close around? It was only too apparent what they were about to do.

But I did not, could not, look. I refused to take part in the horrible repast that was proposed. Neither would Miss Herbey, Andre, nor his father, consent to alleviate their

pangs of hunger by such revolting means. I know nothing for certain as to what Curtis did, and I did not venture to inquire; but of the others, — Falsten, Dowlas, the boatswain, and all the rest, — I know that, to assuage their cravings, they consented to reduce themselves to the level of beasts of prey; they were transformed from human beings into ravenous brutes.

The four of us who sickened at the idea of partaking of the horrid meal withdrew to the seclusion of our tent; it was bad enough to hear, without witnessing the appalling operation. But, in truth, I had the greatest difficulty in the world in preventing Andre from rushing out upon the can- nibals, and snatching the odious food from their clutches. I represented to him the hopelessness of his attempt, and tried to reconcile him by telling him that if they liked the food they had a right to it. Hobart had not been mur- dered; he had died by his own hand; and, after all, as the boatswain had once remarked to me, “It was better to eat a dead man than a live one.”

Do what I would, however, I could not quiet Andre’s feeling of abhorrence; in his disgust and loathing he seemed for the time to have quite forgotten his own sufferings.

Meanwhile, there was no concealing the truth that we were ourselves dying of starvation, while our eight com- panions would probably, by their loathsome diet, escape that frightful destiny. Owing to his secret hoard of provisions Hobart had been by far the strongest among us; he had been supported, so that no organic disease had affected his tissues, and really might be said to be in good health when his chagrin drove him to his desperate suicide. But what was I thinking of! whither were my meditations carrying me away? was it not coming to pass that the cannibals were rousing my envy instead of exciting my horror?

Very shortly after this I heard Dowlas talking about the possibility of obtaining salt by evaporating seawater in the sun; “and then,” he added, “we can salt down the rest.”

The boatswain assented to what the carpenter had said, and probably the suggestion was adopted.

Silence, the most profound, now reigns upon the raft. I presume that nearly all have gone to sleep. One thing I do know, that they are no longer hungry.

CHAPTER XLVIII HOBART'S BODY STOLEN

JANUARY 19. — All through the day the sky remained un- clouded and the heat intense; and night came on without bringing much sensible moderation in the temperature. I was unable to get any sleep, and, toward morning, was dis- turbed by hearing an angry clamor going on outside the tent; it aroused M. Letourneur, Andre, and Miss Herbey, as much as myself, and we were anxious to ascertain the cause of the tumult.

The boatswain, Dowlas, and all the sailors were storming at each other in frightful rage; and Curtis, who had come forward from the stern, was endeavoring to pacify them.

"But who has done it? we must know who has done it," said Dowlas, scowling with vindictive passion on the group around him.

"There's a thief," howled out the boatswain, "and he shall be found! Let's know who has taken it."

"I haven't taken it!" "Nor I! Nor I!" cried the sailors one after another.

And then they set to work again to ransack every quarter of the raft; they rolled every spar aside, they overturned everything on board, and only grew more and more incensed with anger as their search proved fruitless."

"Can YOU tell us," said the boatswain, coming up to me, "who is the thief?"

"Thief!" I replied. "I don't know what you mean."

And while we were speaking the others all came up to- gether, and told me that they had looked everywhere else, and that they were going now to search the tent.

"Shame!" I said. "You ought to allow those whom you know to be dying of hunger at least to die in peace. There is not one of us who has left the tent all night. Why suspect us?"

"Now just look here, Mr. Kazallon," said the boatswain, in a voice which he was endeavoring to calm down into moderation, "we are not accusing you of anything; we know well enough you, and all the rest of you, had a right to your shares as much as anybody; but that isn't it. It's all gone somewhere, every bit."

“Yes,” said Sandon gruffly; “it’s all gone somewheres, and we are going to search the tent.”

Resistance was useless, and Miss Herbey, M. Letourneur, and Andre were all turned out.

I confess I was very fearful. I had a strong suspicion that for the sake of his son, for whom he was ready to ven- ture anything, M. Letourneur had committed the theft; in that case I knew that nothing would have prevented the in- furiated men from tearing the devoted father to pieces. I beckoned to Curtis for protection, and he came and stood beside me. He said nothing, but waited with his hands in his pockets, and I think I am not mistaken in my belief that there was some sort of a weapon in each.

To my great relief the search was ineffectual. There was no doubt that the carcass of the suicide had been thrown overboard, and the rage of the disappointed cannibals knew no bounds.

Yet who had ventured to do the deed? I looked at M. Letourneur and Miss Herbey; but their countenances at once betrayed their ignorance. Andre turned his face away, and his eyes did not meet my own. Probably it is he; but, if it be, I wonder whether he has reckoned up the consequences of so rash an act.

CHAPTER XLIX THE NEGRO BECOMES INSANE

JANUARY 20 to 22. — For the day or two after the hor- rible repast of the 18th those who had partaken of it ap- peared to suffer comparatively little either from hunger or thirst; but for the four of us who had tasted nothing, the agony of suffering grew more and more intense. It was enough to make us repine over the loss of the provision that had so mysteriously gone; and if any one of us should die, I doubt whether the survivors would a second time resist the temptation to assuage their pangs by tasting human flesh.

Before long, all the cravings of hunger began to return to the sailors, and I could see their eyes greedily glancing upon us, starved as they knew us to be, as though they were reck- oning our hours, and already were preparing to consume us as their prey.

As is always the case with shipwrecked men, we were tormented by thirst far more than by hunger; and if, in the height of our sufferings, we had been offered our choice be- tween a few drops of water and a few crumbs of biscuit, I do not doubt that we should, without exception, have pre- ferred to take the water.

And what a mockery to our condition did it seem that all this while there was water, water, nothing but water, every- where around us! Again and again, incapable of compre- hending how powerless it was to relieve me, I put a few drops within my lips, but only with the invariable result of bringing on a most trying nausea, and rendering my thirst more unendurable than before.

Forty-two days had passed since we quitted the sinking Chancellor. There could be no hope now; all of us must die, and by the most deplorable of deaths. I was quite con- scious that a mist was gathering over my brain; I felt my senses sinking into a condition of torpor; I made an effort, but all in vain, to master the delirium that I was aware was taking possession of my reason. It is out of my power to decide for how long I lost my consciousness; but when I came to myself I found that Miss Herbey had folded some wet bandages around my forehead. I am somewhat better; but I am weakened, mind and body, and I am conscious that I have not long to live.

A frightful fatality occurred to-day. The scene was ter- rible. Jynxstrop the negro went raving mad. Curtis and several of the men tried their utmost to control him, but in spite of everything he broke loose, and tore up and down the raft, uttering fearful yells. He had gained possession of a handspike, and rushed upon us all with the ferocity of an

infuriated tiger; how we contrived to escape mischief from his attacks, I know not. All at once, by one of those un- accountable impulses of madness, his rage turned against himself. With his teeth and nails he gnawed and tore away at his own flesh; dashing the blood into our faces, he shrieked out with a demoniacal grin, “Drink, drink!” and flinging us gory morsels, kept saying “Eat, eat!” In the midst of his insane shrieks he made a sudden pause, then dashing back again from the stern to the front, he made a bound and disappeared beneath the waves.

Falsten, Dowlas, and the boatswain, made a rush that at least they might secure the body; but it was too late; all that they could see was a crimson circle in the water, and some huge sharks disporting themselves around the spot.

CHAPTER L ALL HOPE GONE

JANUARY 23. — Only eleven of us now remain; and the probability is very great that every day must now carry off at least its one victim, and perhaps more. The end of the tragedy is rapidly approaching, and save for the chance, which is next to an impossibility, of our sighting land, or being picked up by a passing vessel, ere another week has elapsed not a single survivor of the Chancellor will remain.

The wind freshened considerably in the night, and it is now blowing pretty briskly from the northeast. It has filled our sail, and the white foam in our wake is an indication that we are making some progress. The captain reckons that we must be advancing at the rate of about three miles an hour.

Curtis and Falsten are certainly in the best condition among us, and in spite of their extreme emaciation they bear up wonderfully under the protracted hardships we have all endured. Words cannot describe the melancholy state to which poor Miss Herbey bodily is reduced; her whole being seems absorbed into her soul, but that soul is brave and resolute as ever, living in heaven rather than on earth. The boatswain, strong, energetic man that he was, has shrunk into a mere shadow of his former self, and I doubt whether anyone would recognize him to be the same man. He keeps perpetually to one corner of the raft, his head dropped upon his chest, and his long, bony hands lying upon knees that project sharply from his worn-out trowsers. Unlike Miss Herbey, his spirit seems to have sunk into apathy, and it is at times difficult to believe that he is living at all, so motion- less and statue-like does he sit.

Silence continues to reign upon the raft. Not a sound, not even a groan, escapes our lips. We do not exchange ten words in the course of the day, and the few syllables that our parched tongues and swollen lips can pronounce are almost unintelligible. Wasted and bloodless, we are no longer human beings; we are specters.

CHAPTER LI FLAYPOLE BECOMES DELIRIOUS

JANUARY 24. — 1 have inquired more than once of Curtis if he has the faintest idea to what quarter of the Atlantic we have drifted, and each time he has been unable to give me a decided answer, though from his general observation of the direction of the wind and currents he imagines that we have been carried westward, that is to say, toward the land.

To-day the breeze has dropped entirely, but the heavy swell is still upon the sea, and is an unquestionable sign that a tempest has been raging at no great distance. The raft labors hard against the waves, and Curtis, Falsten, and the boatswain, employ the little energy that remains to them in strengthening the joints. Why do they give themselves such trouble? Why not let the few frail planks part asunder, and allow the ocean to terminate our miserable ex- istence? Certain it seems that our sufferings must have reached their utmost limit, and nothing could exceed the torture that we are enduring. The sky pours down upon us a heat like that of molten lead, and the sweat that saturates the tattered clothes that hang about our bodies goes far to aggravate the agonies of our thirst. No words of mine can describe this dire distress; these sufferings are beyond human estimate.

Even bathing, the only means of refreshment that we possessed, has now become impossible, for ever since Jynx- strop's death the sharks have hung about the raft in shoals.

To-day I tried to gain a few drops of fresh water by evaporation, but even with the exercise of the greatest pa- tience, it was with the utmost difficulty that I obtained enough to moisten a little scrap of linen; and the only kettle that we had was so old and battered, that it would not bear the fire, so that I was obliged to give up the attempt in de- spair.

Falsten is now almost exhausted, and if he survives us at all, it can only be for a few days. Whenever I raised my head I always failed to see him, but he was probably lying sheltered somewhere beneath the sails. Curtis was the only man who remained on his feet, but with indomitable pluck he continued to stand on the front of the raft, waiting, watching, hoping. To look at him, with his unflagging energy, almost tempted me to imagine that he did well to hope, but I dared not entertain one sanguine thought, and there I lay, waiting, nay, longing for death.

How many hours passed away thus I cannot tell, but after a time a loud peal of laughter burst upon my ear. Someone else, then, was going mad, I thought; but the idea did not rouse me in the least. The laughter was repeated with greater vehemence, but I never raised my head. Presently I caught a few incoherent words.

“Fields, fields, gardens and trees! Look, there’s an inn under the trees! Quick, quick! brandy, gin, water! a guinea a drop! I’ll pay for it! I’ve lots of money! lots! lots!”

Poor deluded wretch! I thought again; the wealth of a nation could not buy a drop of water here. There was silence for a minute, when all of a sudden I heard the shout of “Land! land!”

The words acted upon me like an electric shock, and, with a frantic effort, I started to my feet. No land, indeed, was visible, but Flaypole, laughing, singing, and gesticulating, was raging up and down the raft. Sight, taste, and hear- ing — all were gone; but the cerebral derangement supplied their place, and in imagination the maniac was conversing with absent friends, inviting them into the George Inn at Cardiff, offering them gin, whiskey, and, above all, water! Stumbling at every step, and singing in a cracked, discordant voice, he staggered about among us like an intoxicated man. With the loss of his senses all his sufferings had vanished, and his thirst was appeased. It was hard not to wish to be a partaker of his hallucination.

Dowlas, Falsten, and the boatswain, seemed to think that the unfortunate wretch would, like Jynxstrop, put an end to himself by leaping into the sea; but, determined this time to preserve the body, that it might serve a better purpose than merely feeding the sharks, they rose and followed the madman everywhere he went, keeping a strict eye upon his every movement.

But the matter did not end as they expected. As though he were really intoxicated by the stimulants of which he had been raving, Flaypole at last sank down in a heap in a corner of the raft, where he lay lost in a heavy slumber.

CHAPTER LII I DECIDE TO COMMIT SUICIDE

JANUARY 25. — Last night was very misty, and for some unaccountable reason, one of the hottest that can be imagined. The atmosphere was really so stifling, that it seemed as if it only required a spark to set it alight. The raft was not only quite stationary, but did not even rise and fall with any motion of the waves.

During the night I tried to count how many there were now on board, but I was utterly unable to collect my ideas sufficiently to make the enumeration. Sometimes I counted ten, sometimes twelve, and although I knew that eleven, since Jynxstrop was dead, was the correct number, I could never bring my reckoning right. Of one thing I felt quite sure, and that was that the number would very soon be ten. I was convinced that I could myself last but very little longer. All the events and associations of my life passed rapidly through my brain. My country, my friends, and my family all appeared as it were in a vision, and seemed as though they had come to bid me a last farewell.

Toward morning I woke from my sleep, if the languid stupor into which I had fallen was worthy of that name. One fixed idea had taken possession of my brain — I would put an end to myself; and I felt a sort of pleasure as I gloated over the power that I had to terminate my suffer- ings. I told Curtis, with the utmost composure, of my in- tention, and he received the intelligence as calmly as it was delivered.

“Of course you will do as you please,” he said; “for my own part, I shall not abandon my post. It is my duty to remain here; and unless death comes to carry me away, I shall stay where I am to the very last.”

The dull gray fog still hung heavily over the ocean, but the sun was evidently shining above the mist, and would, in course of time, dispel the vapor. Toward seven o’clock I fancied I heard the cries of birds above my head. The sound was repeated three times, and as I went up to the cap- tain to ask him about it, I heard him mutter to himself:

“Birds! Why, that looks as if land were not far off.”

But although Curtis might still cling to the hope of reach- ing land, I knew not what it was to have one sanguine thought. For me there was neither continent nor island; the world was one fluid sphere, uniform, monotonous, as in the most primitive period of its formation. Nevertheless it must be owned that it was with a certain amount of im-

patience that I awaited the rising of the mist, for I was anxious to shake off the phantom fallacies that Curtis's words had suggested to my mind.

Not till eleven o'clock did the fog begin to break, and as it rolled in heavy folds along the surface of the water, I could every now and then catch glimpses of a clear blue sky beyond. Fierce sunbeams pierced the cloud-rifts, scorching and burning our bodies like red-hot iron; but it was only above our heads that there was any sunlight to condense the vapor; the horizon was still quite invisible. There was no wind, and for half an hour longer the fog hung heavily round the raft, while Curtis, leaning against the side, strove to penetrate the obscurity. At length the sun burst forth in full power, and, sweeping the surface of the ocean, dispelled the fog and left the horizon open to our eyes.

There, exactly as we had seen it for the last six weeks, was the circle that bounded sea and sky — unbroken, definite, distinct as ever! Curtis gazed with intensest scrutiny, but did not speak a word. I pitied him sincerely, for he alone of us all felt that he had not the right to put an end to his misery. For myself, I had fully determined that if I lived till the following day, I would die by my own hand. Whether my companions were still alive, I hardly cared to know; it seemed as though days had passed since I had seen them.

Night drew on, but I could not sleep for a moment. To- ward two o'clock in the morning my thirst was so intense that I was unable to suppress loud cries of agony. Was there nothing that would serve to quench the fire that was burning within me? What if, instead of drinking the blood of others, I were to drink my own? It would be all un- availing, I was well aware; but scarcely had the thought crossed my mind, than I proceeded to put it into execution. I unclasped my knife, and, stripping my arm, with a steady thrust I opened a small vein. The blood oozed out slowly, drop by drop, and as I eagerly swallowed the source of my very life, I felt that for a moment my torments were re- lieved. But only for a moment; all energy had failed my pulses, and almost immediately the blood had ceased to flow.

How long it seemed before the morning dawned! and when that morning came it brought another fog, heavy as before, that again shut out the horizon. The fog was hot as the burning steam that issues from a boiler. It was to be my last day upon earth, and I felt that I should like to press the hand of a friend before I died. Curtis was stand- ing near, and crawling up to him, I took his hand in my own. He seemed to know that I was

taking my farewell, and with one last lingering hope he endeavored to restrain me. But all in vain; my mind was finally made up.

I should have liked to speak once again to M. Letourneur, Andre, and Miss Herbey, but my courage failed me. I knew that the young girl would read my resolution in my eyes, and that she would speak to me of duty, and of God, and of eternity, and I dared not meet her gaze; and I would not run the risk of being persuaded to wait until a lingering death should overtake me. I returned to the back of the raft, and after making several efforts, I managed to get on to my feet. I cast one long look at the pitiless ocean and the unbroken horizon; if a sail or the outline of a coast had broken on my view, I believe that I should only have deemed myself the victim of an illusion; but nothing of the kind appeared, and the sea was dreary as a desert.

It was ten o’clock in the morning. The pangs of hunger and the torments of thirst were racking me with redoubled vigor. All instinct of self-preservation had left me, and I felt that the hour had come when I must cease to suffer. Just as I was on the point of casting myself headlong into the sea, a voice, which I recognized as Dowlas’s, broke upon my ear.

“Captain,” he said, “we are going to draw lots.”

Involuntarily I paused; I did not take my plunge, but returned to my place upon the raft.

CHAPTER LIII WE DECIDE TO DRAW LOTS

JANUARY 26. — All heard and understood the proposition; in fact it had been in contemplation for several days, but no one had ventured to put the idea into words. However, it was done now; lots were to be drawn, and to each would be assigned his share of the body of the one ordained by fate to be the victim. For my own part, I profess that I was quite resigned for the lot to fall upon myself. I thought I heard Andre Letourneur beg for an exception to be made in favor of Miss Herbey; but the sailors raised a murmur of dissent. As there were eleven of us on board, there were ten chances to one in each one's favor — a proportion which would be diminished if Miss Herbey were excluded; so that the young lady was forced to take her chance among the rest.

It was then half-past ten, and the boatswain, who had been roused from his lethargy by what the carpenter had said, insisted that the drawing should take place immediately. There was no reason for delaying the fatal lottery. There was not one of us that clung in the least to life; and we knew that, at the worst, whoever should be doomed to die, would only precede the rest by a few days, or even hours. All that we desired was just once to slake our raging thirst and moderate our gnawing hunger.

How all the names found their way to the bottom of a hat I cannot tell. Very likely Falsten wrote them upon a leaf torn from his memorandum-book. But be that as it may, the eleven names were there, and it was unanimously agreed that the last name drawn should be the victim.

But who would draw the names? There was hesitation for a moment; then "I will," said a voice behind me. Turn- ing round, I beheld M. Letourneur standing with out-stretched hand, and with his long white hair falling over his thin livid face that was almost sublime in its calmness. I divined at once the reason of this voluntary offer; I knew that it was the father's devotion in self-sacrifice that led him to undertake the office.

"As soon as you please," said the boatswain.

M. Letourneur proceeded to draw out the folded strips of paper, one by one, and, after reading out loud the name upon it, handed it to its owner.

The first name called was that of Burke, who uttered a cry of delight; then followed Flaypole and the boatswain. What his name really was I never could exactly learn. Then came Falsten, Curtis, Sandon. More than half had now been called, and my name had not yet been drawn. I calculated my remaining chance; it was still four to one in my favor.

M. Letourneur continued his painful task. Since Burke's first exclamation of joy not a sound had escaped our lips, but all were listening in breathless silence. The seventh name was Miss Herbey's, but the young girl heard it with- out a start. Then came mine, yes, mine! and the ninth was was that of Letourneur.

"Which one?" asked the boatswain.

"Andre," said M. Letourneur.

With one cry Andre fell back senseless. Only two names now remained in the hat — those of Dowlas and M. Letour- neur himself.

"Go on!" almost roared the carpenter, surveying his partner in peril as though he could devour him. M. Le- tourneur almost had a smile upon his lips, as he drew forth the last paper but one, and with a firm, unfaltering voice, marvelous for his age, unfolded it slowly, and read the name of Dowlas. The carpenter gave a yell of relief as he heard the word.

M. Letourneur took the last bit of paper from the hat, and, without looking at it, tore it to pieces. But, unper- ceived by all but myself, one little fragment flew into a corner of the raft. I crawled toward it and picked it up. On one side of it was written Andr — ; the rest of the word was torn away. M. Letourneur saw what I had done, and, rushing toward me, snatched the paper from my hands, and flung it into the sea.

CHAPTER LIV MISS HERBEY PLEADS FOR ONE DAY MORE

JANUARY 26. — I understood it all; the devoted father hav- ing nothing more to give, had given his life for his son.

M. Letourneur was no longer a human being in the eyes of the famished creatures who were now yearning to see him sacrificed to their cravings. At the very sight of the victim thus provided, all the tortures of hunger returned with redoubled violence. With lips distended, and teeth dis- played, they waited like a herd of carnivora until they could attack their prey with brutal voracity; it seemed almost doubtful whether they would not fall upon him while still alive. It seemed impossible that any appeal to their human- ity could, at such a moment, have any weight; nevertheless, the appeal was made, and, incredible as it may seem, pre- vailed.

Just as the boatswain was about to act the part of butcher, and Dowlas stood, hatchet in hand, ready to complete the barbarous work, Miss Herbey advanced, or rather crawled, toward them.

“My friends,” she pleaded, “will you not wait just one more day? If no land or ship is in sight to-morrow, then I suppose our poor companion must become your victim. But allow him one more day; in the name of mercy I en- treat, I implore you.”

My heart bounded as she made her pitiful appeal. It seemed to me as though the noble girl had spoken with an inspiration on her lips, and I fancied that, perhaps, in super- natural vision she had viewed the coast or the ship of which she spoke; and one more day was not much to us who had already suffered so long, and endured so much.

Curtis and Falsten agreed with me, and we all united to support Miss Herbey’s merciful petition. The sailors did not utter a murmur, and the boatswain in a smothered voice said:

“Very well, we will wait till daybreak to-morrow,” and threw down his hatchet.

To-morrow, then, unless land or a sail appear, the horrible sacrifice will be accomplished. Stifling their sufferings by a strenuous effort, all returned to their places. The sailors crouched beneath the sails, caring nothing about scanning the ocean. Food was in store for them to-morrow, and that was enough for them.

As soon as Andre Letourneur came to his senses, his first thought was for his father, and I saw him count the pas- sengers on the raft. He looked puzzled; when he lost consciousness there had been only two names left in the hat, those of his father and the carpenter; and yet M. Letourneur and Dowlas were both there still. Miss Herbey went up to him and told him quietly that the drawing of the lots had not yet been finished. Andre asked no further ques- tion, but took his father's hand. M. Letourneur's countenance was calm and serene; he seemed to be conscious of nothing except that the life of his son was spared, and as the two sat conversing in an undertone at the back of the raft, their whole existence seemed bound up in each other.

Meantime, I could not disabuse my mind of the impres- sion caused by Miss Herbey's intervention. Something told me that help was near at hand, and that we were approaching the termination of our suspense and misery; the chimeras that were floating through my brain resolved themselves into realities, so that nothing appeared to me more certain than that either land or sail, be they miles away, would be dis- covered somewhere to leeward.

I imparted my convictions to M. Letourneur and his son. Andre was as sanguine as myself; poor boy! he little thinks what a loss there is in store for him to-morrow. His father listened gravely to all we said, and whatever he might think in his own mind, he did not give us any discouragement; Heaven, he said, he was sure would still spare the survivors of the Chancellor, and then he lavished on his son caresses which he deemed to be his last.

Some time afterward, when I was alone with him, M.

Letourneur whispered in my ear:

"Mr. Kazallon, I commend my boy to your care, and mark you, he must never know __ "

His voice was choked with tears, and he could not finish his sentence.

But I was full of hope, and, without a moment's inter- mission, I kept my eyes fixed upon the unbroken horizon. Curtis, Miss Herbey, Falsten, and even the boatswain, were also eagerly scanning the broad expanse of the sea.

Night has come on; but I have still a profound conviction that through the darkness some ship will approach, and that at daybreak our raft will be observed.

CHAPTER LV FRESH WATER

JANUARY 27. — I did not close my eyes all night, and was keenly alive to the faintest sounds, and every ripple of the water, and every murmur of the waves, broke distinctly on my ear. One thing I noticed and accepted as a happy omen; not a single shark now lingered round the raft. The wan- ing moon rose at a quarter to one, and through the feeble glimmer which she cast across the ocean, many and many a time I fancied I caught sight of the longed-for sail, lying only a few cables'-lengths away.

But when morning came, the sun rose once again upon a desert ocean, and my hopes began to fade. Neither ship nor shore had appeared, and as the shocking hour of execu- tion drew near, my dreams of deliverance melted away; I shuddered in my very soul as I was brought face to face with the stern reality. I dared not look upon the victim, and whenever his eyes, so full of calmness and resignation, met my own, I turned away my head. I felt choked with horror, and my brain reeled as though I were intoxi- cated.

It was now six o'clock, and all hope had vanished from my breast; my heart beat rapidly, and a cold sweat of agony broke out all over me. Curtis and the boatswain stood by the mast attentively scanning the horizon. The boatswain's countenance was terrible to look upon; one could see that although he would not forestall the hour, he was determined not to wait a moment after it arrived. As for the captain, it was impossible to tell what really passed within his mind; his face was livid, and his whole existence seemed concen- trated in the exercise of his power of vision. The sailors were crawling about the platform, with their eyes gleaming, like the wild beasts ready to pounce upon their devoted prey.

I could no longer keep my place, and glided along to the front of the raft. The boatswain was still standing intent on his watch, but all of a sudden, in a voice that made me start, he shouted:

"Now then, time's up!" and followed by Dowlas, Burke,

Flaypole, and Sandon, ran to the back of the raft. As

Dowlas seized the hatchet convulsively, Miss Herbey could

not suppress a cry of terror. Andre started to his feet.

“What are you going to do to my father?” he asked in accents choked with emotion.

“My boy,” said M. Letourneur, “the lot has fallen upon me, and I must die!”

“Never!” shrieked Andre, throwing his arms about his father. “They shall kill me first. It was I who threw Hobart’s body into the sea, and it is I who ought to die!” But the words of the unhappy youth had no other effect than to increase the fury of the men who were so stanchly bent upon their bloody purpose.

“Come, come, no more fuss,” said Dowlas, as he tore the young man away from his father’s embrace.

Andre fell upon his back, in which position two of the sailors held him down so tightly that he could not move, while Burke and Sandon carried off their victim to the front.

All this had taken place much more rapidly than I have been able to describe it. I was transfixed with horror, and much as I wished to throw myself between M. Letourneur and his executioners, I seemed to be rooted to the spot where I was standing.

Meantime the sailors had been taking off some of M. Letourneur’s clothes, and his neck and shoulders were al- ready bare.

“Stop a moment!” he said in a tone in which was the ring of indomitable courage. “Stop! I don’t want to de- prive you of your ration; but I suppose you will not require to eat the whole of me to-day.”

The sailors, taken back by his suggestion, stared at him with amazement.

“There are ten of you,” he went on. “My two arms will give you each a meal; cut them off for to-day, and to- morrow you shall have the rest of me.”

“Agreed!” cried Dowlas; and as M. Letourneur held out his bare arms, quick as lightning the carpenter raised his hatchet.

Curtis and I could bear this scene no longer; while we were alive to prevent it, this butchery should not be per- mitted, and we rushed forward simultaneously to snatch the victim from his murderers. A furious struggle ensued, and in the midst of the melee, I was seized by one of the sailors, and hurled violently into the sea.

Closing my lips, I tried to die of suffocation in the water; but in spite of myself, my mouth opened, and a few drops trickled down my throat.

Merciful Heaven! the water was fresh!

CHAPTER LVI NEAR THE COAST OF SOUTH AMERICA

JANUARY 27 continued. — A change came over me as if

by miracle. No longer had I any wish to die, and already

Curtis, who had heard my cries, was throwing me a rope.

I seized it eagerly, and was hauled up on to the raft.

“Fresh water!” were the first words I uttered.

“Fresh water?” cried Curtis; “why then, my friends, we are not far from land!”

It was not too late: the blow had not been struck, and so the victim had not yet fallen. Curtis and Andre (who had regained his liberty) had fought with the cannibals, and it was just as they were yielding to over-powering numbers that my voice had made itself heard.

The struggle came to an end. As soon as the words “fresh water” had escaped my lips, I leaned over the side of the raft and swallowed the life-giving liquid in greedy draughts. Miss Herbey was the first to follow my example, but soon Curtis, Falsten, and all the rest were on their knees and drinking eagerly. The rough sailors seemed as if by a magic touch transformed back from ravenous beasts to human beings, and I saw several of them raise their hands to heaven in silent gratitude. Andre and his father were the last to drink.

“But where are we?” I asked at length.

“The land is there,” said Curtis, pointing toward the west.

We all stared at the captain as though he were mocking us: no land was in sight, and the raft, just as ever, was the center of a watery waste. Yet our senses had not deceived us; the water we had been drinking was perfectly fresh.

“Yes,” repeated the captain, “land is certainly there, not more than twenty miles to leeward.”

“What land?” inquired the boatswain.

“South America,” answered Curtis, “and near the Amazon; no other river has a current strong enough to freshen the ocean twenty miles from shore!”

CHAPTER LVII LAND AHOY!

JANUARY 27 continued. — Curtis, no doubt, was right. The discharge from the mouth of the Amazon is enor- mously large, but we had probably drifted into the only spot in the Atlantic where we could find fresh water so far from land. Yet land undoubtedly was there, and the breeze was carrying us onward slowly but surely to our deliverance.

Miss Herbey's voice was heard pouring out fervent praise to Heaven, and we were all glad to unite our thanksgivings with hers. Then the whole of us (with the exception of Andre and his father, who remained by themselves to- gether at the stern) clustered in a group, and kept our ex- pectant gaze upon the horizon.

We had not long to wait. Before an hour had passed,

Curtis leaped in ecstasy and raised the joyous shout of

"Land ahoy!"

... .

My journal has come to a close.

I have only to relate, as briefly as possible, the circum- stances that finally brought us to our destination.

A few hours after we first sighted land the raft was off Cape Magoari, on the island of Marajo, and was observed by some fishermen, who, with kind-hearted alacrity picked us up and tended us most carefully. They conveyed us to Para, where we became the objects of unbounded sympathy.

The raft was brought to land in latitude 0 deg. 12' north, so that since we abandoned the Chancellor we had drifted at least fifteen degrees to the southwest. Except for the in- fluence of the Gulf Stream we must have been carried far, far to the south, and in that case we should never have reached the mouth of the Amazon, and must inevitably have been lost.

Of the thirty-two souls — nine passengers and twenty- three seamen — who left Charleston on board the ship, only five passengers and six seamen remain. Eleven of us

alone survive.

An official account of our rescue was drawn up by the Brazilian authorities. Those who signed were Miss Her- bey, J. R. Kazallon, M. Letourneur, Andre Letourneur, Mr. Falsten, the boatswain, Dowlas, Burke, Flaypole, San- don, and last, though not least, “Robert Curtis, Captain.”

At Para we soon found facilities for continuing our homeward route. A vessel took us to Cayenne, where we secured a passage on board one of the steamers of the French Transatlantic Aspinwall line, the Ville de St. Na- zaire, which conveyed us to Europe.

After all the dangers and privations which we have under- gone together, it is scarcely necessary to say that there has arisen between the surviving passengers of the Chancellor a bond of friendship too indissoluble, I believe, for either time or circumstance to destroy; Curtis must ever remain the honored and valued friend of those whose welfare he consulted so faithfully in their misfortunes; his conduct was beyond all praise.

When we were fairly on our homeward way, Miss Herbey by chance intimated to us her intention of retiring from the world and devoting the remainder of her life to the care of the sick and suffering.

“Then why not come and look after my son?” said M. Letourneur, adding, “he is an invalid, and he requires, as he deserves, the best of nursing.”

Miss Herbey, after some deliberation, consented to be- come a member of their family, and finds in M. Letourneur a father, and in Andre a brother. A brother, I say; but may we not hope that she may be united by a dearer and a closer tie, and that the noble-hearted girl may experience the happiness that she so richly deserves?

MICHAEL STROGOFF

THE COURIER OF THE CZAR

Translated by Agnes Kinloch Kingston

This novel was first published 1876 and it is considered to be one Verne's greatest achievements as a novelist. Unlike many of his works, *Michael Strogoff* is not of the genre of science fiction. The novel tells the story of Michael Strogoff, a 30-year-old native of Omsk, who is a courier for Tsar Alexander II of Russia. The Tartar Khan, Feofar, incites a rebellion and separates the Russian Far East from the mainland, severing telegraph lines.

CHAPTER I A FETE AT THE NEW PALACE

“SIRE, a fresh dispatch.”

“Whence?”

“From Tomsk?”

“Is the wire cut beyond that city?”

“Yes, sire, since yesterday.”

“Telegraph hourly to Tomsk, General, and keep me informed of all that occurs.”

“Sire, it shall be done,” answered General Kissoff.

These words were exchanged about two hours after midnight, at the moment when the fete given at the New Palace was at the height of its splendor.

During the whole evening the bands of the Preobra-jensky and Paulowsky regiments had played without cessation polkas, mazurkas, schottisches, and waltzes from among the choicest of their repertoires. Innumerable couples of dancers whirled through the magnificent saloons of the palace, which stood at a few paces only from the “old house of stones” — in former days the scene of so many terrible dramas, the echoes of whose walls were this night awakened by the gay strains of the musicians.

The grand-chamberlain of the court, was, besides, well seconded in his arduous and delicate duties. The grand-dukes and their aides-de-camp, the chamberlains-in-waiting and other officers of the palace, presided personally in the arrangement of the dances. The grand duchesses, covered with diamonds, the ladies-in-waiting in their most exquisite costumes, set the example to the wives of the military and civil dignitaries of the ancient “city of white stone.” When, therefore, the signal for the “polonaise” resounded through the saloons, and the guests of all ranks took part in that measured promenade, which on occasions of this kind has all the importance of a national dance, the mingled costumes, the sweeping robes adorned with lace, and uniforms covered with orders, presented a scene of dazzling splendor, lighted by hundreds of lusters multiplied tenfold by the numerous mirrors adorning the walls.

The grand saloon, the finest of all those contained in the New Palace, formed to this procession of exalted personages and splendidly dressed women a frame worthy of the magnificence they displayed. The rich ceiling, with its gilding already softened by the touch of time, appeared as if glittering with stars. The embroidered drapery of the curtains and doors, falling in gorgeous folds, assumed rich and varied hues, broken by the shadows of the heavy masses of damask.

Through the panes of the vast semicircular bay-windows the light, with which the saloons were filled, shone forth with the brilliancy of a conflagration, vividly illuminating the gloom in which for some hours the palace had been shrouded. The attention of those of the guests not taking part in the dancing was attracted by the contrast. Resting in the recesses of the windows, they could discern, standing out dimly in the darkness, the vague outlines of the countless towers, domes, and spires which adorn the ancient city. Below the sculptured balconies were visible numerous sentries, pacing silently up and down, their rifles carried horizontally on the shoulder, and the spikes of their helmets glittering like flames in the glare of light issuing from the palace. The steps also of the patrols could be heard beating time on the stones beneath with even more regularity than the feet of the dancers on the floor of the saloon. From time to time the watchword was repeated from post to post, and occasionally the notes of a trumpet, mingling with the strains of the orchestra, penetrated into their midst. Still farther down, in front of the facade, dark masses obscured the rays of light which proceeded from the windows of the New Palace. These were boats descending the course of a river, whose waters, faintly illumined by a few lamps, washed the lower portion of the terraces.

The principal personage who has been mentioned, the giver of the fete, and to whom General Kissoff had been speaking in that tone of respect with which sovereigns alone are usually addressed, wore the simple uniform of an officer of chasseurs of the guard. This was not affectation on his part, but the custom of a man who cared little for dress, his contrasting strongly with the gorgeous costumes amid which he moved, encircled by his escort of Georgians, Cossacks, and Circassians — a brilliant band, splendidly clad in the glittering uniforms of the Caucasus.

This personage, of lofty stature, affable demeanor, and physiognomy calm, though bearing traces of anxiety, moved from group to group, seldom speaking, and appearing to pay but little attention either to the merriment of the younger guests or the graver

remarks of the exalted dignitaries or members of the diplomatic corps who represented at the Russian court the principal governments of Europe. Two or three of these astute politicians — physiognomists by virtue of their profession — failed not to detect on the countenance of their host symptoms of disquietude, the source of which eluded their penetration; but none ventured to interrogate him on the subject.

It was evidently the intention of the officer of chasseurs that his own anxieties should in no way cast a shade over the festivities; and, as he was a personage whom almost the population of a world in itself was wont to obey, the gayety of the ball was not for a moment checked.

Nevertheless, General Kissoff waited until the officer to whom he had just communicated the dispatch forwarded from Tomsk should give him permission to withdraw; but the latter still remained silent. He had taken the telegram, he had read it carefully, and his visage became even more clouded than before. Involuntarily he sought the hilt of his sword, and then passed his hand for an instant before his eyes, as though, dazzled by the brilliancy of the light, he wished to shade them, the better to see into the recesses of his own mind.

“We are, then,” he continued, after having drawn General Kissoff aside towards a window, “since yesterday without intelligence from the Grand Duke?”

“Without any, sire; and it is to be feared that in a short time dispatches will no longer cross the Siberian frontier.”

“But have not the troops of the provinces of Amoor and Irkutsk, as those also of the Trans-Balkan territory, received orders to march immediately upon Irkutsk?”

“The orders were transmitted by the last telegram we were able to send beyond Lake Baikal.”

“And the governments of Yeniseisk, Omsk, Semipolatinsk, and Tobolsk — are we still in direct communication with them as before the insurrection?”

“Yes, sire; our dispatches have reached them, and we are assured at the present moment that the Tartars have not advanced beyond the Irtish and the Obi.”

“And the traitor Ivan Ogareff, are there no tidings of him?”

“None,” replied General Kissoff. “The head of the police cannot state whether or not he has crossed the frontier.”

“Let a description of him be immediately dispatched to Nijni-Novgorod, Perm, Ekaterenburg, Kasirnov, Tioumen, Ishim, Omsk, Tomsk, and to all the telegraphic stations with which communication is yet open.”

“Your majesty’s orders shall be instantly carried out.”

“You will observe the strictest silence as to this.”

The General, having made a sign of respectful assent, bowing low, mingled with the crowd, and finally left the apartments without his departure being remarked.

The officer remained absorbed in thought for a few moments, when, recovering himself, he went among the various groups in the saloon, his countenance reassuming that calm aspect which had for an instant been disturbed.

Nevertheless, the important occurrence which had occasioned these rapidly exchanged words was not so unknown as the officer of the chasseurs of the guard and General Kissoff had possibly supposed. It was not spoken of officially, it is true, nor even officiously, since tongues were not free; but a few exalted personages had been informed, more or less exactly, of the events which had taken place beyond the frontier. At any rate, that which was only slightly known, that which was not matter of conversation even between members of the corps diplomatique, two guests, distinguished by no uniform, no decoration, at this reception in the New Palace, discussed in a low voice, and with apparently very correct information.

By what means, by the exercise of what acuteness had these two ordinary mortals ascertained that which so many persons of the highest rank and importance scarcely even suspected? It is impossible to say. Had they the gifts of foreknowledge and foresight? Did they possess a supplementary sense, which enabled them to see beyond that limited horizon which bounds all human gaze? Had they obtained a peculiar power of divining the most secret events? Was it owing to the habit, now become a second nature, of living on information, that their mental constitution had thus become really transformed? It was difficult to escape from this conclusion.

Of these two men, the one was English, the other French; both were tall and thin, but the latter was sallow as are the southern Provencals, while the former was ruddy like a Lancashire gentleman. The Anglo-Norman, formal, cold, grave, parsimonious of gestures and words, appeared only to speak or gesticulate under the influence of a spring operating at regular intervals. The Gaul, on the contrary, lively and petulant, expressed himself with lips, eyes, hands, all at once, having twenty different ways of explaining his thoughts, whereas his interlocutor seemed to have only one, immutably stereotyped on his brain.

The strong contrast they presented would at once have struck the most superficial observer; but a physiognomist, regarding them closely, would have defined their particular characteristics by saying, that if the Frenchman was “all eyes,” the Englishman was “all ears.”

In fact, the visual apparatus of the one had been singularly perfected by practice. The sensibility of its retina must have been as instantaneous as that of those conjurors who recognize a card merely by a rapid movement in cutting the pack or by the arrangement only of marks invisible to others. The Frenchman indeed possessed in the highest degree what may be called “the memory of the eye.”

The Englishman, on the contrary, appeared especially organized to listen and to hear. When his aural apparatus had been once struck by the sound of a voice he could not forget it, and after ten or even twenty years he would have recognized it among a thousand. His ears, to be sure, had not the power of moving as freely as those of animals who are provided with large auditory flaps; but, since scientific men know that human ears possess, in fact, a very limited power of movement, we should not be far wrong in affirming that those of the said Englishman became erect, and turned in all directions while endeavoring to gather in the sounds, in a manner apparent only to the naturalist. It must be observed that this perfection of sight and hearing was of wonderful assistance to these two men in their vocation, for the Englishman acted as correspondent of the Daily Telegraph, and the Frenchman, as correspondent of what newspaper, or of what newspapers, he did not say; and when asked, he replied in a jocular manner that he corresponded with “his cousin Madeleine.” This Frenchman, however, neath his careless surface, was wonderfully shrewd and sagacious. Even while speaking at random, perhaps the better to hide his desire to learn, he never forgot himself. His loquacity even helped him to conceal his thoughts, and he was perhaps

even more discreet than his confrere of the Daily Telegraph. Both were present at this fete given at the New Palace on the night of the 15th of July in their character of reporters.

It is needless to say that these two men were devoted to their mission in the world — that they delighted to throw themselves in the track of the most unexpected intelligence — that nothing terrified or discouraged them from succeeding — that they possessed the imperturbable sang froid and the genuine intrepidity of men of their calling. Enthusiastic jockeys in this steeplechase, this hunt after information, they leaped hedges, crossed rivers, sprang over fences, with the ardor of pure-blooded racers, who will run “a good first” or die!

Their journals did not restrict them with regard to money — the surest, the most rapid, the most perfect element of information known to this day. It must also be added, to their honor, that neither the one nor the other ever looked over or listened at the walls of private life, and that they only exercised their vocation when political or social interests were at stake. In a word, they made what has been for some years called “the great political and military reports.”

It will be seen, in following them, that they had generally an independent mode of viewing events, and, above all, their consequences, each having his own way of observing and appreciating.

The French correspondent was named Alcide Jolivet. Harry Blount was the name of the Englishman. They had just met for the first time at this fete in the New Palace, of which they had been ordered to give an account in their papers. The dissimilarity of their characters, added to a certain amount of jealousy, which generally exists between rivals in the same calling, might have rendered them but little sympathetic. However, they did not avoid each other, but endeavored rather to exchange with each other the chat of the day. They were sportsmen, after all, hunting on the same ground. That which one missed might be advantageously secured by the other, and it was to their interest to meet and converse.

This evening they were both on the look out; they felt, in fact, that there was something in the air.

“Even should it be only a wildgoose chase,” said Alcide Jolivet to himself, “it may be worth powder and shot.”

The two correspondents therefore began by cautiously sounding each other.

“Really, my dear sir, this little fete is charming!” said Alcide Jolivet pleasantly, thinking himself obliged to begin the conversation with this eminently French phrase.

“I have telegraphed already, ‘splendid!’” replied Harry Blount calmly, employing the word specially devoted to expressing admiration by all subjects of the United Kingdom.

“Nevertheless,” added Alcide Jolivet, “I felt compelled to remark to my cousin — ”

“Your cousin?” repeated Harry Blount in a tone of surprise, interrupting his brother of the pen.

“Yes,” returned Alcide Jolivet, “my cousin Madeleine. It is with her that I correspond, and she likes to be quickly and well informed, does my cousin. I therefore remarked to her that, during this fete, a sort of cloud had appeared to overshadow the sovereign’s brow.”

“To me, it seemed radiant,” replied Harry Blount, who perhaps, wished to conceal his real opinion on this topic.

“And, naturally, you made it ‘radiant,’ in the columns of the Daily Telegraph.”

“Exactly.”

“Do you remember, Mr. Blount, what occurred at Zakret in 1812?”

“I remember it as well as if I had been there, sir,” replied the English correspondent.

“Then,” continued Alcide Jolivet, “you know that, in the middle of a fete given in his honor, it was announced to the Emperor Alexander that Napoleon had just crossed the Niemen with the vanguard of the French army. Nevertheless the Emperor did not leave the fete, and notwithstanding the extreme gravity of intelligence which might cost him his empire, he did not allow himself to show more uneasiness.”

“Than our host exhibited when General Kissoff informed him that the telegraphic wires had just been cut between the frontier and the government of Irkutsk.”

“Ah! you are aware of that?”

“I am!”

“As regards myself, it would be difficult to avoid knowing it, since my last telegram reached Udinsk,” observed Alcide Jolivet, with some satisfaction.

“And mine only as far as Krasnoiarsk,” answered Harry Blount, in a no less satisfied tone.

“Then you know also that orders have been sent to the troops of Nikolaevsk?”

“I do, sir; and at the same time a telegram was sent to the Cossacks of the government of Tobolsk to concentrate their forces.”

“Nothing can be more true, Mr. Blount; I was equally well acquainted with these measures, and you may be sure that my dear cousin shall know of them to-morrow.”

“Exactly as the readers of the Daily Telegraph shall know it also, M. Jolivet.”

“Well, when one sees all that is going on...”

“And when one hears all that is said...”

“An interesting campaign to follow, Mr. Blount.”

“I shall follow it, M. Jolivet!”

“Then it is possible that we shall find ourselves on ground less safe, perhaps, than the floor of this ball-room.”

“Less safe, certainly, but — ”

“But much less slippery,” added Alcide Jolivet, holding up his companion, just as the latter, drawing back, was about to lose his equilibrium.

Thereupon the two correspondents separated, pleased that the one had not stolen a march on the other.

At that moment the doors of the rooms adjoining the great reception saloon were thrown open, disclosing to view several immense tables beautifully laid out, and groaning under a profusion of valuable china and gold plate. On the central table, reserved for the princes, princesses, and members of the corps diplomatique, glittered an epergne of inestimable price, brought from London, and around this chef-d'oeuvre of chased gold reflected under the light of the lusters a thousand pieces of most beautiful service from the manufactories of Sevres.

The guests of the New Palace immediately began to stream towards the supper-rooms.

At that moment. General Kissoff, who had just re-entered, quickly approached the officer of chasseurs.

"Well?" asked the latter abruptly, as he had done the former time.

"Telegrams pass Tomsk no longer, sire."

"A courier this moment!"

The officer left the hall and entered a large antechamber adjoining. It was a cabinet with plain oak furniture, situated in an angle of the New Palace. Several pictures, amongst others some by Horace Vernet, hung on the wall.

The officer hastily opened a window, as if he felt the want of air, and stepped out on a balcony to breathe the pure atmosphere of a lovely July night. Beneath his eyes, bathed in moonlight, lay a fortified inclosure, from which rose two cathedrals, three palaces, and an arsenal. Around this inclosure could be seen three distinct towns: Kitai-Gorod, Beloi-Gorod, Zemlianai-Gorod — European, Tartar, and Chinese quarters of great extent, commanded by towers, belfries, minarets, and the cupolas of three hundred churches, with green domes, surmounted by the silver cross. A little winding river, here and there reflected the rays of the moon.

This river was the Moskowa; the town Moscow; the fortified inclosure the Kremlin; and the officer of chasseurs of the guard, who, with folded arms and thoughtful brow, was

listening dreamily to the sounds floating from the New Palace over the old Muscovite city, was the Czar.

CHAPTER II RUSSIANS AND TARTARS

THE Czar had not so suddenly left the ball-room of the New Palace, when the fete he was giving to the civil and military authorities and principal people of Moscow was at the height of its brilliancy, without ample cause; for he had just received information that serious events were taking place beyond the frontiers of the Ural. It had become evident that a formidable rebellion threatened to wrest the Siberian provinces from the Russian crown.

Asiatic Russia, or Siberia, covers a superficial area of 1,790,208 square miles, and contains nearly two millions of inhabitants. Extending from the Ural Mountains, which separate it from Russia in Europe, to the shores of the Pacific Ocean, it is bounded on the south by Turkestan and the Chinese Empire; on the north by the Arctic Ocean, from the Sea of Kara to Behring's Straits. It is divided into several governments or provinces, those of Tobolsk, Yeniseisk, Irkutsk, Omsk, and Yakutsk; contains two districts, Okhotsk and Kamtschatka; and possesses two countries, now under the Muscovite dominion — that of the Kirghiz and that of the Tshouktshes. This immense extent of steppes, which includes more than one hundred and ten degrees from west to east, is a land to which criminals and political offenders are banished.

Two governor-generals represent the supreme authority of the Czar over this vast country. The higher one resides at Irkutsk, the far capital of Eastern Siberia. The River Tchouna separates the two Siberias.

No rail yet furrows these wide plains, some of which are in reality extremely fertile. No iron ways lead from those precious mines which make the Siberian soil far richer below than above its surface. The traveler journeys in summer in a kibick or telga; in winter, in a sledge.

An electric telegraph, with a single wire more than eight thousand versts in length, alone affords communication between the western and eastern frontiers of Siberia. On issuing from the Ural, it passes through Ekaterenburg, Kasirnov, Tioumen, Ishim, Omsk, Elamsk, Kolyvan, Tomsk, Krasnoiarsk, Nijni-Udinsk, Irkutsk, Verkne-Nertschink, Strelink, Albazine, Blagowstenks, Radde, Orlomskaya, Alexandrowskoe, and Nikolaevsk; and six roubles and nineteen copecks are paid for every word sent from one end to the other. From Irkutsk there is a branch to Kiatka, on the Mongolian

frontier; and from thence, for thirty copecks a word, the post conveys the dispatches to Pekin in a fortnight.

It was this wire, extending from Ekaterenburg to Nikolaevsk, which had been cut, first beyond Tomsk, and then between Tomsk and Kolyvan.

This was why the Czar, to the communication made to him for the second time by General Kissoff, had answered by the words, “A courier this moment!”

The Czar remained motionless at the window for a few moments, when the door was again opened. The chief of police appeared on the threshold.

“Enter, General,” said the Czar briefly, “and tell me all you know of Ivan Ogareff.”

“He is an extremely dangerous man, sire,” replied the chief of police.

“He ranked as colonel, did he not?”

“Yes, sire.”

“Was he an intelligent officer?”

“Very intelligent, but a man whose spirit it was impossible to subdue; and possessing an ambition which stopped at nothing, he became involved in secret intrigues, and was degraded from his rank by his Highness the Grand Duke, and exiled to Siberia.”

“How long ago was that?”

“Two years since. Pardoned after six months of exile by your majesty’s favor, he returned to Russia.”

“And since that time, has he not revisited Siberia?”

“Yes, sire; but he voluntarily returned there,” replied the chief of police, adding, and slightly lowering his voice, “there was a time, sire, when NONE returned from Siberia.”

“Well, whilst I live, Siberia is and shall be a country whence men CAN return.”

The Czar had the right to utter these words with some pride, for often, by his clemency, he had shown that Russian justice knew how to pardon.

The head of the police did not reply to this observation, but it was evident that he did not approve of such half-measures. According to his idea, a man who had once passed the Ural Mountains in charge of policemen, ought never again to cross them. Now, it was not thus under the new reign, and the chief of police sincerely deplored it. What! no banishment for life for other crimes than those against social order! What! political exiles returning from Tobolsk, from Yakutsk, from Irkutsk! In truth, the chief of police, accustomed to the despotic sentences of the ukase which formerly never pardoned, could not understand this mode of governing. But he was silent, waiting until the Czar should interrogate him further. The questions were not long in coming.

“Did not Ivan Ogareff,” asked the Czar, “return to Russia a second time, after that journey through the Siberian provinces, the object of which remains unknown?”

“He did.”

“And have the police lost trace of him since?”

“No, sire; for an offender only becomes really dangerous from the day he has received his pardon.”

The Czar frowned. Perhaps the chief of police feared that he had gone rather too far, though the stubbornness of his ideas was at least equal to the boundless devotion he felt for his master. But the Czar, disdaining to reply to these indirect reproaches cast on his policy, continued his questions. “Where was Ogareff last heard of?”

“In the province of Perm.”

“In what town?”

“At Perm itself.”

“What was he doing?”

“He appeared unoccupied, and there was nothing suspicious in his conduct.”

“Then he was not under the surveillance of the secret police?”

“No, sire.”

“When did he leave Perm?”

“About the month of March?”

“To go...?”

“Where, is unknown.”

“And it is not known what has become of him?”

“No, sire; it is not known.”

“Well, then, I myself know,” answered the Czar. “I have received anonymous communications which did not pass through the police department; and, in the face of events now taking place beyond the frontier, I have every reason to believe that they are correct.”

“Do you mean, sire,” cried the chief of police, “that Ivan Ogareff has a hand in this Tartar rebellion?”

“Indeed I do; and I will now tell you something which you are ignorant of. After leaving Perm, Ivan Ogareff crossed the Ural mountains, entered Siberia, and penetrated the Kirghiz steppes, and there endeavored, not without success, to foment rebellion amongst their nomadic population. He then went so far south as free Turkestan; there, in the provinces of Bokhara, Khokhand, and Koondooz, he found chiefs willing to pour their Tartar hordes into Siberia, and excite a general rising in Asiatic Russia. The storm has been silently gathering, but it has at last burst like a thunderclap, and now all means of communication between Eastern and Western Siberia have been stopped. Moreover, Ivan Ogareff, thirsting for vengeance, aims at the life of my brother!”

The Czar had become excited whilst speaking, and now paced up and down with hurried steps. The chief of police said nothing, but he thought to himself that, during the time when the emperors of Russia never pardoned an exile, schemes such as those of Ivan Ogareff could never have been realized. Approaching the Czar, who had thrown himself into an armchair, he asked, “Your majesty has of course given orders so that this rebellion may be suppressed as soon as possible?”

“Yes,” answered the Czar. “The last telegram which reached Nijni-Udinsk would set in motion the troops in the governments of Yenisei, Irkutsk, Yakutsk, as well as those in

the provinces of the Amoor and Lake Baikal. At the same time, the regiments from Perm and Nijni-Novgorod, and the Cossacks from the frontier, are advancing by forced marches towards the Ural Mountains; but some weeks must pass before they can attack the Tartars."

"And your majesty's brother, his Highness the Grand Duke, is now isolated in the government of Irkutsk, and is no longer in direct communication with Moscow?"

"That is so."

"But by the last dispatches, he must know what measures have been taken by your majesty, and what help he may expect from the governments nearest Irkutsk?"

"He knows that," answered the Czar; "but what he does not know is, that Ivan Ogareff, as well as being a rebel, is also playing the part of a traitor, and that in him he has a personal and bitter enemy. It is to the Grand Duke that Ogareff owes his first disgrace; and what is more serious is, that this man is not known to him. Ogareff's plan, therefore, is to go to Irkutsk, and, under an assumed name, offer his services to the Grand Duke. Then, after gaining his confidence, when the Tartars have invested Irkutsk, he will betray the town, and with it my brother, whose life he seeks. This is what I have learned from my secret intelligence; this is what the Grand Duke does not know; and this is what he must know!"

"Well, sire, an intelligent, courageous courier..."

"I momentarily expect one."

"And it is to be hoped he will be expeditious," added the chief of police; "for, allow me to add, sire, that Siberia is a favorable land for rebellions."

"Do you mean to say. General, that the exiles would make common cause with the rebels?" exclaimed the Czar.

"Excuse me, your majesty," stammered the chief of police, for that was really the idea suggested to him by his uneasy and suspicious mind.

"I believe in their patriotism," returned the Czar.

"There are other offenders besides political exiles in Siberia," said the chief of police.

“The criminals? Oh, General, I give those up to you! They are the vilest, I grant, of the human race. They belong to no country. But the insurrection, or rather, the rebellion, is not to oppose the emperor; it is raised against Russia, against the country which the exiles have not lost all hope of again seeing — and which they will see again. No, a Russian would never unite with a Tartar, to weaken, were it only for an hour, the Muscovite power!”

The Czar was right in trusting to the patriotism of those whom his policy kept, for a time, at a distance. Clemency, which was the foundation of his justice, when he could himself direct its effects, the modifications he had adopted with regard to applications for the formerly terrible ukases, warranted the belief that he was not mistaken. But even without this powerful element of success in regard to the Tartar rebellion, circumstances were not the less very serious; for it was to be feared that a large part of the Kirghiz population would join the rebels.

The Kirghiz are divided into three hordes, the greater, the lesser, and the middle, and number nearly four hundred thousand “tents,” or two million souls. Of the different tribes some are independent and others recognize either the sovereignty of Russia or that of the Khans of Khiva, Khokhand, and Bokhara, the most formidable chiefs of Turkestan. The middle horde, the richest, is also the largest, and its encampments occupy all the space between the rivers Sara Sou, Irtish, and the Upper Ishim, Lake Saisang and Lake Aksakal. The greater horde, occupying the countries situated to the east of the middle one, extends as far as the governments of Omsk and Tobolsk. Therefore, if the Kirghiz population should rise, it would be the rebellion of Asiatic Russia, and the first thing would be the separation of Siberia, to the east of the Yenisei.

It is true that these Kirghiz, mere novices in the art of war, are rather nocturnal thieves and plunderers of caravans than regular soldiers. As M. Levchine says, “a firm front or a square of good infantry could repel ten times the number of Kirghiz; and a single cannon might destroy a frightful number.”

That may be; but to do this it is necessary for the square of good infantry to reach the rebellious country, and the cannon to leave the arsenals of the Russian provinces, perhaps two or three thousand versts distant. Now, except by the direct route from Ekaterenburg to Irkutsk, the often marshy steppes are not easily practicable, and some weeks must certainly pass before the Russian troops could reach the Tartar hordes.

Omsk is the center of that military organization of Western Siberia which is intended to overawe the Kirghiz population. Here are the bounds, more than once infringed by the half-subdued nomads, and there was every reason to believe that Omsk was already in danger. The line of military stations, that is to say, those Cossack posts which are ranged in echelon from Omsk to Semipolatinsk, must have been broken in several places. Now, it was to be feared that the “Grand Sultans,” who govern the Kirghiz districts would either voluntarily accept, or involuntarily submit to, the dominion of Tartars, Mussulmen like themselves, and that to the hate caused by slavery was not united the hate due to the antagonism of the Greek and Mussulman religions. For some time, indeed, the Tartars of Turkestan had endeavored, both by force and persuasion, to subdue the Kirghiz hordes.

A few words only with respect to these Tartars. The Tartars belong more especially to two distinct races, the Caucasian and the Mongolian. The Caucasian race, which, as Abel de Remusat says, “is regarded in Europe as the type of beauty in our species, because all the nations in this part of the world have sprung from it,” includes also the Turks and the Persians. The purely Mongolian race comprises the Mongols, Manchoux, and Thibetans.

The Tartars who now threatened the Russian Empire, belonged to the Caucasian race, and occupied Turkestan. This immense country is divided into different states, governed by Khans, and hence termed Khanats. The principal khanats are those of Bokhara, Khokhand, Koondooz, etc. At this period, the most important and the most formidable khanat was that of Bokhara. Russia had already been several times at war with its chiefs, who, for their own interests, had supported the independence of the Kirghiz against the Muscovite dominion. The present chief, Feofar-Khan, followed in the steps of his predecessors.

The khanat of Bokhara has a population of two million five hundred thousand inhabitants, an army of sixty thousand men, trebled in time of war, and thirty thousand horsemen. It is a rich country, with varied animal, vegetable, and mineral products, and has been increased by the accession of the territories of Balkh, Aukoi, and Meimaneh. It possesses nineteen large towns. Bokhara, surrounded by a wall measuring more than eight English miles, and flanked with towers, a glorious city, made illustrious by Avicenna and other learned men of the tenth century, is regarded as the center of Mussulman science, and ranks among the most celebrated cities of Central Asia.

Samarcand, which contains the tomb of Tamerlane and the famous palace where the blue stone is kept on which each new khan must seat himself on his accession, is defended by a very strong citadel. Karschi, with its triple cordon, situated in an oasis, surrounded by a marsh peopled with tortoises and lizards, is almost impregnable, Ischardjoui is defended by a population of twenty thousand souls. Protected by its mountains, and isolated by its steppes, the khanat of Bokhara is a most formidable state; and Russia would need a large force to subdue it.

The fierce and ambitious Feofar now governed this corner of Tartary. Relying on the other khans — principally those of Khokhand and Koondooz, cruel and rapacious warriors, all ready to join an enterprise so dear to Tartar instincts — aided by the chiefs who ruled all the hordes of Central Asia, he had placed himself at the head of the rebellion of which Ivan Ogareff was the instigator. This traitor, impelled by insane ambition as much as by hate, had ordered the movement so as to attack Siberia. Mad indeed he was, if he hoped to rupture the Muscovite Empire. Acting under his suggestion, the Emir — which is the title taken by the khans of Bokhara — had poured his hordes over the Russian frontier. He invaded the government of Semipolatinsk, and the Cossacks, who were only in small force there, had been obliged to retire before him. He had advanced farther than Lake Balkhash, gaining over the Kirghiz population on his way. Pillaging, ravaging, enrolling those who submitted, taking prisoners those who resisted, he marched from one town to another, followed by those impedimenta of Oriental sovereignty which may be called his household, his wives and his slaves — all with the cool audacity of a modern Ghengis-Khan. It was impossible to ascertain where he now was; how far his soldiers had marched before the news of the rebellion reached Moscow; or to what part of Siberia the Russian troops had been forced to retire. All communication was interrupted. Had the wire between Kolyvan and Tomsk been cut by Tartar scouts, or had the Emir himself arrived at the Yeniseisk provinces? Was all the lower part of Western Siberia in a ferment? Had the rebellion already spread to the eastern regions? No one could say. The only agent which fears neither cold nor heat, which can neither be stopped by the rigors of winter nor the heat of summer, and which flies with the rapidity of lightning — the electric current — was prevented from traversing the steppes, and it was no longer possible to warn the Grand Duke, shut up in Irkutsk, of the danger threatening him from the treason of Ivan Ogareff.

A courier only could supply the place of the interrupted current. It would take this man some time to traverse the five thousand two hundred versts between Moscow and Irkutsk. To pass the ranks of the rebels and invaders he must display almost superhuman courage and intelligence. But with a clear head and a firm heart much can be done.

“Shall I be able to find this head and heart?” thought the Czar.

CHAPTER III MICHAEL STROGOFF MEETS THE CZAR

THE door of the imperial cabinet was again opened and General Kissoff was announced.

“The courier?” inquired the Czar eagerly.

“He is here, sire,” replied General Kissoff.

“Have you found a fitting man?”

“I will answer for him to your majesty.”

“Has he been in the service of the Palace?”

“Yes, sire.”

“You know him?”

“Personally, and at various times he has fulfilled difficult missions with success.”

“Abroad?”

“In Siberia itself.”

“Where does he come from?”

“From Omsk. He is a Siberian.”

“Has he coolness, intelligence, courage?”

“Yes, sire; he has all the qualities necessary to succeed, even where others might possibly fail.”

“What is his age?”

“Thirty.”

“Is he strong and vigorous?”

“Sire, he can bear cold, hunger, thirst, fatigue, to the very last extremities.”

“He must have a frame of iron.”

“Sire, he has.”

“And a heart?”

“A heart of gold.”

“His name?”

“Michael Strogoff.”

“Is he ready to set out?”

“He awaits your majesty’s orders in the guard-room.”

“Let him come in,” said the Czar.

In a few moments Michael Strogoff, the courier, entered the imperial library. He was a tall, vigorous, broad-shouldered, deep-chested man. His powerful head possessed the fine features of the Caucasian race. His well-knit frame seemed built for the performance of feats of strength. It would have been a difficult task to move such a man against his will, for when his feet were once planted on the ground, it was as if they had taken root. As he doffed his Muscovite cap, locks of thick curly hair fell over his broad, massive forehead. When his ordinarily pale face became at all flushed, it arose solely from a more rapid action of the heart. His eyes, of a deep blue, looked with clear, frank, firm gaze. The slightly-contracted eyebrows indicated lofty heroism — ”the hero’s cool courage,” according to the definition of the physiologist. He possessed a fine nose, with large nostrils; and a well-shaped mouth, with the slightly-projecting lips which denote a generous and noble heart.

Michael Strogoff had the temperament of the man of action, who does not bite his nails or scratch his head in doubt and indecision. Sparing of gestures as of words, he always stood motionless like a soldier before his superior; but when he moved, his step showed a firmness, a freedom of movement, which proved the confidence and vivacity of his mind.

Michael Strogoff wore a handsome military uniform something resembling that of a light-cavalry officer in the field — boots, spurs, half tightly-fitting trousers, brown pelisse, trimmed with fur and ornamented with yellow braid. On his breast glittered a cross and several medals.

Michael Strogoff belonged to the special corps of the Czar's couriers, ranking as an officer among those picked men. His most discernible characteristic — particularly in his walk, his face, in the whole man, and which the Czar perceived at a glance — was, that he was "a fulfiller of orders." He therefore possessed one of the most serviceable qualities in Russia — one which, as the celebrated novelist Tourgueneff says, "will lead to the highest positions in the Muscovite empire."

In short, if anyone could accomplish this journey from Moscow to Irkutsk, across a rebellious country, surmount obstacles, and brave perils of all sorts, Michael Strogoff was the man.

A circumstance especially favorable to the success of his plan was, that he was thoroughly acquainted with the country which he was about to traverse, and understood its different dialects — not only from having traveled there before, but because he was of Siberian origin.

His father — old Peter Strogoff, dead ten years since — inhabited the town of Omsk, situated in the government of the same name; and his mother, Marfa Strogoff, lived there still. There, amid the wild steppes of the provinces of Omsk and Tobolsk, had the famous huntsman brought up his son Michael to endure hardship. Peter Strogoff was a huntsman by profession. Summer and winter — in the burning heat, as well as when the cold was sometimes fifty degrees below zero — he scoured the frozen plains, the thickets of birch and larch, the pine forests; setting traps; watching for small game with his gun, and for large game with the spear or knife. The large game was nothing less than the Siberian bear, a formidable and ferocious animal, in size equaling its fellow of the frozen seas. Peter Strogoff had killed more than thirty-nine bears — that is to say, the fortieth had fallen under his blows; and, according to Russian legends, most huntsmen who have been lucky enough up to the thirty-ninth bear, have succumbed to the fortieth.

Peter Strogoff had, however, passed the fatal number without even a scratch. From that time, his son Michael, aged eleven years, never failed to accompany him to the hunt,

carrying the ragatina or spear to aid his father, who was armed only with the knife. When he was fourteen, Michael Strogoff had killed his first bear, quite alone — that was nothing; but after stripping it he dragged the gigantic animal's skin to his father's house, many versts distant, exhibiting remarkable strength in a boy so young.

This style of life was of great benefit to him, and when he arrived at manhood he could bear any amount of cold, heat, hunger, thirst, or fatigue. Like the Yakout of the northern countries, he was made of iron. He could go four-and-twenty hours without eating, ten nights without sleeping, and could make himself a shelter in the open steppe where others would have been frozen to death. Gifted with marvelous acuteness, guided by the instinct of the Delaware of North America, over the white plain, when every object is hidden in mist, or even in higher latitudes, where the polar night is prolonged for many days, he could find his way when others would have had no idea whither to turn. All his father's secrets were known to him. He had learnt to read almost imperceptible signs — the forms of icicles, the appearance of the small branches of trees, mists rising far away in the horizon, vague sounds in the air, distant reports, the flight of birds through the foggy atmosphere, a thousand circumstances which are so many words to those who can decipher them. Moreover, tempered by snow like a Damascus blade in the waters of Syria, he had a frame of iron, as General Kissoff had said, and, what was no less true, a heart of gold.

The only sentiment of love felt by Michael Strogoff was that which he entertained for his mother, the aged Marfa, who could never be induced to leave the house of the Strogoffs, at Omsk, on the banks of the Irtish, where the old huntsman and she had lived so long together. When her son left her, he went away with a full heart, but promising to come and see her whenever he could possibly do so; and this promise he had always religiously kept.

When Michael was twenty, it was decided that he should enter the personal service of the Emperor of Russia, in the corps of the couriers of the Czar. The hardy, intelligent, zealous, well-conducted young Siberian first distinguished himself especially, in a journey to the Caucasus, through the midst of a difficult country, ravaged by some restless successors of Schamyl; then later, in an important mission to Petropolowski, in Kamtschatka, the extreme limit of Asiatic Russia. During these long journeys he displayed such marvelous coolness, prudence, and courage, as to gain him the approbation and protection of his chiefs, who rapidly advanced him in his profession.

The furloughs which were his due after these distant missions, he never failed to devote to his old mother. Having been much employed in the south of the empire, he had not seen old Marfa for three years — three ages! — the first time in his life he had been so long absent from her. Now, however, in a few days he would obtain his furlough, and he had accordingly already made preparations for departure for Omsk, when the events which have been related occurred. Michael Strogoff was therefore introduced into the Czar's presence in complete ignorance of what the emperor expected from him.

The Czar fixed a penetrating look upon him without uttering a word, whilst Michael stood perfectly motionless.

The Czar, apparently satisfied with his scrutiny, motioned to the chief of police to seat himself, and dictated in a low voice a letter of not more than a few lines.

The letter penned, the Czar re-read it attentively, then signed it, preceding his name with the words "Byt po semou," which, signifying "So be it," constitutes the decisive formula of the Russian emperors.

The letter was then placed in an envelope, which was sealed with the imperial arms.

The Czar, rising, told Michael Strogoff to draw near.

Michael advanced a few steps, and then stood motionless, ready to answer.

The Czar again looked him full in the face and their eyes met. Then in an abrupt tone, "Thy name?" he asked.

"Michael Strogoff, sire."

"Thy rank?"

"Captain in the corps of couriers of the Czar."

"Thou dost know Siberia?"

"I am a Siberian."

"A native of?"

"Omsk, sire."

“Hast thou relations there?”

“Yes sire.”

“What relations?”

“My old mother.”

The Czar suspended his questions for a moment. Then, pointing to the letter which he held in his hand, “Here is a letter which I charge thee, Michael Strogoff, to deliver into the hands of the Grand Duke, and to no other but him.”

“I will deliver it, sire.”

“The Grand Duke is at Irkutsk.”

“I will go to Irkutsk.”

“Thou wilt have to traverse a rebellious country, invaded by Tartars, whose interest it will be to intercept this letter.”

“I will traverse it.”

“Above all, beware of the traitor, Ivan Ogareff, who will perhaps meet thee on the way.”

“I will beware of him.”

“Wilt thou pass through Omsk?”

“Sire, that is my route.”

“If thou dost see thy mother, there will be the risk of being recognized. Thou must not see her!”

Michael Strogoff hesitated a moment.

“I will not see her,” said he.

“Swear to me that nothing will make thee acknowledge who thou art, nor whither thou art going.”

“I swear it.”

“Michael Strogoff,” continued the Czar, giving the letter to the young courier, “take this letter; on it depends the safety of all Siberia, and perhaps the life of my brother the Grand Duke.”

“This letter shall be delivered to his Highness the Grand Duke.”

“Then thou wilt pass whatever happens?”

“I shall pass, or they shall kill me.”

“I want thee to live.”

“I shall live, and I shall pass,” answered Michael Strogoff.

The Czar appeared satisfied with Strogoff’s calm and simple answer.

“Go then, Michael Strogoff,” said he, “go for God, for Russia, for my brother, and for myself!”

The courier, having saluted his sovereign, immediately left the imperial cabinet, and, in a few minutes, the New Palace.

“You made a good choice there, General,” said the Czar.

“I think so, sire,” replied General Kissoff; “and your majesty may be sure that Michael Strogoff will do all that a man can do.”

“He is indeed a man,” said the Czar.

CHAPTER IV FROM MOSCOW TO NIJNI-NOVGOROD

THE distance between Moscow and Irkutsk, about to be traversed by Michael Strogoff, was three thousand four hundred miles. Before the telegraph wire extended from the Ural Mountains to the eastern frontier of Siberia, the dispatch service was performed by couriers, those who traveled the most rapidly taking eighteen days to get from Moscow to Irkutsk. But this was the exception, and the journey through Asiatic Russia usually occupied from four to five weeks, even though every available means of transport was placed at the disposal of the Czar's messengers.

Michael Strogoff was a man who feared neither frost nor snow. He would have preferred traveling during the severe winter season, in order that he might perform the whole distance by sleighs. At that period of the year the difficulties which all other means of locomotion present are greatly diminished, the wide steppes being leveled by snow, while there are no rivers to cross, but simply sheets of glass, over which the sleigh glides rapidly and easily.

Perhaps certain natural phenomena are most to be feared at that time, such as long-continuing and dense fogs, excessive cold, fearfully heavy snow-storms, which sometimes envelop whole caravans and cause their destruction. Hungry wolves also roam over the plain in thousands. But it would have been better for Michael Strogoff to face these risks; for during the winter the Tartar invaders would have been stationed in the towns, any movement of their troops would have been impracticable, and he could consequently have more easily performed his journey. But it was not in his power to choose either weather or time. Whatever the circumstances, he must accept them and set out.

Such were the difficulties which Michael Strogoff boldly confronted and prepared to encounter.

In the first place, he must not travel as a courier of the Czar usually would. No one must even suspect what he really was. Spies swarm in a rebellious country; let him be recognized, and his mission would be in danger. Also, while supplying him with a large sum of money, which was sufficient for his journey, and would facilitate it in some measure, General Kissoff had not given him any document notifying that he was on the

Emperor's service, which is the Sesame par excellence. He contented himself with furnishing him with a "podorojna."

This podorojna was made out in the name of Nicholas Korpanoff, merchant, living at Irkutsk. It authorized Nicholas Korpanoff to be accompanied by one or more persons, and, moreover, it was, by special notification, made available in the event of the Muscovite government forbidding natives of any other countries to leave Russia.

The podorojna is simply a permission to take post-horses; but Michael Strogoff was not to use it unless he was sure that by so doing he would not excite suspicion as to his mission, that is to say, whilst he was on European territory. The consequence was that in Siberia, whilst traversing the insurgent provinces, he would have no power over the relays, either in the choice of horses in preference to others, or in demanding conveyances for his personal use; neither was Michael Strogoff to forget that he was no longer a courier, but a plain merchant, Nicholas Korpanoff, traveling from Moscow to Irkutsk, and, as such exposed to all the impediments of an ordinary journey.

To pass unknown, more or less rapidly, but to pass somehow, such were the directions he had received.

Thirty years previously, the escort of a traveler of rank consisted of not less than two hundred mounted Cossacks, two hundred foot-soldiers, twenty-five Baskir horsemen, three hundred camels, four hundred horses, twenty-five wagons, two portable boats, and two pieces of cannon. All this was requisite for a journey in Siberia.

Michael Strogoff, however, had neither cannon, nor horsemen, nor foot-soldiers, nor beasts of burden. He would travel in a carriage or on horseback, when he could; on foot, when he could not.

There would be no difficulty in getting over the first thousand miles, the distance between Moscow and the Russian frontier. Railroads, post-carriages, steamboats, relays of horses, were at everyone's disposal, and consequently at the disposal of the courier of the Czar.

Accordingly, on the morning of the 16th of July, having doffed his uniform, with a knapsack on his back, dressed in the simple Russian costume — tightly-fitting tunic, the traditional belt of the Moujik, wide trousers, gartered at the knees, and high boots — Michael Strogoff arrived at the station in time for the first train. He carried no arms,

openly at least, but under his belt was hidden a revolver and in his pocket, one of those large knives, resembling both a cutlass and a yataghan, with which a Siberian hunter can so neatly disembowel a bear, without injuring its precious fur.

A crowd of travelers had collected at the Moscow station. The stations on the Russian railroads are much used as places for meeting, not only by those who are about to proceed by the train, but by friends who come to see them off. The station resembles, from the variety of characters assembled, a small news exchange.

The train in which Michael took his place was to set him down at Nijni-Novgorod. There terminated at that time, the iron road which, uniting Moscow and St. Petersburg, has since been continued to the Russian frontier. It was a journey of under three hundred miles, and the train would accomplish it in ten hours. Once arrived at Nijni-Novgorod, Strogoff would either take the land route or the steamer on the Volga, so as to reach the Ural Mountains as soon as possible.

Michael Strogoff ensconced himself in his corner, like a worthy citizen whose affairs go well with him, and who endeavors to kill time by sleep. Nevertheless, as he was not alone in his compartment, he slept with one eye open, and listened with both his ears.

In fact, rumor of the rising of the Kirghiz hordes, and of the Tartar invasion had transpired in some degree. The occupants of the carriage, whom chance had made his traveling companions, discussed the subject, though with that caution which has become habitual among Russians, who know that spies are ever on the watch for any treasonable expressions which may be uttered.

These travelers, as well as the large number of persons in the train, were merchants on their way to the celebrated fair of Nijni-Novgorod; — a very mixed assembly, composed of Jews, Turks, Cossacks, Russians, Georgians, Kalmucks, and others, but nearly all speaking the national tongue.

They discussed the pros and cons of the serious events which were taking place beyond the Ural, and those merchants seemed to fear lest the government should be led to take certain restrictive measures, especially in the provinces bordering on the frontier — measures from which trade would certainly suffer. They apparently thought only of the struggle from the single point of view of their threatened interests. The presence of a private soldier, clad in his uniform — and the importance of a uniform in Russia is

great — would have certainly been enough to restrain the merchants' tongues. But in the compartment occupied by Michael Strogoff, there was no one who seemed a military man, and the Czar's courier was not the person to betray himself. He listened, then.

"They say that caravan teas are up," remarked a Persian, known by his cap of Astrakhan fur, and his ample brown robe, worn threadbare by use.

"Oh, there's no fear of teas falling," answered an old Jew of sullen aspect. "Those in the market at Nijni-Novgorod will be easily cleared off by the West; but, unfortunately, it won't be the same with Bokhara carpets."

"What! are you expecting goods from Bokhara?" asked the Persian.

"No, but from Samarcand, and that is even more exposed. The idea of reckoning on the exports of a country in which the khans are in a state of revolt from Khiva to the Chinese frontier!"

"Well," replied the Persian, "if the carpets do not arrive, the drafts will not arrive either, I suppose."

"And the profits, Father Abraham!" exclaimed the little Jew, "do you reckon them as nothing?"

"You are right," said another; "goods from Central Asia run a great risk in the market, and it will be the same with the tallow and shawls from the East."

"Why, look out, little father," said a Russian traveler, in a bantering tone; "you'll grease your shawls terribly if you mix them up with your tallow."

"That amuses you," sharply answered the merchant, who had little relish for that sort of joke.

"Well, if you tear your hair, or if you throw ashes on your head," replied the traveler, "will that change the course of events? No; no more than the course of the Exchange."

"One can easily see that you are not a merchant," observed the little Jew.

“Faith, no, worthy son of Abraham! I sell neither hops, nor eider-down, nor honey, nor wax, nor hemp-seed, nor salt meat, nor caviare, nor wood, nor wool, nor ribbons, nor, hemp, nor flax, nor morocco, nor furs.”

“But do you buy them?” asked the Persian, interrupting the traveler’s list.

“As little as I can, and only for my own private use,” answered the other, with a wink.

“He’s a wag,” said the Jew to the Persian.

“Or a spy,” replied the other, lowering his voice. “We had better take care, and not speak more than necessary. The police are not over-particular in these times, and you never can know with whom you are traveling.”

In another corner of the compartment they were speaking less of mercantile affairs, and more of the Tartar invasion and its annoying consequences.

“All the horses in Siberia will be requisitioned,” said a traveler, “and communication between the different provinces of Central Asia will become very difficult.”

“Is it true,” asked his neighbor, “that the Kirghiz of the middle horde have joined the Tartars?”

“So it is said,” answered the traveler, lowering his voice; “but who can flatter themselves that they know anything really of what is going on in this country?”

“I have heard speak of a concentration of troops on the frontier. The Don Cossacks have already gathered along the course of the Volga, and they are to be opposed to the rebel Kirghiz.”

“If the Kirghiz descend the Irtish, the route to Irkutsk will not be safe,” observed his neighbor. “Besides, yesterday I wanted to send a telegram to Krasnoiarsk, and it could not be forwarded. It’s to be feared that before long the Tartar columns will have isolated Eastern Siberia.”

“In short, little father,” continued the first speaker, “these merchants have good reason for being uneasy about their trade and transactions. After requisitioning the horses, they will take the boats, carriages, every means of transport, until presently no one will be allowed to take even one step in all the empire.”

“I’m much afraid that the Nijni-Novgorod fair won’t end as brilliantly as it has begun,” responded the other, shaking his head. “But the safety and integrity of the Russian territory before everything. Business is business.”

If in this compartment the subject of conversation varied but little — nor did it, indeed, in the other carriages of the train — in all it might have been observed that the talkers used much circumspection. When they did happen to venture out of the region of facts, they never went so far as to attempt to divine the intentions of the Muscovite government, or even to criticize them.

This was especially remarked by a traveler in a carriage at the front part of the train. This person — evidently a stranger — made good use of his eyes, and asked numberless questions, to which he received only evasive answers. Every minute leaning out of the window, which he would keep down, to the great disgust of his fellow-travelers, he lost nothing of the views to the right. He inquired the names of the most insignificant places, their position, what were their commerce, their manufactures, the number of their inhabitants, the average mortality, etc. and all this he wrote down in a note-book, already full.

This was the correspondent Alcide Jolivet, and the reason of his putting so many insignificant questions was, that amongst the many answers he received, he hoped to find some interesting fact “for his cousin.” But, naturally enough, he was taken for a spy, and not a word treating of the events of the day was uttered in his hearing.

Finding, therefore, that he could learn nothing of the Tartar invasion, he wrote in his book, “Travelers of great discretion. Very close as to political matters.”

Whilst Alcide Jolivet noted down his impressions thus minutely, his confrere, in the same train, traveling for the same object, was devoting himself to the same work of observation in another compartment. Neither of them had seen each other that day at the Moscow station, and they were each ignorant that the other had set out to visit the scene of the war. Harry Blount, speaking little, but listening much, had not inspired his companions with the suspicions which Alcide Jolivet had aroused. He was not taken for a spy, and therefore his neighbors, without constraint, gossiped in his presence, allowing themselves even to go farther than their natural caution would in most cases have allowed them. The correspondent of the Daily Telegraph had thus an opportunity

of observing how much recent events preoccupied the merchants of Nijni-Novgorod, and to what a degree the commerce with Central Asia was threatened in its transit.

He therefore noted in his book this perfectly correct observation, “My fellow-travelers extremely anxious. Nothing is talked of but war, and they speak of it, with a freedom which is astonishing, as having broken out between the Volga and the Vistula.”

The readers of the Daily Telegraph would not fail to be as well informed as Alcide Jolivet’s “cousin.” But as Harry Blount, seated at the left of the train, only saw one part of the country, which was hilly, without giving himself the trouble of looking at the right side, which was composed of wide plains, he added, with British assurance, “Country mountainous between Moscow and Wladimir.”

It was evident that the Russian government purposed taking severe measures to guard against any serious eventualities even in the interior of the empire. The rebel lion had not crossed the Siberian frontier, but evil influences might be feared in the Volga provinces, so near to the country of the Kirghiz.

The police had as yet found no traces of Ivan Ogareff. It was not known whether the traitor, calling in the foreigner to avenge his personal rancor, had rejoined Feofar-Khan, or whether he was endeavoring to foment a revolt in the government of Nijni-Novgorod, which at this time of year contained a population of such diverse elements. Perhaps among the Persians, Armenians, or Kalmucks, who flocked to the great market, he had agents, instructed to provoke a rising in the interior. All this was possible, especially in such a country as Russia. In fact, this vast empire, 4,000,000 square miles in extent, does not possess the homogeneousness of the states of Western Europe. The Russian territory in Europe and Asia contains more than seventy millions of inhabitants. In it thirty different languages are spoken. The Sclavonian race predominates, no doubt, but there are besides Russians, Poles, Lithuanians, Courlanders. Add to these, Finns, Laplanders, Esthonians, several other northern tribes with unpronounceable names, the Permiaks, the Germans, the Greeks, the Tartars, the Caucasian tribes, the Mongol, Kalmuck, Samoid, Kamtschatkan, and Aleutian hordes, and one may understand that the unity of so vast a state must be difficult to maintain, and that it could only be the work of time, aided by the wisdom of many successive rulers.

Be that as it may, Ivan Ogareff had hitherto managed to escape all search, and very probably he might have rejoined the Tartar army. But at every station where the train

stopped, inspectors came forward who scrutinized the travelers and subjected them all to a minute examination, as by order of the superintendent of police, these officials were seeking Ivan Ogareff. The government, in fact, believed it to be certain that the traitor had not yet been able to quit European Russia. If there appeared cause to suspect any traveler, he was carried off to explain himself at the police station, and in the meantime the train went on its way, no person troubling himself about the unfortunate one left behind.

With the Russian police, which is very arbitrary, it is absolutely useless to argue. Military rank is conferred on its employees, and they act in military fashion. How can anyone, moreover, help obeying, unhesitatingly, orders which emanate from a monarch who has the right to employ this formula at the head of his ukase: “We, by the grace of God, Emperor and Autocrat of all the Russias of Moscow, Kiev, Wladimir, and Novgorod, Czar of Kasan and Astrakhan, Czar of Poland, Czar of Siberia, Czar of the Tauric Chersonese, Seignior of Pskov, Prince of Smolensk, Lithuania, Volkynia, Podolia, and Finland, Prince of Esthonia, Livonia, Courland, and of Semigallia, of Bialystok, Karelia, Sougria, Perm, Viatka, Bulgaria, and many other countries; Lord and Sovereign Prince of the territory of Nijni-Novgorod, Tchemigoff, Riazan, Polotsk, Rostov, Jaroslavl, Bielozersk, Oudoria, Obdoria, Kondinia, Vitepsk, and of Mstislaf, Governor of the Hyperborean Regions, Lord of the countries of Iveria, Kartalinia, Grou-zinia, Kabardinia, and Armenia, Hereditary Lord and Suzerain of the Scherkess princes, of those of the mountains, and of others; heir of Norway, Duke of Schleswig-Holstein, Stormarn, Dittmarsen, and Oldenburg.” A powerful lord, in truth, is he whose arms are an eagle with two heads, holding a scepter and a globe, surrounded by the escutcheons of Novgorod, Wladimir, Kiev, Kasan, Astrakhan, and of Siberia, and environed by the collar of the order of St. Andrew, surmounted by a royal crown!

As to Michael Strogoff, his papers were in order, and he was, consequently, free from all police supervision.

At the station of Wladimir the train stopped for several minutes, which appeared sufficient to enable the correspondent of the Daily Telegraph to take a twofold view, physical and moral, and to form a complete estimate of this ancient capital of Russia.

At the Wladimir station fresh travelers joined the train. Among others, a young girl entered the compartment occupied by Michael Strogoff. A vacant place was found opposite the courier. The young girl took it, after placing by her side a modest traveling-

bag of red leather, which seemed to constitute all her luggage. Then seating herself with downcast eyes, not even glancing at the fellow-travelers whom chance had given her, she prepared for a journey which was still to last several hours.

Michael Strogoff could not help looking attentively at his newly-arrived fellow-traveler. As she was so placed as to travel with her back to the engine, he even offered her his seat, which he might prefer to her own, but she thanked him with a slight bend of her graceful neck.

The young girl appeared to be about sixteen or seventeen years of age. Her head, truly charming, was of the purest Sclavonic type — slightly severe, and likely in a few summers to unfold into beauty rather than mere prettiness. From beneath a sort of kerchief which she wore on her head escaped in profusion light golden hair. Her eyes were brown, soft, and expressive of much sweetness of temper. The nose was straight, and attached to her pale and somewhat thin cheeks by delicately mobile nostrils. The lips were finely cut, but it seemed as if they had long since forgotten how to smile.

The young traveler was tall and upright, as far as could be judged of her figure from the very simple and ample pelisse that covered her. Although she was still a very young girl in the literal sense of the term, the development of her high forehead and clearly-cut features gave the idea that she was the possessor of great moral energy — a point which did not escape Michael Strogoff. Evidently this young girl had already suffered in the past, and the future doubtless did not present itself to her in glowing colors; but she had surely known how to struggle still with the trials of life. Her energy was evidently both prompt and persistent, and her calmness unalterable, even under circumstances in which a man would be likely to give way or lose his self-command.

Such was the impression which she produced at first sight. Michael Strogoff, being himself of an energetic temperament, was naturally struck by the character of her physiognomy, and, while taking care not to cause her annoyance by a too persistent gaze, he observed his neighbor with no small interest. The costume of the young traveler was both extremely simple and appropriate. She was not rich — that could be easily seen; but not the slightest mark of negligence was to be discerned in her dress. All her luggage was contained in the leather bag which, for want of room, she held on her lap.

She wore a long, dark pelisse, gracefully adjusted at the neck by a blue tie. Under this pelisse, a short skirt, also dark, fell over a robe which reached the ankles. Half-boots of leather, thickly soled, as if chosen in anticipation of a long journey, covered her small feet.

Michael Strogoff fancied that he recognized, by certain details, the fashion of the costume of Livonia, and thought his neighbor a native of the Baltic provinces.

But whither was this young girl going, alone, at an age when the fostering care of a father, or the protection of a brother, is considered a matter of necessity? Had she now come, after an already long journey, from the provinces of Western Russia? Was she merely going to Nijni-Novgorod, or was the end of her travels beyond the eastern frontiers of the empire? Would some relation, some friend, await her arrival by the train? Or was it not more probable, on the contrary, that she would find herself as much isolated in the town as she was in this compartment? It was probable.

In fact, the effect of habits contracted in solitude was clearly manifested in the bearing of the young girl. The manner in which she entered the carriage and prepared herself for the journey, the slight disturbance she caused among those around her, the care she took not to incommode or give trouble to anyone, all showed that she was accustomed to be alone, and to depend on herself only.

Michael Strogoff observed her with interest, but, himself reserved, he sought no opportunity of accosting her. Once only, when her neighbor — the merchant who had jumbled together so imprudently in his remarks tallow and shawls — being asleep, and threatening her with his great head, which was swaying from one shoulder to the other, Michael Strogoff awoke him somewhat roughly, and made him understand that he must hold himself upright.

The merchant, rude enough by nature, grumbled some words against “people who interfere with what does not concern them,” but Michael Strogoff cast on him a glance so stern that the sleeper leant on the opposite side, and relieved the young traveler from his unpleasant vicinity.

The latter looked at the young man for an instant, and mute and modest thanks were in that look.

But a circumstance occurred which gave Strogoff a just idea of the character of the maiden. Twelve versts before arriving at Nijni-Novgorod, at a sharp curve of the iron way, the train experienced a very violent shock. Then, for a minute, it ran onto the slope of an embankment.

Travelers more or less shaken about, cries, confusion, general disorder in the carriages — such was the effect at first produced. It was to be feared that some serious accident had happened. Consequently, even before the train had stopped, the doors were opened, and the panic-stricken passengers thought only of getting out of the carriages.

Michael Strogoff thought instantly of the young girl; but, while the passengers in her compartment were precipitating themselves outside, screaming and struggling, she had remained quietly in her place, her face scarcely changed by a slight pallor.

She waited — Michael Strogoff waited also.

Both remained quiet.

“A determined nature!” thought Michael Strogoff.

However, all danger had quickly disappeared. A breakage of the coupling of the luggage-van had first caused the shock to, and then the stoppage of, the train, which in another instant would have been thrown from the top of the embankment into a bog. There was an hour’s delay. At last, the road being cleared, the train proceeded, and at half-past eight in the evening arrived at the station of Nijni-Novgorod.

Before anyone could get out of the carriages, the inspectors of police presented themselves at the doors and examined the passengers.

Michael Strogoff showed his podorojna, made out in the name of Nicholas Korpanoff. He had consequently no difficulty. As to the other travelers in the compartment, all bound for Nijni-Novgorod, their appearance, happily for them, was in nowise suspicious.

The young girl in her turn, exhibited, not a passport, since passports are no longer required in Russia, but a permit indorsed with a private seal, and which seemed to be of a special character. The inspector read the permit with attention. Then, having attentively examined the person whose description it contained:

“You are from Riga?” he said.

“Yes,” replied the young girl.

“You are going to Irkutsk?”

“Yes.”

“By what route?”

“By Perm.”

“Good!” replied the inspector. “Take care to have your permit vised, at the police station of Nijni-Novgorod.”

The young girl bent her head in token of assent.

Hearing these questions and replies, Michael Strogoff experienced a mingled sentiment both of surprise and pity. What! this young girl, alone, journeying to that far-off Siberia, and at a time when, to its ordinary dangers, were added all the perils of an invaded country and one in a state of insurrection! How would she reach it? What would become of her?

The inspection ended, the doors of the carriages were then opened, but, before Michael Strogoff could move towards her, the young Livonian, who had been the first to descend, had disappeared in the crowd which thronged the platforms of the railway station.

CHAPTER V THE TWO ANNOUNCEMENTS

NIJNI-NOVGOROD, Lower Novgorod, situate at the junction of the Volga and the Oka, is the chief town in the district of the same name. It was here that Michael Strogoff was obliged to leave the railway, which at the time did not go beyond that town. Thus, as he advanced, his traveling would become first less speedy and then less safe.

Nijni-Novgorod, the fixed population of which is only from thirty to thirty-five thousand inhabitants, contained at that time more than three hundred thousand; that is to say, the population was increased tenfold. This addition was in consequence of the celebrated fair, which was held within the walls for three weeks. Formerly Makariew had the benefit of this concourse of traders, but since 1817 the fair had been removed to Nijni-Novgorod.

Even at the late hour at which Michael Strogoff left the platform, there was still a large number of people in the two towns, separated by the stream of the Volga, which compose Nijni-Novgorod. The highest of these is built on a steep rock, and defended by a fort called in Russia “kreml.”

Michael Strogoff expected some trouble in finding a hotel, or even an inn, to suit him. As he had not to start immediately, for he was going to take a steamer, he was compelled to look out for some lodging; but, before doing so, he wished to know exactly the hour at which the steamboat would start. He went to the office of the company whose boats plied between Nijni-Novgorod and Perm. There, to his great annoyance, he found that no boat started for Perm till the following day at twelve o’clock. Seventeen hours to wait! It was very vexatious to a man so pressed for time. However, he never senselessly murmured. Besides, the fact was that no other conveyance could take him so quickly either to Perm or Kasan. It would be better, then, to wait for the steamer, which would enable him to regain lost time.

Here, then, was Michael Strogoff, strolling through the town and quietly looking out for some inn in which to pass the night. However, he troubled himself little on this score, and, but that hunger pressed him, he would probably have wandered on till morning in the streets of Nijni-Novgorod. He was looking for supper rather than a bed. But he found both at the sign of the City of Constantinople. There, the landlord offered him a fairly comfortable room, with little furniture, it is true, but not without an image of the Virgin, and a few saints framed in yellow gauze.

A goose filled with sour stuffing swimming in thick cream, barley bread, some curds, powdered sugar mixed with cinnamon, and a jug of kwass, the ordinary Russian beer, were placed before him, and sufficed to satisfy his hunger. He did justice to the meal, which was more than could be said of his neighbor at table, who, having, in his character of “old believer” of the sect of Raskalniks, made the vow of abstinence, rejected the potatoes in front of him, and carefully refrained from putting sugar in his tea.

His supper finished, Michael Strogoff, instead of going up to his bedroom, again strolled out into the town. But, although the long twilight yet lingered, the crowd was already dispersing, the streets were gradually becoming empty, and at length everyone retired to his dwelling.

Why did not Michael Strogoff go quietly to bed, as would have seemed more reasonable after a long railway journey? Was he thinking of the young Livonian girl who had been his traveling companion? Having nothing better to do, he WAS thinking of her. Did he fear that, lost in this busy city, she might be exposed to insult? He feared so, and with good reason. Did he hope to meet her, and, if need were, to afford her protection? No. To meet would be difficult. As to protection — what right had he —

“Alone,” he said to himself, “alone, in the midst of these wandering tribes! And yet the present dangers are nothing compared to those she must undergo. Siberia! Irkutsk! I am about to dare all risks for Russia, for the Czar, while she is about to do so — For whom? For what? She is authorized to cross the frontier! The country beyond is in revolt! The steppes are full of Tartar bands!”

Michael Strogoff stopped for an instant, and reflected.

“Without doubt,” thought he, “she must have determined on undertaking her journey before the invasion. Perhaps she is even now ignorant of what is happening. But no, that cannot be; the merchants discussed before her the disturbances in Siberia — and she did not seem surprised. She did not even ask an explanation. She must have known it then, and knowing it, is still resolute. Poor girl! Her motive for the journey must be urgent indeed! But though she may be brave — and she certainly is so — her strength must fail her, and, to say nothing of dangers and obstacles, she will be unable to endure the fatigue of such a journey. Never can she reach Irkutsk!”

Indulging in such reflections, Michael Strogoff wandered on as chance led him; being well acquainted with the town, he knew that he could easily retrace his steps.

Having strolled on for about an hour, he seated himself on a bench against the wall of a large wooden cottage, which stood, with many others, on a vast open space. He had scarcely been there five minutes when a hand was laid heavily on his shoulder.

“What are you doing here?” roughly demanded a tall and powerful man, who had approached unperceived.

“I am resting,” replied Michael Strogoff.

“Do you mean to stay all night on the bench?”

“Yes, if I feel inclined to do so,” answered Michael Strogoff, in a tone somewhat too sharp for the simple merchant he wished to personate.

“Come forward, then, so I can see you,” said the man.

Michael Strogoff, remembering that, above all, prudence was requisite, instinctively drew back. “It is not necessary,” he replied, and calmly stepped back ten paces.

The man seemed, as Michael observed him well, to have the look of a Bohemian, such as are met at fairs, and with whom contact, either physical or moral, is unpleasant. Then, as he looked more attentively through the dusk, he perceived, near the cottage, a large caravan, the usual traveling dwelling of the Zingaris or gypsies, who swarm in Russia wherever a few copecks can be obtained.

As the gypsy took two or three steps forward, and was about to interrogate Michael Strogoff more closely, the door of the cottage opened. He could just see a woman, who spoke quickly in a language which Michael Strogoff knew to be a mixture of Mongol and Siberian.

“Another spy! Let him alone, and come to supper. The papluka is waiting for you.”

Michael Strogoff could not help smiling at the epithet bestowed on him, dreading spies as he did above all else.

In the same dialect, although his accent was very different, the Bohemian replied in words which signify, “You are right, Sangarre! Besides, we start to-morrow.”

“To-morrow?” repeated the woman in surprise.

“Yes, Sangarre,” replied the Bohemian; “to-morrow, and the Father himself sends us — where we are going!”

Thereupon the man and woman entered the cottage, and carefully closed the door.

“Good!” said Michael Strogoff, to himself; “if these gipsies do not wish to be understood when they speak before me, they had better use some other language.”

From his Siberian origin, and because he had passed his childhood in the Steppes, Michael Strogoff, it has been said, understood almost all the languages in usage from Tartary to the Sea of Ice. As to the exact signification of the words he had heard, he did not trouble his head. For why should it interest him?

It was already late when he thought of returning to his inn to take some repose. He followed, as he did so, the course of the Volga, whose waters were almost hidden under the countless number of boats floating on its bosom.

An hour after, Michael Strogoff was sleeping soundly on one of those Russian beds which always seem so hard to strangers, and on the morrow, the 17th of July, he awoke at break of day.

He had still five hours to pass in Nijni-Novgorod; it seemed to him an age. How was he to spend the morning unless in wandering, as he had done the evening before, through the streets? By the time he had finished his breakfast, strapped up his bag, had his podorojna inspected at the police office, he would have nothing to do but start. But he was not a man to lie in bed after the sun had risen; so he rose, dressed himself, placed the letter with the imperial arms on it carefully at the bottom of its usual pocket within the lining of his coat, over which he fastened his belt; he then closed his bag and threw it over his shoulder. This done, he had no wish to return to the City of Constantinople, and intending to breakfast on the bank of the Volga near the wharf, he settled his bill and left the inn. By way of precaution, Michael Strogoff went first to the office of the steam-packet company, and there made sure that the Caucasus would start at the appointed hour. As he did so, the thought for the first time struck him that, since the

young Livonian girl was going to Perm, it was very possible that her intention was also to embark in the Caucasus, in which case he should accompany her.

The town above with its kremlin, whose circumference measures two versts, and which resembles that of Moscow, was altogether abandoned. Even the governor did not reside there. But if the town above was like a city of the dead, the town below, at all events, was alive.

Michael Strogoff, having crossed the Volga on a bridge of boats, guarded by mounted Cossacks, reached the square where the evening before he had fallen in with the gipsy camp. This was somewhat outside the town, where the fair of Nijni-Novgorod was held. In a vast plain rose the temporary palace of the governor-general, where by imperial orders that great functionary resided during the whole of the fair, which, thanks to the people who composed it, required an ever-watchful surveillance.

This plain was now covered with booths symmetrically arranged in such a manner as to leave avenues broad enough to allow the crowd to pass without a crush.

Each group of these booths, of all sizes and shapes, formed a separate quarter particularly dedicated to some special branch of commerce. There was the iron quarter, the furriers' quarter, the woolen quarter, the quarter of the wood merchants, the weavers' quarter, the dried fish quarter, etc. Some booths were even built of fancy materials, some of bricks of tea, others of masses of salt meat — that is to say, of samples of the goods which the owners thus announced were there to the purchasers — a singular, and somewhat American, mode of advertisement.

In the avenues and long alleys there was already a large assemblage of people — the sun, which had risen at four o'clock, being well above the horizon — an extraordinary mixture of Europeans and Asiatics, talking, wrangling, haranguing, and bargaining. Everything which can be bought or sold seemed to be heaped up in this square. Furs, precious stones, silks, Cashmere shawls, Turkey carpets, weapons from the Caucasus, gauzes from Smyrna and Ispahan. Tiflis armor, caravan teas. European bronzes, Swiss clocks, velvets and silks from Lyons, English cottons, harness, fruits, vegetables, minerals from the Ural, malachite, lapis-lazuli, spices, perfumes, medicinal herbs, wood, tar, rope, horn, pumpkins, water-melons, etc — all the products of India, China, Persia, from the shores of the Caspian and the Black Sea, from America and Europe, were united at this corner of the globe.

It is scarcely possible truly to portray the moving mass of human beings surging here and there, the excitement, the confusion, the hubbub; demonstrative as were the natives and the inferior classes, they were completely outdone by their visitors. There were merchants from Central Asia, who had occupied a year in escorting their merchandise across its vast plains, and who would not again see their shops and counting-houses for another year to come. In short, of such importance is this fair of Nijni-Novgorod, that the sum total of its transactions amounts yearly to nearly a hundred million dollars.

On one of the open spaces between the quarters of this temporary city were numbers of mountebanks of every description; gypsies from the mountains, telling fortunes to the credulous fools who are ever to be found in such assemblies; Zingaris or Tsiganes — a name which the Russians give to the gypsies who are the descendants of the ancient Copts — singing their wildest melodies and dancing their most original dances; comedians of foreign theaters, acting Shakespeare, adapted to the taste of spectators who crowded to witness them. In the long avenues the bear showmen accompanied their four-footed dancers, menageries resounded with the hoarse cries of animals under the influence of the stinging whip or red-hot irons of the tamer; and, besides all these numberless performers, in the middle of the central square, surrounded by a circle four deep of enthusiastic amateurs, was a band of “mariners of the Volga,” sitting on the ground, as on the deck of their vessel, imitating the action of rowing, guided by the stick of the master of the orchestra, the veritable helmsman of this imaginary vessel! A whimsical and pleasing custom!

Suddenly, according to a time-honored observance in the fair of Nijni-Novgorod, above the heads of the vast concourse a flock of birds was allowed to escape from the cages in which they had been brought to the spot. In return for a few copecks charitably offered by some good people, the bird-fanciers opened the prison doors of their captives, who flew out in hundreds, uttering their joyous notes.

It should be mentioned that England and France, at all events, were this year represented at the great fair of Nijni-Novgorod by two of the most distinguished products of modern civilization, Messrs. Harry Blount and Alcide Jolivet. Jolivet, an optimist by nature, found everything agreeable, and as by chance both lodging and food were to his taste, he jotted down in his book some memoranda particularly favorable to the town of Nijni-Novgorod. Blount, on the contrary, having in vain hunted for a supper, had been obliged to find a resting-place in the open air. He therefore looked at it

all from another point of view, and was preparing an article of the most withering character against a town in which the landlords of the inns refused to receive travelers who only begged leave to be flayed, “morally and physically.”

Michael Strogoff, one hand in his pocket, the other holding his cherry-stemmed pipe, appeared the most indifferent and least impatient of men; yet, from a certain contraction of his eyebrows every now and then, a careful observer would have seen that he was burning to be off.

For two hours he kept walking about the streets, only to find himself invariably at the fair again. As he passed among the groups of buyers and sellers he discovered that those who came from countries on the confines of Asia manifested great uneasiness. Their trade was visibly suffering. Another symptom also was marked. In Russia military uniforms appear on every occasion. Soldiers are wont to mix freely with the crowd, the police agents being almost invariably aided by a number of Cossacks, who, lance on shoulder, keep order in the crowd of three hundred thousand strangers. But on this occasion the soldiers, Cossacks and the rest, did not put in an appearance at the great market. Doubtless, a sudden order to move having been foreseen, they were restricted to their barracks.

Moreover, while no soldiers were to be seen, it was not so with their officers. Since the evening before, aides-decamp, leaving the governor’s palace, galloped in every direction. An unusual movement was going forward which a serious state of affairs could alone account for. There were innumerable couriers on the roads both to Wladimir and to the Ural Mountains. The exchange of telegraphic dispatches with Moscow was incessant.

Michael Strogoff found himself in the central square when the report spread that the head of police had been summoned by a courier to the palace of the governor-general. An important dispatch from Moscow, it was said, was the cause of it.

“The fair is to be closed,” said one.

“The regiment of Nijni-Novgorod has received the route,” declared another.

“They say that the Tartars menace Tomsk!”

“Here is the head of police!” was shouted on every side. A loud clapping of hands was suddenly raised, which subsided by degrees, and finally was succeeded by absolute silence. The head of police arrived in the middle of the central square, and it was seen by all that he held in his hand a dispatch.

Then, in a loud voice, he read the following announcements: “By order of the Governor of Nijni-Novgorod.

“1st. All Russian subjects are forbidden to quit the province upon any pretext whatsoever.

“2nd. All strangers of Asiatic origin are commanded to leave the province within twenty-four hours.”

CHAPTER VI BROTHER AND SISTER

HOWEVER disastrous these measures might be to private interests, they were, under the circumstances, perfectly justifiable.

“All Russian subjects are forbidden to leave the province;” if Ivan Ogareff was still in the province, this would at any rate prevent him, unless with the greatest difficulty, from rejoining Feofar-Khan, and becoming a very formidable lieutenant to the Tartar chief.

“All foreigners of Asiatic origin are ordered to leave the province in four-and-twenty hours;” this would send off in a body all the traders from Central Asia, as well as the bands of Bohemians, gipsies, etc. having more or less sympathy with the Tartars. So many heads, so many spies — undoubtedly affairs required their expulsion.

It is easy to understand the effect produced by these two thunder-claps bursting over a town like Nijni-Novgorod, so densely crowded with visitors, and with a commerce so greatly surpassing that of all other places in Russia. The natives whom business called beyond the Siberian frontier could not leave the province for a time at least. The tenor of the first article of the order was express; it admitted of no exception. All private interests must yield to the public weal. As to the second article of the proclamation, the order of expulsion which it contained admitted of no evasion either. It only concerned foreigners of Asiatic origin, but these could do nothing but pack up their merchandise and go back the way they came. As to the mountebanks, of which there were a considerable number, they had nearly a thousand versts to go before they could reach the nearest frontier. For them it was simply misery.

At first there rose against this unusual measure a murmur of protestation, a cry of despair, but this was quickly suppressed by the presence of the Cossacks and agents of police. Immediately, what might be called the exodus from the immense plain began. The awnings in front of the stalls were folded up; the theaters were taken to pieces; the fires were put out; the acrobats’ ropes were lowered; the old broken-winded horses of the traveling vans came back from their sheds. Agents and soldiers with whip or stick stimulated the tardy ones, and made nothing of pulling down the tents even before the poor Bohemians had left them.

Under these energetic measures the square of Nijni-Novgorod would, it was evident, be entirely evacuated before the evening, and to the tumult of the great fair would succeed

the silence of the desert.

It must again be repeated — for it was a necessary aggravation of these severe measures — that to all those nomads chiefly concerned in the order of expulsion even the steppes of Siberia were forbidden, and they would be obliged to hasten to the south of the Caspian Sea, either to Persia, Turkey, or the plains of Turkestan. The post of the Ural, and the mountains which form, as it were, a prolongation of the river along the Russian frontier, they were not allowed to pass. They were therefore under the necessity of traveling six hundred miles before they could tread a free soil.

Just as the reading of the proclamation by the head of the police came to an end, an idea darted instinctively into the mind of Michael Strogoff. “What a singular coincidence,” thought he, “between this proclamation expelling all foreigners of Asiatic origin, and the words exchanged last evening between those two gipsies of the Zingari race. ‘The Father himself sends us where we wish to go,’ that old man said. But ‘the Father’ is the emperor! He is never called anything else among the people. How could those gipsies have foreseen the measure taken against them? how could they have known it beforehand, and where do they wish to go? Those are suspicious people, and it seems to me that to them the government proclamation must be more useful than injurious.”

But these reflections were completely dispelled by another which drove every other thought out of Michael’s mind. He forgot the Zingaris, their suspicious words, the strange coincidence which resulted from the proclamation. The remembrance of the young Livonian girl suddenly rushed into his mind. “Poor child!” he thought to himself. “She cannot now cross the frontier.”

In truth the young girl was from Riga; she was Livonian, consequently Russian, and now could not leave Russian territory! The permit which had been given her before the new measures had been promulgated was no longer available. All the routes to Siberia had just been pitilessly closed to her, and, whatever the motive taking her to Irkutsk, she was now forbidden to go there.

This thought greatly occupied Michael Strogoff. He said to himself, vaguely at first, that, without neglecting anything of what was due to his important mission, it would perhaps be possible for him to be of some use to this brave girl; and this idea pleased him. Knowing how serious were the dangers which he, an energetic and vigorous man, would have personally to encounter, he could not conceal from himself how infinitely

greater they would prove to a young unprotected girl. As she was going to Irkutsk, she would be obliged to follow the same road as himself, she would have to pass through the bands of invaders, as he was about to attempt doing himself. If, moreover, she had at her disposal only the money necessary for a journey taken under ordinary circumstances, how could she manage to accomplish it under conditions which made it not only perilous but expensive?

“Well,” said he, “if she takes the route to Perm, it is nearly impossible but that I shall fall in with her. Then, I will watch over her without her suspecting it; and as she appears to me as anxious as myself to reach Irkutsk, she will cause me no delay.”

But one thought leads to another. Michael Strogoff had till now thought only of doing a kind action; but now another idea flashed into his brain; the question presented itself under quite a new aspect.

“The fact is,” said he to himself, “that I have much more need of her than she can have of me. Her presence will be useful in drawing off suspicion from me. A man traveling alone across the steppe, may be easily guessed to be a courier of the Czar. If, on the contrary, this young girl accompanies me, I shall appear, in the eyes of all, the Nicholas Korpanoff of my podorojna. Therefore, she must accompany me. Therefore, I must find her again at any cost. It is not probable that since yesterday evening she has been able to get a carriage and leave Nijni-Novgorod. I must look for her. And may God guide me!”

Michael left the great square of Nijni-Novgorod, where the tumult produced by the carrying out of the prescribed measures had now reached its height. Recriminations from the banished strangers, shouts from the agents and Cossacks who were using them so brutally, together made an indescribable uproar. The girl for whom he searched could not be there. It was now nine o’clock in the morning. The steamboat did not start till twelve. Michael Strogoff had therefore nearly two hours to employ in searching for her whom he wished to make his traveling companion.

He crossed the Volga again and hunted through the quarters on the other side, where the crowd was much less considerable. He entered the churches, the natural refuge for all who weep, for all who suffer. Nowhere did he meet with the young Livonian.

“And yet,” he repeated, “she could not have left Nijni-Novgorod yet. We’ll have another look.” He wandered about thus for two hours. He went on without stopping,

feeling no fatigue, obeying a potent instinct which allowed no room for thought. All was in vain.

It then occurred to him that perhaps the girl had not heard of the order — though this was improbable enough, for such a thunder-clap could not have burst without being heard by all. Evidently interested in knowing the smallest news from Siberia, how could she be ignorant of the measures taken by the governor, measures which concerned her so directly?

But, if she was ignorant of it, she would come in an hour to the quay, and there some merciless agent would refuse her a passage! At any cost, he must see her beforehand, and enable her to avoid such a repulse.

But all his endeavors were in vain, and he at length almost despaired of finding her again. It was eleven o'clock, and Michael thought of presenting his podorojna at the office of the head of police. The proclamation evidently did not concern him, since the emergency had been foreseen for him, but he wished to make sure that nothing would hinder his departure from the town.

Michael then returned to the other side of the Volga, to the quarter in which was the office of the head of police. An immense crowd was collected there; for though all foreigners were ordered to quit the province, they had notwithstanding to go through certain forms before they could depart.

Without this precaution, some Russian more or less implicated in the Tartar movement would have been able, in a disguise, to pass the frontier — just those whom the order wished to prevent going. The strangers were sent away, but still had to gain permission to go.

Mountebanks, gypsies, Tsiganes, Zingaris, mingled with merchants from Persia, Turkey, India, Turkestan, China, filled the court and offices of the police station.

Everyone was in a hurry, for the means of transport would be much sought after among this crowd of banished people, and those who did not set about it soon ran a great risk of not being able to leave the town in the prescribed time, which would expose them to some brutal treatment from the governor's agents.

Owing to the strength of his elbows Michael was able to cross the court. But to get into the office and up to the clerk's little window was a much more difficult business. However, a word into an inspector's ear and a few judiciously given roubles were powerful enough to gain him a passage. The man, after taking him into the waiting-room, went to call an upper clerk. Michael Strogoff would not be long in making everything right with the police and being free in his movements.

Whilst waiting, he looked about him, and what did he see? There, fallen, rather than seated, on a bench, was a girl, prey to a silent despair, although her face could scarcely be seen, the profile alone being visible against the wall. Michael Strogoff could not be mistaken. He instantly recognized the young Livonian.

Not knowing the governor's orders, she had come to the police office to get her pass signed. They had refused to sign it. No doubt she was authorized to go to Irkutsk, but the order was peremptory — it annulled all previous au-thorizations, and the routes to Siberia were closed to her. Michael, delighted at having found her again, approached the girl.

She looked up for a moment and her face brightened on recognizing her traveling companion. She instinctively rose and, like a drowning man who clutches at a spar, she was about to ask his help.

At that moment the agent touched Michael on the shoulder, "The head of police will see you," he said.

"Good," returned Michael. And without saying a word to her for whom he had been searching all day, without reassuring her by even a gesture, which might compromise either her or himself, he followed the man.

The young Livonian, seeing the only being to whom she could look for help disappear, fell back again on her bench.

Three minutes had not passed before Michael Strogoff reappeared, accompanied by the agent. In his hand he held his podorojna, which threw open the roads to Siberia for him. He again approached the young Livonian, and holding out his hand: "Sister," said he.

She understood. She rose as if some sudden inspiration prevented her from hesitating a moment.

“Sister,” repeated Michael Strogoff, “we are authorized to continue our journey to Irkutsk. Will you come with me?”

“I will follow you, brother,” replied the girl, putting her hand into that of Michael Strogoff. And together they left the police station.

CHAPTER VII GOING DOWN THE VOLGA

A LITTLE before midday, the steamboat's bell drew to the wharf on the Volga an unusually large concourse of people, for not only were those about to embark who had intended to go, but the many who were compelled to go contrary to their wishes. The boilers of the Caucasus were under full pressure; a slight smoke issued from its funnel, whilst the end of the escape-pipe and the lids of the valves were crowned with white vapor. It is needless to say that the police kept a close watch over the departure of the Caucasus, and showed themselves pitiless to those travelers who did not satisfactorily answer their questions.

Numerous Cossacks came and went on the quay, ready to assist the agents, but they had not to interfere, as no one ventured to offer the slightest resistance to their orders. Exactly at the hour the last clang of the bell sounded, the powerful wheels of the steamboat began to beat the water, and the Caucasus passed rapidly between the two towns of which Nijni-Novgorod is composed.

Michael Strogoff and the young Livonian had taken a passage on board the Caucasus. Their embarkation was made without any difficulty. As is known, the podorojna, drawn up in the name of Nicholas Korpanoff, authorized this merchant to be accompanied on his journey to Siberia. They appeared, therefore, to be a brother and sister traveling under the protection of the imperial police. Both, seated together at the stern, gazed at the receding town, so disturbed by the governor's order. Michael had as yet said nothing to the girl, he had not even questioned her. He waited until she should speak to him, when that was necessary. She had been anxious to leave that town, in which, but for the providential intervention of this unexpected protector, she would have remained imprisoned. She said nothing, but her looks spoke her thanks.

The Volga, the Rha of the ancients, the largest river in all Europe, is almost three thousand miles in length. Its waters, rather unwholesome in its upper part, are improved at Nijni-Novgorod by those of the Oka, a rapid affluent, issuing from the central provinces of Russia. The system of Russian canals and rivers has been justly compared to a gigantic tree whose branches spread over every part of the empire. The Volga forms the trunk of this tree, and it has for roots seventy mouths opening into the Caspian Sea. It is navigable as far as Rjef, a town in the government of Tver, that is, along the greater part of its course.

The steamboats plying between Perm and Nijni-Novgorod rapidly perform the two hundred and fifty miles which separate this town from the town of Kasan. It is true that these boats have only to descend the Volga, which adds nearly two miles of current per hour to their own speed; but on arriving at the confluence of the Kama, a little below Kasan, they are obliged to quit the Volga for the smaller river, up which they ascend to Perm. Powerful as were her machines, the Caucasus could not thus, after entering the Kama, make against the current more than ten miles an hour. Including an hour's stoppage at Kasan, the voyage from Nijni-Novgorod to Perm would take from between sixty to sixty-two hours.

The steamer was very well arranged, and the passengers, according to their condition or resources, occupied three distinct classes on board. Michael Strogoff had taken care to engage two first-class cabins, so that his young companion might retire into hers whenever she liked.

The Caucasus was loaded with passengers of every description. A number of Asiatic traders had thought it best to leave Nijni-Novgorod immediately. In that part of the steamer reserved for the first-class might be seen Armenians in long robes and a sort of miter on their heads; Jews, known by their conical caps; rich Chinese in their traditional costume, a very wide blue, violet, or black robe; Turks, wearing the national turban; Hindoos, with square caps, and a simple string for a girdle, some of whom, hold in their hands all the traffic of Central Asia; and, lastly, Tartars, wearing boots, ornamented with many-colored braid, and the breast a mass of embroidery. All these merchants had been obliged to pile up their numerous bales and chests in the hold and on the deck; and the transport of their baggage would cost them dear, for, according to the regulations, each person had only a right to twenty pounds' weight.

In the bows of the Caucasus were more numerous groups of passengers, not only foreigners, but also Russians, who were not forbidden by the order to go back to their towns in the province. There were mujiks with caps on their heads, and wearing checked shirts under their wide pelisses; peasants of the Volga, with blue trousers stuffed into their boots, rose-colored cotton shirts, drawn in by a cord, felt caps; a few women, habited in flowery-patterned cotton dresses, gay-colored aprons, and bright handkerchiefs on their heads. These were principally third-class passengers, who were, happily, not troubled by the prospect of a long return voyage. The Caucasus passed numerous boats being towed up the stream, carrying all sorts of merchandise to Nijni-

Novgorod. Then passed rafts of wood interminably long, and barges loaded to the gunwale, and nearly sinking under water. A bootless voyage they were making, since the fair had been abruptly broken up at its outset.

The waves caused by the steamer splashed on the banks, covered with flocks of wild duck, who flew away uttering deafening cries. A little farther, on the dry fields, bordered with willows, and aspens, were scattered a few cows, sheep, and herds of pigs. Fields, sown with thin buckwheat and rye, stretched away to a background of half-cultivated hills, offering no remarkable prospect. The pencil of an artist in quest of the picturesque would have found nothing to reproduce in this monotonous landscape.

The Caucasus had been steaming on for almost two hours, when the young Livonian, addressing herself to Michael, said, “Are you going to Irkutsk, brother?”

“Yes, sister,” answered the young man. “We are going the same way. Consequently, where I go, you shall go.”

“To-morrow, brother, you shall know why I left the shores of the Baltic to go beyond the Ural Mountains.”

“I ask you nothing, sister.”

“You shall know all,” replied the girl, with a faint smile. “A sister should hide nothing from her brother. But I cannot to-day. Fatigue and sorrow have broken me.”

“Will you go and rest in your cabin?” asked Michael Strogoff.

“Yes — yes; and to-morrow — ”

“Come then — ”

He hesitated to finish his sentence, as if he had wished to end it by the name of his companion, of which he was still ignorant.

“Nadia,” said she, holding out her hand.

“Come, Nadia,” answered Michael, “and make what use you like of your brother Nicholas Korpanoff.” And he led the girl to the cabin engaged for her off the saloon.

Michael Strogoff returned on deck, and eager for any news which might bear on his journey, he mingled in the groups of passengers, though without taking any part in the conversation. Should he by any chance be questioned, and obliged to reply, he would announce himself as the merchant Nicholas Korpanoff, going back to the frontier, for he did not wish it to be suspected that a special permission authorized him to travel to Siberia.

The foreigners in the steamer could evidently speak of nothing but the occurrences of the day, of the order and its consequences. These poor people, scarcely recovered from the fatigue of a journey across Central Asia, found themselves obliged to return, and if they did not give loud vent to their anger and despair, it was because they dared not. Fear, mingled with respect, restrained them. It was possible that inspectors of police, charged with watching the passengers, had secretly embarked on board the Caucasus, and it was just as well to keep silence; expulsion, after all, was a good deal preferable to imprisonment in a fortress. Therefore the men were either silent, or spoke with so much caution that it was scarcely possible to get any useful information.

Michael Strogoff thus could learn nothing here; but if mouths were often shut at his approach — for they did not know him — his ears were soon struck by the sound of one voice, which cared little whether it was heard or not.

The man with the hearty voice spoke Russian, but with a French accent; and another speaker answered him more reservedly. “What,” said the first, “are you on board this boat, too, my dear fellow; you whom I met at the imperial fete in Moscow, and just caught a glimpse of at Nijni-Novgorod?”

“Yes, it’s I,” answered the second drily.

“Really, I didn’t expect to be so closely followed.”

“I am not following you sir; I am preceding you.”

“Precede! precede! Let us march abreast, keeping step, like two soldiers on parade, and for the time, at least, let us agree, if you will, that one shall not pass the other.”

“On the contrary, I shall pass you.”

“We shall see that, when we are at the seat of war; but till then, why, let us be traveling companions. Later, we shall have both time and occasion to be rivals.”

“Enemies.”

“Enemies, if you like. There is a precision in your words, my dear fellow, particularly agreeable to me. One may always know what one has to look for, with you.”

“What is the harm?”

“No harm at all. So, in my turn, I will ask your permission to state our respective situations.”

“State away.”

“You are going to Perm — like me?”

“Like you.”

“And probably you will go from Perm to Ekaterenburg, since that is the best and safest route by which to cross the Ural Mountains?”

“Probably.”

“Once past the frontier, we shall be in Siberia, that is to say in the midst of the invasion.”

“We shall be there.”

“Well! then, and only then, will be the time to say, Each for himself, and God for — ”

“For me.”

“For you, all by yourself! Very well! But since we have a week of neutral days before us, and since it is very certain that news will not shower down upon us on the way, let us be friends until we become rivals again.”

“Enemies.”

“Yes; that’s right, enemies. But till then, let us act together, and not try and ruin each other. All the same, I promise you to keep to myself all that I can see — ”

“And I, all that I can hear.”

“Is that agreed?”

“It is agreed.”

“Your hand?”

“Here it is.” And the hand of the first speaker, that is to say, five wide-open fingers, vigorously shook the two fingers coolly extended by the other.

“By the bye,” said the first, “I was able this morning to telegraph the very words of the order to my cousin at seventeen minutes past ten.”

“And I sent it to the Daily Telegraph at thirteen minutes past ten.”

“Bravo, Mr. Blount!”

“Very good, M. Jolivet.”

“I will try and match that!”

“It will be difficult.”

“I can try, however.”

So saying, the French correspondent familiarly saluted the Englishman, who bowed stiffly. The governor’s proclamation did not concern these two news-hunters, as they were neither Russians nor foreigners of Asiatic origin. However, being urged by the same instinct, they had left Nijni-Novgorod together. It was natural that they should take the same means of transport, and that they should follow the same route to the Siberian steppes. Traveling companions, whether enemies or friends, they had a week to pass together before “the hunt would be open.” And then success to the most expert! Alcide Jolivet had made the first advances, and Harry Blount had accepted them though he had done so coldly.

That very day at dinner the Frenchman open as ever and even too loquacious, the Englishman still silent and grave, were seen hobnobbing at the same table, drinking genuine Cliquot, at six roubles the bottle, made from the fresh sap of the birch-trees of the country. On hearing them chatting away together, Michael Strogoff said to himself: “Those are inquisitive and indiscreet fellows whom I shall probably meet again on the way. It will be prudent for me to keep them at a distance.”

The young Livonian did not come to dinner. She was asleep in her cabin, and Michael did not like to awaken her. It was evening before she reappeared on the deck of the Caucasus. The long twilight imparted a coolness to the atmosphere eagerly enjoyed by the passengers after the stifling heat of the day. As the evening advanced, the greater number never even thought of going into the saloon. Stretched on the benches, they inhaled with delight the slight breeze caused by the speed of the steamer. At this time of year, and under this latitude, the sky scarcely darkened between sunset and dawn, and left the steersman light enough to guide his steamer among the numerous vessels going up or down the Volga.

Between eleven and two, however, the moon being new, it was almost dark. Nearly all the passengers were then asleep on the deck, and the silence was disturbed only by the noise of the paddles striking the water at regular intervals. Anxiety kept Michael Strogoff awake. He walked up and down, but always in the stern of the steamer. Once, however, he happened to pass the engine-room. He then found himself in the part reserved for second and third-class passengers.

There, everyone was lying asleep, not only on the benches, but also on the bales, packages, and even the deck itself. Some care was necessary not to tread on the sleepers, who were lying about everywhere. They were chiefly mujiks, accustomed to hard couches, and quite satisfied with the planks of the deck. But no doubt they would, all the same, have soundly abused the clumsy fellow who roused them with an accidental kick.

Michael Strogoff took care, therefore, not to disturb anyone. By going thus to the end of the boat, he had no other idea but that of striving against sleep by a rather longer walk. He reached the forward deck, and was already climbing the forecastle ladder, when he heard someone speaking near him. He stopped. The voices appeared to come from a group of passengers enveloped in cloaks and wraps. It was impossible to recognize them in the dark, though it sometimes happened that, when the steamer’s chimney sent

forth a plume of ruddy flames, the sparks seemed to fall amongst the group as though thousands of spangles had been suddenly illuminated.

Michael was about to step up the ladder, when a few words reached his ear, uttered in that strange tongue which he had heard during the night at the fair. Instinctively he stopped to listen. Protected by the shadow of the forecastle, he could not be perceived himself. As to seeing the passengers who were talking, that was impossible. He must confine himself to listening.

The first words exchanged were of no importance — to him at least — but they allowed him to recognize the voices of the man and woman whom he had heard at Nijni-Novgorod. This, of course, made him redouble his attention. It was, indeed, not at all impossible that these same Tsiganes, now banished, should be on board the Caucasus.

And it was well for him that he listened, for he distinctly heard this question and answer made in the Tartar idiom: “It is said that a courier has set out from Moscow for Irkutsk.”

“It is so said, Sangarre; but either this courier will arrive too late, or he will not arrive at all.”

Michael Strogoff started involuntarily at this reply, which concerned him so directly. He tried to see if the man and woman who had just spoken were really those whom he suspected, but he could not succeed.

In a few moments Michael Strogoff had regained the stern of the vessel without having been perceived, and, taking a seat by himself, he buried his face in his hands. It might have been supposed that he was asleep.

He was not asleep, however, and did not even think of sleeping. He was reflecting, not without a lively apprehension: “Who is it knows of my departure, and who can have any interest in knowing it?”

CHAPTER VIII GOING UP THE KAMA

THE next day, the 18th of July, at twenty minutes to seven in the morning, the Caucasus reached the Kasan quay, seven versts from the town.

Kasan is situated at the confluence of the Volga and Kasanka. It is an important chief town of the government, and a Greek archbishopric, as well as the seat of a university. The varied population preserves an Asiatic character. Although the town was so far from the landing-place, a large crowd was collected on the quay. They had come for news. The governor of the province had published an order identical with that of Nijni-Novgorod. Police officers and a few Cossacks kept order among the crowd, and cleared the way both for the passengers who were disembarking and also for those who were embarking on board the Caucasus, minutely examining both classes of travelers. The one were the Asiatics who were being expelled; the other, mujiks stopping at Kasan.

Michael Strogoff unconcernedly watched the bustle which occurs at all quays on the arrival of a steam vessel. The Caucasus would stay for an hour to renew her fuel. Michael did not even think of landing. He was unwilling to leave the young Livonian girl alone on board, as she had not yet reappeared on deck.

The two journalists had risen at dawn, as all good huntsmen should do. They went on shore and mingled with the crowd, each keeping to his own peculiar mode of proceeding; Harry Blount, sketching different types, or noting some observation; Alcide Jolivet contenting himself with asking questions, confiding in his memory, which never failed him.

There was a report along all the frontier that the insurrection and invasion had reached considerable proportions. Communication between Siberia and the empire was already extremely difficult. All this Michael Strogoff heard from the new arrivals. This information could not but cause him great uneasiness, and increase his wish of being beyond the Ural Mountains, so as to judge for himself of the truth of these rumors, and enable him to guard against any possible contingency. He was thinking of seeking more direct intelligence from some native of Kasan, when his attention was suddenly diverted.

Among the passengers who were leaving the Caucasus, Michael recognized the troop of Tsiganes who, the day before, had appeared in the Nijni-Novgorod fair. There, on the

deck of the steamboat were the old Bohemian and the woman. With them, and no doubt under their direction, landed about twenty dancers and singers, from fifteen to twenty years of age, wrapped in old cloaks, which covered their spangled dresses. These dresses, just then glancing in the first rays of the sun, reminded Michael of the curious appearance which he had observed during the night. It must have been the glitter of those spangles in the bright flames issuing from the steamboat's funnel which had attracted his attention.

"Evidently," said Michael to himself, "this troop of Tsiganes, after remaining below all day, crouched under the forecastle during the night. Were these gipsies trying to show themselves as little as possible? Such is not according to the usual custom of their race."

Michael Strogoff no longer doubted that the expressions he had heard, had proceeded from this tawny group, and had been exchanged between the old gypsy and the woman to whom he gave the Mongolian name of Sangarre. Michael involuntarily moved towards the gangway, as the Bohemian troop was leaving the steamboat.

The old Bohemian was there, in a humble attitude, little conformable with the effrontery natural to his race. One would have said that he was endeavoring rather to avoid attention than to attract it. His battered hat, browned by the suns of every clime, was pulled forward over his wrinkled face. His arched back was bent under an old cloak, wrapped closely round him, notwithstanding the heat. It would have been difficult, in this miserable dress, to judge of either his size or face. Near him was the Tsigane, Sangarre, a woman about thirty years old. She was tall and well made, with olive complexion, magnificent eyes, and golden hair.

Many of the young dancers were remarkably pretty, all possessing the clear-cut features of their race. These Tsiganes are generally very attractive, and more than one of the great Russian nobles, who try to vie with the English in eccentricity, has not hesitated to choose his wife from among these gypsy girls. One of them was humming a song of strange rhythm, which might be thus rendered:

"Glitters brightly the gold

In my raven locks streaming

Rich coral around

My graceful neck gleaming;

Like a bird of the air,

Through the wide world I roam.”

The laughing girl continued her song, but Michael Strogoff ceased to listen. It struck him just then that the Tsigane, Sangarre, was regarding him with a peculiar gaze, as if to fix his features indelibly in her memory.

It was but for a few moments, when Sangarre herself followed the old man and his troop, who had already left the vessel. “That’s a bold gypsy,” said Michael to himself. “Could she have recognized me as the man whom she saw at Nijni-Novgorod? These confounded Tsiganes have the eyes of a cat! They can see in the dark; and that woman there might well know — ”

Michael Strogoff was on the point of following Sangarre and the gypsy band, but he stopped. “No,” thought he, “no unguarded proceedings. If I were to stop that old fortune teller and his companions my incognito would run a risk of being discovered. Besides, now they have landed, before they can pass the frontier I shall be far beyond it. They may take the route from Kasan to Ishim, but that affords no resources to travelers. Besides a tarantass, drawn by good Siberian horses, will always go faster than a gypsy cart! Come, friend Korpanoff, be easy.”

By this time the man and Sangarre had disappeared.

Kasan is justly called the “Gate of Asia” and considered as the center of Siberian and Bokharian commerce; for two roads begin here and lead across the Ural Mountains. Michael Strogoff had very judiciously chosen the one by Perm and Ekaterenburg. It is the great stage road, well supplied with relays kept at the expense of the government, and is prolonged from Ishim to Irkutsk.

It is true that a second route — the one of which Michael had just spoken — avoiding the slight detour by Perm, also connects Kasan with Ishim. It is perhaps shorter than the other, but this advantage is much diminished by the absence of post-houses, the bad roads, and lack of villages. Michael Strogoff was right in the choice he had made, and if, as appeared probable, the gipsies should follow the second route from Kasan to Ishim, he had every chance of arriving before them.

An hour afterwards the bell rang on board the Caucasus, calling the new passengers, and recalling the former ones. It was now seven o’clock in the morning. The requisite fuel had been received on board. The whole vessel began to vibrate from the effects of the steam. She was ready to start. Passengers going from Kasan to Perm were crowding on the deck.

Michael noticed that of the two reporters Blount alone had rejoined the steamer. Was Alcide Jolivet about to miss his passage?

But just as the ropes were being cast off, Jolivet appeared, tearing along. The steamer was already sheering off, the gangway had been drawn onto the quay, but Alcide Jolivet would not stick at such a little thing as that, so, with a bound like a harlequin, he alighted on the deck of the Caucasus almost in his rival’s arms.

“I thought the Caucasus was going without you,” said the latter.

“Bah!” answered Jolivet, “I should soon have caught you up again, by chartering a boat at my cousin’s expense, or by traveling post at twenty copecks a verst, and on horseback. What could I do? It was so long a way from the quay to the telegraph office.”

“Have you been to the telegraph office?” asked Harry Blount, biting his lips.

“That’s exactly where I have been!” answered Jolivet, with his most amiable smile.

“And is it still working to Kolyvan?”

“That I don’t know, but I can assure you, for instance, that it is working from Kasan to Paris.”

“You sent a dispatch to your cousin?”

“With enthusiasm.”

“You had learnt then — ?”

“Look here, little father, as the Russians say,” replied Alcide Jolivet, “I’m a good fellow, and I don’t wish to keep anything from you. The Tartars, and Feofar-Khan at

their head, have passed Semipolatinsk, and are descending the Irtish. Do what you like with that!”

What! such important news, and Harry Blount had not known it; and his rival, who had probably learned it from some inhabitant of Kasan, had already transmitted it to Paris. The English paper was distanced! Harry Blount, crossing his hands behind him, walked off and seated himself in the stern without uttering a word.

About ten o’clock in the morning, the young Livonian, leaving her cabin, appeared on deck. Michael Strogoff went forward and took her hand. “Look, sister!” said he, leading her to the bows of the Caucasus.

The view was indeed well worth seeing. The Caucasus had reached the confluence of the Volga and the Kama. There she would leave the former river, after having descended it for nearly three hundred miles, to ascend the latter for a full three hundred.

The Kama was here very wide, and its wooded banks lovely. A few white sails enlivened the sparkling water. The horizon was closed by a line of hills covered with aspens, alders, and sometimes large oaks.

But these beauties of nature could not distract the thoughts of the young Livonian even for an instant. She had left her hand in that of her companion, and turning to him, “At what distance are we from Moscow?” she asked.

“Nine hundred versts,” answered Michael.

“Nine hundred, out of seven thousand!” murmured the girl.

The bell now announced the breakfast hour. Nadia followed Michael Strogoff to the restaurant. She ate little, and as a poor girl whose means are small would do. Michael thought it best to content himself with the fare which satisfied his companion; and in less than twenty minutes he and Nadia returned on deck. There they seated themselves in the stern, and without preamble, Nadia, lowering her voice to be heard by him alone, began:

“Brother, I am the daughter of an exile. My name is Nadia Fedor. My mother died at Riga scarcely a month ago, and I am going to Irkutsk to rejoin my father and share his exile.”

“I, too, am going to Irkutsk,” answered Michael, “and I shall thank Heaven if it enables me to give Nadia Fedor safe and sound into her father’s hands.”

“Thank you, brother,” replied Nadia.

Michael Strogoff then added that he had obtained a special podorojna for Siberia, and that the Russian authorities could in no way hinder his progress.

Nadia asked nothing more. She saw in this fortunate meeting with Michael a means only of accelerating her journey to her father.

“I had,” said she, “a permit which authorized me to go to Irkutsk, but the new order annulled that; and but for you, brother, I should have been unable to leave the town, in which, without doubt, I should have perished.”

“And dared you, alone, Nadia,” said Michael, “attempt to cross the steppes of Siberia?”

“The Tartar invasion was not known when I left Riga. It was only at Moscow that I learnt the news.”

“And despite it, you continued your journey?”

“It was my duty.”

The words showed the character of the brave girl.

She then spoke of her father, Wassili Fedor. He was a much-esteemed physician at Riga. But his connection with some secret society having been asserted, he received orders to start for Irkutsk. The police who brought the order conducted him without delay beyond the frontier.

Wassili Fedor had but time to embrace his sick wife and his daughter, so soon to be left alone, when, shedding bitter tears, he was led away. A year and a half after her husband’s departure, Madame Fedor died in the arms of her daughter, who was thus left alone and almost penniless. Nadia Fedor then asked, and easily obtained from the Russian government, an authorization to join her father at Irkutsk. She wrote and told him she was starting. She had barely enough money for this long journey, and yet she did not hesitate to undertake it. She would do what she could. God would do the rest.

CHAPTER IX DAY AND NIGHT IN A TARANTASS

THE next day, the 19th of July, the Caucasus reached Perm, the last place at which she touched on the Kama.

The government of which Perm is the capital is one of the largest in the Russian Empire, and, extending over the Ural Mountains, encroaches on Siberian territory. Marble quarries, mines of salt, platina, gold, and coal are worked here on a large scale. Although Perm, by its situation, has become an important town, it is by no means attractive, being extremely dirty, and without resources. This want of comfort is of no consequence to those going to Siberia, for they come from the more civilized districts, and are supplied with all necessaries.

At Perm travelers from Siberia resell their vehicles, more or less damaged by the long journey across the plains. There, too, those passing from Europe to Asia purchase carriages, or sleighs in the winter season.

Michael Strogoff had already sketched out his programme. A vehicle carrying the mail usually runs across the Ural Mountains, but this, of course, was discontinued. Even if it had not been so, he would not have taken it, as he wished to travel as fast as possible, without depending on anyone. He wisely preferred to buy a carriage, and journey by stages, stimulating the zeal of the postillions by well-applied “na vodkou,” or tips.

Unfortunately, in consequence of the measures taken against foreigners of Asiatic origin, a large number of travelers had already left Perm, and therefore conveyances were extremely rare. Michael was obliged to content himself with what had been rejected by others. As to horses, as long as the Czar’s courier was not in Siberia, he could exhibit his podorojna, and the postmasters would give him the preference. But, once out of Europe, he had to depend alone on the power of his roubles.

But to what sort of a vehicle should he harness his horses? To a telga or to a tarantass? The telga is nothing but an open four-wheeled cart, made entirely of wood, the pieces fastened together by means of strong rope. Nothing could be more primitive, nothing could be less comfortable; but, on the other hand, should any accident happen on the way, nothing could be more easily repaired. There is no want of firs on the Russian frontier, and axle-trees grow naturally in forests. The post extraordinary, known by the name of “perck-ladnoi,” is carried by the telga, as any road is good enough for it. It

must be confessed that sometimes the ropes which fasten the concern together break, and whilst the hinder part remains stuck in some bog, the fore-part arrives at the post-house on two wheels; but this result is considered quite satisfactory.

Michael Strogoff would have been obliged to employ a telga, if he had not been lucky enough to discover a tarantass. It is to be hoped that the invention of Russian coach-builders will devise some improvement in this last-named vehicle. Springs are wanting in it as well as in the telga; in the absence of iron, wood is not spared; but its four wheels, with eight or nine feet between them, assure a certain equilibrium over the jolting rough roads. A splash-board protects the travelers from the mud, and a strong leathern hood, which may be pulled quite over the occupiers, shelters them from the great heat and violent storms of the summer. The tarantass is as solid and as easy to repair as the telga, and is, moreover, less addicted to leaving its hinder part in the middle of the road.

It was not without careful search that Michael managed to discover this tarantass, and there was probably not a second to be found in all Perm. He haggled long about the price, for form’s sake, to act up to his part as Nicholas Korpanoff, a plain merchant of Irkutsk.

Nadia had followed her companion in his search after a suitable vehicle. Although the object of each was different, both were equally anxious to arrive at their goal. One would have said the same will animated them both.

“Sister,” said Michael, “I wish I could have found a more comfortable conveyance for you.”

“Do you say that to me, brother, when I would have gone on foot, if need were, to rejoin my father?”

“I do not doubt your courage, Nadia, but there are physical fatigues a woman may be unable to endure.”

“I shall endure them, whatever they be,” replied the girl. “If you ever hear a complaint from me you may leave me in the road, and continue your journey alone.”

Half an hour later, the podorojna being presented by Michael, three post-horses were harnessed to the tarantass. These animals, covered with long hair, were very like long-

legged bears. They were small but spirited, being of Siberian breed. The way in which the iemschik harnessed them was thus: one, the largest, was secured between two long shafts, on whose farther end was a hoop carrying tassels and bells; the two others were simply fastened by ropes to the steps of the tarantass. This was the complete harness, with mere strings for reins.

Neither Michael Strogoff nor the young Livonian girl had any baggage. The rapidity with which one wished to make the journey, and the more than modest resources of the other, prevented them from embarrassing themselves with packages. It was a fortunate thing, under the circumstances, for the tarantass could not have carried both baggage and travelers. It was only made for two persons, without counting the iemschik, who kept his equilibrium on his narrow seat in a marvelous manner.

The iemschik is changed at every relay. The man who drove the tarantass during the first stage was, like his horses, a Siberian, and no less shaggy than they; long hair, cut square on the forehead, hat with a turned-up brim, red belt, coat with crossed facings and buttons stamped with the imperial cipher. The iemschik, on coming up with his team, threw an inquisitive glance at the passengers of the tarantass. No luggage! — and had there been, where in the world could he have stowed it? Rather shabby in appearance too. He looked contemptuous.

“Crows,” said he, without caring whether he was overheard or not; “crows, at six copecks a verst!”

“No, eagles!” said Michael, who understood the iemschik’s slang perfectly; “eagles, do you hear, at nine copecks a verst, and a tip besides.”

He was answered by a merry crack of the whip.

In the language of the Russian postillions the “crow” is the stingy or poor traveler, who at the post-houses only pays two or three copecks a verst for the horses. The “eagle” is the traveler who does not mind expense, to say nothing of liberal tips. Therefore the crow could not claim to fly as rapidly as the imperial bird.

Nadia and Michael immediately took their places in the tarantass. A small store of provisions was put in the box, in case at any time they were delayed in reaching the post-houses, which are very comfortably provided under direction of the State. The

hood was pulled up, as it was insupport-ably hot, and at twelve o'clock the tarantass left Perm in a cloud of dust.

The way in which the iemschik kept up the pace of his team would have certainly astonished travelers who, being neither Russians nor Siberians, were not accustomed to this sort of thing. The leader, rather larger than the others, kept to a steady long trot, perfectly regular, whether up or down hill. The two other horses seemed to know no other pace than the gallop, though they performed many an eccentric curvette as they went along. The iemschik, however, never touched them, only urging them on by startling cracks of his whip. But what epithets he lavished on them, including the names of all the saints in the calendar, when they behaved like docile and conscientious animals! The string which served as reins would have had no influence on the spirited beasts, but the words "na pravo," to the right, "na levo," to the left, pronounced in a guttural tone, were more effectual than either bridle or snaffle.

And what amiable expressions! "Go on, my doves!" the iemschik would say. "Go on, pretty swallows! Fly, my little pigeons! Hold up, my cousin on the left! Gee up, my little father on the right!"

But when the pace slackened, what insulting expressions, instantly understood by the sensitive animals! "Go on, you wretched snail! Confound you, you slug! I'll roast you alive, you tortoise, you!"

Whether or not it was from this way of driving, which requires the iemschiks to possess strong throats more than muscular arms, the tarantass flew along at a rate of from twelve to fourteen miles an hour. Michael Strogoff was accustomed both to the sort of vehicle and the mode of traveling. Neither jerks nor jolts incommoded him. He knew that a Russian driver never even tries to avoid either stones, ruts, bogs, fallen trees, or trenches, which may happen to be in the road. He was used to all that. His companion ran a risk of being hurt by the violent jolts of the tarantass, but she would not complain.

For a little while Nadia did not speak. Then possessed with the one thought, that of reaching her journey's end, "I have calculated that there are three hundred versts between Perm and Ekaterenburg, brother," said she. "Am I right?"

"You are quite right, Nadia," answered Michael; "and when we have reached Ekaterenburg, we shall be at the foot of the Ural Mountains on the opposite side."

“How long will it take to get across the mountains?”

“Forty-eight hours, for we shall travel day and night. I say day and night, Nadia,” added he, “for I cannot stop even for a moment; I go on without rest to Irkutsk.”

“I shall not delay you, brother; no, not even for an hour, and we will travel day and night.”

“Well then, Nadia, if the Tartar invasion has only left the road open, we shall arrive in twenty days.”

“You have made this journey before?” asked Nadia.

“Many times.”

“During winter we should have gone more rapidly and surely, should we not?”

“Yes, especially with more rapidity, but you would have suffered much from the frost and snow.”

“What matter! Winter is the friend of Russia.”

“Yes, Nadia, but what a constitution anyone must have to endure such friendship! I have often seen the temperature in the Siberian steppes fall to more than forty degrees below freezing point! I have felt, notwithstanding my reindeer coat, my heart growing chill, my limbs stiffening, my feet freezing in triple woolen socks; I have seen my sleigh horses covered with a coating of ice, their breath congealed at their nostrils. I have seen the brandy in my flask change into hard stone, on which not even my knife could make an impression. But my sleigh flew like the wind. Not an obstacle on the plain, white and level farther than the eye could reach! No rivers to stop one! Hard ice everywhere, the route open, the road sure! But at the price of what suffering, Nadia, those alone could say, who have never returned, but whose bodies have been covered up by the snow storm.”

“However, you have returned, brother,” said Nadia.

“Yes, but I am a Siberian, and, when quite a child, I used to follow my father to the chase, and so became inured to these hardships. But when you said to me, Nadia, that winter would not have stopped you, that you would have gone alone, ready to struggle

against the frightful Siberian climate, I seemed to see you lost in the snow and falling, never to rise again."

"How many times have you crossed the steppe in winter?" asked the young Livonian.

"Three times, Nadia, when I was going to Omsk."

"And what were you going to do at Omsk?"

"See my mother, who was expecting me."

"And I am going to Irkutsk, where my father expects me. I am taking him my mother's last words. That is as much as to tell you, brother, that nothing would have prevented me from setting out."

"You are a brave girl, Nadia," replied Michael. "God Himself would have led you."

All day the tarantass was driven rapidly by the iemschiks, who succeeded each other at every stage. The eagles of the mountain would not have found their name dishonored by these "eagles" of the highway. The high price paid for each horse, and the tips dealt out so freely, recommended the travelers in a special way. Perhaps the postmasters thought it singular that, after the publication of the order, a young man and his sister, evidently both Russians, could travel freely across Siberia, which was closed to everyone else, but their papers were all en regle and they had the right to pass.

However, Michael Strogoff and Nadia were not the only travelers on their way from Perm to Ekaterenburg. At the first stages, the courier of the Czar had learnt that a carriage preceded them, but, as there was no want of horses, he did not trouble himself about that.

During the day, halts were made for food alone. At the post-houses could be found lodging and provision. Besides, if there was not an inn, the house of the Russian peasant would have been no less hospitable. In the villages, which are almost all alike, with their white-walled, green-roofed chapels, the traveler might knock at any door, and it would be opened to him. The moujik would come out, smiling and extending his hand to his guest. He would offer him bread and salt, the burning charcoal would be put into the "samovar," and he would be made quite at home. The family would turn out

themselves rather than that he should not have room. The stranger is the relation of all. He is “one sent by God.”

On arriving that evening Michael instinctively asked the postmaster how many hours ago the carriage which preceded them had passed that stage.

“Two hours ago, little father,” replied the postmaster.

“Is it a berlin?”

“No, a telga.”

“How many travelers?”

“Two.”

“And they are going fast?”

“Eagles!”

“Let them put the horses to as soon as possible.”

Michael and Nadia, resolved not to stop even for an hour, traveled all night. The weather continued fine, though the atmosphere was heavy and becoming charged with electricity. It was to be hoped that a storm would not burst whilst they were among the mountains, for there it would be terrible. Being accustomed to read atmospheric signs, Michael Strogoff knew that a struggle of the elements was approaching.

The night passed without incident. Notwithstanding the jolting of the tarantass, Nadia was able to sleep for some hours. The hood was partly raised so as to give as much air as there was in the stifling atmosphere.

Michael kept awake all night, mistrusting the iemschiks, who are apt to sleep at their posts. Not an hour was lost at the relays, not an hour on the road.

The next day, the 20th of July, at about eight o’clock in the morning, they caught the first glimpse of the Ural Mountains in the east. This important chain which separates Russia from Siberia was still at a great distance, and they could not hope to reach it until the end of the day. The passage of the mountains must necessarily be performed

during the next night. The sky was cloudy all day, and the temperature was therefore more bearable, but the weather was very threatening.

It would perhaps have been more prudent not to have ascended the mountains during the night, and Michael would not have done so, had he been permitted to wait; but when, at the last stage, the iemschik drew his attention to a peal of thunder reverberating among the rocks, he merely said:

“Is a telga still before us?”

“Yes.”

“How long is it in advance?”

“Nearly an hour.”

“Forward, and a triple tip if we are at Ekaterenburg to-morrow morning.”

CHAPTER X A STORM IN THE URAL MOUNTAINS

THE Ural Mountains extend in a length of over two thousand miles between Europe and Asia. Whether they are called the Urals, which is the Tartar, or the Poyas, which is the Russian name, they are correctly so termed; for these names signify “belt” in both languages. Rising on the shores of the Arctic Sea, they reach the borders of the Caspian. This was the barrier to be crossed by Michael Strogoff before he could enter Siberian Russia. The mountains could be crossed in one night, if no accident happened. Unfortunately, thunder muttering in the distance announced that a storm was at hand. The electric tension was such that it could not be dispersed without a tremendous explosion, which in the peculiar state of the atmosphere would be very terrible.

Michael took care that his young companion should be as well protected as possible. The hood, which might have been easily blown away, was fastened more securely with ropes, crossed above and at the back. The traces were doubled, and, as an additional precaution, the nave-boxes were stuffed with straw, as much to increase the strength of the wheels as to lessen the jolting, unavoidable on a dark night. Lastly, the fore and hinder parts, connected simply by the axles to the body of the tarantass, were joined one to the other by a crossbar, fixed by means of pins and screws.

Nadia resumed her place in the cart, and Michael took his seat beside her. Before the lowered hood hung two leathern curtains, which would in some degree protect the travelers against the wind and rain. Two great lanterns, suspended from the iemschik’s seat, threw a pale glimmer scarcely sufficient to light the way, but serving as warning lights to prevent any other carriage from running into them.

It was well that all these precautions were taken, in expectation of a rough night. The road led them up towards dense masses of clouds, and should the clouds not soon resolve into rain, the fog would be such that the tarantass would be unable to advance without danger of falling over some precipice.

The Ural chain does not attain any very great height, the highest summit not being more than five thousand feet. Eternal snow is there unknown, and what is piled up by the Siberian winter is soon melted by the summer sun. Shrubs and trees grow to a considerable height. The iron and copper mines, as well as those of precious stones, draw a considerable number of workmen to that region. Also, those villages termed

“gavody” are there met with pretty frequently, and the road through the great passes is easily practicable for post-carriages.

But what is easy enough in fine weather and broad daylight, offers difficulties and perils when the elements are engaged in fierce warfare, and the traveler is in the midst of it. Michael Strogoff knew from former experience what a storm in the mountains was, and perhaps this would be as terrible as the snowstorms which burst forth with such vehemence in the winter.

Rain was not yet falling, so Michael raised the leathern curtains which protected the interior of the tarantass and looked out, watching the sides of the road, peopled with fantastic shadows, caused by the wavering light of the lanterns. Nadia, motionless, her arms folded, gazed forth also, though without leaning forward, whilst her companion, his body half out of the carriage, examined both sky and earth.

The calmness of the atmosphere was very threatening, the air being perfectly still. It was just as if Nature were half stifled, and could no longer breathe; her lungs, that is to say those gloomy, dense clouds, not being able to perform their functions. The silence would have been complete but for the grindings of the wheels of the tarantass over the road, the creaking of the axles, the snorting of the horses, and the clattering of their iron hoofs among the pebbles, sparks flying out on every side.

The road was perfectly deserted. The tarantass encountered neither pedestrians nor horsemen, nor a vehicle of any description, in the narrow defiles of the Ural, on this threatening night. Not even the fire of a charcoal-burner was visible in the woods, not an encampment of miners near the mines, not a hut among the brushwood.

Under these peculiar circumstances it might have been allowable to postpone the journey till the morning. Michael Strogoff, however, had not hesitated, he had no right to stop, but then — and it began to cause him some anxiety — what possible reason could those travelers in the telga ahead have for being so imprudent?

Michael remained thus on the look-out for some time. About eleven o’clock lightning began to blaze continuously in the sky. The shadows of huge pines appeared and disappeared in the rapid light. Sometimes when the tarantass neared the side of the road, deep gulfs, lit up by the flashes, could be seen yawning beneath them. From time to time, on their vehicle giving a worse lurch than usual, they knew that they were

crossing a bridge of roughly-hewn planks thrown over some chasm, thunder appearing actually to be rumbling below them. Besides this, a booming sound filled the air, which increased as they mounted higher. With these different noises rose the shouts of the iemschik, sometimes scolding, sometimes coaxing his poor beasts, who were suffering more from the oppression of the air than the roughness of the roads. Even the bells on the shafts could no longer rouse them, and they stumbled every instant.

“At what time shall we reach the top of the ridge?” asked Michael of the iemschik.

“At one o’clock in the morning if we ever get there at all,” replied he, with a shake of his head.

“Why, my friend, this will not be your first storm in the mountains, will it?”

“No, and pray God it may not be my last!”

“Are you afraid?”

“No, I’m not afraid, but I repeat that I think you were wrong in starting.”

“I should have been still more wrong had I stayed.”

“Hold up, my pigeons!” cried the iemschik; it was his business to obey, not to question.

Just then a distant noise was heard, shrill whistling through the atmosphere, so calm a minute before. By the light of a dazzling flash, almost immediately followed by a tremendous clap of thunder, Michael could see huge pines on a high peak, bending before the blast. The wind was unchained, but as yet it was the upper air alone which was disturbed. Successive crashes showed that many of the trees had been unable to resist the burst of the hurricane. An avalanche of shattered trunks swept across the road and dashed over the precipice on the left, two hundred feet in front of the tarantass.

The horses stopped short.

“Get up, my pretty doves!” cried the iemschik, adding the cracking of his whip to the rumbling of the thunder.

Michael took Nadia’s hand. “Are you asleep, sister?”

“No, brother.”

“Be ready for anything; here comes the storm!”

“I am ready.”

Michael Strogoff had only just time to draw the leathern curtains, when the storm was upon them.

The iemschik leapt from his seat and seized the horses’ heads, for terrible danger threatened the whole party.

The tarantass was at a standstill at a turning of the road, down which swept the hurricane; it was absolutely necessary to hold the animals’ heads to the wind, for if the carriage was taken broadside it must infallibly capsize and be dashed over the precipice. The frightened horses reared, and their driver could not manage to quiet them. His friendly expressions had been succeeded by the most insulting epithets. Nothing was of any use. The unfortunate animals, blinded by the lightning, terrified by the incessant peals of thunder, threatened every instant to break their traces and flee. The iemschik had no longer any control over his team.

At that moment Michael Strogoff threw himself from the tarantass and rushed to his assistance. Endowed with more than common strength, he managed, though not without difficulty, to master the horses.

The storm now raged with redoubled fury. A perfect avalanche of stones and trunks of trees began to roll down the slope above them.

“We cannot stop here,” said Michael.

“We cannot stop anywhere,” returned the iemschik, all his energies apparently overcome by terror. “The storm will soon send us to the bottom of the mountain, and that by the shortest way.”

“Take you that horse, coward,” returned Michael, “I’ll look after this one.”

A fresh burst of the storm interrupted him. The driver and he were obliged to crouch upon the ground to avoid being blown down. The carriage, notwithstanding their efforts

and those of the horses, was gradually blown back, and had it not been stopped by the trunk of a tree, it would have gone over the edge of the precipice.

“Do not be afraid, Nadia!” cried Michael Strogoff.

“I’m not afraid,” replied the young Livonian, her voice not betraying the slightest emotion.

The rumbling of the thunder ceased for an instant, the terrible blast had swept past into the gorge below.

“Will you go back?” said the iemschik.

“No, we must go on! Once past this turning, we shall have the shelter of the slope.”

“But the horses won’t move!”

“Do as I do, and drag them on.”

“The storm will come back!”

“Do you mean to obey?”

“Do you order it?”

“The Father orders it!” answered Michael, for the first time invoking the all-powerful name of the Emperor.

“Forward, my swallows!” cried the iemschik, seizing one horse, while Michael did the same to the other.

Thus urged, the horses began to struggle onward. They could no longer rear, and the middle horse not being hampered by the others, could keep in the center of the road. It was with the greatest difficulty that either man or beasts could stand against the wind, and for every three steps they took in advance, they lost one, and even two, by being forced backwards. They slipped, they fell, they got up again. The vehicle ran a great risk of being smashed. If the hood had not been securely fastened, it would have been blown away long before. Michael Strogoff and the iemschik took more than two hours in getting up this bit of road, only half a verst in length, so directly exposed was it to the

lashing of the storm. The danger was not only from the wind which battered against the travelers, but from the avalanche of stones and broken trunks which were hurtling through the air.

Suddenly, during a flash of lightning, one of these masses was seen crashing and rolling down the mountain towards the tarantass. The iemschik uttered a cry.

Michael Strogoff in vain brought his whip down on the team, they refused to move.

A few feet farther on, and the mass would pass behind them! Michael saw the tarantass struck, his companion crushed; he saw there was no time to drag her from the vehicle.

Then, possessed in this hour of peril with superhuman strength, he threw himself behind it, and planting his feet on the ground, by main force placed it out of danger.

The enormous mass as it passed grazed his chest, taking away his breath as though it had been a cannon-ball, then crushing to powder the flints on the road, it bounded into the abyss below.

“Oh, brother!” cried Nadia, who had seen it all by the light of the flashes.

“Nadia!” replied Michael, “fear nothing!”

“It is not on my own account that I fear!”

“God is with us, sister!”

“With me truly, brother, since He has sent thee in my way!” murmured the young girl.

The impetus the tarantass had received was not to be lost, and the tired horses once more moved forward. Dragged, so to speak, by Michael and the iemschik, they toiled on towards a narrow pass, lying north and south, where they would be protected from the direct sweep of the tempest. At one end a huge rock jutted out, round the summit of which whirled an eddy. Behind the shelter of the rock there was a comparative calm; yet once within the circumference of the cyclone, neither man nor beast could resist its power.

Indeed, some firs which towered above this protection were in a trice shorn of their tops, as though a gigantic scythe had swept across them. The storm was now at its

height. The lightning filled the defile, and the thunderclaps had become one continued peal. The ground, struck by the concussion, trembled as though the whole Ural chain was shaken to its foundations.

Happily, the tarantass could be so placed that the storm might strike it obliquely. But the counter-currents, directed towards it by the slope, could not be so well avoided, and so violent were they that every instant it seemed as though it would be dashed to pieces.

Nadia was obliged to leave her seat, and Michael, by the light of one of the lanterns, discovered an excavation bearing the marks of a miner's pick, where the young girl could rest in safety until they could once more start.

Just then — it was one o'clock in the morning — the rain began to fall in torrents, and this in addition to the wind and lightning, made the storm truly frightful. To continue the journey at present was utterly impossible. Besides, having reached this pass, they had only to descend the slopes of the Ural Mountains, and to descend now, with the road torn up by a thousand mountain torrents, in these eddies of wind and rain, was utter madness.

"To wait is indeed serious," said Michael, "but it must certainly be done, to avoid still longer detentions. The very violence of the storm makes me hope that it will not last long. About three o'clock the day will begin to break, and the descent, which we cannot risk in the dark, we shall be able, if not with ease, at least without such danger, to attempt after sunrise."

"Let us wait, brother," replied Nadia; "but if you delay, let it not be to spare me fatigue or danger."

"Nadia, I know that you are ready to brave everything, but, in exposing both of us, I risk more than my life, more than yours, I am not fulfilling my task, that duty which before everything else I must accomplish."

"A duty!" murmured Nadia.

Just then a bright flash lit up the sky; a loud clap followed. The air was filled with sulphurous suffocating vapor, and a clump of huge pines, struck by the electric fluid, scarcely twenty feet from the tarantass, flared up like a gigantic torch.

The iemschik was struck to the ground by a counter-shock, but, regaining his feet, found himself happily unhurt.

Just as the last growlings of the thunder were lost in the recesses of the mountain, Michael felt Nadia’s hand pressing his, and he heard her whisper these words in his ear: “Cries, brother! Listen!”

CHAPTER XI TRAVELERS IN DISTRESS

DURING the momentary lull which followed, shouts could be distinctly heard from farther on, at no great distance from the tarantass. It was an earnest appeal, evidently from some traveler in distress.

Michael listened attentively. The iemschik also listened, but shook his head, as though it was impossible to help.

“They are travelers calling for aid,” cried Nadia.

“They can expect nothing,” replied the iemschik.

“Why not?” cried Michael. “Ought not we do for them what they would for us under similar circumstances?”

“Surely you will not risk the carriage and horses!”

“I will go on foot,” replied Michael, interrupting the iemschik.

“I will go, too, brother,” said the young girl.

“No, remain here, Nadia. The iemschik will stay with you. I do not wish to leave him alone.”

“I will stay,” replied Nadia.

“Whatever happens, do not leave this spot.”

“You will find me where I now am.”

Michael pressed her hand, and, turning the corner of the slope, disappeared in the darkness.

“Your brother is wrong,” said the iemschik.

“He is right,” replied Nadia simply.

Meanwhile Strogoff strode rapidly on. If he was in a great hurry to aid the travelers, he was also very anxious to know who it was that had not been hindered from starting by

the storm; for he had no doubt that the cries came from the telga, which had so long preceded him.

The rain had stopped, but the storm was raging with redoubled fury. The shouts, borne on the air, became more distinct. Nothing was to be seen of the pass in which Nadia remained. The road wound along, and the squalls, checked by the corners, formed eddies highly dangerous, to pass which, without being taken off his legs, Michael had to use his utmost strength.

He soon perceived that the travelers whose shouts he had heard were at no great distance. Even then, on account of the darkness, Michael could not see them, yet he heard distinctly their words.

This is what he heard, and what caused him some surprise: “Are you coming back, blockhead?”

“You shall have a taste of the knout at the next stage.”

“Do you hear, you devil’s postillion! Hullo! Below!”

“This is how a carriage takes you in this country!”

“Yes, this is what you call a telga!”

“Oh, that abominable driver! He goes on and does not appear to have discovered that he has left us behind!”

“To deceive me, too! Me, an honorable Englishman! I will make a complaint at the chancellor’s office and have the fellow hanged.”

This was said in a very angry tone, but was suddenly interrupted by a burst of laughter from his companion, who exclaimed, “Well! this is a good joke, I must say.”

“You venture to laugh!” said the Briton angrily.

“Certainly, my dear confrere, and that most heartily. ‘Pon my word I never saw anything to come up to it.”

Just then a crashing clap of thunder re-echoed through the defile, and then died away among the distant peaks. When the sound of the last growl had ceased, the merry voice went on: “Yes, it undoubtedly is a good joke. This machine certainly never came from France.”

“Nor from England,” replied the other.

On the road, by the light of the flashes, Michael saw, twenty yards from him, two travelers, seated side by side in a most peculiar vehicle, the wheels of which were deeply imbedded in the ruts formed in the road.

He approached them, the one grinning from ear to ear, and the other gloomily contemplating his situation, and recognized them as the two reporters who had been his companions on board the Caucasus.

“Good-morning to you, sir,” cried the Frenchman. “Delighted to see you here. Let me introduce you to my intimate enemy, Mr. Blount.”

The English reporter bowed, and was about to introduce in his turn his companion, Alcide Jolivet, in accordance with the rules of society, when Michael interrupted him.

“Perfectly unnecessary, sir; we already know each other, for we traveled together on the Volga.”

“Ah, yes! exactly so! Mr. — ”

“Nicholas Korpanoff, merchant, of Irkutsk. But may I know what has happened which, though a misfortune to your companion, amuses you so much?”

“Certainly, Mr. Korpanoff,” replied Alcide. “Fancy! our driver has gone off with the front part of this confounded carriage, and left us quietly seated in the back part! So here we are in the worse half of a telga; no driver, no horses. Is it not a joke?”

“No joke at all,” said the Englishman.

“Indeed it is, my dear fellow. You do not know how to look at the bright side of things.”

“How, pray, are we to go on?” asked Blount.

“That is the easiest thing in the world,” replied Alcide. “Go and harness yourself to what remains of our cart; I will take the reins, and call you my little pigeon, like a true iemschik, and you will trot off like a real post-horse.”

“Mr. Jolivet,” replied the Englishman, “this joking is going too far, it passes all limits and — ”

“Now do be quiet, my dear sir. When you are done up, I will take your place; and call me a broken-winded snail and faint-hearted tortoise if I don’t take you over the ground at a rattling pace.”

Alcide said all this with such perfect good-humor that Michael could not help smiling. “Gentlemen,” said he, “here is a better plan. We have now reached the highest ridge of the Ural chain, and thus have merely to descend the slopes of the mountain. My carriage is close by, only two hundred yards behind. I will lend you one of my horses, harness it to the remains of the telga, and to-mor-how, if no accident befalls us, we will arrive together at Ekaterenburg.”

“That, Mr. Korpanoff,” said Alcide, “is indeed a generous proposal.”

“Indeed, sir,” replied Michael, “I would willingly offer you places in my tarantass, but it will only hold two, and my sister and I already fill it.”

“Really, sir,” answered Alcide, “with your horse and our demi-telga we will go to the world’s end.”

“Sir,” said Harry Blount, “we most willingly accept your kind offer. And, as to that iemschik — ”

“Oh! I assure you that you are not the first travelers who have met with a similar misfortune,” replied Michael.

“But why should not our driver come back? He knows perfectly well that he has left us behind, wretch that he is!”

“He! He never suspected such a thing.”

“What! the fellow not know that he was leaving the better half of his telga behind?”

“Not a bit, and in all good faith is driving the fore part into Ekaterenburg.”

“Did I not tell you that it was a good joke, confrere?” cried Alcide.

“Then, gentlemen, if you will follow me,” said Michael, “we will return to my carriage, and — ”

“But the telga,” observed the Englishman.

“There is not the slightest fear that it will fly away, my dear Blount!” exclaimed Alcide; “it has taken such good root in the ground, that if it were left here until next spring it would begin to bud.”

“Come then, gentlemen,” said Michael Strogoff, “and we will bring up the tarantass.”

The Frenchman and the Englishman, descending from their seats, no longer the hinder one, since the front had taken its departure, followed Michael.

Walking along, Alcide Jolivet chattered away as usual, with his invariable good-humor. “Faith, Mr. Korpanoff,” said he, “you have indeed got us out of a bad scrape.”

“I have only done, sir,” replied Michael, “what anyone would have done in my place.”

“Well, sir, you have done us a good turn, and if you are going farther we may possibly meet again, and — ”

Alcide Jolivet did not put any direct question to Michael as to where he was going, but the latter, not wishing it to be suspected that he had anything to conceal, at once replied, “I am bound for Omsk, gentlemen.”

“Mr. Blount and I,” replied Alcide, “go where danger is certainly to be found, and without doubt news also.”

“To the invaded provinces?” asked Michael with some earnestness.

“Exactly so, Mr. Korpanoff; and we may possibly meet there.”

“Indeed, sir,” replied Michael, “I have little love for cannon-balls or lance points, and am by nature too great a lover of peace to venture where fighting is going on.”

“I am sorry, sir, extremely sorry; we must only regret that we shall separate so soon! But on leaving Ekaterenburg it may be our fortunate fate to travel together, if only for a few days?”

“Do you go on to Omsk?” asked Michael, after a moment’s reflection.

“We know nothing as yet,” replied Alcide; “but we shall certainly go as far as Ishim, and once there, our movements must depend on circumstances.”

“Well then, gentlemen,” said Michael, “we will be fellow-travelers as far as Ishim.”

Michael would certainly have preferred to travel alone, but he could not, without appearing at least singular, seek to separate himself from the two reporters, who were taking the same road that he was. Besides, since Alcide and his companion intended to make some stay at Ishim, he thought it rather convenient than otherwise to make that part of the journey in their company.

Then in an indifferent tone he asked, “Do you know, with any certainty, where this Tartar invasion is?”

“Indeed, sir,” replied Alcide, “we only know what they said at Perm. Feofar-Khan’s Tartars have invaded the whole province of Semipolatinsk, and for some days, by forced marches, have been descending the Irtish. You must hurry if you wish to get to Omsk before them.”

“Indeed I must,” replied Michael.

“It is reported also that Colonel Ogareff has succeeded in passing the frontier in disguise, and that he will not be slow in joining the Tartar chief in the revolted country.”

“But how do they know it?” asked Michael, whom this news, more or less true, so directly concerned.

“Oh! as these things are always known,” replied Alcide; “it is in the air.”

“Then have you really reason to think that Colonel Ogareff is in Siberia?”

“I myself have heard it said that he was to take the road from Kasan to Ekaterenburg.”

“Ah! you know that, Mr. Jolivet?” said Harry Blount, roused from his silence.

“I knew it,” replied Alcide.

“And do you know that he went disguised as a gypsy!” asked Blount.

“As a gypsy!” exclaimed Michael, almost involuntarily, and he suddenly remembered the look of the old Bohemian at Nijni-Novgorod, his voyage on board the Caucasus, and his disembarking at Kasan.

“Just well enough to make a few remarks on the subject in a letter to my cousin,” replied Alcide, smiling.

“You lost no time at Kasan,” dryly observed the Englishman.

“No, my dear fellow! and while the Caucasus was laying in her supply of fuel, I was employed in obtaining a store of information.”

Michael no longer listened to the repartee which Harry Blount and Alcide exchanged. He was thinking of the gypsy troupe, of the old Tsigane, whose face he had not been able to see, and of the strange woman who accompanied him, and then of the peculiar glance which she had cast at him. Suddenly, close by he heard a pistol-shot.

“Ah! forward, sirs!” cried he.

“Hullo!” said Alcide to himself, “this quiet merchant who always avoids bullets is in a great hurry to go where they are flying about just now!”

Quickly followed by Harry Blount, who was not a man to be behind in danger, he dashed after Michael. In another instant the three were opposite the projecting rock which protected the tarantass at the turning of the road.

The clump of pines struck by the lightning was still burning. There was no one to be seen. However, Michael was not mistaken. Suddenly a dreadful growling was heard, and then another report.

“A bear;” cried Michael, who could not mistake the growling. “Nadia; Nadia!” And drawing his cutlass from his belt, Michael bounded round the buttress behind which the young girl had promised to wait.

The pines, completely enveloped in flames, threw a wild glare on the scene. As Michael reached the tarantass, a huge animal retreated towards him.

It was a monstrous bear. The tempest had driven it from the woods, and it had come to seek refuge in this cave, doubtless its habitual retreat, which Nadia then occupied.

Two of the horses, terrified at the presence of the enormous creature, breaking their traces, had escaped, and the iemschik, thinking only of his beasts, leaving Nadia face to face with the bear, had gone in pursuit of them.

But the brave girl had not lost her presence of mind. The animal, which had not at first seen her, was attacking the remaining horse. Nadia, leaving the shelter in which she had been crouching, had run to the carriage, taken one of Michael's revolvers, and, advancing resolutely towards the bear, had fired close to it.

The animal, slightly wounded in the shoulder, turned on the girl, who rushed for protection behind the tarantass, but then, seeing that the horse was attempting to break its traces, and knowing that if it did so, and the others were not recovered, their journey could not be continued, with the most perfect coolness she again approached the bear, and, as it raised its paws to strike her down, gave it the contents of the second barrel.

This was the report which Michael had just heard. In an instant he was on the spot. Another bound and he was between the bear and the girl. His arm made one movement upwards, and the enormous beast, ripped up by that terrible knife, fell to the ground a lifeless mass. He had executed in splendid style the famous blow of the Siberian hunters, who endeavor not to damage the precious fur of the bear, which fetches a high price.

"You are not wounded, sister?" said Michael, springing to the side of the young girl.

"No, brother," replied Nadia.

At that moment the two journalists came up. Alcide seized the horse's head, and, in an instant, his strong wrist mastered it. His companion and he had seen Michael's rapid stroke. "Bravo!" cried Alcide; "for a simple merchant, Mr. Korpanoff, you handle the hunter's knife in a most masterly fashion."

"Most masterly, indeed," added Blount.

“In Siberia,” replied Michael, “we are obliged to do a little of everything.”

Alcide regarded him attentively. Seen in the bright glare, his knife dripping with blood, his tall figure, his foot firm on the huge carcass, he was indeed worth looking at.

“A formidable fellow,” said Alcide to himself. Then advancing respectfully, he saluted the young girl.

Nadia bowed slightly.

Alcide turned towards his companion. “The sister worthy of the brother!” said he. “Now, were I a bear, I should not meddle with two so brave and so charming.”

Harry Blount, perfectly upright, stood, hat in hand, at some distance. His companion’s easy manners only increased his usual stiffness.

At that moment the iemschik, who had succeeded in recapturing his two horses, reappeared. He cast a regretful glance at the magnificent animal lying on the ground, loth to leave it to the birds of prey, and then proceeded once more to harness his team.

Michael acquainted him with the travelers’ situation, and his intention of loaning one of the horses.

“As you please,” replied the iemschik. “Only, you know, two carriages instead of one.”

“All right, my friend,” said Alcide, who understood the insinuation, “we will pay double.”

“Then gee up, my turtle-doves!” cried the iemschik.

Nadia again took her place in the tarantass. Michael and his companions followed on foot. It was three o’clock. The storm still swept with terrific violence across the defile. When the first streaks of daybreak appeared the tarantass had reached the telga, which was still conscientiously imbedded as far as the center of the wheel. Such being the case, it can be easily understood how a sudden jerk would separate the front from the hinder part. One of the horses was now harnessed by means of cords to the remains of the telga, the reporters took their place on the singular equipage, and the two carriages started off. They had now only to descend the Ural slopes, in doing which there was not the slightest difficulty.

Six hours afterwards the two vehicles, the tarantass preceding the telga, arrived at Ekaterenburg, nothing worthy of note having happened in the descent.

The first person the reporters perceived at the door of the post-house was their iemschik, who appeared to be waiting for them. This worthy Russian had a fine open countenance, and he smilingly approached the travelers, and, holding out his hand, in a quiet tone he demanded the usual “pour-boire.”

This very cool request roused Blount’s ire to its highest pitch, and had not the iemschik prudently retreated, a straight-out blow of the fist, in true British boxing style, would have paid his claim of “na vodkou.”

Alcide Jolivet, at this burst of anger, laughed as he had never laughed before.

“But the poor devil is quite right!” he cried. “He is perfectly right, my dear fellow. It is not his fault if we did not know how to follow him!”

Then drawing several copecks from his pocket, “Here my friend,” said he, handing them to the iemschik; “take them. If you have not earned them, that is not your fault.”

This redoubled Mr. Blount’s irritation. He even began to speak of a lawsuit against the owner of the telga.

“A lawsuit in Russia, my dear fellow!” cried Alcide. “Things must indeed change should it ever be brought to a conclusion! Did you never hear the story of the wet-nurse who claimed payment of twelve months’ nursing of some poor little infant?”

“I never heard it,” replied Harry Blount.

“Then you do not know what that suckling had become by the time judgment was given in favor of the nurse?”

“What was he, pray?”

“Colonel of the Imperial Guard!”

At this reply all burst into a laugh.

Alcide, enchanted with his own joke, drew out his notebook, and in it wrote the following memorandum, destined to figure in a forthcoming French and Russian dictionary: “Telga, a Russian carriage with four wheels, that is when it starts; with two wheels, when it arrives at its destination.”

CHAPTER XII PROVOCATION

EKATERENBURG, geographically, is an Asiatic city; for it is situated beyond the Ural Mountains, on the farthest eastern slopes of the chain. Nevertheless, it belongs to the government of Perm; and, consequently, is included in one of the great divisions of European Russia. It is as though a morsel of Siberia lay in Russian jaws.

Neither Michael nor his companions were likely to experience the slightest difficulty in obtaining means of continuing their journey in so large a town as Ekaterenburg. It was founded in 1723, and has since become a place of considerable size, for in it is the chief mint of the empire. There also are the headquarters of the officials employed in the management of the mines. Thus the town is the center of an important district, abounding in manufactories principally for the working and refining of gold and platina.

Just now the population of Ekaterenburg had greatly increased; many Russians and Siberians, menaced by the Tartar invasion, having collected there. Thus, though it had been so troublesome a matter to find horses and vehicles when going to Ekaterenburg, there was no difficulty in leaving it; for under present circumstances few travelers cared to venture on the Siberian roads.

So it happened that Blount and Alcide had not the slightest trouble in replacing, by a sound telga, the famous demi-carriage which had managed to take them to Ekaterenburg. As to Michael, he retained his tarantass, which was not much the worse for its journey across the Urals; and he had only to harness three good horses to it to take him swiftly over the road to Irkutsk.

As far as Tioumen, and even up to Novo-Zaimskoe, this road has slight inclines, which gentle undulations are the first signs of the slopes of the Ural Mountains. But after Novo-Zaimskoe begins the immense steppe.

At Ichim, as we have said, the reporters intended to stop, that is at about four hundred and twenty miles from Ekaterenburg. There they intended to be guided by circumstances as to their route across the invaded country, either together or separately, according as their news-hunting instinct set them on one track or another.

This road from Ekaterenburg to Ichim — which passes through Irkutsk — was the only one which Michael could take. But, as he did not run after news, and wished, on the contrary, to avoid the country devastated by the invaders, he determined to stop nowhere.

“I am very happy to make part of my journey in your company,” said he to his new companions, “but I must tell you that I am most anxious to reach Omsk; for my sister and I are going to rejoin our mother. Who can say whether we shall arrive before the Tartars reach the town! I must therefore stop at the post-houses only long enough to change horses, and must travel day and night.”

“That is exactly what we intend doing,” replied Blount.

“Good,” replied Michael; “but do not lose an instant. Buy or hire a carriage whose — ”

“Whose hind wheels,” added Alcide, “are warranted to arrive at the same time as its front wheels.”

Half an hour afterwards the energetic Frenchman had found a tarantass in which he and his companion at once seated themselves. Michael and Nadia once more entered their own carriage, and at twelve o’clock the two vehicles left the town of Ekaterenburg together.

Nadia was at last in Siberia, on that long road which led to Irkutsk. What must then have been the thoughts of the young girl? Three strong swift horses were taking her across that land of exile where her parent was condemned to live, for how long she knew not, and so far from his native land. But she scarcely noticed those long steppes over which the tarantass was rolling, and which at one time she had despaired of ever seeing, for her eyes were gazing at the horizon, beyond which she knew her banished father was. She saw nothing of the country across which she was traveling at the rate of fifteen versts an hour; nothing of these regions of Western Siberia, so different from those of the east. Here, indeed, were few cultivated fields; the soil was poor, at least at the surface, but in its bowels lay hid quantities of iron, copper, platina, and gold. How can hands be found to cultivate the land, when it pays better to burrow beneath the earth? The pickaxe is everywhere at work; the spade nowhere.

However, Nadia's thoughts sometimes left the provinces of Lake Baikal, and returned to her present situation. Her father's image faded away, and was replaced by that of her generous companion as he first appeared on the Vladimir railroad. She recalled his attentions during that journey, his arrival at the police-station, the hearty simplicity with which he had called her sister, his kindness to her in the descent of the Volga, and then all that he did for her on that terrible night of the storm in the Urals, when he saved her life at the peril of his own.

Thus Nadia thought of Michael. She thanked God for having given her such a gallant protector, a friend so generous and wise. She knew that she was safe with him, under his protection. No brother could have done more than he. All obstacles seemed cleared away; the performance of her journey was but a matter of time.

Michael remained buried in thought. He also thanked God for having brought about this meeting with Nadia, which at the same time enabled him to do a good action, and afforded him additional means for concealing his true character. He delighted in the young girl's calm intrepidity. Was she not indeed his sister? His feeling towards his beautiful and brave companion was rather respect than affection. He felt that hers was one of those pure and rare hearts which are held by all in high esteem.

However, Michael's dangers were now beginning, since he had reached Siberian ground. If the reporters were not mistaken, if Ivan Ogareff had really passed the frontier, all his actions must be made with extreme caution. Things were now altered; Tartar spies swarmed in the Siberian provinces. His incognito once discovered, his character as courier of the Czar known, there was an end of his journey, and probably of his life. Michael felt now more than ever the weight of his responsibility.

While such were the thoughts of those occupying the first carriage, what was happening in the second? Nothing out of the way. Alcide spoke in sentences; Blount replied by monosyllables. Each looked at everything in his own light, and made notes of such incidents as occurred on the journey — few and but slightly varied — while they crossed the provinces of Western Siberia.

At each relay the reporters descended from their carriage and found themselves with Michael. Except when meals were to be taken at the post-houses, Nadia did not leave the tarantass. When obliged to breakfast or dine, she sat at table, but was always very reserved, and seldom joined in conversation.

Alcide, without going beyond the limits of strict propriety, showed that he was greatly struck by the young girl. He admired the silent energy which she showed in bearing all the fatigues of so difficult a journey.

The forced stoppages were anything but agreeable to Michael; so he hastened the departure at each relay, roused the innkeepers, urged on the iemschiks, and expedited the harnessing of the tarantass. Then the hurried meal over — always much too hurried to agree with Blount, who was a methodical eater — they started, and were driven as eagles, for they paid like princes.

It need scarcely be said that Blount did not trouble himself about the girl at table. That gentleman was not in the habit of doing two things at once. She was also one of the few subjects of conversation which he did not care to discuss with his companion.

Alcide having asked him, on one occasion, how old he thought the girl, “What girl?” he replied, quite seriously.

“Why, Nicholas Korpanoff’s sister.”

“Is she his sister?”

“No; his grandmother!” replied Alcide, angry at his indifference. “What age should you consider her?”

“Had I been present at her birth I might have known.”

Very few of the Siberian peasants were to be seen in the fields. These peasants are remarkable for their pale, grave faces, which a celebrated traveler has compared to those of the Castilians, without the haughtiness of the latter. Here and there some villages already deserted indicated the approach of the Tartar hordes. The inhabitants, having driven off their flocks of sheep, their camels, and their horses, were taking refuge in the plains of the north. Some tribes of the wandering Kirghiz, who remained faithful, had transported their tents beyond the Irtych, to escape the depredations of the invaders.

Happily, post traveling was as yet uninterrupted; and telegraphic communication could still be effected between places connected with the wire. At each relay horses were to

be had on the usual conditions. At each telegraphic station the clerks transmitted messages delivered to them, delaying for State dispatches alone.

Thus far, then, Michael's journey had been accomplished satisfactorily. The courier of the Czar had in no way been impeded; and, if he could only get on to Krasnoiarsk, which seemed the farthest point attained by Feofar-Khan's Tartars, he knew that he could arrive at Irkutsk, before them. The day after the two carriages had left Ekaterenburg they reached the small town of Toulouguisk at seven o'clock in the morning, having covered two hundred and twenty versts, no event worthy of mention having occurred. The same evening, the 22d of July, they arrived at Tioumen.

Tioumen, whose population is usually ten thousand inhabitants, then contained double that number. This, the first industrial town established by the Russians in Siberia, in which may be seen a fine metal-refining factory and a bell foundry, had never before presented such an animated appearance. The correspondents immediately went off after news. That brought by Siberian fugitives from the seat of war was far from reassuring. They said, amongst other things, that Feofar-Khan's army was rapidly approaching the valley of the Ichim, and they confirmed the report that the Tartar chief was soon to be joined by Colonel Ogareff, if he had not been so already. Hence the conclusion was that operations would be pushed in Eastern Siberia with the greatest activity. However, the loyal Cossacks of the government of Tobolsk were advancing by forced marches towards Tomsk, in the hope of cutting off the Tartar columns.

At midnight the town of Novo-Saimsk was reached; and the travelers now left behind them the country broken by tree-covered hills, the last remains of the Urals.

Here began the regular Siberian steppe which extends to the neighborhood of Krasnoiarsk. It is a boundless plain, a vast grassy desert; earth and sky here form a circle as distinct as that traced by a sweep of the compasses. The steppe presents nothing to attract notice but the long line of the telegraph posts, their wires vibrating in the breeze like the strings of a harp. The road could be distinguished from the rest of the plain only by the clouds of fine dust which rose under the wheels of the tarantass. Had it not been for this white riband, which stretched away as far as the eye could reach, the travelers might have thought themselves in a desert.

Michael and his companions again pressed rapidly forward. The horses, urged on by the iemschik, seemed to fly over the ground, for there was not the slightest obstacle to

impede them. The tarantass was going straight for Ichim, where the two correspondents intended to stop, if nothing happened to make them alter their plans.

A hundred and twenty miles separated Novo-Saimsk from the town of Ichim, and before eight o'clock the next evening the distance could and should be accomplished if no time was lost. In the opinion of the iemschiks, should the travelers not be great lords or high functionaries, they were worthy of being so, if it was only for their generosity in the matter of "na vodkou."

On the afternoon of the next day, the 23rd of July, the two carriages were not more than thirty versts from Ichim. Suddenly Michael caught sight of a carriage — scarcely visible among the clouds of dust — preceding them along the road. As his horses were evidently less fatigued than those of the other traveler, he would not be long in overtaking it. This was neither a tarantass nor a telga, but a post-berlin, which looked as if it had made a long journey. The postillion was thrashing his horses with all his might, and only kept them at a gallop by dint of abuse and blows. The berlin had certainly not passed through Novo-Saimsk, and could only have struck the Irkutsk road by some less frequented route across the steppe.

Our travelers' first thought, on seeing this berlin, was to get in front of it, and arrive first at the relay, so as to make sure of fresh horses. They said a word to their iemschiks, who soon brought them up with the berlin.

Michael Strogoff came up first. As he passed, a head was thrust out of the window of the berlin.

He had not time to see what it was like, but as he dashed by he distinctly heard this word, uttered in an imperious tone: "Stop!"

But they did not stop; on the contrary, the berlin was soon distanced by the two tarantasses.

It now became a regular race; for the horses of the berlin — no doubt excited by the sight and pace of the others — recovered their strength and kept up for some minutes. The three carriages were hidden in a cloud of dust. From this cloud issued the cracking of whips mingled with excited shouts and exclamations of anger.

Nevertheless, the advantage remained with Michael and his companions, which might be very important to them if the relay was poorly provided with horses. Two carriages were perhaps more than the postmaster could provide for, at least in a short space of time.

Half an hour after the berlin was left far behind, looking only a speck on the horizon of the steppe.

It was eight o'clock in the evening when the two carriages reached Ichim. The news was worse and worse with regard to the invasion. The town itself was menaced by the Tartar vanguard; and two days before the authorities had been obliged to retreat to Tobolsk. There was not an officer nor a soldier left in Ichim.

On arriving at the relay, Michael Strogoff immediately asked for horses. He had been fortunate in distancing the berlin. Only three horses were fit to be harnessed. The others had just come in worn out from a long stage.

As the two correspondents intended to stop at Ichim, they had not to trouble themselves to find transport, and had their carriage put away. In ten minutes Michael was told that his tarantass was ready to start.

"Good," said he.

Then turning to the two reporters: "Well, gentlemen, the time is come for us to separate."

"What, Mr. Korpanoff," said Alcide Jolivet, "shall you not stop even for an hour at Ichim?"

"No, sir; and I also wish to leave the post-house before the arrival of the berlin which we distanced."

"Are you afraid that the traveler will dispute the horses with you?"

"I particularly wish to avoid any difficulty."

"Then, Mr. Korpanoff," said Jolivet, "it only remains for us to thank you once more for the service you rendered us, and the pleasure we have had in traveling with you."

“It is possible that we shall meet you again in a few days at Omsk,” added Blount.

“It is possible,” answered Michael, “since I am going straight there.”

“Well, I wish you a safe journey, Mr. Korpanoff,” said Alcide, “and Heaven preserve you from telgas.”

The two reporters held out their hands to Michael with the intention of cordially shaking his, when the sound of a carriage was heard outside. Almost immediately the door was flung open and a man appeared.

It was the traveler of the berlin, a military-looking man, apparently about forty years of age, tall, robust in figure, broad-shouldered, with a strongly-set head, and thick mustaches meeting red whiskers. He wore a plain uniform. A cavalry saber hung at his side, and in his hand he held a short-handled whip.

“Horses,” he demanded, with the air of a man accustomed to command.

“I have no more disposable horses,” answered the postmaster, bowing.

“I must have some this moment.”

“It is impossible.”

“What are those horses which have just been harnessed to the tarantass I saw at the door?”

“They belong to this traveler,” answered the postmaster, pointing to Michael Strogoff.

“Take them out!” said the traveler in a tone which admitted of no reply.

Michael then advanced.

“These horses are engaged by me,” he said.

“What does that matter? I must have them. Come, be quick; I have no time to lose.”

“I have no time to lose either,” replied Michael, restraining himself with difficulty.

Nadia was near him, calm also, but secretly uneasy at a scene which it would have been better to avoid.

“Enough!” said the traveler. Then, going up to the postmaster, “Let the horses be put into my berlin,” he exclaimed with a threatening gesture.

The postmaster, much embarrassed, did not know whom to obey, and looked at Michael, who evidently had the right to resist the unjust demands of the traveler.

Michael hesitated an instant. He did not wish to make use of his podorojna, which would have drawn attention to him, and he was most unwilling also, by giving up his horses, to delay his journey, and yet he must not engage in a struggle which might compromise his mission.

The two reporters looked at him ready to support him should he appeal to them.

“My horses will remain in my carriage,” said Michael, but without raising his tone more than would be suitable for a plain Irkutsk merchant.

The traveler advanced towards Michael and laid his hand heavily on his shoulder. “Is it so?” he said roughly. “You will not give up your horses to me?”

“No,” answered Michael.

“Very well, they shall belong to whichever of us is able to start. Defend yourself; I shall not spare you!”

So saying, the traveler drew his saber from its sheath, and Nadia threw herself before Michael.

Blount and Alcide Jolivet advanced towards him.

“I shall not fight,” said Michael quietly, folding his arms across his chest.

“You will not fight?”

“No.”

“Not even after this?” exclaimed the traveler. And before anyone could prevent him, he struck Michael’s shoulder with the handle of the whip. At this insult Michael turned

deadly pale. His hands moved convulsively as if he would have knocked the brute down. But by a tremendous effort he mastered himself. A duel! it was more than a delay; it was perhaps the failure of his mission. It would be better to lose some hours. Yes; but to swallow this affront!

“Will you fight now, coward?” repeated the traveler, adding coarseness to brutality.

“No,” answered Michael, without moving, but looking the other straight in the face.

“The horses this moment,” said the man, and left the room.

The postmaster followed him, after shrugging his shoulders and bestowing on Michael a glance of anything but approbation.

The effect produced on the reporters by this incident was not to Michael’s advantage. Their discomfiture was visible. How could this strong young man allow himself to be struck like that and not demand satisfaction for such an insult? They contented themselves with bowing to him and retired, Jolivet remarking to Harry Blount

“I could not have believed that of a man who is so skillful in finishing up Ural Mountain bears. Is it the case that a man can be courageous at one time and a coward at another? It is quite incomprehensible.”

A moment afterwards the noise of wheels and whip showed that the berlin, drawn by the tarantass’ horses, was driving rapidly away from the post-house.

Nadia, unmoved, and Michael, still quivering, remained alone in the room. The courier of the Czar, his arms crossed over his chest was seated motionless as a statue. A color, which could not have been the blush of shame, had replaced the paleness on his countenance.

Nadia did not doubt that powerful reasons alone could have allowed him to suffer so great a humiliation from such a man. Going up to him as he had come to her in the police-station at Nijni-Novgorod:

“Your hand, brother,” said she.

And at the same time her hand, with an almost maternal gesture, wiped away a tear which sprang to her companion’s eye.

CHAPTER XIII DUTY BEFORE EVERYTHING

NADIA, with the clear perception of a right-minded woman, guessed that some secret motive directed all Michael Strogoff's actions; that he, for a reason unknown to her, did not belong to himself; and that in this instance especially he had heroically sacrificed to duty even his resentment at the gross injury he had received.

Nadia, therefore, asked no explanation from Michael. Had not the hand which she had extended to him already replied to all that he might have been able to tell her?

Michael remained silent all the evening. The postmaster not being able to supply them with fresh horses until the next morning, a whole night must be passed at the house. Nadia could profit by it to take some rest, and a room was therefore prepared for her.

The young girl would no doubt have preferred not to leave her companion, but she felt that he would rather be alone, and she made ready to go to her room.

Just as she was about to retire she could not refrain from going up to Michael to say good-night.

"Brother," she whispered. But he checked her with a gesture. The girl sighed and left the room.

Michael Strogoff did not lie down. He could not have slept even for an hour. The place on which he had been struck by the brutal traveler felt like a burn.

"For my country and the Father," he muttered as he ended his evening prayer.

He especially felt a great wish to know who was the man who had struck him, whence he came, and where he was going. As to his face, the features of it were so deeply engraven on his memory that he had no fear of ever forgetting them.

Michael Strogoff at last asked for the postmaster. The latter, a Siberian of the old type, came directly, and looking rather contemptuously at the young man, waited to be questioned.

"You belong to the country?" asked Michael.

"Yes."

“Do you know that man who took my horses?”

“No.”

“Had you never seen him before?”

“Never.”

“Who do you think he was?”

“A man who knows how to make himself obeyed.”

Michael fixed his piercing gaze upon the Siberian, but the other did not quail before it.

“Do you dare to judge me?” exclaimed Michael.

“Yes,” answered the Siberian, “there are some things even a plain merchant cannot receive without returning.”

“Blows?”

“Blows, young man. I am of an age and strength to tell you so.”

Michael went up to the postmaster and laid his two powerful hands on his shoulders.

Then in a peculiarly calm tone, “Be off, my friend,” said he: “be off! I could kill you.”

The postmaster understood. “I like him better for that,” he muttered and retired without another word.

At eight o’clock the next morning, the 24th of July, three strong horses were harnessed to the tarantass. Michael Strogoff and Nadia took their places, and Ichim, with its disagreeable remembrances, was soon left far behind.

At the different relays at which they stopped during the day Strogoff ascertained that the berlin still preceded them on the road to Irkutsk, and that the traveler, as hurried as they were, never lost a minute in pursuing his way across the steppe.

At four o’clock in the evening they reached Abatskaia, fifty miles farther on, where the Ichim, one of the principal affluents of the Irtych, had to be crossed. This passage was

rather more difficult than that of the Tobol. Indeed the current of the Ichim was very rapid just at that place. During the Siberian winter, the rivers being all frozen to a thickness of several feet, they are easily practicable, and the traveler even crosses them without being aware of the fact, for their beds have disappeared under the snowy sheet spread uniformly over the steppe; but in summer the difficulties of crossing are sometimes great.

In fact, two hours were taken up in making the passage of the Ichim, which much exasperated Michael, especially as the boatmen gave them alarming news of the Tartar invasion. Some of Feofar-Khan's scouts had already appeared on both banks of the lower Ichim, in the southern parts of the government of Tobolsk. Omsk was threatened. They spoke of an engagement which had taken place between the Siberian and Tartar troops on the frontier of the great Kirghese horde — an engagement not to the advantage of the Russians, who were weak in numbers. The troops had retreated thence, and in consequence there had been a general emigration of all the peasants of the province. The boatmen spoke of horrible atrocities committed by the invaders — pillage, theft, incendiarism, murder. Such was the system of Tartar warfare.

The people all fled before Feofar-Khan. Michael Strogoff's great fear was lest, in the depopulation of the towns, he should be unable to obtain the means of transport. He was therefore extremely anxious to reach Omsk. Perhaps there they would get the start of the Tartar scouts, who were coming down the valley of the Irtych, and would find the road open to Irkutsk.

Just at the place where the tarantass crossed the river ended what is called, in military language, the "Ichim chain" — a chain of towers, or little wooden forts, extending from the southern frontier of Siberia for a distance of nearly four hundred versts. Formerly these forts were occupied by detachments of Cossacks, and they protected the country against the Kirghese, as well as against the Tartars. But since the Muscovite Government had believed these hordes reduced to absolute submission, they had been abandoned, and now could not be used; just at the time when they were needed. Many of these forts had been reduced to ashes; and the boatmen even pointed out the smoke to Michael, rising in the southern horizon, and showing the approach of the Tartar advance-guard.

As soon as the ferryboat landed the tarantass on the right bank of the Ichim, the journey across the steppe was resumed with all speed. Michael Strogoff remained very silent.

He was, however, always attentive to Nadia, helping her to bear the fatigue of this long journey without break or rest; but the girl never complained. She longed to give wings to the horses. Something told her that her companion was even more anxious than herself to reach Irkutsk; and how many versts were still between!

It also occurred to her that if Omsk was entered by the Tartars, Michael's mother, who lived there, would be in danger, and that this was sufficient to explain her son's impatience to get to her.

Nadia at last spoke to him of old Marfa, and of how unprotected she would be in the midst of all these events.

"Have you received any news of your mother since the beginning of the invasion?" she asked.

"None, Nadia. The last letter my mother wrote to me contained good news. Marfa is a brave and energetic Siberian woman. Notwithstanding her age, she has preserved all her moral strength. She knows how to suffer."

"I shall see her, brother," said Nadia quickly. "Since you give me the name of sister, I am Marfa's daughter."

And as Michael did not answer she added:

"Perhaps your mother has been able to leave Omsk?"

"It is possible, Nadia," replied Michael; "and I hope she may have reached Tobolsk. Marfa hates the Tartars. She knows the steppe, and would have no fear in just taking her staff and going down the banks of the Irtych. There is not a spot in all the province unknown to her. Many times has she traveled all over the country with my father; and many times I myself, when a mere child, have accompanied them across the Siberian desert. Yes, Nadia, I trust that my mother has left Omsk."

"And when shall you see her?"

"I shall see her — on my return."

"If, however, your mother is still at Omsk, you will be able to spare an hour to go to her?"

“I shall not go and see her.”

“You will not see her?”

“No, Nadia,” said Michael, his chest heaving as he felt he could not go on replying to the girl’s questions.

“You say no! Why, brother, if your mother is still at Omsk, for what reason could you refuse to see her?”

“For what reason, Nadia? You ask me for what reason,” exclaimed Michael, in so changed a voice that the young girl started. “For the same reason as that which made me patient even to cowardice with the villain who — ” He could not finish his sentence.

“Calm yourself, brother,” said Nadia in a gentle voice. “I only know one thing, or rather I do not know it, I feel it. It is that all your conduct is now directed by the sentiment of a duty more sacred — if there can be one — than that which unites the son to the mother.”

Nadia was silent, and from that moment avoided every subject which in any way touched on Michael’s peculiar situation. He had a secret motive which she must respect. She respected it.

The next day, July 25th, at three o’clock in the morning, the tarantass arrived at Tioukalmsk, having accomplished a distance of eighty miles since it had crossed the Ichim. They rapidly changed horses. Here, however, for the first time, the iemschik made difficulties about starting, declaring that detachments of Tartars were roving across the steppe, and that travelers, horses, and carriages would be a fine prize for them.

Only by dint of a large bribe could Michael get over the unwillingness of the iemschik, for in this instance, as in many others, he did not wish to show his podorojna. The last ukase, having been transmitted by telegraph, was known in the Siberian provinces; and a Russian specially exempted from obeying these words would certainly have drawn public attention to himself — a thing above all to be avoided by the Czar’s courier. As to the iemschik’s hesitation, either the rascal traded on the traveler’s impatience or he really had good reason to fear.

However, at last the tarantass started, and made such good way that by three in the afternoon it had reached Koulatsinskoe, fifty miles farther on. An hour after this it was on the banks of the Irtych. Omsk was now only fourteen miles distant.

The Irtych is a large river, and one of the principal of those which flow towards the north of Asia. Rising in the Altai Mountains, it flows from the southeast to the northwest and empties itself into the Obi, after a course of four thousand miles.

At this time of year, when all the rivers of the Siberian basin are much swollen, the waters of the Irtych were very high. In consequence the current was changed to a regular torrent, rendering the passage difficult enough. A swimmer could not have crossed, however powerful; and even in a ferryboat there would be some danger.

But Michael and Nadia, determined to brave all perils whatever they might be, did not dream of shrinking from this one. Michael proposed to his young companion that he should cross first, embarking in the ferryboat with the tarantass and horses, as he feared that the weight of this load would render it less safe. After landing the carriage he would return and fetch Nadia.

The girl refused. It would be the delay of an hour, and she would not, for her safety alone, be the cause of it.

The embarkation was made not without difficulty, for the banks were partly flooded and the boat could not get in near enough. However, after half an hour’s exertion, the boatmen got the tarantass and the three horses on board. The passengers embarked also, and they shoved off.

For a few minutes all went well. A little way up the river the current was broken by a long point projecting from the bank, and forming an eddy easily crossed by the boat. The two boatmen propelled their barge with long poles, which they handled cleverly; but as they gained the middle of the stream it grew deeper and deeper, until at last they could only just reach the bottom. The ends of the poles were only a foot above the water, which rendered their use difficult. Michael and Nadia, seated in the stern of the boat, and always in dread of a delay, watched the boatmen with some uneasiness.

“Look out!” cried one of them to his comrade.

The shout was occasioned by the new direction the boat was rapidly taking. It had got into the direct current and was being swept down the river. By diligent use of the poles, putting the ends in a series of notches cut below the gunwale, the boatmen managed to keep the craft against the stream, and slowly urged it in a slanting direction towards the right bank.

They calculated on reaching it some five or six versts below the landing place; but, after all, that would not matter so long as men and beasts could disembark without accident. The two stout boatmen, stimulated moreover by the promise of double fare, did not doubt of succeeding in this difficult passage of the Irtych.

But they reckoned without an accident which they were powerless to prevent, and neither their zeal nor their skill-fulness could, under the circumstances, have done more.

The boat was in the middle of the current, at nearly equal distances from either shore, and being carried down at the rate of two versts an hour, when Michael, springing to his feet, bent his gaze up the river.

Several boats, aided by oars as well as by the current, were coming swiftly down upon them.

Michael’s brow contracted, and a cry escaped him.

“What is the matter?” asked the girl.

But before Michael had time to reply one of the boatmen exclaimed in an accent of terror:

“The Tartars! the Tartars!”

There were indeed boats full of soldiers, and in a few minutes they must reach the ferryboat, it being too heavily laden to escape from them.

The terrified boatmen uttered exclamations of despair and dropped their poles.

“Courage, my friends!” cried Michael; “courage! Fifty roubles for you if we reach the right bank before the boats overtake us.”

Incited by these words, the boatmen again worked manfully but it soon become evident that they could not escape the Tartars.

It was scarcely probable that they would pass without attacking them. On the contrary, there was everything to be feared from robbers such as these.

“Do not be afraid, Nadia,” said Michael; “but be ready for anything.”

“I am ready,” replied Nadia.

“Even to leap into the water when I tell you?”

“Whenever you tell me.”

“Have confidence in me, Nadia.”

“I have, indeed!”

The Tartar boats were now only a hundred feet distant. They carried a detachment of Bokharian soldiers, on their way to reconnoiter around Omsk.

The ferryboat was still two lengths from the shore. The boatmen redoubled their efforts. Michael himself seized a pole and wielded it with superhuman strength. If he could land the tarantass and horses, and dash off with them, there was some chance of escaping the Tartars, who were not mounted.

But all their efforts were in vain. “Saryn na kitchou!” shouted the soldiers from the first boat.

Michael recognized the Tartar war-cry, which is usually answered by lying flat on the ground. As neither he nor the boatmen obeyed a volley was let fly, and two of the horses were mortally wounded.

At the next moment a violent blow was felt. The boats had run into the ferryboat.

“Come, Nadia!” cried Michael, ready to jump overboard.

The girl was about to follow him, when a blow from a lance struck him, and he was thrown into the water. The current swept him away, his hand raised for an instant above the waves, and then he disappeared.

Nadia uttered a cry, but before she had time to throw herself after him she was seized and dragged into one of the boats. The boatmen were killed, the ferryboat left to drift away, and the Tartars continued to descend the Irtych.

CHAPTER XIV MOTHER AND SON

OMSK is the official capital of Western Siberia. It is not the most important city of the government of that name, for Tomsk has more inhabitants and is larger. But it is at Omsk that the Governor-General of this the first half of Asiatic Russia resides. Omsk, properly so called, is composed of two distinct towns: one which is exclusively inhabited by the authorities and officials; the other more especially devoted to the Siberian merchants, although, indeed, the trade of the town is of small importance.

This city has about 12,000 to 13,000 inhabitants. It is defended by walls, but these are merely of earth, and could afford only insufficient protection. The Tartars, who were well aware of this fact, consequently tried at this period to carry it by main force, and in this they succeeded, after an investment of a few days.

The garrison of Omsk, reduced to two thousand men, resisted valiantly. But driven back, little by little, from the mercantile portion of the place, they were compelled to take refuge in the upper town.

It was there that the Governor-General, his officers, and soldiers had entrenched themselves. They had made the upper quarter of Omsk a kind of citadel, and hitherto they held out well in this species of improvised “kreml,” but without much hope of the promised succor. The Tartar troops, who were descending the Irtych, received every day fresh reinforcements, and, what was more serious, they were led by an officer, a traitor to his country, but a man of much note, and of an audacity equal to any emergency. This man was Colonel Ivan Ogareff.

Ivan Ogareff, terrible as any of the most savage Tartar chieftains, was an educated soldier. Possessing on his mother’s side some Mongolian blood, he delighted in deceptive strategy and ambuscades, stopping short of nothing when he desired to fathom some secret or to set some trap. Deceitful by nature, he willingly had recourse to the vilest trickery; lying when occasion demanded, excelling in the adoption of all disguises and in every species of deception. Further, he was cruel, and had even acted as an executioner. Feofar-Khan possessed in him a lieutenant well capable of seconding his designs in this savage war.

When Michael Strogoff arrived on the banks of the Irtych, Ivan Ogareff was already master of Omsk, and was pressing the siege of the upper quarter of the town all the

more eagerly because he must hasten to Tomsk, where the main body of the Tartar army was concentrated.

Tomsk, in fact, had been taken by Feofar-Khan some days previously, and it was thence that the invaders, masters of Central Siberia, were to march upon Irkutsk.

Irkutsk was the real object of Ivan Ogareff. The plan of the traitor was to reach the Grand Duke under a false name, to gain his confidence, and to deliver into Tartar hands the town and the Grand Duke himself. With such a town, and such a hostage, all Asiatic Siberia must necessarily fall into the hands of the invaders. Now it was known that the Czar was acquainted with this conspiracy, and that it was for the purpose of baffling it that a courier had been intrusted with the important warning. Hence, therefore, the very stringent instructions which had been given to the young courier to pass incognito through the invaded district.

This mission he had so far faithfully performed, but now could he carry it to a successful completion?

The blow which had struck Michael Strogoff was not mortal. By swimming in a manner by which he had effectually concealed himself, he had reached the right bank, where he fell exhausted among the bushes.

When he recovered his senses, he found himself in the cabin of a mujik, who had picked him up and cared for him. For how long a time had he been the guest of this brave Siberian? He could not guess. But when he opened his eyes he saw the handsome bearded face bending over him, and regarding him with pitying eyes. “Do not speak, little father,” said the mujik, “Do not speak! Thou art still too weak. I will tell thee where thou art and everything that has passed.”

And the mujik related to Michael Strogoff the different incidents of the struggle which he had witnessed — the attack upon the ferry by the Tartar boats, the pillage of the tarantass, and the massacre of the boatmen.

But Michael Strogoff listened no longer, and slipping his hand under his garment he felt the imperial letter still secured in his breast. He breathed a sigh of relief.

But that was not all. “A young girl accompanied me,” said he.

“They have not killed her,” replied the mujik, anticipating the anxiety which he read in the eyes of his guest. “They have carried her off in their boat, and have continued the descent of Irtych. It is only one prisoner more to join the many they are taking to Tomsk!”

Michael Strogoff was unable to reply. He pressed his hand upon his heart to restrain its beating. But, notwithstanding these many trials, the sentiment of duty mastered his whole soul. “Where am I?” asked he.

“Upon the right bank of the Irtych, only five versts from Omsk,” replied the mujik.

“What wound can I have received which could have thus prostrated me? It was not a gunshot wound?”

“No; a lance-thrust in the head, now healing,” replied the mujik. “After a few days’ rest, little father, thou wilt be able to proceed. Thou didst fall into the river; but the Tartars neither touched nor searched thee; and thy purse is still in thy pocket.”

Michael Strogoff gripped the mujik’s hand. Then, recovering himself with a sudden effort, “Friend,” said he, “how long have I been in thy hut?”

“Three days.”

“Three days lost!”

“Three days hast thou lain unconscious.”

“Hast thou a horse to sell me?”

“Thou wishest to go?”

“At once.”

“I have neither horse nor carriage, little father. Where the Tartar has passed there remains nothing!”

“Well, I will go on foot to Omsk to find a horse.”

“A few more hours of rest, and thou wilt be in a better condition to pursue thy journey.”

“Not an hour!”

“Come now,” replied the mujik, recognizing the fact that it was useless to struggle against the will of his guest, “I will guide thee myself. Besides,” he added, “the Russians are still in great force at Omsk, and thou couldst, perhaps, pass unperceived.”

“Friend,” replied Michael Strogoff, “Heaven reward thee for all thou hast done for me!”

“Only fools expect reward on earth,” replied the mujik.

Michael Strogoff went out of the hut. When he tried to walk he was seized with such faintness that, without the assistance of the mujik, he would have fallen; but the fresh air quickly revived him. He then felt the wound in his head, the violence of which his fur cap had lessened. With the energy which he possessed, he was not a man to succumb under such a trifle. Before his eyes lay a single goal — far-distant Irkutsk. He must reach it! But he must pass through Omsk without stopping there.

“God protect my mother and Nadia!” he murmured. “I have no longer the right to think of them!”

Michael Strogoff and the mujik soon arrived in the mercantile quarter of the lower town. The surrounding earthwork had been destroyed in many places, and there were the breaches through which the marauders who followed the armies of Feofar-Khan had penetrated. Within Omsk, in its streets and squares, the Tartar soldiers swarmed like ants; but it was easy to see that a hand of iron imposed upon them a discipline to which they were little accustomed. They walked nowhere alone, but in armed groups, to defend themselves against surprise.

In the chief square, transformed into a camp, guarded by many sentries, 2,000 Tartars bivouacked. The horses, picketed but still saddled, were ready to start at the first order. Omsk could only be a temporary halting-place for this Tartar cavalry, which preferred the rich plains of Eastern Siberia, where the towns were more wealthy, and, consequently, pillage more profitable.

Above the mercantile town rose the upper quarter, which Ivan Ogareff, notwithstanding several assaults vigorously made but bravely repelled, had not yet been able to reduce. Upon its embattled walls floated the national colors of Russia.

It was not without a legitimate pride that Michael Strogoff and his guide, vowing fidelity, saluted them.

Michael Strogoff was perfectly acquainted with the town of Omsk, and he took care to avoid those streets which were much frequented. This was not from any fear of being recognized. In the town his old mother only could have called him by name, but he had sworn not to see her, and he did not. Besides — and he wished it with his whole heart — she might have fled into some quiet portion of the steppe.

The mujik very fortunately knew a postmaster who, if well paid, would not refuse at his request either to let or to sell a carriage or horses. There remained the difficulty of leaving the town, but the breaches in the fortifications would, of course, facilitate his departure.

The mujik was accordingly conducting his guest straight to the posting-house, when, in a narrow street, Michael Strogoff, coming to a sudden stop sprang behind a jutting wall.

“What is the matter?” asked the astonished mujik.

“Silence!” replied Michael, with his finger on his lips. At this moment a detachment debouched from the principal square into the street which Michael Strogoff and his companion had just been following.

At the head of the detachment, composed of twenty horsemen, was an officer dressed in a very simple uniform. Although he glanced rapidly from one side to the other he could not have seen Michael Strogoff, owing to his precipitous retreat.

The detachment went at full trot into the narrow street. Neither the officer nor his escort concerned themselves about the inhabitants. Several unlucky ones had scarcely time to make way for their passage. There were a few half-stifled cries, to which thrusts of the lance gave an instant reply, and the street was immediately cleared.

When the escort had disappeared, “Who is that officer?” asked Michael Strogoff. And while putting the question his face was pale as that of a corpse.

“It is Ivan Ogareff,” replied the Siberian, in a deep voice which breathed hatred.

“He!” cried Michael Strogoff, from whom the word escaped with a fury he could not conquer. He had just recognized in this officer the traveler who had struck him at the

posting-house of Ichim. And, although he had only caught a glimpse of him, it burst upon his mind, at the same time, that this traveler was the old Zingari whose words he had overheard in the market place of Nijni-Novgorod.

Michael Strogoff was not mistaken. The two men were one and the same. It was under the garb of a Zingari, mingling with the band of Sangarre, that Ivan Ogareff had been able to leave the town of Nijni-Novgorod, where he had gone to seek his confidants. Sangarre and her Zingari, well paid spies, were absolutely devoted to him. It was he who, during the night, on the fair-ground had uttered that singular sentence, which Michael Strogoff could not understand; it was he who was voyaging on board the Caucasus, with the whole of the Bohemian band; it was he who, by this other route, from Kasan to Ichim, across the Urals, had reached Omsk, where now he held supreme authority.

Ivan Ogareff had been barely three days at Omsk, and had it not been for their fatal meeting at Ichim, and for the event which had detained him three days on the banks of the Irtych, Michael Strogoff would have evidently beaten him on the way to Irkutsk.

And who knows how many misfortunes would have been avoided in the future! In any case — and now more than ever — Michael Strogoff must avoid Ivan Ogareff, and contrive not to be seen. When the moment of encountering him face to face should arrive, he knew how to meet it, even should the traitor be master of the whole of Siberia.

The mujik and Michael resumed their way and arrived at the posting-house. To leave Omsk by one of the breaches would not be difficult after nightfall. As for purchasing a carriage to replace the tarantass, that was impossible. There were none to be let or sold. But what want had Michael Strogoff now for a carriage? Was he not alone, alas? A horse would suffice him; and, very fortunately, a horse could be had. It was an animal of strength and mettle, and Michael Strogoff, accomplished horseman as he was, could make good use of it.

It was four o’clock in the afternoon. Michael Strogoff, compelled to wait till nightfall, in order to pass the fortifications, but not desiring to show himself, remained in the posting-house, and there partook of food.

There was a great crowd in the public room. They were talking of the expected arrival of a corps of Muscovite troops, not at Omsk, but at Tomsk — a corps intended to recapture that town from the Tartars of Feofar-Khan.

Michael Strogoff lent an attentive ear, but took no part in the conversation. Suddenly a cry made him tremble, a cry which penetrated to the depths of his soul, and these two words rushed into his ear: “My son!”

His mother, the old woman Marfa, was before him! Trembling, she smiled upon him. She stretched forth her arms to him. Michael Strogoff arose. He was about to throw himself —

The thought of duty, the serious danger for his mother and himself in this unfortunate meeting, suddenly stopped him, and such was his command over himself that not a muscle of his face moved. There were twenty people in the public room. Among them were, perhaps, spies, and was it not known in the town that the son of Marfa Strogoff belonged to the corps of the couriers of the Czar?

Michael Strogoff did not move.

“Michael!” cried his mother.

“Who are you, my good lady?” Michael Strogoff stammered, unable to speak in his usual firm tone.

“Who am I, thou askest! Dost thou no longer know thy mother?”

“You are mistaken,” coldly replied Michael Strogoff. “A resemblance deceives you.”

The old Marfa went up to him, and, looking straight into his eyes, said, “Thou art not the son of Peter and Marfa Strogoff?”

Michael Strogoff would have given his life to have locked his mother in his arms; but if he yielded it was all over with him, with her, with his mission, with his oath! Completely master of himself, he closed his eyes, in order not to see the inexpressible anguish which agitated the revered countenance of his mother. He drew back his hands, in order not to touch those trembling hands which sought him. “I do not know in truth what it is you say, my good woman,” he replied, stepping back.

“Michael!” again cried his aged mother.

“My name is not Michael. I never was your son! I am Nicholas Korpanoff, a merchant at Irkutsk.”

And suddenly he left the public room, whilst for the last time the words re-echoed, “My son! my son!”

Michael Strogoff, by a desperate effort, had gone. He did not see his old mother, who had fallen back almost inanimate upon a bench. But when the postmaster hastened to assist her, the aged woman raised herself. Suddenly a thought occurred to her. She denied by her son! It was not possible. As for being herself deceived, and taking another for him, equally impossible. It was certainly her son whom she had just seen; and if he had not recognized her it was because he would not, it was because he ought not, it was because he had some cogent reasons for acting thus! And then, her mother’s feelings arising within her, she had only one thought — ”Can I, unwittingly, have ruined him?”

“I am mad,” she said to her interrogators. “My eyes have deceived me! This young man is not my child. He had not his voice. Let us think no more of it; if we do I shall end by finding him everywhere.”

Less than ten minutes afterwards a Tartar officer appeared in the posting-house. “Marfa Strogoff?” he asked.

“It is I,” replied the old woman, in a tone so calm, and with a face so tranquil, that those who had witnessed the meeting with her son would not have known her.

“Come,” said the officer.

Marfa Strogoff, with firm step, followed the Tartar. Some moments afterwards she found herself in the chief square in the presence of Ivan Ogareff, to whom all the details of this scene had been immediately reported.

Ogareff, suspecting the truth, interrogated the old Siberian woman. “Thy name?” he asked in a rough voice.

“Marfa Strogoff.”

“Thou hast a son?”

“Yes.”

“He is a courier of the Czar?”

“Yes.”

“Where is he?”

“At Moscow.”

“Thou hast no news of him?”

“No news.”

“Since how long?”

“Since two months.”

“Who, then, was that young man whom thou didst call thy son a few moments ago at the posting-house?”

“A young Siberian whom I took for him,” replied Marfa Strogoff. “This is the tenth man in whom I have thought I recognized my son since the town has been so full of strangers. I think I see him everywhere.”

“So this young man was not Michael Strogoff?”

“It was not Michael Strogoff.”

“Dost thou know, old woman, that I can torture thee until thou avowest the truth?”

“I have spoken the truth, and torture will not cause me to alter my words in any way.”

“This Siberian was not Michael Strogoff?” asked a second time Ivan Ogareff.

“No, it was not he,” replied a second time Marfa Strogoff. “Do you think that for anything in the world I would deny a son whom God has given me?”

Ivan Ogareff regarded with an evil eye the old woman who braved him to the face. He did not doubt but that she had recognized her son in this young Siberian. Now if this son had first renounced his mother, and if his mother renounced him in her turn, it could occur only from the most weighty motive. Ogareff had therefore no doubt that the pretended Nicholas Korpanoff was Michael Strogoff, courier of the Czar, seeking concealment under a false name, and charged with some mission which it would have been important for him to know. He therefore at once gave orders for his pursuit. Then "Let this woman be conducted to Tomsk," he said.

While the soldiers brutally dragged her off, he added between his teeth, "When the moment arrives I shall know how to make her speak, this old sorceress!"

CHAPTER XV THE MARSHES OF THE BARABA

IT was fortunate that Michael Strogoff had left the posting-house so promptly. The orders of Ivan Ogareff had been immediately transmitted to all the approaches of the city, and a full description of Michael sent to all the various commandants, in order to prevent his departure from Omsk. But he had already passed through one of the breaches in the wall; his horse was galloping over the steppe, and the chances of escape were in his favor.

It was on the 29th of July, at eight o'clock in the evening, that Michael Strogoff had left Omsk. This town is situated about halfway between Moscow and Irkutsk, where it was necessary that he should arrive within ten days if he wished to get ahead of the Tartar columns. It was evident that the unlucky chance which had brought him into the presence of his mother had betrayed his incognito. Ivan Ogareff was no longer ignorant of the fact that a courier of the Czar had just passed Omsk, taking the direction of Irkutsk. The dispatches which this courier bore must have been of immense importance. Michael Strogoff knew, therefore, that every effort would be made to capture him.

But what he did not know, and could not know, was that Marfa Strogoff was in the hands of Ivan Ogareff, and that she was about to atone, perhaps with her life, for that natural exhibition of her feelings which she had been unable to restrain when she suddenly found herself in the presence of her son. And it was fortunate that he was ignorant of it. Could he have withstood this fresh trial?

Michael Strogoff urged on his horse, imbuing him with all his own feverish impatience, requiring of him one thing only, namely, to bear him rapidly to the next posting-house, where he could be exchanged for a quicker conveyance.

At midnight he had cleared fifty miles, and halted at the station of Koulikovo. But there, as he had feared, he found neither horses nor carriages. Several Tartar detachments had passed along the highway of the steppe. Everything had been stolen or requisitioned both in the villages and in the posting-houses. It was with difficulty that Michael Strogoff was even able to obtain some refreshment for his horse and himself.

It was of great importance, therefore, to spare his horse, for he could not tell when or how he might be able to replace it. Desiring, however, to put the greatest possible distance between himself and the horsemen who had no doubt been dispatched in

pursuit, he resolved to push on. After one hour's rest he resumed his course across the steppe.

Hitherto the weather had been propitious for his journey. The temperature was endurable. The nights at this time of the year are very short, and as they are lighted by the moon, the route over the steppe is practicable. Michael Strogoff, moreover, was a man certain of his road and devoid of doubt or hesitation, and in spite of the melancholy thoughts which possessed him he had preserved his clearness of mind, and made for his destined point as though it were visible upon the horizon. When he did halt for a moment at some turn in the road it was to breathe his horse. Now he would dismount to ease his steed for a moment, and again he would place his ear to the ground to listen for the sound of galloping horses upon the steppe. Nothing arousing his suspicions, he resumed his way.

On the 30th of July, at nine o'clock in the morning, Michael Strogoff passed through the station of Touroumoff and entered the swampy district of the Baraba.

There, for a distance of three hundred versts, the natural obstacles would be extremely great. He knew this, but he also knew that he would certainly surmount them.

These vast marshes of the Baraba, form the reservoir to all the rain-water which finds no outlet either towards the Obi or towards the Irtych. The soil of this vast depression is entirely argillaceous, and therefore impermeable, so that the waters remain there and make of it a region very difficult to cross during the hot season. There, however, lies the way to Irkutsk, and it is in the midst of ponds, pools, lakes, and swamps, from which the sun draws poisonous exhalations, that the road winds, and entails upon the traveler the greatest fatigue and danger.

Michael Strogoff spurred his horse into the midst of a grassy prairie, differing greatly from the close-cropped sod of the steppe, where feed the immense Siberian herds. The grass here was five or six feet in height, and had made room for swamp-plants, to which the dampness of the place, assisted by the heat of summer, had given giant proportions. These were principally canes and rushes, which formed a tangled network, an impenetrable undergrowth, sprinkled everywhere with a thousand flowers remarkable for the brightness of their color.

Michael Strogoff, galloping amongst this undergrowth of cane, was no longer visible from the swamps which bordered the road. The tall grass rose above him, and his track was indicated only by the flight of innumerable aquatic birds, which rose from the side of the road and dispersed into the air in screaming flocks.

The way, however, was clearly traceable. Now it would lie straight between the dense thicket of marsh-plants; again it would follow the winding shores of vast pools, some of which, several versts in length and breadth, deserve the name of lakes. In other localities the stagnant waters through which the road lay had been avoided, not by bridges, but by tottering platforms ballasted with thick layers of clay, whose joists shook like a too weak plank thrown across an abyss. Some of these platforms extended over three hundred feet, and travelers by tarantass, when crossing them have experienced a nausea like sea-sickness.

Michael Strogoff, whether the soil beneath his feet was solid or whether it sank under him, galloped on without halt, leaping the space between the rotten joists; but however fast they traveled the horse and the horseman were unable to escape from the sting of the two-winged insects which infest this marshy country.

Travelers who are obliged to cross the Baraba during the summer take care to provide themselves with masks of horse-hair, to which is attached a coat of mail of very fine wire, which covers their shoulders. Notwithstanding these precautions, there are few who come out of these marshes without having their faces, necks, and hands covered with red spots. The atmosphere there seems to bristle with fine needles, and one would almost say that a knight’s armor would not protect him against the darts of these dipterals. It is a dreary region, which man dearly disputes with tipulae, gnats, mosquitos, horse-flies, and millions of microscopic insects which are not visible to the naked eye; but, although they are not seen, they make themselves felt by their intolerable stinging, to which the most callous Siberian hunters have never been able to inure themselves.

Michael Strogoff’s horse, stung by these venomous insects, sprang forward as if the rowels of a thousand spurs had pierced his flanks. Mad with rage, he tore along over verst after verst with the speed of an express train, lashing his sides with his tail, seeking by the rapidity of his pace an alleviation of his torture.

It required as good a horseman as Michael Strogoff not to be thrown by the plungings of his horse, and the sudden stops and bounds which he made to escape from the stings of his persecutors. Having become insensible, so to speak, to physical suffering, possessed only with the one desire to arrive at his destination at whatever cost, he saw during this mad race only one thing — that the road flew rapidly behind him.

Who would have thought that this district of the Baraba, so unhealthy during the summer, could have afforded an asylum for human beings? Yet it did so. Several Siberian hamlets appeared from time to time among the giant canes. Men, women, children, and old men, clad in the skins of beasts, their faces covered with hardened blisters of skin, pastured their poor herds of sheep. In order to preserve the animals from the attack of the insects, they drove them to the leeward of fires of green wood, which were kept burning night and day, and the pungent smoke of which floated over the vast swamp.

When Michael Strogoff perceived that his horse, tired out, was on the point of succumbing, he halted at one of these wretched hamlets, and there, forgetting his own fatigue, he himself rubbed the wounds of the poor animal with hot grease according to the Siberian custom; then he gave him a good feed; and it was only after he had well groomed and provided for him that he thought of himself, and recruited his strength by a hasty meal of bread and meat and a glass of kwass. One hour afterwards, or at the most two, he resumed with all speed the interminable road to Irkutsk.

On the 30th of July, at four o’clock in the afternoon, Michael Strogoff, insensible of every fatigue, arrived at Elamsk. There it became necessary to give a night’s rest to his horse. The brave animal could no longer have continued the journey. At Elamsk, as indeed elsewhere, there existed no means of transport, — for the same reasons as at the previous villages, neither carriages nor horses were to be had.

Michael Strogoff resigned himself therefore to pass the night at Elamsk, to give his horse twelve hours’ rest. He recalled the instructions which had been given to him at Moscow — to cross Siberia incognito, to arrive at Irkutsk, but not to sacrifice success to the rapidity of the journey; and consequently it was necessary that he should husband the sole means of transport which remained to him.

On the morrow, Michael Strogoff left Elamsk at the moment when the first Tartar scouts were signaled ten versts behind upon the road to the Baraba, and he plunged again into

the swampy region. The road was level, which made it easy, but very tortuous, and therefore long. It was impossible, moreover, to leave it, and to strike a straight line across that impassable network of pools and bogs.

On the next day, the 1st of August, eighty miles farther, Michael Strogoff arrived at midday at the town of Spaskoe, and at two o'clock he halted at Pokrowskoe. His horse, jaded since his departure from Elamsk, could not have taken a single step more.

There Michael Strogoff was again compelled to lose, for necessary rest, the end of that day and the entire night; but starting again on the following morning, and still traversing the semi-inundated soil, on the 2nd of August, at four o'clock in the afternoon, after a stage of fifty miles he reached Kamsk.

The country had changed. This little village of Kamsk lies, like an island, habitable and healthy, in the midst of the uninhabitable district. It is situated in the very center of the Baraba. The emigration caused by the Tartar invasion had not yet depopulated this little town of Kamsk. Its inhabitants probably fancied themselves safe in the center of the Baraba, whence at least they thought they would have time to flee if they were directly menaced.

Michael Strogoff, although exceedingly anxious for news, could ascertain nothing at this place. It would have been rather to him that the Governor would have addressed himself had he known who the pretended merchant of Irkutsk really was. Kamsk, in fact, by its very situation seemed to be outside the Siberian world and the grave events which troubled it.

Besides, Michael Strogoff showed himself little, if at all. To be unperceived was not now enough for him: he would have wished to be invisible. The experience of the past made him more and more circumspect in the present and the future. Therefore he secluded himself, and not caring to traverse the streets of the village, he would not even leave the inn at which he had halted.

As for his horse, he did not even think of exchanging him for another animal. He had become accustomed to this brave creature. He knew to what extent he could rely upon him. In buying him at Omsk he had been lucky, and in taking him to the postmaster the generous mujik had rendered him a great service. Besides, if Michael Strogoff had already become attached to his horse, the horse himself seemed to become inured, by

degrees, to the fatigue of such a journey, and provided that he got several hours of repose daily, his rider might hope that he would carry him beyond the invaded provinces.

So, during the evening and night of the 2nd of August, Michael Strogoff remained confined to his inn, at the entrance of the town; which was little frequented and out of the way of the importunate and curious.

Exhausted with fatigue, he went to bed after having seen that his horse lacked nothing; but his sleep was broken. What he had seen since his departure from Moscow showed him the importance of his mission. The rising was an extremely serious one, and the treachery of Ogareff made it still more formidable. And when his eyes fell upon the letter bearing upon it the authority of the imperial seal — the letter which, no doubt, contained the remedy for so many evils, the safety of all this war-ravaged country — Michael Strogoff felt within himself a fierce desire to dash on across the steppe, to accomplish the distance which separated him from Irkutsk as the crow would fly it, to be an eagle that he might overtop all obstacles, to be a hurricane that he might sweep through the air at a hundred versts an hour, and to be at last face to face with the Grand Duke, and to exclaim: “Your highness, from his Majesty the Czar!”

On the next morning at six o’clock, Michael Strogoff started off again. Thanks to his extreme prudence this part of the journey was signalized by no incident whatever. At Oubinsk he gave his horse a whole night’s rest, for he wished on the next day to accomplish the hundred versts which lie between Oubinsk and Ikoulskoe without halting. He started therefore at dawn; but unfortunately the Baraba proved more detestable than ever.

In fact, between Oubinsk and Kamakore the very heavy rains of some previous weeks were retained by this shallow depression as in a water-tight bowl. There was, for a long distance, no break in the succession of swamps, pools, and lakes. One of these lakes — large enough to warrant its geographical nomenclature — Tchang, Chinese in name, had to be coasted for more than twenty versts, and this with the greatest difficulty. Hence certain delays occurred, which all the impatience of Michael Strogoff could not avoid. He had been well advised in not taking a carriage at Kamsk, for his horse passed places which would have been impracticable for a conveyance on wheels.

In the evening, at nine o’clock, Michael Strogoff arrived at Ikoulskoe, and halted there over night. In this remote village of the Baraba news of the war was utterly wanting. From its situation, this part of the province, lying in the fork formed by the two Tartar columns which had bifurcated, one upon Omsk and the other upon Tomsk, had hitherto escaped the horrors of the invasion.

But the natural obstacles were now about to disappear, for, if he experienced no delay, Michael Strogoff should on the morrow be free of the Baraba and arrive at Kolyvan. There he would be within eighty miles of Tomsk. He would then be guided by circumstances, and very probably he would decide to go around Tomsk, which, if the news were true, was occupied by Feofar-Khan.

But if the small towns of Ikoulskoe and Karguinsk, which he passed on the next day, were comparatively quiet, owing to their position in the Baraba, was it not to be dreaded that, upon the right banks of the Obi, Michael Strogoff would have much more to fear from man? It was probable. However, should it become necessary, he would not hesitate to abandon the beaten path to Irkutsk. To journey then across the steppe he would, no doubt, run the risk of finding himself without supplies. There would be, in fact, no longer a well-marked road. Still, there must be no hesitation.

Finally, towards half past three in the afternoon, Michael Strogoff left the last depressions of the Baraba, and the dry and hard soil of Siberia rang out once more beneath his horse’s hoofs.

He had left Moscow on the 15th of July. Therefore on this day, the 5th of August, including more than seventy hours lost on the banks of the Irtych, twenty days had gone by since his departure.

One thousand miles still separated him from Irkutsk.

CHAPTER XVI A FINAL EFFORT

MICHAEL'S fear of meeting the Tartars in the plains beyond the Baraba was by no means ungrounded. The fields, trodden down by horses' hoofs, afforded but too clear evidence that their hordes had passed that way; the same, indeed, might be said of these barbarians as of the Turks: "Where the Turk goes, no grass grows."

Michael saw at once that in traversing this country the greatest caution was necessary. Wreaths of smoke curling upwards on the horizon showed that huts and hamlets were still burning. Had these been fired by the advance guard, or had the Emir's army already advanced beyond the boundaries of the province? Was Feofar-Khan himself in the government of Yeniseisk? Michael could settle on no line of action until these questions were answered. Was the country so deserted that he could not discover a single Siberian to enlighten him?

Michael rode on for two versts without meeting a human being. He looked carefully for some house which had not been deserted. Every one was tenantless.

One hut, however, which he could just see between the trees, was still smoking. As he approached he perceived, at some yards from the ruins of the building, an old man surrounded by weeping children. A woman still young, evidently his daughter and the mother of the poor children, kneeling on the ground, was gazing on the scene of desolation. She had at her breast a baby but a few months old; shortly she would have not even that nourishment to give it. Ruin and desolation were all around!

Michael approached the old man.

"Will you answer me a few questions?" he asked.

"Speak," replied the old man.

"Have the Tartars passed this way?"

"Yes, for my house is in flames."

"Was it an army or a detachment?"

"An army, for, as far as eye can reach, our fields are laid waste."

“Commanded by the Emir?”

“By the Emir; for the Obi’s waters are red.”

“Has Feofar-Khan entered Tomsk?”

“He has.”

“Do you know if his men have entered Kolyvan?”

“No; for Kolyvan does not yet burn.”

“Thanks, friend. Can I aid you and yours?”

“No.”

“Good-by.”

“Farewell.”

And Michael, having presented five and twenty roubles to the unfortunate woman, who had not even strength to thank him, put spurs to his horse once more.

One thing he knew; he must not pass through Tomsk. To go to Kolyvan, which the Tartars had not yet reached, was possible. Yes, that is what he must do; there he must prepare himself for another long stage. There was nothing for it but, having crossed the Obi, to take the Irkutsk road and avoid Tomsk.

This new route decided on, Michael must not delay an instant. Nor did he, but, putting his horse into a steady gallop, he took the road towards the left bank of the Obi, which was still forty versts distant. Would there be a ferry boat there, or should he, finding that the Tartars had destroyed all the boats, be obliged to swim across?

As to his horse, it was by this time pretty well worn out, and Michael intended to make it perform this stage only, and then to exchange it for a fresh one at Kolyvan. Kolyvan would be like a fresh starting point, for on leaving that town his journey would take a new form. So long as he traversed a devastated country the difficulties must be very great; but if, having avoided Tomsk, he could resume the road to Irkutsk across the

province of Yeniseisk, which was not yet laid waste, he would finish his journey in a few days.

Night came on, bringing with it refreshing coolness after the heat of the day. At midnight the steppe was profoundly dark. The sound of the horses's hoofs alone was heard on the road, except when, every now and then, its master spoke a few encouraging words. In such darkness as this great care was necessary lest he should leave the road, bordered by pools and streams, tributaries of the Obi. Michael therefore advanced as quickly as was consistent with safety. He trusted no less to the excellence of his eyes, which penetrated the gloom, than to the well-proved sagacity of his horse.

Just as Michael dismounted to discover the exact direction of the road, he heard a confused murmuring sound from the west. It was like the noise of horses' hoofs at some distance on the parched ground. Michael listened attentively, putting his ear to the ground.

"It is a detachment of cavalry coming by the road from Omsk," he said to himself. "They are marching very quickly, for the noise is increasing. Are they Russians or Tartars?"

Michael again listened. "Yes," said he, "they are at a sharp trot. My horse cannot outstrip them. If they are Russians I will join them; if Tartars I must avoid them. But how? Where can I hide in this steppe?"

He gave a look around, and, through the darkness, discovered a confused mass at a hundred paces before him on the left of the road. "There is a copse!" he exclaimed. "To take refuge there is to run the risk of being caught, if they are in search of me; but I have no choice."

In a few moments Michael, dragging his horse by the bridle, reached a little larch wood, through which the road lay. Beyond this it was destitute of trees, and wound among bogs and pools, separated by dwarfed bushes, whins, and heather. The ground on either side was quite impracticable, and the detachment must necessarily pass through the wood. They were pursuing the high road to Irkutsk. Plunging in about forty feet, he was stopped by a stream running under the brushwood. But the shadow was so deep that Michael ran no risk of being seen, unless the wood should be carefully searched. He

therefore led his horse to the stream and fastened him to a tree, returning to the edge of the road to listen and ascertain with what sort of people he had to do.

Michael had scarcely taken up his position behind a group of larches when a confused light appeared, above which glared brighter lights waving about in the shadow.

“Torches!” said he to himself. And he drew quickly back, gliding like a savage into the thickest underwood.

As they approached the wood the horses’ pace was slackened. The horsemen were probably lighting up the road with the intention of examining every turn.

Michael feared this, and instinctively drew near to the bank of the stream, ready to plunge in if necessary.

Arrived at the top of the wood, the detachment halted. The horsemen dismounted. There were about fifty. A dozen of them carried torches, lighting up the road.

By watching their preparations Michael found to his joy that the detachment were not thinking of visiting the copse, but only bivouacking near, to rest their horses and allow the men to take some refreshment. The horses were soon unsaddled, and began to graze on the thick grass which carpeted the ground. The men meantime stretched themselves by the side of the road, and partook of the provisions they produced from their knapsacks.

Michael’s self-possession had never deserted him, and creeping amongst the high grass he endeavored not only to examine the new-comers, but to hear what they said. It was a detachment from Omsk, composed of Usbeck horsemen, a race of the Mongolian type. These men, well built, above the medium height, rough, and wild-featured, wore on their heads the “talpak,” or black sheep-skin cap, and on their feet yellow high-heeled boots with turned-up toes, like the shoes of the Middle Ages. Their tunics were close-fitting, and confined at the waist by a leathern belt braided with red. They were armed defensively with a shield, and offensively with a curved sword, and a flintlock musket slung at the saddle-bow. From their shoulders hung gay-colored cloaks.

The horses, which were feeding at liberty at the edge of the wood, were, like their masters, of the Usbeck race. These animals are rather smaller than the Turcomanian

horses, but are possessed of remarkable strength, and know no other pace than the gallop.

This detachment was commanded by a “pendja-baschi”; that is to say, a commander of fifty men, having under him a “deh-baschi,” or simple commander of ten men. These two officers wore helmets and half coats-of-mail; little trumpets fastened to their saddle-bows were the distinctive signs of their rank.

The pendja-baschi had been obliged to let his men rest, fatigued with a long stage. He and the second officer, smoking “beng,” the leaf which forms the base of the “has-chisch,” strolled up and down the wood, so that Michael Strogoff without being seen, could catch and understand their conversation, which was spoken in the Tartar language.

Michael’s attention was singularly excited by their very first words. It was of him they were speaking.

“This courier cannot be much in advance of us,” said the pendja-baschi; “and, on the other hand, it is absolutely impossible that he can have followed any other route than that of the Baraba.”

“Who knows if he has left Omsk?” replied the deh-baschi. “Perhaps he is still hidden in the town.”

“That is to be wished, certainly. Colonel Ogareff would have no fear then that the dispatches he bears should ever reach their destination.”

“They say that he is a native, a Siberian,” resumed the deh-baschi. “If so, he must be well acquainted with the country, and it is possible that he has left the Irkutsk road, depending on rejoining it later.”

“But then we should be in advance of him,” answered the pendja-baschi; “for we left Omsk within an hour after his departure, and have since followed the shortest road with all the speed of our horses. He has either remained in Omsk, or we shall arrive at Tomsk before him, so as to cut him off; in either case he will not reach Irkutsk.”

“A rugged woman, that old Siberian, who is evidently his mother,” said the deh-baschi.

At this remark Michael’s heart beat violently.

“Yes,” answered the pendja-baschi. “She stuck to it well that the pretended merchant was not her son, but it was too late. Colonel Ogareff was not to be taken in; and, as he said, he will know how to make the old witch speak when the time comes.”

These words were so many dagger-thrusts for Michael. He was known to be a courier of the Czar! A detachment of horsemen on his track could not fail to cut him off. And, worst of all, his mother was in the hands of the Tartars, and the cruel Ogareff had undertaken to make her speak when he wished!

Michael well knew that the brave Siberian would sacrifice her life for him. He had fancied that he could not hate Ivan Ogareff more, yet a fresh tide of hate now rose in his heart. The wretch who had betrayed his country now threatened to torture his mother.

The conversation between the two officers continued, and Michael understood that an engagement was imminent in the neighborhood of Kolyvan, between the Muscovite troops coming from the north and the Tartars. A small Russian force of two thousand men, reported to have reached the lower course of the Obi, were advancing by forced marches towards Tomsk. If such was the case, this force, which would soon find itself engaged with the main body of Feofar-Khan’s army, would be inevitably overwhelmed, and the Irkutsk road would be in the entire possession of the invaders.

As to himself, Michael learnt, by some words from the pendja-baschi, that a price was set on his head, and that orders had been given to take him, dead or alive.

It was necessary, therefore, to get the start of the Usbeck horsemen on the Irkutsk road, and put the Obi between himself and them. But to do that, he must escape before the camp was broken up.

His determination taken, Michael prepared to execute it.

Indeed, the halt would not be prolonged, and the pendja-baschi did not intend to give his men more than an hour’s rest, although their horses could not have been changed for fresh ones since Omsk, and must be as much fatigued as that of Michael Strogoff.

There was not a moment to lose. It was within an hour of morning. It was needful to profit by the darkness to leave the little wood and dash along the road; but although night favored it the success of such a flight appeared to be almost impossible.

Not wishing to do anything at random, Michael took time for reflection, carefully weighing the chances so as to take the best. From the situation of the place the result was this — that he could not escape through the back of the wood, the stream which bordered it being not only deep, but very wide and muddy. Beneath this thick water was a slimy bog, on which the foot could not rest. There was only one way open, the high-road. To endeavor to reach it by creeping round the edge of the wood, without attracting attention, and then to gallop at headlong speed, required all the remaining strength and energy of his noble steed. Too probably it would fall dead on reaching the banks of the Obi, when, either by boat or by swimming, he must cross this important river. This was what Michael had before him.

His energy and courage increased in sight of danger.

His life, his mission, his country, perhaps the safety of his mother, were at stake. He could not hesitate.

There was not a moment to be lost. Already there was a slight movement among the men of the detachment. A few horsemen were strolling up and down the road in front of the wood. The rest were still lying at the foot of the trees, but their horses were gradually penetrating towards the center of the wood.

Michael had at first thought of seizing one of these horses, but he recollected that, of course, they would be as fatigued as his own. It was better to trust to his own brave steed, which had already rendered him such important service. The good animal, hidden behind a thicket, had escaped the sight of the Usbecks. They, besides, had not penetrated so far into the wood.

Michael crawled up to his horse through the grass, and found him lying down. He patted and spoke gently to him, and managed to raise him without noise. Fortunately, the torches were entirely consumed, and now went out, the darkness being still profound under shelter of the larches. After replacing the bit, Michael looked to his girths and stirrups, and began to lead his horse quietly away. The intelligent animal followed his master without even making the least neigh.

A few Usbeck horses raised their heads, and began to wander towards the edge of the wood. Michael held his revolver in his hand, ready to blow out the brains of the first

Tartar who should approach him. But happily the alarm was not given, and he was able to gain the angle made by the wood where it joined the road.

To avoid being seen, Michael's intention was not to mount until after turning a corner some two hundred feet from the wood. Unfortunately, just at the moment that he was issuing from the wood, an Usbeck's horse, scenting him, neighed and began to trot along the road. His master ran to catch him, and seeing a shadowy form moving in the dim light, "Look out!" he shouted.

At the cry, all the men of the bivouac jumped up, and ran to seize their horses. Michael leaped on his steed, and galloped away. The two officers of the detachment urged on their men to follow.

Michael heard a report, and felt a ball pass through his tunic. Without turning his head, without replying, he spurred on, and, clearing the brushwood with a tremendous bound, he galloped at full speed toward the Obi.

The Usbecks' horses being unsaddled gave him a small start, but in less than two minutes he heard the tramp of several horses gradually gaining on him.

Day was now beginning to break, and objects at some distance were becoming visible. Michael turned his head, and perceived a horseman rapidly approaching him. It was the deh-baschi. Being better mounted, this officer had distanced his detachment.

Without drawing rein, Michael extended his revolver, and took a moment's aim. The Usbeck officer, hit in the breast, rolled on the ground.

But the other horsemen followed him closely, and without waiting to assist the deh-baschi, exciting each other by their shouts, digging their spurs into their horses' sides, they gradually diminished the distance between themselves and Michael.

For half an hour only was the latter able to keep out of range of the Tartars, but he well knew that his horse was becoming weaker, and dreaded every instant that he would stumble never to rise again.

It was now light, although the sun had not yet risen above the horizon. Two versts distant could be seen a pale line bordered by a few trees.

This was the Obi, which flows from the southwest to the northeast, the surface almost level with the ground, its bed being but the steppe itself.

Several times shots were fired at Michael, but without hitting him, and several times too he discharged his revolver on those of the soldiers who pressed him too closely. Each time an Usbeck rolled on the ground, midst cries of rage from his companions. But this pursuit could only terminate to Michael’s disadvantage. His horse was almost exhausted. He managed to reach the bank of the river. The Usbeck detachment was now not more than fifty paces behind him.

The Obi was deserted — not a boat of any description which could take him over the water!

“Courage, my brave horse!” cried Michael. “Come! A last effort!” And he plunged into the river, which here was half a verst in width.

It would have been difficult to stand against the current — indeed, Michael’s horse could get no footing. He must therefore swim across the river, although it was rapid as a torrent. Even to attempt it showed Michael’s marvelous courage. The soldiers reached the bank, but hesitated to plunge in.

The pendja-baschi seized his musket and took aim at Michael, whom he could see in the middle of the stream. The shot was fired, and Michael’s horse, struck in the side, was borne away by the current.

His master, speedily disentangling himself from his stirrups, struck out boldly for the shore. In the midst of a hailstorm of balls he managed to reach the opposite side, and disappeared in the rushes.

CHAPTER XVII THE RIVALS

MICHAEL was in comparative safety, though his situation was still terrible. Now that the faithful animal who had so bravely borne him had met his death in the waters of the river, how was he to continue his journey?

He was on foot, without provisions, in a country devastated by the invasion, overrun by the Emir's scouts, and still at a considerable distance from the place he was striving to reach. "By Heaven, I will get there!" he exclaimed, in reply to all the reasons for faltering. "God will protect our sacred Russia."

Michael was out of reach of the Usbeck horsemen. They had not dared to pursue him through the river.

Once more on solid ground Michael stopped to consider what he should do next. He wished to avoid Tomsk, now occupied by the Tartar troops. Nevertheless, he must reach some town, or at least a post-house, where he could procure a horse. A horse once found, he would throw himself out of the beaten track, and not again take to the Irkutsk road until in the neighborhood of Krasnoiarsk. From that place, if he were quick, he hoped to find the way still open, and he intended to go through the Lake Baikal provinces in a southeasterly direction.

Michael began by going eastward. By following the course of the Obi two versts further, he reached a picturesque little town lying on a small hill. A few churches, with Byzantine cupolas colored green and gold, stood up against the gray sky. This is Kolyvan, where the officers and people employed at Kamsk and other towns take refuge during the summer from the unhealthy climate of the Baraba. According to the latest news obtained by the Czar's courier, Kolyvan could not be yet in the hands of the invaders. The Tartar troops, divided into two columns, had marched to the left on Omsk, to the right on Tomsk, neglecting the intermediate country.

Michael Strogoff's plan was simply this — to reach Kolyvan before the arrival of the Usbeck horsemen, who would ascend the other bank of the Obi to the ferry. There he would procure clothes and a horse, and resume the road to Irkutsk across the southern steppe.

It was now three o’clock in the morning. The neighborhood of Kolyvan was very still, and appeared to have been totally abandoned. The country population had evidently fled to the northwards, to the province of Yeniseisk, dreading the invasion, which they could not resist.

Michael was walking at a rapid pace towards Kolyvan when distant firing struck his ear. He stopped, and clearly distinguished the dull roar of artillery, and above it a crisp rattle which could not be mistaken.

“It is cannon and musketry!” said he. “The little Russian body is engaged with the Tartar army! Pray Heaven that I may arrive at Kolyvan before them!”

The firing became gradually louder, and soon to the left of Kolyvan a mist collected — not smoke, but those great white clouds produced by discharges of artillery.

The Usbeck horsemen stopped on the left of the Obi, to await the result of the battle. From them Michael had nothing to fear as he hastened towards the town.

In the meanwhile the firing increased, and became sensibly nearer. It was no longer a confused roar, but distinct reports. At the same time the smoke partially cleared, and it became evident that the combatants were rapidly moving southwards. It appeared that Kolyvan was to be attacked on the north side. But were the Russians defending it or the Tartars? It being impossible to decide this, Michael became greatly perplexed.

He was not more than half a verst from Kolyvan when he observed flames shooting up among the houses of the town, and the steeple of a church fell in the midst of clouds of smoke and fire. Was the struggle, then, in Kolyvan? Michael was compelled to think so. It was evident that Russians and Tartars were fighting in the streets of the town. Was this a time to seek refuge there? Would he not run a risk of being taken prisoner? Should he succeed in escaping from Kolyvan, as he had escaped from Omsk? He hesitated and stopped a moment. Would it not be better to try, even on foot, to reach some small town, and there procure a horse at any price? This was the only thing to be done; and Michael, leaving the Obi, went forward to the right of Kolyvan.

The firing had now increased in violence. Flames soon sprang up on the left of the town. Fire was devouring one entire quarter of Kolyvan.

Michael was running across the steppe endeavoring to gain the covert of some trees when a detachment of Tartar cavalry appeared on the right. He dared not continue in that direction. The horsemen advanced rapidly, and it would have been difficult to escape them.

Suddenly, in a thick clump of trees, he saw an isolated house, which it would be possible to reach before he was perceived. Michael had no choice but to run there, hide himself and ask or take something to recruit his strength, for he was exhausted with hunger and fatigue.

He accordingly ran on towards this house, still about half a verst distant. As he approached, he could see that it was a telegraph office. Two wires left it in westerly and easterly directions, and a third went towards Kolyvan.

It was to be supposed that under the circumstances this station was abandoned; but even if it was, Michael could take refuge there, and wait till nightfall, if necessary, to again set out across the steppe covered with Tartar scouts.

He ran up to the door and pushed it open.

A single person was in the room whence the telegraphic messages were dispatched. This was a clerk, calm, phlegmatic, indifferent to all that was passing outside. Faithful to his post, he waited behind his little wicket until the public claimed his services.

Michael ran up to him, and in a voice broken by fatigue, “What do you know?” he asked.

“Nothing,” answered the clerk, smiling.

“Are the Russians and Tartars engaged?”

“They say so.”

“But who are the victors?”

“I don’t know.”

Such calmness, such indifference, in the midst of these terrible events, was scarcely credible.

“And is not the wire cut?” said Michael.

“It is cut between Kolyvan and Krasnoiarsk, but it is still working between Kolyvan and the Russian frontier.”

“For the government?”

“For the government, when it thinks proper. For the public, when they pay. Ten copecks a word, whenever you like, sir!”

Michael was about to reply to this strange clerk that he had no message to send, that he only implored a little bread and water, when the door of the house was again thrown open.

Thinking that it was invaded by Tartars, Michael made ready to leap out of the window, when two men only entered the room who had nothing of the Tartar soldier about them. One of them held a dispatch, written in pencil, in his hand, and, passing the other, he hurried up to the wicket of the imperturbable clerk.

In these two men Michael recognized with astonishment, which everyone will understand, two personages of whom he was not thinking at all, and whom he had never expected to see again. They were the two reporters, Harry Blount and Alcide Jolivet, no longer traveling companions, but rivals, enemies, now that they were working on the field of battle.

They had left Ichim only a few hours after the departure of Michael Strogoff, and they had arrived at Kolyvan before him, by following the same road, in consequence of his losing three days on the banks of the Irtych. And now, after being both present at the engagement between the Russians and Tartars before the town, they had left just as the struggle broke out in the streets, and ran to the telegraph office, so as to send off their rival dispatches to Europe, and forestall each other in their report of events.

Michael stood aside in the shadow, and without being seen himself he could see and hear all that was going on. He would now hear interesting news, and would find out whether or not he could enter Kolyvan.

Blount, having distanced his companion, took possession of the wicket, whilst Alcide Jolivet, contrary to his usual habit, stamped with impatience.

“Ten copecks a word,” said the clerk.

Blount deposited a pile of roubles on the shelf, whilst his rival looked on with a sort of stupefaction.

“Good,” said the clerk. And with the greatest coolness in the world he began to telegraph the following dispatch: “Daily Telegraph, London.

“From Kolyvan, Government of Omsk, Siberia, 6th August.

“Engagement between Russian and Tartar troops.”

The reading was in a distinct voice, so that Michael heard all that the English correspondent was sending to his paper.

“Russians repulsed with great loss. Tartars entered Kolyvan to-day.” These words ended the dispatch.

“My turn now,” cried Alcide Jolivet, anxious to send off his dispatch, addressed to his cousin.

But that was not Blount’s idea, who did not intend to give up the wicket, but have it in his power to send off the news just as the events occurred. He would therefore not make way for his companion.

“But you have finished!” exclaimed Jolivet.

“I have not finished,” returned Harry Blount quietly.

And he proceeded to write some sentences, which he handed in to the clerk, who read out in his calm voice: “John Gilpin was a citizen of credit and renown; a train-band captain eke was he of famous London town.”

Harry Blount was telegraphing some verses learned in his childhood, in order to employ the time, and not give up his place to his rival. It would perhaps cost his paper some thousands of roubles, but it would be the first informed. France could wait.

Jolivet’s fury may be imagined, though under any other circumstances he would have thought it fair warfare. He even endeavored to force the clerk to take his dispatch in

preference to that of his rival.

“It is that gentleman’s right,” answered the clerk coolly, pointing to Blount, and smiling in the most amiable manner. And he continued faithfully to transmit to the Daily Telegraph the well-known verses of Cowper.

Whilst he was working Blount walked to the window and, his field glass to his eyes, watched all that was going on in the neighborhood of Kolyvan, so as to complete his information. In a few minutes he resumed his place at the wicket, and added to his telegram: “Two churches are in flames. The fire appears to gain on the right. ‘John Gilpin’s spouse said to her dear, Though wedded we have been these twice ten tedious years, yet we no holiday have seen.’”

Alcide Jolivet would have liked to strangle the honorable correspondent of the Daily Telegraph.

He again interrupted the clerk, who, quite unmoved, merely replied: “It is his right, sir, it is his right — at ten copecks a word.”

And he telegraphed the following news, just brought him by Blount: “Russian fugitives are escaping from the town. ‘Away went Gilpin — who but he? His fame soon spread around: He carries weight! he rides a race! ‘Tis for a thousand pound!’” And Blount turned round with a quizzical look at his rival.

Alcide Jolivet fumed.

In the meanwhile Harry Blount had returned to the window, but this time his attention was diverted by the interest of the scene before him. Therefore, when the clerk had finished telegraphing the last lines dictated by Blount, Alcide Jolivet noiselessly took his place at the wicket, and, just as his rival had done, after quietly depositing a respectable pile of roubles on the shelf, he delivered his dispatch, which the clerk read aloud: “Madeleine Jolivet, 10, Faubourg Montmartre, Paris.

“From Kolyvan, Government of Omsk, Siberia, 6th August.

“Fugitives are escaping from the town. Russians defeated. Fiercely pursued by the Tartar cavalry.”

And as Harry Blount returned he heard Jolivet completing his telegram by singing in a mocking tone:

“II est un petit homme, Tout habille de gris, Dans Paris!”

Imitating his rival, Alcide Jolivet had used a merry refrain of Beranger.

“Hallo!” said Harry Blount.

“Just so,” answered Jolivet.

In the meantime the situation at Kolyvan was alarming in the extreme. The battle was raging nearer, and the firing was incessant.

At that moment the telegraph office shook to its foundations. A shell had made a hole in the wall, and a cloud of dust filled the office.

Alcide was just finishing writing his lines; but to stop, dart on the shell, seize it in both hands, throw it out of the window, and return to the wicket, was only the affair of a moment.

Five seconds later the shell burst outside. Continuing with the greatest possible coolness, Alcide wrote: “A six-inch shell has just blown up the wall of the telegraph office. Expecting a few more of the same size.”

Michael Strogoff had no doubt that the Russians were driven out of Kolyvan. His last resource was to set out across the southern steppe.

Just then renewed firing broke out close to the telegraph house, and a perfect shower of bullets smashed all the glass in the windows. Harry Blount fell to the ground wounded in the shoulder.

Jolivet even at such a moment, was about to add this postscript to his dispatch: “Harry Blount, correspondent of the Daily Telegraph, has fallen at my side struck by — ” when the imperturbable clerk said calmly: “Sir, the wire has broken.” And, leaving his wicket, he quietly took his hat, brushed it round with his sleeve, and, still smiling, disappeared through a little door which Michael had not before perceived.

The house was surrounded by Tartar soldiers, and neither Michael nor the reporters could effect their retreat.

Alcide Jolivet, his useless dispatch in his hand, had run to Blount, stretched on the ground, and had bravely lifted him on his shoulders, with the intention of flying with him. He was too late!

Both were prisoners; and, at the same time, Michael, taken unawares as he was about to leap from the window, fell into the hands of the Tartars!

BOOK II

CHAPTER I A TARTAR CAMP

AT a day’s march from Kolyvan, several versts beyond the town of Diachinks, stretches a wide plain, planted here and there with great trees, principally pines and cedars. This part of the steppe is usually occupied during the warm season by Siberian shepherds, and their numerous flocks. But now it might have been searched in vain for one of its nomad inhabitants. Not that the plain was deserted. It presented a most animated appearance.

There stood the Tartar tents; there Feofar-Khan, the terrible Emir of Bokhara, was encamped; and there on the following day, the 7th of August, were brought the prisoners taken at Kolyvan after the annihilation of the Russian force, which had vainly attempted to oppose the progress of the invaders. Of the two thousand men who had engaged with the two columns of the enemy, the bases of which rested on Tomsk and Omsk, only a few hundred remained. Thus events were going badly, and the imperial government appeared to have lost its power beyond the frontiers of the Ural — for a time at least, for the Russians could not fail eventually to defeat the savage hordes of the invaders. But in the meantime the invasion had reached the center of Siberia, and it was spreading through the revolted country both to the eastern, and the western provinces. If the troops of the Amoor and the province of Takutsk did not arrive in time to occupy it, Irkutsk, the capital of Asiatic Russia, being insufficiently garrisoned, would fall into the hands of the Tartars, and the Grand Duke, brother of the Emperor, would be sacrificed to the vengeance of Ivan Ogareff.

What had become of Michael Strogoff? Had he broken down under the weight of so many trials? Did he consider himself conquered by the series of disasters which, since the adventure of Ichim, had increased in magnitude? Did he think his cause lost? that his mission had failed? that his orders could no longer be obeyed?

Michael was one of those men who never give in while life exists. He was yet alive; he still had the imperial letter safe; his disguise had been undiscovered. He was included amongst the numerous prisoners whom the Tartars were dragging with them like cattle; but by approaching Tomsk he was at the same time drawing nearer to Irkutsk. Besides, he was still in front of Ivan Ogareff.

“I will get there!” he repeated to himself.

Since the affair of Kolyvan all the powers of his mind were concentrated on one object — to become free! How should he escape from the Emir's soldiers?

Feofar's camp presented a magnificent spectacle.

Numberless tents, of skin, felt, or silk, glistened in the rays of the sun. The lofty plumes which surmounted their conical tops waved amidst banners, flags, and pennons of every color. The richest of these tents belonged to the Seides and Khodjas, who are the principal personages of the khanat. A special pavilion, ornamented with a horse's tail issuing from a sheaf of red and white sticks artistically interlaced, indicated the high rank of these Tartar chiefs. Then in the distance rose several thousand of the Turcoman tents, called "karaoy," which had been carried on the backs of camels.

The camp contained at least a hundred and fifty thousand soldiers, as many foot as horse soldiers, collected under the name of Alamanes. Amongst them, and as the principal types of Turkestan, would have been directly remarked the Tadjiks, from their regular features, white skin, tall forms, and black eyes and hair; they formed the bulk of the Tartar army, and of them the khanats of Khokhand and Koundouge had furnished a contingent nearly equal to that of Bokhara. With the Tadjiks were mingled specimens of different races who either reside in Turkestan or whose native countries border on it. There were Usbecks, red-bearded, small in stature, similar to those who had pursued Michael. Here were Kirghiz, with flat faces like the Kalmucks, dressed in coats of mail: some carried the lance, bows, and arrows of Asiatic manufacture; some the saber, a matchlock gun, and the "tschakane," a little short-handled ax, the wounds from which invariably prove fatal. There were Mongols — of middle height, with black hair plaited into pigtails, which hung down their back; round faces, swarthy complexions, lively deep-set eyes, scanty beards — dressed in blue nankeen trimmed with black plush, sword-belts of leather with silver buckles, coats gayly braided, and silk caps edged with fur and three ribbons fluttering behind. Brown-skinned Afghans, too, might have been seen. Arabs, having the primitive type of the beautiful Semitic races; and Turcomans, with eyes which looked as if they had lost the pupil, — all enrolled under the Emir's flag, the flag of incendiaries and devastators.

Among these free soldiers were a certain number of slave soldiers, principally Persians, commanded by officers of the same nation, and they were certainly not the least esteemed of Feofar-Khan's army.

If to this list are added the Jews, who acted as servants, their robes confined with a cord, and wearing on their heads instead of the turban, which is forbidden them, little caps of dark cloth; if with these groups are mingled some hundreds of “kalenders,” a sort of religious mendicants, clothed in rags, covered by a leopard skin, some idea may be formed of the enormous agglomerations of different tribes included under the general denomination of the Tartar army.

Nothing could be more romantic than this picture, in delineating which the most skillful artist would have exhausted all the colors of his palette.

Feofar’s tent overlooked the others. Draped in large folds of a brilliant silk looped with golden cords and tassels, surmounted by tall plumes which waved in the wind like fans, it occupied the center of a wide clearing, sheltered by a grove of magnificent birch and pine trees. Before this tent, on a japanned table inlaid with precious stones, was placed the sacred book of the Koran, its pages being of thin gold-leaf delicately engraved. Above floated the Tartar flag, quartered with the Emir’s arms.

In a semicircle round the clearing stood the tents of the great functionaries of Bokhara. There resided the chief of the stables, who has the right to follow the Emir on horseback even into the court of his palace; the grand falconer; the “housch-begui,” bearer of the royal seal; the “toptschi-baschi,” grand master of the artillery; the “khodja,” chief of the council, who receives the prince’s kiss, and may present himself before him with his girdle untied; the “scheikh-oul-islam,” chief of the Ulemas, representing the priests; the “cazi-askev,” who, in the Emir’s absence settles all disputes raised among the soldiers; and lastly, the chief of the astrologers, whose great business is to consult the stars every time the Khan thinks of changing his quarters.

When the prisoners were brought into the camp, the Emir was in his tent. He did not show himself. This was fortunate, no doubt. A sign, a word from him might have been the signal for some bloody execution. But he intrenched himself in that isolation which constitutes in part the majesty of Eastern kings. He who does not show himself is admired, and, above all, feared.

As to the prisoners, they were to be penned up in some enclosure, where, ill-treated, poorly fed, and exposed to all the inclemencies of the weather, they would await Feofar’s pleasure.

The most docile and patient of them all was undoubtedly Michael Strogoff. He allowed himself to be led, for they were leading him where he wished to go, and under conditions of safety which free he could not have found on the road from Kolyvan to Tomsk. To escape before reaching that town was to risk again falling into the hands of the scouts, who were scouring the steppe. The most eastern line occupied by the Tartar columns was not situated beyond the eighty-fifth meridian, which passes through Tomsk. This meridian once passed, Michael considered that he should be beyond the hostile zones, that he could traverse Genisci without danger, and gain Krasnoiarsk before Feofar-Khan had invaded the province.

“Once at Tomsk,” he repeated to himself, to repress some feelings of impatience which he could not entirely master, “in a few minutes I should be beyond the outposts; and twelve hours gained on Feofar, twelve hours on Ogareff, that surely would be enough to give me a start of them to Irkutsk.”

The thing that Michael dreaded more than everything else was the presence of Ivan Ogareff in the Tartar camp. Besides the danger of being recognized, he felt, by a sort of instinct, that this was the traitor whom it was especially necessary to precede. He understood, too, that the union of Ogareff’s troops with those of Feofar would complete the invading army, and that the junction once effected, the army would march en masse on the capital of Eastern Siberia. All his apprehensions came from this quarter, and he dreaded every instant to hear some flourish of trumpets, announcing the arrival of the lieutenant of the Emir.

To this was added the thought of his mother, of Nadia, — the one a prisoner at Omsk; the other dragged on board the Irtych boats, and no doubt a captive, as Marfa Strogoff was. He could do nothing for them. Should he ever see them again? At this question, to which he dared not reply, his heart sank very low.

At the same time with Michael Strogoff and so many other prisoners Harry Blount and Alcide Jolivet had also been taken to the Tartar camp. Their former traveling companion, captured like them at the telegraph office, knew that they were penned up with him in the enclosure, guarded by numerous sentinels, but he did not wish to accost them. It mattered little to him, at this time especially, what they might think of him since the affair at Ichim. Besides, he desired to be alone, that he might act alone, if necessary. He therefore held himself aloof from his former acquaintances.

From the moment that Harry Blount had fallen by his side, Jolivet had not ceased his attentions to him. During the journey from Kolyvan to the camp — that is to say, for several hours — Blount, by leaning on his companion's arm, had been enabled to follow the rest of the prisoners. He tried to make known that he was a British subject; but it had no effect on the barbarians, who only replied by prods with a lance or sword. The correspondent of the Daily Telegraph was, therefore, obliged to submit to the common lot, resolving to protest later, and obtain satisfaction for such treatment. But the journey was not the less disagreeable to him, for his wound caused him much pain, and without Alcide Jolivet's assistance he might never have reached the camp.

Jolivet, whose practical philosophy never abandoned him, had physically and morally strengthened his companion by every means in his power. His first care, when they found themselves definitely established in the enclosure, was to examine Blount's wound. Having managed carefully to draw off his coat, he found that the shoulder had been only grazed by the shot.

"This is nothing," he said. "A mere scratch! After two or three dressings you will be all to rights."

"But these dressings?" asked Blount.

"I will make them for you myself."

"Then you are something of a doctor?"

"All Frenchmen are something of doctors."

And on this affirmation Alcide, tearing his handkerchief, made lint of one piece, bandages of the other, took some water from a well dug in the middle of the enclosure, bathed the wound, and skillfully placed the wet rag on Harry Blount's shoulder.

"I treat you with water," he said. "This liquid is the most efficacious sedative known for the treatment of wounds, and is the most employed now. Doctors have taken six thousand years to discover that! Yes, six thousand years in round numbers!"

"I thank you, M. Jolivet," answered Harry, stretching himself on a bed of dry leaves, which his companion had arranged for him in the shade of a birch tree.

"Bah! it's nothing! You would do as much for me."

“I am not quite so sure,” said Blount candidly.

“Nonsense, stupid! All English are generous.”

“Doubtless; but the French?”

“Well, the French — they are brutes, if you like! But what redeems them is that they are French. Say nothing more about that, or rather, say nothing more at all. Rest is absolutely necessary for you.”

But Harry Blount had no wish to be silent. If the wound, in prudence, required rest, the correspondent of the Daily Telegraph was not a man to indulge himself.

“M. Jolivet,” he asked, “do you think that our last dispatches have been able to pass the Russian frontier?”

“Why not?” answered Alcide. “By this time you may be sure that my beloved cousin knows all about the affair at Kolyvan.”

“How many copies does your cousin work off of her dispatches?” asked Blount, for the first time putting his question direct to his companion.

“Well,” answered Alcide, laughing, “my cousin is a very discreet person, who does not like to be talked about, and who would be in despair if she troubled the sleep of which you are in need.”

“I don’t wish to sleep,” replied the Englishman. “What will your cousin think of the affairs of Russia?”

“That they seem for the time in a bad way. But, bah! the Muscovite government is powerful; it cannot be really uneasy at an invasion of barbarians.”

“Too much ambition has lost the greatest empires,” answered Blount, who was not exempt from a certain English jealousy with regard to Russian pretensions in Central Asia.

“Oh, do not let us talk politics,” cried Jolivet. “It is forbidden by the faculty. Nothing can be worse for wounds in the shoulder — unless it was to put you to sleep.”

“Let us, then, talk of what we ought to do,” replied Blount. “M. Jolivet, I have no intention at all of remaining a prisoner to these Tartars for an indefinite time.”

“Nor I, either, by Jove!”

“We will escape on the first opportunity?”

“Yes, if there is no other way of regaining our liberty.”

“Do you know of any other?” asked Blount, looking at his companion.

“Certainly. We are not belligerents; we are neutral, and we will claim our freedom.”

“From that brute of a Feofar-Khan?”

“No; he would not understand,” answered Jolivet; “but from his lieutenant, Ivan Ogareff.”

“He is a villain.”

“No doubt; but the villain is a Russian. He knows that it does not do to trifle with the rights of men, and he has no interest to retain us; on the contrary. But to ask a favor of that gentleman does not quite suit my taste.”

“But that gentleman is not in the camp, or at least I have not seen him here,” observed Blount.

“He will come. He will not fail to do that. He must join the Emir. Siberia is cut in two now, and very certainly Feofar’s army is only waiting for him to advance on Irkutsk.”

“And once free, what shall we do?”

“Once free, we will continue our campaign, and follow the Tartars, until the time comes when we can make our way into the Russian camp. We must not give up the game. No, indeed; we have only just begun. You, friend, have already had the honor of being wounded in the service of the Daily Telegraph, whilst I — I have as yet suffered nothing in my cousin’s service. Well, well! Good,” murmured Alcide Jolivet; “there he is asleep. A few hours’ sleep and a few cold water compresses are all that are required to set an Englishman on his legs again. These fellows are made of cast iron.”

And whilst Harry Blount rested, Alcide watched near him, after having drawn out his note book, which he loaded with notes, determined besides to share them with his companion, for the greater satisfaction of the readers of the Daily Telegraph. Events had united them one with the other. They were no longer jealous of each other. So, then, the thing that Michael Strogoff dreaded above everything was the most lively desire of the two correspondents. Ivan Ogareff's arrival would evidently be of use to them. Blount and Jolivet's interest was, therefore, contrary to that of Michael. The latter well understood the situation, and it was one reason, added to many others, which prevented him from approaching his former traveling companions. He therefore managed so as not to be seen by them.

Four days passed thus without the state of things being in anywise altered. The prisoners heard no talk of the breaking up of the Tartar camp. They were strictly guarded. It would have been impossible for them to pass the cordon of foot and horse soldiers, which watched them night and day. As to the food which was given them it was barely sufficient. Twice in the twenty-four hours they were thrown a piece of the intestines of goats grilled on the coals, or a few bits of that cheese called "kroute," made of sour ewe's milk, and which, soaked in mare's milk, forms the Kirghiz dish, commonly called "koumyss." And this was all. It may be added that the weather had become detestable. There were considerable atmospheric commotions, bringing squalls mingled with rain. The unfortunate prisoners, destitute of shelter, had to bear all the inclemencies of the weather, nor was there the slightest alleviation to their misery. Several wounded women and children died, and the prisoners were themselves compelled to dig graves for the bodies of those whom their jailers would not even take the trouble to bury.

During this trying period Alcide Jolivet and Michael Strogoff worked hard, each in the portions of the enclosure in which they found themselves. Healthy and vigorous, they suffered less than so many others, and could better endure the hardships to which they were exposed. By their advice, and the assistance they rendered, they were of the greatest possible use to their suffering and despairing fellow-captives.

Was this state of things to last? Would Feofar-Khan, satisfied with his first success, wait some time before marching on Irkutsk? Such, it was to be feared, would be the case. But it was not so. The event so much wished for by Jolivet and Blount, so much dreaded by Michael, occurred on the morning of the 12th of August.

On that day the trumpets sounded, the drums beat, the cannon roared. A huge cloud of dust swept along the road from Kolyvan. Ivan Ogareff, followed by several thousand men, made his entry into the Tartar camp.

CHAPTER II CORRESPONDENTS IN TROUBLE

IVAN OGAREFF was bringing up the main body of the army of the Emir. The cavalry and infantry now under him had formed part of the column which had taken Omsk. Ogareff, not having been able to reduce the high town, in which, it must be remembered, the governor and garrison had sought refuge, had decided to pass on, not wishing to delay operations which ought to lead to the conquest of Eastern Siberia. He therefore left a garrison in Omsk, and, reinforcing himself en route with the conquerors of Kolyvan, joined Feofar's army.

Ivan Ogareff's soldiers halted at the outposts of the camp. They received no orders to bivouac. Their chief's plan, doubtless, was not to halt there, but to press on and reach Tomsk in the shortest possible time, it being an important town, naturally intended to become the center of future operations.

Besides his soldiers, Ogareff was bringing a convoy of Russian and Siberian prisoners, captured either at Omsk or Kolyvan. These unhappy creatures were not led to the enclosure — already too crowded — but were forced to remain at the outposts without shelter, almost without nourishment. What fate was Feofar-Khan reserving for these unfortunates? Would he imprison them in Tomsk, or would some bloody execution, familiar to the Tartar chiefs, remove them when they were found too inconvenient? This was the secret of the capricious Emir.

This army had not come from Omsk and Kolyvan without bringing in its train the usual crowd of beggars, freebooters, pedlars, and gypsies, which compose the rear-guard of an army on the march.

All these people lived on the country traversed, and left little of anything behind them. There was, therefore, a necessity for pushing forward, if only to secure provisions for the troops. The whole region between Ichim and the Obi, now completely devastated, no longer offered any resources. The Tartars left a desert behind them.

Conspicuous among the gypsies who had hastened from the western provinces was the Tsigane troop, which had accompanied Michael Strogoff as far as Perm. Sangarre was there. This fierce spy, the tool of Ivan Ogareff, had not deserted her master. Ogareff had traveled rapidly to Ichim, whilst Sangarre and her band had proceeded to Omsk by the southern part of the province.

It may be easily understood how useful this woman was to Ogareff. With her gypsy-band she could penetrate anywhere. Ivan Ogareff was kept acquainted with all that was going on in the very heart of the invaded provinces. There were a hundred eyes, a hundred ears, open in his service. Besides, he paid liberally for this espionage, from which he derived so much advantage.

Once Sangarre, being implicated in a very serious affair, had been saved by the Russian officer. She never forgot what she owed him, and had devoted herself to his service body and soul.

When Ivan Ogareff entered on the path of treason, he saw at once how he might turn this woman to account. Whatever order he might give her, Sangarre would execute it. An inexplicable instinct, more powerful still than that of gratitude, had urged her to make herself the slave of the traitor to whom she had been attached since the very beginning of his exile in Siberia.

Confidante and accomplice, Sangarre, without country, without family, had been delighted to put her vagabond life to the service of the invaders thrown by Ogareff on Siberia. To the wonderful cunning natural to her race she added a wild energy, which knew neither forgiveness nor pity. She was a savage worthy to share the wigwam of an Apache or the hut of an Andaman.

Since her arrival at Omsk, where she had rejoined him with her Tsiganes, Sangarre had not again left Ogareff. The circumstance that Michael and Marfa Strogoff had met was known to her. She knew and shared Ogareff’s fears concerning the journey of a courier of the Czar. Having Marfa Strogoff in her power, she would have been the woman to torture her with all the refinement of a Redskin in order to wrest her secret from her. But the hour had not yet come in which Ogareff wished the old Siberian to speak. Sangarre had to wait, and she waited, without losing sight of her whom she was watching, observing her slightest gestures, her slightest words, endeavoring to catch the word “son” escaping from her lips, but as yet always baffled by Marfa’s taciturnity.

At the first flourish of the trumpets several officers of high rank, followed by a brilliant escort of Usbeck horsemen, moved to the front of the camp to receive Ivan Ogareff. Arrived in his presence, they paid him the greatest respect, and invited him to accompany them to Feofar-Khan’s tent.

Imperturbable as usual, Ogareff replied coldly to the deference paid to him. He was plainly dressed; but, from a sort of impudent bravado, he still wore the uniform of a Russian officer.

As he was about to enter the camp, Sangarre, passing among the officers approached and remained motionless before him. “Nothing?” asked Ogareff.

“Nothing.”

“Have patience.”

“Is the time approaching when you will force the old woman to speak?”

“It is approaching, Sangarre.”

“When will the old woman speak?”

“When we reach Tomsk.”

“And we shall be there — ”

“In three days.”

A strange gleam shot from Sangarre’s great black eyes, and she retired with a calm step. Ogareff pressed his spurs into his horse’s flanks, and, followed by his staff of Tartar officers, rode towards the Emir’s tent.

Feofar-Khan was expecting his lieutenant. The council, composed of the bearer of the royal seal, the khodja, and some high officers, had taken their places in the tent. Ivan Ogareff dismounted and entered.

Feofar-Khan was a man of forty, tall, rather pale, of a fierce countenance, and evil eyes. A curly black beard flowed over his chest. With his war costume, coat of mail of gold and silver, cross-belt and scabbard glistening with precious stones, boots with golden spurs, helmet ornamented with an aigrette of brilliant diamonds, Feofar presented an aspect rather strange than imposing for a Tartar Sardana-palus, an undisputed sovereign, who directs at his pleasure the life and fortune of his subjects.

When Ivan Ogareff appeared, the great dignitaries remained seated on their gold-embroidered cushions; but Feofar rose from a rich divan which occupied the back part of the tent, the ground being hidden under the thick velvet-pile of a Bokharian carpet.

The Emir approached Ogareff and gave him a kiss, the meaning of which he could not mistake. This kiss made the lieutenant chief of the council, and placed him temporarily above the khodja.

Then Feofar spoke. “I have no need to question you,” said he; “speak, Ivan. You will find here ears very ready to listen to you.”

“Takhsir,” answered Ogareff, “this is what I have to make known to you.” He spoke in the Tartar language, giving to his phrases the emphatic turn which distinguishes the languages of the Orientals. “Takhsir, this is not the time for unnecessary words. What I have done at the head of your troops, you know. The lines of the Ichim and the Irtych are now in our power; and the Turcoman horsemen can bathe their horses in the now Tartar waters. The Kirghiz hordes rose at the voice of Feofar-Khan. You can now push your troops towards the east, and where the sun rises, or towards the west, where he sets.”

“And if I march with the sun?” asked the Emir, without his countenance betraying any of his thoughts.

“To march with the sun,” answered Ogareff, “is to throw yourself towards Europe; it is to conquer rapidly the Siberian provinces of Tobolsk as far as the Ural Mountains.”

“And if I go to meet this luminary of the heavens?”

“It is to subdue to the Tartar dominion, with Irkutsk, the richest countries of Central Asia.”

“But the armies of the Sultan of St. Petersburg?” said Feofar-Khan, designating the Emperor of Russia by this strange title.

“You have nothing to fear from them,” replied Ivan Ogareff. “The invasion has been sudden; and before the Russian army can succor them, Irkutsk or Tobolsk will have fallen into your power. The Czar’s troops have been overwhelmed at Kolyvan, as they will be everywhere where yours meet them.”

“And what advice does your devotion to the Tartar cause suggest?” asked the Emir, after a few moments’ silence.

“My advice,” answered Ivan Ogareff quickly, “is to march to meet the sun. It is to give the grass of the eastern steppes to the Turcoman horses to consume. It is to take Irkutsk, the capital of the eastern provinces, and with it a hostage, the possession of whom is worth a whole country. In the place of the Czar, the Grand Duke his brother must fall into your hands.”

This was the great result aimed at by Ivan Ogareff. To listen to him, one would have taken him for one of the cruel descendants of Stephan Razine, the celebrated pirate who ravaged Southern Russia in the eighteenth century. To seize the Grand Duke, murder him pitilessly, would fully satisfy his hatred. Besides, with the capture of Irkutsk, all Eastern Siberia would pass to the Tartars.

“It shall be thus, Ivan,” replied Feofar.

“What are your orders, Takhsir?”

“To-day our headquarters shall be removed to Tomsk.”

Ogareff bowed, and, followed by the housch-begui, he retired to execute the Emir’s orders.

As he was about to mount his horse, to return to the outposts, a tumult broke out at some distance, in the part of the camp reserved for the prisoners. Shouts were heard, and two or three shots fired. Perhaps it was an attempt at revolt or escape, which must be summarily suppressed.

Ivan Ogareff and the housch-begui walked forward and almost immediately two men, whom the soldiers had not been able to keep back appeared before them.

The housch-begui, without more information, made a sign which was an order for death, and the heads of the two prisoners would have rolled on the ground had not Ogareff uttered a few words which arrested the sword already raised aloft. The Russian had perceived that these prisoners were strangers, and he ordered them to be brought to him.

They were Harry Blount and Alcide jolivet.

On Ogareff's arrival in the camp, they had demanded to be conducted to his presence. The soldiers had refused. In consequence, a struggle, an attempt at flight, shots fired which happily missed the two correspondents, but their execution would not have been long delayed, if it had not been for the intervention of the Emir's lieutenant.

The latter observed the prisoners for some moments, they being absolutely unknown to him. They had been present at that scene in the post-house at Ichim, in which Michael Strogoff had been struck by Ogareff; but the brutal traveler had paid no attention to the persons then collected in the common room.

Blount and Jolivet, on the contrary, recognized him at once, and the latter said in a low voice, "Hullo! It seems that Colonel Ogareff and the rude personage of Ichim are one!" Then he added in his companion's ear, "Explain our affair, Blount. You will do me a service. This Russian colonel in the midst of a Tartar camp disgusts me; and although, thanks to him, my head is still on my shoulders, my eyes would exhibit my feelings were I to attempt to look him in the face."

So saying, Alcide Jolivet assumed a look of complete and haughty indifference.

Whether or not Ivan Ogareff perceived that the prisoner's attitude was insulting towards him, he did not let it appear. "Who are you, gentlemen?" he asked in Russian, in a cold tone, but free from its usual rudeness.

"Two correspondents of English and French newspapers," replied Blount laconically.

"You have, doubtless, papers which will establish your identity?"

"Here are letters which accredit us in Russia, from the English and French chancellor's office."

Ivan Ogareff took the letters which Blount held out, and read them attentively. "You ask," said he, "authorization to follow our military operations in Siberia?"

"We ask to be free, that is all," answered the English correspondent dryly.

"You are so, gentlemen," answered Ogareff; "I am curious to read your articles in the Daily Telegraph."

“Sir,” replied Blount, with the most imperturbable coolness, “it is sixpence a number, including postage.” And thereupon he returned to his companion, who appeared to approve completely of his replies.

Ivan Ogareff, without frowning, mounted his horse, and going to the head of his escort, soon disappeared in a cloud of dust.

“Well, Jolivet, what do you think of Colonel Ivan Ogareff, general-in-chief of the Tartar troops?” asked Blount.

“I think, my dear friend,” replied Alcide, smiling, “that the housch-begui made a very graceful gesture when he gave the order for our heads to be cut off.”

Whatever was the motive which led Ogareff to act thus in regard to the two correspondents, they were free and could rove at their pleasure over the scene of war. Their intention was not to leave it. The sort of antipathy which formerly they had entertained for each other had given place to a sincere friendship. Circumstances having brought them together, they no longer thought of separating. The petty questions of rivalry were forever extinguished. Harry Blount could never forget what he owed his companion, who, on the other hand, never tried to remind him of it. This friendship too assisted the reporting operations, and was thus to the advantage of their readers.

“And now,” asked Blount, “what shall we do with our liberty?”

“Take advantage of it, of course,” replied Alcide, “and go quietly to Tomsk to see what is going on there.”

“Until the time — very near, I hope — when we may rejoin some Russian regiment?”

“As you say, my dear Blount, it won’t do to Tartarise ourselves too much. The best side is that of the most civilized army, and it is evident that the people of Central Asia will have everything to lose and absolutely nothing to gain from this invasion, while the Russians will soon repulse them. It is only a matter of time.”

The arrival of Ivan Ogareff, which had given Jolivet and Blount their liberty, was to Michael Strogoff, on the contrary, a serious danger. Should chance bring the Czar’s courier into Ogareff’s presence, the latter could not fail to recognize in him the traveler

whom he had so brutally treated at the Ichim post-house, and although Michael had not replied to the insult as he would have done under any other circumstances, attention would be drawn to him, and at once the accomplishment of his plans would be rendered more difficult.

This was the unpleasant side of the business. A favorable result of his arrival, however, was the order which was given to raise the camp that very day, and remove the headquarters to Tomsk. This was the accomplishment of Michael's most fervent desire. His intention, as has been said, was to reach Tomsk concealed amongst the other prisoners; that is to say, without any risk of falling into the hands of the scouts who swarmed about the approaches to this important town. However, in consequence of the arrival of Ivan Ogareff, he questioned whether it would not be better to give up his first plan and attempt to escape during the journey.

Michael would, no doubt, have kept to the latter plan had he not learnt that Feofar-Khan and Ogareff had already set out for the town with some thousands of horsemen. "I will wait, then," said he to himself; "at least, unless some exceptional opportunity for escape occurs. The adverse chances are numerous on this side of Tomsk, while beyond I shall in a few hours have passed the most advanced Tartar posts to the east. Still three days of patience, and may God aid me!"

It was indeed a journey of three days which the prisoners, under the guard of a numerous detachment of Tartars, were to make across the steppe. A hundred and fifty versts lay between the camp and the town — an easy march for the Emir's soldiers, who wanted for nothing, but a wretched journey for these people, enfeebled by privations. More than one corpse would show the road they had traversed.

It was two o'clock in the afternoon, on the 12th of August, under a hot sun and cloudless sky, that the toptschi-baschi gave the order to start.

Alcide and Blount, having bought horses, had already taken the road to Tomsk, where events were to reunite the principal personages of this story.

Amongst the prisoners brought by Ivan Ogareff to the Tartar camp was an old woman, whose taciturnity seemed to keep her apart from all those who shared her fate. Not a murmur issued from her lips. She was like a statue of grief. This woman was more strictly guarded than anyone else, and, without her appearing to notice, was constantly

watched by the Tsigane Sangarre. Notwithstanding her age she was compelled to follow the convoy of prisoners on foot, without any alleviation of her suffering.

However, a kind Providence had placed near her a courageous, kind-hearted being to comfort and assist her. Amongst her companions in misfortune a young girl, remarkable for beauty and taciturnity, seemed to have given herself the task of watching over her. No words had been exchanged between the two captives, but the girl was always at the old woman's side when help was useful. At first the mute assistance of the stranger was accepted with some mistrust. Gradually, however, the young girl's clear glance, her reserve, and the mysterious sympathy which draws together those who are in misfortune, thawed Marfa Strogoff's coldness.

Nadia — for it was she — was thus able, without knowing it, to render to the mother those attentions which she had herself received from the son. Her instinctive kindness had doubly inspired her. In devoting herself to her service, Nadia secured to her youth and beauty the protection afforded by the age of the old prisoner.

On the crowd of unhappy people, embittered by sufferings, this silent pair — one seeming to be the grandmother, the other the grand-daughter — imposed a sort of respect.

After being carried off by the Tartar scouts on the Irtych, Nadia had been taken to Omsk. Kept prisoner in the town, she shared the fate of all those captured by Ivan Ogareff, and consequently that of Marfa Strogoff.

If Nadia had been less energetic, she would have succumbed to this double blow. The interruption to her journey, the death of Michael, made her both desperate and excited. Divided, perhaps forever, from her father, after so many happy efforts had brought her near him, and, to crown her grief, separated from the intrepid companion whom God seemed to have placed in her way to lead her. The image of Michael Strogoff, struck before her eyes with a lance and disappearing beneath the waters of the Irtych, never left her thoughts.

Could such a man have died thus? For whom was God reserving His miracles if this good man, whom a noble object was urging onwards, had been allowed to perish so miserably? Then anger would prevail over grief. The scene of the affront so strangely

borne by her companion at the Ichim relay returned to her memory. Her blood boiled at the recollection.

“Who will avenge him who can no longer avenge himself?” she said.

And in her heart, she cried, “May it be I!” If before his death Michael had confided his secret to her, woman, aye girl though she was, she might have been able to carry to a successful conclusion the interrupted task of that brother whom God had so soon taken from her.

Absorbed in these thoughts, it can be understood how Nadia could remain insensible to the miseries even of her captivity. Thus chance had united her to Marfa Strogoff without her having the least suspicion of who she was. How could she imagine that this old woman, a prisoner like herself, was the mother of him, whom she only knew as the merchant Nicholas Korpanoff? And on the other hand, how could Marfa guess that a bond of gratitude connected this young stranger with her son?

The thing that first struck Nadia in Marfa Strogoff was the similarity in the way in which each bore her hard fate. This stoicism of the old woman under the daily hardships, this contempt of bodily suffering, could only be caused by a moral grief equal to her own. So Nadia thought; and she was not mistaken. It was an instinctive sympathy for that part of her misery which Marfa did not show which first drew Nadia towards her. This way of bearing her sorrow went to the proud heart of the young girl. She did not offer her services; she gave them. Marfa had neither to refuse nor accept them. In the difficult parts of the journey, the girl was there to support her. When the provisions were given out, the old woman would not have moved, but Nadia shared her small portion with her; and thus this painful journey was performed. Thanks to her companion, Marfa was able to follow the soldiers who guarded the prisoners without being fastened to a saddle-bow, as were many other unfortunate wretches, and thus dragged along this road of sorrow.

“May God reward you, my daughter, for what you have done for my old age!” said Marfa Strogoff once, and for some time these were the only words exchanged between the two unfortunate beings.

During these few days, which to them appeared like centuries, it would seem that the old woman and the girl would have been led to speak of their situation. But Marfa

Strogoff, from a caution which may be easily understood, never spoke about herself except with the greatest brevity. She never made the smallest allusion to her son, nor to the unfortunate meeting.

Nadia also, if not completely silent, spoke little. However, one day her heart overflowed, and she told all the events which had occurred from her departure from Wladimir to the death of Nicholas Korpanoff.

All that her young companion told intensely interested the old Siberian. “Nicholas Korpanoff!” said she. “Tell me again about this Nicholas. I know only one man, one alone, in whom such conduct would not have astonished me. Nicholas Korpanoff! Was that really his name? Are you sure of it, my daughter?”

“Why should he have deceived me in this,” replied Nadia, “when he deceived me in no other way?”

Moved, however, by a kind of presentiment, Marfa Strogoff put questions upon questions to Nadia.

“You told me he was fearless, my daughter. You have proved that he has been so?” asked she.

“Yes, fearless indeed!” replied Nadia.

“It was just what my son would have done,” said Marfa to herself.

Then she resumed, “Did you not say that nothing stopped him, nor astonished him; that he was so gentle in his strength that you had a sister as well as a brother in him, and he watched over you like a mother?”

“Yes, yes,” said Nadia. “Brother, sister, mother — he has been all to me!”

“And defended you like a lion?”

“A lion indeed!” replied Nadia. “A lion, a hero!”

“My son, my son!” thought the old Siberian. “But you said, however, that he bore a terrible insult at that post-house in Ichim?”

“He did bear it,” answered Nadia, looking down.

“He bore it!” murmured Marfa, shuddering.

“Mother, mother,” cried Nadia, “do not blame him! He had a secret. A secret of which God alone is as yet the judge!”

“And,” said Marfa, raising her head and looking at Nadia as though she would read the depths of her heart, “in that hour of humiliation did you not despise this Nicholas Korpanoff?”

“I admired without understanding him,” replied the girl. “I never felt him more worthy of respect.”

The old woman was silent for a minute.

“Was he tall?” she asked.

“Very tall.”

“And very handsome? Come, speak, my daughter.”

“He was very handsome,” replied Nadia, blushing.

“It was my son! I tell you it was my son!” exclaimed the old woman, embracing Nadia.

“Your son!” said Nadia amazed, “your son!”

“Come,” said Marfa; “let us get to the bottom of this, my child. Your companion, your friend, your protector had a mother. Did he never speak to you of his mother?”

“Of his mother?” said Nadia. “He spoke to me of his mother as I spoke to him of my father — often, always. He adored her.”

“Nadia, Nadia, you have just told me about my own son,” said the old woman.

And she added impetuously, “Was he not going to see this mother, whom you say he loved, in Omsk?”

“No,” answered Nadia, “no, he was not.”

“Not!” cried Marfa. “You dare to tell me not!”

“I say so: but it remains to me to tell you that from motives which outweighed everything else, motives which I do not know, I understand that Nicholas Korpanoff had to traverse the country completely in secret. To him it was a question of life and death, and still more, a question of duty and honor.”

“Duty, indeed, imperious duty,” said the old Siberian, “of those who sacrifice everything, even the joy of giving a kiss, perhaps the last, to his old mother. All that you do not know, Nadia — all that I did not know myself — I now know. You have made me understand everything. But the light which you have thrown on the mysteries of my heart, I cannot return on yours. Since my son has not told you his secret, I must keep it. Forgive me, Nadia; I can never repay what you have done for me.”

“Mother, I ask you nothing,” replied Nadia.

All was thus explained to the old Siberian, all, even the conduct of her son with regard to herself in the inn at Omsk. There was no doubt that the young girl’s companion was Michael Strogoff, and that a secret mission in the invaded country obliged him to conceal his quality of the Czar’s courier.

“Ah, my brave boy!” thought Marfa. “No, I will not betray you, and tortures shall not wrest from me the avowal that it was you whom I saw at Omsk.”

Marfa could with a word have paid Nadia for all her devotion to her. She could have told her that her companion, Nicholas Korpanoff, or rather Michael Strogoff, had not perished in the waters of the Irtych, since it was some days after that incident that she had met him, that she had spoken to him.

But she restrained herself, she was silent, and contented herself with saying, “Hope, my child! Misfortune will not overwhelm you. You will see your father again; I feel it; and perhaps he who gave you the name of sister is not dead. God cannot have allowed your brave companion to perish. Hope, my child, hope! Do as I do. The mourning which I wear is not yet for my son.”

CHAPTER III BLOW FOR BLOW

SUCH were now the relative situations of Marfa Strogoff and Nadia. All was understood by the old Siberian, and though the young girl was ignorant that her much-regretted companion still lived, she at least knew his relationship to her whom she had made her mother; and she thanked God for having given her the joy of taking the place of the son whom the prisoner had lost.

But what neither of them could know was that Michael, having been captured at Kolyvan, was in the same convoy and was on his way to Tomsk with them.

The prisoners brought by Ivan Ogareff had been added to those already kept by the Emir in the Tartar camp. These unfortunate people, consisting of Russians, Siberians, soldiers and civilians, numbered some thousands, and formed a column which extended over several versts. Some among them being considered dangerous were handcuffed and fastened to a long chain. There were, too, women and children, many of the latter suspended to the pommels of the saddles, while the former were dragged mercilessly along the road on foot, or driven forward as if they were animals. The horsemen compelled them to maintain a certain order, and there were no laggards with the exception of those who fell never to rise again.

In consequence of this arrangement, Michael Strogoff, marching in the first ranks of those who had left the Tartar camp — that is to say, among the Kolyvan prisoners — was unable to mingle with the prisoners who had arrived after him from Omsk. He had therefore no suspicion that his mother and Nadia were present in the convoy, nor did they suppose that he was among those in front. This journey from the camp to Tomsk, performed under the lashes and spear-points of the soldiers, proved fatal to many, and terrible to all. The prisoners traveled across the steppe, over a road made still more dusty by the passage of the Emir and his vanguard. Orders had been given to march rapidly. The short halts were rare. The hundred miles under a burning sky seemed interminable, though they were performed as rapidly as possible.

The country, which extends from the right of the Obi to the base of the spur detached from the Sayanok Mountains, is very sterile. Only a few stunted and burnt-up shrubs here and there break the monotony of the immense plain. There was no cultivation, for there was no water; and it was water that the prisoners, parched by their painful march,

most needed. To find a stream they must have diverged fifty versts eastward, to the very foot of the mountains.

There flows the Tom, a little affluent of the Obi, which passes near Tomsk before losing itself in one of the great northern arteries. There water would have been abundant, the steppe less arid, the heat less severe. But the strictest orders had been given to the commanders of the convoy to reach Tomsk by the shortest way, for the Emir was much afraid of being taken in the flank and cut off by some Russian column descending from the northern provinces.

It is useless to dwell upon the sufferings of the unhappy prisoners. Many hundreds fell on the steppe, where their bodies would lie until winter, when the wolves would devour the remnants of their bones.

As Nadia helped the old Siberian, so in the same way did Michael render to his more feeble companions in misfortune such services as his situation allowed. He encouraged some, supported others, going to and fro, until a prick from a soldier’s lance obliged him to resume the place which had been assigned him in the ranks.

Why did he not endeavor to escape?

The reason was that he had now quite determined not to venture until the steppe was safe for him. He was resolved in his idea of going as far as Tomsk “at the Emir’s expense,” and indeed he was right. As he observed the numerous detachments which scoured the plain on the convoy’s flanks, now to the south, now to the north, it was evident that before he could have gone two versts he must have been recaptured. The Tartar horsemen swarmed — it actually appeared as if they sprang from the earth — like insects which a thunderstorm brings to the surface of the ground. Flight under these conditions would have been extremely difficult, if not impossible. The soldiers of the escort displayed excessive vigilance, for they would have paid for the slightest carelessness with their heads.

At nightfall of the 15th of August, the convoy reached the little village of Zabediero, thirty versts from Tomsk.

The prisoners’ first movement would have been to rush into the river, but they were not allowed to leave the ranks until the halt had been organized. Although the current of the Tom was just now like a torrent, it might have favored the flight of some bold or

desperate man, and the strictest measures of vigilance were taken. Boats, requisitioned at Zabediero, were brought up to the Tom and formed a line of obstacles impossible to pass. As to the encampment on the outskirts of the village, it was guarded by a cordon of sentinels.

Michael Strogoff, who now naturally thought of escape, saw, after carefully surveying the situation, that under these conditions it was perfectly impossible; so, not wishing to compromise himself, he waited.

The prisoners were to encamp for the whole night on the banks of the Tom, for the Emir had put off the entrance of his troops into Tomsk. It had been decided that a military fete should mark the inauguration of the Tartar headquarters in this important city. Feofar-Khan already occupied the fortress, but the bulk of his army bivouacked under its walls, waiting until the time came for them to make a solemn entry.

Ivan Ogareff left the Emir at Tomsk, where both had arrived the evening before, and returned to the camp at Zabediero. From here he was to start the next day with the rear-guard of the Tartar army. A house had been arranged for him in which to pass the night. At sunrise horse and foot soldiers were to proceed to Tomsk, where the Emir wished to receive them with the pomp usual to Asiatic sovereigns. As soon as the halt was organized, the prisoners, worn out with their three days' journey, and suffering from burning thirst, could drink and take a little rest. The sun had already set, when Nadia, supporting Marfa Strogoff, reached the banks of the Tom. They had not till then been able to get through those who crowded the banks, but at last they came to drink in their turn.

The old woman bent over the clear stream, and Nadia, plunging in her hand, carried it to Marfa's lips. Then she refreshed herself. They found new life in these welcome waters. Suddenly Nadia started up; an involuntary cry escaped her.

Michael Strogoff was there, a few steps from her. It was he. The dying rays of the sun fell upon him.

At Nadia's cry Michael started. But he had sufficient command over himself not to utter a word by which he might have been compromised. And yet, when he saw Nadia, he also recognized his mother.

Feeling he could not long keep master of himself at this unexpected meeting, he covered his eyes with his hands and walked quickly away.

Nadia's impulse was to run after him, but the old Siberian murmured in her ear, "Stay, my daughter!"

"It is he!" replied Nadia, choking with emotion. "He lives, mother! It is he!"

"It is my son," answered Marfa, "it is Michael Strogoff, and you see that I do not make a step towards him! Imitate me, my daughter."

Michael had just experienced the most violent emotion which a man can feel. His mother and Nadia were there!

The two prisoners who were always together in his heart, God had brought them together in this common misfortune. Did Nadia know who he was? Yes, for he had seen Marfa's gesture, holding her back as she was about to rush towards him. Marfa, then, had understood all, and kept his secret.

During that night, Michael was twenty times on the point of looking for and joining his mother; but he knew that he must resist the longing he felt to take her in his arms, and once more press the hand of his young companion. The least imprudence might be fatal. He had besides sworn not to see his mother. Once at Tomsk, since he could not escape this very night, he would set off without having even embraced the two beings in whom all the happiness of his life was centered, and whom he should leave exposed to so many perils.

Michael hoped that this fresh meeting at the Zabediero camp would have no disastrous consequences either to his mother or to himself. But he did not know that part of this scene, although it passed so rapidly, had been observed by Sangarre, Ogareff's spy.

The Tsigane was there, a few paces off, on the bank, as usual, watching the old Siberian woman. She had not caught sight of Michael, for he disappeared before she had time to look around; but the mother's gesture as she kept back Nadia had not escaped her, and the look in Marfa's eyes told her all.

It was now beyond doubt that Marfa Strogoff's son, the Czar's courier, was at this moment in Zabediero, among Ivan Ogareff's prisoners. Sangarre did not know him, but

she knew that he was there. She did not then attempt to discover him, for it would have been impossible in the dark and the immense crowd.

As for again watching Nadia and Marfa Strogoff, that was equally useless. It was evident that the two women would keep on their guard, and it would be impossible to overhear anything of a nature to compromise the courier of the Czar. The Tsigane's first thought was to tell Ivan Ogareff. She therefore immediately left the encampment. A quarter of an hour after, she reached Zabediero, and was shown into the house occupied by the Emir's lieutenant. Ogareff received the Tsigane directly.

"What have you to tell me, Sangarre?" he asked.

"Marfa Strogoff's son is in the encampment."

"A prisoner?"

"A prisoner."

"Ah!" exclaimed Ogareff, "I shall know — "

"You will know nothing, Ivan," replied Tsigane; "for you do not even know him by sight."

"But you know him; you have seen him, Sangarre?"

"I have not seen him; but his mother betrayed herself by a gesture, which told me everything."

"Are you not mistaken?"

"I am not mistaken."

"You know the importance which I attach to the apprehension of this courier," said Ivan Ogareff. "If the letter which he has brought from Moscow reaches Irkutsk, if it is given to the Grand Duke, the Grand Duke will be on his guard, and I shall not be able to get at him. I must have that letter at any price. Now you come to tell me that the bearer of this letter is in my power. I repeat, Sangarre, are you not mistaken?"

Ogareff spoke with great animation. His emotion showed the extreme importance he attached to the possession of this letter. Sangarre was not at all put out by the urgency with which Ogareff repeated his question. “I am not mistaken, Ivan,” she said.

“But, Sangarre, there are thousands of prisoners; and you say that you do not know Michael Strogoff.”

“No,” answered the Tsigane, with a look of savage joy, “I do not know him; but his mother knows him. Ivan, we must make his mother speak.”

“To-morrow she shall speak!” cried Ogareff. So saying, he extended his hand to the Tsigane, who kissed it; for there is nothing servile in this act of respect, it being usual among the Northern races.

Sangarre returned to the camp. She found out Nadia and Marfa Strogoff, and passed the night in watching them. Although worn out with fatigue, the old woman and the girl did not sleep. Their great anxiety kept them awake. Michael was living, but a prisoner. Did Ogareff know him, or would he not soon find him out? Nadia was occupied by the one thought that he whom she had thought dead still lived. But Marfa saw further into the future: and, although she did not care what became of herself, she had every reason to fear for her son.

Sangarre, under cover of the night, had crept near the two women, and remained there several hours listening. She heard nothing. From an instinctive feeling of prudence not a word was exchanged between Nadia and Marfa Strogoff. The next day, the 16th of August, about ten in the morning, trumpet-calls resounded throughout the encampment. The Tartar soldiers were almost immediately under arms.

Ivan Ogareff arrived, surrounded by a large staff of Tartar officers. His face was more clouded than usual, and his knitted brow gave signs of latent wrath which was waiting for an occasion to break forth.

Michael Strogoff, hidden in a group of prisoners, saw this man pass. He had a presentiment that some catastrophe was imminent: for Ivan Ogareff knew now that Marfa was the mother of Michael Strogoff.

Ogareff dismounted, and his escort cleared a large circle round him. Just then Sangarre approached him, and said, “I have no news.”

Ivan Ogareff's only reply was to give an order to one of his officers. Then the ranks of prisoners were brutally hurried up by the soldiers. The unfortunate people, driven on with whips, or pushed on with lances, arranged themselves round the camp. A strong guard of soldiers drawn up behind, rendered escape impossible.

Silence then ensued, and, on a sign from Ivan Ogareff, Sangarre advanced towards the group, in the midst of which stood Marfa.

The old Siberian saw her, and knew what was going to happen. A scornful smile passed over her face. Then leaning towards Nadia, she said in a low tone, "You know me no longer, my daughter. Whatever may happen, and however hard this trial may be, not a word, not a sign. It concerns him, and not me."

At that moment Sangarre, having regarded her for an instant, put her hand on her shoulder.

"What do you want with me?" said Marfa.

"Come!" replied Sangarre, and pushing the old Siberian before her, she took her to Ivan Ogareff, in the middle of the cleared ground. Michael cast down his eyes that their angry flashings might not appear.

Marfa, standing before Ivan Ogareff, drew herself up, crossed her arms on her breast, and waited.

"You are Marfa Strogoff?" asked Ogareff.

"Yes," replied the old Siberian calmly.

"Do you retract what you said to me when, three days ago, I interrogated you at Omsk?"

"No!"

"Then you do not know that your son, Michael Strogoff, courier of the Czar, has passed through Omsk?"

"I do not know it."

“And the man in whom you thought you recognized your son, was not he your son?”

“He was not my son.”

“And since then you have not seen him amongst the prisoners?”

“No.”

“If he were pointed out, would you recognize him?”

“No.”

On this reply, which showed such determined resolution, a murmur was heard amongst the crowd.

Ogareff could not restrain a threatening gesture.

“Listen,” said he to Marfa, “your son is here, and you shall immediately point him out to me.”

“No.”

“All these men, taken at Omsk and Kolyvan, will defile before you; and if you do not show me Michael Strogoff, you shall receive as many blows of the knout as men shall have passed before you.”

Ivan Ogareff saw that, whatever might be his threats, whatever might be the tortures to which he submitted her, the indomitable Siberian would not speak. To discover the courier of the Czar, he counted, then, not on her, but on Michael himself. He did not believe it possible that, when mother and son were in each other’s presence, some involuntary movement would not betray him. Of course, had he wished to seize the imperial letter, he would simply have given orders to search all the prisoners; but Michael might have destroyed the letter, having learnt its contents; and if he were not recognized, if he were to reach Irkutsk, all Ivan Ogareff’s plans would be baffled. It was thus not only the letter which the traitor must have, but the bearer himself.

Nadia had heard all, and she now knew who was Michael Strogoff, and why he had wished to cross, without being recognized, the invaded provinces of Siberia.

On an order from Ivan Ogareff the prisoners defiled, one by one, past Marfa, who remained immovable as a statue, and whose face expressed only perfect indifference.

Her son was among the last. When in his turn he passed before his mother, Nadia shut her eyes that she might not see him. Michael was to all appearance unmoved, but the palm of his hand bled under his nails, which were pressed into them.

Ivan Ogareff was baffled by mother and son.

Sangarre, close to him, said one word, “The knout!”

“Yes,” cried Ogareff, who could no longer restrain himself; “the knout for this wretched old woman — the knout to the death!”

A Tartar soldier bearing this terrible instrument of torture approached Marfa. The knout is composed of a certain number of leathern thongs, at the end of which are attached pieces of twisted iron wire. It is reckoned that a sentence to one hundred and twenty blows of this whip is equivalent to a sentence of death.

Marfa knew it, but she knew also that no torture would make her speak. She was sacrificing her life.

Marfa, seized by two soldiers, was forced on her knees on the ground. Her dress torn off left her back bare. A saber was placed before her breast, at a few inches’ distance only. Directly she bent beneath her suffering, her breast would be pierced by the sharp steel.

The Tartar drew himself up. He waited. “Begin!” said Ogareff. The whip whistled in the air.

But before it fell a powerful hand stopped the Tartar’s arm. Michael was there. He had leapt forward at this horrible scene. If at the relay at Ichim he had restrained himself when Ogareff’s whip had struck him, here before his mother, who was about to be struck, he could not do so. Ivan Ogareff had succeeded.

“Michael Strogoff!” cried he. Then advancing, “Ah, the man of Ichim?”

“Himself!” said Michael. And raising the knout he struck Ogareff a sharp blow across the face. “Blow for blow!” said he.

“Well repaid!” cried a voice concealed by the tumult.

Twenty soldiers threw themselves on Michael, and in another instant he would have been slain.

But Ogareff, who on being struck had uttered a cry of rage and pain, stopped them. “This man is reserved for the Emir’s judgment,” said he. “Search him!”

The letter with the imperial arms was found in Michael’s bosom; he had not had time to destroy it; it was handed to Ogareff.

The voice which had pronounced the words, “Well repaid!” was that of no other than Alcide Jolivet. “Par-dieu!” said he to Blount, “they are rough, these people. Acknowledge that we owe our traveling companion a good turn. Korpanoff or Strogoff is worthy of it. Oh, that was fine retaliation for the little affair at Ichim.”

“Yes, retaliation truly,” replied Blount; “but Strogoff is a dead man. I suspect that, for his own interest at all events, it would have been better had he not possessed quite so lively a recollection of the event.”

“And let his mother perish under the knout?”

“Do you think that either she or his sister will be a bit better off from this outbreak of his?”

“I do not know or think anything except that I should have done much the same in his position,” replied Alcide. “What a scar the Colonel has received! Bah! one must boil over sometimes. We should have had water in our veins instead of blood had it been incumbent on us to be always and everywhere unmoved to wrath.”

“A neat little incident for our journals,” observed Blount, “if only Ivan Ogareff would let us know the contents of that letter.”

Ivan Ogareff, when he had stanched the blood which was trickling down his face, had broken the seal. He read and re-read the letter deliberately, as if he was determined to discover everything it contained.

Then having ordered that Michael, carefully bound and guarded, should be carried on to Tomsk with the other prisoners, he took command of the troops at Zabediero, and, amid

the deafening noise of drums and trumpets, he marched towards the town where the Emir awaited him.

CHAPTER IV THE TRIUMPHAL ENTRY

TOMSK, founded in 1604, nearly in the heart of the Siberian provinces, is one of the most important towns in Asiatic Russia. Tobolsk, situated above the sixtieth parallel; Irkutsk, built beyond the hundredth meridian — have seen Tomsk increase at their expense.

And yet Tomsk, as has been said, is not the capital of this important province. It is at Omsk that the Governor-General of the province and the official world reside. But Tomsk is the most considerable town of that territory. The country being rich, the town is so likewise, for it is in the center of fruitful mines. In the luxury of its houses, its arrangements, and its equipages, it might rival the greatest European capitals. It is a city of millionaires, enriched by the spade and pickax, and though it has not the honor of being the residence of the Czar's representative, it can boast of including in the first rank of its notables the chief of the merchants of the town, the principal grantees of the imperial government's mines.

But the millionaires were fled now, and except for the crouching poor, the town stood empty to the hordes of Feofar-Khan. At four o'clock the Emir made his entry into the square, greeted by a flourish of trumpets, the rolling sound of the big drums, salvoes of artillery and musketry.

Feofar mounted his favorite horse, which carried on its head an aigrette of diamonds. The Emir still wore his uniform. He was accompanied by a numerous staff, and beside him walked the Khans of Khokhand and Koundouge and the grand dignitaries of the Khanats.

At the same moment appeared on the terrace the chief of Feofar's wives, the queen, if this title may be given to the sultana of the states of Bokhara. But, queen or slave, this woman of Persian origin was wonderfully beautiful. Contrary to the Mahometan custom, and no doubt by some caprice of the Emir, she had her face uncovered. Her hair, divided into four plaits, fell over her dazzling white shoulders, scarcely concealed by a veil of silk worked in gold, which fell from the back of a cap studded with gems of the highest value. Under her blue-silk petticoat, fell the "zirdjameh" of silken gauze, and above the sash lay the "pirahn." But from the head to the little feet, such was the profusion of jewels — gold beads strung on silver threads, chaplets of turquoises, "firouzehs" from the celebrated mines of Elbourz, necklaces of cornelians, agates,

emeralds, opals, and sapphires — that her dress seemed to be literally made of precious stones. The thousands of diamonds which sparkled on her neck, arms, hands, at her waist, and at her feet might have been valued at almost countless millions of roubles.

The Emir and the Khans dismounted, as did the dignitaries who escorted them. All entered a magnificent tent erected on the center of the first terrace. Before the tent, as usual, the Koran was laid.

Feofar's lieutenant did not make them wait, and before five o'clock the trumpets announced his arrival. Ivan Ogareff — the Scarred Cheek, as he was already nicknamed — wearing the uniform of a Tartar officer, dismounted before the Emir's tent. He was accompanied by a party of soldiers from the camp at Zabediero, who ranged up at the sides of the square, in the middle of which a place for the sports was reserved. A large scar could be distinctly seen cut obliquely across the traitor's face.

Ogareff presented his principal officers to the Emir, who, without departing from the coldness which composed the main part of his dignity, received them in a way which satisfied them that they stood well in the good graces of their chief.

At least so thought Harry Blount and Alcide Jolivet, the two inseparables, now associated together in the chase after news. After leaving Zabediero, they had proceeded rapidly to Tomsk. The plan they had agreed upon was to leave the Tartars as soon as possible, and to join a Russian regiment, and, if they could, to go with them to Irkutsk. All that they had seen of the invasion, its burnings, its pillages, its murders, had perfectly sickened them, and they longed to be among the ranks of the Siberian army. Jolivet had told his companion that he could not leave Tomsk without making a sketch of the triumphal entry of the Tartar troops, if it was only to satisfy his cousin's curiosity; but the same evening they both intended to take the road to Irkutsk, and being well mounted hoped to distance the Emir's scouts.

Alcide and Blount mingled therefore in the crowd, so as to lose no detail of a festival which ought to supply them with a hundred good lines for an article. They admired the magnificence of Feofar-Khan, his wives, his officers, his guards, and all the Eastern pomp, of which the ceremonies of Europe can give not the least idea. But they turned away with disgust when Ivan Ogareff presented himself before the Emir, and waited with some impatience for the amusements to begin.

“You see, my dear Blount,” said Alcide, “we have come too soon, like honest citizens who like to get their money’s worth. All this is before the curtain rises, it would have been better to arrive only for the ballet.”

“What ballet?” asked Blount.

“The compulsory ballet, to be sure. But see, the curtain is going to rise.” Alcide Jolivet spoke as if he had been at the Opera, and taking his glass from its case, he prepared, with the air of a connoisseur, “to examine the first act of Feofar’s company.”

A painful ceremony was to precede the sports. In fact, the triumph of the vanquisher could not be complete without the public humiliation of the vanquished. This was why several hundreds of prisoners were brought under the soldiers’ whips. They were destined to march past Feofar-Khan and his allies before being crammed with their companions into the prisons in the town.

In the first ranks of these prisoners figured Michael Strogoff. As Ogareff had ordered, he was specially guarded by a file of soldiers. His mother and Nadia were there also.

The old Siberian, although energetic enough when her own safety was in question, was frightfully pale. She expected some terrible scene. It was not without reason that her son had been brought before the Emir. She therefore trembled for him. Ivan Ogareff was not a man to forgive having been struck in public by the knout, and his vengeance would be merciless. Some frightful punishment familiar to the barbarians of Central Asia would, no doubt, be inflicted on Michael Ogareff had protected him against the soldiers because he well knew what would happen by reserving him for the justice of the Emir.

The mother and son had not been able to speak together since the terrible scene in the camp at Zabediero. They had been pitilessly kept apart — a bitter aggravation of their misery, for it would have been some consolation to have been together during these days of captivity. Marfa longed to ask her son’s pardon for the harm she had unintentionally done him, for she reproached herself with not having commanded her maternal feelings. If she had restrained herself in that post-house at Omsk, when she found herself face to face with him, Michael would have passed unrecognized, and all these misfortunes would have been avoided.

Michael, on his side, thought that if his mother was there, if Ogareff had brought her with him, it was to make her suffer with the sight of his own punishment, or perhaps some frightful death was reserved for her also.

As to Nadia, she only asked herself how she could save them both, how come to the aid of son and mother. As yet she could only wonder, but she felt instinctively that she must above everything avoid drawing attention upon herself, that she must conceal herself, make herself insignificant. Perhaps she might at least gnaw through the meshes which imprisoned the lion. At any rate if any opportunity was given her she would seize upon it, and sacrifice herself, if need be, for the son of Marfa Strogoff.

In the meantime the greater part of the prisoners were passing before the Emir, and as they passed each was obliged to prostrate himself, with his forehead in the dust, in token of servitude. Slavery begins by humiliation. When the unfortunate people were too slow in bending, the rough guards threw them violently to the ground.

Alcide Jolivet and his companion could not witness such a sight without feeling indignant.

“It is cowardly — let us go,” said Alcide.

“No,” answered Blount; “we must see it all.”

“See it all! — ah!” cried Alcide, suddenly, grasping his companion’s arm.

“What is the matter with you?” asked the latter.

“Look, Blount; it is she!”

“What she?”

“The sister of our traveling companion — alone, and a prisoner! We must save her.”

“Calm yourself,” replied Blount coolly. “Any interference on our part in behalf of the young girl would be worse than useless.”

Alcide Jolivet, who had been about to rush forward, stopped, and Nadia — who had not perceived them, her features being half hidden by her hair — passed in her turn before the Emir without attracting his attention.

However, after Nadia came Marfa Strogoff; and as she did not throw herself quickly in the dust, the guards brutally pushed her. She fell.

Her son struggled so violently that the soldiers who were guarding him could scarcely hold him back. But the old woman rose, and they were about to drag her on, when Ogareff interposed, saying, “Let that woman stay!”

As to Nadia, she happily regained the crowd of prisoners. Ivan Ogareff had taken no notice of her.

Michael was then led before the Emir, and there he remained standing, without casting down his eyes.

“Your forehead to the ground!” cried Ogareff.

“No!” answered Michael.

Two soldiers endeavored to make him bend, but they were themselves laid on the ground by a buffet from the young man’s fist.

Ogareff approached Michael. “You shall die!” he said.

“I can die,” answered Michael fiercely; “but your traitor’s face, Ivan, will not the less carry forever the infamous brand of the knout.”

At this reply Ivan Ogareff became perfectly livid.

“Who is this prisoner?” asked the Emir, in a tone of voice terrible from its very calmness.

“A Russian spy,” answered Ogareff. In asserting that Michael was a spy he knew that the sentence pronounced against him would be terrible.

The Emir made a sign at which all the crowd bent low their heads. Then he pointed with his hand to the Koran, which was brought him. He opened the sacred book and placed his finger on one of its pages.

It was chance, or rather, according to the ideas of these Orientals, God Himself who was about to decide the fate of Michael Strogoff. The people of Central Asia give the

name of “fal” to this practice. After having interpreted the sense of the verse touched by the judge’s finger, they apply the sentence whatever it may be.

The Emir had let his finger rest on the page of the Koran. The chief of the Ulemas then approached, and read in a loud voice a verse which ended with these words, “And he will no more see the things of this earth.”

“Russian spy!” exclaimed Feofar-Kahn in a voice trembling with fury, “you have come to see what is going on in the Tartar camp. Then look while you may.”

CHAPTER V “LOOK WHILE YOU MAY!”

MICHAEL was held before the Emir’s throne, at the foot of the terrace, his hands bound behind his back. His mother overcome at last by mental and physical torture, had sunk to the ground, daring neither to look nor listen.

“Look while you may,” exclaimed Feofar-Kahn, stretching his arm towards Michael in a threatening manner. Doubtless Ivan Ogareff, being well acquainted with Tartar customs, had taken in the full meaning of these words, for his lips curled for an instant in a cruel smile; he then took his place by Feofar-Khan.

A trumpet call was heard. This was the signal for the amusements to begin. “Here comes the ballet,” said Alcide to Blount; “but, contrary to our customs, these barbarians give it before the drama.”

Michael had been commanded to look at everything. He looked. A troop of dancers poured into the open space before the Emir’s tent. Different Tartar instruments, the “doutare,” a long-handled guitar, the “kobize,” a kind of violoncello, the “tschibyzga,” a long reed flute; wind instruments, tom-toms, tambourines, united with the deep voices of the singers, formed a strange harmony. Added to this were the strains of an aerial orchestra, composed of a dozen kites, which, fastened by strings to their centers, resounded in the breeze like AEolian harps.

Then the dancers began. The performers were all of Persian origin; they were no longer slaves, but exercised their profession at liberty. Formerly they figured officially in the ceremonies at the court of Teheran, but since the accession of the reigning family, banished or treated with contempt, they had been compelled to seek their fortune elsewhere. They wore the national costume, and were adorned with a profusion of jewels. Little triangles of gold, studded with jewels, glittered in their ears. Circles of silver, marked with black, surrounded their necks and legs.

These performers gracefully executed various dances, sometimes alone, sometimes in groups. Their faces were uncovered, but from time to time they threw a light veil over their heads, and a gauze cloud passed over their bright eyes as smoke over a starry sky. Some of these Persians wore leathern belts embroidered with pearls, from which hung little triangular bags. From these bags, embroidered with golden filigree, they drew long narrow bands of scarlet silk, on which were braided verses of the Koran. These bands,

which they held between them, formed a belt under which the other dancers darted; and, as they passed each verse, following the precept it contained, they either prostrated themselves on the earth or lightly bounded upwards, as though to take a place among the houris of Mohammed's heaven.

But what was remarkable, and what struck Alcide, was that the Persians appeared rather indolent than fiery. Their passion had deserted them, and, by the kind of dances as well as by their execution, they recalled rather the calm and self-possessed nauch girls of India than the impassioned dancers of Egypt.

When this was over, a stern voice was heard saying:

"Look while you may!"

The man who repeated the Emir's words — a tall spare Tartar — was he who carried out the sentences of Feofar-Khan against offenders. He had taken his place behind Michael, holding in his hand a broad curved saber, one of those Damascene blades which are forged by the celebrated armorers of Karschi or Hissar.

Behind him guards were carrying a tripod supporting a chafing-dish filled with live coals. No smoke arose from this, but a light vapor surrounded it, due to the incineration of a certain aromatic and resinous substance which he had thrown on the surface.

The Persians were succeeded by another party of dancers, whom Michael recognized. The journalists also appeared to recognize them, for Blount said to his companion, "These are the Tsiganes of Nijni-Novgorod."

"No doubt of it," cried Alcide. "Their eyes, I imagine, bring more money to these spies than their legs."

In putting them down as agents in the Emir's service, Alcide Jolivet was, by all accounts, not mistaken.

In the first rank of the Tsiganes, Sangarre appeared, superb in her strange and picturesque costume, which set off still further her remarkable beauty.

Sangarre did not dance, but she stood as a statue in the midst of the performers, whose style of dancing was a combination of that of all those countries through which their race had passed — Turkey, Bohemia, Egypt, Italy, and Spain. They were enlivened by

the sound of cymbals, which clashed on their arms, and by the hollow sounds of the "daires" — a sort of tambourine played with the fingers.

Sangarre, holding one of those daires, which she played between her hands, encouraged this troupe of veritable corybantes. A young Tsigane, of about fifteen years of age, then advanced. He held in his hand a "doutare," strings of which he made to vibrate by a simple movement of the nails. He sung. During the singing of each couplet, of very peculiar rhythm, a dancer took her position by him and remained there immovable, listening to him, but each time that the burden came from the lips of the young singer, she resumed her dance, dinning in his ears with her daire, and deafening him with the clashing of her cymbals. Then, after the last chorus, the remainder surrounded the Tsigane in the windings of their dance.

At that moment a shower of gold fell from the hands of the Emir and his train, and from the hands of his officers of all ranks; to the noise which the pieces made as they struck the cymbals of the dancers, being added the last murmurs of the doutares and tambourines.

"Lavish as robbers," said Alcide in the ear of his companion. And in fact it was the result of plunder which was falling; for, with the Tartar tomans and sequins, rained also Russian ducats and roubles.

Then silence followed for an instant, and the voice of the executioner, who laid his hand on Michael's shoulder, once more pronounced the words, which this repetition rendered more and more sinister:

"Look while you may"

But this time Alcide observed that the executioner no longer held the saber bare in his hand.

Meanwhile the sun had sunk behind the horizon. A semi-obscurity began to envelop the plain. The mass of cedars and pines became blacker and blacker, and the waters of the Tom, totally obscured in the distance, mingled with the approaching shadows.

But at that instant several hundreds of slaves, bearing lighted torches, entered the square. Led by Sangarre, Tsiganes and Persians reappeared before the Emir's throne, and showed off, by the contrast, their dances of styles so different. The instruments of

the Tartar orchestra sounded forth in harmony still more savage, accompanied by the guttural cries of the singers. The kites, which had fallen to the ground, once more winged their way into the sky, each bearing a parti-colored lantern, and under a fresher breeze their harps vibrated with intenser sound in the midst of the aerial illumination.

Then a squadron of Tartars, in their brilliant uniforms, mingled in the dances, whose wild fury was increasing rapidly, and then began a performance which produced a very strange effect. Soldiers came on the ground, armed with bare sabers and long pistols, and, as they executed dances, they made the air re-echo with the sudden detonations of their firearms, which immediately set going the rumbling of the tambourines, and grumblings of the daires, and the gnashing of doutares.

Their arms, covered with a colored powder of some metallic ingredient, after the Chinese fashion, threw long jets — red, green, and blue — so that the groups of dancers seemed to be in the midst of fireworks. In some respects, this performance recalled the military dance of the ancients, in the midst of naked swords; but this Tartar dance was rendered yet more fantastic by the colored fire, which wound, serpent-like, above the dancers, whose dresses seemed to be embroidered with fiery hems. It was like a kaleidoscope of sparks, whose infinite combinations varied at each movement of the dancers.

Though it may be thought that a Parisian reporter would be perfectly hardened to any scenic effect, which our modern ideas have carried so far, yet Alcide Jolivet could not restrain a slight movement of the head, which at home, between the Boulevard Montmartre and La Madeleine would have said — ”Very fair, very fair.”

Then, suddenly, at a signal, all the lights of the fantasia were extinguished, the dances ceased, and the performers disappeared. The ceremony was over, and the torches alone lighted up the plateau, which a few instants before had been so brilliantly illuminated.

On a sign from the Emir, Michael was led into the middle of the square.

“Blount,” said Alcide to his companion, “are you going to see the end of all this?”

“No, that I am not,” replied Blount.

“The readers of the Daily Telegraph are, I hope, not very eager for the details of an execution a la mode Tartare?”

“No more than your cousin!”

“Poor fellow!” added Alcide, as he watched Michael. “That valiant soldier should have fallen on the field of battle!”

“Can we do nothing to save him?” said Blount.

“Nothing!”

The reporters recalled Michael’s generous conduct towards them; they knew now through what trials he must have passed, ever obedient to his duty; and in the midst of these Tartars, to whom pity is unknown, they could do nothing for him. Having little desire to be present at the torture reserved for the unfortunate man, they returned to the town. An hour later, they were on the road to Irkutsk, for it was among the Russians that they intended to follow what Alcide called, by anticipation, “the campaign of revenge.”

Meantime, Michael was standing ready, his eyes returning the Emir’s haughty glance, while his countenance assumed an expression of intense scorn whenever he cast his looks on Ivan Ogareff. He was prepared to die, yet not a single sign of weakness escaped him.

The spectators, waiting around the square, as well as Feofar-Khan’s body-guard, to whom this execution was only one of the attractions, were eagerly expecting it. Then, their curiosity satisfied, they would rush off to enjoy the pleasures of intoxication.

The Emir made a sign. Michael was thrust forward by his guards to the foot of the terrace, and Feofar said to him, “You came to see our goings out and comings in, Russian spy. You have seen for the last time. In an instant your eyes will be forever shut to the day.”

Michael’s fate was to be not death, but blindness; loss of sight, more terrible perhaps than loss of life. The unhappy man was condemned to be blinded.

However, on hearing the Emir’s sentence Michael’s heart did not grow faint. He remained unmoved, his eyes wide open, as though he wished to concentrate his whole life into one last look. To entreat pity from these savage men would be useless, besides, it would be unworthy of him. He did not even think of it. His thoughts were condensed

on his mission, which had apparently so completely failed; on his mother, on Nadia, whom he should never more see! But he let no sign appear of the emotion he felt. Then, a feeling of vengeance to be accomplished came over him. “Ivan,” said he, in a stern voice, “Ivan the Traitor, the last menace of my eyes shall be for you!”

Ivan Ogareff shrugged his shoulders.

But Michael was not to be looking at Ivan when his eyes were put out. Marfa Strogoff stood before him.

“My mother!” cried he. “Yes! yes! my last glance shall be for you, and not for this wretch! Stay there, before me! Now I see once more your well-beloved face! Now shall my eyes close as they rest upon it..!”

The old woman, without uttering a word, advanced.

“Take that woman away!” said Ivan.

Two soldiers were about to seize her, but she stepped back and remained standing a few paces from Michael.

The executioner appeared. This time, he held his saber bare in his hand, and this saber he had just drawn from the chafing-dish, where he had brought it to a white heat. Michael was going to be blinded in the Tartar fashion, with a hot blade passed before his eyes!

Michael did not attempt to resist. Nothing existed before his eyes but his mother, whom his eyes seemed to devour. All his life was in that last look.

Marfa Strogoff, her eyes open wide, her arms extended towards where he stood, was gazing at him. The incandescent blade passed before Michael’s eyes.

A despairing cry was heard. His aged mother fell senseless to the ground. Michael Strogoff was blind.

His orders executed, the Emir retired with his train. There remained in the square only Ivan Ogareff and the torch bearers. Did the wretch intend to insult his victim yet further, and yet to give him a parting blow?

Ivan Ogareff slowly approached Michael, who, feeling him coming, drew himself up. Ivan drew from his pocket the Imperial letter, he opened it, and with supreme irony he held it up before the sightless eyes of the Czar's courier, saying, "Read, now, Michael Strogoff, read, and go and repeat at Irkutsk what you have read. The true Courier of the Czar is Ivan Ogareff."

This said, the traitor thrust the letter into his breast. Then, without looking round he left the square, followed by the torch-bearers.

Michael was left alone, at a few paces from his mother, lying lifeless, perhaps dead. He heard in the distance cries and songs, the varied noises of a wild debauch. Tomsk, illuminated, glittered and gleamed.

Michael listened. The square was silent and deserted. He went, groping his way, towards the place where his mother had fallen. He found her with his hand, he bent over her, he put his face close to hers, he listened for the beating of her heart. Then he murmured a few words.

Did Marfa still live, and did she hear her son's words? Whether she did so or not, she made not the slightest movement. Michael kissed her forehead and her white locks. He then raised himself, and, groping with his foot, trying to stretch out his hand to guide himself, he walked by degrees to the edge of the square.

Suddenly Nadia appeared. She walked straight to her companion. A knife in her hand cut the cords which bound Michael's arms. The blind man knew not who had freed him, for Nadia had not spoken a word.

But this done: "Brother!" said she.

"Nadia!" murmured Michael, "Nadia!"

"Come, brother," replied Nadia, "use my eyes whilst yours sleep. I will lead you to Irkutsk."

CHAPTER VI A FRIEND ON THE HIGHWAY

HALF an hour afterwards, Michael and Nadia had left Tomsk.

Many others of the prisoners were that night able to escape from the Tartars, for officers and soldiers, all more or less intoxicated, had unconsciously relaxed the vigilant guard which they had hitherto maintained. Nadia, after having been carried off with the other prisoners, had been able to escape and return to the square, at the moment when Michael was led before the Emir. There, mingling with the crowd, she had witnessed the terrible scene. Not a cry escaped her when the scorching blade passed before her companion's eyes. She kept, by her strength of will, mute and motionless. A providential inspiration bade her restrain herself and retain her liberty that she might lead Marfa's son to that goal which he had sworn to reach. Her heart for an instant ceased to beat when the aged Siberian woman fell senseless to the ground, but one thought restored her to her former energy. "I will be the blind man's dog," said she.

On Ogareff's departure, Nadia had concealed herself in the shade. She had waited till the crowd left the square. Michael, abandoned as a wretched being from whom nothing was to be feared, was alone. She saw him draw himself towards his mother, bend over her, kiss her forehead, then rise and grope his way in flight.

A few instants later, she and he, hand in hand, had descended the steep slope, when, after having followed the high banks of the Tom to the furthest extremity of the town, they happily found a breach in the inclosure.

The road to Irkutsk was the only one which penetrated towards the east. It could not be mistaken. It was possible that on the morrow, after some hours of carousal, the scouts of the Emir, once more scattering over the steppes, might cut off all communication. It was of the greatest importance therefore to get in advance of them. How could Nadia bear the fatigues of that night, from the 16th to the 17th of August? How could she have found strength for so long a stage? How could her feet, bleeding under that forced march, have carried her thither? It is almost incomprehensible. But it is none the less true that on the next morning, twelve hours after their departure from Tomsk, Michael and she reached the town of Semilowskoe, after a journey of thirty-five miles.

Michael had not uttered a single word. It was not Nadia who held his hand, it was he who held that of his companion during the whole of that night; but, thanks to that

trembling little hand which guided him, he had walked at his ordinary pace.

Semilowskoe was almost entirely abandoned. The inhabitants had fled. Not more than two or three houses were still occupied. All that the town contained, useful or precious, had been carried off in wagons. However, Nadia was obliged to make a halt of a few hours. They both required food and rest.

The young girl led her companion to the extremity of the town. There they found an empty house, the door wide open. An old rickety wooden bench stood in the middle of the room, near the high stove which is to be found in all Siberian houses. They silently seated themselves.

Nadia gazed in her companion's face as she had never before gazed. There was more than gratitude, more than pity, in that look. Could Michael have seen her, he would have read in that sweet desolate gaze a world of devotion and tenderness.

The eyelids of the blind man, made red by the heated blade, fell half over his eyes. The pupils seemed to be singularly enlarged. The rich blue of the iris was darker than formerly. The eyelashes and eyebrows were partly burnt, but in appearance, at least, the old penetrating look appeared to have undergone no change. If he could no longer see, if his blindness was complete, it was because the sensibility of the retina and optic nerve was radically destroyed by the fierce heat of the steel.

Then Michael stretched out his hands.

"Are you there, Nadia?" he asked.

"Yes," replied the young girl; "I am close to you, and I will not go away from you, Michael."

At his name, pronounced by Nadia for the first time, a thrill passed through Michael's frame. He perceived that his companion knew all, who he was.

"Nadia," replied he, "we must separate!"

"We separate? How so, Michael?"

"I must not be an obstacle to your journey! Your father is waiting for you at Irkutsk! You must rejoin your father!"

“My father would curse me, Michael, were I to abandon you now, after all you have done for me!”

“Nadia, Nadia,” replied Michael, “you should think only of your father!”

“Michael,” replied Nadia, “you have more need of me than my father. Do you mean to give up going to Irkutsk?”

“Never!” cried Michael, in a tone which plainly showed that none of his energy was gone.

“But you have not the letter!”

“That letter of which Ivan Ogareff robbed me! Well! I shall manage without it, Nadia! They have treated me as a spy! I will act as a spy! I will go and repeat at Irkutsk all I have seen, all I have heard; I swear it by Heaven above! The traitor shall meet me one day face to face! But I must arrive at Irkutsk before him.”

“And yet you speak of our separating, Michael?”

“Nadia, they have taken everything from me!”

“I have some roubles still, and my eyes! I can see for you, Michael; and I will lead you thither, where you could not go alone!”

“And how shall we go?”

“On foot.”

“And how shall we live?”

“By begging.”

“Let us start, Nadia.”

“Come, Michael.”

The two young people no longer kept the names “brother” and “sister.” In their common misfortune, they felt still closer united. They left the house after an hour’s repose. Nadia had procured in the town some morsels of “tchornekhleb,” a sort of

barley bread, and a little mead, called “meod” in Russia. This had cost her nothing, for she had already begun her plan of begging. The bread and mead had in some degree appeased Michael’s hunger and thirst. Nadia gave him the lion’s share of this scanty meal. He ate the pieces of bread his companion gave him, drank from the gourd she held to his lips.

“Are you eating, Nadia?” he asked several times.

“Yes, Michael,” invariably replied the young girl, who contented herself with what her companion left.

Michael and Nadia quitted Semilowskoe, and once more set out on the laborious road to Irkutsk. The girl bore up in a marvelous way against fatigue. Had Michael seen her, perhaps he would not have had the courage to go on. But Nadia never complained, and Michael, hearing no sigh, walked at a speed he was unable to repress. And why? Did he still expect to keep before the Tartars? He was on foot, without money; he was blind, and if Nadia, his only guide, were to be separated from him, he could only lie down by the side of the road and there perish miserably. But if, on the other hand, by energetic perseverance he could reach Krasnoiarsk, all was perhaps not lost, since the governor, to whom he would make himself known, would not hesitate to give him the means of reaching Irkutsk.

Michael walked on, speaking little, absorbed in his own thoughts. He held Nadia’s hand. The two were in incessant communication. It seemed to them that they had no need of words to exchange their thoughts. From time to time Michael said, “Speak to me, Nadia.”

“Why should I, Michael? We are thinking together!” the young girl would reply, and contrived that her voice should not betray her extreme fatigue.

But sometimes, as if her heart had ceased to beat for an instant, her limbs tottered, her steps flagged, her arms fell to her sides, she dropped behind. Michael then stopped, he fixed his eyes on the poor girl, as though he would try to pierce the gloom which surrounded him; his breast heaved; then, supporting his companion more than before, he started on afresh.

However, amidst these continual miseries, a fortunate circumstance on that day occurred which it appeared likely would considerably ease their fatigue. They had been

walking from Semilowskoe for two hours when Michael stopped.

“Is there no one on the road?”

“Not a single soul,” replied Nadia.

“Do you not hear some noise behind us? If they are Tartars we must hide. Keep a good look-out!”

“Wait, Michael!” replied Nadia, going back a few steps to where the road turned to the right.

Michael Strogoff waited alone for a minute, listening attentively.

Nadia returned almost immediately and said, “It is a cart. A young man is leading it.”

“Is he alone?”

“Alone.”

Michael hesitated an instant. Should he hide? or should he, on the contrary, try to find a place in the vehicle, if not for himself, at least for her? For himself, he would be quite content to lay one hand on the cart, to push it if necessary, for his legs showed no sign of failing him; but he felt sure that Nadia, compelled to walk ever since they crossed the Obi, that is, for eight days, must be almost exhausted. He waited.

The cart was soon at the corner of the road. It was a very dilapidated vehicle, known in the country as a kibitka, just capable of holding three persons. Usually the kibitka is drawn by three horses, but this had but one, a beast with long hair and a very long tail. It was of the Mongol breed, known for strength and courage.

A young man was leading it, with a dog beside him. Nadia saw at once that the young man was Russian; his face was phlegmatic, but pleasant, and at once inspired confidence. He did not appear to be in the slightest hurry; he was not walking fast that he might spare his horse, and, to look at him, it would not have been believed that he was following a road which might at any instant be swarming with Tartars.

Nadia, holding Michael by the hand, made way for the vehicle. The kibitka stopped, and the driver smilingly looked at the young girl.

“And where are you going to in this fashion?” he asked, opening wide his great honest eyes.

At the sound of his voice, Michael said to himself that he had heard it before. And it was satisfactory to him to recognize the man for his brow at once cleared.

“Well, where are you going?” repeated the young man, addressing himself more directly to Michael.

“We are going to Irkutsk,” he replied.

“Oh! little father, you do not know that there are still versts and versts between you and Irkutsk?”

“I know it.”

“And you are going on foot?”

“On foot.”

“You, well! but the young lady?”

“She is my sister,” said Michael, who judged it prudent to give again this name to Nadia.

“Yes, your sister, little father! But, believe me, she will never be able to get to Irkutsk!”

“Friend,” returned Michael, approaching him, “the Tartars have robbed us of everything, and I have not a copeck to offer you; but if you will take my sister with you, I will follow your cart on foot; I will run when necessary, I will not delay you an hour!”

“Brother,” exclaimed Nadia, “I will not! I will not! Sir, my brother is blind!”

“Blind!” repeated the young man, much moved.

“The Tartars have burnt out his eyes!” replied Nadia, extending her hands, as if imploring pity.

“Burnt out his eyes! Oh! poor little father! I am going to Krasnoiarsk. Well, why should not you and your sister mount in the kibitka? By sitting a little close, it will hold us all

three. Besides, my dog will not refuse to go on foot; only I don't go fast, I spare my horse."

"Friend, what is your name?" asked Michael.

"My name is Nicholas Pigassof."

"It is a name that I will never forget," said Michael.

"Well, jump up, little blind father. Your sister will be beside you, in the bottom of the cart; I sit in front to drive. There is plenty of good birch bark and straw in the bottom; it's like a nest. Serko, make room!"

The dog jumped down without more telling. He was an animal of the Siberian race, gray hair, of medium size, with an honest big head, just made to pat, and he, moreover, appeared to be much attached to his master.

In a moment more, Michael and Nadia were seated in the kibitka. Michael held out his hands as if to feel for those of Pigassof. "You wish to shake my hands!" said Nicholas. "There they are, little father! shake them as long as it will give you any pleasure."

The kibitka moved on; the horse, which Nicholas never touched with the whip, ambled along. Though Michael did not gain any in speed, at least some fatigue was spared to Nadia.

Such was the exhaustion of the young girl, that, rocked by the monotonous movement of the kibitka, she soon fell into a sleep, its soundness proving her complete prostration. Michael and Nicholas laid her on the straw as comfortably as possible. The compassionate young man was greatly moved, and if a tear did not escape from Michael's eyes, it was because the red-hot iron had dried up the last!

"She is very pretty," said Nicholas.

"Yes," replied Michael.

"They try to be strong, little father, they are brave, but they are weak after all, these dear little things! Have you come from far."

"Very far."

“Poor young people! It must have hurt you very much when they burnt your eyes!”

“Very much,” answered Michael, turning towards Nicholas as if he could see him.

“Did you not weep?”

“Yes.”

“I should have wept too. To think that one could never again see those one loves. But they can see you, however; that’s perhaps some consolation!”

“Yes, perhaps. Tell me, my friend,” continued Michael, “have you never seen me anywhere before?”

“You, little father? No, never.”

“The sound of your voice is not unknown to me.”

“Why!” returned Nicholas, smiling, “he knows the sound of my voice! Perhaps you ask me that to find out where I come from. I come from Kolyvan.”

“From Kolyvan?” repeated Michael. “Then it was there I met you; you were in the telegraph office?”

“That may be,” replied Nicholas. “I was stationed there. I was the clerk in charge of the messages.”

“And you stayed at your post up to the last moment?”

“Why, it’s at that moment one ought to be there!”

“It was the day when an Englishman and a Frenchman were disputing, roubles in hand, for the place at your wicket, and the Englishman telegraphed some poetry.”

“That is possible, but I do not remember it.”

“What! you do not remember it?”

“I never read the dispatches I send. My duty being to forget them, the shortest way is not to know them.”

This reply showed Nicholas Pigassof's character. In the meanwhile the kibitka pursued its way, at a pace which Michael longed to render more rapid. But Nicholas and his horse were accustomed to a pace which neither of them would like to alter. The horse went for two hours and rested one — so on, day and night. During the halts the horse grazed, the travelers ate in company with the faithful Serko. The kibitka was provisioned for at least twenty persons, and Nicholas generously placed his supplies at the disposal of his two guests, whom he believed to be brother and sister.

After a day's rest, Nadia recovered some strength. Nicholas took the best possible care of her. The journey was being made under tolerable circumstances, slowly certainly, but surely. It sometimes happened that during the night, Nicholas, although driving, fell asleep, and snored with a clearness which showed the calmness of his conscience. Perhaps then, by looking close, Michael's hand might have been seen feeling for the reins, and giving the horse a more rapid pace, to the great astonishment of Serko, who, however, said nothing. The trot was exchanged for the amble as soon as Nicholas awoke, but the kibitka had not the less gained some versts.

Thus they passed the river Ichirnsk, the villages of Ichisnokoe, Berikylokoe, Kuskoe, the river Marunsk, the village of the same name, Bogostowskoe, and, lastly, the Ichoula, a little stream which divides Western from Eastern Siberia. The road now lay sometimes across wide moors, which extended as far as the eye could reach, sometimes through thick forests of firs, of which they thought they should never get to the end. Everywhere was a desert; the villages were almost entirely abandoned. The peasants had fled beyond the Yenisei, hoping that this wide river would perhaps stop the Tartars.

On the 22d of August, the kibitka entered the town of Atchinsk, two hundred and fifty miles from Tomsk. Eighty miles still lay between them and Krasnoiarsk.

No incident had marked the journey. For the six days during which they had been together, Nicholas, Michael, and Nadia had remained the same, the one in his unchange-able calm, the other two, uneasy, and thinking of the time when their companion would leave them.

Michael saw the country through which they traveled with the eyes of Nicholas and the young girl. In turns, they each described to him the scenes they passed. He knew whether he was in a forest or on a plain, whether a hut was on the steppe, or whether any Siberian was in sight. Nicholas was never silent, he loved to talk, and, from his

peculiar way of viewing things, his friends were amused by his conversation. One day, Michael asked him what sort of weather it was.

“Fine enough, little father,” he answered, “but soon we shall feel the first winter frosts. Perhaps the Tartars will go into winter quarters during the bad season.”

Michael Strogoff shook his head with a doubtful air.

“You do not think so, little father?” resumed Nicholas. “You think that they will march on to Irkutsk?”

“I fear so,” replied Michael.

“Yes... you are right; they have with them a bad man, who will not let them loiter on the way. You have heard speak of Ivan Ogareff?”

“Yes.”

“You know that it is not right to betray one’s country!”

“No... it is not right...” answered Michael, who wished to remain unmoved.

“Little father,” continued Nicholas, “it seems to me that you are not half indignant enough when Ivan Ogareff is spoken of. Your Russian heart ought to leap when his name is uttered.”

“Believe me, my friend, I hate him more than you can ever hate him,” said Michael.

“It is not possible,” replied Nicholas; “no, it is not possible! When I think of Ivan Ogareff, of the harm which he is doing to our sacred Russia, I get into such a rage that if I could get hold of him — ”

“If you could get hold of him, friend?”

“I think I should kill him.”

“And I, I am sure of it,” returned Michael quietly.

CHAPTER VII THE PASSAGE OF THE YENISEI

AT nightfall, on the 25th of August, the kibitka came in sight of Krasnoiarsk. The journey from Tomsk had taken eight days. If it had not been accomplished as rapidly as it might, it was because Nicholas had slept little. Consequently, it was impossible to increase his horse's pace, though in other hands, the journey would not have taken sixty hours.

Happily, there was no longer any fear of Tartars. Not a scout had appeared on the road over which the kibitka had just traveled. This was strange enough, and evidently some serious cause had prevented the Emir's troops from marching without delay upon Irkutsk. Something had occurred. A new Russian corps, hastily raised in the government of Yeniseisk, had marched to Tomsk to endeavor to retake the town. But, being too weak to withstand the Emir's troops, now concentrated there, they had been forced to effect a retreat. Feofar-Khan, including his own soldiers, and those of the Khanats of Khokhand and Koun-douze, had now under his command two hundred and fifty thousand men, to which the Russian government could not as yet oppose a sufficient force. The invasion could not, therefore, be immediately stopped, and the whole Tartar army might at once march upon Irkutsk. The battle of Tomsk was on the 22nd of August, though this Michael did not know, but it explained why the vanguard of the Emir's army had not appeared at Krasnoiarsk by the 25th.

However, though Michael Strogoff could not know the events which had occurred since his departure, he at least knew that he was several days in advance of the Tartars, and that he need not despair of reaching before them the town of Irkutsk, still six hundred miles distant.

Besides, at Krasnoiarsk, of which the population is about twelve thousand souls, he depended upon obtaining some means of transport. Since Nicholas Pigassof was to stop in that town, it would be necessary to replace him by a guide, and to change the kibitka for another more rapid vehicle. Michael, after having addressed himself to the governor of the town, and established his identity and quality as Courier of the Czar — which would be easy — doubted not that he would be enabled to get to Irkutsk in the shortest possible time. He would thank the good Nicholas Pigassof, and set out immediately with Nadia, for he did not wish to leave her until he had placed her in her father's arms. Though Nicholas had resolved to stop at Krasnoiarsk, it was only as he said, "on condition of finding employment there." In fact, this model clerk, after having stayed to

the last minute at his post in Kolyvan, was endeavoring to place himself again at the disposal of the government. “Why should I receive a salary which I have not earned?” he would say.

In the event of his services not being required at Krasnoiarsk, which it was expected would be still in telegraphic communication with Irkutsk, he proposed to go to Oudinsk, or even to the capital of Siberia itself. In the latter case, he would continue to travel with the brother and sister; and where would they find a surer guide, or a more devoted friend?

The kibitka was now only half a verst from Krasnoiarsk. The numerous wooden crosses which are erected at the approaches to the town, could be seen to the right and left of the road. It was seven in the evening; the outline of the churches and of the houses built on the high bank of the Yenisei were clearly defined against the evening sky, and the waters of the river reflected them in the twilight.

“Where are we, sister?” asked Michael.

“Half a verst from the first houses,” replied Nadia.

“Can the town be asleep?” observed Michael. “Not a sound strikes my ear.”

“And I cannot see the slightest light, nor even smoke mounting into the air,” added Nadia.

“What a queer town!” said Nicholas. “They make no noise in it, and go to bed uncommonly early!”

A presentiment of impending misfortune passed across Michael’s heart. He had not said to Nadia that he had placed all his hopes on Krasnoiarsk, where he expected to find the means of safely finishing his journey. He much feared that his anticipations would again be disappointed.

But Nadia had guessed his thoughts, although she could not understand why her companion should be so anxious to reach Irkutsk, now that the Imperial letter was gone. She one day said something of the sort to him. “I have sworn to go to Irkutsk,” he replied.

But to accomplish his mission, it was necessary that at Krasnoiarsk he should find some more rapid mode of locomotion. “Well, friend,” said he to Nicholas, “why are we not going on?”

“Because I am afraid of waking up the inhabitants of the town with the noise of my carriage!” And with a light fleck of the whip, Nicholas put his horse in motion.

Ten minutes after they entered the High Street. Krasnoiarsk was deserted; there was no longer an Athenian in this “Northern Athens,” as Madame de Bourboulon has called it. Not one of their dashing equipages swept through the wide, clean streets. Not a pedestrian enlivened the footpaths raised at the bases of the magnificent wooden houses, of monumental aspect! Not a Siberian belle, dressed in the last French fashion, promenaded the beautiful park, cleared in a forest of birch trees, which stretches away to the banks of the Yenisei! The great bell of the cathedral was dumb; the chimes of the churches were silent. Here was complete desolation. There was no longer a living being in this town, lately so lively!

The last telegram sent from the Czar’s cabinet, before the rupture of the wire, had ordered the governor, the garrison, the inhabitants, whoever they might be, to leave Krasnoiarsk, to carry with them any articles of value, or which might be of use to the Tartars, and to take refuge at Irkutsk. The same injunction was given to all the villages of the province. It was the intention of the Muscovite government to lay the country desert before the invaders. No one thought for an instant of disputing these orders. They were executed, and this was the reason why not a single human being remained in Krasnoiarsk.

Michael Strogoff, Nadia, and Nicholas passed silently through the streets of the town. They felt half-stupefied. They themselves made the only sound to be heard in this dead city. Michael allowed nothing of what he felt to appear, but he inwardly raged against the bad luck which pursued him, his hopes being again disappointed.

“Alack, alack!” cried Nicholas, “I shall never get any employment in this desert!”

“Friend,” said Nadia, “you must go on with us.”

“I must indeed!” replied Nicholas. “The wire is no doubt still working between Oudinsk and Irkutsk, and there — Shall we start, little father?”

“Let us wait till to-morrow,” answered Michael.

“You are right,” said Nicholas. “We have the Yenisei to cross, and need light to see our way there!”

“To see!” murmured Nadia, thinking of her blind companion.

Nicholas heard her, and turning to Michael, “Forgive me, little father,” said he. “Alas! night and day, it is true, are all the same to you!”

“Do not reproach yourself, friend,” replied Michael, pressing his hand over his eyes. “With you for a guide I can still act. Take a few hours’ repose. Nadia must rest too. To-morrow we will recommence our journey!”

Michael and his friends had not to search long for a place of rest. The first house, the door of which they pushed open, was empty, as well as all the others. Nothing could be found within but a few heaps of leaves. For want of better fodder the horse had to content himself with this scanty nourishment. The provisions of the kibitka were not yet exhausted, so each had a share. Then, after having knelt before a small picture of the Panaghia, hung on the wall, and still lighted up by a flickering lamp, Nicholas and the young girl slept, whilst Michael, over whom sleep had no influence, watched.

Before daybreak the next morning, the 26th of August, the horse was drawing the kibitka through the forests of birch trees towards the banks of the Yenisei. Michael was in much anxiety. How was he to cross the river, if, as was probable, all boats had been destroyed to retard the Tartars’ march? He knew the Yenisei, its width was considerable, its currents strong. Ordinarily by means of boats specially built for the conveyance of travelers, carriages, and horses, the passage of the Yenisei takes about three hours, and then it is with extreme difficulty that the boats reach the opposite bank. Now, in the absence of any ferry, how was the kibitka to get from one bank to the other?

Day was breaking when the kibitka reached the left bank, where one of the wide alleys of the park ended. They were about a hundred feet above the Yenisei, and could therefore survey the whole of its wide course.

“Do you see a boat?” asked Michael, casting his eyes eagerly about from one side to the other, mechanically, no doubt, as if he could really see.

“It is scarcely light yet, brother,” replied Nadia. “The fog is still thick, and we cannot see the water.”

“But I hear it roaring,” said Michael.

Indeed, from the fog issued a dull roaring sound. The waters being high rushed down with tumultuous violence. All three waited until the misty curtain should rise. The sun would not be long in dispersing the vapors.

“Well?” asked Michael.

“The fog is beginning to roll away, brother,” replied Nadia, “and it will soon be clear.”

“Then you do not see the surface of the water yet?”

“Not yet.”

“Have patience, little father,” said Nicholas. “All this will soon disappear. Look! here comes the breeze! It is driving away the fog. The trees on the opposite hills are already appearing. It is sweeping, flying away. The kindly rays of the sun have condensed all that mass of mist. Ah! how beautiful it is, my poor fellow, and how unfortunate that you cannot see such a lovely sight!”

“Do you see a boat?” asked Michael.

“I see nothing of the sort,” answered Nicholas.

“Look well, friend, on this and the opposite bank, as far as your eye can reach. A raft, even a canoe?”

Nicholas and Nadia, grasping the bushes on the edge of the cliff, bent over the water. The view they thus obtained was extensive. At this place the Yenisei is not less than a mile in width, and forms two arms, of unequal size, through which the waters flow swiftly. Between these arms lie several islands, covered with alders, willows, and poplars, looking like verdant ships, anchored in the river. Beyond rise the high hills of the Eastern shore, crowned with forests, whose tops were then empurpled with light. The Yenisei stretched on either side as far as the eye could reach. The beautiful panorama lay before them for a distance of fifty versts.

But not a boat was to be seen. All had been taken away or destroyed, according to order. Unless the Tartars should bring with them materials for building a bridge of boats, their march towards Irkutsk would certainly be stopped for some time by this barrier, the Yenisei.

“I remember,” said Michael, “that higher up, on the outskirts of Krasnoiarsk, there is a little quay. There the boats touch. Friend, let us go up the river, and see if some boat has not been forgotten on the bank.”

Nadia seized Michael’s hand and started off at a rapid pace in the direction indicated. If only a boat or a barge large enough to hold the kibitka could be found, or even one that would carry just themselves, Michael would not hesitate to attempt the passage! Twenty minutes after, all three had reached the little quay, with houses on each side quite down to the water’s edge. It was like a village standing beyond the town of Krasnoiarsk.

But not a boat was on the shore, not a barge at the little wharf, nothing even of which a raft could be made large enough to carry three people. Michael questioned Nicholas, who made the discouraging reply that the crossing appeared to him absolutely impracticable.

“We shall cross!” answered Michael.

The search was continued. They examined the houses on the shore, abandoned like all the rest of Krasnoiarsk. They had merely to push open the doors and enter. The cottages were evidently those of poor people, and quite empty. Nicholas visited one, Nadia entered another, and even Michael went here and there and felt about, hoping to light upon some article that might be useful.

Nicholas and the girl had each fruitlessly rummaged these cottages and were about to give up the search, when they heard themselves called. Both ran to the bank and saw Michael standing on the threshold of a door.

“Come!” he exclaimed. Nicholas and Nadia went towards him and followed him into the cottage.

“What are these?” asked Michael, touching several objects piled up in a corner.

“They are leathern bottles,” answered Nicholas.

“Are they full?”

“Yes, full of koumyss. We have found them very opportunely to renew our provisions!”

“Koumyss” is a drink made of mare’s or camel’s milk, and is very sustaining, and even intoxicating; so that Nicholas and his companions could not but congratulate themselves on the discovery.

“Save one,” said Michael, “but empty the others.”

“Directly, little father.”

“These will help us to cross the Yenisei.”

“And the raft?”

“Will be the kibitka itself, which is light enough to float. Besides, we will sustain it, as well as the horse, with these bottles.”

“Well thought of, little father,” exclaimed Nicholas, “and by God’s help we will get safely over... though perhaps not in a straight line, for the current is very rapid!”

“What does that matter?” replied Michael. “Let us get across first, and we shall soon find out the road to Irkutsk on the other side of the river.”

“To work, then,” said Nicholas, beginning to empty the bottles.

One full of koumyss was reserved, and the rest, with the air carefully fastened in, were used to form a floating apparatus. Two bottles were fastened to the horse’s sides to support it in the water. Two others were attached to the shafts to keep them on a level with the body of the machine, thus transformed into a raft. This work was soon finished.

“You will not be afraid, Nadia?” asked Michael.

“No, brother,” answered the girl.

“And you, friend?”

“I?” cried Nicholas. “I am now going to have one of my dreams realized — that of sailing in a cart.”

At the spot where they were now standing, the bank sloped, and was suitable for the launching of the kibitka. The horse drew it into the water, and they were soon both floating. As to Serko, he was swimming bravely.

The three passengers, seated in the vehicle, had with due precaution taken off their shoes and stockings; but, thanks to the bottles, the water did not even come over their ankles. Michael held the reins, and, according to Nicholas's directions, guided the animal obliquely, but cautiously, so as not to exhaust him by struggling against the current. So long as the kibitka went with the current all was easy, and in a few minutes it had passed the quays of Krasnoiarsk. It drifted northwards, and it was soon evident that it would only reach the opposite bank far below the town. But that mattered little. The crossing would have been made without great difficulty, even on this imperfect apparatus, had the current been regular; but, unfortunately, there were whirlpools in numbers, and soon the kibitka, notwithstanding all Michael's efforts, was irresistibly drawn into one of these.

There the danger was great. The kibitka no longer drifted, but spun rapidly round, inclining towards the center of the eddy, like a rider in a circus. The horse could scarcely keep his head above water, and ran a great risk of being suffocated. Serko had been obliged to take refuge in the carriage.

Michael knew what was happening. He felt himself drawn round in a gradually narrowing line, from which they could not get free. How he longed to see, to be better able to avoid this peril, but that was no longer possible. Nadia was silent, her hands clinging to the sides of the cart, which was inclining more and more towards the center of depression.

And Nicholas, did he not understand the gravity of the situation? Was it with him phlegm or contempt of danger, courage or indifference? Was his life valueless in his eyes, and, according to the Eastern expression, "an hotel for five days," which, whether one is willing or not, must be left the sixth? At any rate, the smile on his rosy face never faded for an instant.

The kibitka was thus in the whirlpool, and the horse was nearly exhausted, when, all at once, Michael, throwing off such of his garments as might impede him, jumped into the water; then, seizing with a strong hand the bridle of the terrified horse, he gave him

such an impulse that he managed to struggle out of the circle, and getting again into the current, the kibitka drifted along anew.

“Hurrah!” exclaimed Nicholas.

Two hours after leaving the wharf, the kibitka had crossed the widest arm of the river, and had landed on an island more than six versts below the starting point.

There the horse drew the cart onto the bank, and an hour’s rest was given to the courageous animal; then the island having been crossed under the shade of its magnificent birches, the kibitka found itself on the shore of the smaller arm of the Yenisei.

This passage was much easier; no whirlpools broke the course of the river in this second bed; but the current was so rapid that the kibitka only reached the opposite side five versts below. They had drifted eleven versts in all.

These great Siberian rivers across which no bridges have as yet been thrown, are serious obstacles to the facility of communication. All had been more or less unfortunate to Michael Strogoff. On the Irtych, the boat which carried him and Nadia had been attacked by Tartars. On the Obi, after his horse had been struck by a bullet, he had only by a miracle escaped from the horsemen who were pursuing him. In fact, this passage of the Yenisei had been performed the least disastrously.

“That would not have been so amusing,” exclaimed Nicholas, rubbing his hands, as they disembarked on the right bank of the river, “if it had not been so difficult.”

“That which has only been difficult to us, friend,” answered Michael Strogoff, “will, perhaps, be impossible to the Tartars.”

CHAPTER VIII A HARE CROSSES THE ROAD

MICHAEL STROGOFF might at last hope that the road to Irkutsk was clear. He had distanced the Tartars, now detained at Tomsk, and when the Emir's soldiers should arrive at Krasnoiarsk they would find only a deserted town. There being no communication between the two banks of the Yenisei, a delay of some days would be caused until a bridge of boats could be established, and to accomplish this would be a difficult undertaking. For the first time since the encounter with Ivan Ogareff at Omsk, the courier of the Czar felt less uneasy, and began to hope that no fresh obstacle would delay his progress.

The road was good, for that part of it which extends between Krasnoiarsk and Irkutsk is considered the best in the whole journey; fewer jolts for travelers, large trees to shade them from the heat of the sun, sometimes forests of pines or cedars covering an extent of a hundred versts. It was no longer the wide steppe with limitless horizon; but the rich country was empty. Everywhere they came upon deserted villages. The Siberian peasantry had vanished. It was a desert, but a desert by order of the Czar.

The weather was fine, but the air, which cooled during the night, took some time to get warm again. Indeed it was now near September, and in this high region the days were sensibly shortening. Autumn here lasts but a very little while, although this part of Siberian territory is not situated above the fifty-fifth parallel, that of Edinburgh and Copenhagen. However, winter succeeds summer almost unexpectedly. These winters of Asiatic Russia may be said to be precocious, considering that during them the thermometer falls until the mercury is frozen nearly 42 degrees below zero, and that 20 degrees below zero is considered an unsupportable temperature.

The weather favored our travelers. It was neither stormy nor rainy. The health of Nadia and Michael was good, and since leaving Tomsk they had gradually recovered from their past fatigues.

As to Nicholas Pigassof, he had never been better in his life. To him this journey was a trip, an agreeable excursion in which he employed his enforced holiday.

"Decidedly," said he, "this is pleasanter than sitting twelve hours a day, perched on a stool, working the manip-ulator!"

Michael had managed to get Nicholas to make his horse quicken his pace. To obtain this result, he had confided to Nicholas that Nadia and he were on their way to join their father, exiled at Irkutsk, and that they were very anxious to get there. Certainly, it would not do to overwork the horse, for very probably they would not be able to exchange him for another; but by giving him frequent rests — every ten miles, for instance — forty miles in twenty-four hours could easily be accomplished. Besides, the animal was strong, and of a race calculated to endure great fatigue. He was in no want of rich pasturage along the road, the grass being thick and abundant. Therefore, it was possible to demand an increase of work from him.

Nicholas gave in to all these reasons. He was much moved at the situation of these two young people, going to share their father's exile. Nothing had ever appeared so touching to him. With what a smile he said to Nadia: "Divine goodness! what joy will Mr. Korpanoff feel, when his eyes behold you, when his arms open to receive you! If I go to Irkutsk — and that appears very probable now — will you permit me to be present at that interview! You will, will you not?" Then, striking his forehead: "But, I forgot, what grief too when he sees that his poor son is blind! Ah! everything is mingled in this world!"

However, the result of all this was the kibitka went faster, and, according to Michael's calculations, now made almost eight miles an hour.

After crossing the little river Biriousa, the kibitka reached Biriousensk on the morning of the 4th of September. There, very fortunately, for Nicholas saw that his provisions were becoming exhausted, he found in an oven a dozen "pogatchas," a kind of cake prepared with sheep's fat and a large supply of plain boiled rice. This increase was very opportune, for something would soon have been needed to replace the koumyss with which the kibitka had been stored at Krasnoiarsk.

After a halt, the journey was continued in the afternoon. The distance to Irkutsk was not now much over three hundred miles. There was not a sign of the Tartar vanguard. Michael Strogoff had some grounds for hoping that his journey would not be again delayed, and that in eight days, or at most ten, he would be in the presence of the Grand Duke.

On leaving Biriousinsk, a hare ran across the road, in front of the kibitka. "Ah!" exclaimed Nicholas.

“What is the matter, friend?” asked Michael quickly, like a blind man whom the least sound arouses.

“Did you not see?” said Nicholas, whose bright face had become suddenly clouded. Then he added, “Ah! no! you could not see, and it’s lucky for you, little father!”

“But I saw nothing,” said Nadia.

“So much the better! So much the better! But I — I saw!”

“What was it then?” asked Michael.

“A hare crossing our road!” answered Nicholas.

In Russia, when a hare crosses the path, the popular belief is that it is the sign of approaching evil. Nicholas, superstitious like the greater number of Russians, stopped the kibitka.

Michael understood his companion’s hesitation, without sharing his credulity, and endeavored to reassure him, “There is nothing to fear, friend,” said he.

“Nothing for you, nor for her, I know, little father,” answered Nicholas, “but for me!”

“It is my fate,” he continued. And he put his horse in motion again. However, in spite of these forebodings the day passed without any accident.

At twelve o’clock the next day, the 6th of September, the kibitka halted in the village of Alsalevok, which was as deserted as the surrounding country. There, on a doorstep, Nadia found two of those strong-bladed knives used by Siberian hunters. She gave one to Michael, who concealed it among his clothes, and kept the other herself.

Nicholas had not recovered his usual spirits. The ill-omen had affected him more than could have been believed, and he who formerly was never half an hour without speaking, now fell into long reveries from which Nadia found it difficult to arouse him. The kibitka rolled swiftly along the road. Yes, swiftly! Nicholas no longer thought of being so careful of his horse, and was as anxious to arrive at his journey’s end as Michael himself. Notwithstanding his fatalism, and though resigned, he would not believe himself in safety until within the walls of Irkutsk. Many Russians would have

thought as he did, and more than one would have turned his horse and gone back again, after a hare had crossed his path.

Some observations made by him, the justice of which was proved by Nadia transmitting them to Michael, made them fear that their trials were not yet over. Though the land from Krasnoiarsk had been respected in its natural productions, its forests now bore trace of fire and steel; and it was evident that some large body of men had passed that way.

Twenty miles before Nijni-Oudinsk, the indications of recent devastation could not be mistaken, and it was impossible to attribute them to others than the Tartars. It was not only that the fields were trampled by horse's feet, and that trees were cut down. The few houses scattered along the road were not only empty, some had been partly demolished, others half burnt down. The marks of bullets could be seen on their walls.

Michael's anxiety may be imagined. He could no longer doubt that a party of Tartars had recently passed that way, and yet it was impossible that they could be the Emir's soldiers, for they could not have passed without being seen. But then, who were these new invaders, and by what out-of-the-way path across the steppe had they been able to join the highroad to Irkutsk? With what new enemies was the Czar's courier now to meet?

He did not communicate his apprehensions either to Nicholas or Nadia, not wishing to make them uneasy. Besides, he had resolved to continue his way, as long as no insurmountable obstacle stopped him. Later, he would see what it was best to do. During the ensuing day, the recent passage of a large body of foot and horse became more and more apparent. Smoke was seen above the horizon. The kibitka advanced cautiously. Several houses in deserted villages still burned, and could not have been set on fire more than four and twenty hours before.

At last, during the day, on the 8th of September, the kibitka stopped suddenly. The horse refused to advance. Serko barked furiously.

"What is the matter?" asked Michael.

"A corpse!" replied Nicholas, who had leapt out of the kibitka. The body was that of a moujik, horribly mutilated, and already cold. Nicholas crossed himself. Then, aided by Michael, he carried the body to the side of the road. He would have liked to give it

decent burial, that the wild beasts of the steppe might not feast on the miserable remains, but Michael could not allow him the time.

“Come, friend, come!” he exclaimed, “we must not delay, even for an hour!” And the kibitka was driven on.

Besides, if Nicholas had wished to render the last duties to all the dead bodies they were now to meet with on the Siberian highroad, he would have had enough to do! As they approached Nijni-Oudinsk, they were found by twenties, stretched on the ground.

It was, however, necessary to follow this road until it was manifestly impossible to do so longer without falling into the hands of the invaders. The road they were following could not be abandoned, and yet the signs of devastation and ruin increased at every village they passed through. The blood of the victims was not yet dry. As to gaining information about what had occurred, that was impossible. There was not a living being left to tell the tale.

About four o’clock in the afternoon of this day, Nicholas caught sight of the tall steeples of the churches of Nijni-Oudinsk. Thick vapors, which could not have been clouds, were floating around them.

Nicholas and Nadia looked, and communicated the result of their observations to Michael. They must make up their minds what to do. If the town was abandoned, they could pass through without risk, but if, by some inexplicable maneuver, the Tartars occupied it, they must at every cost avoid the place.

“Advance cautiously,” said Michael Strogoff, “but advance!”

A verst was soon traversed.

“Those are not clouds, that is smoke!” exclaimed Nadia. “Brother, they are burning the town!”

It was, indeed, only too plain. Flashes of light appeared in the midst of the vapor. It became thicker and thicker as it mounted upwards. But were they Tartars who had done this? They might be Russians, obeying the orders of the Grand Duke. Had the government of the Czar determined that from Krasnoiarsk, from the Yenisei, not a town, not a village should offer a refuge to the Emir’s soldiers? What was Michael to do?

He was undecided. However, having weighed the pros and cons, he thought that whatever might be the difficulties of a journey across the steppe without a beaten path, he ought not to risk capture a second time by the Tartars. He was just proposing to Nicholas to leave the road, when a shot was heard on their right. A ball whistled, and the horse of the kibitka fell dead, shot through the head.

A dozen horsemen dashed forward, and the kibitka was surrounded. Before they knew where they were, Michael, Nadia, and Nicholas were prisoners, and were being dragged rapidly towards Nijni-Oudinsk.

Michael, in this second attack, had lost none of his presence of mind. Being unable to see his enemies, he had not thought of defending himself. Even had he possessed the use of his eyes, he would not have attempted it. The consequences would have been his death and that of his companions. But, though he could not see, he could listen and understand what was said.

From their language he found that these soldiers were Tartars, and from their words, that they preceded the invading army.

In short, what Michael learnt from the talk at the present moment, as well as from the scraps of conversation he overheard later, was this. These men were not under the direct orders of the Emir, who was now detained beyond the Yenisei. They made part of a third column chiefly composed of Tartars from the khanats of Khokland and Koondooz, with which Feofar’s army was to affect a junction in the neighborhood of Irkutsk.

By Ogareff’s advice, in order to assure the success of the invasion in the Eastern provinces, this column had skirted the base of the Altai Mountains. Pillaging and ravaging, it had reached the upper course of the Yenisei. There, guessing what had been done at Krasnoiarsk by order of the Czar, and to facilitate the passage of the river to the Emir’s troops, this column had launched a flotilla of boats, which would enable Feofar to cross and resume the road to Irkutsk. Having done this, it had descended the valley of the Yenisei and struck the road on a level with Alsalevsk. From this little town began the frightful course of ruin which forms the chief part of Tartar warfare. Nijni-Oudinsk had shared the common fate, and the Tartars, to the number of fifty thousand, had now quitted it to take up a position before Irkutsk. Before long, they would be reinforced by the Emir’s troops.

Such was the state of affairs at this date, most serious for this isolated part of Eastern Siberia, and for the comparatively few defenders of its capital.

It can be imagined with what thoughts Michael's mind was now occupied! Who could have been astonished had he, in his present situation, lost all hope and all courage? Nothing of the sort, however; his lips muttered no other words than these: "I will get there!"

Half an hour after the attack of the Tartar horsemen, Michael Strogoff, Nadia, and Nicholas entered Nijni-Oudinsk. The faithful dog followed them, though at a distance. They could not stay in the town, as it was in flames, and about to be left by the last of the marauders. The prisoners were therefore thrown on horses and hurried away; Nicholas resigned as usual, Nadia, her faith in Michael unshaken, and Michael himself, apparently indifferent, but ready to seize any opportunity of escaping.

The Tartars were not long in perceiving that one of their prisoners was blind, and their natural barbarity led them to make game of their unfortunate victim. They were traveling fast. Michael's horse, having no one to guide him, often started aside, and so made confusion among the ranks. This drew on his rider such abuse and brutality as wrung Nadia's heart, and filled Nicholas with indignation. But what could they do? They could not speak the Tartar language, and their assistance was mercilessly refused. Soon it occurred to these men, in a refinement of cruelty, to exchange the horse Michael was riding for one which was blind. The motive of the change was explained by a remark which Michael overheard, "Perhaps that Russian can see, after all!"

Michael was placed on this horse, and the reins ironically put into his hand. Then, by dint of lashing, throwing stones, and shouting, the animal was urged into a gallop. The horse, not being guided by his rider, blind as himself, sometimes ran into a tree, sometimes went quite off the road — in consequence, collisions and falls, which might have been extremely dangerous.

Michael did not complain. Not a murmur escaped him. When his horse fell, he waited until it got up. It was, indeed, soon assisted up, and the cruel fun continued. At sight of this wicked treatment, Nicholas could not contain himself; he endeavored to go to his friend's aid. He was prevented, and treated brutally.

This game would have been prolonged, to the Tartars' great amusement, had not a serious accident put an end to it. On the 10th of September the blind horse ran away, and made straight for a pit, some thirty or forty feet deep, at the side of the road.

Nicholas tried to go after him. He was held back. The horse, having no guide, fell with his rider to the bottom. Nicholas and Nadia uttered a piercing cry! They believed that their unfortunate companion had been killed.

However, when they went to his assistance, it was found that Michael, having been able to throw himself out of the saddle, was unhurt, but the miserable horse had two legs broken, and was quite useless. He was left there to die without being put out of his suffering, and Michael, fastened to a Tartar's saddle, was obliged to follow the detachment on foot.

Even now, not a protest, not a complaint! He marched with a rapid step, scarcely drawn by the cord which tied him. He was still "the Man of Iron," of whom General Kissoff had spoken to the Czar!

The next day, the 11th of September, the detachment passed through the village of Chibarlinskoe. Here an incident occurred which had serious consequences. It was nightfall. The Tartar horsemen, having halted, were more or less intoxicated. They were about to start. Nadia, who till then, by a miracle, had been respectfully treated by the soldiers, was insulted by one of them.

Michael could not see the insult, nor the insulter, but Nicholas saw for him. Then, quietly, without thinking, without perhaps knowing what he was doing, Nicholas walked straight up to the man, and, before the latter could make the least movement to stop him, had seized a pistol from his holster and discharged it full at his breast.

The officer in command of the detachment hastened up on hearing the report. The soldiers would have cut the unfortunate Nicholas to pieces, but at a sign from their officer, he was bound instead, placed across a horse, and the detachment galloped off.

The rope which fastened Michael, gnawed through by him, broke by the sudden start of the horse, and the half-tipsy rider galloped on without perceiving that his prisoner had escaped.

Michael and Nadia found themselves alone on the road.

CHAPTER IX IN THE STEPPE

MICHAEL STROGOFF and Nadia were once more as free as they had been in the journey from Perm to the banks of the Irtych. But how the conditions under which they traveled were altered! Then, a comfortable tarantass, fresh horses, well-kept post-horses assured the rapidity of their journey. Now they were on foot; it was utterly impossible to procure any other means of locomotion, they were without resources, not knowing how to obtain even food, and they had still nearly three hundred miles to go! Moreover, Michael could now only see with Nadia's eyes.

As to the friend whom chance had given them, they had just lost him, and fearful might be his fate. Michael had thrown himself down under the brushwood at the side of the road. Nadia stood beside him, waiting for the word from him to continue the march.

It was ten o'clock. The sun had more than three hours before disappeared below the horizon. There was not a house in sight. The last of the Tartars was lost in the distance. Michael and Nadia were quite alone.

"What will they do with our friend?" exclaimed the girl. "Poor Nicholas! Our meeting will have been fatal to him!" Michael made no response.

"Michael," continued Nadia, "do you not know that he defended you when you were the Tartars' sport; that he risked his life for me?"

Michael was still silent. Motionless, his face buried in his hands; of what was he thinking? Perhaps, although he did not answer, he heard Nadia speak.

Yes! he heard her, for when the young girl added, "Where shall I lead you, Michael?"

"To Irkutsk!" he replied.

"By the highroad?"

"Yes, Nadia."

Michael was still the same man who had sworn, whatever happened, to accomplish his object. To follow the highroad, was certainly to go the shortest way. If the vanguard of Feofar-Khan's troops appeared, it would then be time to strike across the country.

Nadia took Michael’s hand, and they started.

The next morning, the 13th of September, twenty versts further, they made a short halt in the village of Joulounov-skoe. It was burnt and deserted. All night Nadia had tried to see if the body of Nicholas had not been left on the road, but it was in vain that she looked among the ruins, and searched among the dead. Was he reserved for some cruel torture at Irkutsk?

Nadia, exhausted with hunger, was fortunate enough to find in one of the houses a quantity of dried meat and “soukharis,” pieces of bread, which, dried by evaporation, preserve their nutritive qualities for an indefinite time.

Michael and the girl loaded themselves with as much as they could carry. They had thus a supply of food for several days, and as to water, there would be no want of that in a district rendered fertile by the numerous little affluents of the Angara.

They continued their journey. Michael walked with a firm step, and only slackened his pace for his companion’s sake. Nadia, not wishing to retard him, obliged herself to walk. Happily, he could not see to what a miserable state fatigue had reduced her.

However, Michael guessed it. “You are quite done up, poor child,” he said sometimes.

“No,” she would reply.

“When you can no longer walk, I will carry you.”

“Yes, Michael.”

During this day they came to the little river Oka, but it was fordable, and they had no difficulty in crossing. The sky was cloudy and the temperature moderate. There was some fear that the rain might come on, which would much have increased their misery. A few showers fell, but they did not last.

They went on as before, hand in hand, speaking little, Nadia looking about on every side; twice a day they halted. Six hours of the night were given to sleep. In a few huts Nadia again found a little mutton; but, contrary to Michael’s hopes, there was not a single beast of burden in the country; horses, camels — all had been either killed or carried off. They must still continue to plod on across this weary steppe on foot.

The third Tartar column, on its way to Irkutsk, had left plain traces: here a dead horse, there an abandoned cart. The bodies of unfortunate Siberians lay along the road, principally at the entrances to villages. Nadia, overcoming her repugnance, looked at all these corpses!

The chief danger lay, not before, but behind. The advance guard of the Emir's army, commanded by Ivan Ogareff, might at any moment appear. The boats sent down the lower Yenisei must by this time have reached Krasnoiarsk and been made use of. The road was therefore open to the invaders. No Russian force could be opposed to them between Krasnoiarsk and Lake Baikal, Michael therefore expected before long the appearance of the Tartar scouts.

At each halt, Nadia climbed some hill and looked anxiously to the Westward, but as yet no cloud of dust had signaled the approach of a troop of horse.

Then the march was resumed; and when Michael felt that he was dragging poor Nadia forward too rapidly, he went at a slower pace. They spoke little, and only of Nicholas. The young girl recalled all that this companion of a few days had done for them.

In answering, Michael tried to give Nadia some hope of which he did not feel a spark himself, for he well knew that the unfortunate fellow would not escape death.

One day Michael said to the girl, "You never speak to me of my mother, Nadia."

His mother! Nadia had never wished to do so. Why renew his grief? Was not the old Siberian dead? Had not her son given the last kiss to her corpse stretched on the plain of Tomsk?

"Speak to me of her, Nadia," said Michael. "Speak — you will please me."

And then Nadia did what she had not done before. She told all that had passed between Marfa and herself since their meeting at Omsk, where they had seen each other for the first time. She said how an inexplicable instinct had led her towards the old prisoner without knowing who she was, and what encouragement she had received in return. At that time Michael Strogoff had been to her but Nicholas Korpanoff.

"Whom I ought always to have been," replied Michael, his brow darkening.

Then later he added, “I have broken my oath, Nadia. I had sworn not to see my mother!”

“But you did not try to see her, Michael,” replied Nadia. “Chance alone brought you into her presence.”

“I had sworn, whatever might happen, not to betray myself.”

“Michael, Michael! at sight of the lash raised upon Marfa, could you refrain? No! No oath could prevent a son from succoring his mother!”

“I have broken my oath, Nadia,” returned Michael. “May God and the Father pardon me!”

“Michael,” resumed the girl, “I have a question to ask you. Do not answer it if you think you ought not. Nothing from you would vex me!”

“Speak, Nadia.”

“Why, now that the Czar’s letter has been taken from you, are you so anxious to reach Irkutsk?”

Michael tightly pressed his companion’s hand, but he did not answer.

“Did you know the contents of that letter before you left Moscow?”

“No, I did not know.”

“Must I think, Michael, that the wish alone to place me in my father’s hands draws you toward Irkutsk?”

“No, Nadia,” replied Michael, gravely. “I should deceive you if I allowed you to believe that it was so. I go where duty orders me to go. As to taking you to Irkutsk, is it not you, Nadia, who are now taking me there? Do I not see with your eyes; and is it not your hand that guides me? Have you not repaid a hundred-fold the help which I was able to give you at first? I do not know if fate will cease to go against us; but the day on which you thank me for having placed you in your father’s hands, I in my turn will thank you for having led me to Irkutsk.”

“Poor Michael!” answered Nadia, with emotion. “Do not speak so. That does not answer me. Michael, why, now, are you in such haste to reach Irkutsk?”

“Because I must be there before Ivan Ogareff,” exclaimed Michael.

“Even now?”

“Even now, and I will be there, too!”

In uttering these words, Michael did not speak solely through hatred to the traitor. Nadia understood that her companion had not told, or could not tell, her all.

On the 15th of September, three days later, the two reached the village of Kouitounskoe. The young girl suffered dreadfully. Her aching feet could scarcely support her; but she fought, she struggled, against her weariness, and her only thought was this: “Since he cannot see me, I will go on till I drop.”

There were no obstacles on this part of the journey, no danger either since the departure of the Tartars, only much fatigue. For three days it continued thus. It was plain that the third invading column was advancing rapidly in the East; that could be seen by the ruins which they left after them — the cold cinders and the already decomposing corpses.

There was nothing to be seen in the West; the Emir’s advance-guard had not yet appeared. Michael began to consider the various reasons which might have caused this delay. Was a sufficient force of Russians directly menacing Tomsk or Krasnoiarsk? Did the third column, isolated from the others, run a risk of being cut off? If this was the case, it would be easy for the Grand Duke to defend Irkutsk, and any time gained against an invasion was a step towards repulsing it. Michael sometimes let his thoughts run on these hopes, but he soon saw their improbability, and felt that the preservation of the Grand Duke depended alone on him.

Nadia dragged herself along. Whatever might be her moral energy, her physical strength would soon fail her. Michael knew it only too well. If he had not been blind, Nadia would have said to him, “Go, Michael, leave me in some hut! Reach Irkutsk! Accomplish your mission! See my father! Tell him where I am! Tell him that I wait for him, and you both will know where to find me! Start! I am not afraid! I will hide myself from the Tartars! I will take care of myself for him, for you! Go, Michael! I can go no farther!”

Many times Nadia was obliged to stop. Michael then took her in his strong arms and, having no longer to think of her fatigue, walked more rapidly and with his indefatigable step.

On the 18th of September, at ten in the evening, Kimilteiskoe was at last entered. From the top of a hill, Nadia saw in the horizon a long light line. It was the Dinka River. A few lightning flashes were reflected in the water; summer lightning, without thunder. Nadia led her companion through the ruined village. The cinders were quite cold. The last of the Tartars had passed through at least five or six days before.

Beyond the village, Nadia sank down on a stone bench. “Shall we make a halt?” asked Michael.

“It is night, Michael,” answered Nadia. “Do you not want to rest a few hours?”

“I would rather have crossed the Dinka,” replied Michael, “I should like to put that between us and the Emir’s advance-guard. But you can scarcely drag yourself along, my poor Nadia!”

“Come, Michael,” returned Nadia, seizing her companion’s hand and drawing him forward.

Two or three versts further the Dinka flowed across the Irkutsk road. The young girl wished to attempt this last effort asked by her companion. She found her way by the light from the flashes. They were then crossing a boundless desert, in the midst of which was lost the little river. Not a tree nor a hillock broke the flatness. Not a breath disturbed the atmosphere, whose calmness would allow the slightest sound to travel an immense distance.

Suddenly, Michael and Nadia stopped, as if their feet had been fast to the ground. The barking of a dog came across the steppe. “Do you hear?” said Nadia.

Then a mournful cry succeeded it — a despairing cry, like the last appeal of a human being about to die.

“Nicholas! Nicholas!” cried the girl, with a foreboding of evil. Michael, who was listening, shook his head.

“Come, Michael, come,” said Nadia. And she who just now was dragging herself with difficulty along, suddenly recovered strength, under violent excitement.

“We have left the road,” said Michael, feeling that he was treading no longer on powdery soil but on short grass.

“Yes, we must!” returned Nadia. “It was there, on the right, from which the cry came!”

In a few minutes they were not more than half a verst from the river. A second bark was heard, but, although more feeble, it was certainly nearer. Nadia stopped.

“Yes!” said Michael. “It is Serko barking!... He has followed his master!”

“Nicholas!” called the girl. Her cry was unanswered.

Michael listened. Nadia gazed over the plain illumined now and again with electric light, but she saw nothing. And yet a voice was again raised, this time murmuring in a plaintive tone, “Michael!”

Then a dog, all bloody, bounded up to Nadia.

It was Serko! Nicholas could not be far off! He alone could have murmured the name of Michael! Where was he? Nadia had no strength to call again. Michael, crawling on the ground, felt about with his hands.

Suddenly Serko uttered a fresh bark and darted towards a gigantic bird which had swooped down. It was a vulture. When Serko ran towards it, it rose, but returning struck at the dog. The latter leapt up at it. A blow from the formidable beak alighted on his head, and this time Serko fell back lifeless on the ground.

At the same moment a cry of horror escaped Nadia. “There... there!” she exclaimed.

A head issued from the ground! She had stumbled against it in the darkness.

Nadia fell on her knees beside it. Nicholas buried up to his neck, according to the atrocious Tartar custom, had been left in the steppe to die of thirst, and perhaps by the teeth of wolves or the beaks of birds of prey!

Frightful torture for the victim imprisoned in the ground — the earth pressed down so that he cannot move, his arms bound to his body like those of a corpse in its coffin! The miserable wretch, living in the mold of clay from which he is powerless to break out, can only long for the death which is so slow in coming!

There the Tartars had buried their prisoner three days before! For three days, Nicholas waited for the help which now came too late! The vultures had caught sight of the head on a level with the ground, and for some hours the dog had been defending his master against these ferocious birds!

Michael dug at the ground with his knife to release his friend! The eyes of Nicholas, which till then had been closed, opened.

He recognized Michael and Nadia. “Farewell, my friends!” he murmured. “I am glad to have seen you again! Pray for me!”

Michael continued to dig, though the ground, having been tightly rammed down, was as hard as stone, and he managed at last to get out the body of the unhappy man. He listened if his heart was still beating... It was still!

He wished to bury him, that he might not be left exposed; and the hole into which Nicholas had been placed when living, was enlarged, so that he might be laid in it — dead! The faithful Serko was laid by his master.

At that moment, a noise was heard on the road, about half a verst distant. Michael Strogoff listened. It was evidently a detachment of horse advancing towards the Dinka. “Nadia, Nadia!” he said in a low voice.

Nadia, who was kneeling in prayer, arose. “Look, look!” said he.

“The Tartars!” she whispered.

It was indeed the Emir’s advance-guard, passing rapidly along the road to Irkutsk.

“They shall not prevent me from burying him!” said Michael. And he continued his work.

Soon, the body of Nicholas, the hands crossed on the breast, was laid in the grave. Michael and Nadia, kneeling, prayed a last time for the poor fellow, inoffensive and

good, who had paid for his devotion towards them with his life.

“And now,” said Michael, as he threw in the earth, “the wolves of the steppe will not devour him.”

Then he shook his fist at the troop of horsemen who were passing. “Forward, Nadia!” he said.

Michael could not follow the road, now occupied by the Tartars. He must cross the steppe and turn to Irkutsk. He had not now to trouble himself about crossing the Dinka. Nadia could not move, but she could see for him. He took her in his arms and went on towards the southwest of the province.

A hundred and forty miles still remained to be traversed. How was the distance to be performed? Should they not succumb to such fatigue? On what were they to live on the way? By what superhuman energy were they to pass the slopes of the Sayansk Mountains? Neither he nor Nadia could answer this!

And yet, twelve days after, on the 2d of October, at six o’clock in the evening, a wide sheet of water lay at Michael Strogoff’s feet. It was Lake Baikal.

CHAPTER X BAIKAL AND ANGARA

LAKE BAIKAL is situated seventeen hundred feet above the level of the sea. Its length is about six hundred miles, its breadth seventy. Its depth is not known. Madame de Bourboulon states that, according to the boatmen, it likes to be spoken of as “Madam Sea.” If it is called “Sir Lake,” it immediately lashes itself into fury. However, it is reported and believed by the Siberians that a Russian is never drowned in it.

This immense basin of fresh water, fed by more than three hundred rivers, is surrounded by magnificent volcanic mountains. It has no other outlet than the Angara, which after passing Irkutsk throws itself into the Yenisei, a little above the town of Yeniseisk. As to the mountains which encase it, they form a branch of the Toungouzes, and are derived from the vast system of the Altai.

In this territory, subject to peculiar climatical conditions, the autumn appears to be absorbed in the precocious winter. It was now the beginning of October. The sun set at five o’clock in the evening, and during the long nights the temperature fell to zero. The first snows, which would last till summer, already whitened the summits of the neighboring hills. During the Siberian winter this inland sea is frozen over to a thickness of several feet, and is crossed by the sleighs of caravans.

Either because there are people who are so wanting in politeness as to call it “Sir Lake,” or for some more meteorological reason, Lake Baikal is subject to violent tempests. Its waves, short like those of all inland seas, are much feared by the rafts, prahms, and steamboats, which furrow it during the summer.

It was the southwest point of the lake which Michael had now reached, carrying Nadia, whose whole life, so to speak, was concentrated in her eyes. But what could these two expect, in this wild region, if it was not to die of exhaustion and famine? And yet, what remained of the long journey of four thousand miles for the Czar’s courier to reach his end? Nothing but forty miles on the shore of the lake up to the mouth of the Angara, and sixty miles from the mouth of the Angara to Irkutsk; in all, a hundred miles, or three days’ journey for a strong man, even on foot.

Could Michael Strogoff still be that man?

Heaven, no doubt, did not wish to put him to this trial. The fatality which had hitherto pursued his steps seemed for a time to spare him. This end of the Baikal, this part of the steppe, which he believed to be a desert, which it usually is, was not so now. About fifty people were collected at the angle formed by the end of the lake.

Nadia immediately caught sight of this group, when Michael, carrying her in his arms, issued from the mountain pass. The girl feared for a moment that it was a Tartar detachment, sent to beat the shores of the Baikal, in which case flight would have been impossible to them both. But Nadia was soon reassured.

“Russians!” she exclaimed. And with this last effort, her eyes closed and her head fell on Michael’s breast.

But they had been seen, and some of these Russians, running to them, led the blind man and the girl to a little point at which was moored a raft.

The raft was just going to start. These Russians were fugitives of different conditions, whom the same interest had united at Lake Baikal. Driven back by the Tartar scouts, they hoped to obtain a refuge at Irkutsk, but not being able to get there by land, the invaders having occupied both banks of the Angara, they hoped to reach it by descending the river which flows through the town.

Their plan made Michael’s heart leap; a last chance was before him, but he had strength to conceal this, wishing to keep his incognito more strictly than ever.

The fugitives’ plan was very simple. A current in the lake runs along by the upper bank to the mouth of the Angara; this current they hoped to utilize, and with its assistance to reach the outlet of Lake Baikal. From this point to Irkutsk, the rapid waters of the river would bear them along at a rate of eight miles an hour. In a day and a half they might hope to be in sight of the town.

No kind of boat was to be found; they had been obliged to make one; a raft, or rather a float of wood, similar to those which usually are drifted down Siberian rivers, was constructed. A forest of firs, growing on the bank, had supplied the necessary materials; the trunks, fastened together with osiers, made a platform on which a hundred people could have easily found room.

On board this raft Michael and Nadia were taken. The girl had returned to herself; some food was given to her as well as to her companion. Then, lying on a bed of leaves, she soon fell into a deep sleep.

To those who questioned him, Michael Strogoff said nothing of what had taken place at Tomsk. He gave himself out as an inhabitant of Krasnoiarsk, who had not been able to get to Irkutsk before the Emir’s troops arrived on the left bank of the Dinka, and he added that, very probably, the bulk of the Tartar forces had taken up a position before the Siberian capital.

There was not a moment to be lost; besides, the cold was becoming more and more severe. During the night the temperature fell below zero; ice was already forming on the surface of the Baikal. Although the raft managed to pass easily over the lake, it might not be so easy between the banks of the Angara, should pieces of ice be found to block up its course.

At eight in the evening the moorings were cast off, and the raft drifted in the current along the shore. It was steered by means of long poles, under the management of several muscular moujiks. An old Baikal boatman took command of the raft. He was a man of sixty-five, browned by the sun, and lake breezes. A thick white beard flowed over his chest; a fur cap covered his head; his aspect was grave and austere. His large great-coat, fastened in at the waist, reached down to his heels. This taciturn old fellow was seated in the stern, and issued his commands by gestures. Besides, the chief work consisted in keeping the raft in the current, which ran along the shore, without drifting out into the open.

It has been already said that Russians of all conditions had found a place on the raft. Indeed, to the poor moujiks, the women, old men, and children, were joined two or three pilgrims, surprised on their journey by the invasion; a few monks, and a priest. The pilgrims carried a staff, a gourd hung at the belt, and they chanted psalms in a plaintive voice: one came from the Ukraine, another from the Yellow sea, and a third from the Finland provinces. This last, who was an aged man, carried at his waist a little padlocked collecting-box, as if it had been hung at a church door. Of all that he collected during his long and fatiguing pilgrimage, nothing was for himself; he did not even possess the key of the box, which would only be opened on his return.

The monks came from the North of the Empire. Three months before they had left the town of Archangel. They had visited the sacred islands near the coast of Carelia, the convent of Solovetsk, the convent of Troitsa, those of Saint Antony and Saint Theodosia, at Kiev, that of Kazan, as well as the church of the Old Believers, and they were now on their way to Irkutsk, wearing the robe, the cowl, and the clothes of serge.

As to the papa, or priest, he was a plain village pastor, one of the six hundred thousand popular pastors which the Russian Empire contains. He was clothed as miserably as the moujiks, not being above them in social position; in fact, laboring like a peasant on his plot of ground; baptis-ing, marrying, burying. He had been able to protect his wife and children from the brutality of the Tartars by sending them away into the Northern provinces. He himself had stayed in his parish up to the last moment; then he was obliged to fly, and, the Irkutsk road being stopped, had come to Lake Baikal.

These priests, grouped in the forward part of the raft, prayed at regular intervals, raising their voices in the silent night, and at the end of each sentence of their prayer, the “Slava Bogu,” Glory to God! issued from their lips.

No incident took place during the night. Nadia remained in a sort of stupor, and Michael watched beside her; sleep only overtook him at long intervals, and even then his brain did not rest. At break of day, the raft, delayed by a strong breeze, which counteracted the course of the current, was still forty versts from the mouth of the Angara. It seemed probable that the fugitives could not reach it before three or four o’clock in the evening. This did not trouble them; on the contrary, for they would then descend the river during the night, and the darkness would also favor their entrance into Irkutsk.

The only anxiety exhibited at times by the old boatman was concerning the formation of ice on the surface of the water. The night had been excessively cold; pieces of ice could be seen drifting towards the West. Nothing was to be dreaded from these, since they could not drift into the Angara, having already passed the mouth; but pieces from the Eastern end of the lake might be drawn by the current between the banks of the river; this would cause difficulty, possibly delay, and perhaps even an insurmountable obstacle which would stop the raft.

Michael therefore took immense interest in ascertaining what was the state of the lake, and whether any large number of ice blocks appeared. Nadia being now awake, he questioned her often, and she gave him an account of all that was going on.

Whilst the blocks were thus drifting, curious phenomena were taking place on the surface of the Baikal. Magnificent jets, from springs of boiling water, shot up from some of those artesian wells which Nature has bored in the very bed of the lake. These jets rose to a great height and spread out in vapor, which was illuminated by the solar rays, and almost immediately condensed by the cold. This curious sight would have assuredly amazed a tourist traveling in peaceful times on this Siberian sea.

At four in the evening, the mouth of the Angara was signaled by the old boatman, between the high granite rocks of the shore. On the right bank could be seen the little port of Livenitchnaia, its church, and its few houses built on the bank. But the serious thing was that the ice blocks from the East were already drifting between the banks of the Angara, and consequently were descending towards Irkutsk. However, their number was not yet great enough to obstruct the course of the raft, nor the cold great enough to increase their number.

The raft arrived at the little port and there stopped. The old boatman wished to put into harbor for an hour, in order to make some repairs. The trunks threatened to separate, and it was important to fasten them more securely together to resist the rapid current of the Angara.

The old boatman did not expect to receive any fresh fugitives at Livenitchnaia, and yet, the moment the raft touched, two passengers, issuing from a deserted house, ran as fast as they could towards the beach.

Nadia seated on the raft, was abstractedly gazing at the shore. A cry was about to escape her. She seized Michael’s hand, who at that moment raised his head.

“What is the matter, Nadia?” he asked.

“Our two traveling companions, Michael.”

“The Frenchman and the Englishman whom we met in the defiles of the Ural?”

“Yes.”

Michael started, for the strict incognito which he wished to keep ran a risk of being betrayed. Indeed, it was no longer as Nicholas Korpanoff that Jolivet and Blount would now see him, but as the true Michael Strogoff, Courier of the Czar. The two

correspondents had already met him twice since their separation at the Ichim post-house — the first time at the Zabediero camp, when he laid open Ivan Ogareff's face with the knout; the second time at Tomsk, when he was condemned by the Emir. They therefore knew who he was and what depended on him.

Michael Strogoff rapidly made up his mind. "Nadia," said he, "when they step on board, ask them to come to me!"

It was, in fact, Blount and Jolivet, whom the course of events had brought to the port of Livenitchnaia, as it had brought Michael Strogoff. As we know, after having been present at the entry of the Tartars into Tomsk, they had departed before the savage execution which terminated the fete. They had therefore never suspected that their former traveling companion had not been put to death, but blinded by order of the Emir.

Having procured horses they had left Tomsk the same evening, with the fixed determination of henceforward dating their letters from the Russian camp of Eastern Siberia. They proceeded by forced marches towards Irkutsk. They hoped to distance Feofar-Khan, and would certainly have done so, had it not been for the unexpected apparition of the third column, come from the South, up the valley of the Yenisei. They had been cut off, as had been Michael, before being able even to reach the Dinka, and had been obliged to go back to Lake Baikal.

They had been in the place for three days in much perplexity, when the raft arrived. The fugitives' plan was explained to them. There was certainly a chance that they might be able to pass under cover of the night, and penetrate into Irkutsk. They resolved to make the attempt.

Alcide directly communicated with the old boatman, and asked a passage for himself and his companion, offering to pay anything he demanded, whatever it might be.

"No one pays here," replied the old man gravely; "every one risks his life, that is all!"

The two correspondents came on board, and Nadia saw them take their places in the forepart of the raft. Harry Blount was still the reserved Englishman, who had scarcely addressed a word to her during the whole passage over the Ural Mountains. Alcide Jolivet seemed to be rather more grave than usual, and it may be acknowledged that his gravity was justified by the circumstances.

Jolivet had, as has been said, taken his seat on the raft, when he felt a hand laid on his arm. Turning, he recognized Nadia, the sister of the man who was no longer Nicholas Korpanoff, but Michael Strogoff, Courier of the Czar. He was about to make an exclamation of surprise when he saw the young girl lay her finger on her lips.

“Come,” said Nadia. And with a careless air, Alcide rose and followed her, making a sign to Blount to accompany him.

But if the surprise of the correspondents had been great at meeting Nadia on the raft it was boundless when they perceived Michael Strogoff, whom they had believed to be no longer living.

Michael had not moved at their approach. Jolivet turned towards the girl. “He does not see you, gentlemen,” said Nadia. “The Tartars have burnt out his eyes! My poor brother is blind!”

A feeling of lively compassion exhibited itself on the faces of Blount and his companion. In a moment they were seated beside Michael, pressing his hand and waiting until he spoke to them.

“Gentlemen,” said Michael, in a low voice, “you ought not to know who I am, nor what I am come to do in Siberia. I ask you to keep my secret. Will you promise me to do so?”

“On my honor,” answered Jolivet.

“On my word as a gentleman,” added Blount.

“Good, gentlemen.”

“Can we be of any use to you?” asked Harry Blount. “Could we not help you to accomplish your task?”

“I prefer to act alone,” replied Michael.

“But those blackguards have destroyed your sight,” said Alcide.

“I have Nadia, and her eyes are enough for me!”

In half an hour the raft left the little port of Livenitchnaia, and entered the river. It was five in the evening and getting dusk. The night promised to be dark and very cold also, for the temperature was already below zero.

Alcide and Blount, though they had promised to keep Michael's secret, did not leave him. They talked in a low voice, and the blind man, adding what they told him to what he already knew, was able to form an exact idea of the state of things. It was certain that the Tartars had actually invested Irkutsk, and that the three columns had effected a junction. There was no doubt that the Emir and Ivan Ogareff were before the capital.

But why did the Czar's courier exhibit such haste to get there, now that the Imperial letter could no longer be given by him to the Grand Duke, and when he did not even know the contents of it? Alcide Jolivet and Blount could not understand it any more than Nadia had done.

No one spoke of the past, except when Jolivet thought it his duty to say to Michael, "We owe you some apology for not shaking hands with you when we separated at Ichim."

"No, you had reason to think me a coward!"

"At any rate," added the Frenchman, "you knouted the face of that villain finely, and he will carry the mark of it for a long time!"

"No, not a long time!" replied Michael quietly.

Half an hour after leaving Livenitchnaia, Blount and his companion were acquainted with the cruel trials through which Michael and his companion had successively passed. They could not but heartily admire his energy, which was only equaled by the young girl's devotion. Their opinion of Michael was exactly what the Czar had expressed at Moscow: "Indeed, this is a Man!"

The raft swiftly threaded its way among the blocks of ice which were carried along in the current of the Angara. A moving panorama was displayed on both sides of the river, and, by an optical illusion, it appeared as if it was the raft which was motionless before a succession of picturesque scenes. Here were high granite cliffs, there wild gorges, down which rushed a torrent; sometimes appeared a clearing with a still smoking village, then thick pine forests blazing. But though the Tartars had left their traces on all

sides, they themselves were not to be seen as yet, for they were more especially massed at the approaches to Irkutsk.

All this time the pilgrims were repeating their prayers aloud, and the old boatman, shoving away the blocks of ice which pressed too near them, imperturbably steered the raft in the middle of the rapid current of the Angara.

CHAPTER XI BETWEEN TWO BANKS

BY eight in the evening, the country, as the state of the sky had foretold, was enveloped in complete darkness. The moon being new had not yet risen. From the middle of the river the banks were invisible. The cliffs were confounded with the heavy, low-hanging clouds. At intervals a puff of wind came from the east, but it soon died away in the narrow valley of the Angara.

The darkness could not fail to favor in a considerable degree the plans of the fugitives. Indeed, although the Tartar outposts must have been drawn up on both banks, the raft had a good chance of passing unperceived. It was not likely either that the besiegers would have barred the river above Irkutsk, since they knew that the Russians could not expect any help from the south of the province. Besides this, before long Nature would herself establish a barrier, by cementing with frost the blocks of ice accumulated between the two banks.

Perfect silence now reigned on board the raft. The voices of the pilgrims were no longer heard. They still prayed, but their prayer was but a murmur, which could not reach as far as either bank. The fugitives lay flat on the platform, so that the raft was scarcely above the level of the water. The old boatman crouched down forward among his men, solely occupied in keeping off the ice blocks, a maneuver which was performed without noise.

The drifting of the ice was a favorable circumstance so long as it did not offer an insurmountable obstacle to the passage of the raft. If that object had been alone on the water, it would have run a risk of being seen, even in the darkness, but, as it was, it was confounded with these moving masses, of all shapes and sizes, and the tumult caused by the crashing of the blocks against each other concealed likewise any suspicious noises.

There was a sharp frost. The fugitives suffered cruelly, having no other shelter than a few branches of birch. They cowered down together, endeavoring to keep each other warm, the temperature being now ten degrees below freezing point. The wind, though slight, having passed over the snow-clad mountains of the east, pierced them through and through.

Michael and Nadia, lying in the afterpart of the raft, bore this increase of suffering without complaint. Jolivet and Blount, placed near them, stood these first assaults of the

Siberian winter as well as they could. No one now spoke, even in a low voice. Their situation entirely absorbed them. At any moment an incident might occur, which they could not escape unscathed.

For a man who hoped soon to accomplish his mission, Michael was singularly calm. Even in the gravest conjunctures, his energy had never abandoned him. He already saw the moment when he would be at last allowed to think of his mother, of Nadia, of himself! He now only dreaded one final unhappy chance; this was, that the raft might be completely barred by ice before reaching Irkutsk. He thought but of this, determined beforehand, if necessary, to attempt some bold stroke.

Restored by a few hours' rest, Nadia had regained the physical energy which misery had sometimes overcome, although without ever having shaken her moral energy. She thought, too, that if Michael had to make any fresh effort to attain his end, she must be there to guide him. But in proportion as she drew nearer to Irkutsk, the image of her father rose more and more clearly before her mind. She saw him in the invested town, far from those he loved, but, as she never doubted, struggling against the invaders with all the spirit of his patriotism. In a few hours, if Heaven favored them, she would be in his arms, giving him her mother's last words, and nothing should ever separate them again. If the term of Wassili Fedor's exile should never come to an end, his daughter would remain exiled with him. Then, by a natural transition, she came back to him who would have enabled her to see her father once more, to that generous companion, that "brother," who, the Tartars driven back, would retake the road to Moscow, whom she would perhaps never meet again!

As to Alcide Jolivet and Harry Blount, they had one and the same thought, which was, that the situation was extremely dramatic, and that, well worked up, it would furnish a most deeply interesting article. The Englishman thought of the readers of the Daily Telegraph, and the Frenchman of those of his Cousin Madeleine. At heart, both were not without feeling some emotion.

"Well, so much the better!" thought Alcide Jolivet, "to move others, one must be moved one's self! I believe there is some celebrated verse on the subject, but hang me if I can recollect it!" And with his well-practiced eyes he endeavored to pierce the gloom of the river.

Every now and then a burst of light dispelling the darkness for a time, exhibited the banks under some fantastic aspect — either a forest on fire, or a still burning village. The Angara was occasionally illuminated from one bank to the other. The blocks of ice formed so many mirrors, which, reflecting the flames on every point and in every color, were whirled along by the caprice of the current. The raft passed unperceived in the midst of these floating masses.

The danger was not at these points.

But a peril of another nature menaced the fugitives. One that they could not foresee, and, above all, one that they could not avoid. Chance discovered it to Alcide Jolivet in this way: — Lying at the right side of the raft, he let his hand hang over into the water. Suddenly he was surprised by the impression made on it by the current. It seemed to be of a slimy consistency, as if it had been made of mineral oil. Alcide, aiding his touch by his sense of smell, could not be mistaken. It was really a layer of liquid naphtha, floating on the surface of the river!

Was the raft really floating on this substance, which is in the highest degree combustible? Where had this naphtha come from? Was it a natural phenomenon taking place on the surface of the Angara, or was it to serve as an engine of destruction, put in motion by the Tartars? Did they intend to carry conflagration into Irkutsk?

Such were the questions which Alcide asked himself, but he thought it best to make this incident known only to Harry Blount, and they both agreed in not alarming their companions by revealing to them this new danger.

It is known that the soil of Central Asia is like a sponge impregnated with liquid hydrogen. At the port of Bakou, on the Persian frontier, on the Caspian Sea, in Asia Minor, in China, on the Yuen-Kiang, in the Burman Empire, springs of mineral oil rise in thousands to the surface of the ground. It is an “oil country,” similar to the one which bears this name in North America.

During certain religious festivals, principally at the port of Bakou, the natives, who are fire-worshipers, throw liquid naphtha on the surface of the sea, which buoys it up, its density being inferior to that of water. Then at nightfall, when a layer of mineral oil is thus spread over the Caspian, they light it, and exhibit the matchless spectacle of an ocean of fire undulating and breaking into waves under the breeze.

But what is only a sign of rejoicing at Bakou, might prove a fearful disaster on the waters of the Angara. Whether it was set on fire by malevolence or imprudence, in the twinkling of an eye a conflagration might spread beyond Irkutsk. On board the raft no imprudence was to be feared; but everything was to be dreaded from the conflagrations on both banks of the Angara, for should a lighted straw or even a spark blow into the water, it would inevitably set the whole current of naphtha in a blaze.

The apprehensions of Jolivet and Blount may be better understood than described. Would it not be prudent, in face of this new danger, to land on one of the banks and wait there? “At any rate,” said Alcide, “whatever the danger may be, I know some one who will not land!”

He alluded to Michael Strogoff.

In the meantime, on glided the raft among the masses of ice which were gradually getting closer and closer together. Up till then, no Tartar detachment had been seen, which showed that the raft was not abreast of the outposts. At about ten o’clock, however, Harry Blount caught sight of a number of black objects moving on the ice blocks. Springing from one to the other, they rapidly approached.

“Tartars!” he thought. And creeping up to the old boatman, he pointed out to him the suspicious objects.

The old man looked attentively. “They are only wolves!” said he. “I like them better than Tartars. But we must defend ourselves, and without noise!”

The fugitives would indeed have to defend themselves against these ferocious beasts, whom hunger and cold had sent roaming through the province. They had smelt out the raft, and would soon attack it. The fugitives must struggle without using firearms, for they could not now be far from the Tartar posts. The women and children were collected in the middle of the raft, and the men, some armed with poles, others with their knives, stood prepared to repulse their assailants. They did not make a sound, but the howls of the wolves filled the air.

Michael did not wish to remain inactive. He lay down at the side attacked by the savage pack. He drew his knife, and every time that a wolf passed within his reach, his hand found out the way to plunge his weapon into its throat. Neither were Jolivet and Blount idle, but fought bravely with the brutes. Their companions gallantly seconded them.

The battle was carried on in silence, although many of the fugitives received severe bites.

The struggle did not appear as if it would soon terminate. The pack was being continually reinforced from the right bank of the Angara. “This will never be finished!” said Alcide, brandishing his dagger, red with blood.

In fact, half an hour after the commencement of the attack, the wolves were still coming in hundreds across the ice. The exhausted fugitives were getting weaker. The fight was going against them. At that moment, a group of ten huge wolves, raging with hunger, their eyes glowing in the darkness like red coals, sprang onto the raft. Jolivet and his companion threw themselves into the midst of the fierce beasts, and Michael was finding his way towards them, when a sudden change took place.

In a few moments the wolves had deserted not only the raft, but also the ice on the river. All the black bodies dispersed, and it was soon certain that they had in all haste regained the shore. Wolves, like other beasts of prey, require darkness for their proceedings, and at that moment a bright light illuminated the entire river.

It was the blaze of an immense fire. The whole of the small town of Poshkavsk was burning. The Tartars were indeed there, finishing their work. From this point, they occupied both banks beyond Irkutsk. The fugitives had by this time reached the dangerous part of their voyage, and they were still twenty miles from the capital.

It was now half past eleven. The raft continued to glide on amongst the ice, with which it was quite mingled, but gleams of light sometimes fell upon it. The fugitives stretched on the platform did not permit themselves to make a movement by which they might be betrayed.

The conflagration was going on with frightful rapidity. The houses, built of fir-wood, blazed like torches — a hundred and fifty flaming at once. With the crackling of the fire was mingled the yells of the Tartars. The old boatman, getting a foothold on a near piece of ice, managed to shove the raft towards the right bank, by doing which a distance of from three to four hundred feet divided it from the flames of Poshkavsk.

Nevertheless, the fugitives, lighted every now and then by the glare, would have been undoubtedly perceived had not the incendiaries been too much occupied in their work of destruction.

It may be imagined what were the apprehensions of Jolivet and Blount, when they thought of the combustible liquid on which the raft floated. Sparks flew in millions from the houses, which resembled so many glowing furnaces. They rose among the volumes of smoke to a height of five or six hundred feet. On the right bank, the trees and cliffs exposed to the fire looked as if they likewise were burning. A spark falling on the surface of the Angara would be sufficient to spread the flames along the current, and to carry disaster from one bank to the other. The result of this would be in a short time the destruction of the raft and of all those which it carried.

But, happily, the breeze did not blow from that side. It came from the east, and drove the flames towards the left. It was just possible that the fugitives would escape this danger. The blazing town was at last passed. Little by little the glare grew dimmer, the crackling became fainter, and the flames at last disappeared behind the high cliffs which arose at an abrupt turn of the river.

By this time it was nearly midnight. The deep gloom again threw its protecting shadows over the raft. The Tartars were there, going to and fro near the river. They could not be seen, but they could be heard. The fires of the outposts burned brightly.

In the meantime it had become necessary to steer more carefully among the blocks of ice. The old boatman stood up, and the moujiks resumed their poles. They had plenty of work, the management of the raft becoming more and more difficult as the river was further obstructed.

Michael had crept forward; Jolivet followed; both listened to what the old boatman and his men were saying.

“Look out on the right!”

“There are blocks drifting on to us on the left!”

“Fend! fend off with your boat-hook!”

“Before an hour is past we shall be stopped!”

“If it is God’s will!” answered the old man. “Against His will there is nothing to be done.”

“You hear them,” said Alcide.

“Yes,” replied Michael, “but God is with us!”

The situation became more and more serious. Should the raft be stopped, not only would the fugitives not reach Irkutsk, but they would be obliged to leave their floating platform, for it would be very soon smashed to pieces in the ice. The osier ropes would break, the fir trunks torn asunder would drift under the hard crust, and the unhappy people would have no refuge but the ice blocks themselves. Then, when day came, they would be seen by the Tartars, and massacred without mercy!

Michael returned to the spot where Nadia was waiting for him. He approached the girl, took her hand, and put to her the invariable question: “Nadia, are you ready?” to which she replied as usual, “I am ready!”

For a few versts more the raft continued to drift amongst the floating ice. Should the river narrow, it would soon form an impassable barrier. Already they seemed to drift slower. Every moment they encountered severe shocks or were compelled to make detours; now, to avoid running foul of a block, there to enter a channel, of which it was necessary to take advantage. At length the stoppages became still more alarming. There were only a few more hours of night. Could the fugitives not reach Irkutsk by five o’clock in the morning, they must lose all hope of ever getting there at all.

At half-past one, notwithstanding all efforts, the raft came up against a thick barrier and stuck fast. The ice, which was drifting down behind it, pressed it still closer, and kept it motionless, as though it had been stranded.

At this spot the Angara narrowed, it being half its usual breadth. This was the cause of the accumulation of ice, which became gradually soldered together, under the double influence of the increased pressure and of the cold. Five hundred feet beyond, the river widened again, and the blocks, gradually detaching themselves from the floe, continued to drift towards Irkutsk. It was probable that had the banks not narrowed, the barrier would not have formed. But the misfortune was irreparable, and the fugitives must give up all hope of attaining their object.

Had they possessed the tools usually employed by whalers to cut channels through the ice-fields — had they been able to get through to where the river widened — they

might have been saved. But they had nothing which could make the least incision in the ice, hard as granite in the excessive frost. What were they to do?

At that moment several shots on the right bank startled the unhappy fugitives. A shower of balls fell on the raft. The devoted passengers had been seen. Immediately afterwards shots were heard fired from the left bank. The fugitives, taken between two fires, became the mark of the Tartar sharpshooters. Several were wounded, although in the darkness it was only by chance that they were hit.

“Come, Nadia,” whispered Michael in the girl’s ear.

Without making a single remark, “ready for anything,” Nadia took Michael’s hand.

“We must cross the barrier,” he said in a low tone. “Guide me, but let no one see us leave the raft.”

Nadia obeyed. Michael and she glided rapidly over the floe in the obscurity, only broken now and again by the flashes from the muskets. Nadia crept along in front of Michael. The shot fell around them like a tempest of hail, and pattered on the ice. Their hands were soon covered with blood from the sharp and rugged ice over which they clambered, but still on they went.

In ten minutes, the other side of the barrier was reached. There the waters of the Angara again flowed freely. Several pieces of ice, detached gradually from the floe, were swept along in the current down towards the town. Nadia guessed what Michael wished to attempt. One of the blocks was only held on by a narrow strip.

“Come,” said Nadia. And the two crouched on the piece of ice, which their weight detached from the floe.

It began to drift. The river widened, the way was open. Michael and Nadia heard the shots, the cries of distress, the yells of the Tartars. Then, little by little, the sounds of agony and of ferocious joy grew faint in the distance.

“Our poor companions!” murmured Nadia.

For half an hour the current hurried along the block of ice which bore Michael and Nadia. They feared every moment that it would give way beneath them. Swept along in the middle of the current, it was unnecessary to give it an oblique direction until they

drew near the quays of Irkutsk. Michael, his teeth tight set, his ear on the strain, did not utter a word. Never had he been so near his object. He felt that he was about to attain it!

Towards two in the morning a double row of lights glittered on the dark horizon in which were confounded the two banks of the Angara. On the right hand were the lights of Irkutsk; on the left, the fires of the Tartar camp.

Michael Strogoff was not more than half a verst from the town. “At last!” he murmured.

But suddenly Nadia uttered a cry.

At the cry Michael stood up on the ice, which was wavering. His hand was extended up the Angara. His face, on which a bluish light cast a peculiar hue, became almost fearful to look at, and then, as if his eyes had been opened to the bright blaze spreading across the river, “Ah!” he exclaimed, “then Heaven itself is against us!”

CHAPTER XII IRKUTSK

IRKUTSK, the capital of Eastern Siberia, is a populous town, containing, in ordinary times, thirty thousand inhabitants. On the right side of the Angara rises a hill, on which are built numerous churches, a lofty cathedral, and dwellings disposed in picturesque disorder.

Seen at a distance, from the top of the mountain which rises at about twenty versts off along the Siberian highroad, this town, with its cupolas, its bell-towers, its steeples slender as minarets, its domes like pot-bellied Chinese jars, presents something of an oriental aspect. But this similarity vanishes as the traveler enters.

The town, half Byzantine, half Chinese, becomes European as soon as he sees its macadamized roads, bordered with pavements, traversed by canals, planted with gigantic birches, its houses of brick and wood, some of which have several stories, the numerous equipages which drive along, not only tarantasses but broughams and coaches; lastly, its numerous inhabitants far advanced in civilization, to whom the latest Paris fashions are not unknown.

Being the refuge for all the Siberians of the province, Irkutsk was at this time very full. Stores of every kind had been collected in abundance. Irkutsk is the emporium of the innumerable kinds of merchandise which are exchanged between China, Central Asia, and Europe. The authorities had therefore no fear with regard to admitting the peasants of the valley of the Angara, and leaving a desert between the invaders and the town.

Irkutsk is the residence of the governor-general of Eastern Siberia. Below him acts a civil governor, in whose hands is the administration of the province; a head of police, who has much to do in a town where exiles abound; and, lastly, a mayor, chief of the merchants, and a person of some importance, from his immense fortune and the influence which he exercises over the people.

The garrison of Irkutsk was at that time composed of an infantry regiment of Cossacks, consisting of two thousand men, and a body of police wearing helmets and blue uniforms laced with silver. Besides, as has been said, in consequence of the events which had occurred, the brother of the Czar had been shut up in the town since the beginning of the invasion.

A journey of political importance had taken the Grand Duke to these distant provinces of Central Asia. After passing through the principal Siberian cities, the Grand Duke, who traveled en militaire rather than en prince, without any parade, accompanied by his officers, and escorted by a regiment of Cossacks, arrived in the Trans-Baikalcine provinces. Nikolaevsk, the last Russian town situated on the shore of the Sea of Okhotsk, had been honored by a visit from him. Arrived on the confines of the immense Muscovite Empire, the Grand Duke was returning towards Irkutsk, from which place he intended to retake the road to Moscow, when, sudden as a thunder clap, came the news of the invasion.

He hastened to the capital, but only reached it just before communication with Russia had been interrupted. There was time to receive only a few telegrams from St. Petersburg and Moscow, and with difficulty to answer them before the wire was cut. Irkutsk was isolated from the rest of the world.

The Grand Duke had now only to prepare for resistance, and this he did with that determination and coolness of which, under other circumstances, he had given incontestable proofs. The news of the taking of Ichim, Omsk, and Tomsk, successively reached Irkutsk. It was necessary at any price to save the capital of Siberia. Reinforcements could not be expected for some time. The few troops scattered about in the provinces of Siberia could not arrive in sufficiently large numbers to arrest the progress of the Tartar columns. Since therefore it was impossible for Irkutsk to escape attack, the most important thing to be done was to put the town in a state to sustain a siege of some duration.

The preparations were begun on the day Tomsk fell into the hands of the Tartars. At the same time with this last news, the Grand Duke heard that the Emir of Bokhara and the allied Khans were directing the invasion in person, but what he did not know was, that the lieutenant of these barbarous chiefs was Ivan Ogareff, a Russian officer whom he had himself reduced to the ranks, but with whose person he was not acquainted.

First of all, as we have seen, the inhabitants of the province of Irkutsk were compelled to abandon the towns and villages. Those who did not take refuge in the capital had to retire beyond Lake Baikal, a district to which the invasion would probably not extend its ravages. The harvests of corn and fodder were collected and stored up in the town, and Irkutsk, the last bulwark of the Muscovite power in the Far East, was put in a condition to resist the enemy for a lengthened period.

Irkutsk, founded in 1611, is situated at the confluence of the Irkut and the Angara, on the right bank of the latter river. Two wooden draw-bridges, built on piles, connected the town with its suburbs on the left bank. On this side, defence was easy. The suburbs were abandoned, the bridges destroyed. The Angara being here very wide, it would not be possible to pass it under the fire of the besieged.

But the river might be crossed both above and below the town, and consequently, Irkutsk ran a risk of being attacked on its east side, on which there was no wall to protect it.

The whole population were immediately set to work on the fortifications. They labored day and night. The Grand Duke observed with satisfaction the zeal exhibited by the people in the work, whom ere long he would find equally courageous in the defense. Soldiers, merchants, exiles, peasants, all devoted themselves to the common safety. A week before the Tartars appeared on the Angara, earth-works had been raised. A fosse, flooded by the waters of the Angara, was dug between the scarp and counterscarp. The town could not now be taken by a coup de main. It must be invested and besieged.

The third Tartar column — the one which came up the valley of the Yenisei on the 24th of September — appeared in sight of Irkutsk. It immediately occupied the deserted suburbs, every building in which had been destroyed so as not to impede the fire of the Grand Duke’s guns, unfortunately but few in number and of small caliber. The Tartar troops as they arrived organized a camp on the bank of the Angara, whilst waiting the arrival of the two other columns, commanded by the Emir and his allies.

The junction of these different bodies was effected on the 25th of September, in the Angara camp, and the whole of the invading army, except the garrisons left in the principal conquered towns, was concentrated under the command of Feofar-Khan.

The passage of the Angara in front of Irkutsk having been regarded by Ogareff as impracticable, a strong body of troops crossed, several versts up the river, by means of bridges formed with boats. The Grand Duke did not attempt to oppose the enemy in their passage. He could only impede, not prevent it, having no field-artillery at his disposal, and he therefore remained in Irkutsk.

The Tartars now occupied the right bank of the river; then, advancing towards the town, they burnt, in passing, the summer-house of the governor-general, and at last having

entirely invested Irkutsk, took up their positions for the siege.

Ivan Ogareff, who was a clever engineer, was perfectly competent to direct a regular siege; but he did not possess the materials for operating rapidly. He was disappointed too in the chief object of all his efforts — the surprise of Irkutsk. Things had not turned out as he hoped. First, the march of the Tartar army was delayed by the battle of Tomsk; and secondly, the preparations for the defense were made far more rapidly than he had supposed possible; these two things had balked his plans. He was now under the necessity of instituting a regular siege of the town.

However, by his suggestion, the Emir twice attempted the capture of the place, at the cost of a large sacrifice of men. He threw soldiers on the earth-works which presented any weak point; but these two assaults were repulsed with the greatest courage. The Grand Duke and his officers did not spare themselves on this occasion. They appeared in person; they led the civil population to the ramparts. Citizens and peasants both did their duty.

At the second attack, the Tartars managed to force one of the gates. A fight took place at the head of Bolchaia Street, two versts long, on the banks of the Angara. But the Cossacks, the police, the citizens, united in so fierce a resistance that the Tartars were driven out.

Ivan Ogareff then thought of obtaining by stratagem what he could not gain by force. We have said that his plan was to penetrate into the town, make his way to the Grand Duke, gain his confidence, and, when the time came, give up the gates to the besiegers; and, that done, wreak his vengeance on the brother of the Czar. The Tsigane Sangarre, who had accompanied him to the Angara, urged him to put this plan in execution.

Indeed, it was necessary to act without delay. The Russian troops from the government of Yakutsk were advancing towards Irkutsk. They had concentrated along the upper course of the Lena. In six days they would arrive. Therefore, before six days had passed, Irkutsk must be betrayed. Ogareff hesitated no longer.

One evening, the 2d of October, a council of war was held in the grand saloon of the palace of the governor-general. This palace, standing at the end of Bolchaia Street, overlooked the river. From its windows could be seen the camp of the Tartars, and had

the invaders possessed guns of wider range, they would have rendered the palace uninhabitable.

The Grand Duke, General Voranzoff, the governor of the town, and the chief of the merchants, with several officers, had collected to determine upon various proposals.

“Gentlemen,” said the Grand Duke, “you know our situation exactly. I have the firm hope that we shall be able to hold out until the arrival of the Yakutsk troops. We shall then be able to drive off these barbarian hordes, and it will not be my fault if they do not pay dearly for this invasion of the Muscovite territory.”

“Your Highness knows that all the population of Irkutsk may be relied on,” said General Voranzoff.

“Yes, general,” replied the Grand Duke, “and I do justice to their patriotism. Thanks to God, they have not yet been subjected to the horrors of epidemic and famine, and I have reason to hope that they will escape them; but I cannot admire their courage on the ramparts enough. You hear my words, Sir Merchant, and I beg you to repeat such to them.”

“I thank your Highness in the name of the town,” answered the merchant chief. “May I ask you what is the most distant date when we may expect the relieving army?”

“Six days at most, sir,” replied the Grand Duke. “A brave and clever messenger managed this morning to get into the town, and he told me that fifty thousand Russians under General Kisselef, are advancing by forced marches. Two days ago, they were on the banks of the Lena, at Kirensk, and now, neither frost nor snow will keep them back. Fifty thousand good men, taking the Tartars on the flank, will soon set us free.”

“I will add,” said the chief of the merchants, “that we shall be ready to execute your orders, any day that your Highness may command a sortie.”

“Good, sir,” replied the Grand Duke. “Wait till the heads of the relieving columns appear on the heights, and we will speedily crush these invaders.”

Then turning to General Voranzoff, “To-morrow,” said he, “we will visit the works on the right bank. Ice is drifting down the Angara, which will not be long in freezing, and in that case the Tartars might perhaps cross.”

“Will your Highness allow me to make an observation?” said the chief of the merchants.

“Do so, sir.”

“I have more than once seen the temperature fall to thirty and forty degrees below zero, and the Angara has still carried down drifting ice without entirely freezing. This is no doubt owing to the swiftness of its current. If therefore the Tartars have no other means of crossing the river, I can assure your Highness that they will not enter Irkutsk in that way.”

The governor-general confirmed this assertion.

“It is a fortunate circumstance,” responded the Grand Duke. “Nevertheless, we must hold ourselves ready for any emergency.”

He then, turning towards the head of the police, asked, “Have you nothing to say to me, sir?”

“I have your Highness,” answered the head of police, “a petition which is addressed to you through me.”

“Addressed by whom?”

“By the Siberian exiles, whom, as your Highness knows, are in the town to the number of five hundred.”

The political exiles, distributed over the province, had been collected in Irkutsk, from the beginning of the invasion. They had obeyed the order to rally in the town, and leave the villages where they exercised their different professions, some doctors, some professors, either at the Gymnasium, or at the Japanese School, or at the School of Navigation. The Grand Duke, trusting like the Czar in their patriotism, had armed them, and they had thoroughly proved their bravery.

“What do the exiles ask?” said the Grand Duke.

“They ask the consent of your Highness,” answered the head of police, “to their forming a special corps and being placed in the front of the first sortie.”

“Yes,” replied the Grand Duke with an emotion which he did not seek to hide, “these exiles are Russians, and it is their right to fight for their country!”

“I believe I may assure your Highness,” said the governor-general, “you will have no better soldiers.”

“But they must have a chief,” said the Grand Duke, “who will he be?”

“They wish to recommend to your Highness,” said the head of police, “one of their number, who has distinguished himself on several occasions.”

“Is he a Russian?”

“Yes, a Russian from the Baltic provinces.”

“His name?”

“Is Wassili Fedor.”

This exile was Nadia’s father. Wassili Fedor, as we have already said, followed his profession of a medical man in Irkutsk. He was clever and charitable, and also possessed the greatest courage and most sincere patriotism. All the time which he did not devote to the sick he employed in organizing the defense. It was he who had united his companions in exile in the common cause. The exiles, till then mingled with the population, had behaved in such a way as to draw on themselves the attention of the Grand Duke. In several sorties, they had paid with their blood their debt to holy Russia — holy as they believe, and adored by her children! Wassili Fedor had behaved heroically; his name had been mentioned several times, but he never asked either thanks or favors, and when the exiles of Irkutsk thought of forming themselves into a special corps, he was ignorant of their intention of choosing him for their captain.

When the head of police mentioned this name, the Grand Duke answered that it was not unknown to him.

“Indeed,” remarked General Voranzoff, “Wassili Fedor is a man of worth and courage. His influence over his companions has always been very great.”

“How long has he been at Irkutsk?” asked the Duke.

“For two years.”

“And his conduct?”

“His conduct,” answered the head of police, “is that of a man obedient to the special laws which govern him.”

“General,” said the Grand Duke, “General, be good enough to present him to me immediately.”

The orders of the Grand Duke were obeyed, and before half an hour had passed, Fedor was introduced into his presence. He was a man over forty, tall, of a stern and sad countenance. One felt that his whole life was summed up in a single word — strife — he had striven and suffered. His features bore a marked resemblance to those of his daughter, Nadia Fedor.

This Tartar invasion had severely wounded him in his tenderest affections, and ruined the hope of the father, exiled eight thousand versts from his native town. A letter had apprised him of the death of his wife, and at the same time of the departure of his daughter, who had obtained from the government an authorization to join him at Irkutsk. Nadia must have left Riga on the 10th of July. The invasion had begun on the 15th of July; if at that time Nadia had passed the frontier, what could have become of her in the midst of the invaders? The anxiety of the unhappy father may be supposed when, from that time, he had no further news of his daughter.

Wassili Fedor entered the presence of the Grand Duke, bowed, and waited to be questioned.

“Wassili Fedor,” said the Grand Duke, “your companions in exile have asked to be allowed to form a select corps. They are not ignorant that in this corps they must make up their minds to be killed to the last man?”

“They are not ignorant of it,” replied Fedor.

“They wish to have you for their captain.”

“I, your Highness?”

“Do you consent to be placed at their head?”

“Yes, if it is for the good of Russia.”

“Captain Fedor,” said the Grand Duke, “you are no longer an exile.”

“Thanks, your Highness, but can I command those who are so still?”

“They are so no longer!” The brother of the Czar had granted a pardon to all Fedor’s companions in exile, now his companions in arms!

Wassili Fedor wrung, with emotion, the hand which the Grand Duke held out to him, and retired.

The latter, turned to his officers, “The Czar will not refuse to ratify that pardon,” said he, smiling; “we need heroes to defend the capital of Siberia, and I have just made some.”

This pardon, so generously accorded to the exiles of Irkutsk, was indeed an act of real justice and sound policy.

It was now night. Through the windows of the palace burned the fires of the Tartar camp, flickering beyond the Angara. Down the river drifted numerous blocks of ice, some of which stuck on the piles of the old bridges; others were swept along by the current with great rapidity. It was evident, as the merchant had observed, that it would be very difficult for the Angara to freeze all over. The defenders of Irkutsk had not to dread being attacked on that side. Ten o’clock had just struck. The Grand Duke was about to dismiss his officers and retire to his apartments, when a tumult was heard outside the palace.

Almost immediately the door was thrown open, an aide-de-camp appeared, and advanced rapidly towards the Grand Duke.

“Your Highness,” said he, “a courier from the Czar!”

CHAPTER XIII THE CZAR'S COURIER

ALL the members of the council simultaneously started forward. A courier from the Czar arrived in Irkutsk! Had these officers for a moment considered the improbability of this fact, they would certainly not have credited what they heard.

The Grand Duke advanced quickly to his aide-de-camp. "This courier!" he exclaimed.

A man entered. He appeared exhausted with fatigue. He wore the dress of a Siberian peasant, worn into tatters, and exhibiting several shot-holes. A Muscovite cap was on his head. His face was disfigured by a recently-healed scar. The man had evidently had a long and painful journey; his shoes being in a state which showed that he had been obliged to make part of it on foot.

"His Highness the Grand Duke?" he asked.

The Grand Duke went up to him. "You are a courier from the Czar?" he asked.

"Yes, your Highness."

"You come?"

"From Moscow."

"You left Moscow?"

"On the 15th of July."

"Your name?"

"Michael Strogoff."

It was Ivan Ogareff. He had taken the designation of the man whom he believed that he had rendered powerless. Neither the Grand Duke nor anyone knew him in Irkutsk, and he had not even to disguise his features. As he was in a position to prove his pretended identity, no one could have any reason for doubting him. He came, therefore, sustained by his iron will, to hasten by treason and assassination the great object of the invasion.

After Ogareff had replied, the Grand Duke signed to all his officers to withdraw. He and the false Michael Strogoff remained alone in the saloon.

The Grand Duke looked at Ivan Ogareff for some moments with extreme attention. Then he said, “On the 15th of July you were at Moscow?”

“Yes, your Highness; and on the night of the 14th I saw His Majesty the Czar at the New Palace.”

“Have you a letter from the Czar?”

“Here it is.”

And Ivan Ogareff handed to the Grand Duke the Imperial letter, crumpled to almost microscopic size.

“Was the letter given you in this state?”

“No, your Highness, but I was obliged to tear the envelope, the better to hide it from the Emir’s soldiers.”

“Were you taken prisoner by the Tartars?”

“Yes, your Highness, I was their prisoner for several days,” answered Ogareff. “That is the reason that, having left Moscow on the 15th of July, as the date of that letter shows, I only reached Irkutsk on the 2d of October, after traveling seventy-nine days.”

The Grand Duke took the letter. He unfolded it and recognized the Czar’s signature, preceded by the decisive formula, written by his brother’s hand. There was no possible doubt of the authenticity of this letter, nor of the identity of the courier. Though Ogareff’s countenance had at first inspired the Grand Duke with some distrust, he let nothing of it appear, and it soon vanished.

The Grand Duke remained for a few minutes without speaking. He read the letter slowly, so as to take in its meaning fully. “Michael Strogoff, do you know the contents of this letter?” he asked.

“Yes, your Highness. I might have been obliged to destroy it, to prevent its falling into the hands of the Tartars, and should such have been the case, I wished to be able to bring the contents of it to your Highness.”

“You know that this letter enjoins us all to die, rather than give up the town?”

“I know it.”

“You know also that it informs me of the movements of the troops which have combined to stop the invasion?”

“Yes, your Highness, but the movements have failed.”

“What do you mean?”

“I mean that Ichim, Omsk, Tomsk, to speak only of the more important towns of the two Siberias, have been successively occupied by the soldiers of Feofar-Khan.”

“But there has been fighting? Have not our Cossacks met the Tartars?”

“Several times, your Highness.”

“And they were repulsed?”

“They were not in sufficient force to oppose the enemy.”

“Where did the encounters take place?”

“At Kolyvan, at Tomsk.” Until now, Ogareff had only spoken the truth, but, in the hope of troubling the defenders of Irkutsk by exaggerating the defeats, he added, “And a third time before Krasnoiarsk.”

“And what of this last engagement?” asked the Grand Duke, through whose compressed lips the words could scarcely pass.

“It was more than an engagement, your Highness,” answered Ogareff; “it was a battle.”

“A battle?”

“Twenty thousand Russians, from the frontier provinces and the government of Tobolsk, engaged with a hundred and fifty thousand Tartars, and, notwithstanding their courage, were overwhelmed.”

“You lie!” exclaimed the Grand Duke, endeavoring in vain to curb his passion.

“I speak the truth, your Highness,” replied Ivan Ogareff coldly. “I was present at the battle of Krasnoiarsk, and it was there I was made prisoner!”

The Grand Duke grew calmer, and by a significant gesture he gave Ogareff to understand that he did not doubt his veracity. “What day did this battle of Krasnoiarsk take place?” he asked.

“On the 2d of September.”

“And now all the Tartar troops are concentrated here?”

“All.”

“And you estimate them?”

“At about four hundred thousand men.”

Another exaggeration of Ogareff’s in the estimate of the Tartar army, with the same object as before.

“And I must not expect any help from the West provinces?” asked the Grand Duke.

“None, your Highness, at any rate before the end of the winter.”

“Well, hear this, Michael Strogoff. Though I must expect no help either from the East or from the West, even were these barbarians six hundred thousand strong, I will never give up Irkutsk!”

Ogareff’s evil eye slightly contracted. The traitor thought to himself that the brother of the Czar did not reckon the result of treason.

The Grand Duke, who was of a nervous temperament, had great difficulty in keeping calm whilst hearing this disastrous news. He walked to and fro in the room, under the gaze of Ogareff, who eyed him as a victim reserved for vengeance. He stopped at the windows, he looked forth at the fires in the Tartar camp, he listened to the noise of the ice-blocks drifting down the Angara.

A quarter of an hour passed without his putting any more questions. Then taking up the letter, he re-read a passage and said, “You know that in this letter I am warned of a

traitor, of whom I must beware?”

“Yes, your Highness.”

“He will try to enter Irkutsk in disguise; gain my confidence, and betray the town to the Tartars.”

“I know all that, your Highness, and I know also that Ivan Ogareff has sworn to revenge himself personally on the Czar’s brother.”

“Why?”

“It is said that the officer in question was condemned by the Grand Duke to a humiliating degradation.”

“Yes, I remember. But it is a proof that the villain, who could afterwards serve against his country and head an invasion of barbarians, deserved it.”

“His Majesty the Czar,” said Ogareff, “was particularly anxious that you should be warned of the criminal projects of Ivan Ogareff against your person.”

“Yes; of that the letter informs me.”

“And His Majesty himself spoke to me of it, telling me I was above all things to beware of the traitor.”

“Did you meet with him?”

“Yes, your Highness, after the battle of Krasnoiarsk. If he had only guessed that I was the bearer of a letter addressed to your Highness, in which his plans were revealed, I should not have got off so easily.”

“No; you would have been lost!” replied the Grand Duke. “And how did you manage to escape?”

“By throwing myself into the Irtych.”

“And how did you enter Irkutsk?”

“Under cover of a sortie, which was made this evening to repulse a Tartar detachment. I mingled with the defenders of the town, made myself known, and was immediately conducted before your Highness.”

“Good, Michael Strogoff,” answered the Grand Duke. “You have shown courage and zeal in your difficult mission. I will not forget you. Have you any favor to ask?”

“None; unless it is to be allowed to fight at the side of your Highness,” replied Ogareff.

“So be it, Strogoff. I attach you from to-day to my person, and you shall be lodged in the palace.”

“And if according to his intention, Ivan Ogareff should present himself to your Highness under a false name?”

“We will unmask him, thanks to you, who know him, and I will make him die under the knout. Go!”

Ogareff gave a military salute, not forgetting that he was a captain of the couriers of the Czar, and retired.

Ogareff had so far played his unworthy part with success. The Grand Duke’s entire confidence had been accorded him. He could now betray it whenever it suited him. He would inhabit the very palace. He would be in the secret of all the operations for the defense of the town. He thus held the situation in his hand, as it were. No one in Irkutsk knew him, no one could snatch off his mask. He resolved therefore to set to work without delay.

Indeed, time pressed. The town must be captured before the arrival of the Russians from the North and East, and that was only a question of a few days. The Tartars once masters of Irkutsk, it would not be easy to take it again from them. At any rate, even if they were obliged to abandon it later, they would not do so before they had utterly destroyed it, and before the head of the Grand Duke had rolled at the feet of Feofar-Khan.

Ivan Ogareff, having every facility for seeing, observing, and acting, occupied himself the next day with visiting the ramparts. He was everywhere received with cordial

congratulations from officers, soldiers, and citizens. To them this courier from the Czar was a link which connected them with the empire.

Ogareff recounted, with an assurance which never failed, numerous fictitious events of his journey. Then, with the cunning for which he was noted, without dwelling too much on it at first, he spoke of the gravity of the situation, exaggerating the success of the Tartars and the numbers of the barbarian forces, as he had when speaking to the Grand Duke. According to him, the expected succors would be insufficient, if ever they arrived at all, and it was to be feared that a battle fought under the walls of Irkutsk would be as fatal as the battles of Kolyvan, Tomsk, and Krasnoiarsk.

Ogareff was not too free in these insinuations. He wished to allow them to sink gradually into the minds of the defenders of Irkutsk. He pretended only to answer with reluctance when much pressed with questions. He always added that they must fight to the last man, and blow up the town rather than yield!

These false statements would have done more harm had it been possible; but the garrison and the population of Irkutsk were too patriotic to let themselves be moved. Of all the soldiers and citizens shut up in this town, isolated at the extremity of the Asiatic world, not one dreamed of even speaking of a capitulation. The contempt of the Russians for these barbarians was boundless.

No one suspected the odious part played by Ivan Ogareff; no one guessed that the pretended courier of the Czar was a traitor. It occurred very naturally that on his arrival in Irkutsk, a frequent intercourse was established between Ogareff and one of the bravest defenders of the town, Wassili Fedor. We know what anxiety this unhappy father suffered. If his daughter, Nadia Fedor, had left Russia on the date fixed by the last letter he had received from Riga, what had become of her? Was she still trying to cross the invaded provinces, or had she long since been taken prisoner? The only alleviation to Wassili Fedor’s anxiety was when he could obtain an opportunity of engaging in battle with the Tartars — opportunities which came too seldom for his taste. The very evening the pretended courier arrived, Wassili Fedor went to the governor-general’s palace and, acquainting Ogareff with the circumstances under which his daughter must have left European Russia, told him all his uneasiness about her. Ogareff did not know Nadia, although he had met her at Ichim on the day she was there with Michael Strogoff; but then, he had not paid more attention to her than to the two reporters, who

at the same time were in the post-house; he therefore could give Wassili Fedor no news of his daughter.

“But at what time,” asked Ogareff, “must your daughter have left the Russian territory?”

“About the same time that you did,” replied Fedor.

“I left Moscow on the 15th of July.”

“Nadia must also have quitted Moscow at that time. Her letter told me so expressly.”

“She was in Moscow on the 15th of July?”

“Yes, certainly, by that date.”

“Then it was impossible for her — But no, I am mistaken — I was confusing dates. Unfortunately, it is too probable that your daughter must have passed the frontier, and you can only have one hope, that she stopped on learning the news of the Tartar invasion!”

The father’s head fell! He knew Nadia, and he knew too well that nothing would have prevented her from setting out. Ivan Ogareff had just committed gratuitously an act of real cruelty. With a word he might have reassured Fedor. Although Nadia had passed the frontier under circumstances with which we are acquainted, Fedor, by comparing the date on which his daughter would have been at Nijni-Novgorod, and the date of the proclamation which forbade anyone to leave it, would no doubt have concluded thus: that Nadia had not been exposed to the dangers of the invasion, and that she was still, in spite of herself, in the European territory of the Empire.

Ogareff obedient to his nature, a man who was never touched by the sufferings of others, might have said that word. He did not say it. Fedor retired with his heart broken. In that interview his last hope was crushed.

During the two following days, the 3rd and 4th of October, the Grand Duke often spoke to the pretended Michael Strogoff, and made him repeat all that he had heard in the Imperial Cabinet of the New Palace. Ogareff, prepared for all these questions, replied without the least hesitation. He intentionally did not conceal that the Czar’s government had been utterly surprised by the invasion, that the insurrection had been prepared in the

greatest possible secrecy, that the Tartars were already masters of the line of the Obi when the news reached Moscow, and lastly, that none of the necessary preparations were completed in the Russian provinces for sending into Siberia the troops requisite for repulsing the invaders.

Ivan Ogareff, being entirely free in his movements, began to study Irkutsk, the state of its fortifications, their weak points, so as to profit subsequently by his observations, in the event of being prevented from consummating his act of treason. He examined particularly the Bolchaia Gate, the one he wished to deliver up.

Twice in the evening he came upon the glacis of this gate. He walked up and down, without fear of being discovered by the besiegers, whose nearest posts were at least a mile from the ramparts. He fancied that he was recognized by no one, till he caught sight of a shadow gliding along outside the earthworks. Sangarre had come at the risk of her life for the purpose of putting herself in communication with Ivan Ogareff.

For two days the besieged had enjoyed a tranquillity to which the Tartars had not accustomed them since the commencement of the investment. This was by Ogareff’s orders. Feofar-Khan’s lieutenant wished that all attempts to take the town by force should be suspended. He hoped the watchfulness of the besieged would relax. At any rate, several thousand Tartars were kept in readiness at the outposts, to attack the gate, deserted, as Ogareff anticipated that it would be, by its defenders, whenever he should summon the besiegers to the assault.

This he could not now delay in doing. All must be over by the time that the Russian troops should come in sight of Irkutsk. Ogareff’s arrangements were made, and on this evening a note fell from the top of the earthworks into Sangarre’s hands.

On the next day, that is to say during the hours of darkness from the 5th to the 6th of October, at two o’clock in the morning, Ivan Ogareff had resolved to deliver up Irkutsk.

CHAPTER XIV THE NIGHT OF THE FIFTH OF OCTOBER

IVAN OGAREFF'S plan had been contrived with the greatest care, and except for some unforeseen accident he believed that it must succeed. It was of importance that the Bolchaia Gate should be unguarded or only feebly held when he gave it up. The attention of the besieged was therefore to be drawn to another part of the town. A diversion was agreed upon with the Emir.

This diversion was to be effected both up and down the river, on the Irkutsk bank. The attack on these two points was to be conducted in earnest, and at the same time a feigned attempt at crossing the Angara from the left bank was to be made. The Bolchaia Gate, would be probably deserted, so much the more because on this side the Tartar outposts having drawn back, would appear to have broken up.

It was the 5th of October. In four and twenty hours, the capital of Eastern Siberia would be in the hands of the Emir, and the Grand Duke in the power of Ivan Ogareff.

During the day, an unusual stir was going on in the Angara camp. From the windows of the palace important preparations on the opposite shore could be distinctly seen. Numerous Tartar detachments were converging towards the camp, and from hour to hour reinforced the Emir's troops. These movements, intended to deceive the besieged, were conducted in the most open manner possible before their eyes.

Ogareff had warned the Grand Duke that an attack was to be feared. He knew, he said, that an assault was to be made, both above and below the town, and he counselled the Duke to reinforce the two directly threatened points. Accordingly, after a council of war had been held in the palace, orders were issued to concentrate the defense on the bank of the Angara and at the two ends of the town, where the earthworks protected the river.

This was exactly what Ogareff wished. He did not expect that the Bolchaia Gate would be left entirely without defenders, but that there would only be a small number. Besides, Ogareff meant to give such importance to the diversion, that the Grand Duke would be obliged to oppose it with all his available forces. The traitor planned also to produce so frightful a catastrophe that terror must inevitably overwhelm the hearts of the besieged.

All day the garrison and population of Irkutsk were on the alert. The measures to repel an attack on the points hitherto unassailed had been taken. The Grand Duke and General Voranzoff visited the posts, strengthened by their orders. Wassili Fedor's corps occupied the North of the town, but with orders to throw themselves where the danger was greatest. The right bank of the Angara had been protected with the few guns possessed by the defenders. With these measures, taken in time, thanks to the advice so opportunely given by Ivan Ogareff, there was good reason to hope that the expected attack would be repulsed. In that case the Tartars, momentarily discouraged, would no doubt not make another attempt against the town for several days. Now the troops expected by the Grand Duke might arrive at any hour. The safety or the loss of Irkutsk hung only by a thread.

On this day, the sun which had risen at twenty minutes to six, set at forty minutes past five, having traced its diurnal arc for eleven hours above the horizon. The twilight would struggle with the night for another two hours. Then it would be intensely dark, for the sky was cloudy, and there would be no moon. This gloom would favor the plans of Ivan Ogareff.

For a few days already a sharp frost had given warning of the approaching rigor of the Siberian winter, and this evening it was especially severe. The Russians posted by the bank of the Angara, obliged to conceal their position, lighted no fires. They suffered cruelly from the low temperature. A few feet below them, the ice in large masses drifted down the current. All day these masses had been seen passing rapidly between the two banks.

This had been considered by the Grand Duke and his officers as fortunate. Should the channel of the Angara continue to be thus obstructed, the passage must be impracticable. The Tartars could use neither rafts nor boats. As to their crossing the river on the ice, that was not possible. The newly-frozen plain could not bear the weight of an assaulting column.

This circumstance, as it appeared favorable to the defenders of Irkutsk, Ogareff might have regretted. He did not do so, however. The traitor knew well that the Tartars would not try to pass the Angara, and that, on its side at least, their attempt was only a feint.

About ten in the evening, the state of the river sensibly improved, to the great surprise of the besieged and still more to their disadvantage. The passage till then impracticable,

became all at once possible. The bed of the Angara was clear. The blocks of ice, which had for some days drifted past in large numbers, disappeared down the current, and five or six only now occupied the space between the banks. The Russian officers reported this change in the river to the Grand Duke. They suggested that it was probably caused by the circumstance that in some narrower part of the Angara, the blocks had accumulated so as to form a barrier.

We know this was the case. The passage of the Angara was thus open to the besiegers. There was great reason for the Russians to be on their guard.

Up to midnight nothing had occurred. On the Eastern side, beyond the Bolchaia Gate, all was quiet. Not a glimmer was seen in the dense forest, which appeared confounded on the horizon with the masses of clouds hanging low down in the sky. Lights flitting to and fro in the Angara camp, showed that a considerable movement was taking place. From a verst above and below the point where the scarp met the river's bank, came a dull murmur, proving that the Tartars were on foot, expecting some signal. An hour passed. Nothing new.

The bell of the Irkutsk cathedral was about to strike two o'clock in the morning, and not a movement amongst the besiegers had yet shown that they were about to commence the assault. The Grand Duke and his officers began to suspect that they had been mistaken. Had it really been the Tartars' plan to surprise the town? The preceding nights had not been nearly so quiet — musketry rattling from the outposts, shells whistling through the air; and this time, nothing. The officers waited, ready to give their orders, according to circumstances.

We have said that Ogareff occupied a room in the palace. It was a large chamber on the ground floor, its windows opening on a side terrace. By taking a few steps along this terrace, a view of the river could be obtained.

Profound darkness reigned in the room. Ogareff stood by a window, awaiting the hour to act. The signal, of course, could come from him, alone. This signal once given, when the greater part of the defenders of Irkutsk would be summoned to the points openly attacked, his plan was to leave the palace and hurry to the Bolchaia Gate. If it was unguarded, he would open it; or at least he would direct the overwhelming mass of its assailants against the few defenders.

He now crouched in the shadow, like a wild beast ready to spring on its prey. A few minutes before two o'clock, the Grand Duke desired that Michael Strogoff — which was the only name they could give to Ivan Ogareff — should be brought to him. An aide-de-camp came to the room, the door of which was closed. He called.

Ogareff, motionless near the window, and invisible in the shade did not answer. The Grand Duke was therefore informed that the Czar's courier was not at that moment in the palace.

Two o'clock struck. Now was the time to cause the diversion agreed upon with the Tartars, waiting for the assault. Ivan Ogareff opened the window and stationed himself at the North angle of the side terrace.

Below him flowed the roaring waters of the Angara. Ogareff took a match from his pocket, struck it and lighted a small bunch of tow, impregnated with priming powder, which he threw into the river.

It was by the orders of Ivan Ogareff that the torrents of mineral oil had been thrown on the surface of the Angara! There are numerous naphtha springs above Irkutsk, on the right bank, between the suburb of Poshkavsk and the town. Ogareff had resolved to employ this terrible means to carry fire into Irkutsk. He therefore took possession of the immense reservoirs which contained the combustible liquid. It was only necessary to demolish a piece of wall in order to allow it to flow out in a vast stream.

This had been done that night, a few hours previously, and this was the reason that the raft which carried the true Courier of the Czar, Nadia, and the fugitives, floated on a current of mineral oil. Through the breaches in these reservoirs of enormous dimensions rushed the naphtha in torrents, and, following the inclination of the ground, it spread over the surface of the river, where its density allowed it to float. This was the way Ivan Ogareff carried on warfare! Allied with Tartars, he acted like a Tartar, and against his own countrymen!

The tow had been thrown on the waters of the Angara. In an instant, with electrical rapidity, as if the current had been of alcohol, the whole river was in a blaze above and below the town. Columns of blue flames ran between the two banks. Volumes of vapor curled up above. The few pieces of ice which still drifted were seized by the burning

liquid, and melted like wax on the top of a furnace, the evaporated water escaping in shrill hisses.

At the same moment, firing broke out on the North and South of the town. The enemy's batteries discharged their guns at random. Several thousand Tartars rushed to the assault of the earth-works. The houses on the bank, built of wood, took fire in every direction. A bright light dissipated the darkness of the night.

"At last!" said Ivan Ogareff.

He had good reason for congratulating himself. The diversion which he had planned was terrible. The defenders of Irkutsk found themselves between the attack of the Tartars and the fearful effects of fire. The bells rang, and all the able-bodied of the population ran, some towards the points attacked, and others towards the houses in the grasp of the flames, which it seemed too probable would ere long envelop the whole town.

The Gate of Bolchaia was nearly free. Only a very small guard had been left there. And by the traitor's suggestion, and in order that the event might be explained apart from him, as if by political hate, this small guard had been chosen from the little band of exiles.

Ogareff re-entered his room, now brilliantly lighted by the flames from the Angara; then he made ready to go out. But scarcely had he opened the door, when a woman rushed into the room, her clothes drenched, her hair in disorder.

"Sangarre!" exclaimed Ogareff, in the first moment of surprise, and not supposing that it could be any other woman than the gypsy.

It was not Sangarre; it was Nadia!

At the moment when, floating on the ice, the girl had uttered a cry on seeing the fire spreading along the current, Michael had seized her in his arms, and plunged with her into the river itself to seek a refuge in its depths from the flames. The block which bore them was not thirty fathoms from the first quay of Irkutsk.

Swimming beneath the water, Michael managed to get a footing with Nadia on the quay. Michael Strogoff had reached his journey's end! He was in Irkutsk!

“To the governor’s palace!” said he to Nadia.

In less than ten minutes, they arrived at the entrance to the palace. Long tongues of flame from the Angara licked its walls, but were powerless to set it on fire. Beyond the houses on the bank were in a blaze.

The palace being open to all, Michael and Nadia entered without difficulty. In the confusion, no one remarked them, although their garments were dripping. A crowd of officers coming for orders, and of soldiers running to execute them, filled the great hall on the ground floor. There, in a sudden eddy of the confused multitude, Michael and the young girl were separated from each other.

Nadia ran distracted through the passages, calling her companion, and asking to be taken to the Grand Duke. A door into a room flooded with light opened before her. She entered, and found herself suddenly face to face with the man whom she had met at Ichim, whom she had seen at Tomsk; face to face with the one whose villainous hand would an instant later betray the town!

“Ivan Ogareff!” she cried.

On hearing his name pronounced, the wretch started. His real name known, all his plans would be balked. There was but one thing to be done: to kill the person who had just uttered it. Ogareff darted at Nadia; but the girl, a knife in her hand, retreated against the wall, determined to defend herself.

“Ivan Ogareff!” again cried Nadia, knowing well that so detested a name would soon bring her help.

“Ah! Be silent!” hissed out the traitor between his clenched teeth.

“Ivan Ogareff!” exclaimed a third time the brave young girl, in a voice to which hate had added ten-fold strength.

Mad with fury, Ogareff, drawing a dagger from his belt, again rushed at Nadia and compelled her to retreat into a corner of the room. Her last hope appeared gone, when the villain, suddenly lifted by an irresistible force, was dashed to the ground.

“Michael!” cried Nadia.

It was Michael Strogoff. Michael had heard Nadia's call. Guided by her voice, he had just in time reached Ivan Ogareff's room, and entered by the open door.

"Fear nothing, Nadia," said he, placing himself between her and Ogareff.

"Ah!" cried the girl, "take care, brother! The traitor is armed! He can see!"

Ogareff rose, and, thinking he had an immeasurable advantage over the blind man leaped upon him. But with one hand, the blind man grasped the arm of his enemy, seized his weapon, and hurled him again to the ground.

Pale with rage and shame, Ogareff remembered that he wore a sword. He drew it and returned a second time to the charge. A blind man! Ogareff had only to deal with a blind man! He was more than a match for him!

Nadia, terrified at the danger which threatened her companion ran to the door calling for help!

"Close the door, Nadia!" said Michael. "Call no one, and leave me alone! The Czar's courier has nothing to fear to-day from this villain! Let him come on, if he dares! I am ready for him."

In the mean time, Ogareff, gathering himself together like a tiger about to spring, uttered not a word. The noise of his footsteps, his very breathing, he endeavored to conceal from the ear of the blind man. His object was to strike before his opponent was aware of his approach, to strike him with a deadly blow.

Nadia, terrified and at the same time confident, watched this terrible scene with involuntary admiration. Michael's calm bearing seemed to have inspired her. Michael's sole weapon was his Siberian knife. He did not see his adversary armed with a sword, it is true; but Heaven's support seemed to be afforded him. How, almost without stirring, did he always face the point of the sword?

Ivan Ogareff watched his strange adversary with visible anxiety. His superhuman calm had an effect upon him. In vain, appealing to his reason, did he tell himself that in so unequal a combat all the advantages were on his side. The immobility of the blind man froze him. He had settled on the place where he would strike his victim. He had fixed upon it! What, then, hindered him from putting an end to his blind antagonist?

At last, with a spring he drove his sword full at Michael’s breast. An imperceptible movement of the blind man’s knife turned aside the blow. Michael had not been touched, and coolly he awaited a second attack.

Cold drops stood on Ogareff’s brow. He drew back a step, then again leaped forward. But as had the first, this second attempt failed. The knife had simply parried the blow from the traitor’s useless sword.

Mad with rage and terror before this living statue, he gazed into the wide-open eyes of the blind man. Those eyes which seemed to pierce to the bottom of his soul, and yet which did not, could not, see — exercised a sort of dreadful fascination over him.

All at once, Ogareff uttered a cry. A sudden light flashed across his brain. “He sees!” he exclaimed, “he sees!” And like a wild beast trying to retreat into its den, step by step, terrified, he drew back to the end of the room.

Then the statue became animated, the blind man walked straight up to Ivan Ogareff, and placing himself right before him, “Yes, I see!” said he. “I see the mark of the knout which I gave you, traitor and coward! I see the place where I am about to strike you! Defend your life! It is a duel I deign to offer you! My knife against your sword!”

“He sees!” said Nadia. “Gracious Heaven, is it possible!”

Ogareff felt that he was lost. But mustering all his courage, he sprang forward on his impassible adversary. The two blades crossed, but at a touch from Michael’s knife, wielded in the hand of the Siberian hunter, the sword flew in splinters, and the wretch, stabbed to the heart, fell lifeless on the ground.

At the same moment, the door was thrown open. The Grand Duke, accompanied by some of his officers, appeared on the threshold. The Grand Duke advanced. In the body lying on the ground, he recognized the man whom he believed to be the Czar’s courier.

Then, in a threatening voice, “Who killed that man?” he asked.

“I,” replied Michael.

One of the officers put a pistol to his temple, ready to fire.

“Your name?” asked the Grand Duke, before giving the order for his brains to be blown out.

“Your Highness,” answered Michael, “ask me rather the name of the man who lies at your feet!”

“That man, I know him! He is a servant of my brother! He is the Czar’s courier!”

“That man, your Highness, is not a courier of the Czar! He is Ivan Ogareff!”

“Ivan Ogareff!” exclaimed the Grand Duke.

“Yes, Ivan the Traitor!”

“But who are you, then?”

“Michael Strogoff!”

CHAPTER XV CONCLUSION

MICHAEL STROGOFF was not, had never been, blind. A purely human phenomenon, at the same time moral and physical, had neutralized the action of the incandescent blade which Feofar's executioner had passed before his eyes.

It may be remembered, that at the moment of the execution, Marfa Strogoff was present, stretching out her hands towards her son. Michael gazed at her as a son would gaze at his mother, when it is for the last time. The tears, which his pride in vain endeavored to subdue, welling up from his heart, gathered under his eyelids, and volatiliz-ing on the cornea, had saved his sight. The vapor formed by his tears interposing between the glowing saber and his eyeballs, had been sufficient to annihilate the action of the heat. A similar effect is produced, when a workman smelter, after dipping his hand in vapor, can with impunity hold it over a stream of melted iron.

Michael had immediately understood the danger in which he would be placed should he make known his secret to anyone. He at once saw, on the other hand, that he might make use of his supposed blindness for the accomplishment of his designs. Because it was believed that he was blind, he would be allowed to go free. He must therefore be blind, blind to all, even to Nadia, blind everywhere, and not a gesture at any moment must let the truth be suspected. His resolution was taken. He must risk his life even to afford to all he might meet the proof of his want of sight. We know how perfectly he acted the part he had determined on.

His mother alone knew the truth, and he had whispered it to her in Tomsk itself, when bending over her in the dark he covered her with kisses.

When Ogareff had in his cruel irony held the Imperial letter before the eyes which he believed were destroyed, Michael had been able to read, and had read the letter which disclosed the odious plans of the traitor. This was the reason of the wonderful resolution he exhibited during the second part of his journey. This was the reason of his unalterable longing to reach Irkutsk, so as to perform his mission by word of mouth. He knew that the town would be betrayed! He knew that the life of the Grand Duke was threatened! The safety of the Czar's brother and of Siberia was in his hands.

This story was told in a few words to the Grand Duke, and Michael repeated also — and with what emotion! — the part Nadia had taken in these events.

“Who is this girl?” asked the Grand Duke.

“The daughter of the exile, Wassili Fedor,” replied Michael.

“The daughter of Captain Fedor,” said the Grand Duke, “has ceased to be the daughter of an exile. There are no longer exiles in Irkutsk.”

Nadia, less strong in joy than she had been in grief, fell on her knees before the Grand Duke, who raised her with one hand, while he extended the other to Michael.

An hour after, Nadia was in her father’s arms. Michael Strogoff, Nadia, and Wassili Fedor were united. This was the height of happiness to them all.

The Tartars had been repulsed in their double attack on the town. Wassili Fedor, with his little band, had driven back the first assailants who presented themselves at the Bolchaia Gate, expecting to find it open and which, by an instinctive feeling, often arising from sound judgment, he had determined to remain at and defend.

At the same time as the Tartars were driven back the besieged had mastered the fire. The liquid naphtha having rapidly burnt to the surface of the water, the flames did not go beyond the houses on the shore, and left the other quarters of the town uninjured. Before daybreak the troops of Feofar-Khan had retreated into their camp, leaving a large number of dead on and below the ramparts.

Among the dead was the gypsy Sangarre, who had vainly endeavored to join Ivan Ogareff.

For two days the besiegers attempted no fresh assault. They were discouraged by the death of Ogareff. This man was the mainspring of the invasion, and he alone, by his plots long since contrived, had had sufficient influence over the khans and their hordes to bring them to the conquest of Asiatic Russia.

However, the defenders of Irkutsk kept on their guard, and the investment still continued; but on the 7th of October, at daybreak, cannon boomed out from the heights around Irkutsk. It was the succoring army under the command of General Kisselef, and it was thus that he made known his welcome arrival to the Grand Duke.

The Tartars did not wait to be attacked. Not daring to run the risk of a battle under the walls of Irkutsk, they immediately broke up the Angara camp. Irkutsk was at last

relieved.

With the first Russian soldiers, two of Michael's friends entered the city. They were the inseparable Blount and Jolivet. On gaining the right bank of the Angara by means of the icy barrier, they had escaped, as had the other fugitives, before the flames had reached their raft. This had been noted by Alcide Jolivet in his book in this way: "Ran a narrow chance of being finished up like a lemon in a bowl of punch!"

Their joy was great on finding Nadia and Michael safe and sound; above all, when they learnt that their brave companion was not blind. Harry Blount inscribed this observation: "Red-hot iron is insufficient in some cases to destroy the sensibility of the optic nerve."

Then the two correspondents, settled for a time in Irkutsk, busied themselves in putting the notes and impressions of their journey in order. Thence were sent to London and Paris two interesting articles relative to the Tartar invasion, and which — a rare thing — did not contradict each other even on the least important points.

The remainder of the campaign was unfortunate to the Emir and his allies. This invasion, futile as all which attack the Russian Colossus must be, was very fatal to them. They soon found themselves cut off by the Czar's troops, who retook in succession all the conquered towns. Besides this, the winter was terrible, and, decimated by the cold, only a small part of these hordes returned to the steppes of Tartary.

The Irkutsk road, by way of the Ural Mountains, was now open. The Grand Duke was anxious to return to Moscow, but he delayed his journey to be present at a touching ceremony, which took place a few days after the entry of the Russian troops.

Michael Strogoff sought Nadia, and in her father's presence said to her, "Nadia, my sister still, when you left Riga to come to Irkutsk, did you leave it with any other regret than that for your mother?"

"No," replied Nadia, "none of any sort whatever."

"Then, nothing of your heart remains there?"

"Nothing, brother."

“Then, Nadia,” said Michael, “I think that God, in allowing us to meet, and to go through so many severe trials together, must have meant us to be united forever.”

“Ah!” said Nadia, falling into Michael’s arms. Then turning towards Wassili Fedor, “My father,” said she, blushing.

“Nadia,” said Captain Fedor, “it will be my joy to call you both my children!”

The marriage ceremony took place in Irkutsk cathedral.

Jolivet and Blount very naturally assisted at this marriage, of which they wished to give an account to their readers.

“And doesn’t it make you wish to imitate them?” asked Alcide of his friend.

“Pooh!” said Blount. “Now if I had a cousin like you — ”

“My cousin isn’t to be married!” answered Alcide, laughing.

“So much the better,” returned Blount, “for they speak of difficulties arising between London and Pekin. Have you no wish to go and see what is going on there?”

“By Jove, my dear Blount!” exclaimed Alcide Jolivet, “I was just going to make the same proposal to you.”

And that was how the two inseparables set off for China.

A few days after the ceremony, Michael and Nadia Strogoff, accompanied by Wassili Fedor, took the route to Europe. The road so full of suffering when going, was a road of joy in returning. They traveled swiftly, in one of those sleighs which glide like an express train across the frozen steppes of Siberia.

However, when they reached the banks of the Dinka, just before Birskoe, they stopped for a while. Michael found the place where he had buried poor Nicholas. A cross was erected there, and Nadia prayed a last time on the grave of the humble and heroic friend, whom neither of them would ever forget.

At Omsk, old Marfa awaited them in the little house of the Strogoffs. She clasped passionately in her arms the girl whom in her heart she had already a hundred times

called “daughter.” The brave old Siberian, on that day, had the right to recognize her son and say she was proud of him.

After a few days passed at Omsk, Michael and Nadia entered Europe, and, Wassili Fedor settling down in St. Petersburg, neither his son nor his daughter had any occasion to leave him, except to go and see their old mother.

The young courier was received by the Czar, who attached him specially to his own person, and gave him the Cross of St. George. In the course of time, Michael Strogoff reached a high station in the Empire. But it is not the history of his success, but the history of his trials, which deserves to be related.

OFF ON A COMET

Translated by Charles F. Horne,

First published under the French title *Hector Servadac* in 1877, this novel tells the story of John Herschel, who observes Comet Halley from his observatory in Cape Town in 1835. The narrative begins with a comet that touches the Earth in its flight and collects a few small chunks of it.

CHAPTER I. A CHALLENGE

“Nothing, sir, can induce me to surrender my claim.”

“I am sorry, count, but in such a matter your views cannot modify mine.”

“But allow me to point out that my seniority unquestionably gives me a prior right.”

“Mere seniority, I assert, in an affair of this kind, cannot possibly entitle you to any prior claim whatever.”

“Then, captain, no alternative is left but for me to compel you to yield at the sword’s point.”

“As you please, count; but neither sword nor pistol can force me to forego my pretensions. Here is my card.”

“And mine.”

This rapid altercation was thus brought to an end by the formal interchange of the names of the disputants. On one of the cards was inscribed:

Captain Hector Servadac,

Staff Officer, Mostaganem.

On the other was the title:

Count Wassili Timascheff,

On board the Schooner “ Dobryna.”

It did not take long to arrange that seconds should be appointed, who would meet in Mostaganem at two o’clock that day; and the captain and the count were on the point of parting from each other, with a salute of punctilious courtesy, when Timascheff, as if

struck by a sudden thought, said abruptly: “Perhaps it would be better, captain, not to allow the real cause of this to transpire?”

“Far better,” replied Servadac; “it is undesirable in every way for any names to be mentioned.”

“In that case, however,” continued the count, “it will be necessary to assign an ostensible pretext of some kind. Shall we allege a musical dispute? a contention in which I feel bound to defend Wagner, while you are the zealous champion of Rossini?”

“I am quite content,” answered Servadac, with a smile; and with another low bow they parted.

The scene, as here depicted, took place upon the extremity of a little cape on the Algerian coast, between Mostaganem and Tenes, about two miles from the mouth of the Shelif. The headland rose more than sixty feet above the sea-level, and the azure waters of the Mediterranean, as they softly kissed the strand, were tinged with the reddish hue of the ferriferous rocks that formed its base. It was the 31st of December. The noontide sun, which usually illuminated the various projections of the coast with a dazzling brightness, was hidden by a dense mass of cloud, and the fog, which for some unaccountable cause, had hung for the last two months over nearly every region in the world, causing serious interruption to traffic between continent and continent, spread its dreary veil across land and sea.

After taking leave of the staff-officer, Count Wassili Timascheff wended his way down to a small creek, and took his seat in the stern of a light four-oar that had been awaiting his return; this was immediately pushed off from shore, and was soon alongside a pleasure-yacht, that was lying to, not many cable lengths away.

At a sign from Servadac, an orderly, who had been standing at a respectful distance, led forward a magnificent Arabian horse; the captain vaulted into the saddle, and followed by his attendant, well mounted as himself, started off towards Mostaganem. It was half-past twelve when the two riders crossed the bridge that had been recently erected over the Shelif, and a quarter of an hour later their steeds, flecked with foam, dashed through the Mascara Gate, which was one of five entrances opened in the embattled wall that encircled the town.

At that date, Mostaganem contained about fifteen thousand inhabitants, three thousand of whom were French. Besides being one of the principal district towns of the province of Oran, it was also a military station. Mostaganem rejoiced in a well-sheltered harbor, which enabled her to utilize all the rich products of the Mina and the Lower Shelif. It was the existence of so good a harbor amidst the exposed cliffs of this coast that had induced the owner of the *Dobryna* to winter in these parts, and for two months the Russian standard had been seen floating from her yard, whilst on her mast-head was hoisted the pennant of the French Yacht Club, with the distinctive letters M. C. W. T. the initials of Count Timascheff.

Having entered the town, Captain Servadac made his way towards Matmore, the military quarter, and was not long in finding two friends on whom he might rely — a major of the 2nd Fusileers, and a captain of the 8th Artillery. The two officers listened gravely enough to Servadac's request that they would act as his seconds in an affair of honor, but could not resist a smile on hearing that the dispute between him and the count had originated in a musical discussion. Surely, they suggested, the matter might be easily arranged; a few slight concessions on either side, and all might be amicably adjusted. But no representations on their part were of any avail. Hector Servadac was inflexible.

"No concession is possible," he replied, resolutely. "Rossini has been deeply injured, and I cannot suffer the injury to be unavenged. Wagner is a fool. I shall keep my word. I am quite firm."

"Be it so, then," replied one of the officers; "and after all, you know, a sword-cut need not be a very serious affair."

"Certainly not," rejoined Servadac; "and especially in my case, when I have not the slightest intention of being wounded at all."

Incredulous as they naturally were as to the assigned cause of the quarrel, Servadac's friends had no alternative but to accept his explanation, and without farther parley they started for the staff office, where, at two o'clock precisely, they were to meet the seconds of Count Timascheff. Two hours later they had returned. All the preliminaries had been arranged; the count, who like many Russians abroad was an aide-de-camp of the Czar, had of course proposed swords as the most appropriate weapons, and the duel was to take place on the following morning, the first of January, at nine o'clock, upon

the cliff at a spot about a mile and a half from the mouth of the Shelif. With the assurance that they would not fail to keep their appointment with military punctuality, the two officers cordially wrung their friend's hand and retired to the Zulma Cafe for a game at piquet. Captain Servadac at once retraced his steps and left the town.

For the last fortnight Servadac had not been occupying his proper lodgings in the military quarters; having been appointed to make a local levy, he had been living in a gourbi, or native hut, on the Mostaganem coast, between four and five miles from the Shelif. His orderly was his sole companion, and by any other man than the captain the enforced exile would have been esteemed little short of a severe penance.

On his way to the gourbi, his mental occupation was a very laborious effort to put together what he was pleased to call a rondo, upon a model of versification all but obsolete. This rondo, it is unnecessary to conceal, was to be an ode addressed to a young widow by whom he had been captivated, and whom he was anxious to marry, and the tenor of his muse was intended to prove that when once a man has found an object in all respects worthy of his affections, he should love her "in all simplicity." Whether the aphorism were universally true was not very material to the gallant captain, whose sole ambition at present was to construct a roundelay of which this should be the prevailing sentiment. He indulged the fancy that he might succeed in producing a composition which would have a fine effect here in Algeria, where poetry in that form was all but unknown.

"I know well enough," he said repeatedly to himself, "what I want to say. I want to tell her that I love her sincerely, and wish to marry her; but, confound it! the words won't rhyme. Plague on it! Does nothing rhyme with 'simplicity'? Ah! I have it now:

'Lovers should, whoe'er they be,

Love in all simplicity.'

But what next? how am I to go on? I say, Ben Zoof," he called aloud to his orderly, who was trotting silently close in his rear, "did you ever compose any poetry?"

"No, captain," answered the man promptly: "I have never made any verses, but I have seen them made fast enough at a booth during the fete of Montmartre."

"Can you remember them?"

“Remember them! to be sure I can. This is the way they began:

‘Come in! come in! you’ll not repent

The entrance money you have spent;

The wondrous mirror in this place

Reveals your future sweetheart’s face.’”

“Bosh!” cried Servadac in disgust; “your verses are detestable trash.”

“As good as any others, captain, squeaked through a reed pipe.”

“Hold your tongue, man,” said Servadac peremptorily; “I have made another couplet.

‘Lovers should, whoe’er they be,

Love in all simplicity;

Lover, loving honestly,

Offer I myself to thee.’”

Beyond this, however, the captain’s poetical genius was impotent to carry him; his farther efforts were unavailing, and when at six o’clock he reached the gourbi, the four lines still remained the limit of his composition.

CHAPTER II. CAPTAIN SERVADAC AND HIS ORDERLY

At the time of which I write, there might be seen in the registers of the Minister of War the following entry:

SERVADAC (*Hector*), born at St. Trelody in the district of Lesparre, department of the Gironde, July 19th, 18 — .

Property: 1200 francs in rentes.

Length of service: Fourteen years, three months, and five days.

Service: Two years at school at St. Cyr; two years at L'Ecole d'Application; two years in the 8th Regiment of the Line; two years in the 3rd Light Cavalry; seven years in Algeria.

Campaigns: Soudan and Japan.

Rank: Captain on the staff at Mostaganem.

Decorations: Chevalier of the Legion of Honor, March 13th, 18 — .

Hector Servadac was thirty years of age, an orphan without lineage and almost without means. Thirsting for glory rather than for gold, slightly scatter-brained, but warm-hearted, generous, and brave, he was eminently formed to be the protege of the god of battles.

For the first year and a half of his existence he had been the foster-child of the sturdy wife of a vine-dresser of Medoc — a lineal descendant of the heroes of ancient prowess; in a word, he was one of those individuals whom nature seems to have predestined for remarkable things, and around whose cradle have hovered the fairy godmothers of adventure and good luck.

In appearance Hector Servadac was quite the type of an officer; he was rather more than five feet six inches high, slim and graceful, with dark curling hair and mustaches, well-formed hands and feet, and a clear blue eye. He seemed born to please without being conscious of the power he possessed. It must be owned, and no one was more ready to confess it than himself, that his literary attainments were by no means of a high order.

“We don’t spin tops” is a favorite saying amongst artillery officers, indicating that they do not shirk their duty by frivolous pursuits; but it must be confessed that Servadac, being naturally idle, was very much given to “spinning tops.” His good abilities, however, and his ready intelligence had carried him successfully through the curriculum of his early career. He was a good draughtsman, an excellent rider — having thoroughly mastered the successor to the famous “Uncle Tom” at the riding-school of St. Cyr — and in the records of his military service his name had several times been included in the order of the day.

The following episode may suffice, in a certain degree, to illustrate his character. Once, in action, he was leading a detachment of infantry through an intrenchment. They came to a place where the side-work of the trench had been so riddled by shell that a portion of it had actually fallen in, leaving an aperture quite unsheltered from the grape-shot that was pouring in thick and fast. The men hesitated. In an instant Servadac mounted the side-work, laid himself down in the gap, and thus filling up the breach by his own body, shouted, “March on!”

And through a storm of shot, not one of which touched the prostrate officer, the troop passed in safety.

Since leaving the military college, Servadac, with the exception of his two campaigns in the Soudan and Japan, had been always stationed in Algeria. He had now a staff appointment at Mostaganem, and had lately been entrusted with some topographical work on the coast between Tenes and the Shelif. It was a matter of little consequence to him that the gourbi, in which of necessity he was quartered, was uncomfortable and ill-contrived; he loved the open air, and the independence of his life suited him well. Sometimes he would wander on foot upon the sandy shore, and sometimes he would enjoy a ride along the summit of the cliff; altogether being in no hurry at all to bring his task to an end. His occupation, moreover, was not so engrossing but that he could find leisure for taking a short railway journey once or twice a week; so that he was ever and again putting in an appearance at the general’s receptions at Oran, and at the fetes given by the governor at Algiers.

It was on one of these occasions that he had first met Madame de L — — , the lady to whom he was desirous of dedicating the rondo, the first four lines of which had just seen the light. She was a colonel’s widow, young and handsome, very reserved, not to say haughty in her manner, and either indifferent or impervious to the admiration which

she inspired. Captain Servadac had not yet ventured to declare his attachment; of rivals he was well aware he had not a few, and amongst these not the least formidable was the Russian Count Timascheff. And although the young widow was all unconscious of the share she had in the matter, it was she, and she alone, who was the cause of the challenge just given and accepted by her two ardent admirers.

During his residence in the gourbi, Hector Servadac's sole companion was his orderly, Ben Zoof. Ben Zoof was devoted, body and soul, to his superior officer. His own personal ambition was so entirely absorbed in his master's welfare, that it is certain no offer of promotion — even had it been that of aide-de-camp to the Governor-General of Algiers — would have induced him to quit that master's service. His name might seem to imply that he was a native of Algeria; but such was by no means the case. His true name was Laurent; he was a native of Montmartre in Paris, and how or why he had obtained his patronymic was one of those anomalies which the most sagacious of etymologists would find it hard to explain.

Born on the hill of Montmartre, between the Solferino tower and the mill of La Galette, Ben Zoof had ever possessed the most unreserved admiration for his birthplace; and to his eyes the heights and district of Montmartre represented an epitome of all the wonders of the world. In all his travels, and these had been not a few, he had never beheld scenery which could compete with that of his native home. No cathedral — not even Burgos itself — could vie with the church at Montmartre. Its race-course could well hold its own against that at Pentelique; its reservoir would throw the Mediterranean into the shade; its forests had flourished long before the invasion of the Celts; and its very mill produced no ordinary flour, but provided material for cakes of world-wide renown. To crown all, Montmartre boasted a mountain — a veritable mountain; envious tongues indeed might pronounce it little more than a hill; but Ben Zoof would have allowed himself to be hewn in pieces rather than admit that it was anything less than fifteen thousand feet in height.

Ben Zoof's most ambitious desire was to induce the captain to go with him and end his days in his much-loved home, and so incessantly were Servadac's ears besieged with descriptions of the unparalleled beauties and advantages of this eighteenth arrondissement of Paris, that he could scarcely hear the name of Montmartre without a conscious thrill of aversion. Ben Zoof, however, did not despair of ultimately converting the captain, and meanwhile had resolved never to leave him. When a private

in the 8th Cavalry, he had been on the point of quitting the army at twenty-eight years of age, but unexpectedly he had been appointed orderly to Captain Servadac. Side by side they fought in two campaigns. Servadac had saved Ben Zoof's life in Japan; Ben Zoof had rendered his master a like service in the Soudan. The bond of union thus effected could never be severed; and although Ben Zoof's achievements had fairly earned him the right of retirement, he firmly declined all honors or any pension that might part him from his superior officer. Two stout arms, an iron constitution, a powerful frame, and an indomitable courage were all loyally devoted to his master's service, and fairly entitled him to his *soi-disant* designation of "The Rampart of Montmartre." Unlike his master, he made no pretension to any gift of poetic power, but his inexhaustible memory made him a living encyclopaedia; and for his stock of anecdotes and trooper's tales he was matchless.

Thoroughly appreciating his servant's good qualities, Captain Servadac endured with imperturbable good humor those idiosyncrasies, which in a less faithful follower would have been intolerable, and from time to time he would drop a word of sympathy that served to deepen his subordinate's devotion.

On one occasion, when Ben Zoof had mounted his hobby-horse, and was indulging in high-flown praises about his beloved eighteenth arrondissement, the captain had remarked gravely, "Do you know, Ben Zoof, that Montmartre only requires a matter of some thirteen thousand feet to make it as high as Mont Blanc?"

Ben Zoof's eyes glistened with delight; and from that moment Hector Servadac and Montmartre held equal places in his affection.

CHAPTER III. INTERRUPTED EFFUSIONS

Composed of mud and loose stones, and covered with a thatch of turf and straw, known to the natives by the name of “driss,” the gourbi, though a grade better than the tents of the nomad Arabs, was yet far inferior to any habitation built of brick or stone. It adjoined an old stone hostelry, previously occupied by a detachment of engineers, and which now afforded shelter for Ben Zoof and the two horses. It still contained a considerable number of tools, such as mattocks, shovels, and pick-axes.

Uncomfortable as was their temporary abode, Servadac and his attendant made no complaints; neither of them was dainty in the matter either of board or lodging. After dinner, leaving his orderly to stow away the remains of the repast in what he was pleased to term the “cupboard of his stomach.” Captain Servadac turned out into the open air to smoke his pipe upon the edge of the cliff. The shades of night were drawing on. An hour previously, veiled in heavy clouds, the sun had sunk below the horizon that bounded the plain beyond the Shelif.

The sky presented a most singular appearance. Towards the north, although the darkness rendered it impossible to see beyond a quarter of a mile, the upper strata of the atmosphere were suffused with a rosy glare. No well-defined fringe of light, nor arch of luminous rays, betokened a display of aurora borealis, even had such a phenomenon been possible in these latitudes; and the most experienced meteorologist would have been puzzled to explain the cause of this striking illumination on this 31st of December, the last evening of the passing year.

But Captain Servadac was no meteorologist, and it is to be doubted whether, since leaving school, he had ever opened his “Course of Cosmography.” Besides, he had other thoughts to occupy his mind. The prospects of the morrow offered serious matter for consideration. The captain was actuated by no personal animosity against the count; though rivals, the two men regarded each other with sincere respect; they had simply reached a crisis in which one of them was *de trop;* which of them, fate must decide.

At eight o’clock, Captain Servadac re-entered the gourbi, the single apartment of which contained his bed, a small writing-table, and some trunks that served instead of cupboards. The orderly performed his culinary operations in the adjoining building, which he also used as a bed-room, and where, extended on what he called his “good oak mattress,” he would sleep soundly as a dormouse for twelve hours at a stretch. Ben

Zoof had not yet received his orders to retire, and ensconcing himself in a corner of the gourbi, he endeavored to doze — a task which the unusual agitation of his master rendered somewhat difficult. Captain Servadac was evidently in no hurry to betake himself to rest, but seating himself at his table, with a pair of compasses and a sheet of tracing-paper, he began to draw, with red and blue crayons, a variety of colored lines, which could hardly be supposed to have much connection with a topographical survey. In truth, his character of staff-officer was now entirely absorbed in that of Gascon poet. Whether he imagined that the compasses would bestow upon his verses the measure of a mathematical accuracy, or whether he fancied that the parti-colored lines would lend variety to his rhythm, it is impossible to determine; be that as it may, he was devoting all his energies to the compilation of his rondo, and supremely difficult he found the task.

“Hang it!” he ejaculated, “whatever induced me to choose this meter? It is as hard to find rhymes as to rally fugitive in a battle. But, by all the powers! it shan’t be said that a French officer cannot cope with a piece of poetry. One battalion has fought — now for the rest!”

Perseverance had its reward. Presently two lines, one red, the other blue, appeared upon the paper, and the captain murmured:

“Words, mere words, cannot avail,

Telling true heart’s tender tale.”

“What on earth ails my master?” muttered Ben Zoof; “for the last hour he has been as fidgety as a bird returning after its winter migration.”

Servadac suddenly started from his seat, and as he paced the room with all the frenzy of poetic inspiration, read out:

“Empty words cannot convey

All a lover’s heart would say.”

“Well, to be sure, he is at his everlasting verses again!” said Ben Zoof to himself, as he roused himself in his corner. “Impossible to sleep in such a noise;” and he gave vent to a loud groan.

“How now, Ben Zoof?” said the captain sharply. “What ails you?”

“Nothing, sir, only the nightmare.”

“Curse the fellow, he has quite interrupted me!” ejaculated the captain. “Ben Zoof!” he called aloud.

“Here, sir!” was the prompt reply; and in an instant the orderly was upon his feet, standing in a military attitude, one hand to his forehead, the other closely pressed to his trouser-seam.

“Stay where you are! don’t move an inch!” shouted Servadac; “I have just thought of the end of my rondo.” And in a voice of inspiration, accompanying his words with dramatic gestures, Servadac began to declaim:

> “Listen, lady, to my vows —
>
> O, consent to be my spouse;
>
> Constant ever I will be,
>
> Constant...”

No closing lines were uttered. All at once, with unutterable violence, the captain and his orderly were dashed, face downwards, to the ground.

CHAPTER IV. A CONVULSION OF NATURE

Whence came it that at that very moment the horizon underwent so strange and sudden a modification, that the eye of the most practiced mariner could not distinguish between sea and sky?

Whence came it that the billows raged and rose to a height hitherto unregistered in the records of science?

Whence came it that the elements united in one deafening crash; that the earth groaned as though the whole framework of the globe were ruptured; that the waters roared from their innermost depths; that the air shrieked with all the fury of a cyclone?

Whence came it that a radiance, intenser than the effulgence of the Northern Lights, overspread the firmament, and momentarily dimmed the splendor of the brightest stars?

Whence came it that the Mediterranean, one instant emptied of its waters, was the next flooded with a foaming surge?

Whence came it that in the space of a few seconds the moon’s disc reached a magnitude as though it were but a tenth part of its ordinary distance from the earth?

Whence came it that a new blazing spheroid, hitherto unknown to astronomy, now appeared suddenly in the firmament, though it were but to lose itself immediately behind masses of accumulated cloud?

What phenomenon was this that had produced a cataclysm so tremendous in effect upon earth, sky, and sea?

Was it possible that a single human being could have survived the convulsion? and if so, could he explain its mystery?

CHAPTER V. A MYSTERIOUS SEA

Violent as the commotion had been, that portion of the Algerian coast which is bounded on the north by the Mediterranean, and on the west by the right bank of the Shelif, appeared to have suffered little change. It is true that indentations were perceptible in the fertile plain, and the surface of the sea was ruffled with an agitation that was quite unusual; but the rugged outline of the cliff was the same as heretofore, and the aspect of the entire scene appeared unaltered. The stone hostelry, with the exception of some deep clefts in its walls, had sustained little injury; but the gourbi, like a house of cards destroyed by an infant's breath, had completely subsided, and its two inmates lay motionless, buried under the sunken thatch.

It was two hours after the catastrophe that Captain Servadac regained consciousness; he had some trouble to collect his thoughts, and the first sounds that escaped his lips were the concluding words of the rondo which had been so ruthlessly interrupted;

"Constant ever I will be,

Constant..."

His next thought was to wonder what had happened; and in order to find an answer, he pushed aside the broken thatch, so that his head appeared above the *debris*. "The gourbi leveled to the ground!" he exclaimed, "surely a waterspout has passed along the coast."

He felt all over his body to perceive what injuries he had sustained, but not a sprain nor a scratch could he discover. "Where are you, Ben Zoof?" he shouted.

"Here, sir!" and with military promptitude a second head protruded from the rubbish.

"Have you any notion what has happened, Ben Zoof?"

"I've a notion, captain, that it's all up with us."

"Nonsense, Ben Zoof; it is nothing but a waterspout!"

"Very good, sir," was the philosophical reply, immediately followed by the query, "Any bones broken, sir?"

"None whatever," said the captain.

Both men were soon on their feet, and began to make a vigorous clearance of the ruins, beneath which they found that their arms, cooking utensils, and other property, had sustained little injury.

“By-the-by, what o’clock is it?” asked the captain.

“It must be eight o’clock, at least,” said Ben Zoof, looking at the sun, which was a considerable height above the horizon. “It is almost time for us to start.”

“To start! what for?”

“To keep your appointment with Count Timascheff.”

“By Jove! I had forgotten all about it!” exclaimed Servadac. Then looking at his watch, he cried, “What are you thinking of, Ben Zoof? It is scarcely two o’clock.”

“Two in the morning, or two in the afternoon?” asked Ben Zoof, again regarding the sun.

Servadac raised his watch to his ear. “It is going,” said he; “but, by all the wines of Medoc, I am puzzled. Don’t you see the sun is in the west? It must be near setting.”

“Setting, captain! Why, it is rising finely, like a conscript at the sound of the reveille. It is considerably higher since we have been talking.”

Incredible as it might appear, the fact was undeniable that the sun was rising over the Shelif from that quarter of the horizon behind which it usually sank for the latter portion of its daily round. They were utterly bewildered. Some mysterious phenomenon must not only have altered the position of the sun in the sidereal system, but must even have brought about an important modification of the earth’s rotation on her axis.

Captain Servadac consoled himself with the prospect of reading an explanation of the mystery in next week’s newspapers, and turned his attention to what was to him of more immediate importance. “Come, let us be off,” said he to his orderly; “though heaven and earth be topsy-turvy, I must be at my post this morning.”

“To do Count Timascheff the honor of running him through the body,” added Ben Zoof.

If Servadac and his orderly had been less preoccupied, they would have noticed that a variety of other physical changes besides the apparent alteration in the movement of the sun had been evolved during the atmospheric disturbances of that New Year's night. As they descended the steep footpath leading from the cliff towards the Shelif, they were unconscious that their respiration became forced and rapid, like that of a mountaineer when he has reached an altitude where the air has become less charged with oxygen. They were also unconscious that their voices were thin and feeble; either they must themselves have become rather deaf, or it was evident that the air had become less capable of transmitting sound.

The weather, which on the previous evening had been very foggy, had entirely changed. The sky had assumed a singular tint, and was soon covered with lowering clouds that completely hid the sun. There were, indeed, all the signs of a coming storm, but the vapor, on account of the insufficient condensation, failed to fall.

The sea appeared quite deserted, a most unusual circumstance along this coast, and not a sail nor a trail of smoke broke the gray monotony of water and sky. The limits of the horizon, too, had become much circumscribed. On land, as well as on sea, the remote distance had completely disappeared, and it seemed as though the globe had assumed a more decided convexity.

At the pace at which they were walking, it was very evident that the captain and his attendant would not take long to accomplish the three miles that lay between the gourbi and the place of rendezvous. They did not exchange a word, but each was conscious of an unusual buoyancy, which appeared to lift up their bodies and give as it were, wings to their feet. If Ben Zoof had expressed his sensations in words, he would have said that he felt "up to anything," and he had even forgotten to taste so much as a crust of bread, a lapse of memory of which the worthy soldier was rarely guilty.

As these thoughts were crossing his mind, a harsh bark was heard to the left of the footpath, and a jackal was seen emerging from a large grove of lentisks. Regarding the two wayfarers with manifest uneasiness, the beast took up its position at the foot of a rock, more than thirty feet in height. It belonged to an African species distinguished by a black spotted skin, and a black line down the front of the legs. At night-time, when they scour the country in herds, the creatures are somewhat formidable, but singly they are no more dangerous than a dog. Though by no means afraid of them, Ben Zoof had a particular aversion to jackals, perhaps because they had no place among the fauna of his

beloved Montmartre. He accordingly began to make threatening gestures, when, to the unmitigated astonishment of himself and the captain, the animal darted forward, and in one single bound gained the summit of the rock.

“Good Heavens!” cried Ben Zoof, “that leap must have been thirty feet at least.”

“True enough,” replied the captain; “I never saw such a jump.”

Meantime the jackal had seated itself upon its haunches, and was staring at the two men with an air of impudent defiance. This was too much for Ben Zoof’s forbearance, and stooping down he caught up a huge stone, when to his surprise, he found that it was no heavier than a piece of petrified sponge. “Confound the brute!” he exclaimed, “I might as well throw a piece of bread at him. What accounts for its being as light as this?”

Nothing daunted, however, he hurled the stone into the air. It missed its aim; but the jackal, deeming it on the whole prudent to decamp, disappeared across the trees and hedges with a series of bounds, which could only be likened to those that might be made by an india-rubber kangaroo. Ben Zoof was sure that his own powers of propelling must equal those of a howitzer, for his stone, after a lengthened flight through the air, fell to the ground full five hundred paces the other side of the rock.

The orderly was now some yards ahead of his master, and had reached a ditch full of water, and about ten feet wide. With the intention of clearing it, he made a spring, when a loud cry burst from Servadac. “Ben Zoof, you idiot! What are you about? You will break your back!”

And well might he be alarmed, for Ben Zoof had sprung to a height of forty feet into the air. Fearful of the consequences that would attend the descent of his servant to *terra firma*, Servadac bounded forwards, to be on the other side of the ditch in time to break his fall. But the muscular effort that he made carried him in his turn to an altitude of thirty feet; in his ascent he passed Ben Zoof, who had already commenced his downward course; and then, obedient to the laws of gravitation, he descended with increasing rapidity, and alighted upon the earth without experiencing a shock greater than if he had merely made a bound of four or five feet high.

Ben Zoof burst into a roar of laughter. “Bravo!” he said, “we should make a good pair of clowns.”

But the captain was inclined to take a more serious view of the matter. For a few seconds he stood lost in thought, then said solemnly, “Ben Zoof, I must be dreaming. Pinch me hard; I must be either asleep or mad.”

“It is very certain that something has happened to us,” said Ben Zoof. “I have occasionally dreamed that I was a swallow flying over the Montmartre, but I never experienced anything of this kind before; it must be peculiar to the coast of Algeria.”

Servadac was stupefied; he felt instinctively that he was not dreaming, and yet was powerless to solve the mystery. He was not, however, the man to puzzle himself for long over any insoluble problem. “Come what may,” he presently exclaimed, “we will make up our minds for the future to be surprised at nothing.”

“Right, captain,” replied Ben Zoof; “and, first of all, let us settle our little score with Count Timascheff.”

Beyond the ditch lay a small piece of meadow land, about an acre in extent. A soft and delicious herbage carpeted the soil, whilst trees formed a charming framework to the whole. No spot could have been chosen more suitable for the meeting between the two adversaries.

Servadac cast a hasty glance round. No one was in sight. “We are the first on the field,” he said.

“Not so sure of that, sir,” said Ben Zoof.

“What do you mean?” asked Servadac, looking at his watch, which he had set as nearly as possible by the sun before leaving the gourbi; “it is not nine o’clock yet.”

“Look up there, sir. I am much mistaken if that is not the sun;” and as Ben Zoof spoke, he pointed directly overhead to where a faint white disc was dimly visible through the haze of clouds.

“Nonsense!” exclaimed Servadac. “How can the sun be in the zenith, in the month of January, in lat. 39 degrees N.?”

“Can’t say, sir. I only know the sun is there; and at the rate he has been traveling, I would lay my cap to a dish of couscous that in less than three hours he will have set.”

Hector Servadac, mute and motionless, stood with folded arms. Presently he roused himself, and began to look about again. “What means all this?” he murmured. “Laws of gravity disturbed! Points of the compass reversed! The length of day reduced one half! Surely this will indefinitely postpone my meeting with the count. Something has happened; Ben Zoof and I cannot both be mad!”

The orderly, meantime, surveyed his master with the greatest equanimity; no phenomenon, however extraordinary, would have drawn from him a single exclamation of surprise. “Do you see anyone, Ben Zoof?” asked the captain, at last.

“No one, sir; the count has evidently been and gone.” “But supposing that to be the case,” persisted the captain, “my seconds would have waited, and not seeing me, would have come on towards the gourbi. I can only conclude that they have been unable to get here; and as for Count Timascheff — ”

Without finishing his sentence. Captain Servadac, thinking it just probable that the count, as on the previous evening, might come by water, walked to the ridge of rock that overhung the shore, in order to ascertain if the *Dobryna* were anywhere in sight. But the sea was deserted, and for the first time the captain noticed that, although the wind was calm, the waters were unusually agitated, and seethed and foamed as though they were boiling. It was very certain that the yacht would have found a difficulty in holding her own in such a swell. Another thing that now struck Servadac was the extraordinary contraction of the horizon. Under ordinary circumstances, his elevated position would have allowed him a radius of vision at least five and twenty miles in length; but the terrestrial sphere seemed, in the course of the last few hours, to have become considerably reduced in volume, and he could now see for a distance of only six miles in every direction.

Meantime, with the agility of a monkey, Ben Zoof had clambered to the top of a eucalyptus, and from his lofty perch was surveying the country to the south, as well as towards both Tenes and Mostaganem. On descending, be informed the captain that the plain was deserted.

“We will make our way to the river, and get over into Mostaganem,” said the captain.

The Shelif was not more than a mile and a half from the meadow, but no time was to be lost if the two men were to reach the town before nightfall. Though still hidden by

heavy clouds, the sun was evidently declining fast; and what was equally inexplicable, it was not following the oblique curve that in these latitudes and at this time of year might be expected, but was sinking perpendicularly on to the horizon.

As he went along, Captain Servadac pondered deeply. Perchance some unheard-of phenomenon had modified the rotary motion of the globe; or perhaps the Algerian coast had been transported beyond the equator into the southern hemisphere. Yet the earth, with the exception of the alteration in its convexity, in this part of Africa at least, seemed to have undergone no change of any very great importance. As far as the eye could reach, the shore was, as it had ever been, a succession of cliffs, beach, and arid rocks, tinged with a red ferruginous hue. To the south — if south, in this inverted order of things, it might still be called — the face of the country also appeared unaltered, and some leagues away, the peaks of the Merdeyah mountains still retained their accustomed outline.

Presently a rift in the clouds gave passage to an oblique ray of light that clearly proved that the sun was setting in the east.

“Well, I am curious to know what they think of all this at Mostaganem,” said the captain. “I wonder, too, what the Minister of War will say when he receives a telegram informing him that his African colony has become, not morally, but physically disorganized; that the cardinal points are at variance with ordinary rules, and that the sun in the month of January is shining down vertically upon our heads.”

Ben Zoof, whose ideas of discipline were extremely rigid, at once suggested that the colony should be put under the surveillance of the police, that the cardinal points should be placed under restraint, and that the sun should be shot for breach of discipline.

Meantime, they were both advancing with the utmost speed. The decompression of the atmosphere made the specific gravity of their bodies extraordinarily light, and they ran like hares and leaped like chamois. Leaving the devious windings of the footpath, they went as a crow would fly across the country. Hedges, trees, and streams were cleared at a bound, and under these conditions Ben Zoof felt that he could have overstepped Montmartre at a single stride. The earth seemed as elastic as the springboard of an acrobat; they scarcely touched it with their feet, and their only fear was lest the height to which they were propelled would consume the time which they were saving by their short cut across the fields.

It was not long before their wild career brought them to the right bank of the Shelif. Here they were compelled to stop, for not only had the bridge completely disappeared, but the river itself no longer existed. Of the left bank there was not the slightest trace, and the right bank, which on the previous evening had bounded the yellow stream, as it murmured peacefully along the fertile plain, had now become the shore of a tumultuous ocean, its azure waters extending westwards far as the eye could reach, and annihilating the tract of country which had hitherto formed the district of Mostaganem. The shore coincided exactly with what had been the right bank of the Shelif, and in a slightly curved line ran north and south, whilst the adjacent groves and meadows all retained their previous positions. But the river-bank had become the shore of an unknown sea.

Eager to throw some light upon the mystery, Servadac hurriedly made his way through the oleander bushes that overhung the shore, took up some water in the hollow of his hand, and carried it to his lips. “Salt as brine!” he exclaimed, as soon as he had tasted it. “The sea has undoubtedly swallowed up all the western part of Algeria.”

“It will not last long, sir,” said Ben Zoof. “It is, probably, only a severe flood.”

The captain shook his head. “Worse than that, I fear, Ben Zoof,” he replied with emotion. “It is a catastrophe that may have very serious consequences. What can have become of all my friends and fellow-officers?”

Ben Zoof was silent. Rarely had he seen his master so much agitated; and though himself inclined to receive these phenomena with philosophic indifference, his notions of military duty caused his countenance to reflect the captain’s expression of amazement.

But there was little time for Servadac to examine the changes which a few hours had wrought. The sun had already reached the eastern horizon, and just as though it were crossing the ecliptic under the tropics, it sank like a cannon ball into the sea. Without any warning, day gave place to night, and earth, sea, and sky were immediately wrapped in profound obscurity.

CHAPTER VI. THE CAPTAIN MAKES AN EXPLORATION

Hector Servadac was not the man to remain long unnerved by any untoward event. It was part of his character to discover the why and the wherefore of everything that came under his observation, and he would have faced a cannon ball the more unflinchingly from understanding the dynamic force by which it was propelled. Such being his temperament, it may well be imagined that he was anxious not to remain long in ignorance of the cause of the phenomena which had been so startling in their consequences.

“We must inquire into this to-morrow,” he exclaimed, as darkness fell suddenly upon him. Then, after a pause, he added: “That is to say, if there is to be a to-morrow; for if I were to be put to the torture, I could not tell what has become of the sun.”

“May I ask, sir, what we are to do now?” put in Ben Zoof.

“Stay where we are for the present; and when daylight appears — if it ever does appear — we will explore the coast to the west and south, and return to the gourbi. If we can find out nothing else, we must at least discover where we are.”

“Meanwhile, sir, may we go to sleep?”

“Certainly, if you like, and if you can.”

Nothing loath to avail himself of his master’s permission, Ben Zoof crouched down in an angle of the shore, threw his arms over his eyes, and very soon slept the sleep of the ignorant, which is often sounder than the sleep of the just. Overwhelmed by the questions that crowded upon his brain, Captain Servadac could only wander up and down the shore. Again and again he asked himself what the catastrophe could portend. Had the towns of Algiers, Oran, and Mostaganem escaped the inundation? Could he bring himself to believe that all the inhabitants, his friends, and comrades had perished; or was it not more probable that the Mediterranean had merely invaded the region of the mouth of the Shelif? But this supposition did not in the least explain the other physical disturbances. Another hypothesis that presented itself to his mind was that the African coast might have been suddenly transported to the equatorial zone. But although this might get over the difficulty of the altered altitude of the sun and the absence of

twilight, yet it would neither account for the sun setting in the east, nor for the length of the day being reduced to six hours.

“We must wait till to-morrow,” he repeated; adding, for he had become distrustful of the future, “that is to say, if to-morrow ever comes.”

Although not very learned in astronomy, Servadac was acquainted with the position of the principal constellations. It was therefore a considerable disappointment to him that, in consequence of the heavy clouds, not a star was visible in the firmament. To have ascertained that the pole-star had become displaced would have been an undeniable proof that the earth was revolving on a new axis; but not a rift appeared in the lowering clouds, which seemed to threaten torrents of rain.

It happened that the moon was new on that very day; naturally, therefore, it would have set at the same time as the sun. What, then, was the captain’s bewilderment when, after he had been walking for about an hour and a half, he noticed on the western horizon a strong glare that penetrated even the masses of the clouds.

“The moon in the west!” he cried aloud; but suddenly bethinking himself, he added: “But no, that cannot be the moon; unless she had shifted very much nearer the earth, she could never give a light as intense as this.”

As he spoke the screen of vapor was illuminated to such a degree that the whole country was as it were bathed in twilight. “What can this be?” soliloquized the captain. “It cannot be the sun, for the sun set in the east only an hour and a half ago. Would that those clouds would disclose what enormous luminary lies behind them! What a fool I was not to have learnt more astronomy! Perhaps, after all, I am racking my brain over something that is quite in the ordinary course of nature.”

But, reason as he might, the mysteries of the heavens still remained impenetrable. For about an hour some luminous body, its disc evidently of gigantic dimensions, shed its rays upon the upper strata of the clouds; then, marvelous to relate, instead of obeying the ordinary laws of celestial mechanism, and descending upon the opposite horizon, it seemed to retreat farther off, grew dimmer, and vanished.

The darkness that returned to the face of the earth was not more profound than the gloom which fell upon the captain’s soul. Everything was incomprehensible. The simplest mechanical rules seemed falsified; the planets had defied the laws of

gravitation; the motions of the celestial spheres were erroneous as those of a watch with a defective mainspring, and there was reason to fear that the sun would never again shed his radiance upon the earth.

But these last fears were groundless. In three hours' time, without any intervening twilight, the morning sun made its appearance in the west, and day once more had dawned. On consulting his watch, Servadac found that night had lasted precisely six hours. Ben Zoof, who was unaccustomed to so brief a period of repose, was still slumbering soundly.

"Come, wake up!" said Servadac, shaking him by the shoulder; "it is time to start."

"Time to start?" exclaimed Ben Zoof, rubbing his eyes. "I feel as if I had only just gone to sleep."

"You have slept all night, at any rate," replied the captain; "it has only been for six hours, but you must make it enough."

"Enough it shall be, sir," was the submissive rejoinder.

"And now," continued Servadac, "we will take the shortest way back to the gourbi, and see what our horses think about it all."

"They will think that they ought to be groomed," said the orderly.

"Very good; you may groom them and saddle them as quickly as you like. I want to know what has become of the rest of Algeria: if we cannot get round by the south to Mostaganem, we must go eastwards to Tenes." And forthwith they started. Beginning to feel hungry, they had no hesitation in gathering figs, dates, and oranges from the plantations that formed a continuous rich and luxuriant orchard along their path. The district was quite deserted, and they had no reason to fear any legal penalty.

In an hour and a half they reached the gourbi. Everything was just as they had left it, and it was evident that no one had visited the place during their absence. All was desolate as the shore they had quitted.

The preparations for the expedition were brief and simple. Ben Zoof saddled the horses and filled his pouch with biscuits and game; water, he felt certain, could be obtained in abundance from the numerous affluents of the Shelif, which, although they had now

become tributaries of the Mediterranean, still meandered through the plain. Captain Servadac mounted his horse Zephyr, and Ben Zoof simultaneously got astride his mare Galette, named after the mill of Montmartre. They galloped off in the direction of the Shelif, and were not long in discovering that the diminution in the pressure of the atmosphere had precisely the same effect upon their horses as it had had upon themselves. Their muscular strength seemed five times as great as hitherto; their hoofs scarcely touched the ground, and they seemed transformed from ordinary quadrupeds into veritable hippogriffs. Happily, Servadac and his orderly were fearless riders; they made no attempt to curb their steeds, but even urged them to still greater exertions. Twenty minutes sufficed to carry them over the four or five miles that intervened between the gourbi and the mouth of the Shelif; then, slackening their speed, they proceeded at a more leisurely pace to the southeast, along what had once been the right bank of the river, but which, although it still retained its former characteristics, was now the boundary of a sea, which extending farther than the limits of the horizon, must have swallowed up at least a large portion of the province of Oran. Captain Servadac knew the country well; he had at one time been engaged upon a trigonometrical survey of the district, and consequently had an accurate knowledge of its topography. His idea now was to draw up a report of his investigations: to whom that report should be delivered was a problem he had yet to solve.

During the four hours of daylight that still remained, the travelers rode about twenty-one miles from the river mouth. To their vast surprise, they did not meet a single human being. At nightfall they again encamped in a slight bend of the shore, at a point which on the previous evening had faced the mouth of the Mina, one of the left-hand affluents of the Shelif, but now absorbed into the newly revealed ocean. Ben Zoof made the sleeping accommodation as comfortable as the circumstances would allow; the horses were clogged and turned out to feed upon the rich pasture that clothed the shore, and the night passed without special incident.

At sunrise on the following morning, the 2nd of January, or what, according to the ordinary calendar, would have been the night of the 1st, the captain and his orderly remounted their horses, and during the six-hours' day accomplished a distance of forty-two miles. The right bank of the river still continued to be the margin of the land, and only in one spot had its integrity been impaired. This was about twelve miles from the Mina, and on the site of the annex or suburb of Surkelmittoo. Here a large portion of the bank had been swept away, and the hamlet, with its eight hundred inhabitants, had no

doubt been swallowed up by the encroaching waters. It seemed, therefore, more than probable that a similar fate had overtaken the larger towns beyond the Shelif.

In the evening the explorers encamped, as previously, in a nook of the shore which here abruptly terminated their new domain, not far from where they might have expected to find the important village of Memounturroy; but of this, too, there was now no trace. “I had quite reckoned upon a supper and a bed at Orleansville to-night,” said Servadac, as, full of despondency, he surveyed the waste of water.

“Quite impossible,” replied Ben Zoof, “except you had gone by a boat. But cheer up, sir, cheer up; we will soon devise some means for getting across to Mostaganem.”

“If, as I hope,” rejoined the captain, “we are on a peninsula, we are more likely to get to Tenes; there we shall hear the news.”

“Far more likely to carry the news ourselves,” answered Ben Zoof, as he threw himself down for his night’s rest.

Six hours later, only waiting for sunrise, Captain Servadac set himself in movement again to renew his investigations. At this spot the shore, that hitherto had been running in a southeasterly direction, turned abruptly to the north, being no longer formed by the natural bank of the Shelif, but consisting of an absolutely new coast-line. No land was in sight. Nothing could be seen of Orleansville, which ought to have been about six miles to the southwest; and Ben Zoof, who had mounted the highest point of view attainable, could distinguish sea, and nothing but sea, to the farthest horizon.

Quitting their encampment and riding on, the bewildered explorers kept close to the new shore. This, since it had ceased to be formed by the original river bank, had considerably altered its aspect. Frequent landslips occurred, and in many places deep chasms rifted the ground; great gaps furrowed the fields, and trees, half uprooted, overhung the water, remarkable by the fantastic distortions of their gnarled trunks, looking as though they had been chopped by a hatchet.

The sinuosities of the coast line, alternately gully and headland, had the effect of making a devious progress for the travelers, and at sunset, although they had accomplished more than twenty miles, they had only just arrived at the foot of the Merdeyah Mountains, which, before the cataclysm, had formed the extremity of the

chain of the Little Atlas. The ridge, however, had been violently ruptured, and now rose perpendicularly from the water.

On the following morning Servadac and Ben Zoof traversed one of the mountain gorges; and next, in order to make a more thorough acquaintance with the limits and condition of the section of Algerian territory of which they seemed to be left as the sole occupants, they dismounted, and proceeded on foot to the summit of one of the highest peaks. From this elevation they ascertained that from the base of the Merdeyah to the Mediterranean, a distance of about eighteen miles, a new coast line had come into existence; no land was visible in any direction; no isthmus existed to form a connecting link with the territory of Tenes, which had entirely disappeared. The result was that Captain Servadac was driven to the irresistible conclusion that the tract of land which he had been surveying was not, as he had at first imagined, a peninsula; it was actually an island.

Strictly speaking, this island was quadrilateral, but the sides were so irregular that it was much more nearly a triangle, the comparison of the sides exhibiting these proportions: The section of the right bank of the Shelif, seventy-two miles; the southern boundary from the Shelif to the chain of the Little Atlas, twenty-one miles; from the Little Atlas to the Mediterranean, eighteen miles; and sixty miles of the shore of the Mediterranean itself, making in all an entire circumference of about 171 miles.

“What does it all mean?” exclaimed the captain, every hour growing more and more bewildered.

“The will of Providence, and we must submit,” replied Ben Zoof, calm and undisturbed. With this reflection, the two men silently descended the mountain and remounted their horses. Before evening they had reached the Mediterranean. On their road they failed to discern a vestige of the little town of Montenotte; like Tenes, of which not so much as a ruined cottage was visible on the horizon, it seemed to be annihilated.

On the following day, the 6th of January, the two men made a forced march along the coast of the Mediterranean, which they found less altered than the captain had at first supposed; but four villages had entirely disappeared, and the headlands, unable to resist the shock of the convulsion, had been detached from the mainland.

The circuit of the island had been now completed, and the explorers, after a period of sixty hours, found themselves once more beside the ruins of their gourbi. Five days, or what, according to the established order of things, would have been two days and a half, had been occupied in tracing the boundaries of their new domain; and they had ascertained beyond a doubt that they were the sole human inhabitants left upon the island.

“Well, sir, here you are, Governor General of Algeria!” exclaimed Ben Zoof, as they reached the gourbi.

“With not a soul to govern,” gloomily rejoined the captain.

“How so? Do you not reckon me?”

“Pshaw! Ben Zoof, what are you?”

“What am I? Why, I am the population.”

The captain deigned no reply, but, muttering some expressions of regret for the fruitless trouble he had taken about his rondo, betook himself to rest.

CHAPTER VII. BEN ZOOF WATCHES IN VAIN

In a few minutes the governor general and his population were asleep. The gourbi being in ruins, they were obliged to put up with the best accommodation they could find in the adjacent erection. It must be owned that the captain’s slumbers were by no means sound; he was agitated by the consciousness that he had hitherto been unable to account for his strange experiences by any reasonable theory. Though far from being advanced in the knowledge of natural philosophy, he had been instructed, to a certain degree, in its elementary principles; and, by an effort of memory, he managed to recall some general laws which he had almost forgotten. He could understand that an altered inclination of the earth’s axis with regard to the ecliptic would introduce a change of position in the cardinal points, and bring about a displacement of the sea; but the hypothesis entirely failed to account, either for the shortening of the days, or for the diminution in the pressure of the atmosphere. He felt that his judgment was utterly baffled; his only remaining hope was that the chain of marvels was not yet complete, and that something farther might throw some light upon the mystery.

Ben Zoof’s first care on the following morning was to provide a good breakfast. To use his own phrase, he was as hungry as the whole population of three million Algerians, of whom he was the representative, and he must have enough to eat. The catastrophe which had overwhelmed the country had left a dozen eggs uninjured, and upon these, with a good dish of his famous couscous, he hoped that he and his master might have a sufficiently substantial meal. The stove was ready for use, the copper skillet was as bright as hands could make it, and the beads of condensed steam upon the surface of a large stone al-caraza gave evidence that it was supplied with water. Ben Zoof at once lighted a fire, singing all the time, according to his wont, a snatch of an old military refrain.

Ever on the lookout for fresh phenomena, Captain Servadac watched the preparations with a curious eye. It struck him that perhaps the air, in its strangely modified condition, would fail to supply sufficient oxygen, and that the stove, in consequence, might not fulfill its function. But no; the fire was lighted just as usual, and fanned into vigor by Ben Zoof applying his mouth in lieu of bellows, and a bright flame started up from the midst of the twigs and coal. The skillet was duly set upon the stove, and Ben Zoof was prepared to wait awhile for the water to boil. Taking up the eggs, he was surprised to notice that they hardly weighed more than they would if they had been mere shells; but

he was still more surprised when he saw that before the water had been two minutes over the fire it was at full boil.

“By jingo!” he exclaimed, “a precious hot fire!”

Servadac reflected. “It cannot be that the fire is hotter,” he said, “the peculiarity must be in the water.” And taking down a centigrade thermometer, which hung upon the wall, he plunged it into the skillet. Instead of 100 degrees, the instrument registered only 66 degrees.

“Take my advice, Ben Zoof,” he said; “leave your eggs in the saucepan a good quarter of an hour.”

“Boil them hard! That will never do,” objected the orderly.

“You will not find them hard, my good fellow. Trust me, we shall be able to dip our sippets into the yolks easily enough.”

The captain was quite right in his conjecture, that this new phenomenon was caused by a diminution in the pressure of the atmosphere. Water boiling at a temperature of 66 degrees was itself an evidence that the column of air above the earth’s surface had become reduced by one-third of its altitude. The identical phenomenon would have occurred at the summit of a mountain 35,000 feet high; and had Servadac been in possession of a barometer, he would have immediately discovered the fact that only now for the first time, as the result of experiment, revealed itself to him — a fact, moreover, which accounted for the compression of the blood-vessels which both he and Ben Zoof had experienced, as well as for the attenuation of their voices and their accelerated breathing. “And yet,” he argued with himself, “if our encampment has been projected to so great an elevation, how is it that the sea remains at its proper level?”

Once again Hector Servadac, though capable of tracing consequences, felt himself totally at a loss to comprehend their cause; hence his agitation and bewilderment!

After their prolonged immersion in the boiling water, the eggs were found to be only just sufficiently cooked; the couscous was very much in the same condition; and Ben Zoof came to the conclusion that in future he must be careful to commence his culinary operations an hour earlier. He was rejoiced at last to help his master, who, in spite of his perplexed preoccupation, seemed to have a very fair appetite for breakfast.

“Well, captain?” said Ben Zoof presently, such being his ordinary way of opening conversation.

“Well, Ben Zoof?” was the captain’s invariable response to his servant’s formula.

“What are we to do now, sir?”

“We can only for the present wait patiently where we are. We are encamped upon an island, and therefore we can only be rescued by sea.”

“But do you suppose that any of our friends are still alive?” asked Ben Zoof.

“Oh, I think we must indulge the hope that this catastrophe has not extended far. We must trust that it has limited its mischief to some small portion of the Algerian coast, and that our friends are all alive and well. No doubt the governor general will be anxious to investigate the full extent of the damage, and will send a vessel from Algiers to explore. It is not likely that we shall be forgotten. What, then, you have to do, Ben Zoof, is to keep a sharp lookout, and to be ready, in case a vessel should appear, to make signals at once.”

“But if no vessel should appear!” sighed the orderly.

“Then we must build a boat, and go in search of those who do not come in search of us.”

“Very good. But what sort of a sailor are you?”

“Everyone can be a sailor when he must,” said Servadac calmly.

Ben Zoof said no more. For several succeeding days he scanned the horizon unintermittently with his telescope. His watching was in vain. No ship appeared upon the desert sea. “By the name of a Kabyle!” he broke out impatiently, “his Excellency is grossly negligent!”

Although the days and nights had become reduced from twenty-four hours to twelve, Captain Servadac would not accept the new condition of things, but resolved to adhere to the computations of the old calendar. Notwithstanding, therefore, that the sun had risen and set twelve times since the commencement of the new year, he persisted in

calling the following day the 6th of January. His watch enabled him to keep an accurate account of the passing hours.

In the course of his life, Ben Zoof had read a few books. After pondering one day, he said: “It seems to me, captain, that you have turned into Robinson Crusoe, and that I am your man Friday. I hope I have not become a negro.”

“No,” replied the captain. “Your complexion isn’t the fairest in the world, but you are not black yet.”

“Well, I had much sooner be a white Friday than a black one,” rejoined Ben Zoof.

Still no ship appeared; and Captain Servadac, after the example of all previous Crusoes, began to consider it advisable to investigate the resources of his domain. The new territory of which he had become the monarch he named Gourbi Island. It had a superficial area of about nine hundred square miles. Bullocks, cows, goats, and sheep existed in considerable numbers; and as there seemed already to be an abundance of game, it was hardly likely that a future supply would fail them. The condition of the cereals was such as to promise a fine ingathering of wheat, maize, and rice; so that for the governor and his population, with their two horses, not only was there ample provision, but even if other human inhabitants besides themselves should yet be discovered, there was not the remotest prospect of any of them perishing by starvation.

From the 6th to the 13th of January the rain came down in torrents; and, what was quite an unusual occurrence at this season of the year, several heavy storms broke over the island. In spite, however, of the continual downfall, the heavens still remained veiled in cloud. Servadac, moreover, did not fail to observe that for the season the temperature was unusually high; and, as a matter still more surprising, that it kept steadily increasing, as though the earth were gradually and continuously approximating to the sun. In proportion to the rise of temperature, the light also assumed greater intensity; and if it had not been for the screen of vapor interposed between the sky and the island, the irradiation which would have illumined all terrestrial objects would have been vivid beyond all precedent.

But neither sun, moon, nor star ever appeared; and Servadac’s irritation and annoyance at being unable to identify any one point of the firmament may be more readily imagined than described. On one occasion Ben Zoof endeavored to mitigate his

master’s impatience by exhorting him to assume the resignation, even if he did not feel the indifference, which he himself experienced; but his advice was received with so angry a rebuff that he retired in all haste, abashed, to résumé his watchman’s duty, which he performed with exemplary perseverance. Day and night, with the shortest possible intervals of rest, despite wind, rain, and storm, he mounted guard upon the cliff — but all in vain. Not a speck appeared upon the desolate horizon. To say the truth, no vessel could have stood against the weather. The hurricane raged with tremendous fury, and the waves rose to a height that seemed to defy calculation. Never, even in the second era of creation, when, under the influence of internal heat, the waters rose in vapor to descend in deluge back upon the world, could meteorological phenomena have been developed with more impressive intensity.

But by the night of the 13th the tempest appeared to have spent its fury; the wind dropped; the rain ceased as if by a spell; and Servadac, who for the last six days had confined himself to the shelter of his roof, hastened to join Ben Zoof at his post upon the cliff. Now, he thought, there might be a chance of solving his perplexity; perhaps now the huge disc, of which he had had an imperfect glimpse on the night of the 31st of December, might again reveal itself; at any rate, he hoped for an opportunity of observing the constellations in a clear firmament above.

The night was magnificent. Not a cloud dimmed the luster of the stars, which spangled the heavens in surpassing brilliancy, and several nebulae which hitherto no astronomer had been able to discern without the aid of a telescope were clearly visible to the naked eye.

By a natural impulse, Servadac’s first thought was to observe the position of the pole-star. It was in sight, but so near to the horizon as to suggest the utter impossibility of its being any longer the central pivot of the sidereal system; it occupied a position through which it was out of the question that the axis of the earth indefinitely prolonged could ever pass. In his impression he was more thoroughly confirmed when, an hour later, he noticed that the star had approached still nearer the horizon, as though it had belonged to one of the zodiacal constellations.

The pole-star being manifestly thus displaced, it remained to be discovered whether any other of the celestial bodies had become a fixed center around which the constellations made their apparent daily revolutions. To the solution of this problem Servadac applied himself with the most thoughtful diligence. After patient observation, he satisfied

himself that the required conditions were answered by a certain star that was stationary not far from the horizon. This was Vega, in the constellation Lyra, a star which, according to the precession of the equinoxes, will take the place of our pole-star 12,000 years hence. The most daring imagination could not suppose that a period of 12,000 years had been crowded into the space of a fortnight; and therefore the captain came, as to an easier conclusion, to the opinion that the earth's axis had been suddenly and immensely shifted; and from the fact that the axis, if produced, would pass through a point so little removed above the horizon, he deduced the inference that the Mediterranean must have been transported to the equator.

Lost in bewildering maze of thought, he gazed long and intently upon the heavens. His eyes wandered from where the tail of the Great Bear, now a zodiacal constellation, was scarcely visible above the waters, to where the stars of the southern hemisphere were just breaking on his view. A cry from Ben Zoof recalled him to himself.

"The moon!" shouted the orderly, as though overjoyed at once again beholding what the poet has called:

> "The kind companion of terrestrial night;"

and he pointed to a disc that was rising at a spot precisely opposite the place where they would have expected to see the sun. "The moon!" again he cried.

But Captain Servadac could not altogether enter into his servant's enthusiasm. If this were actually the moon, her distance from the earth must have been increased by some millions of miles. He was rather disposed to suspect that it was not the earth's satellite at all, but some planet with its apparent magnitude greatly enlarged by its approximation to the earth. Taking up the powerful field-glass which he was accustomed to use in his surveying operations, he proceeded to investigate more carefully the luminous orb. But he failed to trace any of the lineaments, supposed to resemble a human face, that mark the lunar surface; he failed to decipher any indications of hill and plain; nor could he make out the aureole of light which emanates from what astronomers have designated Mount Tycho. "It is not the moon," he said slowly.

"Not the moon?" cried Ben Zoof. "Why not?"

"It is not the moon," again affirmed the captain.

“Why not?” repeated Ben Zoof, unwilling to renounce his first impression.

“Because there is a small satellite in attendance.” And the captain drew his servant’s attention to a bright speck, apparently about the size of one of Jupiter’s satellites seen through a moderate telescope, that was clearly visible just within the focus of his glass.

Here, then, was a fresh mystery. The orbit of this planet was assuredly interior to the orbit of the earth, because it accompanied the sun in its apparent motion; yet it was neither Mercury nor Venus, because neither one nor the other of these has any satellite at all.

The captain stamped and stamped again with mingled vexation, agitation, and bewilderment. “Confound it!” he cried, “if this is neither Venus nor Mercury, it must be the moon; but if it is the moon, whence, in the name of all the gods, has she picked up another moon for herself?”

The captain was in dire perplexity.

CHAPTER VIII. VENUS IN PERILOUS PROXIMITY

The light of the returning sun soon extinguished the glory of the stars, and rendered it necessary for the captain to postpone his observations. He had sought in vain for further trace of the huge disc that had so excited his wonder on the 1st, and it seemed most probable that, in its irregular orbit, it had been carried beyond the range of vision.

The weather was still superb. The wind, after veering to the west, had sunk to a perfect calm. Pursuing its inverted course, the sun rose and set with undeviating regularity; and the days and nights were still divided into periods of precisely six hours each — a sure proof that the sun remained close to the new equator which manifestly passed through Gourbi Island.

Meanwhile the temperature was steadily increasing. The captain kept his thermometer close at hand where he could repeatedly consult it, and on the 15th he found that it registered 50 degrees centigrade in the shade.

No attempt had been made to rebuild the gourbi, but the captain and Ben Zoof managed to make up quarters sufficiently comfortable in the principal apartment of the adjoining structure, where the stone walls, that at first afforded a refuge from the torrents of rain, now formed an equally acceptable shelter from the burning sun. The heat was becoming insufferable, surpassing the heat of Senegal and other equatorial regions; not a cloud ever tempered the intensity of the solar rays; and unless some modification ensued, it seemed inevitable that all vegetation should become scorched and burnt off from the face of the island.

In spite, however, of the profuse perspirations from which he suffered, Ben Zoof, constant to his principles, expressed no surprise at the unwonted heat. No remonstrances from his master could induce him to abandon his watch from the cliff. To withstand the vertical beams of that noontide sun would seem to require a skin of brass and a brain of adamant; but yet, hour after hour, he would remain conscientiously scanning the surface of the Mediterranean, which, calm and deserted, lay outstretched before him. On one occasion, Servadac, in reference to his orderly’s indomitable perseverance, happened to remark that he thought he must have been born in the heart of equatorial Africa; to which Ben Zoof replied, with the utmost dignity, that he was born at Montmartre, which was all the same. The worthy fellow was unwilling to own

that, even in the matter of heat, the tropics could in any way surpass his own much-loved home.

This unprecedented temperature very soon began to take effect upon the products of the soil. The sap rose rapidly in the trees, so that in the course of a few days buds, leaves, flowers, and fruit had come to full maturity. It was the same with the cereals; wheat and maize sprouted and ripened as if by magic, and for a while a rank and luxuriant pasturage clothed the meadows. Summer and autumn seemed blended into one. If Captain Servadac had been more deeply versed in astronomy, he would perhaps have been able to bring to bear his knowledge that if the axis of the earth, as everything seemed to indicate, now formed a right angle with the plane of the ecliptic, her various seasons, like those of the planet Jupiter, would become limited to certain zones, in which they would remain invariable. But even if he had understood the *rationale* of the change, the convulsion that had brought it about would have been as much a mystery as ever.

The precocity of vegetation caused some embarrassment. The time for the corn and fruit harvest had fallen simultaneously with that of the haymaking; and as the extreme heat precluded any prolonged exertions, it was evident “the population” of the island would find it difficult to provide the necessary amount of labor. Not that the prospect gave them much concern: the provisions of the gourbi were still far from exhausted, and now that the roughness of the weather had so happily subsided, they had every encouragement to hope that a ship of some sort would soon appear. Not only was that part of the Mediterranean systematically frequented by the government steamers that watched the coast, but vessels of all nations were constantly cruising off the shore.

In spite, however, of all their sanguine speculations, no ship appeared. Ben Zoof admitted the necessity of extemporizing a kind of parasol for himself, otherwise he must literally have been roasted to death upon the exposed summit of the cliff.

Meanwhile, Servadac was doing his utmost — it must be acknowledged, with indifferent success — to recall the lessons of his school-days. He would plunge into the wildest speculations in his endeavors to unravel the difficulties of the new situation, and struggled into a kind of conviction that if there had been a change of manner in the earth’s rotation on her axis, there would be a corresponding change in her revolution round the sun, which would involve the consequence of the length of the year being either diminished or increased.

Independently of the increased and increasing heat, there was another very conclusive demonstration that the earth had thus suddenly approximated towards the sun. The diameter of the solar disc was now exactly twice what it ordinarily looks to the naked eye; in fact, it was precisely such as it would appear to an observer on the surface of the planet Venus. The most obvious inference would therefore be that the earth's distance from the sun had been diminished from 91,000,000 to 66,000,000 miles. If the just equilibrium of the earth had thus been destroyed, and should this diminution of distance still continue, would there not be reason to fear that the terrestrial world would be carried onwards to actual contact with the sun, which must result in its total annihilation?

The continuance of the splendid weather afforded Servadac every facility for observing the heavens. Night after night, constellations in their beauty lay stretched before his eyes — an alphabet which, to his mortification, not to say his rage, he was unable to decipher. In the apparent dimensions of the fixed stars, in their distance, in their relative position with regard to each other, he could observe no change. Although it is established that our sun is approaching the constellation of Hercules at the rate of more than 126,000,000 miles a year, and although Arcturus is traveling through space at the rate of fifty-four miles a second — three times faster than the earth goes round the sun, — yet such is the remoteness of those stars that no appreciable change is evident to the senses. The fixed stars taught him nothing.

Far otherwise was it with the planets. The orbits of Venus and Mercury are within the orbit of the earth, Venus rotating at an average distance of 66,130,000 miles from the sun, and Mercury at that of 35,393,000. After pondering long, and as profoundly as he could, upon these figures, Captain Servadac came to the conclusion that, as the earth was now receiving about double the amount of light and heat that it had been receiving before the catastrophe, it was receiving about the same as the planet Venus; he was driven, therefore, to the estimate of the measure in which the earth must have approximated to the sun, a deduction in which he was confirmed when the opportunity came for him to observe Venus herself in the splendid proportions that she now assumed.

That magnificent planet which — as Phosphorus or Lucifer, Hesperus or Vesper, the evening star, the morning star, or the shepherd's star — has never failed to attract the rapturous admiration of the most indifferent observers, here revealed herself with

unprecedented glory, exhibiting all the phases of a lustrous moon in miniature. Various indentations in the outline of its crescent showed that the solar beams were refracted into regions of its surface where the sun had already set, and proved, beyond a doubt, that the planet had an atmosphere of her own; and certain luminous points projecting from the crescent as plainly marked the existence of mountains. As the result of Servadac's computations, he formed the opinion that Venus could hardly be at a greater distance than 6,000,000 miles from the earth.

"And a very safe distance, too," said Ben Zoof, when his master told him the conclusion at which he had arrived.

"All very well for two armies, but for a couple of planets not quite so safe, perhaps, as you may imagine. It is my impression that it is more than likely we may run foul of Venus," said the captain.

"Plenty of air and water there, sir?" inquired the orderly.

"Yes; as far as I can tell, plenty," replied Servadac.

"Then why shouldn't we go and visit Venus?"

Servadac did his best to explain that as the two planets were of about equal volume, and were traveling with great velocity in opposite directions, any collision between them must be attended with the most disastrous consequences to one or both of them. But Ben Zoof failed to see that, even at the worst, the catastrophe could be much more serious than the collision of two railway trains.

The captain became exasperated. "You idiot!" he angrily exclaimed; "cannot you understand that the planets are traveling a thousand times faster than the fastest express, and that if they meet, either one or the other must be destroyed? What would become of your darling Montmartre then?"

The captain had touched a tender chord. For a moment Ben Zoof stood with clenched teeth and contracted muscles; then, in a voice of real concern, he inquired whether anything could be done to avert the calamity.

"Nothing whatever; so you may go about your own business," was the captain's brusque rejoinder.

All discomfited and bewildered, Ben Zoof retired without a word.

During the ensuing days the distance between the two planets continued to decrease, and it became more and more obvious that the earth, on her new orbit, was about to cross the orbit of Venus. Throughout this time the earth had been making a perceptible approach towards Mercury, and that planet — which is rarely visible to the naked eye, and then only at what are termed the periods of its greatest eastern and western elongations — now appeared in all its splendor. It amply justified the epithet of "sparkling" which the ancients were accustomed to confer upon it, and could scarcely fail to awaken a new interest. The periodic recurrence of its phases; its reflection of the sun's rays, shedding upon it a light and a heat seven times greater than that received by the earth; its glacial and its torrid zones, which, on account of the great inclination of the axis, are scarcely separable; its equatorial bands; its mountains eleven miles high; — were all subjects of observation worthy of the most studious regard.

But no danger was to be apprehended from Mercury; with Venus only did collision appear imminent. By the 18th of January the distance between that planet and the earth had become reduced to between two and three millions of miles, and the intensity of its light cast heavy shadows from all terrestrial objects. It might be observed to turn upon its own axis in twenty-three hours twenty-one minutes — an evidence, from the unaltered duration of its days, that the planet had not shared in the disturbance. On its disc the clouds formed from its atmospheric vapor were plainly perceptible, as also were the seven spots, which, according to Bianchini, are a chain of seas. It was now visible in broad daylight. Buonaparte, when under the Directory, once had his attention called to Venus at noon, and immediately hailed it joyfully, recognizing it as his own peculiar star in the ascendant. Captain Servadac, it may well be imagined, did not experience the same gratifying emotion.

On the 20th, the distance between the two bodies had again sensibly diminished. The captain had ceased to be surprised that no vessel had been sent to rescue himself and his companion from their strange imprisonment; the governor general and the minister of war were doubtless far differently occupied, and their interests far otherwise engrossed. What sensational articles, he thought, must now be teeming to the newspapers! What crowds must be flocking to the churches! The end of the world approaching! the great climax close at hand! Two days more, and the earth, shivered into a myriad atoms, would be lost in boundless space!

These dire forebodings, however, were not destined to be realized. Gradually the distance between the two planets began to increase; the planes of their orbits did not coincide, and accordingly the dreaded catastrophe did not ensue. By the 25th, Venus was sufficiently remote to preclude any further fear of collision. Ben Zoof gave a sigh of relief when the captain communicated the glad intelligence.

Their proximity to Venus had been close enough to demonstrate that beyond a doubt that planet has no moon or satellite such as Cassini, Short, Montaigne of Limoges, Montbarron, and some other astronomers have imagined to exist. “Had there been such a satellite,” said Servadac, “we might have captured it in passing. But what can be the meaning,” he added seriously, “of all this displacement of the heavenly bodies?”

“What is that great building at Paris, captain, with a top like a cap?” asked Ben Zoof.

“Do you mean the Observatory?”

“Yes, the Observatory. Are there not people living in the Observatory who could explain all this?”

“Very likely; but what of that?”

“Let us be philosophers, and wait patiently until we can hear their explanation.”

Servadac smiled. “Do you know what it is to be a philosopher, Ben Zoof?” he asked.

“I am a soldier, sir,” was the servant’s prompt rejoinder, “and I have learnt to know that ‘what can’t be cured must be endured.”

The captain made no reply, but for a time, at least, he desisted from puzzling himself over matters which he felt he was utterly incompetent to explain. But an event soon afterwards occurred which awakened his keenest interest.

About nine o’clock on the morning of the 27th, Ben Zoof walked deliberately into his master’s apartment, and, in reply to a question as to what he wanted, announced with the utmost composure that a ship was in sight.

“A ship!” exclaimed Servadac, starting to his feet. “A ship! Ben Zoof, you donkey! you speak as unconcernedly as though you were telling me that my dinner was ready.”

“Are we not philosophers, captain?” said the orderly.

But the captain was out of hearing.

CHAPTER IX. INQUIRIES UNSATISFIED

Fast as his legs could carry him, Servadac had made his way to the top of the cliff. It was quite true that a vessel was in sight, hardly more than six miles from the shore; but owing to the increase in the earth's convexity, and the consequent limitation of the range of vision, the rigging of the topmasts alone was visible above the water. This was enough, however, to indicate that the ship was a schooner — an impression that was confirmed when, two hours later, she came entirely in sight.

"The *Dobryna*!" exclaimed Servadac, keeping his eye unmoved at his telescope.

"Impossible, sir!" rejoined Ben Zoof; "there are no signs of smoke."

"The *Dobryna*!" repeated the captain, positively. "She is under sail; but she is Count Timascheff's yacht."

He was right. If the count were on board, a strange fatality was bringing him to the presence of his rival. But no longer now could Servadac regard him in the light of an adversary; circumstances had changed, and all animosity was absorbed in the eagerness with which he hailed the prospect of obtaining some information about the recent startling and inexplicable events. During the twenty-seven days that she had been absent, the *Dobryna*, he conjectured, would have explored the Mediterranean, would very probably have visited Spain, France, or Italy, and accordingly would convey to Gourbi Island some intelligence from one or other of those countries. He reckoned, therefore, not only upon ascertaining the extent of the late catastrophe, but upon learning its cause. Count Timascheff was, no doubt, magnanimously coming to the rescue of himself and his orderly.

The wind being adverse, the *Dobryna* did not make very rapid progress; but as the weather, in spite of a few clouds, remained calm, and the sea was quite smooth, she was enabled to hold a steady course. It seemed unaccountable that she should not use her engine, as whoever was on board, would be naturally impatient to reconnoiter the new island, which must just have come within their view. The probability that suggested itself was that the schooner's fuel was exhausted.

Servadac took it for granted that the *Dobryna* was endeavoring to put in. It occurred to him, however, that the count, on discovering an island where he had expected to find

the mainland of Africa, would not unlikely be at a loss for a place of anchorage. The yacht was evidently making her way in the direction of the former mouth of the Shelif, and the captain was struck with the idea that he would do well to investigate whether there was any suitable mooring towards which he might signal her. Zephyr and Galette were soon saddled, and in twenty minutes had carried their riders to the western extremity of the island, where they both dismounted and began to explore the coast.

They were not long in ascertaining that on the farther side of the point there was a small well-sheltered creek of sufficient depth to accommodate a vessel of moderate tonnage. A narrow channel formed a passage through the ridge of rocks that protected it from the open sea, and which, even in the roughest weather, would ensure the calmness of its waters.

Whilst examining the rocky shore, the captain observed, to his great surprise, long and well-defined rows of seaweed, which undoubtedly betokened that there had been a very considerable ebb and flow of the waters — a thing unknown in the Mediterranean, where there is scarcely any perceptible tide. What, however, seemed most remarkable, was the manifest evidence that ever since the highest flood (which was caused, in all probability, by the proximity of the body of which the huge disc had been so conspicuous on the night of the 31st of December) the phenomenon had been gradually lessening, and in fact was now reduced to the normal limits which had characterized it before the convulsion.

Without doing more than note the circumstance, Servadac turned his entire attention to the *Dobryna*, which, now little more than a mile from shore, could not fail to see and understand his signals. Slightly changing her course, she first struck her mainsail, and, in order to facilitate the movements of her helmsman, soon carried nothing but her two topsails, brigantine and jib. After rounding the peak, she steered direct for the channel to which Servadac by his gestures was pointing her, and was not long in entering the creek. As soon as the anchor, imbedded in the sandy bottom, had made good its hold, a boat was lowered. In a few minutes more Count Timascheff had landed on the island. Captain Servadac hastened towards him.

“First of all, count,” he exclaimed impetuously, “before we speak one other word, tell me what has happened.”

The count, whose imperturbable composure presented a singular contrast to the French officer's enthusiastic vivacity, made a stiff bow, and in his Russian accent replied: "First of all, permit me to express my surprise at seeing you here. I left you on a continent, and here I have the honor of finding you on an island."

"I assure you, count, I have never left the place."

"I am quite aware of it. Captain Servadac, and I now beg to offer you my sincere apologies for failing to keep my appointment with you."

"Never mind, now," interposed the captain; "we will talk of that by-and-by. First, tell me what has happened."

"The very question I was about to put to you, Captain Servadac."

"Do you mean to say you know nothing of the cause, and can tell me nothing of the extent, of the catastrophe which has transformed this part of Africa into an island?"

"Nothing more than you know yourself."

"But surely, Count Timascheff, you can inform me whether upon the northern shore of the Mediterranean — "

"Are you certain that this is the Mediterranean?" asked the count significantly, and added, "I have discovered no sign of land."

The captain stared in silent bewilderment. For some moments he seemed perfectly stupefied; then, recovering himself, he began to overwhelm the count with a torrent of questions. Had he noticed, ever since the 1st of January, that the sun had risen in the west? Had he noticed that the days had been only six hours long, and that the weight of the atmosphere was so much diminished? Had he observed that the moon had quite disappeared, and that the earth had been in imminent hazard of running foul of the planet Venus? Was he aware, in short, that the entire motions of the terrestrial sphere had undergone a complete modification? To all these inquiries, the count responded in the affirmative. He was acquainted with everything that had transpired; but, to Servadac's increasing astonishment, he could throw no light upon the cause of any of the phenomena.

“On the night of the 31st of December,” he said, “I was proceeding by sea to our appointed place of meeting, when my yacht was suddenly caught on the crest of an enormous wave, and carried to a height which it is beyond my power to estimate. Some mysterious force seemed to have brought about a convulsion of the elements. Our engine was damaged, nay disabled, and we drifted entirely at the mercy of the terrible hurricane that raged during the succeeding days. That the *Dobryna* escaped at all is little less than a miracle, and I can only attribute her safety to the fact that she occupied the center of the vast cyclone, and consequently did not experience much change of position.”

He paused, and added: “Your island is the first land we have seen.”

“Then let us put out to sea at once and ascertain the extent of the disaster,” cried the captain, eagerly. “You will take me on board, count, will you not?”

“My yacht is at your service, sir, even should you require to make a tour round the world.”

“A tour round the Mediterranean will suffice for the present, I think,” said the captain, smiling.

The count shook his head.

“I am not sure,” said he, “but what the tour of the Mediterranean will prove to be the tour of the world.”

Servadac made no reply, but for a time remained silent and absorbed in thought.

After the silence was broken, they consulted as to what course was best to pursue; and the plan they proposed was, in the first place, to discover how much of the African coast still remained, and to carry on the tidings of their own experiences to Algiers; or, in the event of the southern shore having actually disappeared, they would make their way northwards and put themselves in communication with the population on the river banks of Europe.

Before starting, it was indispensable that the engine of the *Dobryna* should be repaired: to sail under canvas only would in contrary winds and rough seas be both tedious and difficult. The stock of coal on board was adequate for two months’ consumption; but as

it would at the expiration of that time be exhausted, it was obviously the part of prudence to employ it in reaching a port where fuel could be replenished.

The damage sustained by the engine proved to be not very serious; and in three days after her arrival the *Dobryna* was again ready to put to sea.

Servadac employed the interval in making the count acquainted with all he knew about his small domain. They made an entire circuit of the island, and both agreed that it must be beyond the limits of that circumscribed territory that they must seek an explanation of what had so strangely transpired.

It was on the last day of January that the repairs of the schooner were completed. A slight diminution in the excessively high temperature which had prevailed for the last few weeks, was the only apparent change in the general order of things; but whether this was to be attributed to any alteration in the earth's orbit was a question which would still require several days to decide. The weather remained fine, and although a few clouds had accumulated, and might have caused a trifling fall of the barometer, they were not sufficiently threatening to delay the departure of the *Dobryna*.

Doubts now arose, and some discussion followed, whether or not it was desirable for Ben Zoof to accompany his master. There were various reasons why he should be left behind, not the least important being that the schooner had no accommodation for horses, and the orderly would have found it hard to part with Zephyr, and much more with his own favorite Galette; besides, it was advisable that there should be some one left to receive any strangers that might possibly arrive, as well as to keep an eye upon the herds of cattle which, in the dubious prospect before them, might prove to be the sole resource of the survivors of the catastrophe. Altogether, taking into consideration that the brave fellow would incur no personal risk by remaining upon the island, the captain was induced with much reluctance to forego the attendance of his servant, hoping very shortly to return and to restore him to his country, when he had ascertained the reason of the mysteries in which they were enveloped.

On the 31st, then, Ben Zoof was "invested with governor's powers," and took an affecting leave of his master, begging him, if chance should carry him near Montmartre, to ascertain whether the beloved "mountain" had been left unmoved.

Farewells over, the *Dobryna* was carefully steered through the creek, and was soon upon the open sea.

CHAPTER X. A SEARCH FOR ALGERIA

The *Dobryna*, a strong craft of 200 tons burden, had been built in the famous shipbuilding yards in the Isle of Wight. Her sea going qualities were excellent, and would have amply sufficed for a circumnavigation of the globe. Count Timascheff was himself no sailor, but had the greatest confidence in leaving the command of his yacht in the hands of Lieutenant Procope, a man of about thirty years of age, and an excellent seaman. Born on the count's estates, the son of a serf who had been emancipated long before the famous edict of the Emperor Alexander, Procope was sincerely attached, by a tie of gratitude as well as of duty and affection, to his patron's service. After an apprenticeship on a merchant ship he had entered the imperial navy, and had already reached the rank of lieutenant when the count appointed him to the charge of his own private yacht, in which he was accustomed to spend by far the greater part of his time, throughout the winter generally cruising in the Mediterranean, whilst in the summer he visited more northern waters.

The ship could not have been in better hands. The lieutenant was well informed in many matters outside the pale of his profession, and his attainments were alike creditable to himself and to the liberal friend who had given him his education. He had an excellent crew, consisting of Tiglew the engineer, four sailors named Niegoch, Tolstoy, Etkef, and Panofka, and Mochel the cook. These men, without exception, were all sons of the count's tenants, and so tenaciously, even out at sea, did they cling to their old traditions, that it mattered little to them what physical disorganization ensued, so long as they felt they were sharing the experiences of their lord and master. The late astounding events, however, had rendered Procope manifestly uneasy, and not the less so from his consciousness that the count secretly partook of his own anxiety.

Steam up and canvas spread, the schooner started eastwards. With a favorable wind she would certainly have made eleven knots an hour had not the high waves somewhat impeded her progress. Although only a moderate breeze was blowing, the sea was rough, a circumstance to be accounted for only by the diminution in the force of the earth's attraction rendering the liquid particles so buoyant, that by the mere effect of oscillation they were carried to a height that was quite unprecedented. M. Arago has fixed twenty-five or twenty-six feet as the maximum elevation ever attained by the highest waves, and his astonishment would have been very great to see them rising fifty or even sixty feet. Nor did these waves in the usual way partially unfurl themselves and

rebound against the sides of the vessel; they might rather be described as long undulations carrying the schooner (its weight diminished from the same cause as that of the water) alternately to such heights and depths, that if Captain Servadac had been subject to seasickness he must have found himself in sorry plight. As the pitching, however, was the result of a long uniform swell, the yacht did not labor much harder than she would against the ordinary short strong waves of the Mediterranean; the main inconvenience that was experienced was the diminution in her proper rate of speed.

For a few miles she followed the line hitherto presumably occupied by the coast of Algeria; but no land appeared to the south. The changed positions of the planets rendered them of no avail for purposes of nautical observation, nor could Lieutenant Procope calculate his latitude and longitude by the altitude of the sun, as his reckonings would be useless when applied to charts that had been constructed for the old order of things; but nevertheless, by means of the log, which gave him the rate of progress, and by the compass which indicated the direction in which they were sailing, he was able to form an estimate of his position that was sufficiently free from error for his immediate need.

Happily the recent phenomena had no effect upon the compass; the magnetic needle, which in these regions had pointed about 22 degrees from the north pole, had never deviated in the least — a proof that, although east and west had apparently changed places, north and south continued to retain their normal position as cardinal points. The log and the compass, therefore, were able to be called upon to do the work of the sextant, which had become utterly useless.

On the first morning of the cruise Lieutenant Procope, who, like most Russians, spoke French fluently, was explaining these peculiarities to Captain Servadac; the count was present, and the conversation perpetually recurred, as naturally it would, to the phenomena which remained so inexplicable to them all.

“It is very evident,” said the lieutenant, “that ever since the 1st of January the earth has been moving in a new orbit, and from some unknown cause has drawn nearer to the sun.”

“No doubt about that,” said Servadac; “and I suppose that, having crossed the orbit of Venus, we have a good chance of running into the orbit of Mercury.”

“And finish up by a collision with the sun!” added the count.

“There is no fear of that, sir. The earth has undoubtedly entered upon a new orbit, but she is not incurring any probable risk of being precipitated onto the sun.”

“Can you satisfy us of that?” asked the count.

“I can, sir. I can give you a proof which I think you will own is conclusive. If, as you suppose, the earth is being drawn on so as to be precipitated against the sun, the great center of attraction of our system, it could only be because the centrifugal and centripetal forces that cause the planets to rotate in their several orbits had been entirely suspended: in that case, indeed, the earth would rush onwards towards the sun, and in sixty-four days and a half the catastrophe you dread would inevitably happen.”

“And what demonstration do you offer,” asked Servadac eagerly, “that it will not happen?”

“Simply this, captain: that since the earth entered her new orbit half the sixty-four days has already elapsed, and yet it is only just recently that she has crossed the orbit of Venus, hardly one-third of the distance to be traversed to reach the sun.”

The lieutenant paused to allow time for reflection, and added: “Moreover, I have every reason to believe that we are not so near the sun as we have been. The temperature has been gradually diminishing; the heat upon Gourbi Island is not greater now than we might ordinarily expect to find in Algeria. At the same time, we have the problem still unsolved that the Mediterranean has evidently been transported to the equatorial zone.”

Both the count and the captain expressed themselves reassured by his representations, and observed that they must now do all in their power to discover what had become of the vast continent of Africa, of which, they were hitherto failing so completely to find a vestige.

Twenty-four hours after leaving the island, the *Dobryna* had passed over the sites where Tenes, Cherchil, Koleah, and Sidi-Feruch once had been, but of these towns not one appeared within range of the telescope. Ocean reigned supreme. Lieutenant Procope was absolutely certain that he had not mistaken his direction; the compass showed that the wind had never shifted from the west, and this, with the rate of speed as estimated by the log, combined to assure him that at this date, the 2d of February, the schooner

was in lat. 36 degrees 49 min N. and long. 3 degrees 25 min E. the very spot which ought to have been occupied by the Algerian capital. But Algiers, like all the other coast-towns, had apparently been absorbed into the bowels of the earth.

Captain Servadac, with clenched teeth and knitted brow, stood sternly, almost fiercely, regarding the boundless waste of water. His pulse beat fast as he recalled the friends and comrades with whom he had spent the last few years in that vanished city. All the images of his past life floated upon his memory; his thoughts sped away to his native France, only to return again to wonder whether the depths of ocean would reveal any traces of the Algerian metropolis.

“Is it not impossible,” he murmured aloud, “that any city should disappear so completely? Would not the loftiest eminences of the city at least be visible? Surely some portion of the Casbah must still rise above the waves? The imperial fort, too, was built upon an elevation of 750 feet; it is incredible that it should be so totally submerged. Unless some vestiges of these are found, I shall begin to suspect that the whole of Africa has been swallowed in some vast abyss.”

Another circumstance was most remarkable. Not a material object of any kind was to be noticed floating on the surface of the water; not one branch of a tree had been seen drifting by, nor one spar belonging to one of the numerous vessels that a month previously had been moored in the magnificent bay which stretched twelve miles across from Cape Matafuz to Point Pexade. Perhaps the depths might disclose what the surface failed to reveal, and Count Timascheff, anxious that Servadac should have every facility afforded him for solving his doubts, called for the sounding-line. Forthwith, the lead was greased and lowered. To the surprise of all, and especially of Lieutenant Procope, the line indicated a bottom at a nearly uniform depth of from four to five fathoms; and although the sounding was persevered with continuously for more than two hours over a considerable area, the differences of level were insignificant, not corresponding in any degree to what would be expected over the site of a city that had been terraced like the seats of an amphitheater. Astounding as it seemed, what alternative was left but to suppose that the Algerian capital had been completely leveled by the flood?

The sea-bottom was composed of neither rock, mud, sand, nor shells; the sounding-lead brought up nothing but a kind of metallic dust, which glittered with a strange iridescence, and the nature of which it was impossible to determine, as it was totally unlike what had ever been known to be raised from the bed of the Mediterranean.

“You must see, lieutenant, I should think, that we are not so near the coast of Algeria as you imagined.”

The lieutenant shook his head. After pondering awhile, he said: “If we were farther away I should expect to find a depth of two or three hundred fathoms instead of five fathoms. Five fathoms! I confess I am puzzled.”

For the next thirty-six hours, until the 4th of February, the sea was examined and explored with the most unflagging perseverance. Its depth remained invariable, still four, or at most five, fathoms; and although its bottom was assiduously dredged, it was only to prove it barren of marine production of any type.

The yacht made its way to lat. 36 degrees, and by reference to the charts it was tolerably certain that she was cruising over the site of the Sahel, the ridge that had separated the rich plain of the Mitidja from the sea, and of which the highest peak, Mount Boujereah, had reached an altitude of 1,200 feet; but even this peak, which might have been expected to emerge like an islet above the surface of the sea, was nowhere to be traced. Nothing was to be done but to put about, and return in disappointment towards the north.

Thus the *Dobryna* regained the waters of the Mediterranean without discovering a trace of the missing province of Algeria.

CHAPTER XI. AN ISLAND TOMB

No longer, then, could there be any doubt as to the annihilation of a considerable portion of the colony. Not merely had there been a submersion of the land, but the impression was more and more confirmed that the very bowels of the earth must have yawned and closed again upon a large territory. Of the rocky substratum of the province it became more evident than ever that not a trace remained, and a new soil of unknown formation had certainly taken the place of the old sandy sea-bottom. As it altogether transcended the powers of those on board to elucidate the origin of this catastrophe, it was felt to be incumbent on them at least to ascertain its extent.

After a long and somewhat wavering discussion, it was at length decided that the schooner should take advantage of the favorable wind and weather, and proceed at first towards the east, thus following the outline of what had formerly represented the coast of Africa, until that coast had been lost in boundless sea.

Not a vestige of it all remained; from Cape Matafuz to Tunis it had all gone, as though it had never been. The maritime town of Dellis, built like Algiers, amphitheater-wise, had totally disappeared; the highest points were quite invisible; not a trace on the horizon was left of the Jurjura chain, the topmost point of which was known to have an altitude of more than 7,000 feet.

Unsparing of her fuel, the *Dobryna* made her way at full steam towards Cape Blanc. Neither Cape Negro nor Cape Serrat was to be seen. The town of Bizerta, once charming in its oriental beauty, had vanished utterly; its marabouts, or temple-tombs, shaded by magnificent palms that fringed the gulf, which by reason of its narrow mouth had the semblance of a lake, all had disappeared, giving place to a vast waste of sea, the transparent waves of which, as still demonstrated by the sounding-line, had ever the same uniform and arid bottom.

In the course of the day the schooner rounded the point where, five weeks previously, Cape Blanc had been so conspicuous an object, and she was now stemming the waters of what once had been the Bay of Tunis. But bay there was none, and the town from which it had derived its name, with the Arsenal, the Goletta, and the two peaks of Bou-Kournein, had all vanished from the view. Cape Bon, too, the most northern promontory of Africa and the point of the continent nearest to the island of Sicily, had been included in the general devastation.

Before the occurrence of the recent prodigy, the bottom of the Mediterranean just at this point had formed a sudden ridge across the Straits of Libya. The sides of the ridge had shelved to so great an extent that, while the depth of water on the summit had been little more than eleven fathoms, that on either hand of the elevation was little short of a hundred fathoms. A formation such as this plainly indicated that at some remote epoch Cape Bon had been connected with Cape Furina, the extremity of Sicily, in the same manner as Ceuta has doubtless been connected with Gibraltar.

Lieutenant Procope was too well acquainted with the Mediterranean to be unaware of this peculiarity, and would not lose the opportunity of ascertaining whether the submarine ridge still existed, or whether the sea-bottom between Sicily and Africa had undergone any modification.

Both Timascheff and Servadac were much interested in watching the operations. At a sign from the lieutenant, a sailor who was stationed at the foot of the fore-shrouds dropped the sounding-lead into the water, and in reply to Procope's inquiries, reported — "Five fathoms and a flat bottom."

The next aim was to determine the amount of depression on either side of the ridge, and for this purpose the *Dobryna* was shifted for a distance of half a mile both to the right and left, and the soundings taken at each station. "Five fathoms and a flat bottom," was the unvaried announcement after each operation. Not only, therefore, was it evident that the submerged chain between Cape Bon and Cape Furina no longer existed, but it was equally clear that the convulsion had caused a general leveling of the sea-bottom, and that the soil, degenerated, as it has been said, into a metallic dust of unrecognized composition, bore no trace of the sponges, sea-anemones, star-fish, sea-nettles, hydrophytes, and shells with which the submarine rocks of the Mediterranean had hitherto been prodigally clothed.

The *Dobryna* now put about and resumed her explorations in a southerly direction. It remained, however, as remarkable as ever how completely throughout the voyage the sea continued to be deserted; all expectations of hailing a vessel bearing news from Europe were entirely falsified, so that more and more each member of the crew began to be conscious of his isolation, and to believe that the schooner, like a second Noah's ark, carried the sole survivors of a calamity that had overwhelmed the earth.

On the 9th of February the *Dobryna* passed over the site of the city of Dido, the ancient Byrsa — a Carthage, however, which was now more completely destroyed than ever Punic Carthage had been destroyed by Scipio Africanus or Roman Carthage by Hassan the Saracen.

In the evening, as the sun was sinking below the eastern horizon, Captain Servadac was lounging moodily against the taffrail. From the heaven above, where stars kept peeping fitfully from behind the moving clouds, his eye wandered mechanically to the waters below, where the long waves were rising and falling with the evening breeze.

All at once, his attention was arrested by a luminous speck straight ahead on the southern horizon. At first, imagining that he was the victim of some spectral illusion, he observed it with silent attention; but when, after some minutes, he became convinced that what he saw was actually a distant light, he appealed to one of the sailors, by whom his impression was fully corroborated. The intelligence was immediately imparted to Count Timascheff and the lieutenant.

“Is it land, do you suppose?” inquired Servadac, eagerly.

“I should be more inclined to think it is a light on board some ship,” replied the count.

“Whatever it is, in another hour we shall know all about it,” said Servadac.

“No, captain,” interposed Lieutenant Procope; “we shall know nothing until to-morrow.”

“What! not bear down upon it at once?” asked the count in surprise.

“No, sir; I should much rather lay to and wait till daylight. If we are really near land, I should be afraid to approach it in the dark.”

The count expressed his approval of the lieutenant’s caution, and thereupon all sail was shortened so as to keep the *Dobryna* from making any considerable progress all through the hours of night. Few as those hours were, they seemed to those on board as if their end would never come. Fearful lest the faint glimmer should at any moment cease to be visible, Hector Servadac did not quit his post upon the deck; but the light continued unchanged. It shone with about the same degree of luster as a star of the second

magnitude, and from the fact of its remaining stationary, Procope became more and more convinced that it was on land and did not belong to a passing vessel.

At sunrise every telescope was pointed with keenest interest towards the center of attraction. The light, of course, had ceased to be visible, but in the direction where it had been seen, and at a distance of about ten miles, there was the distinct outline of a solitary island of very small extent; rather, as the count observed, it had the appearance of being the projecting summit of a mountain all but submerged. Whatever it was, it was agreed that its true character must be ascertained, not only to gratify their own curiosity, but for the benefit of all future navigators. The schooner accordingly was steered directly towards it, and in less than an hour had cast anchor within a few cables' lengths of the shore.

The little island proved to be nothing more than an arid rock rising abruptly about forty feet above the water. It had no outlying reefs, a circumstance that seemed to suggest the probability that in the recent convulsion it had sunk gradually, until it had reached its present position of equilibrium.

Without removing his eye from his telescope, Servadac exclaimed: "There is a habitation on the place; I can see an erection of some kind quite distinctly. Who can tell whether we shall not come across a human being?"

Lieutenant Procope looked doubtful. The island had all the appearance of being deserted, nor did a cannon-shot fired from the schooner have the effect of bringing any resident to the shore. Nevertheless, it was undeniable that there was a stone building situated on the top of the rock, and that this building had much the character of an Arabian mosque.

The boat was lowered and manned by the four sailors; Servadac, Timascheff and Procope were quickly rowed ashore, and lost no time in commencing their ascent of the steep acclivity. Upon reaching the summit, they found their progress arrested by a kind of wall, or rampart of singular construction, its materials consisting mainly of vases, fragments of columns, carved bas-reliefs, statues, and portions of broken stelae, all piled promiscuously together without any pretense to artistic arrangement. They made their way into the enclosure, and finding an open door, they passed through and soon came to a second door, also open, which admitted them to the interior of the mosque, consisting of a single chamber, the walls of which were ornamented in the Arabian style

by sculptures of indifferent execution. In the center was a tomb of the very simplest kind, and above the tomb was suspended a large silver lamp with a capacious reservoir of oil, in which floated a long lighted wick, the flame of which was evidently the light that had attracted Servadac's attention on the previous night.

"Must there not have been a custodian of the shrine?" they mutually asked; but if such there had ever been, he must, they concluded, either have fled or have perished on that eventful night. Not a soul was there in charge, and the sole living occupants were a flock of wild cormorants which, startled at the entrance of the intruders, rose on wing, and took a rapid flight towards the south.

An old French prayer-book was lying on the corner of the tomb; the volume was open, and the page exposed to view was that which contained the office for the celebration of the 25th of August. A sudden revelation dashed across Servadac's mind. The solemn isolation of the island tomb, the open breviary, the ritual of the ancient anniversary, all combined to apprise him of the sanctity of the spot upon which he stood.

"The tomb of St. Louis!" he exclaimed, and his companions involuntarily followed his example, and made a reverential obeisance to the venerated monument.

It was, in truth, the very spot on which tradition asserts that the canonized monarch came to die, a spot to which for six centuries and more his countrymen had paid the homage of a pious regard. The lamp that had been kindled at the memorial shrine of a saint was now in all probability the only beacon that threw a light across the waters of the Mediterranean, and even this ere long must itself expire.

There was nothing more to explore. The three together quitted the mosque, and descended the rock to the shore, whence their boat re-conveyed them to the schooner, which was soon again on her southward voyage; and it was not long before the tomb of St. Louis, the only spot that had survived the mysterious shock, was lost to view.

CHAPTER XII. AT THE MERCY OF THE WINDS

As the affrighted cormorants had winged their flight towards the south, there sprang up a sanguine hope on board the schooner that land might be discovered in that direction. Thither, accordingly, it was determined to proceed, and in a few hours after quitting the island of the tomb, the *Dobryna* was traversing the shallow waters that now covered the peninsula of Dakhul, which had separated the Bay of Tunis from the Gulf of Hammamet. For two days she continued an undeviating course, and after a futile search for the coast of Tunis, reached the latitude of 34 degrees.

Here, on the 11th of February, there suddenly arose the cry of “Land!” and in the extreme horizon, right ahead, where land had never been before, it was true enough that a shore was distinctly to be seen. What could it be? It could not be the coast of Tripoli; for not only would that low-lying shore be quite invisible at such a distance, but it was certain, moreover, that it lay two degrees at least still further south. It was soon observed that this newly discovered land was of very irregular elevation, that it extended due east and west across the horizon, thus dividing the gulf into two separate sections and completely concealing the island of Jerba, which must lie behind. Its position was duly traced on the *Dobryna*’s chart.

“How strange,” exclaimed Hector Servadac, “that after sailing all this time over sea where we expected to find land, we have at last come upon land where we thought to find sea!”

“Strange, indeed,” replied Lieutenant Procope; “and what appears to me almost as remarkable is that we have never once caught sight either of one of the Maltese tartans or one of the Levantine xebecs that traffic so regularly on the Mediterranean.”

“Eastwards or westwards,” asked the count — ”which shall be our course? All farther progress to the south is checked.”

“Westwards, by all means,” replied Servadac quickly. “I am longing to know whether anything of Algeria is left beyond the Shelif; besides, as we pass Gourbi Island we might take Ben Zoof on board, and then make away for Gibraltar, where we should be sure to learn something, at least, of European news.”

With his usual air of stately courtesy, Count Timascheff begged the captain to consider the yacht at his own disposal, and desired him to give the lieutenant instructions accordingly.

Lieutenant Procope, however, hesitated, and after revolving matters for a few moments in his mind, pointed out that as the wind was blowing directly from the west, and seemed likely to increase, if they went to the west in the teeth of the weather, the schooner would be reduced to the use of her engine only, and would have much difficulty in making any headway; on the other hand, by taking an eastward course, not only would they have the advantage of the wind, but, under steam and canvas, might hope in a few days to be off the coast of Egypt, and from Alexandria or some other port they would have the same opportunity of getting tidings from Europe as they would at Gibraltar.

Intensely anxious as he was to revisit the province of Oran, and eager, too, to satisfy himself of the welfare of his faithful Ben Zoof, Servadac could not but own the reasonableness of the lieutenant's objections, and yielded to the proposal that the eastward course should be adopted. The wind gave signs only too threatening of the breeze rising to a gale; but, fortunately, the waves did not culminate in breakers, but rather in a long swell which ran in the same direction as the vessel.

During the last fortnight the high temperature had been gradually diminishing, until it now reached an average of 20 degrees Cent. (or 68 degrees Fahr.), and sometimes descended as low as 15 degrees. That this diminution was to be attributed to the change in the earth's orbit was a question that admitted of little doubt. After approaching so near to the sun as to cross the orbit of Venus, the earth must now have receded so far from the sun that its normal distance of ninety-one millions of miles was greatly increased, and the probability was great that it was approximating to the orbit of Mars, that planet which in its physical constitution most nearly resembles our own. Nor was this supposition suggested merely by the lowering of the temperature; it was strongly corroborated by the reduction of the apparent diameter of the sun's disc to the precise dimensions which it would assume to an observer actually stationed on the surface of Mars. The necessary inference that seemed to follow from these phenomena was that the earth had been projected into a new orbit, which had the form of a very elongated ellipse.

Very slight, however, in comparison was the regard which these astronomical wonders attracted on board the *Dobryna*. All interest there was too much absorbed in terrestrial matters, and in ascertaining what changes had taken place in the configuration of the earth itself, to permit much attention to be paid to its erratic movements through space.

The schooner kept bravely on her way, but well out to sea, at a distance of two miles from land. There was good need of this precaution, for so precipitous was the shore that a vessel driven upon it must inevitably have gone to pieces; it did not offer a single harbor of refuge, but, smooth and perpendicular as the walls of a fortress, it rose to a height of two hundred, and occasionally of three hundred feet. The waves dashed violently against its base. Upon the general substratum rested a massive conglomerate, the crystallizations of which rose like a forest of gigantic pyramids and obelisks.

But what struck the explorers more than anything was the appearance of singular newness that pervaded the whole of the region. It all seemed so recent in its formation that the atmosphere had had no opportunity of producing its wonted effect in softening the hardness of its lines, in rounding the sharpness of its angles, or in modifying the color of its surface; its outline was clearly marked against the sky, and its substance, smooth and polished as though fresh from a founder’s mold, glittered with the metallic brilliancy that is characteristic of pyrites. It seemed impossible to come to any other conclusion but that the land before them, continent or island, had been upheaved by subterranean forces above the surface of the sea, and that it was mainly composed of the same metallic element as had characterized the dust so frequently uplifted from the bottom.

The extreme nakedness of the entire tract was likewise very extraordinary. Elsewhere, in various quarters of the globe, there may be sterile rocks, but there are none so adamant as to be altogether unfurrowed by the filaments engendered in the moist residuum of the condensed vapor; elsewhere there may be barren steeps, but none so rigid as not to afford some hold to vegetation, however low and elementary may be its type; but here all was bare, and blank, and desolate — not a symptom of vitality was visible.

Such being the condition of the adjacent land, it could hardly be a matter of surprise that all the sea-birds, the albatross, the gull, the sea-mew, sought continual refuge on the schooner; day and night they perched fearlessly upon the yards, the report of a gun failing to dislodge them, and when food of any sort was thrown upon the deck, they

would dart down and fight with eager voracity for the prize. Their extreme avidity was recognized as a proof that any land where they could obtain a sustenance must be far remote.

Onwards thus for several days the *Dobryna* followed the contour of the inhospitable coast, of which the features would occasionally change, sometimes for two or three miles assuming the form of a simple arris, sharply defined as though cut by a chisel, when suddenly the prismatic lamellae soaring in rugged confusion would again recur; but all along there was the same absence of beach or tract of sand to mark its base, neither were there any of those shoals of rock that are ordinarily found in shallow water. At rare intervals there were some narrow fissures, but not a creek available for a ship to enter to replenish its supply of water; and the wide roadsteads were unprotected and exposed to well-nigh every point of the compass.

But after sailing two hundred and forty miles, the progress of the *Dobryna* was suddenly arrested. Lieutenant Procope, who had sedulously inserted the outline of the newly revealed shore upon the maps, announced that it had ceased to run east and west, and had taken a turn due north, thus forming a barrier to their continuing their previous direction. It was, of course, impossible to conjecture how far this barrier extended; it coincided pretty nearly with the fourteenth meridian of east longitude; and if it reached, as probably it did, beyond Sicily to Italy, it was certain that the vast basin of the Mediterranean, which had washed the shores alike of Europe, Asia, and Africa, must have been reduced to about half its original area.

It was resolved to proceed upon the same plan as heretofore, following the boundary of the land at a safe distance. Accordingly, the head of the *Dobryna* was pointed north, making straight, as it was presumed, for the south of Europe. A hundred miles, or somewhat over, in that direction, and it was to be anticipated she would come in sight of Malta, if only that ancient island, the heritage in succession of Phoenicians, Carthaginians, Sicilians, Romans, Vandals, Greeks, Arabians, and the knights of Rhodes, should still be undestroyed.

But Malta, too, was gone; and when, upon the 14th, the sounding-line was dropped upon its site, it was only with the same result so oftentimes obtained before.

“The devastation is not limited to Africa,” observed the count.

“Assuredly not,” assented the lieutenant; adding, “and I confess I am almost in despair whether we shall ever ascertain its limits. To what quarter of Europe, if Europe still exists, do you propose that I should now direct your course?”

“To Sicily, Italy, France!” ejaculated Servadac, eagerly, — ”anywhere where we can learn the truth of what has befallen us.”

“How if we are the sole survivors?” said the count, gravely.

Hector Servadac was silent; his own secret presentiment so thoroughly coincided with the doubts expressed by the count, that he refrained from saying another word.

The coast, without deviation, still tended towards the north. No alternative, therefore, remained than to take a westerly course and to attempt to reach the northern shores of the Mediterranean. On the 16th the *Dobryna* essayed to start upon her altered way, but it seemed as if the elements had conspired to obstruct her progress. A furious tempest arose; the wind beat dead in the direction of the coast, and the danger incurred by a vessel of a tonnage so light was necessarily very great.

Lieutenant Procope was extremely uneasy. He took in all sail, struck his topmasts, and resolved to rely entirely on his engine. But the peril seemed only to increase. Enormous waves caught the schooner and carried her up to their crests, whence again she was plunged deep into the abysses that they left. The screw failed to keep its hold upon the water, but continually revolved with useless speed in the vacant air; and thus, although the steam was forced on to the extremest limit consistent with safety, the vessel held her way with the utmost difficulty, and recoiled before the hurricane.

Still, not a single resort for refuge did the inaccessible shore present. Again and again the lieutenant asked himself what would become of him and his comrades, even if they should survive the peril of shipwreck, and gain a footing upon the cliff. What resources could they expect to find upon that scene of desolation? What hope could they entertain that any portion of the old continent still existed beyond that dreary barrier?

It was a trying time, but throughout it all the crew behaved with the greatest courage and composure; confident in the skill of their commander, and in the stability of their ship, they performed their duties with steadiness and unquestioning obedience.

But neither skill, nor courage, nor obedience could avail; all was in vain. Despite the strain put upon her engine, the schooner, bare of canvas (for not even the smallest stay-sail could have withstood the violence of the storm), was drifting with terrific speed towards the menacing precipices, which were only a. few short miles to leeward. Fully alive to the hopelessness of their situation, the crew were all on deck.

“All over with us, sir!” said Procope to the count. “I have done everything that man could do; but our case is desperate. Nothing short of a miracle can save us now. Within an hour we must go to pieces upon yonder rocks.”

“Let us, then, commend ourselves to the providence of Him to Whom nothing is impossible,” replied the count, in a calm, clear voice that could be distinctly heard by all; and as he spoke, he reverently uncovered, an example in which he was followed by all the rest.

The destruction of the vessel seeming thus inevitable, Lieutenant Procope took the best measures he could to insure a few days’ supply of food for any who might escape ashore. He ordered several cases of provisions and kegs of water to be brought on deck, and saw that they were securely lashed to some empty barrels, to make them float after the ship had gone down.

Less and less grew the distance from the shore, but no creek, no inlet, could be discerned in the towering wall of cliff, which seemed about to topple over and involve them in annihilation. Except a change of wind or, as Procope observed, a supernatural rifting of the rock, nothing could bring deliverance now. But the wind did not veer, and in a few minutes more the schooner was hardly three cables’ distance from the fatal land. All were aware that their last moment had arrived. Servadac and the count grasped each other’s hands for a long farewell; and, tossed by the tremendous waves, the schooner was on the very point of being hurled upon the cliff, when a ringing shout was heard. “Quick, boys, quick! Hoist the jib, and right the tiller!”

Sudden and startling as the unexpected orders were, they were executed as if by magic.

The lieutenant, who had shouted from the bow, rushed astern and took the helm, and before anyone had time to speculate upon the object of his maneuvers, he shouted again, “Look out! sharp! watch the sheets!”

An involuntary cry broke forth from all on board. But it was no cry of terror. Right ahead was a narrow opening in the solid rock; it was hardly forty feet wide. Whether it was a passage or no, it mattered little; it was at least a refuge; and, driven by wind and wave, the *Dobryna*, under the dexterous guidance of the lieutenant, dashed in between its perpendicular walls.

Had she not immured herself in a perpetual prison?

CHAPTER XIII. A ROYAL SALUTE

“Then I take your bishop, major,” said Colonel Murphy, as he made a move that he had taken since the previous evening to consider.

“I was afraid you would,” replied Major Oliphant, looking intently at the chess-board.

Such was the way in which a long silence was broken on the morning of the 17th of February by the old calendar.

Another day elapsed before another move was made. It was a protracted game; it had, in fact, already lasted some months — the players being so deliberate, and so fearful of taking a step without the most mature consideration, that even now they were only making the twentieth move.

Both of them, moreover, were rigid disciples of the renowned Philidor, who pronounces that to play the pawns well is “the soul of chess”; and, accordingly, not one pawn had been sacrificed without a most vigorous defense.

The men who were thus beguiling their leisure were two officers in the British army — Colonel Heneage Finch Murphy and Major Sir John Temple Oliphant. Remarkably similar in personal appearance, they were hardly less so in personal character. Both of them were about forty years of age; both of them were tall and fair, with bushy whiskers and mustaches; both of them were phlegmatic in temperament, and both much addicted to the wearing of their uniforms. They were proud of their nationality, and exhibited a manifest dislike, verging upon contempt, of everything foreign. Probably they would have felt no surprise if they had been told that Anglo-Saxons were fashioned out of some specific clay, the properties of which surpassed the investigation of chemical analysis. Without any intentional disparagement they might, in a certain way, be compared to two scarecrows which, though perfectly harmless in themselves, inspire some measure of respect, and are excellently adapted to protect the territory intrusted to their guardianship.

English-like, the two officers had made themselves thoroughly at home in the station abroad in which it had been their lot to be quartered. The faculty of colonization seems to be indigenous to the native character; once let an Englishman plant his national

standard on the surface of the moon, and it would not be long before a colony was established round it.

The officers had a servant, named Kirke, and a company of ten soldiers of the line. This party of thirteen men were apparently the sole survivors of an overwhelming catastrophe, which on the 1st of January had transformed an enormous rock, garrisoned with well-nigh two thousand troops, into an insignificant island far out to sea. But although the transformation had been so marvelous, it cannot be said that either Colonel Murphy or Major Oliphant had made much demonstration of astonishment.

“This is all very peculiar, Sir John,” observed the colonel.

“Yes, colonel; very peculiar,” replied the major.

“England will be sure to send for us,” said one officer.

“No doubt she will,” answered the other.

Accordingly, they came to the mutual resolution that they would “stick to their post.”

To say the truth, it would have been a difficult matter for the gallant officers to do otherwise; they had but one small boat; therefore, it was well that they made a virtue of necessity, and resigned themselves to patient expectation of the British ship which, in due time, would bring relief.

They had no fear of starvation. Their island was mined with subterranean stores, more than ample for thirteen men — nay, for thirteen Englishmen — for the next five years at least. Preserved meat, ale, brandy — all were in abundance; consequently, as the men expressed it, they were in this respect “all right.”

Of course, the physical changes that had taken place had attracted the notice both of officers and men. But the reversed position of east and west, the diminution of the force of gravity, the altered rotation of the earth, and her projection upon a new orbit, were all things that gave them little concern and no uneasiness; and when the colonel and the major had replaced the pieces on the board which had been disturbed by the convulsion, any surprise they might have felt at the chess-men losing some portion of their weight was quite forgotten in the satisfaction of seeing them retain their equilibrium.

One phenomenon, however, did not fail to make its due impression upon the men; this was the diminution in the length of day and night. Three days after the catastrophe, Corporal Pim, on behalf of himself and his comrades, solicited a formal interview with the officers. The request having been granted, Pim, with the nine soldiers, all punctiliously wearing the regimental tunic of scarlet and trousers of invisible green, presented themselves at the door of the colonel's room, where he and his brother-officer were continuing their game. Raising his hand respectfully to his cap, which he wore poised jauntily over his right ear, and scarcely held on by the strap below his under lip, the corporal waited permission to speak.

After a lingering survey of the chess-board, the colonel slowly lifted his eyes, and said with official dignity, "Well, men, what is it?"

"First of all, sir," replied the corporal, "we want to speak to you about our pay, and then we wish to have a word with the major about our rations."

"Say on, then," said Colonel Murphy. "What is it about your pay?"

"Just this, sir; as the days are only half as long as they were, we should like to know whether our pay is to be diminished in proportion."

The colonel was taken somewhat aback, and did not reply immediately, though by some significant nods towards the major, he indicated that he thought the question very reasonable. After a few moments' reflection, he replied, "It must, I think, be allowed that your pay was calculated from sunrise to sunrise; there was no specification of what the interval should be. Your pay will continue as before. England can afford it."

A buzz of approval burst involuntarily from all the men, but military discipline and the respect due to their officers kept them in check from any boisterous demonstration of their satisfaction.

"And now, corporal, what is your business with me?" asked Major Oliphant.

"We want to know whether, as the days are only six hours long, we are to have but two meals instead of four?"

The officers looked at each other, and by their glances agreed that the corporal was a man of sound common sense.

“Eccentricities of nature,” said the major, “cannot interfere with military regulations. It is true that there will be but an interval of an hour and a half between them, but the rule stands good — four meals a day. England is too rich to grudge her soldiers any of her soldiers’ due. Yes; four meals a day.”

“Hurrah!” shouted the soldiers, unable this time to keep their delight within the bounds of military decorum; and, turning to the right-about, they marched away, leaving the officers to renew the all-absorbing game.

However confident everyone upon the island might profess to be that succor would be sent them from their native land — for Britain never abandons any of her sons — it could not be disguised that that succor was somewhat tardy in making its appearance. Many and various were the conjectures to account for the delay. Perhaps England was engrossed with domestic matters, or perhaps she was absorbed in diplomatic difficulties; or perchance, more likely than all, Northern Europe had received no tidings of the convulsion that had shattered the south. The whole party throve remarkably well upon the liberal provisions of the commissariat department, and if the officers failed to show the same tendency to *embonpoint* which was fast becoming characteristic of the men, it was only because they deemed it due to their rank to curtail any indulgences which might compromise the fit of their uniform.

On the whole, time passed indifferently well. An Englishman rarely suffers from *ennui*, and then only in his own country, when required to conform to what he calls “the humbug of society”; and the two officers, with their similar tastes, ideas, and dispositions, got on together admirably. It is not to be questioned that they were deeply affected by a sense of regret for their lost comrades, and astounded beyond measure at finding themselves the sole survivors of a garrison of 1,895 men, but with true British pluck and self-control, they had done nothing more than draw up a report that 1,882 names were missing from the muster-roll.

The island itself, the sole surviving fragment of an enormous pile of rock that had reared itself some 1,600 feet above the sea, was not, strictly speaking, the only land that was visible; for about twelve miles to the south there was another island, apparently the very counterpart of what was now occupied by the Englishmen. It was only natural that this should awaken some interest even in the most imperturbable minds, and there was no doubt that the two officers, during one of the rare intervals when they were not absorbed in their game, had decided that it would be desirable at least to ascertain

whether the island was deserted, or whether it might not be occupied by some others, like themselves, survivors from the general catastrophe. Certain it is that one morning, when the weather was bright and calm, they had embarked alone in the little boat, and been absent for seven or eight hours. Not even to Corporal Pim did they communicate the object of their excursion, nor say one syllable as to its result, and it could only be inferred from their manner that they were quite satisfied with what they had seen; and very shortly afterwards Major Oliphant was observed to draw up a lengthy document, which was no sooner finished than it was formally signed and sealed with the seal of the 33rd Regiment. It was directed:

To the First Lord of the Admiralty,

London,

and kept in readiness for transmission by the first ship that should hail in sight. But time elapsed, and here was the 18th of February without an opportunity having been afforded for any communication with the British Government.

At breakfast that morning, the colonel observed to the major that he was under the most decided impression that the 18th of February was a royal anniversary; and he went on to say that, although he had received no definite instructions on the subject, he did not think that the peculiar circumstances under which they found themselves should prevent them from giving the day its due military honors.

The major quite concurred; and it was mutually agreed that the occasion must be honored by a bumper of port, and by a royal salute. Corporal Pim must be sent for. The corporal soon made his appearance, smacking his lips, having, by a ready intuition, found a pretext for a double morning ration of spirits.

“The 18th of February, you know, Pim,” said the colonel; “we must have a salute of twenty-one guns.”

“Very good,” replied Pim, a man of few words.

“And take care that your fellows don’t get their arms and legs blown off,” added the officer.

“Very good, sir,” said the corporal; and he made his salute and withdrew.

Of all the bombs, howitzers, and various species of artillery with which the fortress had been crowded, one solitary piece remained. This was a cumbrous muzzle-loader of 9-inch caliber, and, in default of the smaller ordnance generally employed for the purpose, had to be brought into requisition for the royal salute.

A sufficient number of charges having been provided, the corporal brought his men to the reduct, whence the gun's mouth projected over a sloping embrasure. The two officers, in cocked hats and full staff uniform, attended to take charge of the proceedings. The gun was maneuvered in strict accordance with the rules of "The Artilleryman's Manual," and the firing commenced.

Not unmindful of the warning he had received, the corporal was most careful between each discharge to see that every vestige of fire was extinguished, so as to prevent an untimely explosion while the men were reloading; and accidents, such as so frequently mar public rejoicings, were all happily avoided.

Much to the chagrin of both Colonel Murphy and Major Oliphant, the effect of the salute fell altogether short of their anticipations. The weight of the atmosphere was so reduced that there was comparatively little resistance to the explosive force of the gases, liberated at the cannon's mouth, and there was consequently none of the reverberation, like rolling thunder, that ordinarily follows the discharge of heavy artillery.

Twenty times had the gun been fired, and it was on the point of being loaded for the last time, when the colonel laid his hand upon the arm of the man who had the ramrod. "Stop!" he said; "we will have a ball this time. Let us put the range of the piece to the test."

"A good idea!" replied the major. "Corporal, you hear the orders."

In quick time an artillery-wagon was on the spot, and the men lifted out a full-sized shot, weighing 200 lbs. which, under ordinary circumstances, the cannon would carry about four miles. It was proposed, by means of telescopes, to note the place where the ball first touched the water, and thus to obtain an approximation sufficiently accurate as to the true range.

Having been duly charged with powder and ball, the gun was raised to an angle of something under 45 degrees, so as to allow proper development to the curve that the

projectile would make, and, at a signal from the major, the light was applied to the priming.

“Heavens!” “By all that’s good!” exclaimed both officers in one breath, as, standing open-mouthed, they hardly knew whether they were to believe the evidence of their own senses. “Is it possible?”

The diminution of the force of attraction at the earth’s surface was so considerable that the ball had sped beyond the horizon.

“Incredible!” ejaculated the colonel.

“Incredible!” echoed the major.

“Six miles at least!” observed the one.

“Ay, more than that!” replied the other.

Awhile, they gazed at the sea and at each other in mute amazement. But in the midst of their perplexity, what sound was that which startled them? Was it mere fancy? Was it the reverberation of the cannon still booming in their ears? Or was it not truly the report of another and a distant gun in answer to their own? Attentively and eagerly they listened. Twice, thrice did the sound repeat itself. It was quite distinct. There could be no mistake.

“I told you so,” cried the colonel, triumphantly. “I knew our country would not forsake us; it is an English ship, no doubt.”

In half an hour two masts were visible above the horizon. “See! Was I not right? Our country was sure to send to our relief. Here is the ship.”

“Yes,” replied the major; “she responded to our gun.”

“It is to be hoped,” muttered the corporal, “that our ball has done her no damage.”

Before long the hull was full in sight. A long trail of smoke betokened her to be a steamer; and very soon, by the aid of the glass, it could be ascertained that she was a schooner-yacht, and making straight for the island. A flag at her mast-head fluttered in

the breeze, and towards this the two officers, with the keenest attention, respectively adjusted their focus.

Simultaneously the two telescopes were lowered. The colonel and the major stared at each other in blank astonishment. “Russian!” they gasped.

And true it was that the flag that floated at the head of yonder mast was the blue cross of Russia.

CHAPTER XIV. SENSITIVE NATIONALITY

When the schooner had approached the island, the Englishmen were able to make out the name "*Dobryna*" painted on the aft-board. A sinuous irregularity of the coast had formed a kind of cove, which, though hardly spacious enough for a few fishing-smacks, would afford the yacht a temporary anchorage, so long as the wind did not blow violently from either west or south. Into this cove the *Dobryna* was duly signaled, and as soon as she was safely moored, she lowered her four-oar, and Count Timascheff and Captain Servadac made their way at once to land.

Colonel Heneage Finch Murphy and Major Sir John Temple Oliphant stood, grave and prim, formally awaiting the arrival of their visitors. Captain Servadac, with the uncontrolled vivacity natural to a Frenchman, was the first to speak.

"A joyful sight, gentlemen!" he exclaimed. "It will give us unbounded pleasure to shake hands again with some of our fellow-creatures. You, no doubt, have escaped the same disaster as ourselves."

But the English officers, neither by word nor gesture, made the slightest acknowledgment of this familiar greeting.

"What news can you give us of France, England, or Russia?" continued Servadac, perfectly unconscious of the stolid rigidity with which his advances were received. "We are anxious to hear anything you can tell us. Have you had communications with Europe? Have you — "

"To whom have we the honor of speaking?" at last interposed Colonel Murphy, in the coldest and most measured tone, and drawing himself up to his full height.

"Ah! how stupid! I forgot," said Servadac, with the slightest possible shrug of the shoulders; "we have not been introduced."

Then, with a wave of his hand towards his companion, who meanwhile had exhibited a reserve hardly less than that of the British officers, he said:

"Allow me to introduce you to Count Wassili Timascheff."

"Major Sir John Temple Oliphant," replied the colonel.

The Russian and the Englishman mutually exchanged the stiffest of bows.

“I have the pleasure of introducing Captain Servadac,” said the count in his turn.

“And this is Colonel Heneage Finch Murphy,” was the major’s grave rejoinder.

More bows were interchanged and the ceremony brought to its due conclusion. It need hardly be said that the conversation had been carried on in French, a language which is generally known both by Russians and Englishmen — a circumstance that is probably in some measure to be accounted for by the refusal of Frenchmen to learn either Russian or English.

The formal preliminaries of etiquette being thus complete, there was no longer any obstacle to a freer intercourse. The colonel, signing to his guests to follow, led the way to the apartment occupied jointly by himself and the major, which, although only a kind of casemate hollowed in the rock, nevertheless wore a general air of comfort. Major Oliphant accompanied them, and all four having taken their seats, the conversation was commenced.

Irritated and disgusted at all the cold formalities, Hector Servadac resolved to leave all the talking to the count; and he, quite aware that the Englishmen would adhere to the fiction that they could be supposed to know nothing that had transpired previous to the introduction felt himself obliged to recapitulate matters from the very beginning.

“You must be aware, gentlemen,” began the count, “that a most singular catastrophe occurred on the 1st of January last. Its cause, its limits we have utterly failed to discover, but from the appearance of the island on which we find you here, you have evidently experienced its devastating consequences.”

The Englishmen, in silence, bowed assent.

“Captain Servadac, who accompanies me,” continued the count, “has been most severely tried by the disaster. Engaged as he was in an important mission as a staff-officer in Algeria — ”

“A French colony, I believe,” interposed Major Oliphant, half shutting his eyes with an expression of supreme indifference.

Servadac was on the point of making some cutting retort, but Count Timascheff, without allowing the interruption to be noticed, calmly continued his narrative:

“It was near the mouth of the Shelif that a portion of Africa, on that eventful night, was transformed into an island which alone survived; the rest of the vast continent disappeared as completely as if it had never been.”

The announcement seemed by no means startling to the phlegmatic colonel.

“Indeed!” was all he said.

“And where were you?” asked Major Oliphant.

“I was out at sea, cruising in my yacht; hard by; and I look upon it as a miracle, and nothing less, that I and my crew escaped with our lives.”

“I congratulate you on your luck,” replied the major.

The count resumed: “It was about a month after the great disruption that I was sailing — my engine having sustained some damage in the shock — along the Algerian coast, and had the pleasure of meeting with my previous acquaintance, Captain Servadac, who was resident upon the island with his orderly, Ben Zoof.”

“Ben who?” inquired the major.

“Zoof! Ben Zoof!” ejaculated Servadac, who could scarcely shout loud enough to relieve his pent-up feelings.

Ignoring this ebullition of the captain’s spleen, the count went on to say: “Captain Servadac was naturally most anxious to get what news he could. Accordingly, he left his servant on the island in charge of his horses, and came on board the *Dobryna* with me. We were quite at a loss to know where we should steer, but decided to direct our course to what previously had been the east, in order that we might, if possible, discover the colony of Algeria; but of Algeria not a trace remained.”

The colonel curled his lip, insinuating only too plainly that to him it was by no means surprising that a French colony should be wanting in the element of stability. Servadac observed the supercilious look, and half rose to his feet, but, smothering his resentment, took his seat again without speaking.

“The devastation, gentlemen,” said the count, who persistently refused to recognize the Frenchman’s irritation, “everywhere was terrible and complete. Not only was Algeria lost, but there was no trace of Tunis, except one solitary rock, which was crowned by an ancient tomb of one of the kings of France — ”

“Louis the Ninth, I presume,” observed the colonel.

“Saint Louis,” blurted out Servadac, savagely.

Colonel Murphy slightly smiled.

Proof against all interruption, Count Timascheff, as if he had not heard it, went on without pausing. He related how the schooner had pushed her way onwards to the south, and had reached the Gulf of Cabes; and how she had ascertained for certain that the Sahara Sea had no longer an existence.

The smile of disdain again crossed the colonel’s face; he could not conceal his opinion that such a destiny for the work of a Frenchman could be no matter of surprise.

“Our next discovery,” continued the count, “was that a new coast had been upheaved right along in front of the coast of Tripoli, the geological formation of which was altogether strange, and which extended to the north as far as the proper place of Malta.”

“And Malta,” cried Servadac, unable to control himself any longer; “Malta — town, forts, soldiers, governor, and all — has vanished just like Algeria.”

For a moment a cloud rested upon the colonel’s brow, only to give place to an expression of decided incredulity.

“The statement seems highly incredible,” he said.

“Incredible?” repeated Servadac. “Why is it that you doubt my word?”

The captain’s rising wrath did not prevent the colonel from replying coolly, “Because Malta belongs to England.”

“I can’t help that,” answered Servadac, sharply; “it has gone just as utterly as if it had belonged to China.”

Colonel Murphy turned deliberately away from Servadac, and appealed to the count: “Do you not think you may have made some error, count, in reckoning the bearings of your yacht?”

“No, colonel, I am quite certain of my reckonings; and not only can I testify that Malta has disappeared, but I can affirm that a large section of the Mediterranean has been closed in by a new continent. After the most anxious investigation, we could discover only one narrow opening in all the coast, and it is by following that little channel that we have made our way hither. England, I fear, has suffered grievously by the late catastrophe. Not only has Malta been entirely lost, but of the Ionian Islands that were under England’s protection, there seems to be but little left.”

“Ay, you may depend upon it,” said Servadac, breaking in upon the conversation petulantly, “your grand resident lord high commissioner has not much to congratulate himself about in the condition of Corfu.”

The Englishmen were mystified.

“Corfu, did you say?” asked Major Oliphant.

“Yes, Corfu; I said Corfu,” replied Servadac, with a sort of malicious triumph.

The officers were speechless with astonishment.

The silence of bewilderment was broken at length by Count Timascheff making inquiry whether nothing had been heard from England, either by telegraph or by any passing ship.

“No,” said the colonel; “not a ship has passed; and the cable is broken.”

“But do not the Italian telegraphs assist you?” continued the count.

“Italian! I do not comprehend you. You must mean the Spanish, surely.”

“How?” demanded Timascheff.

“Confound it!” cried the impatient Servadac. “What matters whether it be Spanish or Italian? Tell us, have you had no communication at all from Europe? — no news of any sort from London?”

“Hitherto, none whatever,” replied the colonel; adding with a stately emphasis, “but we shall be sure to have tidings from England before long.”

“Whether England is still in existence or not, I suppose,” said Servadac, in a tone of irony.

The Englishmen started simultaneously to their feet.

“England in existence?” the colonel cried. “England! Ten times more probable that France — ”

“France!” shouted Servadac in a passion. “France is not an island that can be submerged; France is an integral portion of a solid continent. France, at least, is safe.”

A scene appeared inevitable, and Count Timascheff’s efforts to conciliate the excited parties were of small avail.

“You are at home here,” said Servadac, with as much calmness as he could command; “it will be advisable, I think, for this discussion to be carried on in the open air.” And hurriedly he left the room. Followed immediately by the others, he led the way to a level piece of ground, which he considered he might fairly claim as neutral territory.

“Now, gentlemen,” he began haughtily, “permit me to represent that, in spite of any loss France may have sustained in the fate of Algeria, France is ready to answer any provocation that affects her honor. Here I am the representative of my country, and here, on neutral ground — ”

“Neutral ground?” objected Colonel Murphy; “I beg your pardon. This, Captain Servadac, is English territory. Do you not see the English flag?” and, as he spoke, he pointed with national pride to the British standard floating over the top of the island.

“Pshaw!” cried Servadac, with a contemptuous sneer; “that flag, you know, has been hoisted but a few short weeks.”

“That flag has floated where it is for ages,” asserted the colonel.

“An imposture!” shouted Servadac, as he stamped with rage.

Recovering his composure in a degree, he continued: “Can you suppose that I am not aware that this island on which we find you is what remains of the Ionian representative republic, over which you English exercise the right of protection, but have no claim of government?”

The colonel and the major looked at each other in amazement.

Although Count Timascheff secretly sympathized with Servadac, he had carefully refrained from taking part in the dispute; but he was on the point of interfering, when the colonel, in a greatly subdued tone, begged to be allowed to speak.

“I begin to apprehend,” he said, “that you must be la-boring under some strange mistake. There is no room for questioning that the territory here is England’s — England’s by right of conquest; ceded to England by the Treaty of Utrecht. Three times, indeed — in 1727, 1779, and 1792 — France and Spain have disputed our title, but always to no purpose. You are, I assure you, at the present moment, as much on English soil as if you were in London, in the middle of Trafalgar Square.”

It was now the turn of the captain and the count to look surprised. “Are we not, then, in Corfu?” they asked.

“You are at Gibraltar,” replied the colonel.

Gibraltar! The word fell like a thunderclap upon their ears. Gibraltar! the western extremity of the Mediterranean! Why, had they not been sailing persistently to the east? Could they be wrong in imagining that they had reached the Ionian Islands? What new mystery was this?

Count Timascheff was about to proceed with a more rigorous investigation, when the attention of all was arrested by a loud outcry. Turning round, they saw that the crew of the *Dobryna* was in hot dispute with the English soldiers. A general altercation had arisen from a disagreement between the sailor Panofka and Corporal Pim. It had transpired that the cannon-ball fired in experiment from the island had not only damaged one of the spars of the schooner, but had broken Panofka’s pipe, and, moreover, had just grazed his nose, which, for a Russian’s, was unusually long. The discussion over this mishap led to mutual recriminations, till the sailors had almost come to blows with the garrison.

Servadac was just in the mood to take Panofka's part, which drew from Major Oliphant the remark that England could not be held responsible for any accidental injury done by her cannon, and if the Russian's long nose came in the way of the ball, the Russian must submit to the mischance.

This was too much for Count Timascheff, and having poured out a torrent of angry invective against the English officers, he ordered his crew to embark immediately.

"We shall meet again," said Servadac, as they pushed off from shore.

"Whenever you please," was the cool reply.

The geographical mystery haunted the minds of both the count and the captain, and they felt they could never rest till they had ascertained what had become of their respective countries. They were glad to be on board again, that they might résumé their voyage of investigation, and in two hours were out of sight of the sole remaining fragment of Gibraltar.

CHAPTER XV. AN ENIGMA FROM THE SEA

Lieutenant Procope had been left on board in charge of the *Dobryna*, and on resuming the voyage it was a task of some difficulty to make him understand the fact that had just come to light. Some hours were spent in discussion and in attempting to penetrate the mysteries of the situation.

There were certain things of which they were perfectly certain. They could be under no misapprehension as to the distance they had positively sailed from Gourbi Island towards the east before their further progress was arrested by the unknown shore; as nearly as possible that was fifteen degrees; the length of the narrow strait by which they had made their way across that land to regain the open sea was about three miles and a half; thence onward to the island, which they had been assured, on evidence that they could not disbelieve, to be upon the site of Gibraltar, was four degrees; while from Gibraltar to Gourbi Island was seven degrees or but little more. What was it altogether? Was it not less than thirty degrees? In that latitude, the degree of longitude represents eight and forty miles. What, then, did it all amount to? Indubitably, to less than 1,400 miles. So brief a voyage would bring the *Dobryna* once again to her starting-point, or, in other words, would enable her to complete the circumnavigation of the globe. How changed the condition of things! Previously, to sail from Malta to Gibraltar by an eastward course would have involved the passage of the Suez Canal, the Red Sea, the Indian Ocean, the Pacific, the Atlantic; but what had happened now? Why, Gibraltar had been reached as if it had been just at Corfu, and some three hundred and thirty degrees of the earth’s circuit had vanished utterly.

After allowing for a certain margin of miscalculation, the main fact remained undeniable; and the necessary inference that Lieutenant Procope drew from the round of the earth being completed in 1,400 miles, was that the earth’s diameter had been reduced by about fifteen sixteenths of its length.

“If that be so,” observed the count, “it accounts for some of the strange phenomena we witness. If our world has become so insignificant a spheroid, not only has its gravity diminished, but its rotary speed has been accelerated; and this affords an adequate explanation of our days and nights being thus curtailed. But how about the new orbit in which we are moving?”

He paused and pondered, and then looked at Procope as though awaiting from him some further elucidation of the difficulty. The lieutenant hesitated. When, in a few moments, he began to speak, Servadac smiled intelligently, anticipating the answer he was about to hear.

“My conjecture is,” said Procope, “that a fragment of considerable magnitude has been detached from the earth; that it has carried with it an envelope of the earth’s atmosphere, and that it is now traveling through the solar system in an orbit that does not correspond at all with the proper orbit of the earth.”

The hypothesis was plausible; but what a multitude of bewildering speculations it entailed! If, in truth, a certain mass had been broken off from the terrestrial sphere, whither would it wend its way? What would be the measure of the eccentricity of its path? What would be its period round the sun? Might it not, like a comet, be carried away into the vast infinity of space? or, on the other hand, might it not be attracted to the great central source of light and heat, and be absorbed in it? Did its orbit correspond with the orbit of the ecliptic? and was there no chance of its ever uniting again with the globe, from which it had been torn off by so sudden and violent a disruption?

A thoughtful silence fell upon them all, which Servadac was the first to break. “Lieutenant,” he said, “your explanation is ingenious, and accounts for many appearances; but it seems to me that in one point it fails.”

“How so?” replied Procope. “To my mind the theory meets all objections.”

“I think not,” Servadac answered. “In one point, at least, it appears to me to break down completely.”

“What is that?” asked the lieutenant.

“Stop a moment,” said the captain. “Let us see that we understand each other right. Unless I mistake you, your hypothesis is that a fragment of the earth, comprising the Mediterranean and its shores from Gibraltar to Malta, has been developed into a new asteroid, which is started on an independent orbit in the solar regions. Is not that your meaning?”

“Precisely so,” the lieutenant acquiesced.

“Well, then,” continued Servadac, “it seems to me to be at fault in this respect: it fails, and fails completely, to account for the geological character of the land that we have found now encompassing this sea. Why, if the new land is a fragment of the old — why does it not retain its old formation? What has become of the granite and the calcareous deposits? How is it that these should all be changed into a mineral concrete with which we have no acquaintance?”

No doubt, it was a serious objection; for, however likely it might be that a mass of the earth on being detached would be eccentric in its movements, there was no probable reason to be alleged why the material of its substance should undergo so complete a change. There was nothing to account for the fertile shores, rich in vegetation, being transformed into rocks arid and barren beyond precedent.

The lieutenant felt the difficulty, and owned himself unprepared to give at once an adequate solution; nevertheless, he declined to renounce his theory. He asserted that the arguments in favor of it carried conviction to his mind, and that he entertained no doubt but that, in the course of time, all apparently antagonistic circumstances would be explained so as to become consistent with the view he took. He was careful, however, to make it understood that with respect to the original cause of the disruption he had no theory to offer; and although he knew what expansion might be the result of subterranean forces, he did not venture to say that he considered it sufficient to produce so tremendous an effect. The origin of the catastrophe was a problem still to be solved.

“Ah! well,” said Servadac, “I don’t know that it matters much where our new little planet comes from, or what it is made of, if only it carries France along with it.”

“And Russia,” added the count.

“And Russia, of course,” said Servadac, with a polite bow.

There was, however, not much room for this sanguine expectation, for if a new asteroid had thus been brought into existence, it must be a sphere of extremely limited dimensions, and there could be little chance that it embraced more than the merest fraction of either France or Russia. As to England, the total cessation of all telegraphic communication between her shores and Gibraltar was a virtual proof that England was beyond its compass.

And what was the true measurement of the new little world? At Gourbi Island the days and nights were of equal length, and this seemed to indicate that it was situated on the equator; hence the distance by which the two poles stood apart would be half what had been reckoned would be the distance completed by the *Dobryna* in her circuit. That distance had been already estimated to be something under 1,400 miles, so that the Arctic Pole of their recently fashioned world must be about 350 miles to the north, and the Antarctic about 350 miles to the south of the island. Compare these calculations with the map, and it is at once apparent that the northernmost limit barely touched the coast of Provence, while the southernmost reached to about lat. 20 degrees N. and fell in the heart of the desert. The practical test of these conclusions would be made by future investigation, but meanwhile the fact appeared very much to strengthen the presumption that, if Lieutenant Procope had not arrived at the whole truth, he had made a considerable advance towards it.

The weather, ever since the storm that had driven the *Dobryna* into the creek, had been magnificent. The wind continued favorable, and now under both steam and canvas, she made a rapid progress towards the north, a direction in which she was free to go in consequence of the total disappearance of the Spanish coast, from Gibraltar right away to Alicante. Malaga, Almeria, Cape Gata, Carthagena. Cape Palos — all were gone. The sea was rolling over the southern extent of the peninsula, so that the yacht advanced to the latitude of Seville before it sighted any land at all, and then, not shores such as the shores of Andalusia, but a bluff and precipitous cliff, in its geological features resembling exactly the stern and barren rock that she had coasted beyond the site of Malta. Here the sea made a decided indentation on the coast; it ran up in an acute-angled triangle till its apex coincided with the very spot upon which Madrid had stood. But as hitherto the sea had encroached upon the land, the land in its turn now encroached upon the sea; for a frowning headland stood out far into the basin of the Mediterranean, and formed a promontory stretching out beyond the proper places of the Balearic Isles. Curiosity was all alive. There was the intensest interest awakened to determine whether no vestige could be traced of Majorca, Minorca, or any of the group, and it was during a deviation from the direct course for the purpose of a more thorough scrutiny, that one of the sailors raised a thrill of general excitement by shouting, “A bottle in the sea!”

Here, then, at length was a communication from the outer world. Surely now they would find a document which would throw some light upon all the mysteries that had

happened? Had not the day now dawned that should set their speculations all at rest?

It was the morning of the 21st of February. The count, the captain, the lieutenant, everybody hurried to the forecastle; the schooner was dexterously put about, and all was eager impatience until the supposed bottle was hauled on deck.

It was not, however, a bottle; it proved to be a round leather telescope-case, about a foot long, and the first thing to do before investigating its contents was to make a careful examination of its exterior. The lid was fastened on by wax, and so securely that it would take a long immersion before any water could penetrate; there was no maker's name to be deciphered; but impressed very plainly with a seal on the wax were the two initials "P. R."

When the scrutiny of the outside was finished, the wax was removed and the cover opened, and the lieutenant drew out a slip of ruled paper, evidently torn from a common note-book. The paper had an inscription written in four lines, which were remarkable for the profusion of notes of admiration and interrogation with which they were interspersed:

"Gallia???

Ab sole, au 15 fev. 59,000,000 l!

Chemin parcouru de janv. a fev. 82,000,000 l!!

Va bene! All right!! Parfait!!!"

There was a general sigh of disappointment. They turned the paper over and over, and handed it from one to another. "What does it all mean?" exclaimed the count.

"Something mysterious here!" said Servadac. "But yet," he continued, after a pause, "one thing is tolerably certain: on the 15th, six days ago, someone was alive to write it."

"Yes; I presume there is no reason to doubt the accuracy of the date," assented the count.

To this strange conglomeration of French, English, Italian, and Latin, there was no signature attached; nor was there anything to give a clue as to the locality in which it had been committed to the waves. A telescope-case would probably be the property of

some one on board a ship; and the figures obviously referred to the astronomical wonders that had been experienced.

To these general observations Captain Servadac objected that he thought it unlikely that any one on board a ship would use a telescope-case for this purpose, but would be sure to use a bottle as being more secure; and, accordingly, he should rather be inclined to believe that the message had been set afloat by some *savant* left alone, perchance, upon some isolated coast.

“But, however interesting it might be,” observed the count, “to know the author of the lines, to us it is of far greater moment to ascertain their meaning.”

And taking up the paper again, he said, “Perhaps we might analyze it word by word, and from its detached parts gather some clue to its sense as a whole.”

“What can be the meaning of all that cluster of interrogations after Gallia?” asked Servadac.

Lieutenant Procope, who had hitherto not spoken, now broke his silence by saying, “I beg, gentlemen, to submit my opinion that this document goes very far to confirm my hypothesis that a fragment of the earth has been precipitated into space.”

Captain Servadac hesitated, and then replied, “Even if it does, I do not see how it accounts in the least for the geological character of the new asteroid.”

“But will you allow me for one minute to take my supposition for granted?” said Procope. “If a new little planet has been formed, as I imagine, by disintegration from the old, I should conjecture that Gallia is the name assigned to it by the writer of this paper. The very notes of interrogation are significant that he was in doubt what he should write.”

“You would presume that he was a Frenchman?” asked the count.

“I should think so,” replied the lieutenant.

“Not much doubt about that,” said Servadac; “it is all in French, except a few scattered words of English, Latin, and Italian, inserted to attract attention. He could not tell into whose hands the message would fall first.”

“Well, then,” said Count Timascheff, “we seem to have found a name for the new world we occupy.”

“But what I was going especially to observe,” continued the lieutenant, “is that the distance, 59,000,000 leagues, represents precisely the distance we ourselves were from the sun on the 15th. It was on that day we crossed the orbit of Mars.”

“Yes, true,” assented the others.

“And the next line,” said the lieutenant, after reading it aloud, “apparently registers the distance traversed by Gallia, the new little planet, in her own orbit. Her speed, of course, we know by Kepler’s laws, would vary according to her distance from the sun, and if she were — as I conjecture from the temperature at that date — on the 15th of January at her perihelion, she would be traveling twice as fast as the earth, which moves at the rate of between 50,000 and 60,000 miles an hour.”

“You think, then,” said Servadac, with a smile, “you have determined the perihelion of our orbit; but how about the aphelion? Can you form a judgment as to what distance we are likely to be carried?”

“You are asking too much,” remonstrated the count.

“I confess,” said the lieutenant, “that just at present I am not able to clear away the uncertainty of the future; but I feel confident that by careful observation at various points we shall arrive at conclusions which not only will determine our path, but perhaps may clear up the mystery about our geological structure.”

“Allow me to ask,” said Count Timascheff, “whether such a new asteroid would not be subject to ordinary mechanical laws, and whether, once started, it would not have an orbit that must be immutable?”

“Decidedly it would, so long as it was undisturbed by the attraction of some considerable body; but we must recollect that, compared to the great planets, Gallia must be almost infinitesimally small, and so might be attracted by a force that is irresistible.”

“Altogether, then,” said Servadac, “we seem to have settled it to our entire satisfaction that we must be the population of a young little world called Gallia. Perhaps some day

we may have the honor of being registered among the minor planets."

"No chance of that," quickly rejoined Lieutenant Procope. "Those minor planets all are known to rotate in a narrow zone between the orbits of Mars and Jupiter; in their perihelia they cannot approximate the sun as we have done; we shall not be classed with them."

"Our lack of instruments," said the count, "is much to be deplored; it baffles our investigations in every way."

"Ah, never mind! Keep up your courage, count!" said Servadac, cheerily.

And Lieutenant Procope renewed his assurances that he entertained good hopes that every perplexity would soon be solved.

"I suppose," remarked the count, "that we cannot attribute much importance to the last line: '*Va bene! All right!!* Parfait!!!"

The captain answered, "At least, it shows that whoever wrote it had no murmuring or complaint to make, but was quite content with the new order of things."

CHAPTER XVI. THE RESIDUUM OF A CONTINENT

Almost unconsciously, the voyagers in the *Dobryna* fell into the habit of using Gallia as the name of the new world in which they became aware they must be making an extraordinary excursion through the realms of space. Nothing, however, was allowed to divert them from their ostensible object of making a survey of the coast of the Mediterranean, and accordingly they persevered in following that singular boundary which had revealed itself to their extreme astonishment.

Having rounded the great promontory that had barred her farther progress to the north, the schooner skirted its upper edge. A few more leagues and they ought to be abreast of the shores of France. Yes, of France.

But who shall describe the feelings of Hector Servadac when, instead of the charming outline of his native land, he beheld nothing but a solid boundary of savage rock? Who shall paint the look of consternation with which he gazed upon the stony rampart — rising perpendicularly for a thousand feet — that had replaced the shores of the smiling south? Who shall reveal the burning anxiety with which he throbbed to see beyond that cruel wall?

But there seemed no hope. Onwards and onwards the yacht made her way, and still no sign of France. It might have been supposed that Servadac's previous experiences would have prepared him for the discovery that the catastrophe which had overwhelmed other sites had brought destruction to his own country as well. But he had failed to realize how it might extend to France; and when now he was obliged with his own eyes to witness the waves of ocean rolling over what once had been the lovely shores of Provence, he was well-nigh frantic with desperation.

"Am I to believe that Gourbi Island, that little shred of Algeria, constitutes all that is left of our glorious France? No, no; it cannot be. Not yet have we reached the pole of our new world. There is — there must be — something more behind that frowning rock. Oh, that for a moment we could scale its towering height and look beyond! By Heaven, I adjure you, let us disembark, and mount the summit and explore! France lies beyond."

Disembarkation, however, was an utter impossibility. There was no semblance of a creek in which the *Dobryna* could find an anchorage. There was no outlying ridge on which a footing could be gained. The precipice was perpendicular as a wall, its topmost

height crowned with the same conglomerate of crystallized lamellae that had all along been so pronounced a feature.

With her steam at high pressure, the yacht made rapid progress towards the east. The weather remained perfectly fine, the temperature became gradually cooler, so that there was little prospect of vapors accumulating in the atmosphere; and nothing more than a few cirri, almost transparent, veiled here and there the clear azure of the sky. Throughout the day the pale rays of the sun, apparently lessened in its magnitude, cast only faint and somewhat uncertain shadows; but at night the stars shone with surpassing brilliancy. Of the planets, some, it was observed, seemed to be fading away in remote distance. This was the case with Mars, Venus, and that unknown orb which was moving in the orbit of the minor planets; but Jupiter, on the other hand, had assumed splendid proportions; Saturn was superb in its luster, and Uranus, which hitherto had been imperceptible without a telescope was pointed out by Lieutenant Procope, plainly visible to the naked eye. The inference was irresistible that Gallia was receding from the sun, and traveling far away across the planetary regions.

On the 24th of February, after following the sinuous course of what before the date of the convulsion had been the coast line of the department of Var, and after a fruitless search for Hyeres, the peninsula of St. Tropez, the Lerius Islands, and the gulfs of Cannes and Jouar, the *Dobryna* arrived upon the site of the Cape of Antibes.

Here, quite unexpectedly, the explorers made the discovery that the massive wall of cliff had been rent from the top to the bottom by a narrow rift, like the dry bed of a mountain torrent, and at the base of the opening, level with the sea, was a little strand upon which there was just space enough for their boat to be hauled up.

“Joy! joy!” shouted Servadac, half beside himself with ecstasy; “we can land at last!”

Count Timascheff and the lieutenant were scarcely less impatient than the captain, and little needed his urgent and repeated solicitations: “Come on! Quick! Come on! no time to lose!”

It was half-past seven in the morning, when they set their foot upon this untried land. The bit of strand was only a few square yards in area, quite a narrow strip. Upon it might have been recognized some fragments of that agglutination of yellow limestone which is characteristic of the coast of Provence. But the whole party was far too eager

to wait and examine these remnants of the ancient shore; they hurried on to scale the heights.

The narrow ravine was not only perfectly dry, but manifestly had never been the bed of any mountain torrent. The rocks that rested at the bottom — just as those which formed its sides — were of the same lamellous formation as the entire coast, and had not hitherto been subject to the disaggregation which the lapse of time never fails to work. A skilled geologist would probably have been able to assign them their proper scientific classification, but neither Servadac, Timascheff, nor the lieutenant could pretend to any acquaintance with their specific character.

Although, however, the bottom of the chasm had never as yet been the channel of a stream, indications were not wanting that at some future time it would be the natural outlet of accumulated waters; for already, in many places, thin layers of snow were glittering upon the surface of the fractured rocks, and the higher the elevation that was gained, the more these layers were found to increase in area and in depth.

“Here is a trace of fresh water, the first that Gallia has exhibited,” said the count to his companions, as they toiled up the precipitous path.

“And probably,” replied the lieutenant, “as we ascend we shall find not only snow but ice. We must suppose this Gallia of ours to be a sphere, and if it is so, we must now be very close to her Arctic regions; it is true that her axis is not so much inclined as to prolong day and night as at the poles of the earth, but the rays of the sun must reach us here only very obliquely, and the cold, in all likelihood, will be intense.”

“So cold, do you think,” asked Servadac, “that animal life must be extinct?”

“I do not say that, captain,” answered the lieutenant; “for, however far our little world may be removed from the sun, I do not see why its temperature should fall below what prevails in those outlying regions beyond our system where sky and air are not.” “And what temperature may that be?” inquired the captain with a shudder.

“Fourier estimates that even in those vast unfathomable tracts, the temperature never descends lower than 60 degrees,” said Procope.

“Sixty! Sixty degrees below zero!” cried the count. “Why, there’s not a Russian could endure it!”

“I beg your pardon, count. It is placed on record that the English *have* survived it, or something quite approximate, upon their Arctic expeditions. When Captain Parry was on Melville Island, he knew the thermometer to fall to 56 degrees,” said Procope.

As the explorers advanced, they seemed glad to pause from time to time, that they might recover their breath; for the air, becoming more and more rarefied, made respiration somewhat difficult and the ascent fatiguing. Before they had reached an altitude of 600 feet they noticed a sensible diminution of the temperature; but neither cold nor fatigue deterred them, and they were resolved to persevere. Fortunately, the deep striae or furrows in the surface of the rocks that made the bottom of the ravine in some degree facilitated their progress, but it was not until they had been toiling up for two hours more that they succeeded in reaching the summit of the cliff.

Eagerly and anxiously did they look around. To the south there was nothing but the sea they had traversed; to the north, nothing but one drear, inhospitable stretch.

Servadac could not suppress a cry of dismay. Where was his beloved France? Had he gained this arduous height only to behold the rocks carpeted with ice and snow, and reaching interminably to the far-off horizon? His heart sank within him.

The whole region appeared to consist of nothing but the same strange, uniform mineral conglomerate, crystallized into regular hexagonal prisms. But whatever was its geological character, it was only too evident that it had entirely replaced the former soil, so that not a vestige of the old continent of Europe could be discerned. The lovely scenery of Provence, with the grace of its rich and undulating landscape; its gardens of citrons and oranges rising tier upon tier from the deep red soil — all, all had vanished. Of the vegetable kingdom, there was not a single representative; the most meager of Arctic plants, the most insignificant of lichens, could obtain no hold upon that stony waste. Nor did the animal world assert the feeblest sway. The mineral kingdom reigned supreme.

Captain Servadac’s deep dejection was in strange contrast to his general hilarity. Silent and tearful, he stood upon an ice-bound rock, straining his eyes across the boundless vista of the mysterious territory. “It cannot be!” he exclaimed. “We must somehow have mistaken our bearings. True, we have encountered this barrier; but France is there beyond! Yes, France is *there!* Come, count, come! By all that’s pitiful, I entreat you, come and explore the farthest verge of the ice-bound track!”

He pushed onwards along the rugged surface of the rock, but had not proceeded far before he came to a sudden pause. His foot had come in contact with something hard beneath the snow, and, stooping down, he picked up a little block of stony substance, which the first glance revealed to be of a geological character altogether alien to the universal rocks around. It proved to be a fragment of dis-colored marble, on which several letters were inscribed, of which the only part at all decipherable was the syllable "Vil."

"Vil — Villa!" he cried out, in his excitement dropping the marble, which was broken into atoms by the fall.

What else could this fragment be but the sole surviving remnant of some sumptuous mansion that once had stood on this unrivaled site? Was it not the residue of some edifice that had crowned the luxuriant headland of Antibes, overlooking Nice, and commanding the gorgeous panorama that embraced the Maritime Alps and reached beyond Monaco and Mentone to the Italian height of Bordighera? And did it not give in its sad and too convincing testimony that Antibes itself had been involved in the great destruction? Servadac gazed upon the shattered marble, pensive and disheartened.

Count Timascheff laid his hand kindly on the captain's shoulder, and said, "My friend, do you not remember the motto of the old Hope family?"

He shook his head mournfully.

"*Orbe fracto, spes illoesa*," continued the count — "Though the world be shattered, hope is unimpaired."

Servadac smiled faintly, and replied that he felt rather compelled to take up the despairing cry of Dante, "All hope abandon, ye who enter here."

"Nay, not so," answered the count; "for the present at least, let our maxim be *Nil desperandum!*"

CHAPTER XVII. A SECOND ENIGMA

Upon re-embarking, the bewildered explorers began to discuss the question whether it would not now be desirable to make their way back to Gourbi Island, which was apparently the only spot in their new world from which they could hope to derive their future sustenance. Captain Servadac tried to console himself with the reflection that Gourbi Island was, after all, a fragment of a French colony, and as such almost like a bit of his dear France; and the plan of returning thither was on the point of being adopted, when Lieutenant Procope remarked that they ought to remember that they had not hitherto made an entire circuit of the new shores of the sea on which they were sailing.

“We have,” he said, “neither investigated the northern shore from the site of Cape Antibes to the strait that brought us to Gibraltar, nor have we followed the southern shore that stretches from the strait to the Gulf of Cabes. It is the old coast, and not the new, that we have been tracing; as yet, we cannot say positively that there is no outlet to the south; as yet, we cannot assert that no oasis of the African desert has escaped the catastrophe. Perhaps, even here in the north, we may find that Italy and Sicily and the larger islands of the Mediterranean may still maintain their existence.”

“I entirely concur with you,” said Count Timascheff. “I quite think we ought to make our survey of the confines of this new basin as complete as possible before we withdraw.”

Servadac, although he acknowledged the justness of these observations, could not help pleading that the explorations might be deferred until after a visit had been paid to Gourbi Island.

“Depend upon it, captain, you are mistaken,” replied the lieutenant; “the right thing to do is to use the *Dobryna* while she is available.”

“Available! What do you mean?” asked the count, somewhat taken by surprise.

“I mean,” said Procope, “that the farther this Gallia of ours recedes from the sun, the lower the temperature will fall. It is likely enough, I think, that before long the sea will be frozen over, and navigation will be impossible. Already you have learned something of the difficulties of traversing a field of ice, and I am sure, therefore, you will acquiesce in my wish to continue our explorations while the water is still open.”

“No doubt you are right, lieutenant,” said the count. “We will continue our search while we can for some remaining fragment of Europe. Who shall tell whether we may not meet with some more survivors from the catastrophe, to whom it might be in our power to afford assistance, before we go into our winter quarters?”

Generous and altogether unselfish as this sentiment really was, it was obviously to the general interest that they should become acquainted, and if possible establish friendly relations, with any human inhabitant who might be sharing their own strange destiny in being rolled away upon a new planet into the infinitude of space. All difference of race, all distinction of nationality, must be merged into the one thought that, few as they were, they were the sole surviving representatives of a world which it seemed exceedingly improbable that they would ever see again; and common sense dictated that they were bound to direct all their energies to insure that their asteroid should at least have a united and sympathizing population.

It was on the 25th of February that the yacht left the little creek in which she had taken refuge, and setting off at full steam eastwards, she continued her way along the northern shore. A brisk breeze tended to increase the keenness of the temperature, the thermometer being, on an average, about two degrees below zero. Salt water freezes only at a lower temperature than fresh; the course of the *Dobryna* was therefore unimpeded by ice, but it could not be concealed that there was the greatest necessity to maintain the utmost possible speed.

The nights continued lovely; the chilled condition of the atmosphere prevented the formation of clouds; the constellations gleamed forth with unsullied luster; and, much as Lieutenant Procope, from nautical considerations, might regret the absence of the moon, he could not do otherwise than own that the magnificent nights of Gallia were such as must awaken the enthusiasm of an astronomer. And, as if to compensate for the loss of the moonlight, the heavens were illuminated by a superb shower of falling stars, far exceeding, both in number and in brilliancy, the phenomena which are commonly distinguished as the August and November meteors; in fact, Gallia was passing through that meteoric ring which is known to lie exterior to the earth’s orbit, but almost concentric with it. The rocky coast, its metallic surface reflecting the glow of the dazzling luminaries, appeared literally stippled with light, whilst the sea, as though spattered with burning hailstones, shone with a phosphorescence that was perfectly

splendid. So great, however, was the speed at which Gallia was receding from the sun, that this meteoric storm lasted scarcely more than four and twenty hours.

Next day the direct progress of the *Dobryna* was arrested by a long projection of land, which obliged her to turn southwards, until she reached what formerly would have been the southern extremity of Corsica. Of this, however, there was now no trace; the Strait of Bonifacio had been replaced by a vast expanse of water, which had at first all the appearance of being utterly desert; but on the following morning the explorers unexpectedly sighted a little island, which, unless it should prove, as was only too likely, to be of recent origin they concluded, from its situation, must be a portion of the northernmost territory of Sardinia.

The *Dobryna* approached the land as nearly as was prudent, the boat was lowered, and in a few minutes the count and Servadac had landed upon the islet, which was a mere plot of meadow land, not much more than two acres in extent, dotted here and there with a few myrtle-bushes and lentisks, interspersed with some ancient olives. Having ascertained, as they imagined, that the spot was devoid of living creature, they were on the point of returning to their boat, when their attention was arrested by a faint bleating, and immediately afterwards a solitary she-goat came bounding towards the shore. The creature had dark, almost black hair, and small curved horns, and was a specimen of that domestic breed which, with considerable justice, has gained for itself the title of “the poor man’s cow.” So far from being alarmed at the presence of strangers, the goat ran nimbly towards them, and then, by its movements and plaintive cries, seemed to be enticing them to follow it.

“Come,” said Servadac; “let us see where it will lead us; it is more than probable it is not alone.”

The count agreed; and the animal, as if comprehending what was said, trotted on gently for about a hundred paces, and stopped in front of a kind of cave or burrow that was half concealed by a grove of lentisks. Here a little girl, seven or eight years of age, with rich brown hair and lustrous dark eyes, beautiful as one of Murillo’s angels, was peeping shyly through the branches. Apparently discovering nothing in the aspect of the strangers to excite her apprehensions, the child suddenly gained confidence, darted forwards with outstretched hands, and in a voice, soft and melodious as the language which she spoke, said in Italian:

“I like you; you will not hurt me, will you?”

“Hurt you, my child?” answered Servadac. “No, indeed; we will be your friends; we will take care of you.”

And after a few moments’ scrutiny of the pretty maiden, he added:

“Tell us your name, little one.”

“Nina!” was the child’s reply.

“Well, then, Nina, can you tell us where we are?”

“At Madalena, I think,” said the little girl; “at least, I know I was there when that dreadful shock came and altered everything.”

The count knew that Madalena was close to Caprera, to the north of Sardinia, which had entirely disappeared in the disaster. By dint of a series of questions, he gained from the child a very intelligent account of her experiences. She told him that she had no parents, and had been employed in taking care of a flock of goats belonging to one of the landowners, when one day, all of a sudden, everything around her, except this little piece of land, had been swallowed up, and that she and Marzy, her pet goat, had been left quite alone. She went on to say that at first she had been very frightened; but when she found that the earth did not shake any more, she had thanked the great God, and had soon made herself very happy living with Marzy. She had enough food, she said, and had been waiting for a boat to fetch her, and now a boat had come and she was quite ready to go away; only they must let her goat go with her: they would both like so much to get back to the old farm.

“Here, at least, is one nice little inhabitant of Gallia,” said Captain Servadac, as he caressed the child and conducted her to the boat.

Half an hour later, both Nina and Marzy were safely quartered on board the yacht. It is needless to say that they received the heartiest of welcomes. The Russian sailors, ever superstitious, seemed almost to regard the coming of the child as the appearance of an angel; and, incredible as it may seem, more than one of them wondered whether she had wings, and amongst themselves they commonly referred to her as “the little Madonna.”

Soon out of sight of Madalena, the *Dobryna* for some hours held a southeasterly course along the shore, which here was fifty leagues in advance of the former coast-line of Italy, demonstrating that a new continent must have been formed, substituted as it were for the old peninsula, of which not a vestige could be identified. At a latitude corresponding with the latitude of Rome, the sea took the form of a deep gulf, extending back far beyond the site of the Eternal City; the coast making a wide sweep round to the former position of Calabria, and jutting far beyond the outline of “the boot,” which Italy resembles. But the beacon of Messina was not to be discerned; no trace, indeed, survived of any portion of Sicily; the very peak of Etna, 11,000 feet as it had reared itself above the level of the sea, had vanished utterly.

Another sixty leagues to the south, and the *Dobryna* sighted the entrance of the strait which had afforded her so providential a refuge from the tempest, and had conducted her to the fragmentary relic of Gibraltar. Hence to the Gulf of Cabes had been already explored, and as it was universally allowed that it was unnecessary to renew the search in that direction, the lieutenant started off in a transverse course, towards a point hitherto uninvestigated. That point was reached on the 3rd of March, and thence the coast was continuously followed, as it led through what had been Tunis, across the province of Constantine, away to the oasis of Ziban; where, taking a sharp turn, it first reached a latitude of 32 degrees, and then returned again, thus forming a sort of irregular gulf, enclosed by the same unvarying border of mineral concrete. This colossal boundary then stretched away for nearly 150 leagues over the Sahara desert, and, extending to the south of Gourbi Island, occupied what, if Morocco had still existed, would have been its natural frontier.

Adapting her course to these deviations of the coastline, the *Dobryna* was steering northwards, and had barely reached the limit of the bay, when the attention of all on board was arrested by the phenomenon of a volcano, at least 3,000 feet high, its crater crowned with smoke, which occasionally was streaked by tongues of flame.

“A burning mountain!” they exclaimed.

“Gallia, then, has some internal heat,” said Servadac.

“And why not, captain?” rejoined the lieutenant. “If our asteroid has carried with it a portion of the old earth’s atmosphere, why should it not likewise retain something of its central fire?”

“Ah, well!” said the captain, shrugging his shoulders, “I dare say there is caloric enough in our little world to supply the wants of its population.”

Count Timascheff interrupted the silence that followed this conversation by saying, “And now, gentlemen, as our course has brought us on our way once more towards Gibraltar, what do you say to our renewing our acquaintance with the Englishmen? They will be interested in the result of our voyage.”

“For my part,” said Servadac, “I have no desire that way. They know where to find Gourbi Island; they can betake themselves thither just when they please. They have plenty of provisions. If the water freezes, 120 leagues is no very great distance. The reception they gave us was not so cordial that we need put ourselves out of the way to repeat our visit.”

“What you say is too true,” replied the count. “I hope we shall show them better manners when they condescend to visit us.”

“Ay,” said Servadac, “we must remember that we are all one people now; no longer Russian, French, or English. Nationality is extinct.”

“I am sadly afraid, however,” continued the count, “that an Englishman will be an Englishman ever.”

“Yes,” said the captain, “that is always their failing.”

And thus all further thought of making their way again to the little garrison of Gibraltar was abandoned.

But even if their spirit of courtesy had disposed them to renew their acquaintance with the British officers, there were two circumstances that just then would have rendered such a proposal very unadvisable. In the first place, Lieutenant Procope was convinced that it could not be much longer now before the sea would be entirely frozen; and, besides this, the consumption of their coal, through the speed they had maintained, had been so great that there was only too much reason to fear that fuel would fail them. Anyhow, the strictest economy was necessary, and it was accordingly resolved that the voyage should not be much prolonged. Beyond the volcanic peak, moreover, the waters seemed to expand into a boundless ocean, and it might be a thing full of risk to be frozen up while the yacht was so inadequately provisioned. Taking all these things into

account, it was agreed that further investigations should be deferred to a more favorable season, and that, without delay, the *Dobryna* should return to Gourbi Island.

This decision was especially welcome to Hector Servadac, who, throughout the whole of the last five weeks, had been agitated by much anxious thought on account of the faithful servant he had left behind.

The transit from the volcano to the island was not long, and was marked by only one noticeable incident. This was the finding of a second mysterious document, in character precisely similar to what they had found before. The writer of it was evidently engaged upon a calculation, probably continued from day to day, as to the motions of the planet Gallia upon its orbit, and committing the results of his reckonings to the waves as the channel of communication.

Instead of being enclosed in a telescope-case, it was this time secured in a preserved-meat tin, hermetically sealed, and stamped with the same initials on the wax that fastened it. The greatest care was used in opening it, and it was found to contain the following message:

“Gallia Ab sole, au 1 mars, dist. 78,000,000 l! Chemin parcouru de fev. a mars: 59,000,000 1! *Va bene! All right! Nil desperandum!*

“Enchante!”

“Another enigma!” exclaimed Servadac; “and still no intelligible signature, and no address. No clearing up of the mystery!”

“I have no doubt, in my own mind,” said the count, “that it is one of a series. It seems to me probable that they are being sent broadcast upon the sea.”

“I wonder where the hare-brained *savant* that writes them can be living?” observed Servadac.

“Very likely he may have met with the fate of AEsop’s abstracted astronomer, who found himself at the bottom of a well.”

“Ay; but where *is* that well?” demanded the captain.

This was a question which the count was incapable of settling; and they could only speculate afresh as to whether the author of the riddles was dwelling upon some solitary island, or, like themselves, was navigating the waters of the new Mediterranean. But they could detect nothing to guide them to a definite decision.

After thoughtfully regarding the document for some time. Lieutenant Procope proceeded to observe that he believed the paper might be considered as genuine, and accordingly, taking its statements as reliable, he deduced two important conclusions: first, that whereas, in the month of January, the distance traveled by the planet (hypothetically called Gallia) had been recorded as 82,000,000 leagues, the distance traveled in February was only 59,000,000 leagues — a difference of 23,000,000 leagues in one month; secondly, that the distance of the planet from the sun, which on the 15th of February had been 59,000,000 leagues, was on the 1st of March 78,000,000 leagues — an increase of 19,000,000 leagues in a fortnight. Thus, in proportion as Gallia receded from the sun, so did the rate of speed diminish by which she traveled along her orbit; facts to be observed in perfect conformity with the known laws of celestial mechanism.

“And your inference?” asked the count.

“My inference,” replied the lieutenant, “is a confirmation of my surmise that we are following an orbit decidedly elliptical, although we have not yet the material to determine its eccentricity.”

“As the writer adheres to the appellation of Gallia, do you not think,” asked the count, “that we might call these new waters the Gallian Sea?”

“There can be no reason to the contrary, count,” replied the lieutenant; “and as such I will insert it upon my new chart.”

“Our friend,” said Servadac, “seems to be more and more gratified with the condition of things; not only has he adopted our motto, ‘*Nil desperandum!*’ but see how enthusiastically he has wound up with his ‘*Enchante!*’”

The conversation dropped.

A few hours later the man on watch announced that Gourbi Island was in sight.

CHAPTER XVIII. AN UNEXPECTED POPULATION

The *Dobryna* was now back again at the island. Her cruise had lasted from the 31st of January to the 5th of March, a period of thirty-five days (for it was leap year), corresponding to seventy days as accomplished by the new little world.

Many a time during his absence Hector Servadac had wondered how his present vicissitudes would end, and he had felt some misgivings as to whether he should ever again set foot upon the island, and see his faithful orderly, so that it was not without emotion that he had approached the coast of the sole remaining fragment of Algerian soil. But his apprehensions were groundless; Gourbi Island was just as he had left it, with nothing unusual in its aspect, except that a very peculiar cloud was hovering over it, at an altitude of little more than a hundred feet. As the yacht approached the shore, this cloud appeared to rise and fall as if acted upon by some invisible agency, and the captain, after watching it carefully, perceived that it was not an accumulation of vapors at all, but a dense mass of birds packed as closely together as a swarm of herrings, and uttering deafening and discordant cries, amidst which from time to time the noise of the report of a gun could be plainly distinguished.

The *Dobryna* signalized her arrival by firing her cannon, and dropped anchor in the little port of the Shelif. Almost within a minute Ben Zoof was seen running, gun in hand, towards the shore; he cleared the last ridge of rocks at a single bound, and then suddenly halted. For a few seconds he stood motionless, his eyes fixed, as if obeying the instructions of a drill sergeant, on a point some fifteen yards distant, his whole attitude indicating submission and respect; but the sight of the captain, who was landing, was too much for his equanimity, and darting forward, he seized his master’s hand and covered it with kisses. Instead, however, of uttering any expressions of welcome or rejoicing at the captain’s return, Ben Zoof broke out into the most vehement ejaculations.

“Thieves, captain! beastly thieves! Bedouins! pirates! devils!”

“Why, Ben Zoof, what’s the matter?” said Servadac soothingly.

“They are thieves! downright, desperate thieves! those infernal birds! That’s what’s the matter. It is a good thing you have come. Here have I for a whole month been spending

my powder and shot upon them, and the more I kill them, the worse they get; and yet, if I were to leave them alone, we should not have a grain of corn upon the island."

It was soon evident that the orderly had only too much cause for alarm. The crops had ripened rapidly during the excessive heat of January, when the orbit of Gallia was being traversed at its perihelion, and were now exposed to the depredations of many thousands of birds; and although a goodly number of stacks attested the industry of Ben Zoof during the time of the *Dobryna*'s voyage, it was only too apparent that the portion of the harvest that remained ungathered was liable to the most imminent risk of being utterly devoured. It was, perhaps, only natural that this clustered mass of birds, as representing the whole of the feathered tribe upon the surface of Gallia, should resort to Gourbi Island, of which the meadows seemed to be the only spot from which they could get sustenance at all; but as this sustenance would be obtained at the expense, and probably to the serious detriment, of the human population, it was absolutely necessary that every possible resistance should be made to the devastation that was threatened.

Once satisfied that Servadac and his friends would cooperate with him in the raid upon "the thieves," Ben Zoof became calm and content, and began to make various inquiries. "And what has become," he said, "of all our old comrades in Africa?"

"As far as I can tell you," answered the captain, "they are all in Africa still; only Africa isn't by any means where we expected to find it."

"And France? Montmartre?" continued Ben Zoof eagerly. Here was the cry of the poor fellow's heart.

As briefly as he could, Servadac endeavored to explain the true condition of things; he tried to communicate the fact that Paris, France, Europe, nay, the whole world was more than eighty millions of leagues away from Gourbi Island; as gently and cautiously as he could he expressed his fear that they might never see Europe, France, Paris, Montmartre again.

"No, no, sir!" protested Ben Zoof emphatically; "that is all nonsense. It is altogether out of the question to suppose that we are not to see Montmartre again." And the orderly shook his head resolutely, with the air of a man determined, in spite of argument, to adhere to his own opinion.

“Very good, my brave fellow,” replied Servadac, “hope on, hope while you may. The message has come to us over the sea, ‘Never despair’; but one thing, nevertheless, is certain; we must forthwith commence arrangements for making this island our permanent home.”

Captain Servadac now led the way to the gourbi, which, by his servant’s exertions, had been entirely rebuilt; and here he did the honors of his modest establishment to his two guests, the count and the lieutenant, and gave a welcome, too, to little Nina, who had accompanied them on shore, and between whom and Ben Zoof the most friendly relations had already been established.

The adjacent building continued in good preservation, and Captain Servadac’s satisfaction was very great in finding the two horses, Zephyr and Galette, comfortably housed there and in good condition.

After the enjoyment of some refreshment, the party proceeded to a general consultation as to what steps must be taken for their future welfare. The most pressing matter that came before them was the consideration of the means to be adopted to enable the inhabitants of Gallia to survive the terrible cold, which, in their ignorance of the true eccentricity of their orbit, might, for aught they knew, last for an almost indefinite period. Fuel was far from abundant; of coal there was none; trees and shrubs were few in number, and to cut them down in prospect of the cold seemed a very questionable policy; but there was no doubt some expedient must be devised to prevent disaster, and that without delay.

The victualing of the little colony offered no immediate difficulty. Water was abundant, and the cisterns could hardly fail to be replenished by the numerous streams that meandered along the plains; moreover, the Gallian Sea would ere long be frozen over, and the melted ice (water in its congealed state being divested of every particle of salt) would afford a supply of drink that could not be exhausted. The crops that were now ready for the harvest, and the flocks and herds scattered over the island, would form an ample reserve. There was little doubt that throughout the winter the soil would remain unproductive, and no fresh fodder for domestic animals could then be obtained; it would therefore be necessary, if the exact duration of Gallia’s year should ever be calculated, to proportion the number of animals to be reserved to the real length of the winter.

The next thing requisite was to arrive at a true estimate of the number of the population. Without including the thirteen Englishmen at Gibraltar, about whom he was not particularly disposed to give himself much concern at present, Servadac put down the names of the eight Russians, the two Frenchman, and the little Italian girl, eleven in all, as the entire list of the inhabitants of Gourbi Island.

“Oh, pardon me,” interposed Ben Zoof, “you are mistaking the state of the case altogether. You will be surprised to learn that the total of people on the island is double that. It is twenty-two.”

“Twenty-two!” exclaimed the captain; “twenty-two people on this island? What do you mean?”

“The opportunity has not occurred,” answered Ben Zoof, “for me to tell you before, but I have had company.”

“Explain yourself, Ben Zoof,” said Servadac. “What company have you had?”

“You could not suppose,” replied the orderly, “that my own unassisted hands could have accomplished all that harvest work that you see has been done.”

“I confess,” said Lieutenant Procope, “we do not seem to have noticed that.”

“Well, then,” said Ben Zoof, “if you will be good enough to come with me for about a mile, I shall be able to show you my companions. But we must take our guns.”

“Why take our guns?” asked Servadac. “I hope we are not going to fight.”

“No, not with men,” said Ben Zoof; “but it does not answer to throw a chance away for giving battle to those thieves of birds.”

Leaving little Nina and her goat in the gourbi, Servadac, Count Timascheff, and the lieutenant, greatly mystified, took up their guns and followed the orderly. All along their way they made unsparing slaughter of the birds that hovered over and around them. Nearly every species of the feathered tribe seemed to have its representative in that living cloud. There were wild ducks in thousands; snipe, larks, rooks, and swallows; a countless variety of sea-birds — widgeons, gulls, and seamews; beside a quantity of game — quails, partridges, and woodcocks. The sportsmen did their best; every shot told; and the depredators fell by dozens on either hand.

Instead of following the northern shore of the island, Ben Zoof cut obliquely across the plain. Making their progress with the unwonted rapidity which was attributable to their specific lightness, Servadac and his companions soon found themselves near a grove of sycamores and eucalyptus massed in picturesque confusion at the base of a little hill. Here they halted.

“Ah! the vagabonds! the rascals! the thieves!” suddenly exclaimed Ben Zoof, stamping his foot with rage.

“How now? Are your friends the birds at their pranks again?” asked the captain.

“No, I don’t mean the birds: I mean those lazy beggars that are shirking their work. Look here; look there!” And as Ben Zoof spoke, he pointed to some scythes, and sickles, and other implements of husbandry that had been left upon the ground.

“What is it you mean?” asked Servadac, getting somewhat impatient.

“Hush, hush! listen!” was all Ben Zoof’s reply; and he raised his finger as if in warning.

Listening attentively, Servadac and his associates could distinctly recognize a human voice, accompanied by the notes of a guitar and by the measured click of castanets.

“Spaniards!” said Servadac.

“No mistake about that, sir,” replied Ben Zoof; “a Spaniard would rattle his castanets at the cannon’s mouth.”

“But what is the meaning of it all?” asked the captain, more puzzled than before.

“Hark!” said Ben Zoof; “it is the old man’s turn.”

And then a voice, at once gruff and harsh, was heard vociferating, “My money! my money! when will you pay me my money? Pay me what you owe me, you miserable majos.”

Meanwhile the song continued:

> “*Tu sandunga y cigarro,*

Y una cana de Jerez,

Mi jamelgo y un trabuco,

Que mas gloria puede haver?”

Servadac’s knowledge of Gascon enabled him partially to comprehend the rollicking tenor of the Spanish patriotic air, but his attention was again arrested by the voice of the old man growling savagely, “Pay me you shall; yes, by the God of Abraham, you shall pay me.”

“A Jew!” exclaimed Servadac.

“Ay, sir, a German Jew,” said Ben Zoof.

The party was on the point of entering the thicket, when a singular spectacle made them pause. A group of Spaniards had just begun dancing their national fandango, and the extraordinary lightness which had become the physical property of every object in the new planet made the dancers bound to a height of thirty feet or more into the air, considerably above the tops of the trees. What followed was irresistibly comic. Four sturdy majos had dragged along with them an old man incapable of resistance, and compelled him, *nolens volens*, to join in the dance; and as they all kept appearing and disappearing above the bank of foliage, their grotesque attitudes, combined with the pitiable countenance of their helpless victim, could not do otherwise than recall most forcibly the story of Sancho Panza tossed in a blanket by the merry drapers of Segovia.

Servadac, the count, Procope, and Ben Zoof now proceeded to make their way through the thicket until they came to a little glade, where two men were stretched idly on the grass, one of them playing the guitar, and the other a pair of castanets; both were exploding with laughter, as they urged the performers to greater and yet greater exertions in the dance. At the sight of strangers they paused in their music, and simultaneously the dancers, with their victim, alighted gently on the sward.

Breathless and half exhausted as was the Jew, he rushed with an effort towards Servadac, and exclaimed in French, marked by a strong Teutonic accent, “Oh, my lord governor, help me, help! These rascals defraud me of my rights; they rob me; but, in the name of the God of Israel, I ask you to see justice done!”

The captain glanced inquiringly towards Ben Zoof, and the orderly, by a significant nod, made his master understand that he was to play the part that was implied by the title. He took the cue, and promptly ordered the Jew to hold his tongue at once. The man bowed his head in servile submission, and folded his hands upon his breast.

Servadac surveyed him leisurely. He was a man of about fifty, but from his appearance might well have been taken for at least ten years older. Small and skinny, with eyes bright and cunning, a hooked nose, a short yellow beard, unkempt hair, huge feet, and long bony hands, he presented all the typical characteristics of the German Jew, the heartless, wily usurer, the hardened miser and skinflint. As iron is attracted by the magnet, so was this Shylock attracted by the sight of gold, nor would he have hesitated to draw the life-blood of his creditors, if by such means he could secure his claims.

His name was Isaac Hakkabut, and he was a native of Cologne. Nearly the whole of his time, however, he informed Captain Servadac, had been spent upon the sea, his real business being that of a merchant trading at all the ports of the Mediterranean. A tartan, a small vessel of two hundred tons burden, conveyed his entire stock of merchandise, and, to say the truth, was a sort of floating emporium, conveying nearly every possible article of commerce, from a lucifer match to the radiant fabrics of Frankfort and Epinal. Without wife or children, and having no settled home, Isaac Hakkabut lived almost entirely on board the *Hansa*, as he had named his tartan; and engaging a mate, with a crew of three men, as being adequate to work so light a craft, he cruised along the coasts of Algeria, Tunis, Egypt, Turkey, and Greece, visiting, moreover, most of the harbors of the Levant. Careful to be always well supplied with the products in most general demand — coffee, sugar, rice, tobacco, cotton stuffs, and gunpowder — and being at all times ready to barter, and prepared to deal in secondhand wares, he had contrived to amass considerable wealth.

On the eventful night of the 1st of January the *Hansa* had been at Ceuta, the point on the coast of Morocco exactly opposite Gibraltar. The mate and three sailors had all gone on shore, and, in common with many of their fellow-creatures, had entirely disappeared; but the most projecting rock of Ceuta had been undisturbed by the general catastrophe, and half a score of Spaniards, who had happened to be upon it, had escaped with their lives. They were all Andalusian majos, agricultural laborers, and naturally as careless and apathetic as men of their class usually are, but they could not help being very considerably embarrassed when they discovered that they were left in solitude

upon a detached and isolated rock. They took what mutual counsel they could, but became only more and more perplexed. One of them was named Negrete, and he, as having traveled somewhat more than the rest, was tacitly recognized as a sort of leader; but although he was by far the most enlightened of them all, he was quite incapable of forming the least conception of the nature of what had occurred. The one thing upon which they could not fail to be conscious was that they had no prospect of obtaining provisions, and consequently their first business was to devise a scheme for getting away from their present abode. The *Hansa* was lying off shore. The Spaniards would not have had the slightest hesitation in summarily taking possession of her, but their utter ignorance of seamanship made them reluctantly come to the conclusion that the more prudent policy was to make terms with the owner.

And now came a singular part of the story. Negrete and his companions had meanwhile received a visit from two English officers from Gibraltar. What passed between them the Jew did not know; he only knew that, immediately after the conclusion of the interview, Negrete came to him and ordered him to set sail at once for the nearest point of Morocco. The Jew, afraid to disobey, but with his eye ever upon the main chance, stipulated that at the end of their voyage the Spaniards should pay for their passage — terms to which, as they would to any other, they did not demur, knowing that they had not the slightest intention of giving him a single real.

The *Hansa* had weighed anchor on the 3rd of February. The wind blew from the west, and consequently the working of the tartan was easy enough. The unpracticed sailors had only to hoist their sails and, though they were quite unconscious of the fact, the breeze carried them to the only spot upon the little world they occupied which could afford them a refuge.

Thus it fell out that one morning Ben Zoof, from his lookout on Gourbi Island, saw a ship, not the *Dobryna*, appear upon the horizon, and make quietly down towards what had formerly been the right bank of the Shelif.

Such was Ben Zoof’s version of what had occurred, as he had gathered it from the new-comers. He wound up his recital by remarking that the cargo of the *Hansa* would be of immense service to them; he expected, indeed, that Isaac Hakkabut would be difficult to manage, but considered there could be no harm in appropriating the goods for the common welfare, since there could be no opportunity now for selling them.

Ben Zoof added, “And as to the difficulties between the Jew and his passengers, I told him that the governor general was absent on a tour of inspection, and that he would see everything equitably settled.”

Smiling at his orderly’s tactics, Servadac turned to Hakkabut, and told him that he would take care that his claims should be duly investigated and all proper demands should be paid. The man appeared satisfied, and, for the time at least, desisted from his complaints and importunities.

When the Jew had retired, Count Timascheff asked, “But how in the world can you ever make those fellows pay anything?”

“They have lots of money,” said Ben Zoof.

“Not likely,” replied the count; “when did you ever know Spaniards like them to have lots of money?”

“But I have seen it myself,” said Ben Zoof; “and it is English money.”

“English money!” echoed Servadac; and his mind again reverted to the excursion made by the colonel and the major from Gibraltar, about which they had been so reticent. “We must inquire more about this,” he said.

Then, addressing Count Timascheff, he added, “Altogether, I think the countries of Europe are fairly represented by the population of Gallia.”

“True, captain,” answered the count; “we have only a fragment of a world, but it contains natives of France, Russia, Italy, Spain, and England. Even Germany may be said to have a representative in the person of this miserable Jew.”

“And even in him,” said Servadac, “perhaps we shall not find so indifferent a representative as we at present imagine.”

CHAPTER XIX. GALLIA'S GOVERNOR GENERAL

The Spaniards who had arrived on board the *Hansa* consisted of nine men and a lad of twelve years of age, named Pablo. They all received Captain Servadac, whom Ben Zoof introduced as the governor general, with due respect, and returned quickly to their separate tasks. The captain and his friends, followed at some distance by the eager Jew, soon left the glade and directed their steps towards the coast where the *Hansa* was moored.

As they went they discussed their situation. As far as they had ascertained, except Gourbi Island, the sole surviving fragments of the Old World were four small islands: the bit of Gibraltar occupied by the Englishmen; Ceuta, which had just been left by the Spaniards; Madalena, where they had picked up the little Italian girl; and the site of the tomb of Saint Louis on the coast of Tunis. Around these there was stretched out the full extent of the Gallian Sea, which apparently comprised about one-half of the Mediterranean, the whole being encompassed by a barrier like a framework of precipitous cliffs, of an origin and a substance alike unknown.

Of all these spots only two were known to be inhabited: Gibraltar, where the thirteen Englishmen were amply provisioned for some years to come, and their own Gourbi Island. Here there was a population of twenty-two, who would all have to subsist upon the natural products of the soil. It was indeed not to be forgotten that, perchance, upon some remote and undiscovered isle there might be the solitary writer of the mysterious papers which they had found, and if so, that would raise the census of their new asteroid to an aggregate of thirty-six.

Even upon the supposition that at some future date the whole population should be compelled to unite and find a residence upon Gourbi Island, there did not appear any reason to question but that eight hundred acres of rich soil, under good management, would yield them all an ample sustenance. The only critical matter was how long the cold season would last; every hope depended upon the land again becoming productive; at present, it seemed impossible to determine, even if Gallia's orbit were really elliptic, when she would reach her aphelion, and it was consequently necessary that the Gallians for the time being should reckon on nothing beyond their actual and present resources.

These resources were, first, the provisions of the *Dobryna*, consisting of preserved meat, sugar, wine, brandy, and other stores sufficient for about two months; secondly,

the valuable cargo of the *Hansa*, which, sooner or later, the owner, whether he would or not, must be compelled to surrender for the common benefit; and lastly, the produce of the island, animal and vegetable, which with proper economy might be made to last for a considerable period.

In the course of the conversation, Count Timascheff took an opportunity of saying that, as Captain Servadac had already been presented to the Spaniards as governor of the island, he thought it advisable that he should really assume that position.

“Every body of men,” he observed, “must have a head, and you, as a Frenchman, should, I think, take the command of this fragment of a French colony. My men, I can answer for it, are quite prepared to recognize you as their superior officer.”

“Most unhesitatingly,” replied Servadac, “I accept the post with all its responsibilities. We understand each other so well that I feel sure we shall try and work together for the common good; and even if it be our fate never again to behold our fellow creatures, I have no misgivings but that we shall be able to cope with whatever difficulties may be before us.”

As he spoke, he held out his hand. The count took it, at the same time making a slight bow. It was the first time since their meeting that the two men had shaken hands; on the other hand, not a single word about their former rivalry had ever escaped their lips; perhaps that was all forgotten now.

The silence of a few moments was broken by Servadac saying, “Do you not think we ought to explain our situation to the Spaniards?”

“No, no, your Excellency,” burst in Ben Zoof, emphatically; “the fellows are chicken-hearted enough already; only tell them what has happened, and in sheer despondency they will not do another stroke of work.”

“Besides,” said Lieutenant Procope, who took very much the same view as the orderly, “they are so miserably ignorant they would be sure to misunderstand you.”

“Understand or misunderstand,” replied Servadac, “I do not think it matters. They would not care. They are all fatalists. Only give them a guitar and their castanets, and they will soon forget all care and anxiety. For my own part, I must adhere to my belief that it will be advisable to tell them everything. Have you any opinion to offer, count?”

“My own opinion, captain, coincides entirely with yours. I have followed the plan of explaining all I could to my men on board the *Dobryna*, and no inconvenience has arisen.”

“Well, then, so let it be,” said the captain; adding, “It is not likely that these Spaniards are so ignorant as not to have noticed the change in the length of the days; neither can they be unaware of the physical changes that have transpired. They shall certainly be told that we are being carried away into unknown regions of space, and that this island is nearly all that remains of the Old World.”

“Ha! ha!” laughed Ben Zoof, aloud; “it will be fine sport to watch the old Jew’s face, when he is made to comprehend that he is flying away millions and millions of leagues from all his debtors.”

Isaac Hakkabut was about fifty yards behind, and was consequently unable to overhear the conversation. He went shambling along, half whimpering and not unfrequently invoking the God of Israel; but every now and then a cunning light gleamed from his eyes, and his lips became compressed with a grim significance.

None of the recent phenomena had escaped his notice, and more than once he had attempted to entice Ben Zoof into conversation upon the subject; but the orderly made no secret of his antipathy to him, and generally replied to his advances either by satire or by banter. He told him that he had everything to gain under the new system of nights and days, for, instead of living the Jew’s ordinary life of a century, he would reach to the age of two centuries; and he congratulated him upon the circumstance of things having become so light, because it would prevent him feeling the burden of his years. At another time he would declare that, to an old usurer like him, it could not matter in the least what had become of the moon, as he could not possibly have advanced any money upon her. And when Isaac, undaunted by his jeers, persevered in besetting him with questions, he tried to silence him by saying, “Only wait till the governor general comes; he is a shrewd fellow, and will tell you all about it.”

“But will he protect my property?” poor Isaac would ask tremulously.

“To be sure he will! He would confiscate it all rather than that you should be robbed of it.”

With this Job's comfort the Jew had been obliged to content himself as best he could, and to await the promised arrival of the governor.

When Servadac and his companions reached the shore, they found that the *Hansa* had anchored in an exposed bay, protected but barely by a few projecting rocks, and in such a position that a gale rising from the west would inevitably drive her on to the land, where she must be dashed in pieces. It would be the height of folly to leave her in her present moorings; without loss of time she must be brought round to the mouth of the Shelif, in immediate proximity to the Russian yacht.

The consciousness that his tartan was the subject of discussion made the Jew give way to such vehement ejaculations of anxiety, that Servadac turned round and peremptorily ordered him to desist from his clamor. Leaving the old man under the surveillance of the count and Ben Zoof, the captain and the lieutenant stepped into a small boat and were soon alongside the floating emporium.

A very short inspection sufficed to make them aware that both the tartan and her cargo were in a perfect state of preservation. In the hold were sugar-loaves by hundreds, chests of tea, bags of coffee, hogsheads of tobacco, pipes of wine, casks of brandy, barrels of dried herrings, bales of cotton, clothing of every kind, shoes of all sizes, caps of various shape, tools, household utensils, china and earthenware, reams of paper, bottles of ink, boxes of lucifer matches, blocks of salt, bags of pepper and spices, a stock of huge Dutch cheeses, and a collection of almanacs and miscellaneous literature. At a rough guess the value could not be much under pounds 5,000 sterling. A new cargo had been taken in only a few days before the catastrophe, and it had been Isaac Hakkabut's intention to cruise from Ceuta to Tripoli, calling wherever he had reason to believe there was likely to be a market for any of his commodities.

"A fine haul, lieutenant," said the captain.

"Yes, indeed," said the lieutenant; "but what if the owner refuses to part with it?"

"No fear; no fear," replied the captain. "As soon as ever the old rascal finds that there are no more Arabs or Algerians for him to fleece, he will be ready enough to transact a little business with us. We will pay him by bills of acceptance on some of his old friends in the Old World."

“But why should he want any payment?” inquired the lieutenant. “Under the circumstances, he must know that you have a right to make a requisition of his goods.”

“No, no,” quickly rejoined Servadac; “we will not do that. Just because the fellow is a German we shall not be justified in treating him in German fashion. We will transact our business in a business way. Only let him once realize that he is on a new globe, with no prospect of getting back to the old one, and he will be ready enough to come to terms with us.”

“Perhaps you are right,” replied the lieutenant; “I hope you are. But anyhow, it will not do to leave the tartan here; not only would she be in danger in the event of a storm, but it is very questionable whether she could resist the pressure of the ice, if the water were to freeze.”

“Quite true, Procope; and accordingly I give you the commission to see that your crew bring her round to the Shelif as soon as may be.”

“To-morrow morning it shall be done,” answered the lieutenant, promptly.

Upon returning to the shore, it was arranged that the whole of the little colony should forthwith assemble at the gourbi. The Spaniards were summoned and Isaac, although he could only with reluctance take his wistful gaze from his tartan, obeyed the governor’s orders to follow.

An hour later and the entire population of twenty-two had met in the chamber adjoining the gourbi. Young Pablo made his first acquaintance with little Nina, and the child seemed highly delighted to find a companion so nearly of her own age. Leaving the children to entertain each other, Captain Servadac began his address.

Before entering upon further explanation, he said that he counted upon the cordial co-operation of them all for the common welfare.

Negrete interrupted him by declaring that no promises or pledges could be given until he and his countrymen knew how soon they could be sent back to Spain.

“To Spain, do you say?” asked Servadac.

“To Spain!” echoed Isaac Hakkabut, with a hideous yell. “Do they expect to go back to Spain till they have paid their debts? Your Excellency, they owe me twenty reals apiece

for their passage here; they owe me two hundred reals. Are they to be allowed...?”

“Silence, Mordecai, you fool!” shouted Ben Zoof, who was accustomed to call the Jew by any Hebrew name that came uppermost to his memory. “Silence!”

Servadac was disposed to appease the old man’s anxiety by promising to see that justice was ultimately done; but, in a fever of frantic excitement, he went on to implore that he might have the loan of a few sailors to carry his ship to Algiers.

“I will pay you honestly; I will pay you *well*,” he cried; but his ingrained propensity for making a good bargain prompted him to add, “provided you do not overcharge me.”

Ben Zoof was about again to interpose some angry exclamation; but Servadac checked him, and continued in Spanish: “Listen to me, my friends. Something very strange has happened. A most wonderful event has cut us off from Spain, from France, from Italy, from every country of Europe. In fact, we have left the Old World entirely. Of the whole earth, nothing remains except this island on which you are now taking refuge. The old globe is far, far away. Our present abode is but an insignificant fragment that is left. I dare not tell you that there is any chance of your ever again seeing your country or your homes.”

He paused. The Spaniards evidently had no conception of his meaning.

Negrete begged him to tell them all again. He repeated all that he had said, and by introducing some illustrations from familiar things, he succeeded to a certain extent in conveying some faint idea of the convulsion that had happened. The event was precisely what he had foretold. The communication was received by all alike with the most supreme indifference.

Hakkabut did not say a word. He had listened with manifest attention, his lips twitching now and then as if suppressing a smile. Servadac turned to him, and asked whether he was still disposed to put out to sea and make for Algiers.

The Jew gave a broad grin, which, however, he was careful to conceal from the Spaniards. “Your Excellency jests,” he said in French; and turning to Count Timascheff, he added in Russian: “The governor has made up a wonderful tale.”

The count turned his back in disgust, while the Jew sidled up to little Nina and muttered in Italian. “A lot of lies, pretty one; a lot of lies!”

“Confound the knave!” exclaimed Ben Zoof; “he gabbles every tongue under the sun!”

“Yes,” said Servadac; “but whether he speaks French, Russian, Spanish, German, or Italian, he is neither more nor less than a Jew.”

CHAPTER XX. A LIGHT ON THE HORIZON

On the following day, without giving himself any further concern about the Jew's incredulity, the captain gave orders for the *Hansa* to be shifted round to the harbor of the Shelif. Hakkabut raised no objection, not only because he was aware that the move insured the immediate safety of his tartan, but because he was secretly entertaining the hope that he might entice away two or three of the *Dobryna's* crew and make his escape to Algiers or some other port.

Operations now commenced for preparing proper winter quarters. Spaniards and Russians alike joined heartily in the work, the diminution of atmospheric pressure and of the force of attraction contributing such an increase to their muscular force as materially facilitated all their labors.

The first business was to accommodate the building adjacent to the gourbi to the wants of the little colony. Here for the present the Spaniards were lodged, the Russians retaining their berths upon the yacht, while the Jew was permitted to pass his nights upon the *Hansa*. This arrangement, however, could be only temporary. The time could not be far distant when ships' sides and ordinary walls would fail to give an adequate protection from the severity of the cold that must be expected; the stock of fuel was too limited to keep up a permanent supply of heat in their present quarters, and consequently they must be driven to seek some other refuge, the internal temperature of which would at least be bearable.

The plan that seemed to commend itself most to their consideration was, that they should dig out for themselves some subterraneous pits similar to "silos," such as are used as receptacles for grain. They presumed that when the surface of Gallia should be covered by a thick layer of ice, which is a bad conductor of heat, a sufficient amount of warmth for animal vitality might still be retained in excavations of this kind. After a long consultation they failed to devise any better expedient, and were forced to resign themselves to this species of troglodyte existence.

In one respect they congratulated themselves that they should be better off than many of the whalers in the polar seas, for as it is impossible to get below the surface of a frozen ocean, these adventurers have to seek refuge in huts of wood and snow erected on their ships, which at best can give but slight protection from extreme cold; but here, with a

solid subsoil, the Gallians might hope to dig down a hundred feet or so and secure for themselves a shelter that would enable them to brave the hardest severity of climate.

The order, then, was at once given. The work was commenced. A stock of shovels, mattocks, and pick-axes was brought from the gourbi, and with Ben Zoof as overseer, both Spanish majos and Russian sailors set to work with a will.

It was not long, however, before a discovery, more unexpected than agreeable, suddenly arrested their labors. The spot chosen for the excavation was a little to the right of the gourbi, on a slight elevation of the soil. For the first day everything went on prosperously enough; but at a depth of eight feet below the surface, the navvies came in contact with a hard surface, upon which all their tools failed to make the slightest impression. Servadac and the count were at once apprised of the fact, and had little difficulty in recognizing the substance that had revealed itself as the very same which composed the shores as well as the subsoil of the Gallian sea. It evidently formed the universal substructure of the new asteroid. Means for hollowing it failed them utterly. Harder and more resisting than granite, it could not be blasted by ordinary powder; dynamite alone could suffice to rend it.

The disappointment was very great. Unless some means of protection were speedily devised, death seemed to be staring them in the face. Were the figures in the mysterious documents correct? If so, Gallia must now be a hundred millions of leagues from the sun, nearly three times the distance of the earth at the remotest section of her orbit. The intensity of the solar light and heat, too, was very seriously diminishing, although Gourbi Island (being on the equator of an orb which had its axes always perpendicular to the plane in which it revolved) enjoyed a position that gave it a permanent summer. But no advantage of this kind could compensate for the remoteness of the sun. The temperature fell steadily; already, to the discomfiture of the little Italian girl, nurtured in sunshine, ice was beginning to form in the crevices of the rocks, and manifestly the time was impending when the sea itself would freeze.

Some shelter must be found before the temperature should fall to 60 degrees below zero. Otherwise death was inevitable. Hitherto, for the last few days, the thermometer had been registering an average of about 6 degrees below zero, and it had become matter of experience that the stove, although replenished with all the wood that was available, was altogether inadequate to effect any sensible mitigation of the severity of the cold. Nor could any amount of fuel be enough. It was certain that ere long the very

mercury and spirit in the thermometers would be congealed. Some other resort must assuredly be soon found, or they must perish. That was clear.

The idea of betaking themselves to the *Dobryna* and *Hansa* could not for a moment be seriously entertained; not only did the structure of the vessels make them utterly insufficient to give substantial shelter, but they were totally unfitted to be trusted as to their stability when exposed to the enormous pressure of the accumulated ice.

Neither Servadac, nor the count, nor Lieutenant Procope were men to be easily disheartened, but it could not be concealed that they felt themselves in circumstances by which they were equally harassed and perplexed. The sole expedient that their united counsel could suggest was to obtain a refuge below ground, and *that* was denied them by the strange and impenetrable substratum of the soil; yet hour by hour the sun's disc was lessening in its dimensions, and although at midday some faint radiance and glow were to be distinguished, during the night the painfulness of the cold was becoming almost intolerable.

Mounted upon Zephyr and Galette, the captain and the count scoured the island in search of some available retreat. Scarcely a yard of ground was left unexplored, the horses clearing every obstacle as if they were, like Pegasus, furnished with wings. But all in vain. Soundings were made again and again, but invariably with the same result; the rock, hard as adamant, never failed to reveal itself within a few feet of the surface of the ground.

The excavation of any silo being thus manifestly hopeless, there seemed nothing to be done except to try and render the buildings alongside the gourbi impervious to frost. To contribute to the supply of fuel, orders were given to collect every scrap of wood, dry or green, that the island produced; and this involved the necessity of felling the numerous trees that were scattered over the plain. But toil as they might at the accumulation of firewood, Captain Servadac and his companions could not resist the conviction that the consumption of a very short period would exhaust the total stock. And what would happen then?

Studious if possible to conceal his real misgivings, and anxious that the rest of the party should be affected as little as might be by his own uneasiness, Servadac would wander alone about the island, racking his brain for an idea that would point the way out of the serious difficulty. But still all in vain.

One day he suddenly came upon Ben Zoof, and asked him whether he had no plan to propose. The orderly shook his head, but after a few moments' pondering, said: "Ah! master, if only we were at Montmartre, we would get shelter in the charming stone-quarries."

"Idiot!" replied the captain, angrily, "if we were at Montmartre, you don't suppose that we should need to live in stone-quarries?"

But the means of preservation which human ingenuity had failed to secure were at hand from the felicitous provision of Nature herself. It was on the 10th of March that the captain and Lieutenant Procope started off once more to investigate the northwest corner of the island; on their way their conversation naturally was engrossed by the subject of the dire necessities which only too manifestly were awaiting them. A discussion more than usually animated arose between them, for the two men were not altogether of the same mind as to the measures that ought to be adopted in order to open the fairest chance of avoiding a fatal climax to their exposure; the captain persisted that an entirely new abode must be sought, while the lieutenant was equally bent upon devising a method of some sort by which their present quarters might be rendered sufficiently warm. All at once, in the very heat of his argument, Procope paused; he passed his hand across his eyes, as if to dispel a mist, and stood, with a fixed gaze centered on a point towards the south. "What is that?" he said, with a kind of hesitation. "No, I am not mistaken," he added; "it is a light on the horizon."

"A light!" exclaimed Servadac; "show me where."

"Look there!" answered the lieutenant, and he kept pointing steadily in its direction, until Servadac also distinctly saw the bright speck in the distance.

It increased in clearness in the gathering shades of evening. "Can it be a ship?" asked the captain.

"If so, it must be in flames; otherwise we should not be able to see it so far off," replied Procope.

"It does not move," said Servadac; "and unless I am greatly deceived, I can hear a kind of reverberation in the air."

For some seconds the two men stood straining eyes and ears in rapt attention. Suddenly an idea struck Servadac's mind. "The volcano!" he cried; "may it not be the volcano that we saw, whilst we were on board the *Dobryna?*"

The lieutenant agreed that it was very probable.

"Heaven be praised!" ejaculated the captain, and he went on in the tones of a keen excitement: "Nature has provided us with our winter quarters; the stream of burning lava that is flowing there is the gift of a bounteous Providence; it will provide us all the warmth we need. No time to lose! To-morrow, my dear Procope, to-morrow we will explore it all; no doubt the life, the heat we want is reserved for us in the heart and bowels of our own Gallia!"

Whilst the captain was indulging in his expressions of enthusiasm, Procope was endeavoring to collect his thoughts. Distinctly he remembered the long promontory which had barred the *Dobryna's* progress while coasting the southern confines of the sea, and which had obliged her to ascend northwards as far as the former latitude of Oran; he remembered also that at the extremity of the promontory there was a rocky headland crowned with smoke; and now he was convinced that he was right in identifying the position, and in believing that the smoke had given place to an eruption of flame.

When Servadac gave him a chance of speaking, he said, "The more I consider it, captain, the more I am satisfied that your conjecture is correct. Beyond a doubt, what we see is the volcano, and to-morrow we will not fail to visit it."

On returning to the gourbi, they communicated their discovery to Count Timascheff only, deeming any further publication of it to be premature. The count at once placed his yacht at their disposal, and expressed his intention of accompanying them.

"The yacht, I think," said Procope, "had better remain where she is; the weather is beautifully calm, and the steam-launch will answer our purpose better; at any rate, it will convey us much closer to shore than the schooner."

The count replied that the lieutenant was by all means to use his own discretion, and they all retired for the night.

Like many other modern pleasure-yachts, the *Dobryna*, in addition to her four-oar, was fitted with a fast-going little steam-launch, its screw being propelled, on the Oriolle system, by means of a boiler, small but very effective. Early next morning, this handy little craft was sufficiently freighted with coal (of which there was still about ten tons on board the *Dobryna*), and manned by nobody except the captain, the count, and the lieutenant, left the harbor of the Shelif, much to the bewilderment of Ben Zoof, who had not yet been admitted into the secret. The orderly, however, consoled himself with the reflection that he had been temporarily invested with the full powers of governor general, an office of which he was not a little proud.

The eighteen miles between the island and the headland were made in something less than three hours. The volcanic eruption was manifestly very considerable, the entire summit of the promontory being enveloped in flames. To produce so large a combustion either the oxygen of Gallia’s atmosphere had been brought into contact with the explosive gases contained beneath her soil, or perhaps, still more probable, the volcano, like those in the moon, was fed by an internal supply of oxygen of her own.

It took more than half an hour to settle on a suitable landing-place. At length, a small semi-circular creek was discovered among the rocks, which appeared advantageous, because, if circumstances should so require, it would form a safe anchorage for both the *Dobryna* and the *Hansa*.

The launch securely moored, the passengers landed on the side of the promontory opposite to that on which a torrent of burning lava was descending to the sea. With much satisfaction they experienced, as they approached the mountain, a sensible difference in the temperature, and their spirits could not do otherwise than rise at the prospect of having their hopes confirmed, that a deliverance from the threatened calamity had so opportunely been found. On they went, up the steep acclivity, scrambling over its rugged projections, scaling the irregularities of its gigantic strata, bounding from point to point with the agility of chamois, but never alighting on anything except on the accumulation of the same hexagonal prisms with which they had now become so familiar.

Their exertions were happily rewarded. Behind a huge pyramidal rock they found a hole in the mountain-side, like the mouth of a great tunnel. Climbing up to this orifice, which was more than sixty feet above the level of the sea, they ascertained that it opened into a long dark gallery. They entered and groped their way cautiously along the sides. A

continuous rumbling, that increased as they advanced, made them aware that they must be approaching the central funnel of the volcano; their only fear was lest some insuperable wall of rock should suddenly bar their further progress.

Servadac was some distance ahead.

“Come on!” he cried cheerily, his voice ringing through the darkness, “come on! Our fire is lighted! no stint of fuel! Nature provides that! Let us make haste and warm ourselves!”

Inspired by his confidence, the count and the lieutenant advanced bravely along the unseen and winding path. The temperature was now at least fifteen degrees above zero, and the walls of the gallery were beginning to feel quite warm to the touch, an indication, not to be overlooked, that the substance of which the rock was composed was metallic in its nature, and capable of conducting heat.

“Follow me!” shouted Servadac again; “we shall soon find a regular stove!”

Onwards they made their way, until at last a sharp turn brought them into a sudden flood of light. The tunnel had opened into a vast cavern, and the gloom was exchanged for an illumination that was perfectly dazzling. Although the temperature was high, it was not in any way intolerable.

One glance was sufficient to satisfy the explorers that the grateful light and heat of this huge excavation were to be attributed to a torrent of lava that was rolling downwards to the sea, completely subtending the aperture of the cave. Not inaptly might the scene be compared to the celebrated Grotto of the Winds at the rear of the central fall of Niagara, only with the exception that here, instead of a curtain of rushing water, it was a curtain of roaring flame that hung before the cavern’s mouth.

“Heaven be praised!” cried Servadac, with glad emotion; “here is all that we hoped for, and more besides!”

CHAPTER XXI. WINTER QUARTERS

The habitation that had now revealed itself, well lighted and thoroughly warm, was indeed marvelous. Not only would it afford ample accommodation for Hector Servadac and “his subjects,” as Ben Zoof delighted to call them, but it would provide shelter for the two horses, and for a considerable number of domestic animals.

This enormous cavern was neither more or less than the common junction of nearly twenty tunnels (similar to that which had been traversed by the explorers), forming ramifications in the solid rock, and the pores, as it were, by which the internal heat exuded from the heart of the mountain. Here, as long as the volcano retained its activity, every living creature on the new asteroid might brave the most rigorous of climates; and as Count Timascheff justly remarked, since it was the only burning mountain they had sighted, it was most probably the sole outlet for Gallia’s subterranean fires, and consequently the eruption might continue unchanged for ages to come.

But not a day, not an hour, was to be lost now. The steam-launch returned to Gourbi Island, and preparations were forthwith taken in hand for conveying man and beast, corn and fodder, across to the volcanic headland. Loud and hearty were the acclamations of the little colony, especially of the Spaniards, and great was the relief of Nina, when Servadac announced to them the discovery of their future domicile; and with requickened energies they labored hard at packing, anxious to reach their genial winter quarters without delay.

For three successive days the *Dobryna*, laden to her very gunwale, made a transit to and fro. Ben Zoof was left upon the island to superintend the stowage of the freight, whilst Servadac found abundant occupation in overlooking its disposal within the recesses of the mountain. First of all, the large store of corn and fodder, the produce of the recent harvest, was landed and deposited in one of the vaults; then, on the 15th, about fifty head of live cattle — bullocks, cows, sheep, and pigs — were conveyed to their rocky stalls. These were saved for the sake of preserving the several breeds, the bulk of the island cattle being slaughtered, as the extreme severity of the climate insured all meat remaining fresh for almost an indefinite period. The winter which they were expecting would probably be of unprecedented length; it was quite likely that it would exceed the six months’ duration by which many arctic explorers have been tried; but the population of Gallia had no anxiety in the matter of provisions — their stock was far

more than adequate; while as for drink, as long as they were satisfied with pure water, a frozen sea would afford them an inexhaustible reservoir.

The need for haste in forwarding their preparations became more and more manifest; the sea threatened to be un-navigable very soon, as ice was already forming which the noonday sun was unable to melt. And if haste were necessary, so also were care, ingenuity, and forethought. It was indispensable that the space at their command should be properly utilized, and yet that the several portions of the store should all be readily accessible.

On further investigation an unexpected number of galleries was discovered, so that, in fact, the interior of the mountain was like a vast bee-hive perforated with innumerable cells; and in compliment to the little Italian it was unanimously voted by the colony that their new home should be called “Nina’s Hive.”

The first care of Captain Servadac was to ascertain how he could make the best possible use of the heat which nature had provided for them so opportunely and with so lavish a hand. By opening fresh vents in the solid rock (which by the action of the heat was here capable of fissure) the stream of burning lava was diverted into several new channels, where it could be available for daily use; and thus Mochel, the *Dobryna’s* cook, was furnished with an admirable kitchen, provided with a permanent stove, where he was duly installed with all his culinary apparatus.

“What a saving of expense it would be,” exclaimed Ben Zoof, “if every household could be furnished with its own private volcano!”

The large cavern at the general junction of the galleries was fitted up as a drawing-room, and arranged with all the best furniture both of the gourbi and of the cabin of the *Dobryna*. Hither was also brought the schooner’s library, containing a good variety of French and Russian books; lamps were suspended over the different tables; and the walls of the apartment were tapestried with the sails and adorned with the flags belonging to the yacht. The curtain of fire extending over the opening of the cavern provided it, as already stated, with light and heat.

The torrent of lava fell into a small rock-bound basin that had no apparent communication with the sea, and was evidently the aperture of a deep abyss, of which

the waters, heated by the descent of the eruptive matter, would no doubt retain their liquid condition long after the Gallian Sea had become a sheet of ice.

A small excavation to the left of the common hall was allotted for the special use of Servadac and the count; another on the right was appropriated to the lieutenant and Ben Zoof; whilst a third recess, immediately at the back, made a convenient little chamber for Nina. The Spaniards and the Russian sailors took up their sleeping-quarters in the adjacent galleries, and found the temperature quite comfortable.

Such were the internal arrangements of Nina's Hive, the refuge where the little colony were full of hope that they would be able to brave the rigors of the stern winter-time that lay before them — a winter-time during which Gallia might possibly be projected even to the orbit of Jupiter, where the temperature would not exceed one twenty-fifth of the normal winter temperature of the earth.

The only discontented spirit was Isaac Hakkabut. Throughout all the preparations which roused even the Spaniards to activity, the Jew, still incredulous and deaf to every representation of the true state of things, insisted upon remaining in the creek at Gourbi Island; nothing could induce him to leave his tartan, where, like a miser, he would keep guard over his precious cargo, ever grumbling and growling, but with his weather-eye open in the hope of catching sight of some passing sail. It must be owned that the whole party were far from sorry to be relieved of his presence; his uncomely figure and repulsive countenance was a perpetual bugbear. He had given out in plain terms that he did not intend to part with any of his property, except for current money, and Servadac, equally resolute, had strictly forbidden any purchases to be made, hoping to wear out the rascal's obstinacy.

Hakkabut persistently refused to credit the real situation; he could not absolutely deny that some portions of the terrestrial globe had undergone a certain degree of modification, but nothing could bring him to believe that he was not, sooner or later, to résumé his old line of business in the Mediterranean. With his wonted distrust of all with whom he came in contact, he regarded every argument that was urged upon him only as evidence of a plot that had been devised to deprive him of his goods. Repudiating, as he did utterly, the hypothesis that a fragment had become detached from the earth, he scanned the horizon for hours together with an old telescope, the case of which had been patched up till it looked like a rusty stove-pipe, hoping to descry the passing trader with which he might effect some bartering upon advantageous terms.

At first he professed to regard the proposed removal into winter-quarters as an attempt to impose upon his credulity; but the frequent voyages made by the *Dobryna* to the south, and the repeated consignments of corn and cattle, soon served to make him aware that Captain Servadac and his companions were really contemplating a departure from Gourbi Island.

The movement set him thinking. What, he began to ask himself — what if all that was told him was true? What if this sea was no longer the Mediterranean? What if he should never again behold his German fatherland? What if his marts for business were gone for ever? A vague idea of ruin began to take possession of his mind: he must yield to necessity; he must do the best he could. As the result of his cogitations, he occasionally left his tartan and made a visit to the shore. At length he endeavored to mingle with the busy group, who were hurrying on their preparations; but his advances were only met by jeers and scorn, and, ridiculed by all the rest, he was fain to turn his attention to Ben Zoof, to whom he offered a few pinches of tobacco.

“No, old Zebulon,” said Ben Zoof, steadily refusing the gift, “it is against orders to take anything from you. Keep your cargo to yourself; eat and drink it all if you can; we are not to touch it.”

Finding the subordinates incorruptible, Isaac determined to go to the fountain-head. He addressed himself to Servadac, and begged him to tell him the whole truth, piteously adding that surely it was unworthy of a French officer to deceive a poor old man like himself.

“Tell you the truth, man!” cried Servadac. “Confound it, I have told you the truth twenty times. Once for all, I tell you now, you have left yourself barely time enough to make your escape to yonder mountain.”

“God and Mahomet have mercy on me!” muttered the Jew, whose creed frequently assumed a very ambiguous character.

“I will tell you what,” continued the captain — ”you shall have a few men to work the *Hansa* across, if you like.”

“But I want to go to Algiers,” whimpered Hakkabut.

“How often am I to tell you that Algiers is no longer in existence? Only say yes or no — are you coming with us into winter-quarters?”

“God of Israel! what is to become of all my property?”

“But, mind you,” continued the captain, not heeding the interruption, “if you do not choose voluntarily to come with us, I shall have the *Hansa*, by my orders, removed to a place of safety. I am not going to let your cursed obstinacy incur the risk of losing your cargo altogether.”

“Merciful Heaven! I shall be ruined!” moaned Isaac, in despair.

“You are going the right way to ruin yourself, and it would serve you right to leave you to your own devices. But be off! I have no more to say.”

And, turning contemptuously on his heel, Servadac left the old man vociferating bitterly, and with uplifted hands protesting vehemently against the rapacity of the Gentiles.

By the 20th all preliminary arrangements were complete, and everything ready for a final departure from the island. The thermometer stood on an average at 8 degrees below zero, and the water in the cistern was completely frozen. It was determined, therefore, for the colony to embark on the following day, and take up their residence in Nina’s Hive.

A final consultation was held about the *Hansa*. Lieutenant Procope pronounced his decided conviction that it would be impossible for the tartan to resist the pressure of the ice in the harbor of the Shelif, and that there would be far more safety in the proximity of the volcano. It was agreed on all hands that the vessel must be shifted; and accordingly orders were given, four Russian sailors were sent on board, and only a few minutes elapsed after the *Dobryna* had weighed anchor, before the great lateen sail of the tartan was unfurled, and the “shop-ship,” as Ben Zoof delighted to call it, was also on her way to the southward.

Long and loud were the lamentations of the Jew. He kept exclaiming that he had given no orders, that he was being moved against his will, that he had asked for no assistance, and needed none; but it required no very keen discrimination to observe that all along there was a lurking gleam of satisfaction in his little gray eyes, and when, a few hours

later, he found himself securely anchored, and his property in a place of safety, he quite chuckled with glee.

“God of Israel!” he said in an undertone, “they have made no charge; the idiots have piloted me here for nothing.”

For nothing! His whole nature exulted in the consciousness that he was enjoying a service that had been rendered gratuitously.

Destitute of human inhabitants, Gourbi Island was now left to the tenancy of such birds and beasts as had escaped the recent promiscuous slaughter. Birds, indeed, that had migrated in search of warmer shores, had returned, proving that this fragment of the French colony was the only shred of land that could yield them any sustenance; but their life must necessarily be short. It was utterly impossible that they could survive the cold that would soon ensue.

The colony took possession of their new abode with but few formalities. Everyone, however, approved of all the internal arrangements of Nina’s Hive, and were profuse in their expressions of satisfaction at finding themselves located in such comfortable quarters. The only malcontent was Hakkabut; he had no share in the general enthusiasm, refused even to enter or inspect any of the galleries, and insisted on remaining on board his tartan.

“He is afraid,” said Ben Zoof, “that he will have to pay for his lodgings. But wait a bit; we shall see how he stands the cold out there; the frost, no doubt, will drive the old fox out of his hole.”

Towards evening the pots were set boiling, and a bountiful supper, to which all were invited, was spread in the central hall. The stores of the *Dobryna* contained some excellent wine, some of which was broached to do honor to the occasion. The health of the governor general was drunk, as well as the toast “Success to his council,” to which Ben Zoof was called upon to return thanks. The entertainment passed off merrily. The Spaniards were in the best of spirits; one of them played the guitar, another the castanets, and the rest joined in a ringing chorus. Ben Zoof contributed the famous Zouave refrain, well known throughout the French army, but rarely performed in finer style than by this *virtuoso:*

“ Misti goth dar dar tire lyre!

Flic! floc! flac! lirette, lira!

Far la rira,

Tour tala rire,

Tour la Ribaud,

Ricandeau,

Sans repos, repit, repit, repos, ris pot, ripette!

Si vous attrapez mon refrain,

Fameux vous etes.”

The concert was succeeded by a ball, unquestionably the first that had ever taken place in Gallia. The Russian sailors exhibited some of their national dances, which gained considerable applause, even although they followed upon the marvelous fandangos of the Spaniards. Ben Zoof, in his turn, danced a *pas seul* (often performed in the Elysee Montmartre) with an elegance and vigor that earned many compliments from Negrete.

It was nine o’clock before the festivities came to an end, and by that time the company, heated by the high temperature of the hall, and by their own exertions, felt the want of a little fresh air. Accordingly the greater portion of the party, escorted by Ben Zoof, made their way into one of the adjacent galleries that led to the shore. Servadac, with the count and lieutenant, did not follow immediately; but shortly afterwards they proceeded to join them, when on their way they were startled by loud cries from those in advance.

Their first impression was that they were cries of distress, and they were greatly relieved to find that they were shouts of delight, which the dryness and purity of the atmosphere caused to re-echo like a volley of musketry.

Reaching the mouth of the gallery, they found the entire group pointing with eager interest to the sky.

“Well, Ben Zoof,” asked the captain, “what’s the matter now?”

“Oh, your Excellency,” ejaculated the orderly, “look there! look there! The moon! the moon’s come back!”

And, sure enough, what was apparently the moon was rising above the mists of evening.

CHAPTER XXII. A FROZEN OCEAN

The moon! She had disappeared for weeks; was she now returning? Had she been faithless to the earth? and had she now approached to be a satellite of the new-born world?

“Impossible!” said Lieutenant Procope; “the earth is millions and millions of leagues away, and it is not probable that the moon has ceased to revolve about her.”

“Why not?” remonstrated Servadac. “It would not be more strange than the other phenomena which we have lately witnessed. Why should not the moon have fallen within the limits of Gallia’s attraction, and become her satellite?”

“Upon that supposition,” put in the count, “I should think that it would be altogether unlikely that three months would elapse without our seeing her.”

“Quite incredible!” continued Procope. “And there is another thing which totally disproves the captain’s hypothesis; the magnitude of Gallia is far too insignificant for her power of attraction to carry off the moon.”

“But,” persisted Servadac, “why should not the same convulsion that tore us away from the earth have torn away the moon as well? After wandering about as she would for a while in the solar regions, I do not see why she should not have attached herself to us.”

The lieutenant repeated his conviction that it was not likely.

“But why not?” again asked Servadac impetuously.

“Because, I tell you, the mass of Gallia is so inferior to that of the moon, that Gallia would become the moon’s satellite; the moon could not possibly become hers.”

“Assuming, however,” continued Servadac, “such to be the case — ”

“I am afraid,” said the lieutenant, interrupting him, “that I cannot assume anything of the sort even for a moment.”

Servadac smiled good-humoredly.

“I confess you seem to have the best of the argument, and if Gallia had become a satellite of the moon, it would not have taken three months to catch sight of her. I suppose you are right.”

While this discussion had been going on, the satellite, or whatever it might be, had been rising steadily above the horizon, and had reached a position favorable for observation. Telescopes were brought, and it was very soon ascertained, beyond a question, that the new luminary was not the well-known Phoebe of terrestrial nights; it had no feature in common with the moon. Although it was apparently much nearer to Gallia than the moon to the earth, its superficies was hardly one-tenth as large, and so feebly did it reflect the light of the remote sun, that it scarcely emitted radiance enough to extinguish the dim luster of stars of the eighth magnitude. Like the sun, it had risen in the west, and was now at its full. To mistake its identity with the moon was absolutely impossible; not even Servadac could discover a trace of the seas, chasms, craters, and mountains which have been so minutely delineated in lunar charts, and it could not be denied that any transient hope that had been excited as to their once again being about to enjoy the peaceful smiles of “the queen of night” must all be resigned.

Count Timascheff finally suggested, though somewhat doubtfully, the question of the probability that Gallia, in her course across the zone of the minor planets, had carried off one of them; but whether it was one of the 169 asteroids already included in the astronomical catalogues, or one previously unknown, he did not presume to determine. The idea to a certain extent was plausible, inasmuch as it has been ascertained that several of the telescopic planets are of such small dimensions that a good walker might make a circuit of them in four and twenty hours; consequently Gallia, being of superior volume, might be supposed capable of exercising a power of attraction upon any of these miniature microcosms.

The first night in Nina’s Hive passed without special incident; and next morning a regular scheme of life was definitely laid down. “My lord governor,” as Ben Zoof until he was peremptorily forbidden delighted to call Servadac, had a wholesome dread of idleness and its consequences, and insisted upon each member of the party undertaking some special duty to fulfill. There was plenty to do. The domestic animals required a great deal of attention; a supply of food had to be secured and preserved; fishing had to be carried on while the condition of the sea would allow it; and in several places the galleries had to be further excavated to render them more available for use. Occupation,

then, need never be wanting, and the daily round of labor could go on in orderly routine.

A perfect concord ruled the little colony. The Russians and Spaniards amalgamated well, and both did their best to pick up various scraps of French, which was considered the official language of the place. Servadac himself undertook the tuition of Pablo and Nina, Ben Zoof being their companion in play-hours, when he entertained them with enchanting stories in the best Parisian French, about “a lovely city at the foot of a mountain,” where he always promised one day to take them.

The end of March came, but the cold was not intense to such a degree as to confine any of the party to the interior of their resort; several excursions were made along the shore, and for a radius of three or four miles the adjacent district was carefully explored. Investigation, however, always ended in the same result; turn their course in whatever direction they would, they found that the country retained everywhere its desert character, rocky, barren, and without a trace of vegetation. Here and there a slight layer of snow, or a thin coating of ice arising from atmospheric condensation indicated the existence of superficial moisture, but it would require a period indefinitely long, exceeding human reckoning, before that moisture could collect into a stream and roll downwards over the stony strata to the sea. It seemed at present out of their power to determine whether the land upon which they were so happily settled was an island or a continent, and till the cold was abated they feared to undertake any lengthened expedition to ascertain the actual extent of the strange concrete of metallic crystallization.

By ascending one day to the summit of the volcano, Captain Servadac and the count succeeded in getting a general idea of the aspect of the country. The mountain itself was an enormous block rising symmetrically to a height of nearly 3,000 feet above the level of the sea, in the form of a truncated cone, of which the topmost section was crowned by a wreath of smoke issuing continuously from the mouth of a narrow crater.

Under the old condition of terrestrial things, the ascent of this steep acclivity would have been attended with much fatigue, but as the effect of the altered condition of the law of gravity, the travelers performed perpetual prodigies in the way of agility, and in little over an hour reached the edge of the crater, without more sense of exertion than if they had traversed a couple of miles on level ground. Gallia had its drawbacks, but it had some compensating advantages.

Telescopes in hand, the explorers from the summit scanned the surrounding view. Their anticipations had already realized what they saw. Just as they expected, on the north, east, and west lay the Gallian Sea, smooth and motionless as a sheet of glass, the cold having, as it were, congealed the atmosphere so that there was not a breath of wind. Towards the south there seemed no limit to the land, and the volcano formed the apex of a triangle, of which the base was beyond the reach of vision. Viewed even from this height, whence distance would do much to soften the general asperity, the surface nevertheless seemed to be bristling with its myriads of hexagonal lamellae, and to present difficulties which, to an ordinary pedestrian, would be insurmountable.

“Oh for some wings, or else a balloon!” cried Servadac, as he gazed around him; and then, looking down to the rock upon which they were standing, he added, “We seem to have been transplanted to a soil strange enough in its chemical character to bewilder the *savants* at a museum.”

“And do you observe, captain,” asked the count, “how the convexity of our little world curtails our view? See, how circumscribed is the horizon!”

Servadac replied that he had noticed the same circumstance from the top of the cliffs of Gourbi Island.

“Yes,” said the count; “it becomes more and more obvious that ours is a very tiny world, and that Gourbi Island is the sole productive spot upon its surface. We have had a short summer, and who knows whether we are not entering upon a winter that may last for years, perhaps for centuries?”

“But we must not mind, count,” said Servadac, smiling. “We have agreed, you know, that, come what may, we are to be philosophers.”

“Ay, true, my friend,” rejoined the count; “we must be philosophers and something more; we must be grateful to the good Protector who has hitherto befriended us, and we must trust His mercy to the end.”

For a few moments they both stood in silence, and contemplated land and sea; then, having given a last glance over the dreary panorama, they prepared to wend their way down the mountain. Before, however, they commenced their descent, they resolved to make a closer examination of the crater. They were particularly struck by what seemed

to them almost the mysterious calmness with which the eruption was effected. There was none of the wild disorder and deafening tumult that usually accompany the discharge of volcanic matter, but the heated lava, rising with a uniform gentleness, quietly overran the limits of the crater, like the flow of water from the bosom of a peaceful lake. Instead of a boiler exposed to the action of an angry fire, the crater rather resembled a brimming basin, of which the contents were noiselessly escaping. Nor were there any igneous stones or red-hot cinders mingled with the smoke that crowned the summit; a circumstance that quite accorded with the absence of the pumice-stones, obsidians, and other minerals of volcanic origin with which the base of a burning mountain is generally strewn.

Captain Servadac was of opinion that this peculiarity augured favorably for the continuance of the eruption. Extreme violence in physical, as well as in moral nature, is never of long duration. The most terrible storms, like the most violent fits of passion, are not lasting; but here the calm flow of the liquid fire appeared to be supplied from a source that was inexhaustible, in the same way as the waters of Niagara, gliding on steadily to their final plunge, would defy all effort to arrest their course.

Before the evening of this day closed in, a most important change was effected in the condition of the Gallian Sea by the intervention of human agency. Notwithstanding the increasing cold, the sea, unruffled as it was by a breath of wind, still retained its liquid state. It is an established fact that water, under this condition of absolute stillness, will remain uncongealed at a temperature several degrees below zero, whilst experiment, at the same time, shows that a very slight shock will often be sufficient to convert it into solid ice. It had occurred to Servadac that if some communication could be opened with Gourbi Island, there would be a fine scope for hunting expeditions. Having this ultimate object in view, he assembled his little colony upon a projecting rock at the extremity of the promontory, and having called Nina and Pablo out to him in front, he said: “Now, Nina, do you think you could throw something into the sea?”

“I think I could,” replied the child, “but I am sure that Pablo would throw it a great deal further than I can.”

“Never mind, you shall try first.”

Putting a fragment of ice into Nina’s hand, he addressed himself to Pablo:

“Look out, Pablo; you shall see what a nice little fairy Nina is! Throw, Nina, throw, as hard as you can.”

Nina balanced the piece of ice two or three times in her hand, and threw it forward with all her strength.

A sudden thrill seemed to vibrate across the motionless waters to the distant horizon, and the Gallian Sea had become a solid sheet of ice!

CHAPTER XXIII. A CARRIER-PIGEON

When, three hours after sunset, on the 23d of March, the Gallian moon rose upon the western horizon, it was observed that she had entered upon her last quarter. She had taken only four days to pass from syzygy to quadrature, and it was consequently evident that she would be visible for little more than a week at a time, and that her lunation would be accomplished within sixteen days. The lunar months, like the solar days, had been diminished by one-half. Three days later the moon was in conjunction with the sun, and was consequently lost to view; Ben Zoof, as the first observer of the satellite, was extremely interested in its movements, and wondered whether it would ever reappear.

On the 26th, under an atmosphere perfectly clear and dry, the thermometer fell to 12 degrees F. below zero. Of the present distance of Gallia from the sun, and the number of leagues she had traversed since the receipt of the last mysterious document, there were no means of judging; the extent of diminution in the apparent disc of the sun did not afford sufficient basis even for an approximate calculation; and Captain Servadac was perpetually regretting that they could receive no further tidings from the anonymous correspondent, whom he persisted in regarding as a fellow-countryman.

The solidity of the ice was perfect; the utter stillness of the air at the time when the final congelation of the waters had taken place had resulted in the formation of a surface that for smoothness would rival a skating-rink; without a crack or flaw it extended far beyond the range of vision.

The contrast to the ordinary aspect of polar seas was very remarkable. There, the ice-fields are an agglomeration of hummocks and icebergs, massed in wild confusion, often towering higher than the masts of the largest whalers, and from the instability of their foundations liable to an instantaneous loss of equilibrium; a breath of wind, a slight modification of the temperature, not unfrequently serving to bring about a series of changes outrivaling the most elaborate transformation scenes of a pantomime. Here, on the contrary, the vast white plain was level as the desert of Sahara or the Russian steppes; the waters of the Gallian Sea were imprisoned beneath the solid sheet, which became continually stouter in the increasing cold.

Accustomed to the uneven crystallizations of their own frozen seas, the Russians could not be otherwise than delighted with the polished surface that afforded them such

excellent opportunity for enjoying their favorite pastime of skating. A supply of skates, found hidden away amongst the *Dobryna's* stores, was speedily brought into use. The Russians undertook the instruction of the Spaniards, and at the end of a few days, during which the temperature was only endurable through the absence of wind, there was not a Gallian who could not skate tolerably well, while many of them could describe figures involving the most complicated curves. Nina and Pablo earned loud applause by their rapid proficiency; Captain Servadac, an adept in athletics, almost outvied his instructor, the count; and Ben Zoof, who had upon some rare occasions skated upon the Lake of Montmartre (in his eyes, of course, a sea), performed prodigies in the art.

This exercise was not only healthful in itself, but it was acknowledged that, in case of necessity, it might become a very useful means of locomotion. As Captain Servadac remarked, it was almost a substitute for railways, and as if to illustrate this proposition, Lieutenant Procope, perhaps the greatest expert in the party, accomplished the twenty miles to Gourbi Island and back in considerably less than four hours.

The temperature, meanwhile, continued to decrease, and the average reading of the thermometer was about 16 degrees F. below zero; the light also diminished in proportion, and all objects appeared to be enveloped in a half-defined shadow, as though the sun were undergoing a perpetual eclipse. It was not surprising that the effect of this continuously overhanging gloom should be to induce a frequent depression of spirits amongst the majority of the little population, exiles as they were from their mother earth, and not unlikely, as it seemed, to be swept far away into the regions of another planetary sphere. Probably Count Timascheff, Captain Servadac, and Lieutenant Procope were the only members of the community who could bring any scientific judgment to bear upon the uncertainty that was before them, but a general sense of the strangeness of their situation could not fail at times to weigh heavily upon the minds of all. Under these circumstances it was very necessary to counteract the tendency to despond by continual diversion; and the recreation of skating thus opportunely provided, seemed just the thing to arouse the flagging spirits, and to restore a wholesome excitement.

With dogged obstinacy, Isaac Hakkabut refused to take any share either in the labors or the amusements of the colony. In spite of the cold, he had not been seen since the day of his arrival from Gourbi Island. Captain Servadac had strictly forbidden any

communication with him; and the smoke that rose from the cabin chimney of the *Hansa* was the sole indication of the proprietor being still on board. There was nothing to prevent him, if he chose, from partaking gratuitously of the volcanic light and heat which were being enjoyed by all besides; but rather than abandon his close and personal oversight of his precious cargo, he preferred to sacrifice his own slender stock of fuel.

Both the schooner and the tartan had been carefully moored in the way that seemed to promise best for withstanding the rigor of the winter. After seeing the vessels made secure in the frozen creek. Lieutenant Procope, following the example of many Arctic explorers, had the precaution to have the ice beveled away from the keels, so that there should be no risk of the ships' sides being crushed by the increasing pressure; he hoped that they would follow any rise in the level of the ice-field, and when the thaw should come, that they would easily regain their proper water-line.

On his last visit to Gourbi Island, the lieutenant had ascertained that north, east, and west, far as the eye could reach, the Gallian Sea had become one uniform sheet of ice. One spot alone refused to freeze; this was the pool immediately below the central cavern, the receptacle for the stream of burning lava. It was entirely enclosed by rocks, and if ever a few icicles were formed there by the action of the cold, they were very soon melted by the fiery shower. Hissing and spluttering as the hot lava came in contact with it, the water was in a continual state of ebullition, and the fish that abounded in its depths defied the angler's craft; they were, as Ben Zoof remarked, "too much boiled to bite."

At the beginning of April the weather changed. The sky became overcast, but there was no rise in the temperature. Unlike the polar winters of the earth, which ordinarily are affected by atmospheric influence, and liable to slight intermissions of their severity at various shiftings of the wind, Gallia's winter was caused by her immense distance from the source of all light and heat, and the cold was consequently destined to go on steadily increasing until it reached the limit ascertained by Fourier to be the normal temperature of the realms of space.

With the over-clouding of the heavens there arose a violent tempest; but although the wind raged with an almost inconceivable fury, it was unaccompanied by either snow or rain. Its effect upon the burning curtain that covered the aperture of the central hall was very remarkable. So far from there being any likelihood of the fire being extinguished by the vehemence of the current of air, the hurricane seemed rather to act as a ventilator,

which fanned the flame into greater activity, and the utmost care was necessary to avoid being burnt by the fragments of lava that were drifted into the interior of the grotto. More than once the curtain itself was rifted entirely asunder, but only to close up again immediately after allowing a momentary draught of cold air to penetrate the hall in a way that was refreshing and rather advantageous than otherwise.

On the 4th of April, after an absence of about four days, the new satellite, to Ben Zoof's great satisfaction, made its reappearance in a crescent form, a circumstance that seemed to justify the anticipation that henceforward it would continue to make a periodic revolution every fortnight.

The crust of ice and snow was far too stout for the beaks of the strongest birds to penetrate, and accordingly large swarms had left the island, and, following the human population, had taken refuge on the volcanic promontory; not that there the barren shore had anything in the way of nourishment to offer them, but their instinct impelled them to haunt now the very habitations which formerly they would have shunned. Scraps of food were thrown to them from the galleries; these were speedily devoured, but were altogether inadequate in quantity to meet the demand. At length, emboldened by hunger, several hundred birds ventured through the tunnel, and took up their quarters actually in Nina's Hive. Congregating in the large hall, the half-famished creatures did not hesitate to snatch bread, meat, or food of any description from the hands of the residents as they sat at table, and soon became such an intolerable nuisance that it formed one of the daily diversions to hunt them down; but although they were vigorously attacked by stones and sticks, and even occasionally by shot, it was with some difficulty that their number could be sensibly reduced.

By a systematic course of warfare the bulk of the birds were all expelled, with the exception of about a hundred, which began to build in the crevices of the rocks. These were left in quiet possession of their quarters, as not only was it deemed advisable to perpetuate the various breeds, but it was found that these birds acted as a kind of police, never failing either to chase away or to kill any others of their species who infringed upon what they appeared to regard as their own special privilege in intruding within the limits of their domain.

On the 15th loud cries were suddenly heard issuing from the mouth of the principal gallery.

“Help, help! I shall be killed!”

Pablo in a moment recognized the voice as Nina’s. Outrunning even Ben Zoof he hurried to the assistance of his little playmate, and discovered that she was being attacked by half a dozen great sea-gulls, and only after receiving some severe blows from their beaks could he succeed by means of a stout cudgel in driving them away.

“Tell me, Nina, what is this?” he asked as soon as the tumult had subsided.

The child pointed to a bird which she was caressing tenderly in her bosom.

“A pigeon!” exclaimed Ben Zoof, who had reached the scene of commotion, adding:

“A carrier-pigeon! And by all the saints of Montmartre, there is a little bag attached to its neck!”

He took the bird, and rushing into the hall placed it in Servadac’s hands.

“Another message, no doubt,” cried the captain, “from our unknown friend. Let us hope that this time he has given us his name and address.”

All crowded round, eager to hear the news. In the struggle with the gulls the bag had been partially torn open, but still contained the following dispatch:

“Gallia!

Chemin parcouru du 1er Mars au 1er Avril: 39,000,000 l!

Distance du soleil: 110,000,000 l!

Capte Nerina en passant.

Vivres vont manquer et...”

The rest of the document had been so damaged by the beaks of the gulls that it was illegible. Servadac was wild with vexation. He felt more and more convinced that the writer was a Frenchman, and that the last line indicated that he was in distress from scarcity of food. The very thought of a fellow-countryman in peril of starvation drove him well-nigh to distraction, and it was in vain that search was made everywhere near

the scene of conflict in hopes of finding the missing scrap that might bear a signature or address.

Suddenly little Nina, who had again taken possession of the pigeon, and was hugging it to her breast, said:

“Look here, Ben Zoof!”

And as she spoke she pointed to the left wing of the bird. The wing bore the faint impress of a postage-stamp, and the one word: “FORMENTERA.”

CHAPTER XXIV. A SLEDGE-RIDE

Formentera was at once recognized by Servadac and the count as the name of one of the smallest of the Balearic Islands. It was more than probable that the unknown writer had thence sent out the mysterious documents, and from the message just come to hand by the carrier-pigeon, it appeared all but certain that at the beginning of April, a fortnight back, he had still been there. In one important particular the present communication differed from those that had preceded it: it was written entirely in French, and exhibited none of the ecstatic exclamations in other languages that had been remarkable in the two former papers. The concluding line, with its intimation of failing provisions, amounted almost to an appeal for help. Captain Servadac briefly drew attention to these points, and concluded by saying, “My friends, we must, without delay, hasten to the assistance of this unfortunate man.”

“For my part,” said the count, “I am quite ready to accompany you; it is not unlikely that he is not alone in his distress.”

Lieutenant Procope expressed much surprise. “We must have passed close to Formentera,” he said, “when we explored the site of the Balearic Isles; this fragment must be very small; it must be smaller than the remaining splinter of Gibraltar or Ceuta; otherwise, surely it would never have escaped our observation.”

“However small it may be,” replied Servadac, “we must find it. How far off do you suppose it is?”

“It must be a hundred and twenty leagues away,” said the lieutenant, thoughtfully; “and I do not quite understand how you would propose to get there.”

“Why, on skates of course; no difficulty in that, I should imagine,” answered Servadac, and he appealed to the count for confirmation of his opinion.

The count assented, but Procope looked doubtful.

“Your enterprise is generous,” he said, “and I should be most unwilling to throw any unnecessary obstacle in the way of its execution; but, pardon me, if I submit to you a few considerations which to my mind are very important. First of all, the thermometer is already down to 22 degrees below zero, and the keen wind from the south is making the temperature absolutely unendurable; in the second place, supposing you travel at the

rate of twenty leagues a day, you would be exposed for at least six consecutive days; and thirdly, your expedition will be of small avail unless you convey provisions not only for yourselves, but for those whom you hope to relieve."

"We can carry our own provisions on our backs in knapsacks," interposed Servadac, quickly, unwilling to recognize any difficulty in the way.

"Granted that you can," answered the lieutenant, quietly; "but where, on this level ice-field, will you find shelter in your periods of rest? You must perish with cold; you will not have the chance of digging out ice-huts like the Esquimaux."

"As to rest," said Servadac, "we shall take none; we shall keep on our way continuously; by traveling day and night without intermission, we shall not be more than three days in reaching Formentera."

"Believe me," persisted the lieutenant, calmly, "your enthusiasm is carrying you too far; the feat you propose is impossible; but even conceding the possibility of your success in reaching your destination, what service do you imagine that you, half-starved and half-frozen yourself, could render to those who are already perishing by want and exposure? you would only bring them away to die."

The obvious and dispassionate reasoning of the lieutenant could not fail to impress the minds of those who listened to him; the impracticability of the journey became more and more apparent; unprotected on that drear expanse, any traveler must assuredly succumb to the snow-drifts that were continually being whirled across it. But Hector Servadac, animated by the generous desire of rescuing a suffering fellow-creature, could scarcely be brought within the bounds of common sense. Against his better judgment he was still bent upon the expedition, and Ben Zoof declared himself ready to accompany his master in the event of Count Timascheff hesitating to encounter the peril which the undertaking involved. But the count entirely repudiated all idea of shrinking from what, quite as much as the captain, he regarded as a sacred duty, and turning to Lieutenant Procope, told him that unless some better plan could be devised, he was prepared to start off at once and make the attempt to skate across to Formentera. The lieutenant, who was lost in thought, made no immediate reply.

"I wish we had a sledge," said Ben Zoof.

“I dare say that a sledge of some sort could be contrived,” said the count; “but then we should have no dogs or reindeers to draw it.”

“Why not rough-shoe the two horses?”

“They would never be able to endure the cold,” objected the count.

“Never mind,” said Servadac, “let us get our sledge and put them to the test. Something must be done!”

“I think,” said Lieutenant Procope, breaking his thoughtful silence, “that I can tell you of a sledge already provided for your hand, and I can suggest a motive power surer and swifter than horses.”

“What do you mean?” was the eager inquiry.

“I mean the *Dobryna*’s yawl,” answered the lieutenant; “and I have no doubt that the wind would carry her rapidly along the ice.”

The idea seemed admirable. Lieutenant Procope was well aware to what marvelous perfection the Americans had brought their sail-sledges, and had heard how in the vast prairies of the United States they had been known to outvie the speed of an express train, occasionally attaining a rate of more than a hundred miles an hour. The wind was still blowing hard from the south, and assuming that the yawl could be propelled with a velocity of about fifteen or at least twelve leagues an hour, he reckoned that it was quite possible to reach Formentera within twelve hours, that is to say, in a single day between the intervals of sunrise and sunrise.

The yawl was about twelve feet long, and capable of holding five or six people. The addition of a couple of iron runners would be all that was requisite to convert it into an excellent sledge, which, if a sail were hoisted, might be deemed certain to make a rapid progress over the smooth surface of the ice. For the protection of the passengers it was proposed to erect a kind of wooden roof lined with strong cloth; beneath this could be packed a supply of provisions, some warm furs, some cordials, and a portable stove to be heated by spirits of wine.

For the outward journey the wind was as favorable as could be desired; but it was to be apprehended that, unless the direction of the wind should change, the return would be a

matter of some difficulty; a system of tacking might be carried out to a certain degree, but it was not likely that the yawl would answer her helm in any way corresponding to what would occur in the open sea. Captain Servadac, however, would not listen to any representation of probable difficulties; the future, he said, must provide for itself.

The engineer and several of the sailors set vigorously to work, and before the close of the day the yawl was furnished with a pair of stout iron runners, curved upwards in front, and fitted with a metal scull designed to assist in maintaining the directness of her course; the roof was put on, and beneath it were stored the provisions, the wraps, and the cooking utensils.

A strong desire was expressed by Lieutenant Procope that he should be allowed to accompany Captain Servadac instead of Count Timascheff. It was unadvisable for all three of them to go, as, in case of there being several persons to be rescued, the space at their command would be quite inadequate. The lieutenant urged that he was the most experienced seaman, and as such was best qualified to take command of the sledge and the management of the sails; and as it was not to be expected that Servadac would resign his intention of going in person to relieve his fellow-countryman, Procope submitted his own wishes to the count. The count was himself very anxious to have his share in the philanthropic enterprise, and demurred considerably to the proposal; he yielded, however, after a time, to Servadac's representations that in the event of the expedition proving disastrous, the little colony would need his services alike as governor and protector, and overcoming his reluctance to be left out of the perilous adventure, was prevailed upon to remain behind for the general good of the community at Nina's Hive.

At sunrise on the following morning, the 16th of April, Captain Servadac and the lieutenant took their places in the yawl. The thermometer was more than 20 degrees below zero, and it was with deep emotion that their companions beheld them thus embarking upon the vast white plain. Ben Zoof's heart was too full for words; Count Timascheff could not forbear pressing his two brave friends to his bosom; the Spaniards and the Russian sailors crowded round for a farewell shake of the hand, and little Nina, her great eyes flooded with tears, held up her face for a parting kiss. The sad scene was not permitted to be long. The sail was quickly hoisted, and the sledge, just as if it had expanded a huge white wing, was in a little while carried far away beyond the horizon.

Light and unimpeded, the yawl scudded on with incredible speed. Two sails, a brigantine and a jib, were arranged to catch the wind to the greatest advantage, and the travelers estimated that their progress would be little under the rate of twelve leagues an hour. The motion of their novel vehicle was singularly gentle, the oscillation being less than that of an ordinary railway-carriage, while the diminished force of gravity contributed to the swiftness. Except that the clouds of ice-dust raised by the metal runners were an evidence that they had not actually left the level surface of the ice, the captain and lieutenant might again and again have imagined that they were being conveyed through the air in a balloon.

Lieutenant Procope, with his head all muffled up for fear of frost-bite, took an occasional peep through an aperture that had been intentionally left in the roof, and by the help of a compass, maintained a proper and straight course for Formentera. Nothing could be more dejected than the aspect of that frozen sea; not a single living creature relieved the solitude; both the travelers, Procope from a scientific point of view, Servadac from an aesthetic, were alike impressed by the solemnity of the scene, and where the lengthened shadow of the sail cast upon the ice by the oblique rays of the setting sun had disappeared, and day had given place to night, the two men, drawn together as by an involuntary impulse, mutually held each other’s hands in silence.

There had been a new moon on the previous evening; but, in the absence of moonlight, the constellations shone with remarkable brilliancy. The new pole-star close upon the horizon was resplendent, and even had Lieutenant Procope been destitute of a compass, he would have had no difficulty in holding his course by the guidance of that alone. However great was the distance that separated Gallia from the sun, it was after all manifestly insignificant in comparison with the remoteness of the nearest of the fixed stars.

Observing that Servadac was completely absorbed in his own thoughts, Lieutenant Procope had leisure to contemplate some of the present perplexing problems, and to ponder over the true astronomical position. The last of the three mysterious documents had represented that Gallia, in conformity with Kepler’s second law, had traveled along her orbit during the month of March twenty millions of leagues less than she had done in the previous month; yet, in the same time, her distance from the sun had nevertheless been increased by thirty-two millions of leagues. She was now, therefore, in the center of the zone of telescopic planets that revolve between the orbits of Mars and Jupiter,

and had captured for herself a satellite which, according to the document, was Nerina, one of the asteroids most recently identified. If thus, then, it was within the power of the unknown writer to estimate with such apparent certainty Gallia's exact position, was it not likely that his mathematical calculations would enable him to arrive at some definite conclusion as to the date at which she would begin again to approach the sun? Nay, was it not to be expected that he had already estimated, with sufficient approximation to truth, what was to be the true length of the Gallian year?

So intently had they each separately been following their own train of thought, that daylight reappeared almost before the travelers were aware of it. On consulting their instruments, they found that they must have traveled close upon a hundred leagues since they started, and they resolved to slacken their speed. The sails were accordingly taken in a little, and in spite of the intensity of the cold, the explorers ventured out of their shelter, in order that they might reconnoiter the plain, which was apparently as boundless as ever. It was completely desert; not so much as a single point of rock relieved the bare uniformity of its surface.

"Are we not considerably to the west of Formentera?" asked Servadac, after examining the chart.

"Most likely," replied Procope. "I have taken the same course as I should have done at sea, and I have kept some distance to windward of the island; we can bear straight down upon it whenever we like."

"Bear down then, now; and as quickly as you can."

The yawl was at once put with her head to the northeast and Captain Servadac, in defiance of the icy blast, remained standing at the bow, his gaze fixed on the horizon.

All at once his eye brightened.

"Look! look!" he exclaimed, pointing to a faint outline that broke the monotony of the circle that divided the plain from the sky.

In an instant the lieutenant had seized his telescope.

"I see what you mean," said he; "it is a pylone that has been used for some geodesic survey."

The next moment the sail was filled, and the yawl was bearing down upon the object with inconceivable swiftness, both Captain Servadac and the lieutenant too excited to utter a word. Mile after mile the distance rapidly grew less, and as they drew nearer the pylone they could see that it was erected on a low mass of rocks that was the sole interruption to the dull level of the field of ice. No wreath of smoke rose above the little island; it was manifestly impossible, they conceived, that any human being could there have survived the cold; the sad presentiment forced itself upon their minds that it was a mere cairn to which they had been hurrying.

Ten minutes later, and they were so near the rock that the lieutenant took in his sail, convinced that the impetus already attained would be sufficient to carry him to the land. Servadac's heart bounded as he caught sight of a fragment of blue canvas fluttering in the wind from the top of the pylone: it was all that now remained of the French national standard. At the foot of the pylone stood a miserable shed, its shutters tightly closed. No other habitation was to be seen; the entire island was less than a quarter of a mile in circumference; and the conclusion was irresistible that it was the sole surviving remnant of Formentera, once a member of the Balearic Archipelago.

To leap on shore, to clamber over the slippery stones, and to reach the cabin was but the work of a few moments. The worm-eaten door was bolted on the inside. Servadac began to knock with all his might. No answer. Neither shouting nor knocking could draw forth a reply.

"Let us force it open, Procope!" he said.

The two men put their shoulders to the door, which soon yielded to their vigorous efforts, and they found themselves inside the shed, and in almost total darkness. By opening a shutter they admitted what daylight they could. At first sight the wretched place seemed to be deserted; the little grate contained the ashes of a fire long since extinguished; all looked black and desolate. Another instant's investigation, however, revealed a bed in the extreme corner, and extended on the bed a human form.

"Dead!" sighed Servadac; "dead of cold and hunger!"

Lieutenant Procope bent down and anxiously contemplated the body.

"No; he is alive!" he said, and drawing a small flask from his pocket he poured a few drops of brandy between the lips of the senseless man.

There was a faint sigh, followed by a feeble voice, which uttered the one word, “Gallia?”

“Yes, yes! Gallia!” echoed Servadac, eagerly.

“My comet, my comet!” said the voice, so low as to be almost inaudible, and the unfortunate man relapsed again into unconsciousness.

“Where have I seen this man?” thought Servadac to himself; “his face is strangely familiar to me.”

But it was no time for deliberation. Not a moment was to be lost in getting the unconscious astronomer away from his desolate quarters. He was soon conveyed to the yawl; his books, his scanty wardrobe, his papers, his instruments, and the blackboard which had served for his calculations, were quickly collected; the wind, by a fortuitous Providence, had shifted into a favorable quarter; they set their sail with all speed, and ere long were on their journey back from Formentera.

Thirty-six hours later, the brave travelers were greeted by the acclamations of their fellow-colonists, who had been most anxiously awaiting their reappearance, and the still senseless *savant,* who had neither opened his eyes nor spoken a word throughout the journey, was safely deposited in the warmth and security of the great hall of Nina’s Hive.

END OF FIRST BOOK

BOOK II.

CHAPTER I. THE ASTRONOMER

By the return of the expedition, conveying its contribution from Formentera, the known population of Gallia was raised to a total of thirty-six.

On learning the details of his friends' discoveries, Count Timascheff did not hesitate in believing that the exhausted individual who was lying before him was the author alike of the two unsigned documents picked up at sea, and of the third statement so recently brought to hand by the carrier-pigeon. Manifestly, he had arrived at some knowledge of Gallia's movements: he had estimated her distance from the sun; he had calculated the diminution of her tangential speed; but there was nothing to show that he had arrived at the conclusions which were of the most paramount interest to them all. Had he ascertained the true character of her orbit? had he established any data from which it would be possible to reckon what time must elapse before she would again approach the earth?

The only intelligible words which the astronomer had uttered had been, "My comet!"

To what could the exclamation refer? Was it to be conjectured that a fragment of the earth had been chipped off by the collision of a comet? and if so, was it implied that the name of the comet itself was Gallia, and were they mistaken in supposing that such was the name given by the *savant* to the little world that had been so suddenly launched into space? Again and again they discussed these questions; but no satisfactory answer could be found. The only man who was able to throw any light upon the subject was lying amongst them in an unconscious and half-dying condition.

Apart from motives of humanity, motives of self-interest made it a matter of the deepest concern to restore animation to that senseless form. Ben Zoof, after making the encouraging remark that *savants* have as many lives as a cat, proceeded, with Negrete's assistance, to give the body such a vigorous rubbing as would have threatened serious injury to any ordinary mortal, whilst they administered cordials and restoratives from the *Dobryna's* medical stores powerful enough, one might think, to rouse the very dead.

Meanwhile the captain was racking his brain in his exertions to recall what were the circumstances of his previous acquaintance with the Frenchman upon whose features he was gazing; he only grew more and more convinced that he had once been familiar with them. Perhaps it was not altogether surprising that he had almost forgotten him; he had

never seen him since the days of his youth, that time of life which, with a certain show of justice, has been termed the age of ingratitude; for, in point of fact, the astronomer was none other than Professor Palmyrin Rosette, Servadac's old science-master at the Lycee Charlemagne.

After completing his year of elementary studies, Hector Servadac had entered the school at Saint Cyr, and from that time he and his former tutor had never met, so that naturally they would well-nigh pass from each other's recollection. One thing, however, on the other hand, might conduce to a mutual and permanent impression on their memories; during the year at the Lycee, young Servadac, never of a very studious turn of mind, had contrived, as the ringleader of a set of like caliber as himself, to lead the poor professor a life of perpetual torment. On the discovery of each delinquency he would fume and rage in a manner that was a source of unbounded delight to his audience.

Two years after Servadac left the Lycee, Professor Rosette had thrown up all educational employment in order that he might devote himself entirely to the study of astronomy. He endeavored to obtain a post at the Observatory, but his ungenial character was so well known in scientific circles that he failed in his application; however, having some small private means, he determined on his own account to carry on his researches without any official salary. He had really considerable genius for the science that he had adopted; besides discovering three of the latest of the telescopic planets, he had worked out the elements of the three hundred and twenty-fifth comet in the catalogue; but his chief delight was to criticize the publications of other astronomers, and he was never better pleased than when he detected a flaw in their reckonings.

When Ben Zoof and Negrete had extricated their patient from the envelope of furs in which he had been wrapped by Servadac and the lieutenant, they found themselves face to face with a shrivelled little man, about five feet two inches high, with a round bald head, smooth and shiny as an ostrich's egg, no beard unless the unshorn growth of a week could be so described, and a long hooked nose that supported a huge pair of spectacles such as with many near-sighted people seems to have become a part of their individuality. His nervous system was remarkably developed, and his body might not inaptly be compared to one of the Rhumkorff's bobbins of which the thread, several hundred yards in length, is permeated throughout by electric fluid. But whatever he

was, his life, if possible, must be preserved. When he had been partially divested of his clothing, his heart was found to be still beating, though very feebly. Asserting that while there was life there was hope, Ben Zoof recommenced his friction with more vigor than ever.

When the rubbing had been continued without a moment's intermission for the best part of half an hour, the astronomer heaved a faint sigh, which ere long was followed by another and another. He half opened his eyes, closed them again, then opened them completely, but without exhibiting any consciousness whatever of his situation. A few words seemed to escape his lips, but they were quite unintelligible. Presently he raised his right hand to his forehead as though instinctively feeling for something that was missing; then, all of a sudden, his features became contracted, his face flushed with apparent irritation, and he exclaimed fretfully, "My spectacles! — where are my spectacles?"

In order to facilitate his operations, Ben Zoof had removed the spectacles in spite of the tenacity with which they seemed to adhere to the temples of his patient; but he now rapidly brought them back and readjusted them as best he could to what seemed to be their natural position on the aquiline nose. The professor heaved a long sigh of relief, and once more closed his eyes.

Before long the astronomer roused himself a little more, and glanced inquiringly about him, but soon relapsed into his comatose condition. When next he opened his eyes, Captain Servadac happened to be bending down closely over him, examining his features with curious scrutiny. The old man darted an angry look at him through the spectacles, and said sharply, "Servadac, five hundred lines to-morrow!"

It was an echo of days of old. The words were few, but they were enough to recall the identity which Servadac was trying to make out.

"Is it possible?" he exclaimed. "Here is my old tutor, Mr. Rosette, in very flesh and blood."

"Can't say much for the flesh," muttered Ben Zoof.

The old man had again fallen back into a torpid slumber. Ben Zoof continued, "His sleep is getting more composed. Let him alone; he will come round yet. Haven't I heard

of men more dried up than he is, being brought all the way from Egypt in cases covered with pictures?”

“You idiot! — those were mummies; they had been dead for ages.”

Ben Zoof did not answer a word. He went on preparing a warm bed, into which he managed to remove his patient, who soon fell into a calm and natural sleep.

Too impatient to await the awakening of the astronomer and to hear what representations he had to make, Servadac, the count, and the lieutenant, constituting themselves what might be designated “the Academy of Sciences” of the colony, spent the whole of the remainder of the day in starting and discussing the wildest conjectures about their situation. The hypothesis, to which they had now accustomed themselves for so long, that a new asteroid had been formed by a fracture of the earth’s surface, seemed to fall to the ground when they found that Professor Palmyrin Rosette had associated the name of Gallia, not with their present home, but with what he called “my comet”; and that theory being abandoned, they were driven to make the most improbable speculations to replace it.

Alluding to Rosette, Servadac took care to inform his companions that, although the professor was always eccentric, and at times very irascible, yet he was really exceedingly good-hearted; his bark was worse than his bite; and if suffered to take their course without observation, his outbreaks of ill-temper seldom lasted long.

“We will certainly do our best to get on with him,” said the count. “He is no doubt the author of the papers, and we must hope that he will be able to give us some valuable information.”

“Beyond a question the documents have originated with him,” assented the lieutenant. “Gallia was the word written at the top of every one of them, and Gallia was the first word uttered by him in our hearing.”

The astronomer slept on. Meanwhile, the three together had no hesitation in examining his papers, and scrutinizing the figures on his extemporized blackboard. The handwriting corresponded with that of the papers already received; the blackboard was covered with algebraical symbols traced in chalk, which they were careful not to obliterate; and the papers, which consisted for the most part of detached scraps,

presented a perfect wilderness of geometrical figures, conic sections of every variety being repeated in countless profusion.

Lieutenant Procope pointed out that these curves evidently had reference to the orbits of comets, which are variously parabolic, hyperbolic, or elliptic. If either of the first two, the comet, after once appearing within the range of terrestrial vision, would vanish forever in the outlying regions of space; if the last, it would be sure, sooner or later, after some periodic interval, to return.

From the *prima facie* appearance of his papers, then, it seemed probable that the astronomer, during his sojourn at Formentera, had been devoting himself to the study of cometary orbits; and as calculations of this kind are ordinarily based upon the assumption that the orbit is a parabola, it was not unlikely that he had been endeavoring to trace the path of some particular comet.

“I wonder whether these calculations were made before or after the 1st of January; it makes all the difference,” said Lieutenant Procope.

“We must bide our time and hear,” replied the count.

Servadac paced restlessly up and down. “I would give a month of my life,” he cried, impetuously, “for every hour that the old fellow goes sleeping on.”

“You might be making a bad bargain,” said Procope, smiling. “Perhaps after all the comet has had nothing to do with the convulsion that we have experienced.”

“Nonsense!” exclaimed the captain; “I know better than that, and so do you. Is it not as clear as daylight that the earth and this comet have been in collision, and the result has been that our little world has been split off and sent flying far into space?”

Count Timascheff and the lieutenant looked at each other in silence. “I do not deny your theory,” said Procope after a while. “If it be correct, I suppose we must conclude that the enormous disc we observed on the night of the catastrophe was the comet itself; and the velocity with which it was traveling must have been so great that it was hardly arrested at all by the attraction of the earth.”

“Plausible enough,” answered Count Timascheff; “and it is to this comet that our scientific friend here has given the name of Gallia.”

It still remained a puzzle to them all why the astronomer should apparently be interested in the comet so much more than in the new little world in which their strange lot was cast.

“Can you explain this?” asked the count.

“There is no accounting for the freaks of philosophers, you know,” said Servadac; “and have I not told you that this philosopher in particular is one of the most eccentric beings in creation?”

“Besides,” added the lieutenant, “it is exceedingly likely that his observations had been going on for some considerable period before the convulsion happened.”

Thus, the general conclusion arrived at by the Gallian Academy of Science was this: That on the night of the 31st of December, a comet, crossing the ecliptic, had come into collision with the earth, and that the violence of the shock had separated a huge fragment from the globe, which fragment from that date had been traversing the remote inter-planetary regions. Palmyrin Rosette would doubtless confirm their solution of the phenomenon.

CHAPTER II. A REVELATION

To the general population of the colony the arrival of the stranger was a matter of small interest. The Spaniards were naturally too indolent to be affected in any way by an incident that concerned themselves so remotely; while the Russians felt themselves simply reliant on their master, and as long as they were with him were careless as to where or how they spent their days. Everything went on with them in an accustomed routine; and they lay down night after night, and awoke to their avocations morning after morning, just as if nothing extraordinary had occurred.

All night long Ben Zoof would not leave the professor's bedside. He had constituted himself sick nurse, and considered his reputation at stake if he failed to set his patient on his feet again. He watched every movement, listened to every breath, and never failed to administer the strongest cordials upon the slightest pretext. Even in his sleep Rosette's irritable nature revealed itself. Ever and again, sometimes in a tone of uneasiness, and sometimes with the expression of positive anger, the name of Gallia escaped his lips, as though he were dreaming that his claim to the discovery of the comet was being contested or denied; but although his attendant was on the alert to gather all he could, he was able to catch nothing in the incoherent sentences that served to throw any real light upon the problem that they were all eager to solve.

When the sun reappeared on the western horizon the professor was still sound asleep; and Ben Zoof, who was especially anxious that the repose which promised to be so beneficial should not be disturbed, felt considerable annoyance at hearing a loud knocking, evidently of some blunt heavy instrument against a door that had been placed at the entrance of the gallery, more for the purpose of retaining internal warmth than for guarding against intrusion from without.

"Confound it!" said Ben Zoof. "I must put a stop to this;" and he made his way towards the door.

"Who's there?" he cried, in no very amiable tone.

"I." replied the quavering voice.

"Who are you?"

"Isaac Hakkabut. Let me in; do, please, let me in."

“Oh, it is you, old Ashtaroth, is it? What do you want? Can’t you get anybody to buy your stuffs?”

“Nobody will pay me a proper price.”

“Well, old Shimei, you won’t find a customer here. You had better be off.”

“No; but do, please — do, please, let me in,” supplicated the Jew. “I want to speak to his Excellency, the governor.”

“The governor is in bed, and asleep.”

“I can wait until he awakes.”

“Then wait where you are.”

And with this inhospitable rejoinder the orderly was about to return to his place at the side of his patient, when Servadac, who had been roused by the sound of voices, called out, “What’s the matter, Ben Zoof?”

“Oh, nothing, sir; only that hound of a Hakkabut says he wants to speak to you.”

“Let him in, then.”

Ben Zoof hesitated.

“Let him in, I say,” repeated the captain, peremptorily.

However reluctantly, Ben Zoof obeyed. The door was unfastened, and Isaac Hakkabut, enveloped in an old overcoat, shuffled into the gallery. In a few moments Servadac approached, and the Jew began to overwhelm him with the most obsequious epithets. Without vouchsafing any reply, the captain beckoned to the old man to follow him, and leading the way to the central hall, stopped, and turning so as to look him steadily in the face, said, “Now is your opportunity. Tell me what you want.”

“Oh, my lord, my lord,” whined Isaac, “you must have some news to tell me.”

“News? What do you mean?”

“From my little tartan yonder, I saw the yawl go out from the rock here on a journey, and I saw it come back, and it brought a stranger; and I thought — I thought — I thought — ”

“Well, you thought — what did you think?”

“Why, that perhaps the stranger had come from the northern shores of the Mediterranean, and that I might ask him — ”

He paused again, and gave a glance at the captain.

“Ask him what? Speak out, man?”

“Ask him if he brings any tidings of Europe,” Hakkabut blurted out at last.

Servadac shrugged his shoulders in contempt and turned away. Here was a man who had been resident three months in Gallia, a living witness of all the abnormal phenomena that had occurred, and yet refusing to believe that his hope of making good bargains with European traders was at an end. Surely nothing, thought the captain, will convince the old rascal now; and he moved off in disgust. The orderly, however, who had listened with much amusement, was by no means disinclined for the conversation to be continued. “Are you satisfied, old Ezekiel?” he asked.

“Isn’t it so? Am I not right? Didn’t a stranger arrive here last night?” inquired the Jew.

“Yes, quite true.”

“Where from?”

“From the Balearic Isles.”

“The Balearic Isles?” echoed Isaac.

“Yes.”

“Fine quarters for trade! Hardly twenty leagues from Spain! He must have brought news from Europe!”

“Well, old Manasseh, what if he has?”

“I should like to see him.”

“Can’t be.”

The Jew sidled close up to Ben Zoof, and laying his hand on his arm, said in a low and insinuating tone, “I am poor, you know; but I would give you a few reals if you would let me talk to this stranger.”

But as if he thought he was making too liberal an offer, he added, “Only it must be at once.”

“He is too tired; he is worn out; he is fast asleep,” answered Ben Zoof.

“But I would pay you to wake him.”

The captain had overheard the tenor of the conversation, and interposed sternly, “Hakkabut! if you make the least attempt to disturb our visitor, I shall have you turned outside that door immediately.”

“No offense, my lord, I hope,” stammered out the Jew. “I only meant — ”

“Silence!” shouted Servadac. The old man hung his head, abashed.

“I will tell you what,” said Servadac after a brief interval; “I will give you leave to hear what this stranger has to tell as soon as he is able to tell us anything; at present we have not heard a word from his lips.”

The Jew looked perplexed.

“Yes,” said Servadac; “when we hear his story, you shall hear it too.”

“And I hope it will be to your liking, old Ezekiel!” added Ben Zoof in a voice of irony.

They had none of them long to wait, for within a few minutes Rosette’s peevish voice was heard calling, “Joseph! Joseph!”

The professor did not open his eyes, and appeared to be slumbering on, but very shortly afterwards called out again, “Joseph! Confound the fellow! where is he?” It was evident that he was half dreaming about a former servant now far away on the ancient globe. “Where’s my blackboard, Joseph?”

“Quite safe, sir,” answered Ben Zoof, quickly.

Rosette unclosed his eyes and fixed them full upon the orderly’s face. “Are you Joseph?” he asked.

“At your service, sir,” replied Ben Zoof with imperturbable gravity.

“Then get me my coffee, and be quick about it.”

Ben Zoof left to go into the kitchen, and Servadac approached the professor in order to assist him in rising to a sitting posture.

“Do you recognize your quondam pupil, professor?” he asked.

“Ah, yes, yes; you are Servadac,” replied Rosette. “It is twelve years or more since I saw you; I hope you have improved.”

“Quite a reformed character, sir, I assure you,” said Servadac, smiling.

“Well, that’s as it should be; that’s right,” said the astronomer with fussy importance. “But let me have my coffee,” he added impatiently; “I cannot collect my thoughts without my coffee.”

Fortunately, Ben Zoof appeared with a great cup, hot and strong. After draining it with much apparent relish, the professor got out of bed, walked into the common hall, round which he glanced with a pre-occupied air, and proceeded to seat himself in an armchair, the most comfortable which the cabin of the *Dobryna* had supplied. Then, in a voice full of satisfaction, and that involuntarily recalled the exclamations of delight that had wound up the two first of the mysterious documents that had been received, he burst out, “Well, gentlemen, what do you think of Gallia?”

There was no time for anyone to make a reply before Isaac Hakkabut had darted forward.

“By the God — ”

“Who is that?” asked the startled professor; and he frowned, and made a gesture of repugnance.

Regardless of the efforts that were made to silence him, the Jew continued, “By the God of Abraham, I beseech you, give me some tidings of Europe!”

“Europe?” shouted the professor, springing from his seat as if he were electrified; “what does the man want with Europe?”

“I want to get there!” screeched the Jew; and in spite of every exertion to get him away, he clung most tenaciously to the professor’s chair, and again and again implored for news of Europe.

Rosette made no immediate reply. After a moment or two’s reflection, he turned to Servadac and asked him whether it was not the middle of April.

“It is the twentieth,” answered the captain.

“Then to-day,” said the astronomer, speaking with the greatest deliberation — ”to-day we are just three millions of leagues away from Europe.”

The Jew was utterly crestfallen.

“You seem here,” continued the professor, “to be very ignorant of the state of things.”

“How far we are ignorant,” rejoined Servadac, “I cannot tell. But I will tell you all that we do know, and all that we have surmised.” And as briefly as he could, he related all that had happened since the memorable night of the thirty-first of December; how they had experienced the shock; how the *Dobryna* had made her voyage; how they had discovered nothing except the fragments of the old continent at Tunis, Sardinia, Gibraltar, and now at Formentera; how at intervals the three anonymous documents had been received; and, finally, how the settlement at Gourbi Island had been abandoned for their present quarters at Nina’s Hive.

The astronomer had hardly patience to hear him to the end. “And what do you say is your surmise as to your present position?” he asked.

“Our supposition,” the captain replied, “is this. We imagine that we are on a considerable fragment of the terrestrial globe that has been detached by collision with a planet to which you appear to have given the name of Gallia.”

“Better than that!” cried Rosette, starting to his feet with excitement.

“How? Why? What do you mean?” cried the voices of the listeners.

“You are correct to a certain degree,” continued the professor. “It is quite true that at 47’ 35.6” after two o’clock on the morning of the first of January there was a collision; my comet grazed the earth; and the bits of the earth which you have named were carried clean away.”

They were all fairly bewildered.

“Where, then,” cried Servadac eagerly, “where are we?”

“You are on my comet, on Gallia itself!”

And the professor gazed around him with a perfect air of triumph.

CHAPTER III. THE PROFESSOR'S EXPERIENCES

"Yes, my comet!" repeated the professor, and from time to time he knitted his brows, and looked around him with a defiant air, as though he could not get rid of the impression that someone was laying an unwarranted claim to its proprietorship, or that the individuals before him were intruders upon his own proper domain.

But for a considerable while, Servadac, the count, and the lieutenant remained silent and sunk in thought. Here then, at last, was the unriddling of the enigma they had been so long endeavoring to solve; both the hypotheses they had formed in succession had now to give way before the announcement of the real truth. The first supposition, that the rotatory axis of the earth had been subject to some accidental modification, and the conjecture that replaced it, namely, that a certain portion of the terrestrial sphere had been splintered off and carried into space, had both now to yield to the representation that the earth had been grazed by an unknown comet, which had caught up some scattered fragments from its surface, and was bearing them far away into sidereal regions. Unfolded lay the past and the present before them; but this only served to awaken a keener interest about the future. Could the professor throw any light upon that? they longed to inquire, but did not yet venture to ask him.

Meanwhile Rosette assumed a pompous professional air, and appeared to be waiting for the entire party to be ceremoniously introduced to him. Nothing unwilling to humor the vanity of the eccentric little man, Servadac proceeded to go through the expected formalities.

"Allow me to present to you my excellent friend, the Count Timascheff," he said.

"You are very welcome," said Rosette, bowing to the count with a smile of condescension.

"Although I am not precisely a voluntary resident on your comet, Mr. Professor, I beg to acknowledge your courteous reception," gravely responded Timascheff.

Servadac could not quite conceal his amusement at the count's irony, but continued, "This is Lieutenant Procope, the officer in command of the *Dobryna*."

The professor bowed again in frigid dignity.

“His yacht has conveyed us right round Gallia,” added the captain.

“Round Gallia?” eagerly exclaimed the professor.

“Yes, entirely round it,” answered Servadac, and without allowing time for reply, proceeded, “And this is my orderly, Ben Zoof.”

“Aide-de-camp to his Excellency the Governor of Gallia,” interposed Ben Zoof himself, anxious to maintain his master’s honor as well as his own.

Rosette scarcely bent his head.

The rest of the population of the Hive were all presented in succession: the Russian sailors, the Spaniards, young Pablo, and little Nina, on whom the professor, evidently no lover of children, glared fiercely through his formidable spectacles. Isaac Hakkabut, after his introduction, begged to be allowed to ask one question.

“How soon may we hope to get back?” he inquired.

“Get back!” rejoined Rosette, sharply; “who talks of getting back? We have hardly started yet.”

Seeing that the professor was inclined to get angry, Captain Servadac adroitly gave a new turn to the conversation by asking him whether he would gratify them by relating his own recent experiences. The astronomer seemed pleased with the proposal, and at once commenced a verbose and somewhat circumlocutory address, of which the following summary presents the main features.

The French Government, being desirous of verifying the measurement already made of the arc of the meridian of Paris, appointed a scientific commission for that purpose. From that commission the name of Palmyrin Rosette was omitted, apparently for no other reason than his personal unpopularity. Furious at the slight, the professor resolved to set to work independently on his own account, and declaring that there were inaccuracies in the previous geodesic operations, he determined to re-examine the results of the last triangulation which had united Formentera to the Spanish coast by a triangle, one of the sides of which measured over a hundred miles, the very operation which had already been so successfully accomplished by Arago and Biot.

Accordingly, leaving Paris for the Balearic Isles, he placed his observatory on the highest point of Formentera, and accompanied as he was only by his servant, Joseph, led the life of a recluse. He secured the services of a former assistant, and dispatched him to a high peak on the coast of Spain, where he had to superintend a reverberator, which, with the aid of a glass, could be seen from Formentera. A few books and instruments, and two months' victuals, was all the baggage he took with him, except an excellent astronomical telescope, which was, indeed, almost part and parcel of himself, and with which he assiduously scanned the heavens, in the sanguine anticipation of making some discovery which would immortalize his name.

The task he had undertaken demanded the utmost patience. Night after night, in order to fix the apex of his triangle, he had to linger on the watch for the assistant's signal-light, but he did not forget that his predecessors, Arago and Biot, had had to wait sixty-one days for a similar purpose. What retarded the work was the dense fog which, it has been already mentioned, at that time enveloped not only that part of Europe, but almost the entire world.

Never failing to turn to the best advantage the few intervals when the mist lifted a little, the astronomer would at the same time cast an inquiring glance at the firmament, as he was greatly interested in the revision of the chart of the heavens, in the region contiguous to the constellation Gemini.

To the naked eye this constellation consists of only six stars, but through a telescope ten inches in diameter, as many as six thousand are visible. Rosette, however, did not possess a reflector of this magnitude, and was obliged to content himself with the good but comparatively small instrument he had.

On one of these occasions, whilst carefully gauging the recesses of Gemini, he espied a bright speck which was unregistered in the chart, and which at first he took for a small star that had escaped being entered in the catalogue. But the observation of a few separate nights soon made it manifest that the star was rapidly changing its position with regard to the adjacent stars, and the astronomer's heart began to leap at the thought that the renown of the discovery of a new planet would be associated with his name.

Redoubling his attention, he soon satisfied himself that what he saw was not a planet; the rapidity of its displacement rather forced him to the conjecture that it must be a

comet, and this opinion was soon strengthened by the appearance of a coma, and subsequently confirmed, as the body approached the sun, by the development of a tail.

A comet! The discovery was fatal to all further progress in the triangulation. However conscientiously the assistant on the Spanish coast might look to the kindling of the beacon, Rosette had no glances to spare for that direction; he had no eyes except for the one object of his notice, no thoughts apart from that one quarter of the firmament.

A comet! No time must be lost in calculating its elements.

Now, in order to calculate the elements of a comet, it is always deemed the safest mode of procedure to assume the orbit to be a parabola. Ordinarily, comets are conspicuous at their perihelia, as being their shortest distances from the sun, which is the focus of their orbit, and inasmuch as a parabola is but an ellipse with its axis indefinitely produced, for some short portion of its pathway the orbit may be indifferently considered either one or the other; but in this particular case the professor was right in adopting the supposition of its being parabolic.

Just as in a circle, it is necessary to know three points to determine the circumference; so in ascertaining the elements of a comet, three different positions must be observed before what astronomers call its “ephemeris” can be established.

But Professor Rosette did not content himself with three positions; taking advantage of every rift in the fog he made ten, twenty, thirty observations both in right ascension and in declination, and succeeded in working out with the most minute accuracy the five elements of the comet which was evidently advancing with astounding rapidity towards the earth.

These elements were:

1. The inclination of the plane of the cometary orbit to the plane of the ecliptic, an angle which is generally considerable, but in this case the planes were proved to coincide.

2. The position of the ascending node, or the point where the comet crossed the terrestrial orbit.

These two elements being obtained, the position in space of the comet’s orbit was determined.

3. The direction of the axis major of the orbit, which was found by calculating the longitude of the comet's perihelion.

4. The perihelion distance from the sun, which settled the precise form of the parabola.

5. The motion of the comet, as being retrograde, or, unlike the planets, from east to west.

Rosette thus found himself able to calculate the date at which the comet would reach its perihelion, and, overjoyed at his discovery, without thinking of calling it Palmyra or Rosette, after his own name, he resolved that it should be known as Gallia.

His next business was to draw up a formal report. Not only did he at once recognize that a collision with the earth was possible, but he soon foresaw that it was inevitable, and that it must happen on the night of the 31st of December; moreover, as the bodies were moving in opposite directions, the shock could hardly fail to be violent.

To say that he was elated at the prospect was far below the truth; his delight amounted almost to delirium. Anyone else would have hurried from the solitude of Formentera in sheer fright; but, without communicating a word of his startling discovery, he remained resolutely at his post. From occasional newspapers which he had received, he had learnt that fogs, dense as ever, continued to envelop both hemispheres, so that he was assured that the existence of the comet was utterly unknown elsewhere; and the ignorance of the world as to the peril that threatened it averted the panic that would have followed the publication of the facts, and left the philosopher of Formentera in sole possession of the great secret. He clung to his post with the greater persistency, because his calculations had led him to the conclusion that the comet would strike the earth somewhere to the south of Algeria, and as it had a solid nucleus, he felt sure that, as he expressed it, the effect would be "unique," and he was anxious to be in the vicinity.

The shock came, and with it the results already recorded. Palmyrin Rosette was suddenly separated from his servant Joseph, and when, after a long period of unconsciousness, he came to himself, he found that he was the solitary occupant of the only fragment that survived of the Balearic Archipelago.

Such was the substance of the narrative which the professor gave with sundry repetitions and digressions; while he was giving it, he frequently paused and frowned as

if irritated in a way that seemed by no means justified by the patient and good-humored demeanor of his audience.

“But now, gentlemen,” added the professor, “I must tell you something more. Important changes have resulted from the collision; the cardinal points have been displaced; gravity has been diminished: not that I ever supposed for a minute, as you did, that I was still upon the earth. No! the earth, attended by her moon, continued to rotate along her proper orbit. But we, gentlemen, have nothing to complain of; our destiny might have been far worse; we might all have been crushed to death, or the comet might have remained in adhesion to the earth; and in neither of these cases should we have had the satisfaction of making this marvelous excursion through untraversed solar regions. No, gentlemen, I repeat it, we have nothing to regret.”

And as the professor spoke, he seemed to kindle with the emotion of such supreme contentment that no one had the heart to gainsay his assertion. Ben Zoof alone ventured an unlucky remark to the effect that if the comet had happened to strike against Montmartre, instead of a bit of Africa, it would have met with some resistance.

“Pshaw!” said Rosette, disdainfully. “A mole-hill like Montmartre would have been ground to powder in a moment.”

“Mole-hill!” exclaimed Ben Zoof, stung to the quick. “I can tell you it would have caught up your bit of a comet and worn it like a feather in a cap.”

The professor looked angry, and Servadac having imposed silence upon his orderly, explained the worthy soldier’s sensitiveness on all that concerned Montmartre. Always obedient to his master, Ben Zoof held his tongue; but he felt that he could never forgive the slight that had been cast upon his beloved home.

It was now all-important to learn whether the astronomer had been able to continue his observations, and whether he had learned sufficient of Gallia’s path through space to make him competent to determine, at least approximately, the period of its revolution round the sun. With as much tact and caution as he could, Lieutenant Procope endeavored to intimate the general desire for some information on this point.

“Before the shock, sir,” answered the professor, “I had conclusively demonstrated the path of the comet; but, in consequence of the modifications which that shock has

entailed upon my comet's orbit, I have been compelled entirely to recommence my calculations."

The lieutenant looked disappointed.

"Although the orbit of the earth was unaltered," continued the professor, "the result of the collision was the projection of the comet into a new orbit altogether."

"And may I ask," said Procope, deferentially, "whether you have got the elements of the fresh orbit?"

"Yes."

"Then perhaps you know — "

"I know this, sir, that at 47 minutes 35.6 seconds after two o'clock on the morning of the 1st of January last, Gallia, in passing its ascending node, came in contact with the earth; that on the 10th of January it crossed the orbit of Venus; that it reached its perihelion on the 15th; that it re-crossed the orbit of Venus; that on the 1st of February it passed its descending node; on the 13th crossed the orbit of Mars; entered the zone of the telescopic planets on the 10th of March, and, attracting Nerina, carried it off as a satellite."

Servadac interposed:

"We are already acquainted with well-nigh all these extraordinary facts; many of them, moreover, we have learned from documents which we have picked up, and which, although unsigned, we cannot entertain a doubt have originated with you."

Professor Rosette drew himself up proudly and said: "Of course, they originated with me. I sent them off by hundreds. From whom else could they come?"

"From no one but yourself, certainly," rejoined the count, with grave politeness.

Hitherto the conversation had thrown no light upon the future movements of Gallia, and Rosette was disposed apparently to evade, or at least to postpone, the subject. When, therefore, Lieutenant Procope was about to press his inquiries in a more categorical form, Servadac, thinking it advisable not prematurely to press the little *savant* too far,

interrupted him by asking the professor how he accounted for the earth having suffered so little from such a formidable concussion.

“I account for it in this way,” answered Rosette: “the earth was traveling at the rate of 28,000 leagues an hour, and Gallia at the rate of 57,000 leagues an hour, therefore the result was the same as though a train rushing along at a speed of about 86,000 leagues an hour had suddenly encountered some obstacle. The nucleus of the comet, being excessively hard, has done exactly what a ball would do fired with that velocity close to a pane of glass. It has crossed the earth without cracking it.”

“It is possible you may be right,” said Servadac, thoughtfully.

“Right! of course I am right!” replied the snappish professor. Soon, however, recovering his equanimity, he continued: “It is fortunate that the earth was only touched obliquely; if the comet had impinged perpendicularly, it must have plowed its way deep below the surface, and the disasters it might have caused are beyond reckoning. Perhaps,” he added, with a smile, “even Montmartre might not have survived the calamity.”

“Sir!” shouted Ben Zoof, quite unable to bear the unprovoked attack.

“Quiet, Ben Zoof!” said Servadac sternly.

Fortunately for the sake of peace, Isaac Hakkabut, who at length was beginning to realize something of the true condition of things, came forward at this moment, and in a voice trembling with eagerness, implored the professor to tell him when they would all be back again upon the earth.

“Are you in a great hurry?” asked the professor coolly.

The Jew was about to speak again, when Captain Servadac interposed: “Allow me to say that, in somewhat more scientific terms, I was about to ask you the same question. Did I not understand you to say that, as the consequence of the collision, the character of the comet’s orbit has been changed?”

“You did, sir.”

“Did you imply that the orbit has ceased to be a parabola?”

“Just so.”

“Is it then an hyperbola? and are we to be carried on far and away into remote distance, and never, never to return?”

“I did not say an hyperbola.”

“And is it not?”

“It is not.”

“Then it must be an ellipse?”

“Yes.”

“And does its plane coincide with the plane of the earth?”

“Yes.”

“Then it must be a periodic comet?”

“It is.”

Servadac involuntarily raised a ringing shout of joy that echoed again along the gallery.

“Yes,” continued the professor, “Gallia is a periodic comet, and allowing for the perturbations to which it is liable from the attraction of Mars and Jupiter and Saturn, it will return to the earth again in two years precisely.”

“You mean that in two years after the first shock, Gallia will meet the earth at the same point as they met before?” said Lieutenant Procope.

“I am afraid so,” said Rosette.

“Why afraid?”

“Because we are doing exceedingly well as we are.” The professor stamped his foot upon the ground, by way of emphasis, and added, “If I had my will, Gallia should never return to the earth again!”

CHAPTER IV. A REVISED CALENDAR

All previous hypotheses, then, were now forgotten in the presence of the one great fact that Gallia was a comet and gravitating through remote solar regions. Captain Servadac became aware that the huge disc that had been looming through the clouds after the shock was the form of the retreating earth, to the proximity of which the one high tide they had experienced was also to be attributed.

As to the fulfillment of the professor’s prediction of an ultimate return to the terrestrial sphere, that was a point on which it must be owned that the captain, after the first flush of his excitement was over, was not without many misgivings.

The next day or two were spent in providing for the accommodation of the new comer. Fortunately his desires were very moderate; he seemed to live among the stars, and as long as he was well provided with coffee, he cared little for luxuries, and paid little or no regard to the ingenuity with which all the internal arrangements of Nina’s Hive had been devised. Anxious to show all proper respect to his former tutor, Servadac proposed to leave the most comfortable apartment of the place at his disposal; but the professor resolutely declined to occupy it, saying that what he required was a small chamber, no matter how small, provided that it was elevated and secluded, which he could use as an observatory and where he might prosecute his studies without disturbance. A general search was instituted, and before long they were lucky enough to find, about a hundred feet above the central grotto, a small recess or reduct hollowed, as it were, in the mountain side, which would exactly answer their purpose. It contained room enough for a bed, a table, an arm-chair, a chest of drawers, and, what was of still more consequence, for the indispensable telescope. One small stream of lava, an off-shoot of the great torrent, sufficed to warm the apartment enough.

In these retired quarters the astronomer took up his abode. It was on all hands acknowledged to be advisable to let him go on entirely in his own way. His meals were taken to him at stated intervals; he slept but little; carried on his calculations by day, his observations by night, and very rarely made his appearance amongst the rest of the little community.

The cold now became very intense, the thermometer registering 30 degrees F. below zero. The mercury, however, never exhibited any of those fluctuations that are ever and again to be observed in variable climates, but continued slowly and steadily to fall, and

in all probability would continue to do so until it reached the normal temperature of the regions of outlying space.

This steady sinking of the mercury was accompanied by a complete stillness of the atmosphere; the very air seemed to be congealed; no particle of it stirred; from zenith to horizon there was never a cloud; neither were there any of the damp mists or dry fogs which so often extend over the polar regions of the earth; the sky was always clear; the sun shone by day and the stars by night without causing any perceptible difference in the temperature.

These peculiar conditions rendered the cold endurable even in the open air. The cause of so many of the diseases that prove fatal to Arctic explorers resides in the cutting winds, unwholesome fogs, or terrible snow drifts, which, by drying up, relaxing, or otherwise affecting the lungs, make them incapable of fulfilling their proper functions. But during periods of calm weather, when the air has been absolutely still, many polar navigators, well-clothed and properly fed, have been known to withstand a temperature when the thermometer has fallen to 60 degrees below zero. It was the experience of Parry upon Melville Island, of Kane beyond latitude 81 degrees north, and of Hall and the crew of the *Polaris*, that, however intense the cold, in the absence of the wind they could always brave its rigor.

Notwithstanding, then, the extreme lowness of the temperature, the little population found that they were able to move about in the open air with perfect immunity. The governor general made it his special care to see that his people were all well fed and warmly clad. Food was both wholesome and abundant, and besides the furs brought from the *Dobryna's* stores, fresh skins could very easily be procured and made up into wearing apparel. A daily course of out-door exercise was enforced upon everyone; not even Pablo and Nina were exempted from the general rule; the two children, muffled up in furs, looking like little Esquimeaux, skated along together, Pablo ever at his companion's side, ready to give her a helping hand whenever she was weary with her exertions.

After his interview with the newly arrived astronomer, Isaac Hakkabut slunk back again to his tartan. A change had come over his ideas; he could no longer resist the conviction that he was indeed millions and millions of miles away from the earth, where he had carried on so varied and remunerative a traffic. It might be imagined that this realization of his true position would have led him to a better mind, and that, in some degree at

least, he would have been induced to regard the few fellow-creatures with whom his lot had been so strangely cast, otherwise than as mere instruments to be turned to his own personal and pecuniary advantage; but no — the desire of gain was too thoroughly ingrained into his hard nature ever to be eradicated, and secure in his knowledge that he was under the protection of a French officer, who, except under the most urgent necessity, would not permit him to be molested in retaining his property, he determined to wait for some emergency to arise which should enable him to use his present situation for his own profit.

On the one hand, the Jew took it into account that although the chances of returning to the earth might be remote, yet from what he had heard from the professor he could not believe that they were improbable; on the other, he knew that a considerable sum of money, in English and Russian coinage, was in the possession of various members of the little colony, and this, although valueless now, would be worth as much as ever if the proper condition of things should be restored; accordingly, he set his heart on getting all the monetary wealth of Gallia into his possession, and to do this he must sell his goods. But he would not sell them yet; there might come a time when for many articles the supply would not be equal to the demand; that would be the time for him; by waiting he reckoned he should be able to transact some lucrative business.

Such in his solitude were old Isaac’s cogitations, whilst the universal population of Nina’s Hive were congratulating themselves upon being rid of his odious presence.

As already stated in the message brought by the carrier pigeon, the distance traveled by Gallia in April was 39,000,000 leagues, and at the end of the month she was 110,000,000 leagues from the sun. A diagram representing the elliptical orbit of the planet, accompanied by an ephemeris made out in minute detail, had been drawn out by the professor. The curve was divided into twenty-four sections of unequal length, representing respectively the distance described in the twenty-four months of the Gallian year, the twelve former divisions, according to Kepler’s law, gradually diminishing in length as they approached the point denoting the aphelion and increasing as they neared the perihelion.

It was on the 12th of May that Rosette exhibited this result of his labors to Servadac, the count, and the lieutenant, who visited his apartment and naturally examined the drawing with the keenest interest. Gallia’s path, extending beyond the orbit of Jupiter, lay clearly defined before their eyes, the progress along the orbit and the solar distances being

inserted for each month separately. Nothing could look plainer, and if the professor's calculations were correct (a point upon which they dared not, if they would, express the semblance of a doubt), Gallia would accomplish her revolution in precisely two years, and would meet the earth, which would in the same period of time have completed two annual revolutions, in the very same spot as before. What would be the consequences of a second collision they scarcely ventured to think.

Without lifting his eye from the diagram, which he was still carefully scrutinizing, Servadac said, "I see that during the month of May, Gallia will only travel 30,400,000 leagues, and that this will leave her about 140,000,000 leagues distant from the sun."

"Just so," replied the professor.

"Then we have already passed the zone of the telescopic planets, have we not?" asked the count.

"Can you not use your eyes?" said the professor, testily. "If you will look you will see the zone marked clearly enough upon the map."

Without noticing the interruption, Servadac continued his own remarks, "The comet then, I see, is to reach its aphelion on the 15th of January, exactly a twelvemonth after passing its perihelion."

"A twelvemonth! Not a Gallian twelvemonth?" exclaimed Rosette.

Servadac looked bewildered. Lieutenant Procope could not suppress a smile.

"What are you laughing at?" demanded the professor, turning round upon him angrily.

"Nothing, sir; only it amuses me to see how you want to revise the terrestrial calendar."

"I want to be logical, that's all."

"By all manner of means, my dear professor, let us be logical."

"Well, then, listen to me," resumed the professor, stiffly. "I presume you are taking it for granted that the Gallian year — by which I mean the time in which Gallia makes one revolution round the sun — is equal in length to two terrestrial years."

They signified their assent.

“And that year, like every other year, ought to be divided into twelve months.”

“Yes, certainly, if you wish it,” said the captain, acquiescing.

“If I wish it!” exclaimed Rosette. “Nothing of the sort! Of course a year must have twelve months!”

“Of course,” said the captain.

“And how many days will make a month?” asked the professor.

“I suppose sixty or sixty-two, as the case may be. The days now are only half as long as they used to be,” answered the captain.

“Servadac, don’t be thoughtless!” cried Rosette, with all the petulant impatience of the old pedagogue. “If the days are only half as long as they were, sixty of them cannot make up a twelfth part of Gallia’s year — cannot be a month.”

“I suppose not,” replied the confused captain.

“Do you not see, then,” continued the astronomer, “that if a Gallian month is twice as long as a terrestrial month, and a Gallian day is only half as long as a terrestrial day, there must be a hundred and twenty days in every month?”

“No doubt you are right, professor,” said Count Timascheff; “but do you not think that the use of a new calendar such as this would practically be very troublesome?”

“Not at all! not at all! I do not intend to use any other,” was the professor’s bluff reply.

After pondering for a few moments, the captain spoke again. “According, then, to this new calendar, it isn’t the middle of May at all; it must now be some time in March.”

“Yes,” said the professor, “to-day is the 26th of March. It is the 266th day of the Gallian year. It corresponds with the 133d day of the terrestrial year. You are quite correct, it is the 26th of March.”

“Strange!” muttered Servadac.

“And a month, a terrestrial month, thirty old days, sixty new days hence, it will be the 86th of March.”

“Ha, ha!” roared the captain; “this is logic with a vengeance!”

The old professor had an undefined consciousness that his former pupil was laughing at him; and as it was growing late, he made an excuse that he had no more leisure. The visitors accordingly quitted the observatory.

It must be owned that the revised calendar was left to the professor’s sole use, and the colony was fairly puzzled whenever he referred to such unheard-of dates as the 47th of April or the 118th of May.

According to the old calendar, June had now arrived; [illustration omitted] [page intentionally blank] and by the professor’s tables Gallia during the month would have advanced 27,500,000 leagues farther along its orbit, and would have attained a distance of 155,000,000 leagues from the sun. The thermometer continued to fall; the atmosphere remained clear as heretofore. The population performed their daily avocations with systematic routine; and almost the only thing that broke the monotony of existence was an occasional visit from the blustering, nervous, little professor, when some sudden fancy induced him to throw aside his astronomical studies for a time, and pay a visit to the common hall. His arrival there was generally hailed as the precursor of a little season of excitement. Somehow or other the conversation would eventually work its way round to the topic of a future collision between the comet and the earth; and in the same degree as this was a matter of sanguine anticipation to Captain Servadac and his friends, it was a matter of aversion to the astronomical enthusiast, who had no desire to quit his present quarters in a sphere which, being of his own discovery, he could hardly have cared for more if it had been of his own creation. The interview would often terminate in a scene of considerable animation.

On the 27th of June (old calendar) the professor burst like a cannon-ball into the central hall, where they were all assembled, and without a word of salutation or of preface, accosted the lieutenant in the way in which in earlier days he had been accustomed to speak to an idle school-boy, “Now, lieutenant! no evasions! no shufflings! Tell me, have you or have you not circumnavigated Gallia?”

The lieutenant drew himself up stiffly. “Evasions! shufflings! I am not accustomed, sir — ” he began in a tone evidencing no little resentment; but catching a hint from the count he subdued his voice, and simply said, “We have.”

“And may I ask,” continued the professor, quite unaware of his previous discourtesy, “whether, when you made your voyage, you took any account of distances?”

“As approximately as I could,” replied the lieutenant; “I did what I could by log and compass. I was unable to take the altitude of sun or star.”

“At what result did you arrive? What is the measurement of our equator?”

“I estimate the total circumference of the equator to be about 1,400 miles.”

“Ah!” said the professor, more than half speaking to himself, “a circumference of 1,400 miles would give a diameter of about 450 miles. That would be approximately about one-sixteenth of the diameter of the earth.”

Raising his voice, he continued, “Gentlemen, in order to complete my account of my comet Gallia, I require to know its area, its mass, its volume, its density, its specific gravity.”

“Since we know the diameter,” remarked the lieutenant, “there can be no difficulty in finding its surface and its volume.”

“And did I say there was any difficulty?” asked the professor, fiercely. “I have been able to reckon that ever since I was born.”

“Cock-a-doodle-doo!” cried Ben Zoof, delighted at any opportunity of paying off his old grudge.

The professor looked at him, but did not vouchsafe a word. Addressing the captain, he said, “Now, Servadac, take your paper and a pen, and find me the surface of Gallia.”

With more submission than when he was a school-boy, the captain sat down and endeavored to recall the proper formula.

“The surface of a sphere? Multiply circumference by diameter.”

“Right!” cried Rosette; “but it ought to be done by this time.”

“Circumference, 1,400; diameter, 450; area of surface, 630,000,” read the captain.

“True,” replied Rosette, “630,000 square miles; just 292 times less than that of the earth.”

“Pretty little comet! nice little comet!” muttered Ben Zoof.

The astronomer bit his lip, snorted, and cast at him a withering look, but did not take any further notice.

“Now, Captain Servadac,” said the professor, “take your pen again, and find me the volume of Gallia.”

The captain hesitated.

“Quick, quick!” cried the professor, impatiently; “surely you have not forgotten how to find the volume of a sphere!”

“A moment’s breathing time, please.”

“Breathing time, indeed! A mathematician should not want breathing time! Come, multiply the surface by the third of the radius. Don’t you recollect?”

Captain Servadac applied himself to his task while the by-standers waited, with some difficulty suppressing their inclination to laugh. There was a short silence, at the end of which Servadac announced that the volume of the comet was 47,880,000 cubic miles.

“Just about 5,000 times less than the earth,” observed the lieutenant.

“Nice little comet! pretty little comet!” said Ben Zoof.

The professor scowled at him, and was manifestly annoyed at having the insignificant dimensions of his comet pointed out in so disparaging a manner. Lieutenant Procope further remarked that from the earth he supposed it to be about as conspicuous as a star of the seventh magnitude, and would require a good telescope to see it.

“Ha, ha!” laughed the orderly, aloud; “charming little comet! so pretty; and so modest!”

“You rascal!” roared the professor, and clenched his hand in passion, as if about to strike him. Ben Zoof laughed the more, and was on the point of repeating his satirical comments, when a stern order from the captain made him hold his tongue. The truth was that the professor was just as sensitive about his comet as the orderly was about Montmartre, and if the contention between the two had been allowed to go on unchecked, it is impossible to say what serious quarrel might not have arisen.

When Professor Rosette’s equanimity had been restored, he said, “Thus, then, gentlemen, the diameter, the surface, the volume of my comet are settled; but there is more to be done. I shall not be satisfied until, by actual measurement, I have determined its mass, its density, and the force of gravity at its surface.”

“A laborious problem,” remarked Count Timascheff.

“Laborious or not, it has to be accomplished. I am resolved to find out what my comet weighs.”

“Would it not be of some assistance, if we knew of what substance it is composed?” asked the lieutenant.

“That is of no moment at all,” replied the professor; “the problem is independent of it.”

“Then we await your orders,” was the captain’s reply.

“You must understand, however,” said Rosette, “that there are various preliminary calculations to be made; you will have to wait till they are finished.”

“As long as you please,” said the count.

“No hurry at all,” observed the captain, who was not in the least impatient to continue his mathematical exercises.

“Then, gentlemen,” said the astronomer, “with your leave we will for this purpose make an appointment a few weeks hence. What do you say to the 62d of April?”

Without noticing the general smile which the novel date provoked, the astronomer left the hall, and retired to his observatory.

CHAPTER V. WANTED: A STEELYARD

Under the still diminishing influence of the sun’s attraction, but without let or hindrance, Gallia continued its interplanetary course, accompanied by Nerina, its captured satellite, which performed its fortnightly revolutions with unvarying regularity.

Meanwhile, the question beyond all others important was ever recurring to the minds of Servadac and his two companions: were the astronomer’s calculations correct, and was there a sound foundation for his prediction that the comet would again touch the earth? But whatever might be their doubts or anxieties, they were fain to keep all their misgivings to themselves; the professor was of a temper far too cross-grained for them to venture to ask him to revise or re-examine the results of his observations.

The rest of the community by no means shared in their uneasiness. Negrete and his fellow-countrymen yielded to their destiny with philosophical indifference. Happier and better provided for than they had ever been in their lives, it did not give them a passing thought, far less cause any serious concern, whether they were still circling round the sun, or whether they were being carried right away within the limits of another system. Utterly careless of the future, the majos, light-hearted as ever, carolled out their favorite songs, just as if they had never quitted the shores of their native land.

Happiest of all were Pablo and Nina. Racing through the galleries of the Hive, clambering over the rocks upon the shore, one day skating far away across the frozen ocean, the next fishing in the lake that was kept liquid by the heat of the lava-torrent, the two children led a life of perpetual enjoyment. Nor was their recreation allowed to interfere with their studies. Captain Servadac, who in common with the count really liked them both, conceived that the responsibilities of a parent in some degree had devolved upon him, and took great care in superintending their daily lessons, which he succeeded in making hardly less pleasant than their sports.

Indulged and loved by all, it was little wonder that young Pablo had no longing for the scorching plains of Andalusia, or that little Nina had lost all wish to return with her pet goat to the barren rocks of Sardinia. They had now a home in which they had nothing to desire.

“Have you no father nor mother?” asked Pablo, one day.

“No,” she answered.

“No more have I,” said the boy, “I used to run along by the side of the diligences when I was in Spain.”

“I used to look after goats at Madalena,” said Nina; “but it is much nicer here — I am so happy here. I have you for a brother, and everybody is so kind. I am afraid they will spoil us, Pablo,” she added, smiling.

“Oh, no, Nina; you are too good to be spoiled, and when I am with you, you make me good too,” said Pablo, gravely.

July had now arrived. During the month Gallia’s advance along its orbit would be reduced to 22,000,000 leagues, the distance from the sun at the end being 172,000,000 leagues, about four and a half times as great as the average distance of the earth from the sun. It was traveling now at about the same speed as the earth, which traverses the ecliptic at a rate of 21,000,000 leagues a month, or 28,800 leagues an hour.

In due time the 62d April, according to the revised Gallian calendar, dawned; and in punctual fulfillment of the professor’s appointment, a note was delivered to Servadac to say that he was ready, and hoped that day to commence operations for calculating the mass and density of his comet, as well as the force of gravity at its surface.

A point of far greater interest to Captain Servadac and his friends would have been to ascertain the nature of the substance of which the comet was composed, but they felt pledged to render the professor any aid they could in the researches upon which he had set his heart. Without delay, therefore, they assembled in the central hall, where they were soon joined by Rosette, who seemed to be in fairly good temper.

“Gentlemen,” he began, “I propose to-day to endeavor to complete our observations of the elements of my comet. Three matters of investigation are before us. First, the measure of gravity at its surface; this attractive force we know, by the increase of our own muscular force, must of course be considerably less than that at the surface of the earth. Secondly, its mass, that is, the quality of its matter. And thirdly, its density or quantity of matter in a unit of its volume. We will proceed, gentlemen, if you please, to weigh Gallia.”

Ben Zoof, who had just entered the hall, caught the professor's last sentence, and without saying a word, went out again and was absent for some minutes. When he returned, he said, "If you want to weigh this comet of yours, I suppose you want a pair of scales; but I have been to look, and I cannot find a pair anywhere. And what's more," he added mischievously, "you won't get them anywhere."

A frown came over the professor's countenance. Servadac saw it, and gave his orderly a sign that he should desist entirely from his bantering.

"I require, gentlemen," resumed Rosette, "first of all to know by how much the weight of a kilogramme here differs from its weight upon the earth; the attraction, as we have said, being less, the weight will proportionately be less also."

"Then an ordinary pair of scales, being under the influence of attraction, I suppose, would not answer your purpose," submitted the lieutenant.

"And the very kilogramme weight you used would have become lighter," put in the count, deferentially.

"Pray, gentlemen, do not interrupt me," said the professor, authoritatively, as if *ex cathedra*. "I need no instruction on these points."

Procope and Timascheff demurely bowed their heads.

The professor resumed. "Upon a steelyard, or spring-balance, dependent upon mere tension or flexibility, the attraction will have no influence. If I suspend a weight equivalent to the weight of a kilogramme, the index will register the proper weight on the surface of Gallia. Thus I shall arrive at the difference I want: the difference between the earth's attraction and the comet's. Will you, therefore, have the goodness to provide me at once with a steelyard and a tested kilogramme?"

The audience looked at one another, and then at Ben Zoof, who was thoroughly acquainted with all their resources. "We have neither one nor the other," said the orderly.

The professor stamped with vexation.

"I believe old Hakkabut has a steelyard on board his tartan," said Ben Zoof, presently.

“Then why didn’t you say so before, you idiot?” roared the excitable little man.

Anxious to pacify him, Servadac assured him that every exertion should be made to procure the instrument, and directed Ben Zoof to go to the Jew and borrow it.

“No, stop a moment,” he said, as Ben Zoof was moving away on his, errand; “perhaps I had better go with you myself; the old Jew may make a difficulty about lending us any of his property.”

“Why should we not all go?” asked the count; “we should see what kind of a life the misanthrope leads on board the *Hansa*.”

The proposal met with general approbation. Before they started, Professor Rosette requested that one of the men might be ordered to cut him a cubic decimeter out of the solid substance of Gallia. “My engineer is the man for that,” said the count; “he will do it well for you if you will give him the precise measurement.”

“What! you don’t mean,” exclaimed the professor, again going off into a passion, “that you haven’t a proper measure of length?”

Ben Zoof was sent off to ransack the stores for the article in question, but no measure was forthcoming. “Most likely we shall find one on the tartan,” said the orderly.

“Then let us lose no time in trying,” answered the professor, as he hustled with hasty strides into the gallery.

The rest of the party followed, and were soon in the open air upon the rocks that overhung the shore. They descended to the level of the frozen water and made their way towards the little creek where the *Dobryna* and the *Hansa* lay firmly imprisoned in their icy bonds.

The temperature was low beyond previous experience; but well muffled up in fur, they all endured it without much actual suffering. Their breath issued in vapor, which was at once congealed into little crystals upon their whiskers, beards, eyebrows, and eyelashes, until their faces, covered with countless snow-white prickles, were truly ludicrous. The little professor, most comical of all, resembled nothing so much as the cub of an Arctic bear.

It was eight o’clock in the morning. The sun was rapidly approaching the zenith; but its disc, from the extreme remoteness, was proportionately dwarfed; its beams being all but destitute of their proper warmth and radiance. The volcano to its very summit and the surrounding rocks were still covered with the unsullied mantle of snow that had fallen while the atmosphere was still to some extent charged with vapor; but on the north side the snow had given place to the cascade of fiery lava, which, making its way down the sloping rocks as far as the vaulted opening of the central cavern, fell thence perpendicularly into the sea. Above the cavern, 130 feet up the mountain, was a dark hole, above which the stream of lava made a bifurcation in its course. From this hole projected the case of an astronomer’s telescope; it was the opening of Palmyrin Rosette’s observatory.

Sea and land seemed blended into one dreary whiteness, to which the pale blue sky offered scarcely any contrast. The shore was indented with the marks of many footsteps left by the colonists either on their way to collect ice for drinking purposes, or as the result of their skating expeditions; the edges of the skates had cut out a labyrinth of curves complicated as the figures traced by aquatic insects upon the surface of a pool.

Across the quarter of a mile of level ground that lay between the mountain and the creek, a series of footprints, frozen hard into the snow, marked the course taken by Isaac Hakkabut on his last return from Nina’s Hive.

On approaching the creek, Lieutenant Procope drew his companions’ attention to the elevation of the *Dobryna’s* and *Hansa’s* waterline, both vessels being now some fifteen feet above the level of the sea.

“What a strange phenomenon!” exclaimed the captain.

“It makes me very uneasy,” rejoined the lieutenant; “in shallow places like this, as the crust of ice thickens, it forces everything upwards with irresistible force.”

“But surely this process of congelation must have a limit!” said the count.

“But who can say what that limit will be? Remember that we have not yet reached our maximum of cold,” replied Procope.

“Indeed, I hope not!” exclaimed the professor; “where would be the use of our traveling 200,000,000 leagues from the sun, if we are only to experience the same temperature as

we should find at the poles of the earth?”

“Fortunately for us, however, professor,” said the lieutenant, with a smile, “the temperature of the remotest space never descends beyond 70 degrees below zero.”

“And as long as there is no wind,” added Servadac, “we may pass comfortably through the winter, without a single attack of catarrh.”

Lieutenant Procope proceeded to impart to the count his anxiety about the situation of his yacht. He pointed out that by the constant superposition of new deposits of ice, the vessel would be elevated to a great height, and consequently in the event of a thaw, it must be exposed to a calamity similar to those which in polar seas cause destruction to so many whalers.

There was no time now for concerting measures offhand to prevent the disaster, for the other members of the party had already reached the spot where the *Hansa* lay bound in her icy trammels. A flight of steps, recently hewn by Hakkabut himself, gave access for the present to the gangway, but it was evident that some different contrivance would have to be resorted to when the tartan should be elevated perhaps to a hundred feet.

A thin curl of blue smoke issued from the copper funnel that projected above the mass of snow which had accumulated upon the deck of the *Hansa*. The owner was sparing of his fuel, and it was only the non-conducting layer of ice enveloping the tartan that rendered the internal temperature endurable.

“Hi! old Nebuchadnezzar, where are you?” shouted Ben Zoof, at the full strength of his lungs.

At the sound of his voice, the cabin door opened, and the Jew’s head and shoulders protruded onto the deck.

CHAPTER VI. MONEY AT A PREMIUM

“Who’s there? I have nothing here for anyone. Go away!” Such was the inhospitable greeting with which Isaac Hakkabut received his visitors.

“Hakkabut! do you take us for thieves?” asked Servadac, in tones of stern displeasure.

“Oh, your Excellency, my lord, I did not know that it was you,” whined the Jew, but without emerging any farther from his cabin.

“Now, old Hakkabut, come out of your shell! Come and show the governor proper respect, when he gives you the honor of his company,” cried Ben Zoof, who by this time had clambered onto the deck.

After considerable hesitation, but still keeping his hold upon the cabin-door, the Jew made up his mind to step outside. “What do you want?” he inquired, timorously.

“I want a word with you,” said Servadac, “but I do not want to stand talking out here in the cold.”

Followed by the rest of the party, he proceeded to mount the steps. The Jew trembled from head to foot. “But I cannot let you into my cabin. I am a poor man; I have nothing to give you,” he moaned piteously.

“Here he is!” laughed Ben Zoof, contemptuously; “he is beginning his chapter of lamentations over again. But standing out here will never do. Out of the way, old Hakkabut, I say! out of the way!” and, without more ado, he thrust the astonished Jew on one side and opened the door of the cabin.

Servadac, however, declined to enter until he had taken the pains to explain to the owner of the tartan that he had no intention of laying violent hands upon his property, and that if the time should ever come that his cargo was in requisition for the common use, he should receive a proper price for his goods, the same as he would in Europe.

“Europe, indeed!” muttered the Jew maliciously between his teeth. “European prices will not do for me. I must have Gallian prices — and of my own fixing, too!”

So large a portion of the vessel had been appropriated to the cargo that the space reserved for the cabin was of most meager dimensions. In one corner of the

compartment stood a small iron stove, in which smoldered a bare handful of coals; in another was a trestle-board which served as a bed; two or three stools and a rickety deal table, together with a few cooking utensils, completed a stock of furniture which was worthy of its proprietor.

On entering the cabin, Ben Zoof's first proceeding was to throw on the fire a liberal supply of coals, utterly regardless of the groans of poor Isaac, who would almost as soon have parted with his own bones as submit to such reckless expenditure of his fuel. The perishing temperature of the cabin, however, was sufficient justification for the orderly's conduct, and by a little skillful manipulation he soon succeeded in getting up a tolerable fire.

The visitors having taken what seats they could, Hakkabut closed the door, and, like a prisoner awaiting his sentence, stood with folded hands, expecting the captain to speak.

"Listen," said Servadac; "we have come to ask a favor."

Imagining that at least half his property was to be confiscated, the Jew began to break out into his usual formula about being a poor man and having nothing to spare; but Servadac, without heeding his complainings, went on: "We are not going to ruin you, you know."

Hakkabut looked keenly into the captain's face.

"We have only come to know whether you can lend us a steelyard."

So far from showing any symptom of relief, the old miser exclaimed, with a stare of astonishment, as if he had been asked for some thousand francs: "A steelyard?"

"Yes!" echoed the professor, impatiently; "a steelyard."

"Have you not one?" asked Servadac.

"To be sure he has!" said Ben Zoof.

Old Isaac stammered and stuttered, but at last confessed that perhaps there might be one amongst the stores.

"Then, surely, you will not object to lend it to us?" said the captain.

“Only for one day,” added the professor.

The Jew stammered again, and began to object. “It is a very delicate instrument, your Excellency. The cold, you know, the cold may do injury to the spring; and perhaps you are going to use it to weigh something very heavy.”

“Why, old Ephraim, do you suppose we are going to weigh a mountain with it?” said Ben Zoof.

“Better than that!” cried out the professor, triumphantly; “we are going to weigh Gallia with it; my comet.”

“Merciful Heaven!” shrieked Isaac, feigning consternation at the bare suggestion.

Servadac knew well enough that the Jew was holding out only for a good bargain, and assured him that the steelyard was required for no other purpose than to weigh a kilogramme, which (considering how much lighter everything had become) could not possibly put the slightest strain upon the instrument.

The Jew still spluttered, and moaned, and hesitated.

“Well, then,” said Servadac, “if you do not like to lend us your steelyard, do you object to sell it to us?”

Isaac fairly shrieked aloud. “God of Israel!” he ejaculated, “sell my steelyard? Would you deprive me of one of the most indispensable of my means of livelihood? How should I weigh my merchandise without my steelyard — my solitary steelyard, so delicate and so correct?”

The orderly wondered how his master could refrain from strangling the old miser upon the spot; but Servadac, rather amused than otherwise, determined to try another form of persuasion. “Come, Hakkabut, I see that you are not disposed either to lend or to sell your steelyard. What do you say to letting us hire it?”

The Jew’s eyes twinkled with a satisfaction that he was unable to conceal. “But what security would you give? The instrument is very valuable;” and he looked more cunning than ever.

“What is it worth? If it is worth twenty francs, I will leave a deposit of a hundred. Will that satisfy you?”

He shook his head doubtfully. “It is very little; indeed, it is too little, your Excellency. Consider, it is the only steelyard in all this new world of ours; it is worth more, much more. If I take your deposit it must be in gold — all gold. But how much do you agree to give me for the hire — the hire, one day?”

“You shall have twenty francs,” said Servadac.

“Oh, it is dirt cheap; but never mind, for one day, you shall have it. Deposit in gold money a hundred francs, and twenty francs for the hire.” The old man folded his hands in meek resignation.

“The fellow knows how to make a good bargain,” said Servadac, as Isaac, after casting a distrustful look around, went out of the cabin.

“Detestable old wretch!” replied the count, full of disgust.

Hardly a minute elapsed before the Jew was back again, carrying his precious steelyard with ostentatious care. It was of an ordinary kind. A spring balance, fitted with a hook, held the article to be weighed; a pointer, revolving on a disc, indicated the weight of the article. Professor Rosette was manifestly right in asserting that such a machine would register results quite independently of any change in the force of attraction. On the earth it would have registered a kilogramme as a kilogramme; here it recorded a different value altogether, as the result of the altered force of gravity.

Gold coinage to the worth of one hundred and twenty francs was handed over to the Jew, who clutched at the money with unmistakable eagerness. The steelyard was committed to the keeping of Ben Zoof, and the visitors prepared to quit the *Hansa*.

All at once it occurred to the professor that the steelyard would be absolutely useless to him, unless he had the means for ascertaining the precise measurement of the unit of the soil of Gallia which he proposed to weigh. “Something more you must lend me,” he said, addressing the Jew. “I must have a measure, and I must have a kilogramme.”

“I have neither of them,” answered Isaac. “I have neither. I am sorry; I am very sorry.” And this time the old Jew spoke the truth. He would have been really glad to do another

stroke or two of business upon terms as advantageous as the transaction he had just concluded.

Palmyrin Rosette scratched his head in perplexity, glaring round upon his companions as if they were personally responsible for his annoyance. He muttered something about finding a way out of his difficulty, and hastily mounted the cabin-ladder. The rest followed, but they had hardly reached the deck when the chink of money was heard in the room below. Hakkabut was locking away the gold in one of the drawers.

Back again, down the ladder, scrambled the little professor, and before the Jew was aware of his presence he had seized him by the tail of his slouchy overcoat. “Some of your money! I must have money!” he said.

“Money!” gasped Hakkabut; “I have no money.” He was pale with fright, and hardly knew what he was saying.

“Falsehood!” roared Rosette. “Do you think I cannot see?” And peering down into the drawer which the Jew was vainly trying to close, he cried, “Heaps of money! French money! Five-franc pieces! the very thing I want! I must have them!”

The captain and his friends, who had returned to the cabin looked on with mingled amusement and bewilderment.

“They are mine!” shrieked Hakkabut.

“I will have them!” shouted the professor.

“You shall kill me first!” bellowed the Jew.

“No, but I must!” persisted the professor again.

It was manifestly time for Servadac to interfere. “My dear professor,” he said, smiling, “allow me to settle this little matter for you.”

“Ah! your Excellency,” moaned the agitated Jew, “protect me! I am but a poor man —”

“None of that, Hakkabut. Hold your tongue.” And, turning to Rosette, the captain said, “If, sir, I understand right, you require some silver five-franc pieces for your

operation?”

“Forty,” said Rosette, surlily.

“Two hundred francs!” whined Hakkabut.

“Silence!” cried the captain.

“I must have more than that,” the professor continued. “I want ten two-franc pieces, and twenty half-francs.”

“Let me see,” said Servadac, “how much is that in all? Two hundred and thirty francs, is it not?”

“I dare say it is,” answered the professor.

“Count, may I ask you,” continued Servadac, “to be security to the Jew for this loan to the professor?”

“Loan!” cried the Jew, “do you mean only a loan?”

“Silence!” again shouted the captain.

Count Timascheff, expressing his regret that his purse contained only paper money, begged to place it at Captain Servadac’s disposal.

“No paper, no paper!” exclaimed Isaac. “Paper has no currency in Gallia.”

“About as much as silver,” coolly retorted the count.

“I am a poor man,” began the Jew.

“Now, Hakkabut, stop these miserable lamentations of yours, once for all. Hand us over two hundred and thirty francs in silver money, or we will proceed to help ourselves.”

Isaac began to yell with all his might: “Thieves! thieves!”

In a moment Ben Zoof’s hand was clasped tightly over his mouth. “Stop that howling, Belshazzar!”

“Let him alone, Ben Zoof. He will soon come to his senses,” said Servadac, quietly.

When the old Jew had again recovered himself, the captain addressed him. “Now, tell us, what interest do you expect?”

Nothing could overcome the Jew’s anxiety to make another good bargain. He began: “Money is scarce, very scarce, you know — ”

“No more of this!” shouted Servadac. “What interest, I say, what interest do you ask?”

Faltering and undecided still, the Jew went on. “Very scarce, you know. Ten francs a day, I think, would not be unreasonable, considering — ”

The count had no patience to allow him to finish what he was about to say. He flung down notes to the value of several rubles. With a greediness that could not be concealed, Hakkabut grasped them all. Paper, indeed, they were; but the cunning Israelite knew that they would in any case be security far beyond the value of his cash. He was making some eighteen hundred per cent. interest, and accordingly chuckled within himself at his unexpected stroke of business.

The professor pocketed his French coins with a satisfaction far more demonstrative. “Gentlemen,” he said, “with these franc pieces I obtain the means of determining accurately both a meter and a kilogramme.”

CHAPTER VII. GALLIA WEIGHED

A quarter of an hour later, the visitors to the *Hansa* had reassembled in the common hall of Nina’s Hive.

“Now, gentlemen, we can proceed,” said the professor. “May I request that this table may be cleared?”

Ben Zoof removed the various articles that were lying on the table, and the coins which had just been borrowed from the Jew were placed upon it in three piles, according to their value.

The professor commenced. “Since none of you gentlemen, at the time of the shock, took the precaution to save either a meter measure or a kilogramme weight from the earth, and since both these articles are necessary for the calculation on which we are engaged, I have been obliged to devise means of my own to replace them.”

This exordium delivered, he paused and seemed to watch its effect upon his audience, who, however, were too well acquainted with the professor’s temper to make any attempt to exonerate themselves from the rebuke of carelessness, and submitted silently to the implied reproach.

“I have taken pains,” he continued, “to satisfy myself that these coins are in proper condition for my purpose. I find them unworn and unchipped; indeed, they are almost new. They have been hoarded instead of circulated; accordingly, they are fit to be utilized for my purpose of obtaining the precise length of a terrestrial meter.”

Ben Zoof looked on in perplexity, regarding the lecturer with much the same curiosity as he would have watched the performances of a traveling mountebank at a fair in Montmartre; but Servadac and his two friends had already divined the professor’s meaning. They knew that French coinage is all decimal, the franc being the standard of which the other coins, whether gold, silver, or copper, are multiples or measures; they knew, too, that the caliber or diameter of each piece of money is rigorously determined by law, and that the diameters of the silver coins representing five francs, two francs, and fifty centimes measure thirty-seven, twenty-seven, and eighteen millimeters respectively; and they accordingly guessed that Professor Rosette had conceived the plan of placing such a number of these coins in juxtaposition that the length of their

united diameters should measure exactly the thousand millimeters that make up the terrestrial meter.

The measurement thus obtained was by means of a pair of compasses divided accurately into ten equal portions, or decimeters, each of course 3.93 inches long. A lath was then cut of this exact length and given to the engineer of the *Dobryna*, who was directed to cut out of the solid rock the cubic decimeter required by the professor.

The next business was to obtain the precise weight of a kilogramme. This was by no means a difficult matter. Not only the diameters, but also the weights, of the French coins are rigidly determined by law, and as the silver five-franc pieces always weigh exactly twenty-five grammes, the united weight of forty of these coins is known to amount to one kilogramme.

“Oh!” cried Ben Zoof; “to be able to do all this I see you must be rich as well as learned.”

With a good-natured laugh at the orderly’s remark, the meeting adjourned for a few hours. By the appointed time the engineer had finished his task, and with all due care had prepared a cubic decimeter of the material of the comet.

“Now, gentlemen,” said Professor Rosette, “we are in a position to complete our calculation; we can now arrive at Gallia’s attraction, density, and mass.”

Everyone gave him his complete attention.

“Before I proceed,” he resumed, “I must recall to your minds Newton’s general law, ‘that the attraction of two bodies is directly proportional to the product of their masses, and inversely proportional to the square of their distances.’”

“Yes,” said Servadac; “we remember that.”

“Well, then,” continued the professor, “keep it in mind for a few minutes now. Look here! In this bag are forty five-franc pieces — altogether they weigh exactly a kilogramme; by which I mean that if we were on the earth, and I were to hang the bag on the hook of the steelyard, the indicator on the dial would register one kilogramme. This is clear enough, I suppose?”

As he spoke the professor designedly kept his eyes fixed upon Ben Zoof. He was avowedly following the example of Arago, who was accustomed always in lecturing to watch the countenance of the least intelligent of his audience, and when he felt that he had made his meaning clear to him, he concluded that he must have succeeded with all the rest. In this case, however, it was technical ignorance, rather than any lack of intelligence, that justified the selection of the orderly for this special attention.

Satisfied with his scrutiny of Ben Zoof's face, the professor went on. "And now, gentlemen, we have to see what these coins weigh here upon Gallia."

He suspended the money bag to the hook; the needle oscillated, and stopped. "Read it off!" he said.

The weight registered was one hundred and thirty-three grammes.

"There, gentlemen, one hundred and thirty-three grammes! Less than one-seventh of a kilogramme! You see, consequently, that the force of gravity here on Gallia is not one-seventh of what it is upon the earth!"

"Interesting!" cried Servadac, "most interesting! But let us go on and compute the mass."

"No, captain, the density first," said Rosette.

"Certainly," said the lieutenant; "for, as we already know the volume, we can determine the mass as soon as we have ascertained the density."

The professor took up the cube of rock. "You know what this is," he went on to say. "You know, gentlemen, that this block is a cube hewn from the substance of which everywhere, all throughout your voyage of circumnavigation, you found Gallia to be composed — a substance to which your geological attainments did not suffice to assign a name."

"Our curiosity will be gratified," said Servadac, "if you will enlighten our ignorance."

But Rosette did not take the slightest notice of the interruption.

"A substance it is which no doubt constitutes the sole material of the comet, extending from its surface to its innermost depths. The probability is that it would be so; your

experience confirms that probability: you have found no trace of any other substance. Of this rock here is a solid decimeter; let us get at its weight, and we shall have the key which will unlock the problem of the whole weight of Gallia. We have demonstrated that the force of attraction here is only one-seventh of what it is upon the earth, and shall consequently have to multiply the apparent weight of our cube by seven, in order to ascertain its proper weight. Do you understand me, goggle-eyes?"

This was addressed to Ben Zoof, who was staring hard at him. "No!" said Ben Zoof.

"I thought not; it is of no use waiting for your puzzle-brains to make it out. I must talk to those who can understand."

The professor took the cube, and, on attaching it to the hook of the steelyard, found that its apparent weight was one kilogramme and four hundred and thirty grammes.

"Here it is, gentlemen; one kilogramme, four hundred and thirty grammes. Multiply that by seven; the product is, as nearly as possible, ten kilogrammes. What, therefore, is our conclusion? Why, that the density of Gallia is just about double the density of the earth, which we know is only five kilogrammes to a cubic decimeter. Had it not been for this greater density, the attraction of Gallia would only have been one-fifteenth instead of one-seventh of the terrestrial attraction."

The professor could not refrain from exhibiting his gratification that, however inferior in volume, in density, at least, his comet had the advantage over the earth.

Nothing further now remained than to apply the investigations thus finished to the determining of the mass or weight. This was a matter of little labor.

"Let me see," said the captain; "what is the force of gravity upon the various planets?"

"You can't mean, Servadac, that you have forgotten that? But you always were a disappointing pupil."

The captain could not help himself: he was forced to confess that his memory had failed him.

"Well, then," said the professor, "I must remind you. Taking the attraction on the earth as 1, that on Mercury is 1.15, on Venus it is.92, on Mars.5, and on Jupiter 2.45; on the

moon the attraction is.16, whilst on the surface of the sun a terrestrial kilogramme would weigh 28 kilogrammes."

"Therefore, if a man upon the surface of the sun were to fall down, he would have considerable difficulty in getting up again. A cannon ball, too, would only fly a few yards," said Lieutenant Procope.

"A jolly battle-field for cowards!" exclaimed Ben Zoof.

"Not so jolly, Ben Zoof, as you fancy," said his master; "the cowards would be too heavy to run away."

Ben Zoof ventured the remark that, as the smallness of Gallia secured to its inhabitants such an increase of strength and agility, he was almost sorry that it had not been a little smaller still.

"Though it could not anyhow have been very much smaller," he added, looking slyly at the professor.

"Idiot!" exclaimed Rosette. "Your head is too light already; a puff of wind would blow it away."

"I must take care of my head, then, and hold it on," replied the irrepressible orderly.

Unable to get the last word, the professor was about to retire, when Servadac detained him.

"Permit me to ask you one more question," he said. "Can you tell me what is the nature of the soil of Gallia?"

"Yes, I can answer that. And in this matter I do not think your impertinent orderly will venture to put Montmartre into the comparison. This soil is of a substance not unknown upon the earth." And speaking very slowly, the professor said: "It contains 70 per cent. of tellurium, and 30 per cent. of gold."

Servadac uttered an exclamation of surprise.

"And the sum of the specific gravities of these two substances is 10, precisely the number that represents Gallia's density."

“A comet of gold!” ejaculated the captain.

“Yes; a realization of what the illustrious Maupertuis has already deemed probable,” replied the astronomer.

“If Gallia, then, should ever become attached to the earth, might it not bring about an important revolution in all monetary affairs?” inquired the count.

“No doubt about it!” said Rosette, with manifest satisfaction. “It would supply the world with about 246,000 trillions of francs.”

“It would make gold about as cheap as dirt, I suppose,” said Servadac.

The last observation, however, was entirely lost upon the professor, who had left the hall with an air almost majestic, and was already on his way to the observatory.

“And what, I wonder, is the use of all these big figures?” said Ben Zoof to his master, when next day they were alone together.

“That’s just the charm of them, my good fellow,” was the captain’s cool reply, “that they are of no use whatever.”

CHAPTER VIII. JUPITER SOMEWHAT CLOSE

Except as to the time the comet would take to revolve round the sun, it must be confessed that all the professor’s calculations had comparatively little interest for anyone but himself, and he was consequently left very much to pursue his studies in solitude.

The following day was the 1st of August, or, according to Rosette, the 63rd of April. In the course of this month Gallia would travel 16,500,000 leagues, attaining at the end a distance of 197,000,000 leagues from the sun. This would leave 81,000,000 leagues more to be traversed before reaching the aphelion of the 15th of January, after which it would begin once more to approach the sun.

But meanwhile, a marvelous world, never before so close within the range of human vision, was revealing itself. No wonder that Palmyrin Rosette cared so little to quit his observatory; for throughout those calm, clear Gallian nights, when the book of the firmament lay open before him, he could revel in a spectacle which no previous astronomer had ever been permitted to enjoy.

The glorious orb that was becoming so conspicuous an object was none other than the planet Jupiter, the largest of all the bodies existing within the influence of solar attraction. During the seven months that had elapsed since its collision with the earth, the comet had been continuously approaching the planet, until the distance between them was scarcely more than 61,000,000 leagues, and this would go on diminishing until the 15th of October.

Under these circumstances, was it perfectly certain that no danger could accrue? Was not Gallia, when its pathway led it into such close proximity to this enormous planet, running a risk of being attracted within its influence? Might not that influence be altogether disastrous? The professor, it is true, in his estimate of the duration of his comet’s revolution, had represented that he had made all proper allowances for any perturbations that would be caused either by Jupiter, by Saturn, or by Mars; but what if there were any errors in his calculations? what if there should be any elements of disturbance on which he had not reckoned?

Speculations of this kind became more and more frequent, and Lieutenant Procope pointed out that the danger incurred might be of a fourfold character: first, that the

comet, being irresistibly attracted, might be drawn on to the very surface of the planet, and there annihilated; secondly, that as the result of being brought under that attraction, it might be transformed into a satellite, or even a sub-satellite, of that mighty world; thirdly, that it might be diverted into a new orbit, which would never be coincident with the ecliptic; or, lastly, its course might be so retarded that it would only reach the ecliptic too late to permit any junction with the earth. The occurrence of any one of these contingencies would be fatal to their hopes of reunion with the globe, from which they had been so strangely severed.

To Rosette, who, without family ties which he had never found leisure or inclination to contract, had no shadow of desire to return to the earth, it would be only the first of these probabilities that could give him any concern. Total annihilation might not accord with his views, but he would be quite content for Gallia to miss its mark with regard to the earth, indifferent whether it revolved as a new satellite around Jupiter, or whether it wended its course through the untraversed regions of the milky way. The rest of the community, however, by no means sympathized with the professor’s sentiments, and the following month was a period of considerable doubt and anxiety.

On the 1st of September the distance between Gallia and Jupiter was precisely the same as the mean distance between the earth and the sun; on the 16th, the distance was further reduced to 26,000,000 leagues. The planet began to assume enormous dimensions, and it almost seemed as if the comet had already been deflected from its elliptical orbit, and was rushing on in a straight line towards the overwhelming luminary.

The more they contemplated the character of this gigantic planet, the more they became impressed with the likelihood of a serious perturbation in their own course. The diameter of Jupiter is 85,390 miles, nearly eleven times as great as that of the earth; his volume is 1,387 times, and his mass 300 times greater; and although the mean density is only about a quarter of that of the earth, and only a third of that of water (whence it has been supposed that the superficies of Jupiter is liquid), yet his other proportions were large enough to warrant the apprehension that important disturbances might result from his proximity.

“I forget my astronomy, lieutenant,” said Servadac. “Tell me all you can about this formidable neighbor.”

The lieutenant having refreshed his memory by reference to Flammarion's *Recits de l'Infini*, of which he had a Russian translation, and some other books, proceeded to recapitulate that Jupiter accomplishes his revolution round the sun in 4,332 days 14 hours and 2 minutes; that he travels at the rate of 467 miles a minute along an orbit measuring 2,976 millions of miles; and that his rotation on his axis occupies only 9 hours and 55 minutes.

"His days, then, are shorter than ours?" interrupted the captain.

"Considerably," answered the lieutenant, who went on to describe how the displacement of a point at the equator of Jupiter was twenty-seven times as rapid as on the earth, causing the polar compression to be about 2,378 miles; how the axis, being nearly perpendicular, caused the days and nights to be nearly of the same length, and the seasons to be invariable; and how the amount of light and heat received by the planet is only a twenty-fifth part of that received by the earth, the average distance from the sun being 475,693,000 miles.

"And how about these satellites? Sometimes, I suppose, Jupiter has the benefit of four moons all shining at once?" asked Servadac.

Of the satellites, Lieutenant Procope went on to say that one is rather smaller than our own moon; that another moves round its primary at an interval about equal to the moon's distance from ourselves; but that they all revolve in considerably less time: the first takes only l day 18 hours 27 minutes; the second takes 3 days 13 hours 14 minutes; the third, 7 days 3 hours 42 minutes; whilst the largest of all takes but 16 days 16 hours 32 minutes. The most remote revolves round the planet at a distance of 1,192,820 miles.

"They have been enlisted into the service of science," said Procope. "It is by their movements that the velocity of light has been calculated; and they have been made available for the determination of terrestrial longitudes."

"It must be a wonderful sight," said the captain.

"Yes," answered Procope. "I often think Jupiter is like a prodigious clock with four hands."

"I only hope that we are not destined to make a fifth hand," answered Servadac.

Such was the style of the conversation that was day by day reiterated during the whole month of suspense. Whatever topic might be started, it seemed soon to settle down upon the huge orb that was looming upon them with such threatening aspect.

“The more remote that these planets are from the sun,” said Procope, “the more venerable and advanced in formation are they found to be. Neptune, situated 2,746,271,000 miles from the sun, issued from the solar nebulosity, thousands of millions of centuries back. Uranus, revolving 1,753,851,000 miles from the center of the planetary system, is of an age amounting to many hundred millions of centuries. Jupiter, the colossal planet, gravitating at a distance of 475,693,000 miles, may be reckoned as 70,000,000 centuries old. Mars has existed for 1,000,000,000 years at a distance of 139,212,000 miles. The earth, 91,430,000 miles from the sun, quitted his burning bosom 100,000,000 years ago. Venus, revolving now 66,131,000 miles away, may be assigned the age of 50,000,000 years at least; and Mercury, nearest of all, and youngest of all, has been revolving at a distance of 35,393,000 miles for the space of 10,000,000 years — the same time as the moon has been evolved from the earth.”

Servadac listened attentively. He was at a loss what to say; and the only reply he made to the recital of this novel theory was to the effect that, if it were true, he would prefer being captured by Mercury than by Jupiter, for Mercury, being so much the younger, would probably prove the less imperative and self-willed master.

It was on the 1st of September that the comet had crossed the orbit of Jupiter, and on the 1st of October the two bodies were calculated to be at their minimum separation. No direct shock, however, could be apprehended; the demonstration was sufficiently complete that the orbit of Gallia did not coincide with that of the planet, the orbit of Jupiter being inclined at an angle of 1 degrees 19 mins to the orbit of the earth, with which that of Gallia was, no doubt, coincident.

As the month of September verged towards its close, Jupiter began to wear an aspect that must have excited the admiration of the most ignorant or the most indifferent observer. Its salient points were illumined with novel and radiant tints, and the solar rays, reflected from its disc, glowed with a mingled softness and intensity upon Gallia, so that Nerina had to pale her beauty.

Who could wonder that Rosette, enthusiast as he was, should be irremovable from his observatory? Who could expect otherwise than that, with the prospect before him of

viewing the giant among planets, ten times nearer than any mortal eye had ever done, he should have begrudged every moment that distracted his attention?

Meanwhile, as Jupiter grew large, the sun grew small.

From its increased remoteness the diameter of the sun's disc was diminished to 5 degrees 46 mins.

And what an increased interest began to be associated with the satellites! They were visible to the naked eye! Was it not a new record in the annals of science?

Although it is acknowledged that they are not ordinarily visible on earth without the aid of a somewhat powerful telescope, it has been asserted that a favored few, endued with extraordinary powers of vision, have been able to identify them with an unassisted eye; but here, at least, in Nina's Hive were many rivals, for everyone could so far distinguish them one from the other as to describe them by their colors. The first was of a dull white shade; the second was blue; the third was white and brilliant; the fourth was orange, at times approaching to a red. It was further observed that Jupiter itself was almost void of scintillation.

Rosette, in his absorbing interest for the glowing glories of the planet, seemed to be beguiled into comparative forgetfulness of the charms of his comet; but no astronomical enthusiasm of the professor could quite allay the general apprehension that some serious collision might be impending.

Time passed on. There was nothing to justify apprehension. The question was continually being asked, "What does the professor really think?"

"Our friend the professor," said Servadac, "is not likely to tell us very much; but we may feel pretty certain of one thing: he wouldn't keep us long in the dark, if he thought we were not going back to the earth again. The greatest satisfaction he could have would be to inform us that we had parted from the earth for ever."

"I trust from my very soul," said the count, "that his prognostications are correct."

"The more I see of him, and the more I listen to him," replied Servadac, "the more I become convinced that his calculations are based on a solid foundation, and will prove correct to the minutest particular."

Ben Zoof here interrupted the conversation. “I have something on my mind,” he said.

“Something on your mind? Out with it!” said the captain.

“That telescope!” said the orderly; “it strikes me that that telescope which the old professor keeps pointed up at yonder big sun is bringing it down straight upon us.”

The captain laughed heartily.

“Laugh, captain, if you like; but I feel disposed to break the old telescope into atoms.”

“Ben Zoof,” said Servadac, his laughter exchanged for a look of stern displeasure, “touch that telescope, and you shall swing for it!”

The orderly looked astonished.

“I am governor here,” said Servadac.

Ben Zoof knew what his master meant, and to him his master’s wish was law.

The interval between the comet and Jupiter was, by the 1st of October, reduced to 43,000,000 miles. The belts all parallel to Jupiter’s equator were very distinct in their markings. Those immediately north and south of the equator were of a dusky hue; those toward the poles were alternately dark and light; the intervening spaces of the planet’s superficies, between edge and edge, being intensely bright. The belts themselves were occasionally broken by spots, which the records of astronomy describe as varying both in form and in extent.

The physiology of belts and spots alike was beyond the astronomer’s power to ascertain; and even if he should be destined once again to take his place in an astronomical congress on the earth, he would be just as incapable as ever of determining whether or no they owed their existence to the external accumulation of vapor, or to some internal agency. It would not be Professor Rosette’s lot to enlighten his brother *savants* to any great degree as to the mysteries that are associated with this, which must ever rank as one of the most magnificent amongst the heavenly orbs.

As the comet approached the critical point of its career it cannot be denied that there was an unacknowledged consciousness of alarm. Mutually reserved, though ever courteous, the count and the captain were secretly drawn together by the prospect of a

common danger; and as their return to the earth appeared to them to become more and more dubious, they abandoned their views of narrow isolation, and tried to embrace the wider philosophy that acknowledges the credibility of a habitable universe.

But no philosophy could be proof against the common instincts of their humanity; their hearts, their hopes, were set upon their natural home; no speculation, no science, no experience, could induce them to give up their fond and sanguine anticipation that once again they were to come in contact with the earth.

“Only let us escape Jupiter,” said Lieutenant Procope, repeatedly, “and we are free from anxiety.”

“But would not Saturn lie ahead?” asked Servadac and the count in one breath.

“No!” said Procope; “the orbit of Saturn is remote, and does not come athwart our path. Jupiter is our sole hindrance. Of Jupiter we must say, as William Tell said, ‘Once through the ominous pass and all is well.’”

The 15th of October came, the date of the nearest approximation of the comet to the planet. They were only 31,000,000 miles apart. What would now transpire? Would Gallia be diverted from its proper way? or would it hold the course that the astronomer had predicted?

Early next morning the captain ventured to take the count and the lieutenant up to the observatory. The professor was in the worst of tempers.

That was enough. It was enough, without a word, to indicate the course which events had taken. The comet was pursuing an unaltered way.

The astronomer, correct in his prognostications, ought to have been the most proud and contented of philosophers; his pride and contentment were both overshadowed by the certainty that the career of his comet was destined to be so transient, and that it must inevitably once again come into collision with the earth.

CHAPTER IX MARKET PRICES IN GALLIA

“All right!” said Servadac, convinced by the professor’s ill humor that the danger was past; “no doubt we are in for a two years’ excursion, but fifteen months more will take us back to the earth!”

“And we shall see Montmartre again!” exclaimed Ben Zoof, in excited tones that betrayed his delight in the anticipation.

To use a nautical expression, they had safely “rounded the point,” and they had to be congratulated on their successful navigation; for if, under the influence of Jupiter’s attraction, the comet had been retarded for a single hour, in that hour the earth would have already traveled 2,300,000 miles from the point where contact would ensue, and many centuries would elapse before such a coincidence would possibly again occur.

On the 1st of November Gallia and Jupiter were 40,000,000 miles apart. It was little more than ten weeks to the 15th of January, when the comet would begin to re-approach the sun. Though light and heat were now reduced to a twenty-fifth part of their terrestrial intensity, so that a perpetual twilight seemed to have settled over Gallia, yet the population felt cheered even by the little that was left, and buoyed up by the hope that they should ultimately regain their proper position with regard to the great luminary, of which the temperature has been estimated as not less than 5,000,000 degrees.

Of the anxiety endured during the last two months Isaac Hakkabut had known nothing. Since the day he had done his lucky stroke of business he had never left the tartan; and after Ben Zoof, on the following day, had returned the steelyard and the borrowed cash, receiving back the paper roubles deposited, all communication between the Jew and Nina’s Hive had ceased. In the course of the few minutes’ conversation which Ben Zoof had held with him, he had mentioned that he knew that the whole soil of Gallia was made of gold; but the old man, guessing that the orderly was only laughing at him as usual, paid no attention to the remark, and only meditated upon the means he could devise to get every bit of the money in the new world into his own possession. No one grieved over the life of solitude which Hakkabut persisted in leading. Ben Zoof giggled heartily, as he repeatedly observed “it was astonishing how they reconciled themselves to his absence.”

The time came, however, when various circumstances prompted him to think he must renew his intercourse with the inhabitants of the Hive. Some of his goods were beginning to spoil, and he felt the necessity of turning them into money, if he would not be a loser; he hoped, moreover, that the scarcity of his commodities would secure very high prices.

It happened, just about this same time, that Ben Zoof had been calling his master's attention to the fact that some of their most necessary provisions would soon be running short, and that their stock of coffee, sugar, and tobacco would want replenishing. Servadac's mind, of course, turned to the cargo on board the *Hansa*, and he resolved, according to his promise, to apply to the Jew and become a purchaser. Mutual interest and necessity thus conspired to draw Hakkabut and the captain together.

Often and often had Isaac gloated in his solitude over the prospect of first selling a portion of his merchandise for all the gold and silver in the colony. His recent usurious transaction had whetted his appetite. He would next part with some more of his cargo for all the paper money they could give him; but still he should have goods left, and they would want these. Yes, they should have these, too, for promissory notes. Notes would hold good when they got back again to the earth; bills from his Excellency the governor would be good bills; anyhow there would be the sheriff. By the God of Israel! he would get good prices, and he would get fine interest!

Although he did not know it, he was proposing to follow the practice of the Gauls of old, who advanced money on bills for payment in a future life. Hakkabut's "future life," however, was not many months in advance of the present.

Still Hakkabut hesitated to make the first advance, and it was accordingly with much satisfaction that he hailed Captain Servadac's appearance on board the *Hansa*.

"Hakkabut," said the captain, plunging without further preface into business, "we want some coffee, some tobacco, and other things. I have come to-day to order them, to settle the price, and to-morrow Ben Zoof shall fetch the goods away."

"Merciful, heavens!" the Jew began to whine; but Servadac cut him short.

"None of that miserable howling! Business! I am come to buy your goods. I shall pay for them."

“Ah yes, your Excellency,” whispered the Jew, his voice trembling like a street beggar. “Don’t impose on me. I am poor; I am nearly ruined already.”

“Cease your wretched whining!” cried Servadac. “I have told you once, I shall pay for all I buy.”

“Ready money?” asked Hakkabut.

“Yes, ready money. What makes you ask?” said the captain, curious to hear what the Jew would say.

“Well, you see — you see, your Excellency,” stammered out the Jew, “to give credit to one wouldn’t do, unless I gave credit to another. You are solvent — I mean honorable, and his lordship the count is honorable; but maybe — maybe — ”

“Well?” said Servadac, waiting, but inclined to kick the old rascal out of his sight.

“I shouldn’t like to give credit,” he repeated.

“I have not asked you for credit. I have told you, you shall have ready money.”

“Very good, your Excellency. But how will you pay me?”

“Pay you? Why, we shall pay you in gold and silver and copper, while our money lasts, and when that is gone we shall pay you in bank notes.”

“Oh, no paper, no paper!” groaned out the Jew, relapsing into his accustomed whine.

“Nonsense, man!” cried Servadac.

“No paper!” reiterated Hakkabut.

“Why not? Surely you can trust the banks of England, France, and Russia.”

“Ah no! I must have gold. Nothing so safe as gold.”

“Well then,” said the captain, not wanting to lose his temper, “you shall have it your own way; we have plenty of gold for the present. We will leave the bank notes for by and by.” The Jew’s countenance brightened, and Servadac, repeating that he should come again the next day, was about to quit the vessel.

“One moment, your Excellency,” said Hakkabut, sidling up with a hypocritical smile; “I suppose I am to fix my own prices.”

“You will, of course, charge ordinary prices — proper market prices; European prices, I mean.”

“Merciful heavens!” shrieked the old man, “you rob me of my rights; you defraud me of my privilege. The monopoly of the market belongs to me. It is the custom; it is my right; it is my privilege to fix my own prices.”

Servadac made him understand that he had no intention of swerving from his decision.

“Merciful heavens!” again howled the Jew, “it is sheer ruin. The time of monopoly is the time for profit; it is the time for speculation.”

“The very thing, Hakkabut, that I am anxious to prevent. Just stop now, and think a minute. You seem to forget *my* rights; you are forgetting that, if I please, I can confiscate all your cargo for the common use. You ought to think yourself lucky in getting any price at all. Be contented with European prices; you will get no more. I am not going to waste my breath on you. I will come again to-morrow;” and, without allowing Hakkabut time to renew his lamentations, Servadac went away.

All the rest of the day the Jew was muttering bitter curses against the thieves of Gentiles in general, and the governor of Gallia in particular, who were robbing him of his just profits, by binding him down to a maximum price for his goods, just as if it were a time of revolution in the state. But he would be even with them yet; he would have it all out of them: he would make European prices pay, after all. He had a plan — he knew how; and he chuckled to himself, and grinned maliciously.

True to his word, the captain next morning arrived at the tartan. He was accompanied by Ben Zoof and two Russian sailors. “Good-morning, old Eleazar; we have come to do our little bit of friendly business with you, you know,” was Ben Zoof’s greeting.

“What do you want to-day?” asked the Jew.

“To-day we want coffee, and we want sugar, and we want tobacco. We must have ten kilogrammes of each. Take care they are all good; all first rate. I am commissariat officer, and I am responsible.”

“I thought you were the governor’s aide-de-camp,” said Hakkabut.

“So I am, on state occasions; but to-day, I tell you. I am superintendent of the commissariat department. Now, look sharp!”

Hakkabut hereupon descended into the hold of the tartan, and soon returned, carrying ten packets of tobacco, each weighing one kilogramme, and securely fastened by strips of paper, labeled with the French government stamp.

“Ten kilogrammes of tobacco at twelve francs a kilogramme: a hundred and twenty francs,” said the Jew.

Ben Zoof was on the point of laying down the money, when Servadac stopped him.

“Let us just see whether the weight is correct.”

Hakkabut pointed out that the weight was duly registered on every packet, and that the packets had never been unfastened. The captain, however, had his own special object in view, and would not be diverted. The Jew fetched his steelyard, and a packet of the tobacco was suspended to it.

“Merciful heavens!” screamed Isaac.

The index registered only 133 grammes!

“You see, Hakkabut, I was right. I was perfectly justified in having your goods put to the test,” said Servadac, quite seriously.

“But — but, your Excellency — ” stammered out the bewildered man.

“You will, of course, make up the deficiency,” the captain continued, not noticing the interruption.

“Oh, my lord, let me say — ” began Isaac again.

“Come, come, old Caiaphas, do you hear? You are to make up the deficiency,” exclaimed Ben Zoof.

“Ah, yes, yes; but — ”

The unfortunate Israelite tried hard to speak, but his agitation prevented him. He understood well enough the cause of the phenomenon, but he was overpowered by the conviction that the “cursed Gentiles” wanted to cheat him. He deeply regretted that he had not a pair of common scales on board.

“Come, I say, old Jedediah, you are a long while making up what’s short,” said Ben Zoof, while the Jew was still stammering on.

As soon as he recovered his power of articulation, Isaac began to pour out a medley of lamentations and petitions for mercy. The captain was inexorable. “Very sorry, you know, Hakkabut. It is not my fault that the packet is short weight; but I cannot pay for a kilogramme except I have a kilogramme.”

Hakkabut pleaded for some consideration.

“A bargain is a bargain,” said Servadac. “You must complete your contract.”

And, moaning and groaning, the miserable man was driven to make up the full weight as registered by his own steelyard. He had to repeat the process with the sugar and coffee: for every kilogramme he had to weigh seven. Ben Zoof and the Russians jeered him most unmercifully.

“I say, old Mordecai, wouldn’t you rather give your goods away, than sell them at this rate? I would.”

“I say, old Pilate, a monopoly isn’t always a good thing, is it?”

“I say, old Sepharvaim, what a flourishing trade you’re driving!”

Meanwhile seventy kilogrammes of each of the articles required were weighed, and the Jew for each seventy had to take the price of ten.

All along Captain Servadac had been acting only in jest. Aware that old Isaac was an utter hypocrite, he had no compunction in turning a business transaction with him into an occasion for a bit of fun. But the joke at an end, he took care that the Jew was properly paid all his legitimate due.

CHAPTER X. FAR INTO SPACE

A month passed away. Gallia continued its course, bearing its little population onwards, so far removed from the ordinary influence of human passions that it might almost be said that its sole ostensible vice was represented by the greed and avarice of the miserable Jew.

After all, they were but making a voyage — a strange, yet a transient, excursion through solar regions hitherto untraversed; but if the professor's calculations were correct — and why should they be doubted? — their little vessel was destined, after a two years' absence, once more to return "to port." The landing, indeed, might be a matter of difficulty; but with the good prospect before them of once again standing on terrestrial shores, they had nothing to do at present except to make themselves as comfortable as they could in their present quarters.

Thus confident in their anticipations, neither the captain, the count, nor the lieutenant felt under any serious obligation to make any extensive provisions for the future; they saw no necessity for expending the strength of the people, during the short summer that would intervene upon the long severity of winter, in the cultivation or the preservation of their agricultural resources. Nevertheless, they often found themselves talking over the measures they would have been driven to adopt, if they had found themselves permanently attached to their present home.

Even after the turning-point in their career, they knew that at least nine months would have to elapse before the sea would be open to navigation; but at the very first arrival of summer they would be bound to arrange for the *Dobryna* and the *Hansa* to retransport themselves and all their animals to the shores of Gourbi Island, where they would have to commence their agricultural labors to secure the crops that must form their winter store. During four months or thereabouts, they would lead the lives of farmers and of sportsmen; but no sooner would their haymaking and their corn harvest have been accomplished, than they would be compelled again, like a swarm of bees, to retire to their semi-troglodyte existence in the cells of Nina's Hive.

Now and then the captain and his friends found themselves speculating whether, in the event of their having to spend another winter upon Gallia, some means could not be devised by which the dreariness of a second residence in the recesses of the volcano might be escaped. Would not another exploring expedition possibly result in the

discovery of a vein of coal or other combustible matter, which could be turned to account in warming some erection which they might hope to put up? A prolonged existence in their underground quarters was felt to be monotonous and depressing, and although it might be all very well for a man like Professor Rosette, absorbed in astronomical studies, it was ill suited to the temperaments of any of themselves for any longer period than was absolutely indispensable.

One contingency there was, almost too terrible to be taken into account. Was it not to be expected that the time might come when the internal fires of Gallia would lose their activity, and the stream of lava would consequently cease to flow? Why should Gallia be exempt from the destiny that seemed to await every other heavenly body? Why should it not roll onwards, like the moon, a dark cold mass in space?

In the event of such a cessation of the volcanic eruption, whilst the comet was still at so great a distance from the sun, they would indeed be at a loss to find a substitute for what alone had served to render life endurable at a temperature of 60 degrees below zero. Happily, however, there was at present no symptom of the subsidence of the lava's stream; the volcano continued its regular and unchanging discharge, and Servadac, ever sanguine, declared that it was useless to give themselves any anxiety upon the matter.

On the 15th of December, Gallia was 276,000,000 leagues from the sun, and, as it was approximately to the extremity of its axis major, would travel only some 11,000,000 or 12,000,000 leagues during the month. Another world was now becoming a conspicuous object in the heavens, and Palmyrin Rosette, after rejoicing in an approach nearer to Jupiter than any other mortal man had ever attained, was now to be privileged to enjoy a similar opportunity of contemplating the planet Saturn. Not that the circumstances were altogether so favorable. Scarcely 31,000,000 miles had separated Gallia from Jupiter; the minimum distance of Saturn would not be less than 415,000,000 miles; but even this distance, although too great to affect the comet's progress more than had been duly reckoned on, was considerably shorter than what had ever separated Saturn from the earth.

To get any information about the planet from Rosette appeared quite impossible. Although equally by night and by day he never seemed to quit his telescope, he did not evince the slightest inclination to impart the result of his observations. It was only from the few astronomical works that happened to be included in the *Dobryna's* library that

any details could be gathered, but these were sufficient to give a large amount of interesting information.

Ben Zoof, when he was made aware that the earth would be invisible to the naked eye from the surface of Saturn, declared that he then, for his part, did not care to learn any more about such a planet; to him it was indispensable that the earth should remain in sight, and it was his great consolation that hitherto his native sphere had never vanished from his gaze.

At this date Saturn was revolving at a distance of 420,000,000 miles from Gallia, and consequently 874,440,000 miles from the sun, receiving only a hundredth part of the light and heat which that luminary bestows upon the earth. On consulting their books of reference, the colonists found that Saturn completes his revolution round the sun in a period of 29 years and 167 days, traveling at the rate of more than 21,000 miles an hour along an orbit measuring 5,490 millions of miles in length. His circumference is about 220,000 miles; his superficies, 144,000 millions of square miles; his volume, 143,846 millions of cubic miles. Saturn is 735 times larger than the earth, consequently he is smaller than Jupiter; in mass he is only 90 times greater than the earth, which gives him a density less than that of water. He revolves on his axis in 10 hours 29 minutes, causing his own year to consist of 86,630 days; and his seasons, on account of the great inclination of his axis to the plane of his orbit, are each of the length of seven terrestrial years.

Although the light received from the sun is comparatively feeble, the nights upon Saturn must be splendid. Eight satellites — Mimas, Enceladus, Tethys, Dione, Rhea, Titan, Hyperion, and Japetus — accompany the planet; Mimas, the nearest to its primary, rotating on its axis in 221/2 hours, and revolving at a distance of only 120,800 miles, whilst Japetus, the most remote, occupies 79 days in its rotation, and revolves at a distance of 2,314,000 miles.

Another most important contribution to the magnificence of the nights upon Saturn is the triple ring with which, as a brilliant setting, the planet is encompassed. To an observer at the equator, this ring, which has been estimated by Sir William Herschel as scarcely 100 miles in thickness, must have the appearance of a narrow band of light passing through the zenith 12,000 miles above his head. As the observer, however, increases his latitude either north or south, the band will gradually widen out into three detached and concentric rings, of which the innermost, dark though transparent, is 9,625

miles in breadth; the intermediate one, which is brighter than the planet itself, being 17,605 miles broad; and the outer, of a dusky hue, being 8,660 miles broad.

Such, they read, is the general outline of this strange appendage, which revolves in its own plane in 10 hours 32 minutes. Of what matter it is composed, and how it resists disintegration, is still an unsettled question; but it might almost seem that the Designer of the universe, in permitting its existence, had been willing to impart to His intelligent creatures the manner in which celestial bodies are evolved, and that this remarkable ring-system is a remnant of the nebula from which Saturn was himself developed, and which, from some unknown cause, has become solidified. If at any time it should disperse, it would either fall into fragments upon the surface of Saturn, or the fragments, mutually coalescing, would form additional satellites to circle round the planet in its path.

To any observer stationed on the planet, between the extremes of lat. 45 degrees on either side of the equator, these wonderful rings would present various strange phenomena. Sometimes they would appear as an illuminated arch, with the shadow of Saturn passing over it like the hour-hand over a dial; at other times they would be like a semi-aureole of light. Very often, too, for periods of several years, daily eclipses of the sun must occur through the interposition of this triple ring.

Truly, with the constant rising and setting of the satellites, some with bright discs at their full, others like silver crescents, in quadrature, as well as by the encircling rings, the aspect of the heavens from the surface of Saturn must be as impressive as it is gorgeous.

Unable, indeed, the Gallians were to realize all the marvels of this strange world. After all, they were practically a thousand times further off than the great astronomers have been able to approach by means of their giant telescopes. But they did not complain; their little comet, they knew, was far safer where it was; far better out of the reach of an attraction which, by affecting their path, might have annihilated their best hopes.

The distances of several of the brightest of the fixed stars have been estimated. Amongst others, Vega in the constellation Lyra is 100 millions of millions of miles away; Sirius in Canis Major, 123 millions of millions; the Pole-star, 282 millions of millions; and Capella, 340 millions of millions of miles, a figure represented by no less than fifteen digits.

The hard numerical statement of these enormous figures, however, fails altogether in any adequate way to convey a due impression of the magnitude of these distances. Astronomers, in their ingenuity, have endeavored to use some other basis, and have found “the velocity of light” to be convenient for their purpose. They have made their representations something in this way:

“Suppose,” they say, “an observer endowed with an infinite length of vision: suppose him stationed on the surface of Capella; looking thence towards the earth, he would be a spectator of events that had happened seventy years previously; transport him to a star ten times distant, and he will be reviewing the terrestrial sphere of 720 years back; carry him away further still, to a star so remote that it requires something less than nineteen centuries for light to reach it, and he would be a witness of the birth and death of Christ; convey him further again, and he shall be looking upon the dread desolation of the Deluge; take him away further yet (for space is infinite), and he shall be a spectator of the Creation of the spheres. History is thus stereotyped in space; nothing once accomplished can ever be effaced.”

Who can altogether be astonished that Palmyrin Rosette, with his burning thirst for astronomical research, should have been conscious of a longing for yet wider travel through the sidereal universe? With his comet now under the influence of one star, now of another, what various systems might he not have explored! what undreamed-of marvels might not have revealed themselves before his gaze! The stars, fixed and immovable in name, are all of them in motion, and Gallia might have followed them in their un-tracked way.

But Gallia had a narrow destiny. She was not to be allowed to wander away into the range of attraction of another center; nor to mingle with the star clusters, some of which have been entirely, others partially resolved; nor was she to lose herself amongst the 5,000 nebulae which have resisted hitherto the grasp of the most powerful reflectors. No; Gallia was neither to pass beyond the limits of the solar system, nor to travel out of sight of the terrestrial sphere. Her orbit was circumscribed to little over 1,500 millions of miles; and, in comparison with the infinite space beyond, this was a mere nothing.

CHAPTER XI. A FETE DAY

The temperature continued to decrease; the mercurial thermometer, which freezes at 42 degrees below zero, was no longer of service, and the spirit thermometer of the *Dobryna* had been brought into use. This now registered 53 degrees below freezing-point.

In the creek, where the two vessels had been moored for the winter, the elevation of the ice, in anticipation of which Lieutenant Procope had taken the precautionary measure of beveling, was going on slowly but irresistibly, and the tartan was upheaved fifty feet above the level of the Gallian Sea, while the schooner, as being lighter, had been raised to a still greater altitude.

So irresistible was this gradual process of elevation, so utterly defying all human power to arrest, that the lieutenant began to feel very anxious as to the safety of his yacht. With the exception of the engine and the masts, everything had been cleared out and conveyed to shore, but in the event of a thaw it appeared that nothing short of a miracle could prevent the hull from being dashed to pieces, and then all means of leaving the promontory would be gone. The *Hansa*, of course, would share a similar fate; in fact, it had already heeled over to such an extent as to render it quite dangerous for its obstinate owner, who, at the peril of his life, resolved that he would stay where he could watch over his all-precious cargo, though continually invoking curses on the ill-fate of which he deemed himself the victim.

There was, however, a stronger will than Isaac Hakkabut’s. Although no one of all the community cared at all for the safety of the Jew, they cared very much for the security of his cargo, and when Servadac found that nothing would induce the old man to abandon his present quarters voluntarily, he very soon adopted measures of coercion that were far more effectual than any representations of personal danger.

“Stop where you like, Hakkabut,” said the captain to him; “but understand that I consider it my duty to make sure that your cargo is taken care of. I am going to have it carried across to land, at once.”

Neither groans, nor tears, nor protestations on the part of the Jew, were of the slightest avail. Forthwith, on the 20th of December, the removal of the goods commenced.

Both Spaniards and Russians were all occupied for several days in the work of unloading the tartan. Well muffled up as they were in furs, they were able to endure the cold with impunity, making it their special care to avoid actual contact with any article made of metal, which, in the low state of the temperature, would inevitably have taken all the skin off their hands, as much as if it had been red-hot. The task, however, was brought to an end without accident of any kind; and when the stores of the *Hansa* were safely deposited in the galleries of the Hive, Lieutenant Procope avowed that he really felt that his mind had been unburdened from a great anxiety.

Captain Servadac gave old Isaac full permission to take up his residence amongst the rest of the community, promised him the entire control over his own property, and altogether showed him so much consideration that, but for his unbounded respect for his master, Ben Zoof would have liked to reprimand him for his courtesy to a man whom he so cordially despised.

Although Hakkabut clamored most vehemently about his goods being carried off "against his will," in his heart he was more than satisfied to see his property transferred to a place of safety, and delighted, moreover, to know that the transport had been effected without a farthing of expense to himself. As soon, then, as he found the tartan empty, he was only too glad to accept the offer that had been made him, and very soon made his way over to the quarters in the gallery where his merchandise had been stored. Here he lived day and night. He supplied himself with what little food he required from his own stock of provisions, a small spirit-lamp sufficing to perform all the operations of his meager cookery. Consequently all intercourse between himself and the rest of the inhabitants was entirely confined to business transactions, when occasion required that some purchase should be made from his stock of commodities. Meanwhile, all the silver and gold of the colony was gradually finding its way to a double-locked drawer, of which the Jew most carefully guarded the key.

The 1st of January was drawing near, the anniversary of the shock which had resulted in the severance of thirty-six human beings from the society of their fellow-men. Hitherto, not one of them was missing. The unvarying calmness of the climate, notwithstanding the cold, had tended to maintain them in good health, and there seemed no reason to doubt that, when Gallia returned to the earth, the total of its little population would still be complete.

The 1st of January, it is true, was not properly “New Year’s Day” in Gallia, but Captain Servadac, nevertheless, was very anxious to have it observed as a holiday.

“I do not think,” he said to Count Timascheff and Lieutenant Procope, “that we ought to allow our people to lose their interest in the world to which we are all hoping to return; and how can we cement the bond that ought to unite us, better than by celebrating, in common with our fellow-creatures upon earth, a day that awakens afresh the kindliest sentiments of all? Besides,” he added, smiling, “I expect that Gallia, although invisible just at present to the naked eye, is being closely watched by the telescopes of our terrestrial friends, and I have no doubt that the newspapers and scientific journals of both hemispheres are full of accounts detailing the movements of the new comet.”

“True,” asserted the count. “I can quite imagine that we are occasioning no small excitement in all the chief observatories.”

“Ay, more than that,” said the lieutenant; “our Gallia is certain to be far more than a mere object of scientific interest or curiosity. Why should we doubt that the elements of a comet which has once come into collision with the earth have by this time been accurately calculated? What our friend the professor has done here, has been done likewise on the earth, where, beyond a question, all manner of expedients are being discussed as to the best way of mitigating the violence of a concussion that must occur.”

The lieutenant’s conjectures were so reasonable that they commanded assent. Gallia could scarcely be otherwise than an object of terror to the inhabitants of the earth, who could by no means be certain that a second collision would be comparatively so harmless as the first. Even to the Gallians themselves, much as they looked forward to the event, the prospect was not unmixed with alarm, and they would rejoice in the invention of any device by which it was likely the impetus of the shock might be deadened.

Christmas arrived, and was marked by appropriate religious observance by everyone in the community, with the exception of the Jew, who made a point of secluding himself more obstinately than ever in the gloomy recesses of his retreat.

To Ben Zoof the last week of the year was full of bustle. The arrangements for the New Year *fete* were entrusted to him, and he was anxious, in spite of the resources of Gallia being so limited, to make the program for the great day as attractive as possible.

It was a matter of debate that night whether the professor should be invited to join the party; it was scarcely likely that he would care to come, but, on the whole, it was felt to be advisable to ask him. At first Captain Servadac thought of going in person with the invitation; but, remembering Rosette's dislike to visitors, he altered his mind, and sent young Pablo up to the observatory with a formal note, requesting the pleasure of Professor Rosette's company at the New Year's *fete*.

Pablo was soon back, bringing no answer except that the professor had told him that "to-day was the 125th of June, and that to-morrow would be the 1st of July."

Consequently, Servadac and the count took it for granted that Palmyrin Rosette declined their invitation.

An hour after sunrise on New Year's Day, Frenchmen, Russians, Spaniards, and little Nina, as the representative of Italy, sat down to a feast such as never before had been seen in Gallia. Ben Zoof and the Russian cook had quite surpassed themselves. The wines, part of the *Dobryna's* stores, were of excellent quality. Those of the vintages of France and Spain were drunk in toasting their respective countries, and even Russia was honored in a similar way by means of a few bottles of kummel. The company was more than contented — it was as jovial as Ben Zoof could desire; and the ringing cheers that followed the great toast of the day — "A happy return to our Mother Earth," must fairly have startled the professor in the silence of his observatory.

The *dejeuner* over, there still remained three hours of daylight. The sun was approaching the zenith, but so dim and enfeebled were his rays that they were very unlike what had produced the wines of Bordeaux and Burgundy which they had just been enjoying, and it was necessary for all, before starting upon an excursion that would last over nightfall, to envelop themselves in the thickest of clothing.

Full of spirits, the party left the Hive, and chattering and singing as they went, made their way down to the frozen shore, where they fastened on their skates. Once upon the ice, everyone followed his own fancy, and some singly, some in groups, scattered themselves in all directions. Captain Servadac, the count, and the lieutenant were generally seen together. Negrete and the Spaniards, now masters of their novel exercise, wandered fleetly and gracefully hither and thither, occasionally being out of sight completely. The Russian sailors, following a northern custom, skated in file, maintaining their rank by means of a long pole passed under their right arms, and in this

way they described a trackway of singular regularity. The two children, blithe as birds, flitted about, now singly, now arm-in-arm, now joining the captain's party, now making a short peregrination by themselves, but always full of life and spirit. As for Ben Zoof, he was here, there, and everywhere, his imperturbable good temper ensuring him a smile of welcome whenever he appeared.

Thus coursing rapidly over the icy plain, the whole party had soon exceeded the line that made the horizon from the shore. First, the rocks of the coast were lost to view; then the white crests of the cliffs were no longer to be seen; and at last, the summit of the volcano, with its corona of vapor, was entirely out of sight. Occasionally the skaters were obliged to stop to recover their breath, but, fearful of frost-bite, they almost instantly resumed their exercise, and proceeded nearly as far as Gourbi Island before they thought about retracing their course.

But night was coming on, and the sun was already sinking in the east with the rapidity to which the residents on Gallia were by this time well accustomed. The sunset upon this contracted horizon was very remarkable. There was not a cloud nor a vapor to catch the tints of the declining beams; the surface of the ice did not, as a liquid sea would, reflect the last green ray of light; but the radiant orb, enlarged by the effect of refraction, its circumference sharply defined against the sky, sank abruptly, as though a trap had been opened in the ice for its reception.

Before the daylight ended. Captain Servadac had cautioned the party to collect themselves betimes into one group. "Unless you are sure of your whereabouts before dark," he said, "you will not find it after. We have come out like a party of skirmishers; let us go back in full force."

The night would be dark; their moon was in conjunction, and would not be seen; the stars would only give something of that "pale radiance" which the poet Corneille has described.

Immediately after sunset the torches were lighted, and the long series of flames, fanned by the rapid motion of their bearers, had much the appearance of an enormous fiery banner. An hour later, and the volcano appeared like a dim shadow on the horizon, the light from the crater shedding a lurid glare upon the surrounding gloom. In time the glow of the burning lava, reflected in the icy mirror, fell upon the troop of skaters, and cast their lengthened shadows grotesquely on the surface of the frozen sea.

Later still, half an hour or more afterwards, the torches were all but dying out. The shore was close at hand. All at once, Ben Zoof uttered a startled cry, and pointed with bewildered excitement towards the mountain. Involuntarily, one and all, they plowed their heels into the ice and came to a halt. Exclamations of surprise and horror burst from every lip. The volcano was extinguished! The stream of burning lava had suddenly ceased to flow!

Speechless with amazement, they stood still for some moments. There was not one of them that did not realize, more or less, how critical was their position. The sole source of the heat that had enabled them to brave the rigor of the cold had failed them! death, in the cruellest of all shapes, seemed staring them in the face — death from cold! Meanwhile, the last torch had flickered out.

It was quite dark.

“Forward!” cried Servadac, firmly.

At the word of command they advanced to the shore; clambered with no little difficulty up the slippery rocks; gained the mouth of the gallery; groped their way into the common hall.

How dreary! how chill it seemed!

The fiery cataract no longer spread its glowing covering over the mouth of the grotto. Lieutenant Procope leaned through the aperture. The pool, hitherto kept fluid by its proximity to the lava, was already encrusted with a layer of ice.

Such was the end of the New Year’s Day so happily begun.

CHAPTER XII. THE BOWELS OF THE COMET

The whole night was spent in speculating, with gloomy forebodings, upon the chances of the future. The temperature of the hall, now entirely exposed to the outer air, was rapidly falling, and would quickly become unendurable. Far too intense was the cold to allow anyone to remain at the opening, and the moisture on the walls soon resolved itself into icicles. But the mountain was like the body of a dying man, that retains awhile a certain amount of heat at the heart after the extremities have become cold and dead. In the more interior galleries there was still a certain degree of warmth, and hither Servadac and his companions were glad enough to retreat.

Here they found the professor, who, startled by the sudden cold, had been fain to make a precipitate retreat from his observatory. Now would have been the opportunity to demand of the enthusiast whether he would like to prolong his residence indefinitely upon his little comet. It is very likely that he would have declared himself ready to put up with any amount of discomfort to be able to gratify his love of investigation; but all were far too disheartened and distressed to care to banter him upon the subject on which he was so sensitive.

Next morning, Servadac thus addressed his people. “My friends, except from cold, we have nothing to fear. Our provisions are ample — more than enough for the remaining period of our sojourn in this lone world of ours; our preserved meat is already cooked; we shall be able to dispense with all fuel for cooking purposes. All that we require is warmth — warmth for ourselves; let us secure that, and all may be well. Now, I do not entertain a doubt but that the warmth we require is resident in the bowels of this mountain on which we are living; to the depth of those bowels we must penetrate; there we shall obtain the warmth which is indispensable to our very existence.”

His tone, quite as much as his words, restored confidence to many of his people, who were already yielding to a feeling of despair. The count and the lieutenant fervently, but silently, grasped his hand.

“Nina,” said the captain, “you will not be afraid to go down to the lower depths of the mountain, will you?”

“Not if Pablo goes,” replied the child.

“Oh yes, of course, Pablo will go. You are not afraid to go, are you, Pablo?” he said, addressing the boy.

“Anywhere with you, your Excellency,” was the boy’s prompt reply.

And certain it was that no time must be lost in penetrating below the heart of the volcano; already the most protected of the many ramifications of Nina’s Hive were being pervaded by a cold that was insufferable. It was an acknowledged impossibility to get access to the crater by the exterior declivities of the mountain-side; they were far too steep and too slippery to afford a foothold. It must of necessity be entered from the interior.

Lieutenant Procope accordingly undertook the task of exploring all the galleries, and was soon able to report that he had discovered one which he had every reason to believe abutted upon the central funnel. His reason for coming to this conclusion was that the caloric emitted by the rising vapors of the hot lava seemed to be oozing, as it were, out of the tellurium, which had been demonstrated already to be a conductor of heat. Only succeed in piercing through this rock for seven or eight yards, and the lieutenant did not doubt that his way would be opened into the old lava-course, by following which he hoped descent would be easy.

Under the lieutenant’s direction the Russian sailors were immediately set to work. Their former experience had convinced them that spades and pick-axes were of no avail, and their sole resource was to proceed by blasting with gunpowder. However skillfully the operation might be carried on, it must necessarily occupy several days, and during that time the sufferings from cold must be very severe.

“If we fail in our object, and cannot get to the depths of the mountain, our little colony is doomed,” said Count Timascheff.

“That speech is not like yourself,” answered Servadac, smiling. “What has become of the faith which has hitherto carried you so bravely through all our difficulties?”

The count shook his head, as if in despair, and said, sadly, “The Hand that has hitherto been outstretched to help seems now to be withdrawn.”

“But only to test our powers of endurance,” rejoined the captain, earnestly. “Courage, my friend, courage! Something tells me that this cessation of the eruption is only

partial; the internal fire is not all extinct. All is not over yet. It is too soon to give up; never despair!”

Lieutenant Procope quite concurred with the captain. Many causes, he knew, besides the interruption of the influence of the oxygen upon the mineral substances in Gallia’s interior, might account for the stoppage of the lava-flow in this one particular spot, and he considered it more than probable that a fresh outlet had been opened in some other part of the surface, and that the eruptive matter had been diverted into the new channel. But at present his business was to prosecute his labors so that a retreat might be immediately effected from their now untenable position.

Restless and agitated, Professor Rosette, if he took any interest in these discussions, certainly took no share in them. He had brought his telescope down from the observatory into the common hall, and there at frequent intervals, by night and by day, he would endeavor to continue his observations; but the intense cold perpetually compelled him to desist, or he would literally have been frozen to death. No sooner, however, did he find himself obliged to retreat from his study of the heavens, than he would begin overwhelming everybody about him with bitter complaints, pouring out his regrets that he had ever quitted his quarters at Formentera.

On the 4th of January, by persevering industry, the process of boring was completed, and the lieutenant could hear that fragments of the blasted rock, as the sailors cleared them away with their spades, were rolling into the funnel of the crater. He noticed, too, that they did not fall perpendicularly, but seemed to slide along, from which he inferred that the sides of the crater were sloping; he had therefore reason to hope that a descent would be found practicable.

Larger and larger grew the orifice; at length it would admit a man’s body, and Ben Zoof, carrying a torch, pushed himself through it, followed by the lieutenant and Servadac. Procope’s conjecture proved correct. On entering the crater, they found that the sides slanted at the angle of about 4 degrees; moreover, the eruption had evidently been of recent origin, dating probably only from the shock which had invested Gallia with a proportion of the atmosphere of the earth, and beneath the coating of ashes with which they were covered, there were various irregularities in the rock, not yet worn away by the action of the lava, and these afforded a tolerably safe footing.

“Rather a bad staircase!” said Ben Zoof, as they began to make their way down.

In about half an hour, proceeding in a southerly direction, they had descended nearly five hundred feet. From time to time they came upon large excavations that at first sight had all the appearance of galleries, but by waving his torch, Ben Zoof could always see their extreme limits, and it was evident that the lower strata of the mountain did not present the same system of ramification that rendered the Hive above so commodious a residence.

It was not a time to be fastidious; they must be satisfied with such accommodation as they could get, provided it was warm. Captain Servadac was only too glad to find that his hopes about the temperature were to a certain extent realized. The lower they went, the greater was the diminution in the cold, a diminution that was far more rapid than that which is experienced in making the descent of terrestrial mines. In this case it was a volcano, not a colliery, that was the object of exploration, and thankful enough they were to find that it had not become extinct. Although the lava, from some unknown cause, had ceased to rise in the crater, yet plainly it existed somewhere in an incandescent state, and was still transmitting considerable heat to inferior strata.

Lieutenant Procope had brought in his hand a mercurial thermometer, and Servadac carried an aneroid barometer, by means of which he could estimate the depth of their descent below the level of the Gallian Sea. When they were six hundred feet below the orifice the mercury registered a temperature of 6 degrees below zero.

“Six degrees!” said Servadac; “that will not suit us. At this low temperature we could not survive the winter. We must try deeper down. I only hope the ventilation will hold out.”

There was, however, nothing to fear on the score of ventilation. The great current of air that rushed into the aperture penetrated everywhere, and made respiration perfectly easy.

The descent was continued for about another three hundred feet, which brought the explorers to a total depth of nine hundred feet from their old quarters. Here the thermometer registered 12 degrees above zero — a temperature which, if only it were permanent, was all they wanted. There was no advantage in proceeding any further along the lava-course; they could already hear the dull rumblings that indicated that they were at no great distance from the central focus.

“Quite near enough for me!” exclaimed Ben Zoof. “Those who are chilly are welcome to go as much lower as they like. For my part, I shall be quite warm enough here.”

After throwing the gleams of torch-light in all directions, the explorers seated themselves on a jutting rock, and began to debate whether it was practicable for the colony to make an abode in these lower depths of the mountain. The prospect, it must be owned, was not inviting. The crater, it is true, widened out into a cavern sufficiently large, but here its accommodation ended. Above and below were a few ledges in the rock that would serve as receptacles for provisions; but, with the exception of a small recess that must be reserved for Nina, it was clear that henceforth they must all renounce the idea of having separate apartments. The single cave must be their dining-room, drawing-room, and dormitory, all in one. From living the life of rabbits in a warren, they were reduced to the existence of moles, with the difference that they could not, like them, forget their troubles in a long winter’s sleep.

The cavern, however, was quite capable of being lighted by means of lamps and lanterns. Among the stores were several barrels of oil and a considerable quantity of spirits of wine, which might be burned when required for cooking purposes. Moreover, it would be unnecessary for them to confine themselves entirely to the seclusion of their gloomy residence; well wrapped up, there would be nothing to prevent them making occasional excursions both to the Hive and to the sea-shore. A supply of fresh water would be constantly required; ice for this purpose must be perpetually carried in from the coast, and it would be necessary to arrange that everyone in turn should perform this office, as it would be no sinecure to clamber up the sides of the crater for 900 feet, and descend the same distance with a heavy burden.

But the emergency was great, and it was accordingly soon decided that the little colony should forthwith take up its quarters in the cave. After all, they said, they should hardly be much worse off than thousands who annually winter in Arctic regions. On board the whaling-vessels, and in the establishments of the Hudson’s Bay Company, such luxuries as separate cabins or sleeping-chambers are never thought of; one large apartment, well heated and ventilated, with as few corners as possible, is considered far more healthy; and on board ship the entire hold, and in forts a single floor, is appropriated to this purpose. The recollection of this fact served to reconcile them, in a great degree, to the change to which they felt it requisite to submit.

Having remounted the ascent, they made the result of their exploration known to the mass of the community, who received the tidings with a sense of relief, and cordially accepted the scheme of the migration.

The first step was to clear the cavern of its accumulation of ashes, and then the labor of removal commenced in earnest. Never was a task undertaken with greater zest. The fear of being to a certainty frozen to death if they remained where they were, was a stimulus that made everyone put forth all his energies. Beds, furniture, cooking utensils — first the stores of the *Dobryna*, then the cargo of the tartan — all were carried down with the greatest alacrity, and the diminished weight combined with the downhill route to make the labor proceed with incredible briskness.

Although Professor Rosette yielded to the pressure of circumstances, and allowed himself to be conducted to the lower regions, nothing would induce him to allow his telescope to be carried underground; and as it was undeniable that it would certainly be of no service deep down in the bowels of the mountain, it was allowed to remain undisturbed upon its tripod in the great hall of Nina's Hive.

As for Isaac Hakkabut, his outcry was beyond description lamentable. Never, in the whole universe, had a merchant met with such reverses; never had such a pitiable series of losses befallen an unfortunate man. Regardless of the ridicule which his abject wretchedness excited, he howled on still, and kept up an unending wail; but meanwhile he kept a keen eye upon every article of his property, and amidst universal laughter insisted on having every item registered in an inventory as it was transferred to its appointed place of safety. Servadac considerately allowed the whole of the cargo to be deposited in a hollow apart by itself, over which the Jew was permitted to keep a watch as vigilant as he pleased.

By the 10th the removal was accomplished. Rescued, at all events, from the exposure to a perilous temperature of 60 degrees below zero, the community was installed in its new home. The large cave was lighted by the *Dobryna's* lamps, while several lanterns, suspended at intervals along the acclivity that led to their deserted quarters above, gave a weird picturesqueness to the scene, that might vie with any of the graphic descriptions of the "Arabian Nights' Entertainments."

"How do you like this, Nina?" said Ben Zoof.

"*Va bene!*" replied the child. "We are only living in the cellars instead of upon the ground floor."

"We will try and make ourselves comfortable," said the orderly.

"Oh yes, we will be happy here," rejoined the child; "it is nice and warm."

Although they were as careful as they could to conceal their misgivings from the rest, Servadac and his two friends could not regard their present situation without distrust. When alone, they would frequently ask each other what would become of them all, if the volcanic heat should really be subsiding, or if some unexpected perturbation should retard the course of the comet, and compel them to an indefinitely prolonged residence in their grim abode. It was scarcely likely that the comet could supply the fuel of which ere long they would be in urgent need. Who could expect to find coal in the bowels of Gallia, — coal, which is the residuum of ancient forests mineralized by the lapse of ages? Would not the lava-cinders exhumed from the extinct volcano be their last poor resource?

"Keep up your spirits, my friends," said Servadac; "we have plenty of time before us at present. Let us hope that as fresh difficulties arise, fresh ways of escape will open. Never despair!"

"True," said the count; "it is an old saying that 'Necessity is the mother of invention.' Besides, I should think it very unlikely that the internal heat will fail us now before the summer."

The lieutenant declared that he entertained the same hope. As the reason of his opinion he alleged that the combustion of the eruptive matter was most probably of quite recent origin, because the comet before its collision with the earth had possessed no atmosphere, and that consequently no oxygen could have penetrated to its interior.

"Most likely you are right," replied the count; "and so far from dreading a failure of the internal heat, I am not quite sure that we may not be exposed to a more terrible calamity still?"

"What?" asked Servadac.

"The calamity of the eruption breaking out suddenly again, and taking us by surprise."

“Heavens!” cried the captain, “we will not think of that.”

“The outbreak may happen again,” said the lieutenant, calmly; “but it will be our fault, our own lack of vigilance, if we are taken by surprise.” And so the conversation dropped.

The 15th of January dawned; and the comet was 220,000,000 leagues from the sun.

Gallia had reached its aphelion.

CHAPTER XIII. DREARY MONTHS

Henceforth, then, with a velocity ever increasing, Gallia would re-approach the sun.

Except the thirteen Englishmen who had been left at Gibraltar, every living creature had taken refuge in the dark abyss of the volcano’s crater.

And with those Englishmen, how had it fared?

“Far better than with ourselves,” was the sentiment that would have been universally accepted in Nina’s Hive. And there was every reason to conjecture that so it was. The party at Gibraltar, they all agreed, would not, like themselves, have been compelled to have recourse to a stream of lava for their supply of heat; they, no doubt, had had abundance of fuel as well as food; and in their solid casemate, with its substantial walls, they would find ample shelter from the rigor of the cold. The time would have been passed at least in comfort, and perhaps in contentment; and Colonel Murphy and Major Oliphant would have had leisure more than sufficient for solving the most abstruse problems of the chess-board. All of them, too, would be happy in the confidence that when the time should come, England would have full meed of praise to award to the gallant soldiers who had adhered so well and so manfully to their post.

It did, indeed, more than once occur to the minds both of Servadac and his friends that, if their condition should become one of extreme emergency, they might, as a last resource, betake themselves to Gibraltar, and there seek a refuge; but their former reception had not been of the kindest, and they were little disposed to renew an acquaintanceship that was marked by so little cordiality. Not in the least that they would expect to meet with any inhospitable rebuff. Far from that; they knew well enough that Englishmen, whatever their faults, would be the last to abandon their fellow-creatures in the hour of distress. Nevertheless, except the necessity became far more urgent than it had hitherto proved, they resolved to endeavor to remain in their present quarters. Up till this time no casualties had diminished their original number, but to undertake so long a journey across that unsheltered expanse of ice could scarcely fail to result in the loss of some of their party.

However great was the desire to find a retreat for every living thing in the deep hollow of the crater, it was found necessary to slaughter almost all the domestic animals before the removal of the community from Nina’s Hive. To have stabled them all in the cavern

below would have been quite impossible, whilst to have left them in the upper galleries would only have been to abandon them to a cruel death; and since meat could be preserved for an indefinite time in the original store-places, now colder than ever, the expedient of killing the animals seemed to recommend itself as equally prudent and humane.

Naturally the captain and Ben Zoof were most anxious that their favorite horses should be saved, and accordingly, by dint of the greatest care, all difficulties in the way were overcome, and Zephyr and Galette were conducted down the crater, where they were installed in a large hole and provided with forage, which was still abundant.

Birds, subsisting only on scraps thrown out to them did not cease to follow the population in its migration, and so numerous did they become that multitudes of them had repeatedly to be destroyed.

The general re-arrangement of the new residence was no easy business, and occupied so much time that the end of January arrived before they could be said to be fairly settled. And then began a life of dreary monotony. Then seemed to creep over everyone a kind of moral torpor as well as physical lassitude, which Servadac, the count, and the lieutenant did their best not only to combat in themselves, but to counteract in the general community. They provided a variety of intellectual pursuits; they instituted debates in which everybody was encouraged to take part; they read aloud, and explained extracts from the elementary manuals of science, or from the books of adventurous travel which their library supplied; and Russians and Spaniards, day after day, might be seen gathered round the large table, giving their best attention to instruction which should send them back to Mother Earth less ignorant than they had left her.

Selfish and morose, Hakkabut could never be induced to be present at these social gatherings. He was far too much occupied in his own appropriated corner, either in conning his accounts, or in counting his money. Altogether, with what he had before, he now possessed the round sum of 150,000 francs, half of which was in sterling gold; but nothing could give him any satisfaction while he knew that the days were passing, and that he was denied the opportunity of putting out his capital in advantageous investments, or securing a proper interest.

Neither did Palmyrin Rosette find leisure to take any share in the mutual intercourse. His occupation was far too absorbing for him to suffer it to be interrupted, and to him, living as he did perpetually in a world of figures, the winter days seemed neither long nor wearisome. Having ascertained every possible particular about his comet, he was now devoting himself with equal ardor to the analysis of all the properties of the satellite Nerina, to which he appeared to assert the same claim of proprietorship.

In order to investigate Nerina it was indispensable that he should make several actual observations at various points of the orbit; and for this purpose he repeatedly made his way up to the grotto above, where, in spite of the extreme severity of the cold, he would persevere in the use of his telescope till he was all but paralyzed. But what he felt more than anything was the want of some retired apartment, where he could pursue his studies without hindrance or intrusion.

It was about the beginning of February, when the professor brought his complaint to Captain Servadac, and begged him to assign him a chamber, no matter how small, in which he should be free to carry on his task in silence and without molestation. So readily did Servadac promise to do everything in his power to provide him with the accommodation for which he asked, that the professor was put into such a manifest good temper that the captain ventured to speak upon the matter that was ever uppermost in his mind.

“I do not mean,” he began timidly, “to cast the least imputation of inaccuracy upon any of your calculations, but would you allow me, my dear professor, to suggest that you should revise your estimate of the duration of Gallia’s period of revolution. It is so important, you know, so all important; the difference of one half minute, you know, would so certainly mar the expectation of reunion with the earth — ”

And seeing a cloud gathering on Rosette’s face, he added:

“I am sure Lieutenant Procope would be only too happy to render you any assistance in the revision.”

“Sir,” said the professor, bridling up, “I want no assistant; my calculations want no revision. I never make an error. I have made my reckoning as far as Gallia is concerned. I am now making a like estimate of the elements of Nerina.”

Conscious how impolitic it would be to press this matter further, the captain casually remarked that he should have supposed that all the elements of Nerina had been calculated long since by astronomers on the earth. It was about as unlucky a speech as he could possibly have made. The professor glared at him fiercely.

“Astounding, sir!” he exclaimed. “Yes! Nerina was a planet then; everything that appertained to the planet was determined; but Nerina is a moon now. And do you not think, sir, that we have a right to know as much about our moon as those *terrestrials*” — and he curled his lip as he spoke with a contemptuous emphasis — ”know of theirs?”

“I beg pardon,” said the corrected captain.

“Well then, never mind,” replied the professor, quickly appeased; “only will you have the goodness to get me a proper place for study?”

“I will, as I promised, do all I can,” answered Servadac.

“Very good,” said the professor. “No immediate hurry; an hour hence will do.”

But in spite of this condescension on the part of the man of science, some hours had to elapse before any place of retreat could be discovered likely to suit his requirements; but at length a little nook was found in the side of the cavern just large enough to hold an armchair and a table, and in this the astronomer was soon ensconced to his entire satisfaction.

Buried thus, nearly 900 feet below ground, the Gallians ought to have had unbounded mental energy to furnish an adequate reaction to the depressing monotony of their existence; but many days would often elapse without any one of them ascending to the surface of the soil, and had it not been for the necessity of obtaining fresh water, it seemed almost probable that there would never have been an effort made to leave the cavern at all.

A few excursions, it is true, were made in the downward direction. The three leaders, with Ben Zoof, made their way to the lower depths of the crater, not with the design of making any further examination as to the nature of the rock — for although it might be true enough that it contained thirty per cent. of gold, it was as valueless to them as granite — but with the intention of ascertaining whether the subterranean fire still

retained its activity. Satisfied upon this point, they came to the conclusion that the eruption which had so suddenly ceased in one spot had certainly broken out in another.

February, March, April, May, passed wearily by; but day succeeded to day with such gloomy sameness that it was little wonder that no notice was taken of the lapse of time. The people seemed rather to vegetate than to live, and their want of vigor became at times almost alarming. The readings around the long table ceased to be attractive, and the debates, sustained by few, became utterly wanting in animation. The Spaniards could hardly be roused to quit their beds, and seemed to have scarcely energy enough to eat. The Russians, constitutionally of more enduring temperament, did not give way to the same extent, but the long and drear confinement was beginning to tell upon them all. Servadac, the count, and the lieutenant all knew well enough that it was the want of air and exercise that was the cause of much of this mental depression; but what could they do? The most serious remonstrances on their part were entirely in vain. In fact, they themselves occasionally fell a prey to the same lassitude both of body and mind. Long fits of drowsiness, combined with an utter aversion to food, would come over them. It almost seemed as if their entire nature had become degenerate, and that, like tortoises, they could sleep and fast till the return of summer.

Strange to say, little Nina bore her hardships more bravely than any of them. Flitting about, coaxing one to eat, another to drink, rousing Pablo as often as he seemed yielding to the common languor, the child became the life of the party. Her merry prattle enlivened the gloom of the grim cavern like the sweet notes of a bird; her gay Italian songs broke the monotony of the depressing silence; and almost unconscious as the half-dormant population of Gallia were of her influence, they still would have missed her bright presence sorely. The months still glided on; how, it seemed impossible for the inhabitants of the living tomb to say. There was a dead level of dullness.

At the beginning of June the general torpor appeared slightly to relax its hold upon its victims. This partial revival was probably due to the somewhat increased influence of the sun, still far, far away. During the first half of the Gallian year, Lieutenant Procope had taken careful note of Rosette’s monthly announcements of the comet’s progress, and he was able now, without reference to the professor, to calculate the rate of advance on its way back towards the sun. He found that Gallia had re-crossed the orbit of Jupiter, but was still at the enormous distance of 197,000,000 leagues from the sun, and

he reckoned that in about four months it would have entered the zone of the telescopic planets.

Gradually, but uninterruptedly, life and spirits continued to revive, and by the end of the month Servadac and his little colony had regained most of their ordinary physical and mental energies. Ben Zoof, in particular, roused himself with redoubled vigor, like a giant refreshed from his slumbers. The visits, consequently, to the long-neglected galleries of Nina's Hive became more and more frequent.

One day an excursion was made to the shore. It was still bitterly cold, but the atmosphere had lost nothing of its former stillness, and not a cloud was visible from horizon to zenith. The old footmarks were all as distinct as on the day in which they had been imprinted, and the only portion of the shore where any change was apparent was in the little creek. Here the elevation of the ice had gone on increasing, until the schooner and the tartan had been uplifted to a height of 150 feet, not only rendering them quite inaccessible, but exposing them to all but certain destruction in the event of a thaw.

Isaac Hakkabut, immovable from the personal oversight of his property in the cavern, had not accompanied the party, and consequently was in blissful ignorance of the fate that threatened his vessel. "A good thing the old fellow wasn't there to see," observed Ben Zoof; "he would have screamed like a peacock. What a misfortune it is," he added, speaking to himself, "to have a peacock's voice, without its plumage!"

During the months of July and August, Gallia advanced 164,000,000 leagues along her orbit. At night the cold was still intense, but in the daytime the sun, here full upon the equator, caused an appreciable difference of 20 degrees in the temperature. Like birds, the population spent whole days exposed to its grateful warmth, rarely returning till nightfall to the shade of their gloomy home.

This spring-time, if such it may be called, had a most enlivening influence upon all. Hope and courage revived as day by day the sun's disc expanded in the heavens, and every evening the earth assumed a greater magnitude amongst the fixed stars. It was distant yet, but the goal was cheeringly in view.

"I can't believe that yonder little speck of light contains my mountain of Montmartre," said Ben Zoof, one night, after he had been gazing long and steadily at the far-off

world.

“You will, I hope, some day find out that it does,” answered his master.

“I hope so,” said the orderly, without moving his eye from the distant sphere. After meditating a while, he spoke again. “I suppose Professor Rosette couldn’t make his comet go straight back, could he?”

“Hush!” cried Servadac.

Ben Zoof understood the correction.

“No,” continued the captain; “it is not for man to disturb the order of the universe. That belongs to a Higher Power than ours!”

CHAPTER XIV. THE PROFESSOR PERPLEXED

Another month passed away, and it was now September, but it was still impossible to leave the warmth of the subterranean retreat for the more airy and commodious quarters of the Hive, where “the bees” would certainly have been frozen to death in their cells. It was altogether quite as much a matter of congratulation as of regret that the volcano showed no symptoms of resuming its activity; for although a return of the eruption might have rendered their former resort again habitable, any sudden outbreak would have been disastrous to them where they were, the crater being the sole outlet by which the burning lava could escape.

“A wretched time we have had for the last seven months,” said the orderly one day to his master; “but what a comfort little Nina has been to us all!”

“Yes, indeed,” replied Servadac; “she is a charming little creature. I hardly know how we should have got on without her.”

“What is to become of her when we arrive back at the earth?”

“Not much fear, Ben Zoof, but that she will be well taken care of. Perhaps you and I had better adopt her.”

“Ay, yes,” assented the orderly. “You can be her father, and I can be her mother.”

Servadac laughed. “Then you and I shall be man and wife.”

“We have been as good as that for a long time,” observed Ben Zoof, gravely.

By the beginning of October, the temperature had so far moderated that it could scarcely be said to be intolerable. The comet’s distance was scarcely three times as great from the sun as the earth from the sun, so that the thermometer rarely sunk beyond 35 degrees below zero. The whole party began to make almost daily visits to the Hive, and frequently proceeded to the shore, where they resumed their skating exercise, rejoicing in their recovered freedom like prisoners liberated from a dungeon. Whilst the rest were enjoying their recreation, Servadac and the count would hold long conversations with Lieutenant Procope about their present position and future prospects, discussing all manner of speculations as to the results of the anticipated collision with the earth, and wondering whether any measures could be devised for

mitigating the violence of a shock which might be terrible in its consequences, even if it did not entail a total annihilation of themselves.

There was no visitor to the Hive more regular than Rosette. He had already directed his telescope to be moved back to his former observatory, where, as much as the cold would permit him, he persisted in making his all-absorbing studies of the heavens.

The result of these studies no one ventured to inquire; but it became generally noticed that something was very seriously disturbing the professor's equanimity. Not only would he be seen toiling more frequently up the arduous way that lay between his nook below and his telescope above, but he would be heard muttering in an angry tone that indicated considerable agitation.

One day, as he was hurrying down to his study, he met Ben Zoof, who, secretly entertaining a feeling of delight at the professor's manifest discomfiture, made some casual remark about things not being very straight. The way in which his advance was received the good orderly never divulged, but henceforward he maintained the firm conviction that there was something very much amiss up in the sky.

To Servadac and his friends this continual disquietude and ill-humor on the part of the professor occasioned no little anxiety. From what, they asked, could his dissatisfaction arise? They could only conjecture that he had discovered some flaw in his reckonings; and if this were so, might there not be reason to apprehend that their anticipations of coming into contact with the earth, at the settled time, might all be falsified?

Day followed day, and still there was no cessation of the professor's discomposure. He was the most miserable of mortals. If really his calculations and his observations were at variance, this, in a man of his irritable temperament, would account for his perpetual perturbation. But he entered into no explanation; he only climbed up to his telescope, looking haggard and distressed, and when compelled by the frost to retire, he would make his way back to his study more furious than ever. At times he was heard giving vent to his vexation. "Confound it! what does it mean? what is she doing? All behind! Is Newton a fool? Is the law of universal gravitation the law of universal nonsense?" And the little man would seize his head in both his hands, and tear away at the scanty locks which he could ill afford to lose.

Enough was overheard to confirm the suspicion that there was some irreconcilable discrepancy between the results of his computation and what he had actually observed; and yet, if he had been called upon to say, he would have sooner insisted that there was derangement in the laws of celestial mechanism, than have owned there was the least probability of error in any of his own calculations. Assuredly, if the poor professor had had any flesh to lose he would have withered away to a shadow.

But this state of things was before long to come to an end. On the 12th, Ben Zoof, who was hanging about outside the great hall of the cavern, heard the professor inside utter a loud cry. Hurrying in to ascertain the cause, he found Rosette in a state of perfect frenzy, in which ecstasy and rage seemed to be struggling for the predominance.

“Eureka! Eureka!” yelled the excited astronomer.

“What, in the name of peace, do you mean?” bawled Ben Zoof, in open-mouthed amazement.

“Eureka!” again shrieked the little man.

“How? What? Where?” roared the bewildered orderly.

“Eureka! I say,” repeated Rosette; “and if you don’t understand me, you may go to the devil!”

Without availing himself of this polite invitation, Ben Zoof betook himself to his master. “Something has happened to the professor,” he said; “he is rushing about like a madman, screeching and yelling ‘Eureka!’”

“Eureka?” exclaimed Servadac. “That means he has made a discovery;” and, full of anxiety, he hurried off to meet the professor.

But, however great was his desire to ascertain what this discovery implied, his curiosity was not yet destined to be gratified. The professor kept muttering in incoherent phrases: “Rascal! he shall pay for it yet. I will be even with him! Cheat! Thrown me out!” But he did not vouchsafe any reply to Servadac’s inquiries, and withdrew to his study.

From that day Rosette, for some reason at present incomprehensible, quite altered his behavior to Isaac Hakkabut, a man for whom he had always hitherto evinced the greatest repugnance and contempt. All at once he began to show a remarkable interest

in the Jew and his affairs, paying several visits to the dark little storehouse, making inquiries as to the state of business and expressing some solicitude about the state of the exchequer.

The wily Jew was taken somewhat by surprise, but came to an immediate conclusion that the professor was contemplating borrowing some money; he was consequently very cautious in all his replies.

It was not Hakkabut's habit ever to advance a loan except at an extravagant rate of interest, or without demanding far more than an adequate security. Count Timascheff, a Russian nobleman, was evidently rich; to him perhaps, for a proper consideration, a loan might be made: Captain Servadac was a Gascon, and Gascons are proverbially poor; it would never do to lend any money to him; but here was a professor, a mere man of science, with circumscribed means; did *he* expect to borrow? Certainly Isaac would as soon think of flying, as of lending money to him. Such were the thoughts that made him receive all Rosette's approaches with a careful reservation.

It was not long, however, before Hakkabut was to be called upon to apply his money to a purpose for which he had not reckoned. In his eagerness to effect sales, he had parted with all the alimentary articles in his cargo without having the precautionary prudence to reserve enough for his own consumption. Amongst other things that failed him was his stock of coffee, and as coffee was a beverage without which he deemed it impossible to exist, he found himself in considerable perplexity.

He pondered the matter over for a long time, and ultimately persuaded himself that, after all, the stores were the common property of all, and that he had as much right to a share as anyone else. Accordingly, he made his way to Ben Zoof, and, in the most amiable tone he could assume, begged as a favor that he would let him have a pound of coffee.

The orderly shook his head dubiously.

"A pound of coffee, old Nathan? I can't say."

"Why not? You have some?" said Isaac.

"Oh yes! plenty — a hundred kilogrammes."

“Then let me have one pound. I shall be grateful.”

“Hang your gratitude!”

“Only one pound! You would not refuse anybody else.”

“That’s just the very point, old Samuel; if you were anybody else, I should know very well what to do. I must refer the matter to his Excellency.”

“Oh, his Excellency will do me justice.”

“Perhaps you will find his justice rather too much for you.” And with this consoling remark, the orderly went to seek his master.

Rosette meanwhile had been listening to the conversation, and secretly rejoicing that an opportunity for which he had been watching had arrived. “What’s the matter, Master Isaac? Have you parted with all your coffee?” he asked, in a sympathizing voice, when Ben Zoof was gone.

“Ah! yes, indeed,” groaned Hakkabut, “and now I require some for my own use. In my little black hole I cannot live without my coffee.”

“Of course you cannot,” agreed the professor.

“And don’t you think the governor ought to let me have it?”

“No doubt.”

“Oh, I must have coffee,” said the Jew again.

“Certainly,” the professor assented. “Coffee is nutritious; it warms the blood. How much do you want?”

“A pound. A pound will last me for a long time.”

“And who will weigh it for you?” asked Rosette, scarcely able to conceal the eagerness that prompted the question.

“Why, they will weigh it with my steelyard, of course. There is no other balance here.” And as the Jew spoke, the professor fancied he could detect the faintest of sighs.

“Good, Master Isaac; all the better for you! You will get your seven pounds instead of one!”

“Yes; well, seven, or thereabouts — thereabouts,” stammered the Jew with considerable hesitation.

Rosette scanned his countenance narrowly, and was about to probe him with further questions, when Ben Zoof returned. “And what does his Excellency say?” inquired Hakkabut.

“Why, Nehemiah, he says he shan’t give you any.”

“Merciful heavens!” began the Jew.

“He says he doesn’t mind selling you a little.”

“But, by the holy city, why does he make me pay for what anybody else could have for nothing?”

“As I told you before, you are not anybody else; so, come along. You can afford to buy what you want. We should like to see the color of your money.”

“Merciful heavens!” the old man whined once more.

“Now, none of that! Yes or no? If you are going to buy, say so at once; if not, I shall shut up shop.”

Hakkabut knew well enough that the orderly was not a man to be trifled with, and said, in a tremulous voice, “Yes, I will buy.”

The professor, who had been looking on with much interest, betrayed manifest symptoms of satisfaction.

“How much do you want? What will you charge for it?” asked Isaac, mournfully, putting his hand into his pocket and chinking his money.

“Oh, we will deal gently with you. We will not make any profit. You shall have it for the same price that we paid for it. Ten francs a pound, you know.”

The Jew hesitated.

“Come now, what is the use of your hesitating? Your gold will have no value when you go back to the world.”

“What do you mean?” asked Hakkabut, startled.

“You will find out some day,” answered Ben Zoof, significantly.

Hakkabut drew out a small piece of gold from his pocket, took it close under the lamp, rolled it over in his hand, and pressed it to his lips. “Shall you weigh me the coffee with my steelyard?” he asked, in a quavering voice that confirmed the professor’s suspicions.

“There is nothing else to weigh it with; you know that well enough, old Shechem,” said Ben Zoof. The steelyard was then produced; a tray was suspended to the hook, and upon this coffee was thrown until the needle registered the weight of one pound. Of course, it took seven pounds of coffee to do this.

“There you are! There’s your coffee, man!” Ben Zoof said.

“Are you sure?” inquired Hakkabut, peering down close to the dial. “Are you quite sure that the needle touches the point?”

“Yes; look and see.”

“Give it a little push, please.”

“Why?”

“Because — because — ”

“Well, because of what?” cried the orderly, impatiently.

“Because I think, perhaps — I am not quite sure — perhaps the steelyard is not quite correct.”

The words were not uttered before the professor, fierce as a tiger, had rushed at the Jew, had seized him by the throat, and was shaking him till he was black in the face.

“Help! help!” screamed Hakkabut. “I shall be strangled.”

“Rascal! consummate rascal! thief! villain!” the professor reiterated, and continued to shake the Jew furiously.

Ben Zoof looked on and laughed, making no attempt to interfere; he had no sympathy with either of the two.

The sound of the scuffling, however, drew the attention of Servadac, who, followed by his companions, hastened to the scene. The combatants were soon parted. “What is the meaning of all this?” demanded the captain.

As soon as the professor had recovered his breath, exhausted by his exertions, he said, “The old reprobate, the rascal has cheated us! His steelyard is wrong! He is a thief!”

Captain Servadac looked sternly at Hakkabut.

“How is this, Hakkabut? Is this a fact?”

“No, no — yes — no, your Excellency, only — ”

“He is a cheat, a thief!” roared the excited astronomer. “His weights deceive!”

“Stop, stop!” interposed Servadac; “let us hear. Tell me, Hakkabut — ”

“The steelyard lies! It cheats! it lies!” roared the irrepressible Rosette.

“Tell me, Hakkabut, I say,” repeated Servadac.

The Jew only kept on stammering, “Yes — no — I don’t know.”

But heedless of any interruption, the professor continued, “False weights! That confounded steelyard! It gave a false result! The mass was wrong! The observations contradicted the calculations; they were wrong! She was out of place! Yes, out of place entirely.”

“What!” cried Servadac and Procope in a breath, “out of place?”

“Yes, completely,” said the professor.

“Gallia out of place?” repeated Servadac, agitated with alarm.

“I did not say Gallia,” replied Rosette, stamping his foot impetuously; “I said Nerina.”

“Oh, Nerina,” answered Servadac. “But what of Gallia?” he inquired, still nervously.

“Gallia, of course, is on her way to the earth. I told you so. But that Jew is a rascal!”

CHAPTER XV. A JOURNEY AND A DISAPPOINTMENT

It was as the professor had said. From the day that Isaac Hakkabut had entered upon his mercantile career, his dealings had all been carried on by a system of false weight. That deceitful steelyard had been the mainspring of his fortune. But when it had become his lot to be the purchaser instead of the vendor, his spirit had groaned within him at being compelled to reap the fruits of his own dishonesty. No one who had studied his character could be much surprised at the confession that was extorted from him, that for every supposed kilogramme that he had ever sold the true weight was only 750 grammes, or just five and twenty per cent. less than it ought to have been.

The professor, however, had ascertained all that he wanted to know. By estimating his comet at a third as much again as its proper weight, he had found that his calculations were always at variance with the observed situation of the satellite, which was immediately influenced by the mass of its primary.

But now, besides enjoying the satisfaction of having punished old Hakkabut, Rosette was able to recommence his calculations with reference to the elements of Nerina upon a correct basis, a task to which he devoted himself with redoubled energy.

It will be easily imagined that Isaac Hakkabut, thus caught in his own trap, was jeered most unmercifully by those whom he had attempted to make his dupes. Ben Zoof, in particular, was never wearied of telling him how on his return to the world he would be prosecuted for using false weights, and would certainly become acquainted with the inside of a prison. Thus badgered, he secluded himself more than ever in his dismal hole, never venturing, except when absolutely obliged, to face the other members of the community.

On the 7th of October the comet re-entered the zone of the telescopic planets, one of which had been captured as a satellite, and the origin of the whole of which is most probably correctly attributed to the disintegration of some large planet that formerly revolved between the orbits of Mars and Jupiter. By the beginning of the following month half of this zone had been traversed, and only two months remained before the collision with the earth was to be expected. The temperature was now rarely below 12 degrees below zero, but that was far too cold to permit the slightest symptoms of a

thaw. The surface of the sea remained as frozen as ever, and the two vessels, high up on their icy pedestals, remained unaltered in their critical position.

It was about this time that the question began to be mooted whether it would not be right to reopen some communication with the Englishmen at Gibraltar. Not that any doubt was entertained as to their having been able successfully to cope with the rigors of the winter; but Captain Servadac, in a way that did honor to his generosity, represented that, however uncourteous might have been their former behavior, it was at least due to them that they should be informed of the true condition of things, which they had had no opportunity of learning; and, moreover, that they should be invited to co-operate with the population of Nina's Hive, in the event of any measures being suggested by which the shock of the approaching collision could be mitigated.

The count and the lieutenant both heartily concurred in Servadac's sentiments of humanity and prudence, and all agreed that if the intercourse were to be opened at all, no time could be so suitable as the present, while the surface of the sea presented a smooth and solid footing. After a thaw should set in, neither the yacht nor the tartan could be reckoned on for service, and it would be inexpedient to make use of the steam launch, for which only a few tons of coal had been reserved, just sufficient to convey them to Gourbi Island when the occasion should arise; whilst as to the yawl, which, transformed into a sledge, had performed so successful a trip to Formentera, the absence of wind would make that quite unavailable. It was true that with the return of summer temperature, there would be certain to be a derangement in the atmosphere of Gallia, which would result in wind, but for the present the air was altogether too still for the yawl to have any prospects of making its way to Gibraltar.

The only question remaining was as to the possibility of going on foot. The distance was somewhere about 240 miles. Captain Servadac declared himself quite equal to the undertaking. To skate sixty or seventy miles a day would be nothing, he said, to a practical skater like himself. The whole journey there and back might be performed in eight days. Provided with a compass, a sufficient supply of cold meat, and a spirit lamp, by which he might boil his coffee, he was perfectly sure he should, without the least difficulty, accomplish an enterprise that chimed in so exactly with his adventurous spirit.

Equally urgent were both the count and the lieutenant to be allowed to accompany him; nay, they even offered to go instead; but Servadac, expressing himself as most grateful

for their consideration, declined their offer, and avowed his resolution of taking no other companion than his own orderly.

Highly delighted at his master’s decision, Ben Zoof expressed his satisfaction at the prospect of “stretching his legs a bit,” declaring that nothing could induce him to permit the captain to go alone. There was no delay. The departure was fixed for the following morning, the 2nd of November.

Although it is not to be questioned that a genuine desire of doing an act of kindness to his fellow-creatures was a leading motive of Servadac’s proposed visit to Gibraltar, it must be owned that another idea, confided to nobody, least of all to Count Timascheff, had been conceived in the brain of the worthy Gascon. Ben Zoof had an inkling that his master was “up to some other little game,” when, just before starting, he asked him privately whether there was a French tricolor among the stores. “I believe so,” said the orderly.

“Then don’t say a word to anyone, but fasten it up tight in your knapsack.”

Ben Zoof found the flag, and folded it up as he was directed. Before proceeding to explain this somewhat enigmatical conduct of Servadac, it is necessary to refer to a certain physiological fact, coincident but unconnected with celestial phenomena, originating entirely in the frailty of human nature. The nearer that Gallia approached the earth, the more a sort of reserve began to spring up between the captain and Count Timascheff. Though they could not be said to be conscious of it, the remembrance of their former rivalry, so completely buried in oblivion for the last year and ten months, was insensibly recovering its hold upon their minds, and the question was all but coming to the surface as to what would happen if, on their return to earth, the handsome Madame de L — — should still be free. From companions in peril, would they not again be avowed rivals? Conceal it as they would, a coolness was undeniably stealing over an intimacy which, though it could never be called affectionate, had been uniformly friendly and courteous.

Under these circumstances, it was not surprising that Hector Servadac should not have confided to the count a project which, wild as it was, could scarcely have failed to widen the unacknowledged breach that was opening in their friendship.

The project was the annexation of Ceuta to the French dominion. The Englishmen, rightly enough, had continued to occupy the fragment of Gibraltar, and their claim was indisputable. But the island of Ceuta, which before the shock had commanded the opposite side of the strait, and had been occupied by Spaniards, had since been abandoned, and was therefore free to the first occupant who should lay claim to it. To plant the tricolor upon it, in the name of France, was now the cherished wish of Servadac's heart.

"Who knows," he said to himself, "whether Ceuta, on its return to earth, may not occupy a grand and commanding situation? What a proud thing it would be to have secured its possession to France!"

Next morning, as soon as they had taken their brief farewell of their friends, and were fairly out of sight of the shore, Servadac imparted his design to Ben Zoof, who entered into the project with the greatest zest, and expressed himself delighted, not only at the prospect of adding to the dominions of his beloved country, but of stealing a march upon England.

Both travelers were warmly clad, the orderly's knapsack containing all the necessary provisions. The journey was accomplished without special incident; halts were made at regular intervals, for the purpose of taking food and rest. The temperature by night as well as by day was quite endurable, and on the fourth afternoon after starting, thanks to the straight course which their compass enabled them to maintain, the adventurers found themselves within a few miles of Ceuta.

As soon as Ben Zoof caught sight of the rock on the western horizon, he was all excitement. Just as if he were in a regiment going into action, he talked wildly about "columns" and "squares" and "charges." The captain, although less demonstrative, was hardly less eager to reach the rock. They both pushed forward with all possible speed till they were within a mile and a half of the shore, when Ben Zoof, who had a very keen vision, stopped suddenly, and said that he was sure he could see something moving on the top of the island.

"Never mind, let us hasten on," said Servadac. A few minutes carried them over another mile, when Ben Zoof stopped again.

"What is it, Ben Zoof?" asked the captain.

“It looks to me like a man on a rock, waving his arms in the air,” said the orderly.

“Plague on it!” muttered Servadac; “I hope we are not too late.” Again they went on; but soon Ben Zoof stopped for the third time.

“It is a semaphore, sir; I see it quite distinctly.” And he was not mistaken; it had been a telegraph in motion that had caught his eye.

“Plague on it!” repeated the captain.

“Too late, sir, do you think?” said Ben Zoof.

“Yes, Ben Zoof; if that’s a telegraph — and there is no doubt of it — somebody has been before us and erected it; and, moreover, if it is moving, there must be somebody working it now.”

He was keenly disappointed. Looking towards the north, he could distinguish Gibraltar faintly visible in the extreme distance, and upon the summit of the rock both Ben Zoof and himself fancied they could make out another semaphore, giving signals, no doubt, in response to the one here.

“Yes, it is only too clear; they have already occupied it, and established their communications,” said Servadac.

“And what are we to do, then?” asked Ben Zoof.

“We must pocket our chagrin, and put as good a face on the matter as we can,” replied the captain.

“But perhaps there are only four or five Englishmen to protect the place,” said Ben Zoof, as if meditating an assault.

“No, no, Ben Zoof,” answered Servadac; “we must do nothing rash. We have had our warning, and, unless our representations can induce them to yield their position, we must resign our hope.”

Thus discomfited, they had reached the foot of the rock, when all at once, like a “Jack-in-the-box,” a sentinel started up before them with the challenge:

“Who goes there?”

“Friends. Vive la France!” cried the captain.

“Hurrah for England!” replied the soldier.

By this time four other men had made their appearance from the upper part of the rock.

“What do you want?” asked one of them, whom Servadac remembered to have seen before at Gibraltar.

“Can I speak to your commanding officer?” Servadac inquired.

“Which?” said the man. “The officer in command of Ceuta?”

“Yes, if there is one.”

“I will acquaint him with your arrival,” answered the Englishman, and disappeared.

In a few minutes the commanding officer, attired in full uniform, was seen descending to the shore. It was Major Oliphant himself.

Servadac could no longer entertain a doubt that the Englishmen had forestalled him in the occupation of Ceuta. Provisions and fuel had evidently been conveyed thither in the boat from Gibraltar before the sea had frozen, and a solid casemate, hollowed in the rock, had afforded Major Oliphant and his contingent ample protection from the rigor of the winter. The ascending smoke that rose above the rock was sufficient evidence that good fires were still kept up; the soldiers appeared to have thriven well on what, no doubt, had been a generous diet, and the major himself, although he would scarcely have been willing to allow it, was slightly stouter than before.

Being only about twelve miles distant from Gibraltar, the little garrison at Ceuta had felt itself by no means isolated in its position; but by frequent excursions across the frozen strait, and by the constant use of the telegraph, had kept up their communication with their fellow-countrymen on the other island. Colonel Murphy and the major had not even been forced to forego the pleasures of the chessboard. The game that had been interrupted by Captain Servadac’s former visit was not yet concluded; but, like the two American clubs that played their celebrated game in 1846 between Washington and

Baltimore, the two gallant officers made use of the semaphore to communicate their well-digested moves.

The major stood waiting for his visitor to speak.

“Major Oliphant, I believe?” said Servadac, with a courteous bow.

“Yes, sir, Major Oliphant, officer in command of the garrison at Ceuta,” was the Englishman’s reply. “And to whom,” he added, “may I have the honor of speaking?”

“To Captain Servadac, the governor general of Gallia.”

“Indeed!” said the major, with a supercilious look.

“Allow me to express my surprise,” resumed the captain, “at seeing you installed as commanding officer upon what I have always understood to be Spanish soil. May I demand your claim to your position?”

“My claim is that of first occupant.”

“But do you not think that the party of Spaniards now resident with me may at some future time assert a prior right to the proprietorship?”

“I think not, Captain Servadac.”

“But why not?” persisted the captain.

“Because these very Spaniards have, by formal contract, made over Ceuta, in its integrity, to the British government.”

Servadac uttered an exclamation of surprise.

“And as the price of that important cession,” continued Major Oliphant, “they have received a fair equivalent in British gold.”

“Ah!” cried Ben Zoof, “that accounts for that fellow Negrete and his people having such a lot of money.”

Servadac was silent. It had become clear to his mind what had been the object of that secret visit to Ceuta which he had heard of as being made by the two English officers.

The arguments that he had intended to use had completely fallen through; all that he had now to do was carefully to prevent any suspicion of his disappointed project.

“May I be allowed to ask, Captain Servadac, to what I am indebted for the honor of this visit?” asked Major Oliphant presently.

“I have come, Major Oliphant, in the hope of doing you and your companions a service,” replied Servadac, rousing himself from his reverie.

“Ah, indeed!” replied the major, as though he felt himself quite independent of all services from exterior sources.

“I thought, major, that it was not unlikely you were in ignorance of the fact that both Ceuta and Gibraltar have been traversing the solar regions on the surface of a comet.”

The major smiled incredulously; but Servadac, nothing daunted, went on to detail the results of the collision between the comet and the earth, adding that, as there was the almost immediate prospect of another concussion, it had occurred to him that it might be advisable for the whole population of Gallia to unite in taking precautionary measures for the common welfare.

“In fact, Major Oliphant,” he said in conclusion, “I am here to inquire whether you and your friends would be disposed to join us in our present quarters.”

“I am obliged to you, Captain Servadac,” answered the major stiffly; “but we have not the slightest intention of abandoning our post. We have received no government orders to that effect; indeed, we have received no orders at all. Our own dispatch to the First Lord of the Admiralty still awaits the mail.”

“But allow me to repeat,” insisted Servadac, “that we are no longer on the earth, although we expect to come in contact with it again in about eight weeks.”

“I have no doubt,” the major answered, “that England will make every effort to reclaim us.”

Servadac felt perplexed. It was quite evident that Major Oliphant had not been convinced of the truth of one syllable of what he had been saying.

“Then I am to understand that you are determined to retain your two garrisons here and at Gibraltar?” asked Servadac, with one last effort at persuasion.

“Certainly; these two posts command the entrance of the Mediterranean.”

“But supposing there is no longer any Mediterranean?” retorted the captain, growing impatient.

“Oh, England will always take care of that,” was Major Oliphant’s cool reply. “But excuse me,” he added presently; “I see that Colonel Murphy has just telegraphed his next move. Allow me to wish you good-afternoon.”

And without further parley, followed by his soldiers, he retired into the casemate, leaving Captain Servadac gnawing his mustache with mingled rage and mortification.

“A fine piece of business we have made of this!” said Ben Zoof, when he found himself alone with his master.

“We will make our way back at once,” replied Captain Servadac.

“Yes, the sooner the better, with our tails between our legs,” rejoined the orderly, who this time felt no inclination to start off to the march of the Algerian zephyrs. And so the French tricolor returned as it had set out — in Ben Zoof’s knapsack.

On the eighth evening after starting, the travelers again set foot on the volcanic promontory just in time to witness a great commotion.

Palmyrin Rosette was in a furious rage. He had completed all his calculations about Nerina, but that perfidious satellite had totally disappeared. The astronomer was frantic at the loss of his moon. Captured probably by some larger body, it was revolving in its proper zone of the minor planets.

CHAPTER XVI. A BOLD PROPOSITION

On his return Servadac communicated to the count the result of his expedition, and, though perfectly silent on the subject of his personal project, did not conceal the fact that the Spaniards, without the smallest right, had sold Ceuta to the English.

Having refused to quit their post, the Englishmen had virtually excluded themselves from any further consideration; they had had their warning, and must now take the consequences of their own incredulity.

Although it had proved that not a single creature either at Gourbi Island, Gibraltar, Ceuta, Madalena, or Formentera had received any injury whatever at the time of the first concussion, there was nothing in the least to make it certain that a like immunity from harm would attend the second. The previous escape was doubtless owing to some slight, though unaccountable, modification in the rate of motion; but whether the inhabitants of the earth had fared so fortunately, was a question that had still to be determined.

The day following Servadac's return, he and the count and Lieutenant Procope met by agreement in the cave, formally to discuss what would be the most advisable method of proceeding under their present prospects. Ben Zoof was, as a matter of course, allowed to be present, and Professor Rosette had been asked to attend; but he declined on the plea of taking no interest in the matter. Indeed, the disappearance of his moon had utterly disconcerted him, and the probability that he should soon lose his comet also, plunged him into an excess of grief which he preferred to bear in solitude.

Although the barrier of cool reserve was secretly increasing between the captain and the count, they scrupulously concealed any outward token of their inner feelings, and without any personal bias applied their best energies to the discussion of the question which was of such mutual, nay, of such universal interest.

Servadac was the first to speak. "In fifty-one days, if Professor Rosette has made no error in his calculations, there is to be a recurrence of collision between this comet and the earth. The inquiry that we have now to make is whether we are prepared for the coming shock. I ask myself, and I ask you, whether it is in our power, by any means, to avert the evil consequences that are only too likely to follow?"

Count Timascheff, in a voice that seemed to thrill with solemnity, said: “In such events we are at the disposal of an over-ruling Providence; human precautions cannot sway the Divine will.”

“But with the most profound reverence for the will of Providence,” replied the captain, “I beg to submit that it is our duty to devise whatever means we can to escape the threatening mischief. Heaven helps them that help themselves.”

“And what means have you to suggest, may I ask?” said the count, with a faint accent of satire.

Servadac was forced to acknowledge that nothing tangible had hitherto presented itself to his mind.

“I don’t want to intrude,” observed Ben Zoof, “but I don’t understand why such learned gentlemen as you cannot make the comet go where you want it to go.”

“You are mistaken, Ben Zoof, about our learning,” said the captain; “even Professor Rosette, with all his learning, has not a shadow of power to prevent the comet and the earth from knocking against each other.”

“Then I cannot see what is the use of all this learning,” the orderly replied.

“One great use of learning,” said Count Timascheff with a smile, “is to make us know our own ignorance.”

While this conversation had been going on, Lieutenant Procope had been sitting in thoughtful silence. Looking up, he now said, “Incident to this expected shock, there may be a variety of dangers. If, gentlemen, you will allow me, I will enumerate them; and we shall, perhaps, by taking them *seriatim*, be in a better position to judge whether we can successfully grapple with them, or in any way mitigate their consequences.”

There was a general attitude of attention. It was surprising how calmly they proceeded to discuss the circumstances that looked so threatening and ominous.

“First of all,” resumed the lieutenant, “we will specify the different ways in which the shock may happen.”

“And the prime fact to be remembered,” interposed Servadac, “is that the combined velocity of the two bodies will be about 21,000 miles an hour.”

“Express speed, and no mistake!” muttered Ben Zoof.

“Just so,” assented Procope. “Now, the two bodies may impinge either directly or obliquely. If the impact is sufficiently oblique, Gallia may do precisely what she did before: she may graze the earth; she may, or she may not, carry off a portion of the earth’s atmosphere and substance, and so she may float away again into space; but her orbit would undoubtedly be deranged, and if we survive the shock, we shall have small chance of ever returning to the world of our fellow-creatures.”

“Professor Rosette, I suppose,” Ben Zoof remarked, “would pretty soon find out all about that.”

“But we will leave this hypothesis,” said the lieutenant; “our own experience has sufficiently shown us its advantages and its disadvantages. We will proceed to consider the infinitely more serious alternative of direct impact; of a shock that would hurl the comet straight on to the earth, to which it would become attached.”

“A great wart upon her face!” said Ben Zoof, laughing.

The captain held up his finger to his orderly, making him understand that he should hold his tongue.

“It is, I presume, to be taken for granted,” continued Lieutenant Procope, “that the mass of the earth is comparatively so large that, in the event of a direct collision, her own motion would not be sensibly retarded, and that she would carry the comet along with her, as part of herself.”

“Very little question of that, I should think,” said Servadac.

“Well, then,” the lieutenant went on, “what part of this comet of ours will be the part to come into collision with the earth? It may be the equator, where we are; it may be at the exactly opposite point, at our antipodes; or it may be at either pole. In any case, it seems hard to foresee whence there is to come the faintest chance of deliverance.”

“Is the case so desperate?” asked Servadac.

“I will tell you why it seems so. If the side of the comet on which we are resident impinges on the earth, it stands to reason that we must be crushed to atoms by the violence of the concussion.”

“Regular mincemeat!” said Ben Zoof, whom no admonitions could quite reduce to silence.

“And if,” said the lieutenant, after a moment’s pause, and the slightest possible frown at the interruption — ”and if the collision should occur at our antipodes, the sudden check to the velocity of the comet would be quite equivalent to a shock *in situ*; and, another thing, we should run the risk of being suffocated, for all our comet’s atmosphere would be assimilated with the terrestrial atmosphere, and we, supposing we were not dashed to atoms, should be left as it were upon the summit of an enormous mountain (for such to all intents and purposes Gallia would be), 450 miles above the level of the surface of the globe, without a particle of air to breathe.”

“But would not our chances of escape be considerably better,” asked Count Timascheff, “in the event of either of the comet’s poles being the point of contact?”

“Taking the combined velocity into account,” answered the lieutenant, “I confess that I fear the violence of the shock will be too great to permit our destruction to be averted.”

A general silence ensued, which was broken by the lieutenant himself. “Even if none of these contingencies occur in the way we have contemplated, I am driven to the suspicion that we shall be burnt alive.”

“Burnt alive!” they all exclaimed in a chorus of horror.

“Yes. If the deductions of modern science be true, the speed of the comet, when suddenly checked, will be transmuted into heat, and that heat will be so intense that the temperature of the comet will be raised to some millions of degrees.”

No one having anything definite to allege in reply to Lieutenant Procope’s forebodings, they all relapsed into silence. Presently Ben Zoof asked whether it was not possible for the comet to fall into the middle of the Atlantic.

Procope shook his head. “Even so, we should only be adding the fate of drowning to the list of our other perils.”

“Then, as I understand,” said Captain Servadac, “in whatever way or in whatever place the concussion occurs, we must be either crushed, suffocated, roasted, or drowned. Is that your conclusion, lieutenant?”

“I confess I see no other alternative,” answered Procope, calmly.

“But isn’t there another thing to be done?” said Ben Zoof.

“What do you mean?” his master asked.

“Why, to get off the comet before the shock comes.”

“How could you get off Gallia?”

“That I can’t say,” replied the orderly.

“I am not sure that that could not be accomplished,” said the lieutenant.

All eyes in a moment were riveted upon him, as, with his head resting on his hands, he was manifestly cogitating a new idea. “Yes, I think it could be accomplished,” he repeated. “The project may appear extravagant, but I do not know why it should be impossible. Ben Zoof has hit the right nail on the head; we must try and leave Gallia before the shock.”

“Leave Gallia! How?” said Count Timascheff.

The lieutenant did not at once reply. He continued pondering for a time, and at last said, slowly and distinctly, “By making a balloon!”

Servadac’s heart sank.

“A balloon!” he exclaimed. “Out of the question! Balloons are exploded things. You hardly find them in novels. Balloon, indeed!”

“Listen to me,” replied Procope. “Perhaps I can convince you that my idea is not so chimerical as you imagine.” And, knitting his brow, he proceeded to establish the feasibility of his plan. “If we can ascertain the precise moment when the shock is to happen, and can succeed in launching ourselves a sufficient time beforehand into Gallia’s atmosphere, I believe it will transpire that this atmosphere will amalgamate

with that of the earth, and that a balloon whirled along by the combined velocity would glide into the mingled atmosphere and remain suspended in mid-air until the shock of the collision is overpast."

Count Timascheff reflected for a minute, and said, "I think, lieutenant, I understand your project. The scheme seems tenable; and I shall be ready to co-operate with you, to the best of my power, in putting it into execution."

"Only, remember," continued Procope, "there are many chances to one against our success. One instant's obstruction and stoppage in our passage, and our balloon is burnt to ashes. Still, reluctant as I am to acknowledge it, I confess that I feel our sole hope of safety rests in our getting free from this comet."

"If the chances were ten thousand to one against us," said Servadac, "I think the attempt ought to be made."

"But have we hydrogen enough to inflate a balloon?" asked the count.

"Hot air will be all that we shall require," the lieutenant answered; "we are only contemplating about an hour's journey."

"Ah, a fire-balloon! A montgolfier!" cried Servadac. "But what are you going to do for a casing?"

"I have thought of that. We must cut it out of the sails of the *Dobryna*; they are both light and strong," rejoined the lieutenant. Count Timascheff complimented the lieutenant upon his ingenuity, and Ben Zoof could not resist bringing the meeting to a conclusion by a ringing cheer.

Truly daring was the plan of which Lieutenant Procope had thus become the originator; but the very existence of them all was at stake, and the design must be executed resolutely. For the success of the enterprise it was absolutely necessary to know, almost to a minute, the precise time at which the collision would occur, and Captain Servadac undertook the task, by gentle means or by stern, of extracting the secret from the professor.

To Lieutenant Procope himself was entrusted the superintendence of the construction of the montgolfier, and the work was begun at once. It was to be large enough to carry the

whole of the twenty-three residents in the volcano, and, in order to provide the means of floating aloft long enough to give time for selecting a proper place for descent, the lieutenant was anxious to make it carry enough hay or straw to maintain combustion for a while, and keep up the necessary supply of heated air.

The sails of the *Dobryna*, which had all been carefully stowed away in the Hive, were of a texture unusually close, and quite capable of being made airtight by means of a varnish, the ingredients of which were rummaged out of the promiscuous stores of the tartan. The lieutenant himself traced out the pattern and cut out the strips, and all hands were employed in seaming them together. It was hardly the work for little fingers, but Nina persisted in accomplishing her own share of it. The Russians were quite at home at occupation of this sort, and having initiated the Spaniards into its mysteries, the task of joining together the casing was soon complete. Isaac Hakkabut and the professor were the only two members of the community who took no part in this somewhat tedious proceeding.

A month passed away, but Servadac found no opportunity of getting at the information he had pledged himself to gain. On the sole occasion when he had ventured to broach the subject with the astronomer, he had received for answer that as there was no hurry to get back to the earth, there need be no concern about any dangers of transit.

Indeed, as time passed on, the professor seemed to become more and more inaccessible. A pleasant temperature enabled him to live entirely in his observatory, from which intruders were rigidly shut out. But Servadac bided his time. He grew more and more impressed with the importance of finding out the exact moment at which the impact would take place, but was content to wait for a promising opportunity to put any fresh questions on the subject to the too reticent astronomer.

Meanwhile, the earth’s disc was daily increasing in magnitude; the comet traveled 50,000,000 leagues during the month, at the close of which it was not more than 78,000,000 leagues from the sun.

A thaw had now fairly set in. The breaking up of the frozen ocean was a magnificent spectacle, and “the great voice of the sea,” as the whalers graphically describe it, was heard in all its solemnity. Little streams of water began to trickle down the declivities of the mountain and along the shelving shore, only to be transformed, as the melting of the snow continued, into torrents or cascades. Light vapors gathered on the horizon, and

clouds were formed and carried rapidly along by breezes to which the Gallian atmosphere had long been unaccustomed. All these were doubtless but the prelude to atmospheric disturbances of a more startling character; but as indications of returning spring, they were greeted with a welcome which no apprehensions for the future could prevent being glad and hearty.

A double disaster was the inevitable consequence of the thaw. Both the schooner and the tartan were entirely destroyed. The basement of the icy pedestal on which the ships had been upheaved was gradually undermined, like the icebergs of the Arctic Ocean, by warm currents of water, and on the night of the 12th the huge block collapsed *en masse*, so that on the following morning nothing remained of the *Dobryna* and the *Hansa* except the fragments scattered on the shore.

Although certainly expected, the catastrophe could not fail to cause a sense of general depression. Well-nigh one of their last ties to Mother Earth had been broken; the ships were gone, and they had only a balloon to replace them!

To describe Isaac Hakkabut’s rage at the destruction of the tartan would be impossible. His oaths were simply dreadful; his imprecations on the accursed race were full of wrath. He swore that Servadac and his people were responsible for his loss; he vowed that they should be sued and made to pay him damages; he asserted that he had been brought from Gourbi Island only to be plundered; in fact, he became so intolerably abusive, that Servadac threatened to put him into irons unless he conducted himself properly; whereupon the Jew, finding that the captain was in earnest, and would not hesitate to carry the threat into effect, was fain to hold his tongue, and slunk back into his dim hole.

By the 14th the balloon was finished, and, carefully sewn and well varnished as it had been, it was really a very substantial structure. It was covered with a network that had been made from the light rigging of the yacht, and the car, composed of wicker-work that had formed partitions in the hold of the *Hansa*, was quite commodious enough to hold the twenty-three passengers it was intended to convey. No thought had been bestowed upon comfort or convenience, as the ascent was to last for so short a time, merely long enough for making the transit from atmosphere to atmosphere.

The necessity was becoming more and more urgent to get at the true hour of the approaching contact, but the professor seemed to grow more obstinate than ever in his

resolution to keep his secret.

On the 15th the comet crossed the orbit of Mars, at the safe distance of 56,000,000 leagues; but during that night the community thought that their last hour had taken them unawares. The volcano rocked and trembled with the convulsions of internal disturbance, and Servadac and his companions, convinced that the mountain was doomed to some sudden disruption, rushed into the open air.

The first object that caught their attention as they emerged upon the open rocks was the unfortunate professor, who was scrambling down the mountain-side, piteously displaying a fragment of his shattered telescope.

It was no time for condolence.

A new marvel arrested every eye. A fresh satellite, in the gloom of night, was shining conspicuously before them.

That satellite was a part of Gallia itself!

By the expansive action of the inner heat, Gallia, like Gambart’s comet, had been severed in twain; an enormous fragment had been detached and launched into space!

The fragment included Ceuta and Gibraltar, with the two English garrisons!

CHAPTER XVII. THE VENTURE MADE

What would be the consequences of this sudden and complete disruption, Servadac and his people hardly dared to think.

The first change that came under their observation was the rapidity of the sun's appearances and disappearances, forcing them to the conviction that although the comet still rotated on its axis from east to west, yet the period of its rotation had been diminished by about one-half. Only six hours instead of twelve elapsed between sunrise and sunrise; three hours after rising in the west the sun was sinking again in the east.

"We are coming to something!" exclaimed Servadac. "We have got a year of something like 2,880 days."

"I shouldn't think it would be an easy matter to find saints enough for such a calendar as that!" said Ben Zoof.

Servadac laughed, and remarked that they should have the professor talking about the 238th of June, and the 325th of December.

It soon became evident that the detached portion was not revolving round the comet, but was gradually retreating into space. Whether it had carried with it any portion of atmosphere, whether it possessed any other condition for supporting life, and whether it was likely ever again to approach to the earth, were all questions that there were no means of determining. For themselves the all-important problem was — what effect would the rending asunder of the comet have upon its rate of progress? and as they were already conscious of a further increase of muscular power, and a fresh diminution of specific gravity, Servadac and his associates could not but wonder whether the alteration in the mass of the comet would not result in its missing the expected coincidence with the earth altogether.

Although he professed himself incompetent to pronounce a decided opinion, Lieutenant Procope manifestly inclined to the belief that no alteration would ensue in the rate of Gallia's velocity; but Rosette, no doubt, could answer the question directly, and the time had now arrived in which he must be compelled to divulge the precise moment of collision.

But the professor was in the worst of tempers. Generally taciturn and morose, he was more than usually uncivil whenever any one ventured to speak to him. The loss of his telescope had doubtless a great deal to do with his ill-humor; but the captain drew the most favorable conclusions from Rosette's continued irritation. Had the comet been in any way projected from its course, so as to be likely to fail in coming into contact with the earth, the professor would have been quite unable to conceal his satisfaction. But they required to know more than the general truth, and felt that they had no time to lose in getting at the exact details.

The opportunity that was wanted soon came.

On the 18th, Rosette was overheard in furious altercation with Ben Zoof. The orderly had been taunting the astronomer with the mutilation of his little comet. A fine thing, he said, to split in two like a child's toy. It had cracked like a dry nut; and mightn't one as well live upon an exploding bomb? — with much more to the same effect. The professor, by way of retaliation, had commenced sneering at the "prodigious" mountain of Montmartre, and the dispute was beginning to look serious when Servadac entered.

Thinking he could turn the wrangling to some good account, so as to arrive at the information he was so anxiously seeking, the captain pretended to espouse the views of his orderly; he consequently brought upon himself the full force of the professor's wrath.

Rosette's language became more and more violent, till Servadac, feigning to be provoked beyond endurance, cried:

"You forget, sir, that you are addressing the Governor-General of Gallia."

"Governor-General! humbug!" roared Rosette. "Gallia is my comet!"

"I deny it," said Servadac. "Gallia has lost its chance of getting back to the earth. Gallia has nothing to do with you. Gallia is mine; and you must submit to the government which I please to ordain."

"And who told you that Gallia is not going back to the earth?" asked the professor, with a look of withering scorn.

“Why, isn’t her mass diminished? Isn’t she split in half? Isn’t her velocity all altered?” demanded the captain.

“And pray who told you this?” again said the professor, with a sneer.

“Everybody. Everybody knows it, of course,” replied Servadac.

“Everybody is very clever. And you always were a very clever scholar too. We remember that of old, don’t we?”

“Sir!”

“You nearly mastered the first elements of science, didn’t you?”

“Sir!”

“A credit to your class!”

“Hold your tongue, sir!” bellowed the captain again, as if his anger was uncontrollable.

“Not I,” said the professor.

“Hold your tongue!” repeated Servadac.

“Just because the mass is altered you think the velocity is altered?”

“Hold your tongue!” cried the captain, louder than ever.

“What has mass to do with the orbit? Of how many comets do you know the mass, and yet you know their movements? Ignorance!” shouted Rosette.

“Insolence!” retorted Servadac.

Ben Zoof, really thinking that his master was angry, made a threatening movement towards the professor.

“Touch me if you dare!” screamed Rosette, drawing himself up to the fullest height his diminutive figure would allow. “You shall answer for your conduct before a court of justice!”

“Where? On Gallia?” asked the captain.

“No; on the earth.”

“The earth! Pshaw! You know we shall never get there; our velocity is changed.”

“On the earth,” repeated the professor, with decision.

“Trash!” cried Ben Zoof. “The earth will be too far off!”

“Not too far off for us to come across her orbit at 42 minutes and 35.6 seconds past two o’clock on the morning of this coming 1st of January.”

“Thanks, my dear professor — many thanks. You have given me all the information I required;” and, with a low bow and a gracious smile, the captain withdrew. The orderly made an equally polite bow, and followed his master. The professor, completely nonplussed, was left alone.

Thirteen days, then — twenty-six of the original Gallian days, fifty-two of the present — was all the time for preparation that now remained. Every preliminary arrangement was hurried on with the greatest earnestness.

There was a general eagerness to be quit of Gallia. Indifferent to the dangers that must necessarily attend a balloon ascent under such unparalleled circumstances, and heedless of Lieutenant Procope’s warning that the slightest check in their progress would result in instantaneous combustion, they all seemed to conclude that it must be the simplest thing possible to glide from one atmosphere to another, so that they were quite sanguine as to the successful issue of their enterprise. Captain Servadac made a point of showing himself quite enthusiastic in his anticipations, and to Ben Zoof the going up in a balloon was the supreme height of his ambition. The count and the lieutenant, of colder and less demonstrative temperament, alike seemed to realize the possible perils of the undertaking, but even they were determined to put a bold face upon every difficulty.

The sea had now become navigable, and three voyages were made to Gourbi Island in the steam launch, consuming the last of their little reserve of coal.

The first voyage had been made by Servadac with several of the sailors. They found the gourbi and the adjacent building quite uninjured by the severity of the winter; numbers of little rivulets intersected the pasture-land; new plants were springing up under the influence of the equatorial sun, and the luxuriant foliage was tenanted by the birds

which had flown back from the volcano. Summer had almost abruptly succeeded to winter, and the days, though only three hours long, were intensely hot.

Another of the voyages to the island had been to collect the dry grass and straw which was necessary for inflating the balloon. Had the balloon been less cumbersome it would have been conveyed to the island, whence the start would have been effected; but as it was, it was more convenient to bring the combustible material to the balloon.

The last of the coal having been consumed, the fragments of the shipwrecked vessels had to be used day by day for fuel. Hakkabut began making a great hubbub when he found that they were burning some of the spars of the *Hansa*; but he was effectually silenced by Ben Zoof, who told him that if he made any more fuss, he should be compelled to pay 50,000 francs for a balloon-ticket, or else he should be left behind.

By Christmas Day everything was in readiness for immediate departure. The festival was observed with a solemnity still more marked than the anniversary of the preceding year. Every one looked forward to spending New Year's Day in another sphere altogether, and Ben Zoof had already promised Pablo and Nina all sorts of New Year's gifts.

It may seem strange, but the nearer the critical moment approached, the less Hector Servadac and Count Timascheff had to say to each other on the subject. Their mutual reserve became more apparent; the experiences of the last two years were fading from their minds like a dream; and the fair image that had been the cause of their original rivalry was ever rising, as a vision, between them.

The captain's thoughts began to turn to his unfinished rondo; in his leisure moments, rhymes suitable and unsuitable, possible and impossible, were perpetually jingling in his imagination. He labored under the conviction that he had a work of genius to complete. A poet he had left the earth, and a poet he must return.

Count Timascheff's desire to return to the world was quite equaled by Lieutenant Procope's. The Russian sailors' only thought was to follow their master, wherever he went. The Spaniards, though they would have been unconcerned to know that they were to remain upon Gallia, were nevertheless looking forward with some degree of pleasure to revisiting the plains of Andalusia; and Nina and Pablo were only too delighted at the prospect of accompanying their kind protectors on any fresh excursion whatever.

The only malcontent was Palmyrin Rosette. Day and night he persevered in his astronomical pursuits, declared his intention of never abandoning his comet, and swore positively that nothing should induce him to set foot in the car of the balloon.

The misfortune that had befallen his telescope was a never-ending theme of complaint; and just now, when Gallia was entering the narrow zone of shooting-stars, and new discoveries might have been within his reach, his loss made him more inconsolable than ever. In sheer desperation, he endeavored to increase the intensity of his vision by applying to his eyes some belladonna which he found in the *Dobryna's* medicine chest; with heroic fortitude he endured the tortures of the experiment, and gazed up into the sky until he was nearly blind. But all in vain; not a single fresh discovery rewarded his sufferings.

No one was quite exempt from the feverish excitement which prevailed during the last days of December. Lieutenant Procope superintended his final arrangements. The two low masts of the schooner had been erected firmly on the shore, and formed supports for the montgolfier, which had been duly covered with the netting, and was ready at any moment to be inflated. The car was close at hand. Some inflated skins had been attached to its sides, so that the balloon might float for a time, in the event of its descending in the sea at a short distance from the shore. If unfortunately, it should come down in mid-ocean, nothing but the happy chance of some passing vessel could save them all from the certain fate of being drowned.

The 31st came. Twenty-four hours hence and the balloon, with its large living freight, would be high in the air. The atmosphere was less buoyant than that of the earth, but no difficulty in ascending was to be apprehended.

Gallia was now within 96,000,000 miles of the sun, consequently not much more than 4,000,000 miles from the earth; and this interval was being diminished at the rate of nearly 208,000 miles an hour, the speed of the earth being about 70,000 miles, that of the comet being little less than 138,000 miles an hour.

It was determined to make the start at two o'clock, three-quarters of an hour, or, to speak correctly 42 minutes 35.6 seconds, before the time predicted by the professor as the instant of collision. The modified rotation of the comet caused it to be daylight at the time.

An hour previously the balloon was inflated with perfect success, and the car was securely attached to the network. It only awaited the stowage of the passengers.

Isaac Hakkabut was the first to take his place in the car. But scarcely had he done so, when Servadac noticed that his waist was encompassed by an enormous girdle that bulged out to a very extraordinary extent. “What’s all this, Hakkabut?” he asked.

“It’s only my little bit of money, your Excellency; my modest little fortune — a mere bagatelle,” said the Jew.

“And what may your little fortune weigh?” inquired the captain.

“Only about sixty-six pounds!” said Isaac.

“Sixty-six pounds!” cried Servadac. “We haven’t reckoned for this.”

“Merciful heavens!” began the Jew.

“Sixty-six pounds!” repeated Servadac. “We can hardly carry ourselves; we can’t have any dead weight here. Pitch it out, man, pitch it out!”

“God of Israel!” whined Hakkabut.

“Out with it, I say!” cried Servadac.

“What, all my money, which I have saved so long, and toiled for so hard?”

“It can’t be helped,” said the captain, unmoved.

“Oh, your Excellency!” cried the Jew.

“Now, old Nicodemus, listen to me,” interposed Ben Zoof; “you just get rid of that pouch of yours, or we will get rid of you. Take your choice. Quick, or out you go!”

The avaricious old man was found to value his life above his money; he made a lamentable outcry about it, but he unfastened his girdle at last, and put it out of the car.

Very different was the case with Palmyrin Rosette. He avowed over and over again his intention of never quitting the nucleus of his comet. Why should he trust himself to a

balloon, that would blaze up like a piece of paper? Why should he leave the comet? Why should he not go once again upon its surface into the far-off realms of space?

His volubility was brought to a sudden check by Servadac's bidding two of the sailors, without more ado, to take him in their arms and put him quietly down at the bottom of the car.

To the great regret of their owners, the two horses and Nina's pet goat were obliged to be left behind. The only creature for which there was found a place was the carrier-pigeon that had brought the professor's message to the Hive. Servadac thought it might probably be of service in carrying some communication to the earth.

When every one, except the captain and his orderly, had taken their places, Servadac said, "Get in, Ben Zoof."

"After you, sir," said Ben Zoof, respectfully.

"No, no!" insisted Servadac; "the captain must be the last to leave the ship!"

A moment's hesitation and the orderly clambered over the side of the car. Servadac followed. The cords were cut. The balloon rose with stately calmness into the air.

CHAPTER XVIII. SUSPENSE

When the balloon had reached an elevation of about 2,500 yards, Lieutenant Procope determined to maintain it at that level. A wire-work stove, suspended below the casing, and filled with lighted hay, served to keep the air in the interior at a proper temperature.

Beneath their feet was extended the basin of the Gallian Sea. An inconsiderable speck to the north marked the site of Gourbi Island. Ceuta and Gibraltar, which might have been expected in the west, had utterly disappeared. On the south rose the volcano, the extremity of the promontory that jutted out from the continent that formed the framework of the sea; whilst in every direction the strange soil, with its commixture of tellurium and gold, gleamed under the sun’s rays with a perpetual iridescence.

Apparently rising with them in their ascent, the horizon was well-defined. The sky above them was perfectly clear; but away in the northwest, in opposition to the sun, floated a new sphere, so small that it could not be an asteroid, but like a dim meteor. It was the fragment that the internal convulsion had rent from the surface of the comet, and which was now many thousands of leagues away, pursuing the new orbit into which it had been projected. During the hours of daylight it was far from distinct, but after nightfall it would assume a definite luster.

The object, however, of supreme interest was the great expanse of the terrestrial disc, which was rapidly drawing down obliquely towards them. It totally eclipsed an enormous portion of the firmament above, and approaching with an ever-increasing velocity, was now within half its average distance from the moon. So close was it, that the two poles could not be embraced in one focus. Irregular patches of greater or less brilliancy alternated on its surface, the brighter betokening the continents, the more somber indicating the oceans that absorbed the solar rays. Above, there were broad white bands, darkened on the side averted from the sun, exhibiting a slow but unintermittent movement; these were the vapors that pervaded the terrestrial atmosphere.

But as the aeronauts were being hurried on at a speed of 70 miles a second, this vague aspect of the earth soon developed itself into definite outlines. Mountains and plains were no longer confused, the distinction between sea and shore was more plainly identified, and instead of being, as it were, depicted on a map, the surface of the earth appeared as though modelled in relief.

Twenty-seven minutes past two, and Gallia is only 72,000 miles from the terrestrial sphere; quicker and quicker is the velocity; ten minutes later, and they are only 36,000 miles apart!

The whole configuration of the earth is clear.

“Europe! Russia! France!” shout Procope, the count, and Servadac, almost in a breath.

And they are not mistaken. The eastern hemisphere lies before them in the full blaze of light, and there is no possibility of error in distinguishing continent from continent.

The surprise only kindled their emotion to yet keener intensity, and it would be hard to describe the excitement with which they gazed at the panorama that was before them. The crisis of peril was close at hand, but imagination overleaped all consideration of danger; and everything was absorbed in the one idea that they were again within reach of that circle of humanity from which they had supposed themselves severed forever.

And, truly, if they could have paused to study it, that panorama of the states of Europe which was outstretched before their eyes, was conspicuous for the fantastic resemblances with which Nature on the one hand, and international relations on the other, have associated them. There was England, marching like some stately dame towards the east, trailing her ample skirts and coroneted with the cluster of her little islets; Sweden and Norway, with their bristling spine of mountains, seemed like a splendid lion eager to spring down from the bosom of the ice-bound north; Russia, a gigantic polar bear, stood with its head towards Asia, its left paw resting upon Turkey, its right upon Mount Caucasus; Austria resembled a huge cat curled up and sleeping a watchful sleep; Spain, with Portugal as a pennant, like an unfurled banner, floated from the extremity of the continent; Turkey, like an insolent cock, appeared to clutch the shores of Asia with the one claw, and the land of Greece with the other; Italy, as it were a foot and leg encased in a tight-fitting boot, was juggling deftly with the islands of Sicily, Sardinia, and Corsica; Prussia, a formidable hatchet imbedded in the heart of Germany, its edge just grazing the frontiers of France; whilst France itself suggested a vigorous torso with Paris at its breast.

All at once Ben Zoof breaks the silence: “Montmartre! I see Montmartre!” And, smile at the absurdity as others might, nothing could induce the worthy orderly to surrender his belief that he could actually make out the features of his beloved home.

The only individual whose soul seemed unstirred by the approaching earth was Palmyrin Rosette. Leaning over the side of the car, he kept his eyes fixed upon the abandoned comet, now floating about a mile and a half below him, bright in the general irradiation which was flooding the surrounding space.

Chronometer in hand, Lieutenant Procope stood marking the minutes and seconds as they fled; and the stillness which had once again fallen upon them all was only broken by his order to replenish the stove, that the montgolfier might retain its necessary level. Servadac and the count continued to gaze upon the earth with an eagerness that almost amounted to awe. The balloon was slightly in the rear of Gallia, a circumstance that augured somewhat favorably, because it might be presumed that if the comet preceded the balloon in its contact with the earth, there would be a break in the suddenness of transfer from one atmosphere to the other.

The next question of anxiety was, where would the balloon alight? If upon *terra firma*, would it be in a place where adequate resources for safety would be at hand? If upon the ocean, would any passing vessel be within hail to rescue them from their critical position? Truly, as the count observed to his comrades, none but a Divine Pilot could steer them now.

“Forty-two minutes past!” said the lieutenant, and his voice seemed to thrill through the silence of expectation.

There were not 20,000 miles between the comet and the earth!

The calculated time of impact was 2 hours 47 minutes 35.6 seconds. Five minutes more and collision must ensue!

But was it so? Just at this moment, Lieutenant Procope observed that the comet deviated sensibly in an oblique course. Was it possible that after all collision would not occur?

The deviation, however, was not great; it did not justify any anticipation that Gallia would merely graze the earth, as it had done before; it left it certain that the two bodies would inevitably impinge.

“No doubt,” said Ben Zoof, “this time we shall stick together.”

Another thought occurred. Was it not only too likely that, in the fusion of the two atmospheres, the balloon itself, in which they were being conveyed, would be rent into ribbons, and every one of its passengers hurled into destruction, so that not a Gallian should survive to tell the tale of their strange peregrinations?

Moments were precious; but Hector Servadac resolved that he would adopt a device to secure that at least some record of their excursion in solar distances should survive themselves.

Tearing a leaf from his note-book, he wrote down the name of the comet, the list of the fragments of the earth it had carried off, the names of his companions, and the date of the comet's aphelion; and having subscribed it with his signature, turned to Nina and told her he must have the carrier-pigeon which was nestling in her bosom.

The child's eyes filled with tears; she did not say a word, but imprinting a kiss upon its soft plumage, she surrendered it at once, and the message was hurriedly fastened to its neck. The bird wheeled round and round in a few circles that widened in their diameter, and quickly sunk to an altitude in the comet's atmosphere much inferior to the balloon.

Some minutes more were thus consumed and the interval of distance was reduced to less than 8,000 miles.

The velocity became inconceivably great, but the increased rate of motion was in no way perceptible; there was nothing to disturb the equilibrium of the car in which they were making their aerial adventure.

"Forty-six minutes!" announced the lieutenant.

The glowing expanse of the earth's disc seemed like a vast funnel, yawning to receive the comet and its atmosphere, balloon and all, into its open mouth.

"Forty-seven!" cried Procope.

There was half a minute yet. A thrill ran through every vein. A vibration quivered through the atmosphere. The montgolfier, elongated to its utmost stretch, was manifestly being sucked into a vortex. Every passenger in the quivering car involuntarily clung spasmodically to its sides, and as the two atmospheres

amalgamated, clouds accumulated in heavy masses, involving all around in dense obscurity, while flashes of lurid flame threw a weird glimmer on the scene.

In a mystery every one found himself upon the earth again. They could not explain it, but here they were once more upon terrestrial soil; in a swoon they had left the earth, and in a similar swoon they had come back!

Of the balloon not a vestige remained, and contrary to previous computation, the comet had merely grazed the earth, and was traversing the regions of space, again far away!

CHAPTER XIX. BACK AGAIN

“In Algeria, captain?”

“Yes, Ben Zoof, in Algeria; and not far from Mostaganem.” Such were the first words which, after their return to consciousness, were exchanged between Servadac and his orderly.

They had resided so long in the province that they could not for a moment be mistaken as to their whereabouts, and although they were incapable of clearing up the mysteries that shrouded the miracle, yet they were convinced at the first glance that they had been returned to the earth at the very identical spot where they had quitted it.

In fact, they were scarcely more than a mile from Mostaganem, and in the course of an hour, when they had all recovered from the bewilderment occasioned by the shock, they started off in a body and made their way to the town. It was a matter of extreme surprise to find no symptom of the least excitement anywhere as they went along. The population was perfectly calm; every one was pursuing his ordinary avocation; the cattle were browsing quietly upon the pastures that were moist with the dew of an ordinary January morning. It was about eight o’clock; the sun was rising in the east; nothing could be noticed to indicate that any abnormal incident had either transpired or been expected by the inhabitants. As to a collision with a comet, there was not the faintest trace of any such phenomenon crossing men’s minds, and awakening, as it surely would, a panic little short of the certified approach of the millennium.

“Nobody expects us,” said Servadac; “that is very certain.”

“No, indeed,” answered Ben Zoof, with a sigh; he was manifestly disappointed that his return to Mostaganem was not welcomed with a triumphal reception.

They reached the Mascara gate. The first persons that Servadac recognized were the two friends that he had invited to be his seconds in the duel two years ago, the colonel of the 2nd Fusiliers and the captain of the 8th Artillery. In return to his somewhat hesitating salutation, the colonel greeted him heartily, “Ah! Servadac, old fellow! is it you?”

“I, myself,” said the captain.

“Where on earth have you been to all this time? In the name of peace, what have you been doing with yourself?”

“You would never believe me, colonel,” answered Servadac, “if I were to tell you; so on that point I had better hold my tongue.”

“Hang your mysteries!” said the colonel; “tell me, where have you been?”

“No, my friend, excuse me,” replied Servadac; “but shake hands with me in earnest, that I may be sure I am not dreaming.” Hector Servadac had made up his mind, and no amount of persuasion could induce him to divulge his incredible experiences.

Anxious to turn the subject, Servadac took the earliest opportunity of asking, “And what about Madame de L — — ?”

“Madame de L — — -!” exclaimed the colonel, taking the words out of his mouth; “the lady is married long ago; you did not suppose that she was going to wait for you. ‘Out of sight, out of mind,’ you know.”

“True,” replied Servadac; and turning to the count he said, “Do you hear that? We shall not have to fight our duel after all.”

“Most happy to be excused,” rejoined the count. The rivals took each other by the hand, and were united henceforth in the bonds of a sincere and confiding friendship.

“An immense relief,” said Servadac to himself, “that I have no occasion to finish that confounded rondo!”

It was agreed between the captain and the count that it would be desirable in every way to maintain the most rigid silence upon the subject of the inexplicable phenomena which had come within their experience. It was to them both a subject of the greatest perplexity to find that the shores of the Mediterranean had undergone no change, but they coincided in the opinion that it was prudent to keep their bewilderment entirely to themselves. Nothing induced them to break their reserve.

The very next day the small community was broken up.

The *Dobryna’s* crew, with the count and the lieutenant, started for Russia, and the Spaniards, provided, by the count’s liberality, with a competency that ensured them

from want, were despatched to their native shores. The leave taking was accompanied by genuine tokens of regard and goodwill.

For Isaac Hakkabut alone there was no feeling of regret. Doubly ruined by the loss of his tartan, and by the abandonment of his fortune, he disappeared entirely from the scene. It is needless to say that no one troubled himself to institute a search after him, and, as Ben Zoof sententiously remarked, “Perhaps old Jehoram is making money in America by exhibiting himself as the latest arrival from a comet!”

But however great was the reserve which Captain Servadac might make on his part, nothing could induce Professor Rosette to conceal his experiences. In spite of the denial which astronomer after astronomer gave to the appearance of such a comet as Gallia at all, and of its being refused admission to the catalogue, he published a voluminous treatise, not only detailing his own adventures, but setting forth, with the most elaborate precision, all the elements which settled its period and its orbit. Discussions arose in scientific circles; an overwhelming majority decided against the representations of the professor; an unimportant minority declared themselves in his favor, and a pamphlet obtained some degree of notice, ridiculing the whole debate under the title of “The History of an Hypothesis.” In reply to this impertinent criticism of his labors, Rosette issued a rejoinder full with the most vehement expressions of indignation, and reiterating his asseveration that a fragment of Gibraltar was still traversing the regions of space, carrying thirteen Englishmen upon its surface, and concluding by saying that it was the great disappointment of his life that he had not been taken with them.

Pablo and little Nina were adopted, the one by Servadac, the other by the count, and under the supervision of their guardians, were well educated and cared for. Some years later, Colonel, no longer Captain, Servadac, his hair slightly streaked with grey, had the pleasure of seeing the handsome young Spaniard united in marriage to the Italian, now grown into a charming girl, upon whom the count bestowed an ample dowry; the young people’s happiness in no way marred by the fact that they had not been destined, as once seemed likely, to be the Adam and Eve of a new world.

The career of the comet was ever a mystery which neither Servadac nor his orderly could eliminate from the regions of doubt. Anyhow, they were firmer and more confiding friends than ever.

One day, in the environs of Montmartre, where they were secure from eavesdroppers, Ben Zoof incidentally referred to the experiences in the depths of Nina’s Hive; but stopped short and said, “However, those things never happened, sir, did they?”

His master could only reply, “Confound it, Ben Zoof! What is a man to believe?”

THE UNDERGROUND CITY

Translated by W.H.G. Kingston

Also known as *The Black Indies*, this novel was first published in 1877. It concerns the fortunes of the mining community of Aberfoyle near Stirling, Scotland. Receiving a letter from an old colleague, mining engineer James Starr sets off for the old Aberfoyle mine, thought to have been mined out ten years earlier. Starr finds mine overman Simon Ford and his family living in a cottage deep inside the mine; he is astonished to find that Ford has made a discovery of the presence of a large vein of coal. Accompanying Simon Ford are his wife, Madge, and adult son, Harry.

CHAPTER I. CONTRADICTORY LETTERS

To Mr. F. R. Starr, Engineer, 30 Canongate, Edinburgh.

IF Mr. James Starr will come to-morrow to the Aberfoyle coal-mines, Dochart pit, Yarrow shaft, a communication of an interesting nature will be made to him.

“Mr. James Starr will be awaited for, the whole day, at the Callander station, by Harry Ford, son of the old overman Simon Ford.”

“He is requested to keep this invitation secret.”

Such was the letter which James Starr received by the first post, on the 3rd December, 18 — , the letter bearing the Aberfoyle postmark, county of Stirling, Scotland.

The engineer’s curiosity was excited to the highest pitch. It never occurred to him to doubt whether this letter might not be a hoax. For many years he had known Simon Ford, one of the former foremen of the Aberfoyle mines, of which he, James Starr, had for twenty years, been the manager, or, as he would be termed in English coal-mines, the viewer. James Starr was a strongly-constituted man, on whom his fifty-five years weighed no more heavily than if they had been forty. He belonged to an old Edinburgh family, and was one of its most distinguished members. His labors did credit to the body of engineers who are gradually devouring the carboniferous subsoil of the United Kingdom, as much at Cardiff and Newcastle, as in the southern counties of Scotland. However, it was more particularly in the depths of the mysterious mines of Aberfoyle, which border on the Alloa mines and occupy part of the county of Stirling, that the name of Starr had acquired the greatest renown. There, the greater part of his existence had been passed. Besides this, James Starr belonged to the Scottish Antiquarian Society, of which he had been made president. He was also included amongst the most active members of the Royal Institution; and the Edinburgh Review frequently published clever articles signed by him. He was in fact one of those practical men to whom is due the prosperity of England. He held a high rank in the old capital of Scotland, which not only from a physical but also from a moral point of view, well deserves the name of the Northern Athens.

We know that the English have given to their vast extent of coal-mines a very significant name. They very justly call them the “Black Indies,” and these Indies have

contributed perhaps even more than the Eastern Indies to swell the surprising wealth of the United Kingdom.

At this period, the limit of time assigned by professional men for the exhaustion of coal-mines was far distant and there was no dread of scarcity. There were still extensive mines to be worked in the two Americas. The manu-factories, appropriated to so many different uses, locomotives, steamers, gas works, &c. were not likely to fail for want of the mineral fuel; but the consumption had so increased during the last few years, that certain beds had been exhausted even to their smallest veins. Now deserted, these mines perforated the ground with their useless shafts and forsaken galleries. This was exactly the case with the pits of Aberfoyle.

Ten years before, the last butty had raised the last ton of coal from this colliery. The underground working stock, traction engines, trucks which run on rails along the galleries, subterranean tramways, frames to support the shaft, pipes — in short, all that constituted the machinery of a mine had been brought up from its depths. The exhausted mine was like the body of a huge fantastically-shaped mastodon, from which all the organs of life have been taken, and only the skeleton remains.

Nothing was left but long wooden ladders, down the Yarrow shaft — the only one which now gave access to the lower galleries of the Dochart pit. Above ground, the sheds, formerly sheltering the outside works, still marked the spot where the shaft of that pit had been sunk, it being now abandoned, as were the other pits, of which the whole constituted the mines of Aberfoyle.

It was a sad day, when for the last time the workmen quitted the mine, in which they had lived for so many years. The engineer, James Starr, had collected the hundreds of workmen which composed the active and courageous population of the mine. Overmen, brakemen, putters, wastemen, barrowmen, masons, smiths, carpenters, outside and inside laborers, women, children, and old men, all were collected in the great yard of the Dochart pit, formerly heaped with coal from the mine.

Many of these families had existed for generations in the mine of old Aberfoyle; they were now driven to seek the means of subsistence elsewhere, and they waited sadly to bid farewell to the engineer.

James Starr stood upright, at the door of the vast shed in which he had for so many years superintended the powerful machines of the shaft. Simon Ford, the foreman of the Dochart pit, then fifty-five years of age, and other managers and overseers, surrounded him. James Starr took off his hat. The miners, cap in hand, kept a profound silence. This farewell scene was of a touching character, not wanting in grandeur.

“My friends,” said the engineer, “the time has come for us to separate. The Aberfoyle mines, which for so many years have united us in a common work, are now exhausted. All our researches have not led to the discovery of a new vein, and the last block of coal has just been extracted from the Dochart pit.” And in confirmation of his words, James Starr pointed to a lump of coal which had been kept at the bottom of a basket.

“This piece of coal, my friends,” resumed James Starr, “is like the last drop of blood which has flowed through the veins of the mine! We shall keep it, as the first fragment of coal is kept, which was extracted a hundred and fifty years ago from the bearings of Aberfoyle. Between these two pieces, how many generations of workmen have succeeded each other in our pits! Now, it is over! The last words which your engineer will address to you are a farewell. You have lived in this mine, which your hands have emptied. The work has been hard, but not without profit for you. Our great family must disperse, and it is not probable that the future will ever again unite the scattered members. But do not forget that we have lived together for a long time, and that it will be the duty of the miners of Aberfoyle to help each other. Your old masters will not forget you either. When men have worked together, they must never be stranger to each other again. We shall keep our eye on you, and wherever you go, our recommendations shall follow you. Farewell then, my friends, and may Heaven be with you!”

So saying, James Starr wrung the horny hand of the oldest miner, whose eyes were dim with tears. Then the overmen of the different pits came forward to shake hands with him, whilst the miners waved their caps, shouting, “Farewell, James Starr, our master and our friend!”

This farewell would leave a lasting remembrance in all these honest hearts. Slowly and sadly the population quitted the yard. The black soil of the roads leading to the Dochart pit resounded for the last time to the tread of miners’ feet, and silence succeeded to the bustling life which had till then filled the Aberfoyle mines.

One man alone remained by James Starr. This was the overman, Simon Ford. Near him stood a boy, about fifteen years of age, who for some years already had been employed down below.

James Starr and Simon Ford knew and esteemed each other well. “Good-by, Simon,” said the engineer.

“Good-by, Mr. Starr,” replied the overman, “let me add, till we meet again!”

“Yes, till we meet again. Ford!” answered James Starr. “You know that I shall be always glad to see you, and talk over old times.”

“I know that, Mr. Starr.”

“My house in Edinburgh is always open to you.”

“It’s a long way off, is Edinburgh!” answered the man shaking his head. “Ay, a long way from the Dochart pit.”

“A long way, Simon? Where do you mean to live?”

“Even here, Mr. Starr! We’re not going to leave the mine, our good old nurse, just because her milk is dried up! My wife, my boy, and myself, we mean to remain faithful to her!”

“Good-by then, Simon,” replied the engineer, whose voice, in spite of himself, betrayed some emotion.

“No, I tell you, it’s TILL WE MEET AGAIN, Mr. Starr, and not Just ‘good-by,’” returned the foreman. “Mark my words, Aberfoyle will see you again!”

The engineer did not try to dispel the man’s illusion. He patted Harry’s head, again wrung the father’s hand, and left the mine.

All this had taken place ten years ago; but, notwithstanding the wish which the overman had expressed to see him again, during that time Starr had heard nothing of him. It was after ten years of separation that he got this letter from Simon Ford, requesting him to take without delay the road to the old Aberfoyle colliery.

A communication of an interesting nature, what could it be? Dochart pit. Yarrow shaft! What recollections of the past these names brought back to him! Yes, that was a fine time, that of work, of struggle, — the best part of the engineer's life. Starr re-read his letter. He pondered over it in all its bearings. He much regretted that just a line more had not been added by Ford. He wished he had not been quite so laconic.

Was it possible that the old foreman had discovered some new vein? No! Starr remembered with what minute care the mines had been explored before the definite cessation of the works. He had himself proceeded to the lowest soundings without finding the least trace in the soil, burrowed in every direction. They had even attempted to find coal under strata which are usually below it, such as the Devonian red sandstone, but without result. James Starr had therefore abandoned the mine with the absolute conviction that it did not contain another bit of coal.

"No," he repeated, "no! How is it possible that anything which could have escaped my researches, should be revealed to those of Simon Ford. However, the old overman must well know that such a discovery would be the one thing in the world to interest me, and this invitation, which I must keep secret, to repair to the Dochart pit!" James Starr always came back to that.

On the other hand, the engineer knew Ford to be a clever miner, peculiarly endowed with the instinct of his trade. He had not seen him since the time when the Aberfoyle colliery was abandoned, and did not know either what he was doing or where he was living, with his wife and his son. All that he now knew was, that a rendezvous had been appointed him at the Yarrow shaft, and that Harry, Simon Ford's son, was to wait for him during the whole of the next day at the Callander station.

"I shall go, I shall go!" said Starr, his excitement increasing as the time drew near.

Our worthy engineer belonged to that class of men whose brain is always on the boil, like a kettle on a hot fire. In some of these brain kettles the ideas bubble over, in others they just simmer quietly. Now on this day, James Starr's ideas were boiling fast.

But suddenly an unexpected incident occurred. This was the drop of cold water, which in a moment was to condense all the vapors of the brain. About six in the evening, by the third post, Starr's servant brought him a second letter. This letter was enclosed in a coarse envelope, and evidently directed by a hand unaccustomed to the use of a pen.

James Starr tore it open. It contained only a scrap of paper, yellowed by time, and apparently torn out of an old copy book.

On this paper was written a single sentence, thus worded:

“It is useless for the engineer James Starr to trouble himself, Simon Ford’s letter being now without object.”

No signature.

CHAPTER II. ON THE ROAD

THE course of James Starr’s ideas was abruptly stopped, when he got this second letter contradicting the first.

“What does this mean?” said he to himself. He took up the torn envelope, and examined it. Like the other, it bore the Aberfoyle postmark. It had therefore come from the same part of the county of Stirling. The old miner had evidently not written it. But, no less evidently, the author of this second letter knew the overman’s secret, since it expressly contradicted the invitation to the engineer to go to the Yarrow shaft.

Was it really true that the first communication was now without object? Did someone wish to prevent James Starr from troubling himself either uselessly or otherwise? Might there not be rather a malevolent intention to thwart Ford’s plans?

This was the conclusion at which James Starr arrived, after mature reflection. The contradiction which existed between the two letters only wrought in him a more keen desire to visit the Dochart pit. And besides, if after all it was a hoax, it was well worth while to prove it. Starr also thought it wiser to give more credence to the first letter than to the second; that is to say, to the request of such a man as Simon Ford, rather than to the warning of his anonymous contradictor.

“Indeed,” said he, “the fact of anyone endeavoring to influence my resolution, shows that Ford’s communication must be of great importance. To-morrow, at the appointed time, I shall be at the rendezvous.”

In the evening, Starr made his preparations for departure. As it might happen that his absence would be prolonged for some days, he wrote to Sir W. Elphiston, President of the Royal Institution, that he should be unable to be present at the next meeting of the Society. He also wrote to excuse himself from two or three engagements which he had made for the week. Then, having ordered his servant to pack a traveling bag, he went to bed, more excited than the affair perhaps warranted.

The next day, at five o’clock, James Starr jumped out of bed, dressed himself warmly, for a cold rain was falling, and left his house in the Canongate, to go to Granton Pier to catch the steamer, which in three hours would take him up the Forth as far as Stirling.

For the first time in his life, perhaps, in passing along the Canongate, he did NOT TURN TO LOOK AT HOLYROOD, the palace of the former sovereigns of Scotland. He did not notice the sentinels who stood before its gateways, dressed in the uniform of their Highland regiment, tartan kilt, plaid and sporran complete. His whole thought was to reach Callander where Harry Ford was supposedly awaiting him.

The better to understand this narrative, it will be as well to hear a few words on the origin of coal. During the geological epoch, when the terrestrial spheroid was still in course of formation, a thick atmosphere surrounded it, saturated with watery vapors, and copiously impregnated with carbonic acid. The vapors gradually condensed in diluvial rains, which fell as if they had leapt from the necks of thousands of millions of seltzer water bottles. This liquid, loaded with carbonic acid, rushed in torrents over a deep soft soil, subject to sudden or slow alterations of form, and maintained in its semi-fluid state as much by the heat of the sun as by the fires of the interior mass. The internal heat had not as yet been collected in the center of the globe. The terrestrial crust, thin and incompletely hardened, allowed it to spread through its pores. This caused a peculiar form of vegetation, such as is probably produced on the surface of the inferior planets, Venus or Mercury, which revolve nearer than our earth around the radiant sun of our system.

The soil of the continents was covered with immense forests. Carbonic acid, so suitable for the development of the vegetable kingdom, abounded. The feet of these trees were drowned in a sort of immense lagoon, kept continually full by currents of fresh and salt waters. They eagerly assimilated to themselves the carbon which they, little by little, extracted from the atmosphere, as yet unfit for the function of life, and it may be said that they were destined to store it, in the form of coal, in the very bowels of the earth.

It was the earthquake period, caused by internal convulsions, which suddenly modified the unsettled features of the terrestrial surface. Here, an intumescence which was to become a mountain, there, an abyss which was to be filled with an ocean or a sea. There, whole forests sunk through the earth’s crust, below the unfixed strata, either until they found a resting-place, such as the primitive bed of granitic rock, or, settling together in a heap, they formed a solid mass.

As the waters were contained in no bed, and were spread over every part of the globe, they rushed where they liked, tearing from the scarcely-formed rocks material with which to compose schists, sandstones, and limestones. This the roving waves bore over

the submerged and now peaty forests, and deposited above them the elements of rocks which were to superpose the coal strata. In course of time, periods of which include millions of years, these earths hardened in layers, and enclosed under a thick carapace of pudding-stone, schist, compact or friable sandstone, gravel and stones, the whole of the massive forests.

And what went on in this gigantic crucible, where all this vegetable matter had accumulated, sunk to various depths? A regular chemical operation, a sort of distillation. All the carbon contained in these vegetables had agglomerated, and little by little coal was forming under the double influence of enormous pressure and the high temperature maintained by the internal fires, at this time so close to it.

Thus there was one kingdom substituted for another in this slow but irresistible reaction. The vegetable was transformed into a mineral. Plants which had lived the vegetative life in all the vigor of first creation became petrified. Some of the substances enclosed in this vast herbal left their impression on the other more rapidly mineralized products, which pressed them as an hydraulic press of incalculable power would have done.

Thus also shells, zoophytes, star-fish, polypi, spirifores, even fish and lizards brought by the water, left on the yet soft coal their exact likeness, “admirably taken off.”

Pressure seems to have played a considerable part in the formation of carboniferous strata. In fact, it is to its degree of power that are due the different sorts of coal, of which industry makes use. Thus in the lowest layers of the coal ground appears the anthracite, which, being almost destitute of volatile matter, contains the greatest quantity of carbon. In the higher beds are found, on the contrary, lignite and fossil wood, substances in which the quantity of carbon is infinitely less. Between these two beds, according to the degree of pressure to which they have been subjected, are found veins of graphite and rich or poor coal. It may be asserted that it is for want of sufficient pressure that beds of peaty bog have not been completely changed into coal. So then, the origin of coal mines, in whatever part of the globe they have been discovered, is this: the absorption through the terrestrial crust of the great forests of the geological period; then, the mineralization of the vegetables obtained in the course of time, under the influence of pressure and heat, and under the action of carbonic acid.

Now, at the time when the events related in this story took place, some of the most important mines of the Scottish coal beds had been exhausted by too rapid working. In the region which extends between Edinburgh and Glasgow, for a distance of ten or twelve miles, lay the Aberfoyle colliery, of which the engineer, James Starr, had so long directed the works. For ten years these mines had been abandoned. No new seams had been discovered, although the soundings had been carried to a depth of fifteen hundred or even of two thousand feet, and when James Starr had retired, it was with the full conviction that even the smallest vein had been completely exhausted.

Under these circumstances, it was plain that the discovery of a new seam of coal would be an important event. Could Simon Ford's communication relate to a fact of this nature? This question James Starr could not cease asking himself. Was he called to make conquest of another corner of these rich treasure fields? Fain would he hope it was so.

The second letter had for an instant checked his speculations on this subject, but now he thought of that letter no longer. Besides, the son of the old overman was there, waiting at the appointed rendezvous. The anonymous letter was therefore worth nothing.

The moment the engineer set foot on the platform at the end of his journey, the young man advanced towards him.

"Are you Harry Ford?" asked the engineer quickly.

"Yes, Mr. Starr."

"I should not have known you, my lad. Of course in ten years you have become a man!"

"I knew you directly, sir," replied the young miner, cap in hand. "You have not changed. You look just as you did when you bade us good-by in the Dochart pit. I haven't forgotten that day."

"Put on your cap, Harry," said the engineer. "It's pouring, and politeness needn't make you catch cold."

"Shall we take shelter anywhere, Mr. Starr?" asked young Ford.

"No, Harry. The weather is settled. It will rain all day, and I am in a hurry. Let us go on."

“I am at your orders,” replied Harry.

“Tell me, Harry, is your father well?”

“Very well, Mr. Starr.”

“And your mother?”

“She is well, too.”

“Was it your father who wrote telling me to come to the Yarrow shaft?”

“No, it was I.”

“Then did Simon Ford send me a second letter to contradict the first?” asked the engineer quickly.

“No, Mr. Starr,” answered the young miner.

“Very well,” said Starr, without speaking of the anonymous letter. Then, continuing, “And can you tell me what you father wants with me?”

“Mr. Starr, my father wishes to tell you himself.”

“But you know what it is?”

“I do, sir.”

“Well, Harry, I will not ask you more. But let us get on, for I’m anxious to see Simon Ford. By-the-bye, where does he live?”

“In the mine.”

“What! In the Dochart pit?”

“Yes, Mr. Starr,” replied Harry.

“Really! has your family never left the old mine since the cessation of the works?”

“Not a day, Mr. Starr. You know my father. It is there he was born, it is there he means to die!”

“I can understand that, Harry. I can understand that! His native mine! He did not like to abandon it! And are you happy there?”

“Yes, Mr. Starr,” replied the young miner, “for we love one another, and we have but few wants.”

“Well, Harry,” said the engineer, “lead the way.”

And walking rapidly through the streets of Callander, in a few minutes they had left the town behind them.

CHAPTER III. THE DOCHART PIT

HARRY FORD was a fine, strapping fellow of five and twenty. His grave looks, his habitually passive expression, had from childhood been noticed among his comrades in the mine. His regular features, his deep blue eyes, his curly hair, rather chestnut than fair, the natural grace of his person, altogether made him a fine specimen of a lowlander. Accustomed from his earliest days to the work of the mine, he was strong and hardy, as well as brave and good. Guided by his father, and impelled by his own inclinations, he had early begun his education, and at an age when most lads are little more than apprentices, he had managed to make himself of some importance, a leader, in fact, among his fellows, and few are very ignorant in a country which does all it can to remove ignorance. Though, during the first years of his youth, the pick was never out of Harry’s hand, nevertheless the young miner was not long in acquiring sufficient knowledge to raise him into the upper class of the miners, and he would certainly have succeeded his father as overman of the Dochart pit, if the colliery had not been abandoned.

James Starr was still a good walker, yet he could not easily have kept up with his guide, if the latter had not slackened his pace. The young man, carrying the engineer’s bag, followed the left bank of the river for about a mile. Leaving its winding course, they took a road under tall, dripping trees. Wide fields lay on either side, around isolated farms. In one field a herd of hornless cows were quietly grazing; in another sheep with silky wool, like those in a child’s toy sheep fold.

The Yarrow shaft was situated four miles from Callander. Whilst walking, James Starr could not but be struck with the change in the country. He had not seen it since the day when the last ton of Aberfoyle coal had been emptied into railway trucks to be sent to Glasgow. Agricultural life had now taken the place of the more stirring, active, industrial life. The contrast was all the greater because, during winter, field work is at a standstill. But formerly, at whatever season, the mining population, above and below ground, filled the scene with animation. Great wagons of coal used to be passing night and day. The rails, with their rotten sleepers, now disused, were then constantly ground by the weight of wagons. Now stony roads took the place of the old mining tramways. James Starr felt as if he was traversing a desert.

The engineer gazed about him with a saddened eye. He stopped now and then to take breath. He listened. The air was no longer filled with distant whistlings and the panting

of engines. None of those black vapors which the manufacturer loves to see, hung in the horizon, mingling with the clouds. No tall cylindrical or prismatic chimney vomited out smoke, after being fed from the mine itself; no blast-pipe was puffing out its white vapor. The ground, formerly black with coal dust, had a bright look, to which James Starr's eyes were not accustomed.

When the engineer stood still, Harry Ford stopped also. The young miner waited in silence. He felt what was passing in his companion's mind, and he shared his feelings; he, a child of the mine, whose whole life had been passed in its depths.

"Yes, Harry, it is all changed," said Starr. "But at the rate we worked, of course the treasures of coal would have been exhausted some day. Do you regret that time?"

"I do regret it, Mr. Starr," answered Harry. "The work was hard, but it was interesting, as are all struggles."

"No doubt, my lad. A continuous struggle against the dangers of landslips, fires, inundations, explosions of firedamp, like claps of thunder. One had to guard against all those perils! You say well! It was a struggle, and consequently an exciting life."

"The miners of Alva have been more favored than the miners of Aberfoyle, Mr. Starr!"

"Ay, Harry, so they have," replied the engineer.

"Indeed," cried the young man, "it's a pity that all the globe was not made of coal; then there would have been enough to last millions of years!"

"No doubt there would, Harry; it must be acknowledged, however, that nature has shown more forethought by forming our sphere principally of sandstone, limestone, and granite, which fire cannot consume."

"Do you mean to say, Mr. Starr, that mankind would have ended by burning their own globe?"

"Yes! The whole of it, my lad," answered the engineer. "The earth would have passed to the last bit into the furnaces of engines, machines, steamers, gas factories; certainly, that would have been the end of our world one fine day!"

“There is no fear of that now, Mr. Starr. But yet, the mines will be exhausted, no doubt, and more rapidly than the statistics make out!”

“That will happen, Harry; and in my opinion England is very wrong in exchanging her fuel for the gold of other nations! I know well,” added the engineer, “that neither hydraulics nor electricity has yet shown all they can do, and that some day these two forces will be more completely utilized. But no matter! Coal is of a very practical use, and lends itself easily to the various wants of industry. Unfortunately man cannot produce it at will. Though our external forests grow incessantly under the influence of heat and water, our subterranean forests will not be reproduced, and if they were, the globe would never be in the state necessary to make them into coal.”

James Starr and his guide, whilst talking, had continued their walk at a rapid pace. An hour after leaving Callander they reached the Dochart pit.

The most indifferent person would have been touched at the appearance this deserted spot presented. It was like the skeleton of something that had formerly lived. A few wretched trees bordered a plain where the ground was hidden under the black dust of the mineral fuel, but no cinders nor even fragments of coal were to be seen. All had been carried away and consumed long ago.

They walked into the shed which covered the opening of the Yarrow shaft, whence ladders still gave access to the lower galleries of the pit. The engineer bent over the opening. Formerly from this place could be heard the powerful whistle of the air inhaled by the ventilators. It was now a silent abyss. It was like being at the mouth of some extinct volcano.

When the mine was being worked, ingenious machines were used in certain shafts of the Aberfoyle colliery, which in this respect was very well off; frames furnished with automatic lifts, working in wooden slides, oscillating ladders, called “man-engines,” which, by a simple movement, permitted the miners to descend without danger.

But all these appliances had been carried away, after the cessation of the works. In the Yarrow shaft there remained only a long succession of ladders, separated at every fifty feet by narrow landings. Thirty of these ladders placed thus end to end led the visitor down into the lower gallery, a depth of fifteen hundred feet. This was the only way of communication which existed between the bottom of the Dochart pit and the open air.

As to air, that came in by the Yarrow shaft, from whence galleries communicated with another shaft whose orifice opened at a higher level; the warm air naturally escaped by this species of inverted siphon.

“I will follow you, my lad,” said the engineer, signing to the young man to precede him.

“As you please, Mr. Starr.”

“Have you your lamp?”

“Yes, and I only wish it was still the safety lamp, which we formerly had to use!”

“Sure enough,” returned James Starr, “there is no fear of fire-damp explosions now!”

Harry was provided with a simple oil lamp, the wick of which he lighted. In the mine, now empty of coal, escapes of light carburetted hydrogen could not occur. As no explosion need be feared, there was no necessity for interposing between the flame and the surrounding air that metallic screen which prevents the gas from catching fire. The Davy lamp was of no use here. But if the danger did not exist, it was because the cause of it had disappeared, and with this cause, the combustible in which formerly consisted the riches of the Dochart pit.

Harry descended the first steps of the upper ladder. Starr followed. They soon found themselves in a profound obscurity, which was only relieved by the glimmer of the lamp. The young man held it above his head, the better to light his companion. A dozen ladders were descended by the engineer and his guide, with the measured step habitual to the miner. They were all still in good condition.

James Starr examined, as well as the insufficient light would permit, the sides of the dark shaft, which were covered by a partly rotten lining of wood.

Arrived at the fifteenth landing, that is to say, half way down, they halted for a few minutes.

“Decidedly, I have not your legs, my lad,” said the engineer, panting.

“You are very stout, Mr. Starr,” replied Harry, “and it’s something too, you see, to live all one’s life in the mine.”

“Right, Harry. Formerly, when I was twenty, I could have gone down all at a breath. Come, forward!”

But just as the two were about to leave the platform, a voice, as yet far distant, was heard in the depths of the shaft. It came up like a sonorous billow, swelling as it advanced, and becoming more and more distinct.

“Halloo! who comes here?” asked the engineer, stopping Harry.

“I cannot say,” answered the young miner.

“Is it not your father?”

“My father, Mr. Starr? no.”

“Some neighbor, then?”

“We have no neighbors in the bottom of the pit,” replied Harry. “We are alone, quite alone.”

“Well, we must let this intruder pass,” said James Starr. “Those who are descending must yield the path to those who are ascending.”

They waited. The voice broke out again with a magnificent burst, as if it had been carried through a vast speaking trumpet; and soon a few words of a Scotch song came clearly to the ears of the young miner.

“The Hundred Pipers!” cried Harry. “Well, I shall be much surprised if that comes from the lungs of any man but Jack Ryan.”

“And who is this Jack Ryan?” asked James Starr.

“An old mining comrade,” replied Harry. Then leaning from the platform, “Halloo! Jack!” he shouted.

“Is that you, Harry?” was the reply. “Wait a bit, I’m coming.” And the song broke forth again.

In a few minutes, a tall fellow of five and twenty, with a merry face, smiling eyes, a laughing mouth, and sandy hair, appeared at the bottom of the luminous cone which

was thrown from his lantern, and set foot on the landing of the fifteenth ladder. His first act was to vigorously wring the hand which Harry extended to him.

“Delighted to meet you!” he exclaimed. “If I had only known you were to be above ground to-day, I would have spared myself going down the Yarrow shaft!”

“This is Mr. James Starr,” said Harry, turning his lamp towards the engineer, who was in the shadow.

“Mr. Starr!” cried Jack Ryan. “Ah, sir, I could not see. Since I left the mine, my eyes have not been accustomed to see in the dark, as they used to do.”

“Ah, I remember a laddie who was always singing. That was ten years ago. It was you, no doubt?”

“Ay, Mr. Starr, but in changing my trade, I haven’t changed my disposition. It’s far better to laugh and sing than to cry and whine!”

“You’re right there, Jack Ryan. And what do you do now, as you have left the mine?”

“I am working on the Melrose farm, forty miles from here. Ah, it’s not like our Aberfoyle mines! The pick comes better to my hand than the spade or hoe. And then, in the old pit, there were vaulted roofs, to merrily echo one’s songs, while up above ground! — But you are going to see old Simon, Mr. Starr?”

“Yes, Jack,” answered the engineer.

“Don’t let me keep you then.”

“Tell me, Jack,” said Harry, “what was taking you to our cottage to-day?”

“I wanted to see you, man,” replied Jack, “and ask you to come to the Irvine games. You know I am the piper of the place. There will be dancing and singing.”

“Thank you, Jack, but it’s impossible.”

“Impossible?”

“Yes; Mr. Starr’s visit will last some time, and I must take him back to Callander.”

“Well, Harry, it won’t be for a week yet. By that time Mr. Starr’s visit will be over, I should think, and there will be nothing to keep you at the cottage.”

“Indeed, Harry,” said James Starr, “you must profit by your friend Jack’s invitation.”

“Well, I accept it, Jack,” said Harry. “In a week we will meet at Irvine.”

“In a week, that’s settled,” returned Ryan. “Good-by, Harry! Your servant, Mr. Starr. I am very glad to have seen you again! I can give news of you to all my friends. No one has forgotten you, sir.”

“And I have forgotten no one,” said Starr.

“Thanks for all, sir,” replied Jack.

“Good-by, Jack,” said Harry, shaking his hand. And Jack Ryan, singing as he went, soon disappeared in the heights of the shaft, dimly lighted by his lamp.

A quarter of an hour afterwards James Starr and Harry descended the last ladder, and set foot on the lowest floor of the pit.

From the bottom of the Yarrow shaft radiated numerous empty galleries. They ran through the wall of schist and sandstone, some shored up with great, roughly-hewn beams, others lined with a thick casing of wood. In every direction embankments supplied the place of the excavated veins. Artificial pillars were made of stone from neighboring quarries, and now they supported the ground, that is to say, the double layer of tertiary and quaternary soil, which formerly rested on the seam itself. Darkness now filled the galleries, formerly lighted either by the miner’s lamp or by the electric light, the use of which had been introduced in the mines.

“Will you not rest a while, Mr. Starr?” asked the young man.

“No, my lad,” replied the engineer, “for I am anxious to be at your father’s cottage.”

“Follow me then, Mr. Starr. I will guide you, and yet I daresay you could find your way perfectly well through this dark labyrinth.”

“Yes, indeed! I have the whole plan of the old pit still in my head.”

Harry, followed by the engineer, and holding his lamp high the better to light their way, walked along a high gallery, like the nave of a cathedral. Their feet still struck against the wooden sleepers which used to support the rails.

They had not gone more than fifty paces, when a huge stone fell at the feet of James Starr. “Take care, Mr. Starr!” cried Harry, seizing the engineer by the arm.

“A stone, Harry! Ah! these old vaultings are no longer quite secure, of course, and —”

“Mr. Starr,” said Harry Ford, “it seems to me that stone was thrown, thrown as by the hand of man!”

“Thrown!” exclaimed James Starr. “What do you mean, lad?”

“Nothing, nothing, Mr. Starr,” replied Harry evasively, his anxious gaze endeavoring to pierce the darkness. “Let us go on. Take my arm, sir, and don’t be afraid of making a false step.”

“Here I am, Harry.” And they both advanced, whilst Harry looked on every side, throwing the light of his lamp into all the corners of the gallery.

“Shall we soon be there?” asked the engineer.

“In ten minutes at most.”

“Good.”

“But,” muttered Harry, “that was a most singular thing. It is the first time such an accident has happened to me.

“That stone falling just at the moment we were passing.”

“Harry, it was a mere chance.”

“Chance,” replied the young man, shaking his head. “Yes, chance.” He stopped and listened.

“What is the matter, Harry?” asked the engineer.

“I thought I heard someone walking behind us,” replied the young miner, listening more attentively. Then he added, “No, I must have been mistaken. Lean harder on my arm, Mr. Starr. Use me like a staff.”

“A good solid staff, Harry,” answered James Starr. “I could not wish for a better than a fine fellow like you.”

They continued in silence along the dark nave. Harry was evidently preoccupied, and frequently turned, trying to catch, either some distant noise, or remote glimmer of light.

But behind and before, all was silence and darkness.

CHAPTER IV. THE FORD FAMILY

TEN minutes afterwards, James Starr and Harry issued from the principal gallery. They were now standing in a glade, if we may use this word to designate a vast and dark excavation. The place, however, was not entirely deprived of daylight. A few rays straggled in through the opening of a deserted shaft. It was by means of this pipe that ventilation was established in the Dochart pit. Owing to its lesser density, the warm air was drawn towards the Yarrow shaft. Both air and light, therefore, penetrated in some measure into the glade.

Here Simon Ford had lived with his family ten years, in a subterranean dwelling, hollowed out in the schistous mass, where formerly stood the powerful engines which worked the mechanical traction of the Dochart pit.

Such was the habitation, “his cottage,” as he called it, in which resided the old overman. As he had some means saved during a long life of toil, Ford could have afforded to live in the light of day, among trees, or in any town of the kingdom he chose, but he and his wife and son preferred remaining in the mine, where they were happy together, having the same opinions, ideas, and tastes. Yes, they were quite fond of their cottage, buried fifteen hundred feet below Scottish soil. Among other advantages, there was no fear that tax gatherers, or rent collectors would ever come to trouble its inhabitants.

At this period, Simon Ford, the former overman of the Dochart pit, bore the weight of sixty-five years well. Tall, robust, well-built, he would have been regarded as one of the most conspicuous men in the district which supplies so many fine fellows to the Highland regiments.

Simon Ford was descended from an old mining family, and his ancestors had worked the very first carboniferous seams opened in Scotland. Without discussing whether or not the Greeks and Romans made use of coal, whether the Chinese worked coal mines before the Christian era, whether the French word for coal (HOUILLE) is really derived from the farrier Houillos, who lived in Belgium in the twelfth century, we may affirm that the beds in Great Britain were the first ever regularly worked. So early as the eleventh century, William the Conqueror divided the produce of the Newcastle bed among his companions-in-arms. At the end of the thirteenth century, a license for the mining of “sea coal” was granted by Henry III. Lastly, towards the end of the same century, mention is made of the Scotch and Welsh beds.

It was about this time that Simon Ford's ancestors penetrated into the bowels of Caledonian earth, and lived there ever after, from father to son. They were but plain miners. They labored like convicts at the work of extracting the precious combustible. It is even believed that the coal miners, like the salt-makers of that period, were actual slaves.

However that might have been, Simon Ford was proud of belonging to this ancient family of Scotch miners. He had worked diligently in the same place where his ancestors had wielded the pick, the crowbar, and the mattock. At thirty he was overman of the Dochart pit, the most important in the Aberfoyle colliery. He was devoted to his trade. During long years he zealously performed his duty. His only grief had been to perceive the bed becoming impoverished, and to see the hour approaching when the seam would be exhausted.

It was then he devoted himself to the search for new veins in all the Aberfoyle pits, which communicated underground one with another. He had had the good luck to discover several during the last period of the working. His miner's instinct assisted him marvelously, and the engineer, James Starr, appreciated him highly. It might be said that he divined the course of seams in the depths of the coal mine as a hydroscope reveals springs in the bowels of the earth. He was par excellence the type of a miner whose whole existence is indissolubly connected with that of his mine. He had lived there from his birth, and now that the works were abandoned he wished to live there still. His son Harry foraged for the subterranean housekeeping; as for himself, during those ten years he had not been ten times above ground.

"Go up there! What is the good?" he would say, and refused to leave his black domain. The place was remarkably healthy, subject to an equable temperature; the old overman endured neither the heat of summer nor the cold of winter. His family enjoyed good health; what more could he desire?

But at heart he felt depressed. He missed the former animation, movement, and life in the well-worked pit. He was, however, supported by one fixed idea. "No, no! the mine is not exhausted!" he repeated.

And that man would have given serious offense who could have ventured to express before Simon Ford any doubt that old Aberfoyle would one day revive! He had never given up the hope of discovering some new bed which would restore the mine to its past

splendor. Yes, he would willingly, had it been necessary, have resumed the miner's pick, and with his still stout arms vigorously attacked the rock. He went through the dark galleries, sometimes alone, sometimes with his son, examining, searching for signs of coal, only to return each day, wearied, but not in despair, to the cottage.

Madge, Simon's faithful companion, his "gude-wife," to use the Scotch term, was a tall, strong, comely woman. Madge had no wish to leave the Dochart pit any more than had her husband. She shared all his hopes and regrets. She encouraged him, she urged him on, and talked to him in a way which cheered the heart of the old overman. "Aberfoyle is only asleep," she would say. "You are right about that, Simon. This is but a rest, it is not death!"

Madge, as well as the others, was perfectly satisfied to live independent of the outer world, and was the center of the happiness enjoyed by the little family in their dark cottage.

The engineer was eagerly expected. Simon Ford was standing at his door, and as soon as Harry's lamp announced the arrival of his former viewer he advanced to meet him.

"Welcome, Mr. Starr!" he exclaimed, his voice echoing under the roof of schist. "Welcome to the old overman's cottage! Though it is buried fifteen hundred feet under the earth, our house is not the less hospitable."

"And how are you, good Simon?" asked James Starr, grasping the hand which his host held out to him.

"Very well, Mr. Starr. How could I be otherwise here, sheltered from the inclemencies of the weather? Your ladies who go to Newhaven or Portobello in the summer time would do much better to pass a few months in the coal mine of Aberfoyle! They would run no risk here of catching a heavy cold, as they do in the damp streets of the old capital."

"I'm not the man to contradict you, Simon," answered James Starr, glad to find the old man just as he used to be. "Indeed, I wonder why I do not change my home in the Canongate for a cottage near you."

"And why not, Mr. Starr? I know one of your old miners who would be truly pleased to have only a partition wall between you and him."

“And how is Madge?” asked the engineer.

“The goodwife is in better health than I am, if that’s possible,” replied Ford, “and it will be a pleasure to her to see you at her table. I think she will surpass herself to do you honor.”

“We shall see that, Simon, we shall see that!” said the engineer, to whom the announcement of a good breakfast could not be indifferent, after his long walk.

“Are you hungry, Mr. Starr?”

“Ravenously hungry. My journey has given me an appetite. I came through horrible weather.”

“Ah, it is raining up there,” responded Simon Ford.

“Yes, Simon, and the waters of the Forth are as rough as the sea.”

“Well, Mr. Starr, here it never rains. But I needn’t describe to you all the advantages, which you know as well as myself. Here we are at the cottage. That is the chief thing, and I again say you are welcome, sir.”

Simon Ford, followed by Harry, ushered their guest into the dwelling. James Starr found himself in a large room lighted by numerous lamps, one hanging from the colored beams of the roof.

“The soup is ready, wife,” said Ford, “and it mustn’t be kept waiting any more than Mr. Starr. He is as hungry as a miner, and he shall see that our boy doesn’t let us want for anything in the cottage! By-the-bye, Harry,” added the old overman, turning to his son, “Jack Ryan came here to see you.”

“I know, father. We met him in the Yarrow shaft.”

“He’s an honest and a merry fellow,” said Ford; “but he seems to be quite happy above ground. He hasn’t the true miner’s blood in his veins. Sit down, Mr. Starr, and have a good dinner, for we may not sup till late.”

As the engineer and his hosts were taking their places:

“One moment, Simon,” said James Starr. “Do you want me to eat with a good appetite?”

“It will be doing us all possible honor, Mr. Starr,” answered Ford.

“Well, in order to eat heartily, I must not be at all anxious. Now I have two questions to put to you.”

“Go on, sir.”

“Your letter told me of a communication which was to be of an interesting nature.”

“It is very interesting indeed.”

“To you?”

“To you and to me, Mr. Starr. But I do not want to tell it you until after dinner, and on the very spot itself. Without that you would not believe me.”

“Simon,” resumed the engineer, “look me straight in the face. An interesting communication? Yes. Good! I will not ask more,” he added, as if he had read the reply in the old overman’s eyes.

“And the second question?” asked the latter.

“Do you know, Simon, who the person is who can have written this?” answered the engineer, handing him the anonymous letter.

Ford took the letter and read it attentively. Then giving it to his son, “Do you know the writing?” he asked.

“No, father,” replied Harry.

“And had this letter the Aberfoyle postmark?” inquired Simon Ford.

“Yes, like yours,” replied James Starr.

“What do you think of that, Harry?” said his father, his brow darkening.

“I think, father,” returned Harry, “that someone has had some interest in trying to prevent Mr. Starr from coming to the place where you invited him.”

“But who,” exclaimed the old miner, “who could have possibly guessed enough of my secret?” And Simon fell into a reverie, from which he was aroused by his wife.

“Let us begin, Mr. Starr,” she said. “The soup is already getting cold. Don’t think any more of that letter just now.”

On the old woman’s invitation, each drew in his chair, James Starr opposite to Madge — to do him honor — the father and son opposite to each other. It was a good Scotch dinner. First they ate “hotchpotch,” soup with the meat swimming in capital broth. As old Simon said, his wife knew no rival in the art of preparing hotchpotch. It was the same with the “cockyleeky,” a cock stewed with leeks, which merited high praise. The whole was washed down with excellent ale, obtained from the best brewery in Edinburgh.

But the principal dish consisted of a “haggis,” the national pudding, made of meat and barley meal. This remarkable dish, which inspired the poet Burns with one of his best odes, shared the fate of all the good things in this world — it passed away like a dream.

Madge received the sincere compliments of her guest. The dinner ended with cheese and oatcake, accompanied by a few small glasses of “usquebaugh,” capital whisky, five and twenty years old — just Harry’s age. The repast lasted a good hour. James Starr and Simon Ford had not only eaten much, but talked much too, chiefly of their past life in the old Aberfoyle mine.

Harry had been rather silent. Twice he had left the table, and even the house. He evidently felt uneasy since the incident of the stone, and wished to examine the environs of the cottage. The anonymous letter had not contributed to reassure him.

Whilst he was absent, the engineer observed to Ford and his wife, “That’s a fine lad you have there, my friends.”

“Yes, Mr. Starr, he is a good and affectionate son,” replied the old overman earnestly.

“Is he happy with you in the cottage?”

“He would not wish to leave us.”

“Don’t you think of finding him a wife, some day?”

“A wife for Harry,” exclaimed Ford. “And who would it be? A girl from up yonder, who would love merry-makings and dancing, who would prefer her clan to our mine! Harry wouldn’t do it!”

“Simon,” said Madge, “you would not forbid that Harry should take a wife.”

“I would forbid nothing,” returned the old miner, “but there’s no hurry about that. Who knows but we may find one for him — ”

Harry re-entered at that moment, and Simon Ford was silent.

When Madge rose from the table, all followed her example, and seated themselves at the door of the cottage. “Well, Simon,” said the engineer, “I am ready to hear you.”

“Mr. Starr,” responded Ford, “I do not need your ears, but your legs. Are you quite rested?”

“Quite rested and quite refreshed, Simon. I am ready to go with you wherever you like.”

“Harry,” said Simon Ford, turning to his son, “light our safety lamps.”

“Are you going to take safety lamps!” exclaimed James Starr, in amazement, knowing that there was no fear of explosions of fire-damp in a pit quite empty of coal.

“Yes, Mr. Starr, it will be prudent.”

“My good Simon, won’t you propose next to put me in a miner’s dress?”

“Not just yet, sir, not just yet!” returned the old overman, his deep-set eyes gleaming strangely.

Harry soon reappeared, carrying three safety lamps. He handed one of these to the engineer, the other to his father, and kept the third hanging from his left hand, whilst his right was armed with a long stick.

“Forward!” said Simon Ford, taking up a strong pick, which was leaning against the wall of the cottage.

“Forward!” echoed the engineer. “Good-by, Madge.”

“GOD speed you!” responded the good woman.

“A good supper, wife, do you hear?” exclaimed Ford. “We shall be hungry when we come back, and will do it justice!”

CHAPTER V. SOME STRANGE PHENOMENA

MANY superstitious beliefs exist both in the Highlands and Lowlands of Scotland. Of course the mining population must furnish its contingent of legends and fables to this mythological repertory. If the fields are peopled with imaginary beings, either good or bad, with much more reason must the dark mines be haunted to their lowest depths. Who shakes the seam during tempestuous nights? who puts the miners on the track of an as yet unworked vein? who lights the fire-damp, and presides over the terrible explosions? who but some spirit of the mine? This, at least, was the opinion commonly spread among the superstitious Scotch.

In the first rank of the believers in the supernatural in the Dochart pit figured Jack Ryan, Harry's friend. He was the great partisan of all these superstitions. All these wild stories were turned by him into songs, which earned him great applause in the winter evenings.

But Jack Ryan was not alone in his belief. His comrades affirmed, no less strongly, that the Aberfoyle pits were haunted, and that certain strange beings were seen there frequently, just as in the Highlands. To hear them talk, it would have been more extraordinary if nothing of the kind appeared. Could there indeed be a better place than a dark and deep coal mine for the freaks of fairies, elves, goblins, and other actors in the fantastical dramas? The scenery was all ready, why should not the supernatural personages come there to play their parts?

So reasoned Jack Ryan and his comrades in the Aberfoyle mines. We have said that the different pits communicated with each other by means of long subterranean galleries. Thus there existed beneath the county of Stirling a vast tract, full of burrows, tunnels, bored with caves, and perforated with shafts, a subterranean labyrinth, which might be compared to an enormous ant-hill.

Miners, though belonging to different pits, often met, when going to or returning from their work. Consequently there was a constant opportunity of exchanging talk, and circulating the stories which had their origin in the mine, from one pit to another. These accounts were transmitted with marvelous rapidity, passing from mouth to mouth, and gaining in wonder as they went.

Two men, however, better educated and with more practical minds than the rest, had always resisted this temptation. They in no degree believed in the intervention of spirits,

elves, or goblins. These two were Simon Ford and his son. And they proved it by continuing to inhabit the dismal crypt, after the desertion of the Dochart pit. Perhaps good Madge, like every Highland woman, had some leaning towards the supernatural. But she had to repeat all these stories to herself, and so she did, most conscientiously, so as not to let the old traditions be lost.

Even had Simon and Harry Ford been as credulous as their companions, they would not have abandoned the mine to the imps and fairies. For ten years, without missing a single day, obstinate and immovable in their convictions, the father and son took their picks, their sticks, and their lamps. They went about searching, sounding the rock with a sharp blow, listening if it would return a favor-able sound. So long as the soundings had not been pushed to the granite of the primary formation, the Fords were agreed that the search, unsuccessful to-day, might succeed to-morrow, and that it ought to be resumed. They spent their whole life in endeavoring to bring Aberfoyle back to its former prosperity. If the father died before the hour of success, the son was to go on with the task alone.

It was during these excursions that Harry was more particularly struck by certain phenomena, which he vainly sought to explain. Several times, while walking along some narrow cross-alley, he seemed to hear sounds similar to those which would be produced by violent blows of a pickax against the wall.

Harry hastened to seek the cause of this mysterious work. The tunnel was empty. The light from the young miner’s lamp, thrown on the wall, revealed no trace of any recent work with pick or crowbar. Harry would then ask himself if it was not the effect of some acoustic illusion, or some strange and fantastic echo. At other times, on suddenly throwing a bright light into a suspicious-looking cleft in the rock, he thought he saw a shadow. He rushed forward. Nothing, and there was no opening to permit a human being to evade his pursuit!

Twice in one month, Harry, whilst visiting the west end of the pit, distinctly heard distant reports, as if some miner had exploded a charge of dynamite. The second time, after many careful researches, he found that a pillar had just been blown up.

By the light of his lamp, Harry carefully examined the place attacked by the explosion. It had not been made in a simple embankment of stones, but in a mass of schist, which had penetrated to this depth in the coal stratum. Had the object of the explosion been to

discover a new vein? Or had someone wished simply to destroy this portion of the mine? Thus he questioned, and when he made known this occurrence to his father, neither could the old overman nor he himself answer the question in a satisfactory way.

“It is very queer,” Harry often repeated. “The presence of an unknown being in the mine seems impossible, and yet there can be no doubt about it. Does someone besides ourselves wish to find out if a seam yet exists? Or, rather, has he attempted to destroy what remains of the Aberfoyle mines? But for what reason? I will find that out, if it should cost me my life!”

A fortnight before the day on which Harry Ford guided the engineer through the labyrinth of the Dochart pit, he had been on the point of attaining the object of his search. He was going over the southwest end of the mine, with a large lantern in his hand. All at once, it seemed to him that a light was suddenly extinguished, some hundred feet before him, at the end of a narrow passage cut obliquely through the rock. He darted forward.

His search was in vain. As Harry would not admit a supernatural explanation for a physical occurrence, he concluded that certainly some strange being prowled about in the pit. But whatever he could do, searching with the greatest care, scrutinizing every crevice in the gallery, he found nothing for his trouble.

If Jack Ryan and the other superstitious fellows in the mine had seen these lights, they would, without fail, have called them supernatural, but Harry did not dream of doing so, nor did his father. And when they talked over these phenomena, evidently due to a physical cause, “My lad,” the old man would say, “we must wait. It will all be explained some day.”

However, it must be observed that, hitherto, neither Harry nor his father had ever been exposed to any act of violence. If the stone which had fallen at the feet of James Starr had been thrown by the hand of some ill-disposed person, it was the first criminal act of that description.

James Starr was of opinion that the stone had become detached from the roof of the gallery; but Harry would not admit of such a simple explanation. According to him, the stone had not fallen, it had been thrown; for otherwise, without rebounding, it could never have described a trajectory as it did.

Harry saw in it a direct attempt against himself and his father, or even against the engineer.

CHAPTER VI. SIMON FORD'S EXPERIMENT

THE old clock in the cottage struck one as James Starr and his two companions went out. A dim light penetrated through the ventilating shaft into the glade. Harry's lamp was not necessary here, but it would very soon be of use, for the old overman was about to conduct the engineer to the very end of the Dochart pit.

After following the principal gallery for a distance of two miles, the three explorers — for, as will be seen, this was a regular exploration — arrived at the entrance of a narrow tunnel. It was like a nave, the roof of which rested on woodwork, covered with white moss. It followed very nearly the line traced by the course of the river Forth, fifteen hundred feet above.

"So we are going to the end of the last vein?" said James Starr.

"Ay! You know the mine well still."

"Well, Simon," returned the engineer, "it will be difficult to go further than that, if I don't mistake."

"Yes, indeed, Mr. Starr. That was where our picks tore out the last bit of coal in the seam. I remember it as if it were yesterday. I myself gave that last blow, and it re-echoed in my heart more dismally than on the rock. Only sandstone and schist were round us after that, and when the truck rolled towards the shaft, I followed, with my heart as full as though it were a funeral. It seemed to me that the soul of the mine was going with it."

The gravity with which the old man uttered these words impressed the engineer, who was not far from sharing his sentiments. They were those of the sailor who leaves his disabled vessel — of the proprietor who sees the house of his ancestors pulled down. He pressed Ford's hand; but now the latter seized that of the engineer, and, wringing it:

"That day we were all of us mistaken," he exclaimed. "No! The old mine was not dead. It was not a corpse that the miners abandoned; and I dare to assert, Mr. Starr, that its heart beats still."

"Speak, Ford! Have you discovered a new vein?" cried the engineer, unable to contain himself. "I know you have! Your letter could mean nothing else."

“Mr. Starr,” said Simon Ford, “I did not wish to tell any man but yourself.”

“And you did quite right, Ford. But tell me how, by what signs, are you sure?”

“Listen, sir!” resumed Simon. “It is not a seam that I have found.”

“What is it, then?”

“Only positive proof that such a seam exists.”

“And the proof?”

“Could fire-damp issue from the bowels of the earth if coal was not there to produce it?”

“No, certainly not!” replied the engineer. “No coal, no fire-damp. No effects without a cause.”

“Just as no smoke without fire.”

“And have you recognized the presence of light carburetted hydrogen?”

“An old miner could not be deceived,” answered Ford. “I have met with our old enemy, the fire-damp!”

“But suppose it was another gas,” said Starr. “Firedamp is almost without smell, and colorless. It only really betrays its presence by an explosion.”

“Mr. Starr,” said Simon Ford, “will you let me tell you what I have done? Harry had once or twice observed something remarkable in his excursions to the west end of the mine. Fire, which suddenly went out, sometimes appeared along the face of the rock or on the embankment of the further galleries. How those flames were lighted, I could not and cannot say. But they were evidently owing to the presence of fire-damp, and to me fire-damp means a vein of coal.”

“Did not these fires cause any explosion?” asked the engineer quickly.

“Yes, little partial explosions,” replied Ford, “such as I used to cause myself when I wished to ascertain the presence of fire-damp. Do you remember how formerly it was

the custom to try to prevent explosions before our good genius, Humphry Davy, invented his safety-lamp?"

"Yes," replied James Starr. "You mean what the 'monk,' as the men called him, used to do. But I have never seen him in the exercise of his duty."

"Indeed, Mr. Starr, you are too young, in spite of your five-and-fifty years, to have seen that. But I, ten years older, often saw the last 'monk' working in the mine. He was called so because he wore a long robe like a monk. His proper name was the 'fireman.' At that time there was no other means of destroying the bad gas but by dispersing it in little explosions, before its buoyancy had collected it in too great quantities in the heights of the galleries. The monk, as we called him, with his face masked, his head muffled up, all his body tightly wrapped in a thick felt cloak, crawled along the ground. He could breathe down there, when the air was pure; and with his right hand he waved above his head a blazing torch. When the firedamp had accumulated in the air, so as to form a detonating mixture, the explosion occurred without being fatal, and, by often renewing this operation, catastrophes were prevented. Sometimes the 'monk' was injured or killed in his work, then another took his place. This was done in all mines until the Davy lamp was universally adopted. But I knew the plan, and by its means I discovered the presence of firedamp and consequently that of a new seam of coal in the Dochart pit."

All that the old overman had related of the so-called "monk" or "fireman" was perfectly true. The air in the galleries of mines was formerly always purified in the way described.

Fire-damp, marsh-gas, or carburetted hydrogen, is colorless, almost scentless; it burns with a blue flame, and makes respiration impossible. The miner could not live in a place filled with this injurious gas, any more than one could live in a gasometer full of common gas. Moreover, fire-damp, as well as the latter, a mixture of inflammable gases, forms a detonating mixture as soon as the air unites with it in a proportion of eight, and perhaps even five to the hundred. When this mixture is lighted by any cause, there is an explosion, almost always followed by a frightful catastrophe.

As they walked on, Simon Ford told the engineer all that he had done to attain his object; how he was sure that the escape of fire-damp took place at the very end of the farthest gallery in its western part, because he had provoked small and partial

explosions, or rather little flames, enough to show the nature of the gas, which escaped in a small jet, but with a continuous flow.

An hour after leaving the cottage, James Starr and his two companions had gone a distance of four miles. The engineer, urged by anxiety and hope, walked on without noticing the length of the way. He pondered over all that the old miner had told him, and mentally weighed all the arguments which the latter had given in support of his belief. He agreed with him in thinking that the continued emission of carburetted hydrogen certainly showed the existence of a new coal-seam. If it had been merely a sort of pocket, full of gas, as it is sometimes found amongst the rock, it would soon have been empty, and the phenomenon have ceased. But far from that. According to Simon Ford, the fire-damp escaped incessantly, and from that fact the existence of an important vein might be considered certain. Consequently, the riches of the Dochart pit were not entirely exhausted. The chief question now was, whether this was merely a vein which would yield comparatively little, or a bed occupying a large extent.

Harry, who preceded his father and the engineer, stopped.

“Here we are!” exclaimed the old miner. “At last, thank Heaven! you are here, Mr. Starr, and we shall soon know.” The old overman’s voice trembled slightly.

“Be calm, my man!” said the engineer. “I am as excited as you are, but we must not lose time.”

The gallery at this end of the pit widened into a sort of dark cave. No shaft had been pierced in this part, and the gallery, bored into the bowels of the earth, had no direct communication with the surface of the earth.

James Starr, with intense interest, examined the place in which they were standing. On the walls of the cavern the marks of the pick could still be seen, and even holes in which the rock had been blasted, near the termination of the working. The schist was excessively hard, and it had not been necessary to bank up the end of the tunnel where the works had come to an end. There the vein had failed, between the schist and the tertiary sandstone. From this very place had been extracted the last piece of coal from the Dochart pit.

“We must attack the dyke,” said Ford, raising his pick; “for at the other side of the break, at more or less depth, we shall assuredly find the vein, the existence of which I

assert."

"And was it on the surface of these rocks that you found out the fire-damp?" asked James Starr.

"Just there, sir," returned Ford, "and I was able to light it only by bringing my lamp near to the cracks in the rock. Harry has done it as well as I."

"At what height?" asked Starr.

"Ten feet from the ground," replied Harry.

James Starr had seated himself on a rock. After critically inhaling the air of the cavern, he gazed at the two miners, almost as if doubting their words, decided as they were. In fact, carburetted hydrogen is not completely scentless, and the engineer, whose sense of smell was very keen, was astonished that it had not revealed the presence of the explosive gas. At any rate, if the gas had mingled at all with the surrounding air, it could only be in a very small stream. There was no danger of an explosion, and they might without fear open the safety lamp to try the experiment, just as the old miner had done before.

What troubled James Starr was, not lest too much gas mingled with the air, but lest there should be little or none.

"Could they have been mistaken?" he murmured. "No: these men know what they are about. And yet — "

He waited, not without some anxiety, until Simon Ford's phenomenon should have taken place. But just then it seemed that Harry, like himself, had remarked the absence of the characteristic odor of fire-damp; for he exclaimed in an altered voice, "Father, I should say the gas was no longer escaping through the cracks!"

"No longer!" cried the old miner — and, pressing his lips tight together, he snuffed the air several times.

Then, all at once, with a sudden movement, "Hand me your lamp, Harry," he said.

Ford took the lamp with a trembling hand. He drew off the wire gauze case which surrounded the wick, and the flame burned in the open air.

As they had expected, there was no explosion, but, what was more serious, there was not even the slight crackling which indicates the presence of a small quantity of firedamp. Simon took the stick which Harry was holding, fixed his lamp to the end of it, and raised it high above his head, up to where the gas, by reason of its buoyancy, would naturally accumulate. The flame of the lamp, burning straight and clear, revealed no trace of the carburetted hydrogen.

“Close to the wall,” said the engineer.

“Yes,” responded Ford, carrying the lamp to that part of the wall at which he and his son had, the evening before, proved the escape of gas.

The old miner’s arm trembled whilst he tried to hoist the lamp up. “Take my place, Harry,” said he.

Harry took the stick, and successively presented the lamp to the different fissures in the rock; but he shook his head, for of that slight crackling peculiar to escaping fire-damp he heard nothing. There was no flame. Evidently not a particle of gas was escaping through the rock.

“Nothing!” cried Ford, clenching his fist with a gesture rather of anger than disappointment.

A cry escaped Harry.

“What’s the matter?” asked Starr quickly.

“Someone has stopped up the cracks in the schist!”

“Is that true?” exclaimed the old miner.

“Look, father!” Harry was not mistaken. The obstruction of the fissures was clearly visible by the light of the lamp. It had been recently done with lime, leaving on the rock a long whitish mark, badly concealed with coal dust.

“It’s he!” exclaimed Harry. “It can only be he!”

“He?” repeated James Starr in amazement.

“Yes!” returned the young man, “that mysterious being who haunts our domain, for whom I have watched a hundred times without being able to get at him — the author, we may now be certain, of that letter which was intended to hinder you from coming to see my father, Mr. Starr, and who finally threw that stone at us in the gallery of the Yarrow shaft! Ah! there’s no doubt about it; there is a man’s hand in all that!”

Harry spoke with such energy that conviction came instantly and fully to the engineer’s mind. As to the old overman, he was already convinced. Besides, there they were in the presence of an undeniable fact — the stopping-up of cracks through which gas had escaped freely the night before.

“Take your pick, Harry,” cried Ford; “mount on my shoulders, my lad! I am still strong enough to bear you!” The young man understood in an instant. His father propped himself up against the rock. Harry got upon his shoulders, so that with his pick he could reach the line of the fissure. Then with quick sharp blows he attacked it. Almost directly afterwards a slight sound was heard, like champagne escaping from a bottle — a sound commonly expressed by the word “puff.”

Harry again seized his lamp, and held it to the opening. There was a slight report; and a little red flame, rather blue at its outline, flickered over the rock like a Will-o’-the-Wisp.

Harry leaped to the ground, and the old overman, unable to contain his joy, grasped the engineer’s hands, exclaiming, “Hurrah! hurrah! hurrah! Mr. Starr. The fire-damp burns! the vein is there!”

CHAPTER VII. NEW ABERFOYLE

THE old overman's experiment had succeeded. Firedamp, it is well known, is only generated in coal seams; therefore the existence of a vein of precious combustible could no longer be doubted. As to its size and quality, that must be determined later.

"Yes," thought James Starr, "behind that wall lies a carboniferous bed, undiscovered by our soundings. It is vexatious that all the apparatus of the mine, deserted for ten years, must be set up anew. Never mind. We have found the vein which was thought to be exhausted, and this time it shall be worked to the end!"

"Well, Mr. Starr," asked Ford, "what do you think of our discovery? Was I wrong to trouble you? Are you sorry to have paid this visit to the Dochart pit?"

"No, no, my old friend!" answered Starr. "We have not lost our time; but we shall be losing it now, if we do not return immediately to the cottage. To-morrow we will come back here. We will blast this wall with dynamite. We will lay open the new vein, and after a series of soundings, if the seam appears to be large, I will form a new Aberfoyle Company, to the great satisfaction of the old shareholders. Before three months have passed, the first corves full of coal will have been taken from the new vein."

"Well said, sir!" cried Simon Ford. "The old mine will grow young again, like a widow who remarries! The bustle of the old days will soon begin with the blows of the pick, and mattock, blasts of powder, rumbling of wagons, neighing of horses, creaking of machines! I shall see it all again! I hope, Mr. Starr, that you will not think me too old to resume my duties of overman?"

"No, Simon, no indeed! You wear better than I do, my old friend!"

"And, sir, you shall be our viewer again. May the new working last for many years, and pray Heaven I shall have the consolation of dying without seeing the end of it!"

The old miner was overflowing with joy. James Starr fully entered into it; but he let Ford rave for them both. Harry alone remained thoughtful. To his memory recurred the succession of singular, inexplicable circumstances attending the discovery of the new bed. It made him uneasy about the future.

An hour afterwards, James Starr and his two companions were back in the cottage. The engineer supped with good appetite, listening with satisfaction to all the plans unfolded by the old overman; and had it not been for his excitement about the next day's work, he would never have slept better than in the perfect stillness of the cottage.

The following day, after a substantial breakfast, James Starr, Simon Ford, Harry, and even Madge herself, took the road already traversed the day before. All looked like regular miners. They carried different tools, and some dynamite with which to blast the rock. Harry, besides a large lantern, took a safety lamp, which would burn for twelve hours. It was more than was necessary for the journey there and back, including the time for the working — supposing a working was possible.

"To work! to work!" shouted Ford, when the party reached the further end of the passage; and he grasped a heavy crowbar and brandished it.

"Stop one instant," said Starr. "Let us see if any change has taken place, and if the fire-damp still escapes through the crevices."

"You are right, Mr. Starr," said Harry. "Whoever stopped it up yesterday may have done it again to-day!"

Madge, seated on a rock, carefully observed the excavation, and the wall which was to be blasted.

It was found that everything was just as they left it. The crevices had undergone no alteration; the carburetted hydrogen still filtered through, though in a small stream, which was no doubt because it had had a free passage since the day before. As the quantity was so small, it could not have formed an explosive mixture with the air inside. James Starr and his companions could therefore proceed in security. Besides, the air grew purer by rising to the heights of the Dochart pit; and the fire-damp, spreading through the atmosphere, would not be strong enough to make any explosion.

"To work, then!" repeated Ford; and soon the rock flew in splinters under his skillful blows. The break was chiefly composed of pudding-stone, interspersed with sandstone and schist, such as is most often met with between the coal veins. James Starr picked up some of the pieces, and examined them carefully, hoping to discover some trace of coal.

Starr having chosen the place where the holes were to be drilled, they were rapidly bored by Harry. Some cartridges of dynamite were put into them. As soon as the long, tarred safety match was laid, it was lighted on a level with the ground. James Starr and his companions then went off to some distance.

“Oh! Mr. Starr,” said Simon Ford, a prey to agitation, which he did not attempt to conceal, “never, no, never has my old heart beaten so quick before! I am longing to get at the vein!”

“Patience, Simon!” responded the engineer. “You don’t mean to say that you think you are going to find a passage all ready open behind that dyke?”

“Excuse me, sir,” answered the old overman; “but of course I think so! If there was good luck in the way Harry and I discovered this place, why shouldn’t the good luck go on?”

As he spoke, came the explosion. A sound as of thunder rolled through the labyrinth of subterranean galleries. Starr, Madge, Harry, and Simon Ford hastened towards the spot.

“Mr. Starr! Mr. Starr!” shouted the overman. “Look! the door is broken open!”

Ford’s comparison was justified by the appearance of an excavation, the depth of which could not be calculated. Harry was about to spring through the opening; but the engineer, though excessively surprised to find this cavity, held him back. “Allow time for the air in there to get pure,” said he.

“Yes! beware of the foul air!” said Simon.

A quarter of an hour was passed in anxious waiting. The lantern was then fastened to the end of a stick, and introduced into the cave, where it continued to burn with unaltered brilliancy. “Now then, Harry, go,” said Starr, “and we will follow you.”

The opening made by the dynamite was sufficiently large to allow a man to pass through. Harry, lamp in hand, entered unhesitatingly, and disappeared in the darkness. His father, mother, and James Starr waited in silence. A minute — which seemed to them much longer — passed. Harry did not reappear, did not call. Gazing into the opening, James Starr could not even see the light of his lamp, which ought to have illuminated the dark cavern.

Had the ground suddenly given way under Harry's feet? Had the young miner fallen into some crevice? Could his voice no longer reach his companions?

The old overman, dead to their remonstrances, was about to enter the opening, when a light appeared, dim at first, but gradually growing brighter, and Harry's voice was heard shouting, "Come, Mr. Starr! come, father! The road to New Aberfoyle is open!"

If, by some superhuman power, engineers could have raised in a block, a thousand feet thick, all that portion of the terrestrial crust which supports the lakes, rivers, gulfs, and territories of the counties of Stirling, Dumbarton, and Renfrew, they would have found, under that enormous lid, an immense excavation, to which but one other in the world can be compared — the celebrated Mammoth caves of Kentucky. This excavation was composed of several hundred divisions of all sizes and shapes. It might be called a hive with numberless ranges of cells, capriciously arranged, but a hive on a vast scale, and which, instead of bees, might have lodged all the ichthyosauri, megatheriums, and pterodactyles of the geological epoch.

A labyrinth of galleries, some higher than the most lofty cathedrals, others like cloisters, narrow and winding — these following a horizontal line, those on an incline or running obliquely in all directions — connected the caverns and allowed free communication between them.

The pillars sustaining the vaulted roofs, whose curves allowed of every style, the massive walls between the passages, the naves themselves in this layer of secondary formation, were composed of sandstone and schistous rocks. But tightly packed between these useless strata ran valuable veins of coal, as if the black blood of this strange mine had circulated through their tangled network. These fields extended forty miles north and south, and stretched even under the Caledonian Canal. The importance of this bed could not be calculated until after soundings, but it would certainly surpass those of Cardiff and Newcastle.

We may add that the working of this mine would be singularly facilitated by the fantastic dispositions of the secondary earths; for by an unaccountable retreat of the mineral matter at the geological epoch, when the mass was solidifying, nature had already multiplied the galleries and tunnels of New Aberfoyle.

Yes, nature alone! It might at first have been supposed that some works abandoned for centuries had been discovered afresh. Nothing of the sort. No one would have deserted such riches. Human termites had never gnawed away this part of the Scottish subsoil; nature herself had done it all. But, we repeat, it could be compared to nothing but the celebrated Mammoth caves, which, in an extent of more than twenty miles, contain two hundred and twenty-six avenues, eleven lakes, seven rivers, eight cataracts, thirty-two unfathomable wells, and fifty-seven domes, some of which are more than four hundred and fifty feet in height. Like these caves, New Aberfoyle was not the work of men, but the work of the Creator.

Such was this new domain, of matchless wealth, the discovery of which belonged entirely to the old overman. Ten years' sojourn in the deserted mine, an uncommon pertinacity in research, perfect faith, sustained by a marvelous mining instinct — all these qualities together led him to succeed where so many others had failed. Why had the soundings made under the direction of James Starr during the last years of the working stopped just at that limit, on the very frontier of the new mine? That was all chance, which takes great part in researches of this kind.

However that might be, there was, under the Scottish subsoil, what might be called a subterranean county, which, to be habitable, needed only the rays of the sun, or, for want of that, the light of a special planet.

Water had collected in various hollows, forming vast ponds, or rather lakes larger than Loch Katrine, lying just above them. Of course the waters of these lakes had no movement of currents or tides; no old castle was reflected there; no birch or oak trees waved on their banks. And yet these deep lakes, whose mirror-like surface was never ruffled by a breeze, would not be without charm by the light of some electric star, and, connected by a string of canals, would well complete the geography of this strange domain.

Although unfit for any vegetable production, the place could be inhabited by a whole population. And who knows but that in this steady temperature, in the depths of the mines of Aberfoyle, as well as in those of Newcastle, Alloa, or Cardiff — when their contents shall have been exhausted — who knows but that the poorer classes of Great Britain will some day find a refuge?

CHAPTER VIII. EXPLORING

AT Harry’s call, James Starr, Madge, and Simon Ford entered through the narrow orifice which put the Dochart pit in communication with the new mine. They found themselves at the beginning of a tolerably wide gallery. One might well believe that it had been pierced by the hand of man, that the pick and mattock had emptied it in the working of a new vein. The explorers question whether, by a strange chance, they had not been transported into some ancient mine, of the existence of which even the oldest miners in the county had ever known.

No! It was merely that the geological layers had left this passage when the secondary earths were in course of formation. Perhaps some torrent had formerly dashed through it; but now it was as dry as if it had been cut some thousand feet lower, through granite rocks. At the same time, the air circulated freely, which showed that certain natural vents placed it in communication with the exterior atmosphere.

This observation, made by the engineer, was correct, and it was evident that the ventilation of the new mine would be easily managed. As to the fire-damp which had lately filtered through the schist, it seemed to have been contained in a pocket now empty, and it was certain that the atmosphere of the gallery was quite free from it. However, Harry prudently carried only the safety lamp, which would insure light for twelve hours.

James Starr and his companions now felt perfectly happy. All their wishes were satisfied. There was nothing but coal around them. A sort of emotion kept them silent; even Simon Ford restrained himself. His joy overflowed, not in long phrases, but in short ejaculations.

It was perhaps imprudent to venture so far into the crypt. Pooh! they never thought of how they were to get back.

The gallery was practicable, not very winding. They met with no noxious exhalations, nor did any chasm bar the path. There was no reason for stopping for a whole hour; James Starr, Madge, Harry, and Simon Ford walked on, though there was nothing to show them what was the exact direction of this unknown tunnel.

And they would no doubt have gone farther still, if they had not suddenly come to the end of the wide road which they had followed since their entrance into the mine.

The gallery ended in an enormous cavern, neither the height nor depth of which could be calculated. At what altitude arched the roof of this excavation — at what distance was its opposite wall — the darkness totally concealed; but by the light of the lamp the explorers could discover that its dome covered a vast extent of still water — pond or lake — whose picturesque rocky banks were lost in obscurity.

“Halt!” exclaimed Ford, stopping suddenly. “Another step, and perhaps we shall fall into some fathomless pit.”

“Let us rest awhile, then, my friends,” returned the engineer. “Besides, we ought to be thinking of returning to the cottage.”

“Our lamp will give light for another ten hours, sir,” said Harry.

“Well, let us make a halt,” replied Starr; “I confess my legs have need of a rest. And you, Madge, don’t you feel tired after so long a walk?”

“Not over much, Mr. Starr,” replied the sturdy Scotchwoman; “we have been accustomed to explore the old Aberfoyle mine for whole days together.”

“Tired? nonsense!” interrupted Simon Ford; “Madge could go ten times as far, if necessary. But once more, Mr. Starr, wasn’t my communication worth your trouble in coming to hear it? Just dare to say no, Mr. Starr, dare to say no!”

“Well, my old friend, I haven’t felt so happy for a long while!” replied the engineer; “the small part of this marvelous mine that we have explored seems to show that its extent is very considerable, at least in length.”

“In width and in depth, too, Mr. Starr!” returned Simon Ford.

“That we shall know later.”

“And I can answer for it! Trust to the instinct of an old miner! It has never deceived me!”

“I wish to believe you, Simon,” replied the engineer, smiling. “As far as I can judge from this short exploration, we possess the elements of a working which will last for centuries!”

“Centuries!” exclaimed Simon Ford; “I believe you, sir! A thousand years and more will pass before the last bit of coal is taken out of our new mine!”

“Heaven grant it!” returned Starr. “As to the quality of the coal which crops out of these walls?”

“Superb! Mr. Starr, superb!” answered Ford; “just look at it yourself!”

And so saying, with his pick he struck off a fragment of the black rock.

“Look! look!” he repeated, holding it close to his lamp; “the surface of this piece of coal is shining! We have here fat coal, rich in bituminous matter; and see how it comes in pieces, almost without dust! Ah, Mr. Starr! twenty years ago this seam would have entered into a strong competition with Swansea and Cardiff! Well, stokers will quarrel for it still, and if it costs little to extract it from the mine, it will not sell at a less price outside.”

“Indeed,” said Madge, who had taken the fragment of coal and was examining it with the air of a connoisseur; “that’s good quality of coal. Carry it home, Simon, carry it back to the cottage! I want this first piece of coal to burn under our kettle.”

“Well said, wife!” answered the old overman, “and you shall see that I am not mistaken.”

“Mr. Starr,” asked Harry, “have you any idea of the probable direction of this long passage which we have been following since our entrance into the new mine?”

“No, my lad,” replied the engineer; “with a compass I could perhaps find out its general bearing; but without a compass I am here like a sailor in open sea, in the midst of fogs, when there is no sun by which to calculate his position.”

“No doubt, Mr. Starr,” replied Ford; “but pray don’t compare our position with that of the sailor, who has everywhere and always an abyss under his feet! We are on firm ground here, and need never be afraid of foundering.”

“I won’t tease you, then, old Simon,” answered James Starr. “Far be it from me even in jest to depreciate the New Aberfoyle mine by an unjust comparison! I only meant to say one thing, and that is that we don’t know where we are.”

“We are in the subsoil of the county of Stirling, Mr. Starr,” replied Simon Ford; “and that I assert as if — ”

“Listen!” said Harry, interrupting the old man. All listened, as the young miner was doing. His ears, which were very sharp, had caught a dull sound, like a distant murmur. His companions were not long in hearing it themselves. It was above their heads, a sort of rolling sound, in which though it was so feeble, the successive CRESCENDO and DIMINUENDO could be distinctly heard.

All four stood for some minutes, their ears on the stretch, without uttering a word. All at once Simon Ford exclaimed, “Well, I declare! Are trucks already running on the rails of New Aberfoyle?”

“Father,” replied Harry, “it sounds to me just like the noise made by waves rolling on the sea shore.”

“We can’t be under the sea though!” cried the old overman.

“No,” said the engineer, “but it is not impossible that we should be under Loch Katrine.”

“The roof cannot have much thickness just here, if the noise of the water is perceptible.”

“Very little indeed,” answered James Starr, “and that is the reason this cavern is so huge.”

“You must be right, Mr. Starr,” said Harry.

“Besides, the weather is so bad outside,” resumed Starr, “that the waters of the loch must be as rough as those of the Firth of Forth.”

“Well! what does it matter after all?” returned Simon Ford; “the seam won’t be any the worse because it is under a loch. It would not be the first time that coal has been looked

for under the very bed of the ocean! When we have to work under the bottom of the Caledonian Canal, where will be the harm?”

“Well said, Simon,” cried the engineer, who could not restrain a smile at the overman’s enthusiasm; “let us cut our trenches under the waters of the sea! Let us bore the bed of the Atlantic like a strainer; let us with our picks join our brethren of the United States through the subsoil of the ocean! let us dig into the center of the globe if necessary, to tear out the last scrap of coal.”

“Are you joking, Mr. Starr?” asked Ford, with a pleased but slightly suspicious look.

“I joking, old man? no! but you are so enthusiastic that you carry me away into the regions of impossibility! Come, let us return to the reality, which is sufficiently beautiful; leave our picks here, where we may find them another day, and let’s take the road back to the cottage.”

Nothing more could be done for the time. Later, the engineer, accompanied by a brigade of miners, supplied with lamps and all necessary tools, would resume the exploration of New Aberfoyle. It was now time to return to the Dochart pit. The road was easy, the gallery running nearly straight through the rock up to the orifice opened by the dynamite, so there was no fear of their losing themselves.

But as James Starr was proceeding towards the gallery Simon Ford stopped him.

“Mr. Starr,” said he, “you see this immense cavern, this subterranean lake, whose waters bathe this strand at our feet? Well! it is to this place I mean to change my dwelling, here I will build a new cottage, and if some brave fellows will follow my example, before a year is over there will be one town more inside old England.”

James Starr, smiling approval of Ford’s plans, pressed his hand, and all three, preceding Madge, re-entered the gallery, on their way back to the Dochart pit. For the first mile no incident occurred. Harry walked first, holding his lamp above his head. He carefully followed the principal gallery, without ever turning aside into the narrow tunnels which radiated to the right and left. It seemed as if the returning was to be accomplished as easily as the going, when an unexpected accident occurred which rendered the situation of the explorers very serious.

Just at a moment when Harry was raising his lamp there came a rush of air, as if caused by the flapping of invisible wings. The lamp escaped from his hands, fell on the rocky ground, and was broken to pieces.

James Starr and his companions were suddenly plunged in absolute darkness. All the oil of the lamp was spilt, and it was of no further use. “Well, Harry,” cried his father, “do you want us all to break our necks on the way back to the cottage?”

Harry did not answer. He wondered if he ought to suspect the hand of a mysterious being in this last accident? Could there possibly exist in these depths an enemy whose unaccountable antagonism would one day create serious difficulties? Had someone an interest in defending the new coal field against any attempt at working it? In truth that seemed absurd, yet the facts spoke for themselves, and they accumulated in such a way as to change simple presumptions into certainties.

In the meantime the explorers’ situation was bad enough. They had now, in the midst of black darkness, to follow the passage leading to the Dochart pit for nearly five miles. There they would still have an hour’s walk before reaching the cottage.

“Come along,” said Simon Ford. “We have no time to lose. We must grope our way along, like blind men. There’s no fear of losing our way. The tunnels which open off our road are only just like those in a molehill, and by following the chief gallery we shall of course reach the opening we got in at. After that, it is the old mine. We know that, and it won’t be the first time that Harry and I have found ourselves there in the dark. Besides, there we shall find the lamps that we left. Forward then! Harry, go first. Mr. Starr, follow him. Madge, you go next, and I will bring up the rear. Above everything, don’t let us get separated.”

All complied with the old overman’s instructions. As he said, by groping carefully, they could not mistake the way. It was only necessary to make the hands take the place of the eyes, and to trust to their instinct, which had with Simon Ford and his son become a second nature.

James Starr and his companions walked on in the order agreed. They did not speak, but it was not for want of thinking. It became evident that they had an adversary. But what was he, and how were they to defend themselves against these mysteriously-prepared

attacks? These disquieting ideas crowded into their brains. However, this was not the moment to get discouraged.

Harry, his arms extended, advanced with a firm step, touching first one and then the other side of the passage.

If a cleft or side opening presented itself, he felt with his hand that it was not the main way; either the cleft was too shallow, or the opening too narrow, and he thus kept in the right road.

In darkness through which the eye could not in the slightest degree pierce, this difficult return lasted two hours. By reckoning the time since they started, taking into consideration that the walking had not been rapid, Starr calculated that he and his companions were near the opening. In fact, almost immediately, Harry stopped.

“Have we got to the end of the gallery?” asked Simon Ford.

“Yes,” answered the young miner.

“Well! have you not found the hole which connects New Aberfoyle with the Dochart pit?”

“No,” replied Harry, whose impatient hands met with nothing but a solid wall.

The old overman stepped forward, and himself felt the schistous rock. A cry escaped him.

Either the explorers had strayed from the right path on their return, or the narrow orifice, broken in the rock by the dynamite, had been recently stopped up. James Starr and his companions were prisoners in New Aberfoyle.

CHAPTER IX. THE FIRE-MAIDENS

A WEEK after the events just related had taken place, James Starr’s friends had become very anxious. The engineer had disappeared, and no reason could be brought forward to explain his absence. They learnt, by questioning his servant, that he had embarked at Granton Pier. But from that time there were no traces of James Starr. Simon Ford’s letter had requested secrecy, and he had said nothing of his departure for the Aberfoyle mines.

Therefore in Edinburgh nothing was talked of but the unaccountable absence of the engineer. Sir W. Elphiston, the President of the Royal Institution, communicated to his colleagues a letter which James Starr had sent him, excusing himself from being present at the next meeting of the society. Two or three others produced similar letters. But though these documents proved that Starr had left Edinburgh — which was known before — they threw no light on what had become of him. Now, on the part of such a man, this prolonged absence, so contrary to his usual habits, naturally first caused surprise, and then anxiety.

A notice was inserted in the principal newspapers of the United Kingdom relative to the engineer James Starr, giving a description of him and the date on which he left Edinburgh; nothing more could be done but to wait. The time passed in great anxiety. The scientific world of England was inclined to believe that one of its most distinguished members had positively disappeared. At the same time, when so many people were thinking about James Starr, Harry Ford was the subject of no less anxiety. Only, instead of occupying public attention, the son of the old overman was the cause of trouble alone to the generally cheerful mind of Jack Ryan.

It may be remembered that, in their encounter in the Yarrow shaft, Jack Ryan had invited Harry to come a week afterwards to the festivities at Irvine. Harry had accepted and promised expressly to be there. Jack Ryan knew, having had it proved by many circumstances, that his friend was a man of his word. With him, a thing promised was a thing done. Now, at the Irvine merry-making, nothing was wanting; neither song, nor dance, nor fun of any sort — nothing but Harry Ford.

The notice relative to James Starr, published in the papers, had not yet been seen by Ryan. The honest fellow was therefore only worried by Harry’s absence, telling himself that something serious could alone have prevented him from keeping his promise. So,

the day after the Irvine games, Jack Ryan intended to take the railway from Glasgow and go to the Dochart pit; and this he would have done had he not been detained by an accident which nearly cost him his life. Something which occurred on the night of the 12th of December was of a nature to support the opinions of all partisans of the supernatural, and there were many at Melrose Farm.

Irvine, a little seaport of Renfrew, containing nearly seven thousand inhabitants, lies in a sharp bend made by the Scottish coast, near the mouth of the Firth of Clyde. The most ancient and the most famed ruins on this part of the coast were those of this castle of Robert Stuart, which bore the name of Dundonald Castle.

At this period Dundonald Castle, a refuge for all the stray goblins of the country, was completely deserted. It stood on the top of a high rock, two miles from the town, and was seldom visited. Sometimes a few strangers took it into their heads to explore these old historical remains, but then they always went alone. The inhabitants of Irvine would not have taken them there at any price. Indeed, several legends were based on the story of certain “fire-maidens,” who haunted the old castle.

The most superstitious declared they had seen these fantastic creatures with their own eyes. Jack Ryan was naturally one of them. It was a fact that from time to time long flames appeared, sometimes on a broken piece of wall, sometimes on the summit of the tower which was the highest point of Dundonald Castle.

Did these flames really assume a human shape, as was asserted? Did they merit the name of fire-maidens, given them by the people of the coast? It was evidently just an optical delusion, aided by a good deal of credulity, and science could easily have explained the phenomenon.

However that might be, these fire-maidens had the reputation of frequenting the ruins of the old castle and there performing wild strathspeys, especially on dark nights. Jack Ryan, bold fellow though he was, would never have dared to accompany those dances with the music of his bagpipes.

“Old Nick is enough for them!” said he. “He doesn’t need me to complete his infernal orchestra.”

We may well believe that these strange apparitions frequently furnished a text for the evening stories. Jack Ryan was ending the evening with one of these. His auditors,

transported into the phantom world, were worked up into a state of mind which would believe anything.

All at once shouts were heard outside. Jack Ryan stopped short in the middle of his story, and all rushed out of the barn. The night was pitchy dark. Squalls of wind and rain swept along the beach. Two or three fishermen, their backs against a rock, the better to resist the wind, were shouting at the top of their voices.

Jack Ryan and his companions ran up to them. The shouts were, however, not for the inhabitants of the farm, but to warn men who, without being aware of it, were going to destruction. A dark, confused mass appeared some way out at sea. It was a vessel whose position could be seen by her lights, for she carried a white one on her foremast, a green on the starboard side, and a red on the outside. She was evidently running straight on the rocks.

“A ship in distress?” said Ryan.

“Ay,” answered one of the fishermen, “and now they want to tack, but it’s too late!”

“Do they want to run ashore?” said another.

“It seems so,” responded one of the fishermen, “unless he has been misled by some —”

The man was interrupted by a yell from Jack. Could the crew have heard it? At any rate, it was too late for them to beat back from the line of breakers which gleamed white in the darkness.

But it was not, as might be supposed, a last effort of Ryan’s to warn the doomed ship. He now had his back to the sea. His companions turned also, and gazed at a spot situated about half a mile inland. It was Dundonald Castle. A long flame twisted and bent under the gale, on the summit of the old tower.

“The Fire-Maiden!” cried the superstitious men in terror.

Clearly, it needed a good strong imagination to find any human likeness in that flame. Waving in the wind like a luminous flag, it seemed sometimes to fly round the tower, as if it was just going out, and a moment after it was seen again dancing on its blue point.

“The Fire-Maiden! the Fire-Maiden!” cried the terrified fishermen and peasants.

All was then explained. The ship, having lost her reckoning in the fog, had taken this flame on the top of Dundonald Castle for the Irvine light. She thought herself at the entrance of the Firth, ten miles to the north, when she was really running on a shore which offered no refuge.

What could be done to save her, if there was still time? It was too late. A frightful crash was heard above the tumult of the elements. The vessel had struck. The white line of surf was broken for an instant; she heeled over on her side and lay among the rocks.

At the same time, by a strange coincidence, the long flame disappeared, as if it had been swept away by a violent gust. Earth, sea, and sky were plunged in complete darkness.

“The Fire-Maiden!” shouted Ryan, for the last time, as the apparition, which he and his companions believed supernatural, disappeared. But then the courage of these superstitious Scotchmen, which had failed before a fancied danger, returned in face of a real one, which they were ready to brave in order to save their fellow-creatures. The tempest did not deter them. As heroic as they had before been credulous, fastening ropes round their waists, they rushed into the waves to the aid of those on the wreck.

Happily, they succeeded in their endeavors, although some — and bold Jack Ryan was among the number — were severely wounded on the rocks. But the captain of the vessel and the eight sailors who composed his crew were hauled up, safe and sound, on the beach.

The ship was the Norwegian brig MOTALA, laden with timber, and bound for Glasgow. Of the MOTALA herself nothing remained but a few spars, washed up by the waves, and dashed among the rocks on the beach.

Jack Ryan and three of his companions, wounded like himself, were carried into a room of Melrose Farm, where every care was lavished on them. Ryan was the most hurt, for when with the rope round his waist he had rushed into the sea, the waves had almost immediately dashed him back against the rocks. He was brought, indeed, very nearly lifeless on to the beach.

The brave fellow was therefore confined to bed for several days, to his great disgust. However, as soon as he was given permission to sing as much as he liked, he bore his

trouble patiently, and the farm echoed all day with his jovial voice. But from this adventure he imbibed a more lively sentiment of fear with regard to brownies and other goblins who amuse themselves by plaguing mankind, and he made them responsible for the catastrophe of the Motala. It would have been vain to try and convince him that the Fire-Maidens did not exist, and that the flame, so suddenly appearing among the ruins, was but a natural phenomenon. No reasoning could make him believe it. His companions were, if possible, more obstinate than he in their credulity. According to them, one of the Fire-Maidens had maliciously attracted the MOTALA to the coast. As to wishing to punish her, as well try to bring the tempest to justice! The magistrates might order what arrests they pleased, but a flame cannot be imprisoned, an impalpable being can't be handcuffed. It must be acknowledged that the researches which were ultimately made gave ground, at least in appearance, to this superstitious way of explaining the facts.

The inquiry was made with great care. Officials came to Dundonald Castle, and they proceeded to conduct a most vigorous search. The magistrate wished first to ascertain if the ground bore any footprints, which could be attributed to other than goblins' feet. It was impossible to find the least trace, whether old or new. Moreover, the earth, still damp from the rain of the day before, would have preserved the least vestige.

The result of all this was, that the magistrates only got for their trouble a new legend added to so many others — a legend which would be perpetuated by the remembrance of the catastrophe of the MOTALA, and indisputably confirm the truth of the apparition of the Fire-Maidens.

A hearty fellow like Jack Ryan, with so strong a constitution, could not be long confined to his bed. A few sprains and bruises were not quite enough to keep him on his back longer than he liked. He had not time to be ill.

Jack, therefore, soon got well. As soon as he was on his legs again, before resuming his work on the farm, he wished to go and visit his friend Harry, and learn why he had not come to the Irvine merry-making. He could not understand his absence, for Harry was not a man who would willingly promise and not perform. It was unlikely, too, that the son of the old overman had not heard of the wreck of the MOTALA, as it was in all the papers. He must know the part Jack had taken in it, and what had happened to him, and it was unlike Harry not to hasten to the farm and see how his old chum was going on.

As Harry had not come, there must have been something to prevent him. Jack Ryan would as soon deny the existence of the Fire-Maidens as believe in Harry's indifference.

Two days after the catastrophe Jack left the farm merily, feeling nothing of his wounds. Singing in the fullness of his heart, he awoke the echoes of the cliff, as he walked to the station of the railway, which VIA Glasgow would take him to Stirling and Callander.

As he was waiting for his train, his attention was attracted by a bill posted up on the walls, containing the following notice:

"On the 4th of December, the engineer, James Starr, of Edinburgh, embarked from Granton Pier, on board the Prince of Wales. He disembarked the same day at Stirling. From that time nothing further has been heard of him.

"Any information concerning him is requested to be sent to the President of the Royal Institution, Edinburgh."

Jack Ryan, stopping before one of these advertisements, read it twice over, with extreme surprise.

"Mr. Starr!" he exclaimed. "Why, on the 4th of December I met him with Harry on the ladder of the Dochart pit! That was ten days ago! And he has not been seen from that time! That explains why my chum didn't come to Irvine."

And without taking time to inform the President of the Royal Institution by letter, what he knew relative to James Starr, Jack jumped into the train, determining to go first of all to the Yarrow shaft. There he would descend to the depths of the pit, if necessary, to find Harry, and with him was sure to be the engineer James Starr.

"They haven't turned up again," said he to himself. "Why? Has anything prevented them? Could any work of importance keep them still at the bottom of the mine? I must find out!" and Ryan, hastening his steps, arrived in less than an hour at the Yarrow shaft.

Externally nothing was changed. The same silence around. Not a living creature was moving in that desert region. Jack entered the ruined shed which covered the opening of

the shaft. He gazed down into the dark abyss — nothing was to be seen. He listened — nothing was to be heard.

“And my lamp!” he exclaimed; “suppose it isn’t in its place!” The lamp which Ryan used when he visited the pit was usually deposited in a corner, near the landing of the topmost ladder. It had disappeared.

“Here is a nuisance!” said Jack, beginning to feel rather uneasy. Then, without hesitating, superstitious though he was, “I will go,” said he, “though it’s as dark down there as in the lowest depths of the infernal regions!”

And he began to descend the long flight of ladders, which led down the gloomy shaft. Jack Ryan had not forgotten his old mining habits, and he was well acquainted with the Dochart pit, or he would scarcely have dared to venture thus. He went very carefully, however. His foot tried each round, as some of them were worm-eaten. A false step would entail a deadly fall, through this space of fifteen hundred feet. He counted each landing as he passed it, knowing that he could not reach the bottom of the shaft until he had left the thirtieth. Once there, he would have no trouble, so he thought, in finding the cottage, built, as we have said, at the extremity of the principal passage.

Jack Ryan went on thus until he got to the twenty-sixth landing, and consequently had two hundred feet between him and the bottom.

Here he put down his leg to feel for the first rung of the twenty-seventh ladder. But his foot swinging in space found nothing to rest on. He knelt down and felt about with his hand for the top of the ladder. It was in vain.

“Old Nick himself must have been down this way!” said Jack, not without a slight feeling of terror.

He stood considering for some time, with folded arms, and longing to be able to pierce the impenetrable darkness. Then it occurred to him that if he could not get down, neither could the inhabitants of the mine get up. There was now no communication between the depths of the pit and the upper regions. If the removal of the lower ladders of the Yarrow shaft had been effected since his last visit to the cottage, what had become of Simon Ford, his wife, his son, and the engineer?

The prolonged absence of James Starr proved that he had not left the pit since the day Ryan met with him in the shaft. How had the cottage been provisioned since then? The food of these unfortunate people, imprisoned fifteen hundred feet below the surface of the ground, must have been exhausted by this time.

All this passed through Jack's mind, as he saw that by himself he could do nothing to get to the cottage. He had no doubt but that communication had been interrupted with a malevolent intention. At any rate, the authorities must be informed, and that as soon as possible. Jack Ryan bent forward from the landing.

"Harry! Harry!" he shouted with his powerful voice.

Harry's name echoed and re-echoed among the rocks, and finally died away in the depths of the shaft.

Ryan rapidly ascended the upper ladders and returned to the light of day. Without losing a moment he reached the Callander station, just caught the express to Edinburgh, and by three o'clock was before the Lord Provost.

There his declaration was received. His account was given so clearly that it could not be doubted. Sir William Elphiston, President of the Royal Institution, and not only colleague, but a personal friend of Starr's, was also informed, and asked to direct the search which was to be made without delay in the mine. Several men were placed at his disposal, supplied with lamps, picks, long rope ladders, not forgetting provisions and cordials. Then guided by Jack Ryan, the party set out for the Aberfoyle mines.

The same evening the expedition arrived at the opening of the Yarrow shaft, and descended to the twenty-seventh landing, at which Jack Ryan had been stopped a few hours previously. The lamps, fastened to long ropes, were lowered down the shaft, and it was thus ascertained that the four last ladders were wanting.

As soon as the lamps had been brought up, the men fixed to the landing a rope ladder, which unrolled itself down the shaft, and all descended one after the other. Jack Ryan's descent was the most difficult, for he went first down the swinging ladders, and fastened them for the others.

The space at the bottom of the shaft was completely deserted; but Sir William was much surprised at hearing Jack Ryan exclaim, "Here are bits of the ladders, and some of

them half burnt!”

“Burnt?” repeated Sir William. “Indeed, here sure enough are cinders which have evidently been cold a long time!”

“Do you think, sir,” asked Ryan, “that Mr. Starr could have had any reason for burning the ladders, and thus breaking of communication with the world?”

“Certainly not,” answered Sir William Elphiston, who had become very thoughtful. “Come, my lad, lead us to the cottage. There we shall ascertain the truth.”

Jack Ryan shook his head, as if not at all convinced. Then, taking a lamp from the hands of one of the men, he proceeded with a rapid step along the principal passage of the Dochart pit. The others all followed him.

In a quarter of an hour the party arrived at the excavation in which stood Simon Ford’s cottage. There was no light in the window. Ryan darted to the door, and threw it open. The house was empty.

They examined all the rooms in the somber habitation. No trace of violence was to be found. All was in order, as if old Madge had been still there. There was even an ample supply of provisions, enough to last the Ford family for several days.

The absence of the tenants of the cottage was quite unaccountable. But was it not possible to find out the exact time they had quitted it? Yes, for in this region, where there was no difference of day or night, Madge was accustomed to mark with a cross each day in her almanac.

The almanac was pinned up on the wall, and there the last cross had been made at the 6th of December; that is to say, a day after the arrival of James Starr, to which Ryan could positively swear. It was clear that on the 6th of December, ten days ago, Simon Ford, his wife, son, and guest, had quitted the cottage. Could a fresh exploration of the mine, undertaken by the engineer, account for such a long absence? Certainly not.

It was intensely dark all round. The lamps held by the men gave light only just where they were standing. Suddenly Jack Ryan uttered a cry. “Look there, there!”

His finger was pointing to a tolerably bright light, which was moving about in the distance. “After that light, my men!” exclaimed Sir William.

“It’s a goblin light!” said Ryan. “So what’s the use? We shall never catch it.”

The president and his men, little given to superstition, darted off in the direction of the moving light. Jack Ryan, bravely following their example, quickly overtook the head-most of the party.

It was a long and fatiguing chase. The lantern seemed to be carried by a being of small size, but singular agility.

Every now and then it disappeared behind some pillar, then was seen again at the end of a cross gallery. A sharp turn would place it out of sight, and it seemed to have completely disappeared, when all at once there would be the light as bright as ever. However, they gained very little on it, and Ryan’s belief that they could never catch it seemed far from groundless.

After an hour of this vain pursuit Sir William Elphiston and his companions had gone a long way in the southwest direction of the pit, and began to think they really had to do with an impalpable being. Just then it seemed as if the distance between the goblin and those who were pursuing it was becoming less. Could it be fatigued, or did this invisible being wish to entice Sir William and his companions to the place where the inhabitants of the cottage had perhaps themselves been enticed. It was hard to say.

The men, seeing that the distance lessened, redoubled their efforts. The light which had before burnt at a distance of more than two hundred feet before them was now seen at less than fifty. The space continued to diminish. The bearer of the lamp became partially visible. Sometimes, when it turned its head, the indistinct profile of a human face could be made out, and unless a sprite could assume bodily shape, Jack Ryan was obliged to confess that here was no supernatural being. Then, springing forward, —

“Courage, comrades!” he exclaimed; “it is getting tired! We shall soon catch it up now, and if it can talk as well as it can run we shall hear a fine story.”

But the pursuit had suddenly become more difficult. They were in unknown regions of the mine; narrow passages crossed each other like the windings of a labyrinth. The bearer of the lamp might escape them as easily as possible, by just extinguishing the light and retreating into some dark refuge.

“And indeed,” thought Sir William, “if it wishes to avoid us, why does it not do so?”

Hitherto there had evidently been no intention to avoid them, but just as the thought crossed Sir William’s mind the light suddenly disappeared, and the party, continuing the pursuit, found themselves before an extremely narrow natural opening in the schistous rocks.

To trim their lamps, spring forward, and dart through the opening, was for Sir William and his party but the work of an instant. But before they had gone a hundred paces along this new gallery, much wider and loftier than the former, they all stopped short. There, near the wall, lay four bodies, stretched on the ground — four corpses, perhaps!

“James Starr!” exclaimed Sir William Elphiston.

“Harry! Harry!” cried Ryan, throwing himself down beside his friend.

It was indeed the engineer, Madge, Simon, and Harry Ford who were lying there motionless. But one of the bodies moved slightly, and Madge’s voice was heard faintly murmuring, “See to the others! help them first!”

Sir William, Jack, and their companions endeavored to reanimate the engineer and his friends by getting them to swallow a few drops of brandy. They very soon succeeded. The unfortunate people, shut up in that dark cavern for ten days, were dying of starvation. They must have perished had they not on three occasions found a loaf of bread and a jug of water set near them. No doubt the charitable being to whom they owed their lives was unable to do more for them.

Sir William wondered whether this might not have been the work of the strange sprite who had allured them to the very spot where James Starr and his companions lay.

However that might be, the engineer, Madge, Simon, and Harry Ford were saved. They were assisted to the cottage, passing through the narrow opening which the bearer of the strange light had apparently wished to point out to Sir William. This was a natural opening. The passage which James Starr and his companions had made for themselves with dynamite had been completely blocked up with rocks laid one upon another.

So, then, whilst they had been exploring the vast cavern, the way back had been purposely closed against them by a hostile hand.

CHAPTER X. COAL TOWN

THREE years after the events which have just been related, the guide-books recommended as a “great attraction,” to the numerous tourists who roam over the county of Stirling, a visit of a few hours to the mines of New Aberfoyle.

No mine in any country, either in the Old or New World, could present a more curious aspect.

To begin with, the visitor was transported without danger or fatigue to a level with the workings, at fifteen hundred feet below the surface of the ground. Seven miles to the southwest of Callander opened a slanting tunnel, adorned with a castellated entrance, turrets and battlements. This lofty tunnel gently sloped straight to the stupendous crypt, hollowed out so strangely in the bowels of the earth.

A double line of railway, the wagons being moved by hydraulic power, plied from hour to hour to and from the village thus buried in the subsoil of the county, and which bore the rather ambitious title of Coal Town.

Arrived in Coal Town, the visitor found himself in a place where electricity played a principal part as an agent of heat and light. Although the ventilation shafts were numerous, they were not sufficient to admit much daylight into New Aberfoyle, yet it had abundance of light. This was shed from numbers of electric discs; some suspended from the vaulted roofs, others hanging on the natural pillars — all, whether suns or stars in size, were fed by continuous currents produced from electro-magnetic machines. When the hour of rest arrived, an artificial night was easily produced all over the mine by disconnecting the wires.

Below the dome lay a lake of an extent to be compared to the Dead Sea of the Mammoth caves — a deep lake whose transparent waters swarmed with eyeless fish, and to which the engineer gave the name of Loch Malcolm.

There, in this immense natural excavation, Simon Ford built his new cottage, which he would not have exchanged for the finest house in Prince’s Street, Edinburgh. This dwelling was situated on the shores of the loch, and its five windows looked out on the dark waters, which extended further than the eye could see. Two months later a second habitation was erected in the neighborhood of Simon Ford’s cottage: this was for James

Starr. The engineer had given himself body and soul to New Aberfoyle, and nothing but the most imperative necessity ever caused him to leave the pit. There, then, he lived in the midst of his mining world.

On the discovery of the new field, all the old colliers had hastened to leave the plow and harrow, and resume the pick and mattock. Attracted by the certainty that work would never fail, allured by the high wages which the prosperity of the mine enabled the company to offer for labor, they deserted the open air for an underground life, and took up their abode in the mines.

The miners' houses, built of brick, soon grew up in a picturesque fashion; some on the banks of Loch Malcolm, others under the arches which seemed made to resist the weight that pressed upon them, like the piers of a bridge. So was founded Coal Town, situated under the eastern point of Loch Katrine, to the north of the county of Stirling. It was a regular settlement on the banks of Loch Malcolm. A chapel, dedicated to St. Giles, overlooked it from the top of a huge rock, whose foot was laved by the waters of the subterranean sea.

When this underground town was lighted up by the bright rays thrown from the discs, hung from the pillars and arches, its aspect was so strange, so fantastic, that it justified the praise of the guide-books, and visitors flocked to see it.

It is needless to say that the inhabitants of Coal Town were proud of their place. They rarely left their laboring village — in that imitating Simon Ford, who never wished to go out again. The old overman maintained that it always rained "up there," and, considering the climate of the United Kingdom, it must be acknowledged that he was not far wrong. All the families in New Aberfoyle prospered well, having in three years obtained a certain competency which they could never have hoped to attain on the surface of the county. Dozens of babies, who were born at the time when the works were resumed, had never yet breathed the outer air.

This made Jack Ryan remark, "It's eighteen months since they were weaned, and they have not yet seen daylight!"

It may be mentioned here, that one of the first to run at the engineer's call was Jack Ryan. The merry fellow had thought it his duty to return to his old trade. But though Melrose farm had lost singer and piper it must not be thought that Jack Ryan sung no

more. On the contrary, the sonorous echoes of New Aberfoyle exerted their strong lungs to answer him.

Jack Ryan took up his abode in Simon Ford's new cottage. They offered him a room, which he accepted without ceremony, in his frank and hearty way. Old Madge loved him for his fine character and good nature. She in some degree shared his ideas on the subject of the fantastic beings who were supposed to haunt the mine, and the two, when alone, told each other stories wild enough to make one shudder — stories well worthy of enriching the hyperborean mythology.

Jack thus became the life of the cottage. He was, besides being a jovial companion, a good workman. Six months after the works had begun, he was made head of a gang of hewers.

"That was a good work done, Mr. Ford," said he, a few days after his appointment. "You discovered a new field, and though you narrowly escaped paying for the discovery with your life — well, it was not too dearly bought."

"No, Jack, it was a good bargain we made that time!" answered the old overman. "But neither Mr. Starr nor I have forgotten that to you we owe our lives."

"Not at all," returned Jack. "You owe them to your son Harry, when he had the good sense to accept my invitation to Irvine."

"And not to go, isn't that it?" interrupted Harry, grasping his comrade's hand. "No, Jack, it is to you, scarcely healed of your wounds — to you, who did not delay a day, no, nor an hour, that we owe our being found still alive in the mine!"

"Rubbish, no!" broke in the obstinate fellow. "I won't have that said, when it's no such thing. I hurried to find out what had become of you, Harry, that's all. But to give everyone his due, I will add that without that unapproachable goblin — "

"Ah, there we are!" cried Ford. "A goblin!"

"A goblin, a brownie, a fairy's child," repeated Jack Ryan, "a cousin of the Fire-Maidens, an Urisk, whatever you like! It's not the less certain that without it we should never have found our way into the gallery, from which you could not get out."

“No doubt, Jack,” answered Harry. “It remains to be seen whether this being was as supernatural as you choose to believe.”

“Supernatural!” exclaimed Ryan. “But it was as supernatural as a Will-o’-the-Wisp, who may be seen skipping along with his lantern in his hand; you may try to catch him, but he escapes like a fairy, and vanishes like a shadow! Don’t be uneasy, Harry, we shall see it again some day or other!”

“Well, Jack,” said Simon Ford, “Will-o’-the-Wisp or not, we shall try to find it, and you must help us.”

“You’ll get into a scrap if you don’t take care, Mr. Ford!” responded Jack Ryan.

“We’ll see about that, Jack!”

We may easily imagine how soon this domain of New Aberfoyle became familiar to all the members of the Ford family, but more particularly to Harry. He learnt to know all its most secret ins and outs. He could even say what point of the surface corresponded with what point of the mine. He knew that above this seam lay the Firth of Clyde, that there extended Loch Lomond and Loch Katrine. Those columns supported a spur of the Grampian mountains. This vault served as a basement to Dumbarton. Above this large pond passed the Balloch railway. Here ended the Scottish coast. There began the sea, the tumult of which could be distinctly heard during the equinoctial gales. Harry would have been a first-rate guide to these natural catacombs, and all that Alpine guides do on their snowy peaks in daylight he could have done in the dark mine by the wonderful power of instinct.

He loved New Aberfoyle. Many times, with his lamp stuck in his hat, did he penetrate its furthest depths. He explored its ponds in a skillfully-managed canoe. He even went shooting, for numerous birds had been introduced into the crypt — pintails, snipes, ducks, who fed on the fish which swarmed in the deep waters. Harry’s eyes seemed made for the dark, just as a sailor’s are made for distances. But all this while Harry felt irresistibly animated by the hope of finding the mysterious being whose intervention, strictly speaking, had saved himself and his friends. Would he succeed? He certainly would, if presentiments were to be trusted; but certainly not, if he judged by the success which had as yet attended his researches.

The attacks directed against the family of the old overman, before the discovery of New Aberfoyle, had not been renewed.

CHAPTER XI. HANGING BY A THREAD

ALTHOUGH in this way the Ford family led a happy and contented life, yet it was easy to see that Harry, naturally of a grave disposition, became more and more quiet and reserved. Even Jack Ryan, with all his good humor and usually infectious merriment, failed to rouse him to gayety of manner.

One Sunday — it was in the month of June — the two friends were walking together on the shores of Loch Malcolm. Coal Town rested from labor. In the world above, stormy weather prevailed. Violent rains fell, and dull sultry vapors brooded over the earth; the atmosphere was most oppressive.

Down in Coal Town there was perfect calm; no wind, no rain. A soft and pleasant temperature existed instead of the strife of the elements which raged without. What wonder then, that excursionists from Stirling came in considerable numbers to enjoy the calm fresh air in the recesses of the mine?

The electric discs shed a brilliancy of light which the British sun, oftener obscured by fogs than it ought to be, might well envy. Jack Ryan kept talking of these visitors, who passed them in noisy crowds, but Harry paid very little attention to what he said.

“I say, do look, Harry!” cried Jack. “See what numbers of people come to visit us! Cheer up, old fellow! Do the honors of the place a little better. If you look so glum, you’ll make all these outside folks think you envy their life above-ground.”

“Never mind me, Jack,” answered Harry. “You are jolly enough for two, I’m sure; that’s enough.”

“I’ll be hanged if I don’t feel your melancholy creeping over me though!” exclaimed Jack. “I declare my eyes are getting quite dull, my lips are drawn together, my laugh sticks in my throat; I’m forgetting all my songs. Come, man, what’s the matter with you?”

“You know well enough, Jack.”

“What? the old story?”

“Yes, the same thoughts haunt me.”

“Ah, poor fellow!” said Jack, shrugging his shoulders. “If you would only do like me, and set all the queer things down to the account of the goblins of the mine, you would be easier in your mind.”

“But, Jack, you know very well that these goblins exist only in your imagination, and that, since the works here have been reopened, not a single one has been seen.”

“That’s true, Harry; but if no spirits have been seen, neither has anyone else to whom you could attribute the extraordinary doings we want to account for.”

“I shall discover them.”

“Ah, Harry! Harry! it’s not so easy to catch the spirits of New Aberfoyle!”

“I shall find out the spirits as you call them,” said Harry, in a tone of firm conviction.

“Do you expect to be able to punish them?”

“Both punish and reward. Remember, if one hand shut us up in that passage, another hand delivered us! I shall not soon forget that.”

“But, Harry, how can we be sure that these two hands do not belong to the same body?”

“What can put such a notion in your head, Jack?” asked Harry.

“Well, I don’t know. Creatures that live in these holes, Harry, don’t you see? they can’t be made like us, eh?”

“But they ARE just like us, Jack.”

“Oh, no! don’t say that, Harry! Perhaps some madman managed to get in for a time.”

“A madman! No madman would have formed such connected plans, or done such continued mischief as befell us after the breaking of the ladders.”

“Well, but anyhow he has done no harm for the last three years, either to you, Harry, or any of your people.”

“No matter, Jack,” replied Harry; “I am persuaded that this malignant being, whoever he is, has by no means given up his evil intentions. I can hardly say on what I found my

convictions. But at any rate, for the sake of the new works, I must and will know who he is and whence he comes."

"For the sake of the new works did you say?" asked Jack, considerably surprised.

"I said so, Jack," returned Harry. "I may be mistaken, but, to me, all that has happened proves the existence of an interest in this mine in strong opposition to ours. Many a time have I considered the matter; I feel almost sure of it. Just consider the whole series of inexplicable circumstances, so singularly linked together. To begin with, the anonymous letter, contradictory to that of my father, at once proves that some man had become aware of our projects, and wished to prevent their accomplishment. Mr. Starr comes to see us at the Dochart pit. No sooner does he enter it with me than an immense stone is cast upon us, and communication is interrupted by the breaking of the ladders in the Yarrow shaft. We commence exploring. An experiment, by which the existence of a new vein would be proved, is rendered impossible by stoppage of fissures. Notwithstanding this, the examination is carried out, the vein discovered. We return as we came, a prodigious gust of air meets us, our lamp is broken, utter darkness surrounds us. Nevertheless, we make our way along the gloomy passage until, on reaching the entrance, we find it blocked up. There we were — imprisoned. Now, Jack, don't you see in all these things a malicious intention? Ah, yes, believe me, some being hitherto invisible, but not supernatural, as you will persist in thinking, was concealed in the mine. For some reason, known only to himself, he strove to keep us out of it. WAS there, did I say? I feel an inward conviction that he IS there still, and probably prepares some terrible disaster for us. Even at the risk of my life, Jack, I am resolved to discover him."

Harry spoke with an earnestness which strongly impressed his companion. "Well, Harry," said he, "if I am forced to agree with you in certain points, won't you admit that some kind fairy or brownie, by bringing bread and water to you, was the means of — "

"Jack, my friend," interrupted Harry, "it is my belief that the friendly person, whom you will persist in calling a spirit, exists in the mine as certainly as the criminal we speak of, and I mean to seek them both in the most distant recesses of the mine."

"But," inquired Jack, "have you any possible clew to guide your search?"

“Perhaps I have. Listen to me! Five miles west of New Aberfoyle, under the solid rock which supports Ben Lomond, there exists a natural shaft which descends perpendicularly into the vein beneath. A week ago I went to ascertain the depth of this shaft. While sounding it, and bending over the opening as my plumb-line went down, it seemed to me that the air within was agitated, as though beaten by huge wings.”

“Some bird must have got lost among the lower galleries,” replied Jack.

“But that is not all, Jack. This very morning I went back to the place, and, listening attentively, I thought I could detect a sound like a sort of groaning.”

“Groaning!” cried Jack, “that must be nonsense; it was a current of air — unless indeed some ghost — ”

“I shall know to-morrow what it was,” said Harry.

“To-morrow?” answered Jack, looking at his friend.

“Yes; to-morrow I am going down into that abyss.”

“Harry! that will be a tempting of Providence.”

“No, Jack, Providence will aid me in the attempt. Tomorrow, you and some of our comrades will go with me to that shaft. I will fasten myself to a long rope, by which you can let me down, and draw me up at a given signal. I may depend upon you, Jack?”

“Well, Harry,” said Jack, shaking his head, “I will do as you wish me; but I tell you all the same, you are very wrong.”

“Nothing venture nothing win,” said Harry, in a tone of decision. “To-morrow morning, then, at six o’clock. Be silent, and farewell!”

It must be admitted that Jack Ryan’s fears were far from groundless. Harry would expose himself to very great danger, supposing the enemy he sought for lay concealed at the bottom of the pit into which he was going to descend. It did not seem likely that such was the case, however.

“Why in the world,” repeated Jack Ryan, “should he take all this trouble to account for a set of facts so very easily and simply explained by the supernatural intervention of the

spirits of the mine?”

But, notwithstanding his objections to the scheme, Jack Ryan and three miners of his gang arrived next morning with Harry at the mouth of the opening of the suspicious shaft. Harry had not mentioned his intentions either to James Starr or to the old overman. Jack had been discreet enough to say nothing.

Harry had provided himself with a rope about 200 feet long. It was not particularly thick, but very strong — sufficiently so to sustain his weight. His friends were to let him down into the gulf, and his pulling the cord was to be the signal to withdraw him.

The opening into this shaft or well was twelve feet wide. A beam was thrown across like a bridge, so that the cord passing over it should hang down the center of the opening, and save Harry from striking against the sides in his descent.

He was ready.

“Are you still determined to explore this abyss?” whispered Jack Ryan.

“Yes, I am, Jack.”

The cord was fastened round Harry’s thighs and under his arms, to keep him from rocking. Thus supported, he was free to use both his hands. A safety-lamp hung at his belt, also a large, strong knife in a leather sheath.

Harry advanced to the middle of the beam, around which the cord was passed. Then his friends began to let him down, and he slowly sank into the pit. As the rope caused him to swing gently round and round, the light of his lamp fell in turns on all points of the side walls, so that he was able to examine them carefully. These walls consisted of pit coal, and so smooth that it would be impossible to ascend them.

Harry calculated that he was going down at the rate of about a foot per second, so that he had time to look about him, and be ready for any event.

During two minutes — that is to say, to the depth of about 120 feet, the descent continued without any incident.

No lateral gallery opened from the side walls of the pit, which was gradually narrowing into the shape of a funnel. But Harry began to feel a fresher air rising from beneath,

whence he concluded that the bottom of the pit communicated with a gallery of some description in the lowest part of the mine.

The cord continued to unwind. Darkness and silence were complete. If any living being whatever had sought refuge in the deep and mysterious abyss, he had either left it, or, if there, by no movement did he in the slightest way betray his presence.

Harry, becoming more suspicious the lower he got, now drew his knife and held it in his right hand. At a depth of 180 feet, his feet touched the lower point and the cord slackened and unwound no further.

Harry breathed more freely for a moment. One of the fears he entertained had been that, during his descent, the cord might be cut above him, but he had seen no projection from the walls behind which anyone could have been concealed.

The bottom of the abyss was quite dry. Harry, taking the lamp from his belt, walked round the place, and perceived he had been right in his conjectures.

An extremely narrow passage led aside out of the pit. He had to stoop to look into it, and only by creeping could it be followed; but as he wanted to see in which direction it led, and whether another abyss opened from it, he lay down on the ground and began to enter it on hands and knees.

An obstacle speedily arrested his progress. He fancied he could perceive by touching it, that a human body lay across the passage. A sudden thrill of horror and surprise made him hastily draw back, but he again advanced and felt more carefully.

His senses had not deceived him; a body did indeed lie there; and he soon ascertained that, although icy cold at the extremities, there was some vital heat remaining. In less time than it takes to tell it, Harry had drawn the body from the recess to the bottom of the shaft, and, seizing his lamp, he cast its lights on what he had found, exclaiming immediately, “Why, it is a child!”

The child still breathed, but so very feebly that Harry expected it to cease every instant. Not a moment was to be lost; he must carry this poor little creature out of the pit, and take it home to his mother as quickly as he could. He eagerly fastened the cord round his waist, stuck on his lamp, clasped the child to his breast with his left arm, and,

keeping his right hand free to hold the knife, he gave the signal agreed on, to have the rope pulled up.

It tightened at once; he began the ascent. Harry looked around him with redoubled care, for more than his own life was now in danger.

For a few minutes all went well, no accident seemed to threaten him, when suddenly he heard the sound of a great rush of air from beneath; and, looking down, he could dimly perceive through the gloom a broad mass arising until it passed him, striking him as it went by.

It was an enormous bird — of what sort he could not see; it flew upwards on mighty wings, then paused, hovered, and dashed fiercely down upon Harry, who could only wield his knife in one hand. He defended himself and the child as well as he could, but the ferocious bird seemed to aim all its blows at him alone. Afraid of cutting the cord, he could not strike it as he wished, and the struggle was prolonged, while Harry shouted with all his might in hopes of making his comrades hear.

He soon knew they did, for they pulled the rope up faster; a distance of about eighty feet remained to be got over. The bird ceased its direct attack, but increased the horror and danger of his situation by rushing at the cord, clinging to it just out of his reach, and endeavoring, by pecking furiously, to cut it.

Harry felt overcome with terrible dread. One strand of the rope gave way, and it made them sink a little.

A shriek of despair escaped his lips.

A second strand was divided, and the double burden now hung suspended by only half the cord.

Harry dropped his knife, and by a superhuman effort succeeded, at the moment the rope was giving way, in catching hold of it with his right hand above the cut made by the beak of the bird. But, powerfully as he held it in his iron grasp, he could feel it gradually slipping through his fingers.

He might have caught it, and held on with both hands by sacrificing the life of the child he supported in his left arm. The idea crossed him, but was banished in an instant,

although he believed himself quite unable to hold out until drawn to the surface. For a second he closed his eyes, believing they were about to plunge back into the abyss.

He looked up once more; the huge bird had disappeared; his hand was at the very extremity of the broken rope — when, just as his convulsive grasp was failing, he was seized by the men, and with the child was placed on the level ground.

The fearful strain of anxiety removed, a reaction took place, and Harry fell fainting into the arms of his friends.

CHAPTER XII. NELL ADOPTED

A COUPLE of hours later, Harry still unconscious, and the child in a very feeble state, were brought to the cottage by Jack Ryan and his companions. The old overman listened to the account of their adventures, while Madge attended with the utmost care to the wants of her son, and of the poor creature whom he had rescued from the pit.

Harry imagined her a mere child, but she was a maiden of the age of fifteen or sixteen years.

She gazed at them with vague and wondering eyes; and the thin face, drawn by suffering, the pallid complexion, which light could never have tinged, and the fragile, slender figure, gave her an appearance at once singular and attractive. Jack Ryan declared that she seemed to him to be an uncommonly interesting kind of ghost.

It must have been due to the strange and peculiar circumstances under which her life hitherto had been led, that she scarcely seemed to belong to the human race. Her countenance was of a very uncommon cast, and her eyes, hardly able to bear the lamp-light in the cottage, glanced around in a confused and puzzled way, as if all were new to them.

As this singular being reclined on Madge’s bed and awoke to consciousness, as from a long sleep, the old Scotchwoman began to question her a little.

“What do they call you, my dear?” said she.

“Nell,” replied the girl.

“Do you feel anything the matter with you, Nell?”

“I am hungry. I have eaten nothing since — since — ”

Nell uttered these few words like one unused to speak much. They were in the Gaelic language, which was often spoken by Simon and his family. Madge immediately brought her some food; she was evidently famished. It was impossible to say how long she might have been in that pit.

“How many days had you been down there, dearie?” inquired Madge.

Nell made no answer; she seemed not to understand the question.

“How many days, do you think?”

“Days?” repeated Nell, as though the word had no meaning for her, and she shook her head to signify entire want of comprehension.

Madge took her hand, and stroked it caressingly. “How old are you, my lassie?” she asked, smiling kindly at her.

Nell shook her head again.

“Yes, yes,” continued Madge, “how many years old?”

“Years?” replied Nell. She seemed to understand that word no better than days! Simon, Harry, Jack, and the rest, looked on with an air of mingled compassion, wonder, and sympathy. The state of this poor thing, clothed in a miserable garment of coarse woolen stuff, seemed to impress them painfully.

Harry, more than all the rest, seemed attracted by the very peculiarity of this poor stranger. He drew near, took Nell’s hand from his mother, and looked directly at her, while something like a smile curved her lip. “Nell,” he said, “Nell, away down there — in the mine — were you all alone?”

“Alone! alone!” cried the girl, raising herself hastily. Her features expressed terror; her eyes, which had appeared to soften as Harry looked at her, became quite wild again. “Alone!” repeated she, “alone!” — and she fell back on the bed, as though deprived of all strength.

“The poor bairn is too weak to speak to us,” said Madge, when she had adjusted the pillows. “After a good rest, and a little more food, she will be stronger. Come away, Simon and Harry, and all the rest of you, and let her go to sleep.” So Nell was left alone, and in a very few minutes slept profoundly.

This event caused a great sensation, not only in the coal mines, but in Stirlingshire, and ultimately throughout the kingdom. The strangeness of the story was exaggerated; the affair could not have made more commotion had they found the girl enclosed in the solid rock, like one of those antediluvian creatures who have occasionally been released by a stroke of the pickax from their stony prison. Nell became a fashionable wonder

without knowing it. Superstitious folks made her story a new subject for legendary marvels, and were inclined to think, as Jack Ryan told Harry, that Nell was the spirit of the mines.

“Be it so, Jack,” said the young man; “but at any rate she is the good spirit. It can have been none but she who brought us bread and water when we were shut up down there; and as to the bad spirit, who must still be in the mine, we’ll catch him some day.”

Of course James Starr had been at once informed of all this, and came, as soon as the young girl had sufficiently recovered her strength, to see her, and endeavor to question her carefully.

She appeared ignorant of nearly everything relating to life, and, although evidently intelligent, was wanting in many elementary ideas, such as time, for instance. She had never been used to its division, and the words signifying hours, days, months, and years were unknown to her.

Her eyes, accustomed to the night, were pained by the glare of the electric discs; but in the dark her sight was wonderfully keen, the pupil dilated in a remarkable manner, and she could see where to others there appeared profound obscurity. It was certain that her brain had never received any impression of the outer world, that her eyes had never looked beyond the mine, and that these somber depths had been all the world to her.

The poor girl probably knew not that there were a sun and stars, towns and counties, a mighty universe composed of myriads of worlds. But until she comprehended the significance of words at present conveying no precise meaning to her, it was impossible to ascertain what she knew.

As to whether or not Nell had lived alone in the recesses of New Aberfoyle, James Starr was obliged to remain uncertain; indeed, any allusion to the subject excited evident alarm in the mind of this strange girl. Either Nell could not or would not reply to questions, but that some secret existed in connection with the place, which she could have explained, was manifest.

“Should you like to stay with us? Should you like to go back to where we found you?” asked James Starr.

“Oh, yes!” exclaimed the maiden, in answer to his first question; but a cry of terror was all she seemed able to say to the second.

James Starr, as well as Simon and Harry Ford, could not help feeling a certain amount of uneasiness with regard to this persistent silence. They found it impossible to forget all that had appeared so inexplicable at the time they made the discovery of the coal mine; and although that was three years ago, and nothing new had happened, they always expected some fresh attack on the part of the invisible enemy.

They resolved to explore the mysterious well, and did so, well armed and in considerable numbers. But nothing suspicious was to be seen; the shaft communicated with lower stages of the crypt, hollowed out in the carboniferous bed.

Many a time did James Starr, Simon, and Harry talk over these things. If one or more malevolent beings were concealed in the coal-pit, and there concocted mischief, Nell surely could have warned them of it, yet she said nothing. The slightest allusion to her past life brought on such fits of violent emotion, that it was judged best to avoid the subject for the present. Her secret would certainly escape her by-and-by.

By the time Nell had been a fortnight in the cottage, she had become a most intelligent and zealous assistant to old Madge. It was clear that she instinctively felt she should remain in the dwelling where she had been so charitably received, and perhaps never dreamt of quitting it. This family was all in all to her, and to the good folks themselves Nell had seemed an adopted child from the moment when she first came beneath their roof. Nell was in truth a charming creature; her new mode of existence added to her beauty, for these were no doubt the first happy days of her life, and her heart was full of gratitude towards those to whom she owed them. Madge felt towards her as a mother would; the old woman doted upon her; in short, she was beloved by everybody. Jack Ryan only regretted one thing, which was that he had not saved her himself. Friend Jack often came to the cottage. He sang, and Nell, who had never heard singing before, admired it greatly; but anyone might see that she preferred to Jack’s songs the graver conversation of Harry, from whom by degrees she learnt truths concerning the outer world, of which hitherto she had known nothing.

It must be said that, since Nell had appeared in her own person, Jack Ryan had been obliged to admit that his belief in hobgoblins was in a measure weakened. A couple of months later his credulity experienced a further shock. About that time Harry

unexpectedly made a discovery which, in part at least, accounted for the apparition of the fire-maidens among the ruins of Dundonald Castle at Irvine.

During several days he had been engaged in exploring the remote galleries of the prodigious excavation towards the south. At last he scrambled with difficulty up a narrow passage which branched off through the upper rock. To his great astonishment, he suddenly found himself in the open air. The passage, after ascending obliquely to the surface of the ground, led out directly among the ruins of Dundonald Castle.

There was, therefore, a communication between New Aberfoyle and the hills crowned by this ancient castle. The upper entrance to this gallery, being completely concealed by stones and brushwood, was invisible from without; at the time of their search, therefore, the magistrates had been able to discover nothing.

A few days afterwards, James Starr, guided by Harry, came himself to inspect this curious natural opening into the coal mine. “Well,” said he, “here is enough to convince the most superstitious among us. Farewell to all their brownies, goblins, and fire-maidens now!”

“I hardly think, Mr. Starr, we ought to congratulate ourselves,” replied Harry. “Whatever it is we have instead of these things, it can’t be better, and may be worse than they are.”

“That’s true, Harry,” said the engineer; “but what’s to be done? It is plain that, whatever the beings are who hide in the mine, they reach the surface of the earth by this passage. No doubt it was the light of torches waved by them during that dark and stormy night which attracted the MOTALA towards the rocky coast, and like the wreckers of former days, they would have plundered the unfortunate vessel, had it not been for Jack Ryan and his friends. Anyhow, so far it is evident, and here is the mouth of the den. As to its occupants, the question is — Are they here still?”

“I say yes; because Nell trembles when we mention them — yes, because Nell will not, or dare not, speak about them,” answered Harry in a tone of decision.

Harry was surely in the right. Had these mysterious denizens of the pit abandoned it, or ceased to visit the spot, what reason could the girl have had for keeping silence?

James Starr could not rest till he had penetrated this mystery. He foresaw that the whole future of the new excavations must depend upon it. Renewed and strict precautions were therefore taken. The authorities were informed of the discovery of the entrance. Watchers were placed among the ruins of the castle. Harry himself lay hid for several nights in the thickets of brushwood which clothed the hill-side.

Nothing was discovered — no human being emerged from the opening. So most people came to the conclusion that the villains had been finally dislodged from the mine, and that, as to Nell, they must suppose her to be dead at the bottom of the shaft where they had left her.

While it remained unworked, the mine had been a safe enough place of refuge, secure from all search or pursuit. But now, circumstances being altered, it became difficult to conceal this lurking-place, and it might reasonably be hoped they were gone, and that nothing for the future was to be dreaded from them.

James Starr, however, could not feel sure about it; neither could Harry be satisfied on the subject, often repeating, “Nell has clearly been mixed up with all this secret business. If she had nothing more to fear, why should she keep silence? It cannot be doubted that she is happy with us. She likes us all — she adores my mother. Her absolute silence as to her former life, when by speaking out she might benefit us, proves to me that some awful secret, which she dares not reveal, weighs on her mind. It may also be that she believes it better for us, as well as for herself, that she should remain mute in a way otherwise so unaccountable.”

In consequence of these opinions, it was agreed by common consent to avoid all allusion to the maiden’s former mode of life. One day, however, Harry was led to make known to Nell what James Starr, his father, mother, and himself believed they owed to her interference.

It was a fete-day. The miners made holiday on the surface of the county of Stirling as well as in its subterraneous domains. Parties of holiday-makers were moving about in all directions. Songs resounded in many places beneath the sonorous vaults of New Aberfoyle. Harry and Nell left the cottage, and slowly walked along the left bank of Loch Malcolm.

Then the electric brilliance darted less vividly, and the rays were interrupted with fantastic effect by the sharp angles of the picturesque rocks which supported the dome. This imperfect light suited Nell, to whose eyes a glare was very unpleasant.

“Nell,” said Harry, “your eyes are not fit for daylight yet, and could not bear the brightness of the sun.”

“Indeed they could not,” replied the girl; “if the sun is such as you describe it to me, Harry.”

“I cannot by any words, Nell, give you an idea either of his splendor or of the beauty of that universe which your eyes have never beheld. But tell me, is it really possible that, since the day when you were born in the depths of the coal mine, you never once have been up to the surface of the earth?”

“Never once, Harry,” said she; “I do not believe that, even as an infant, my father or mother ever carried me thither. I am sure I should have retained some impression of the open air if they had.”

“I believe you would,” answered Harry. “Long ago, Nell, many children used to live altogether in the mine; communication was then difficult, and I have met with more than one young person, quite as ignorant as you are of things above-ground. But now the railway through our great tunnel takes us in a few minutes to the upper regions of our country. I long, Nell, to hear you say, ‘Come, Harry, my eyes can bear daylight, and I want to see the sun! I want to look upon the works of the Almighty.’”

“I shall soon say so, Harry, I hope,” replied the girl; “I shall soon go with you to the world above; and yet — ”

“What are you going to say, Nell?” hastily cried Harry; “can you possibly regret having quitted that gloomy abyss in which you spent your early years, and whence we drew you half dead?”

“No, Harry,” answered Nell; “I was only thinking that darkness is beautiful as well as light. If you but knew what eyes accustomed to its depth can see! Shades flit by, which one longs to follow; circles mingle and intertwine, and one could gaze on them forever; black hollows, full of indefinite gleams of radiance, lie deep at the bottom of the mine.

And then the voice-like sounds! Ah, Harry! one must have lived down there to understand what I feel, what I can never express."

"And were you not afraid, Nell, all alone there?"

"It was just when I was alone that I was not afraid."

Nell's voice altered slightly as she said these words; however, Harry thought he might press the subject a little further, so he said, "But one might be easily lost in these great galleries, Nell. Were you not afraid of losing your way?"

"Oh, no, Harry; for a long time I had known every turn of the new mine."

"Did you never leave it?"

"Yes, now and then," answered the girl with a little hesitation; "sometimes I have been as far as the old mine of Aberfoyle."

"So you knew our old cottage?"

"The cottage! oh, yes; but the people who lived there I only saw at a great distance."

"They were my father and mother," said Harry; "and I was there too; we have always lived there — we never would give up the old dwelling."

"Perhaps it would have been better for you if you had," murmured the maiden.

"Why so, Nell? Was it not just because we were obstinately resolved to remain that we ended by discovering the new vein of coal? And did not that discovery lead to the happy result of providing work for a large population, and restoring them to ease and comfort? and did it not enable us to find you, Nell, to save your life, and give you the love of all our hearts?"

"Ah, yes, for me indeed it is well, whatever may happen," replied Nell earnestly; "for others — who can tell?"

"What do you mean?"

"Oh, nothing — nothing. But it used to be very dangerous at that time to go into the new cutting — yes, very dangerous indeed, Harry! Once some rash people made their

way into these chasms. They got a long, long way; they were lost!”

“They were lost?” said Harry, looking at her.

“Yes, lost!” repeated Nell in a trembling voice. “They could not find their way out.”

“And there,” cried Harry, “they were imprisoned during eight long days! They were at the point of death, Nell; and, but for a kind and charitable being — an angel perhaps — sent by God to help them, who secretly brought them a little food; but for a mysterious guide, who afterwards led to them their deliverers, they never would have escaped from that living tomb!”

“And how do you know about that?” demanded the girl.

“Because those men were James Starr, my father, and myself, Nell!”

Nell looked up hastily, seized the young man’s hand, and gazed so fixedly into his eyes that his feelings were stirred to their depths. “You were there?” at last she uttered.

“I was indeed,” said Harry, after a pause, “and she to whom we owe our lives can have been none other than yourself, Nell!”

Nell hid her face in her hands without speaking. Harry had never seen her so much affected.

“Those who saved your life, Nell,” added he in a voice tremulous with emotion, “already owed theirs to you; do you think they will ever forget it?”

CHAPTER XIII. ON THE REVOLVING LADDER

THE mining operations at New Aberfoyle continued to be carried on very successfully. As a matter of course, the engineer, James Starr, as well as Simon Ford, the discoverers of this rich carboniferous region, shared largely in the profits.

In time Harry became a partner. But he never thought of quitting the cottage. He took his father’s place as overman, and diligently superintended the works of this colony of miners. Jack Ryan was proud and delighted at the good fortune which had befallen his comrade. He himself was getting on very well also.

They frequently met, either at the cottage or at the works in the pit. Jack did not fail to remark the sentiments entertained by Harry towards Nell. Harry would not confess to them; but Jack only laughed at him when he shook his head and tried to deny any special interest in her.

It must be noted that Jack Ryan had the greatest possible wish to be of the party when Nell should pay her first visit to the upper surface of the county of Stirling. He wished to see her wonder and admiration on first beholding the yet unknown face of Nature. He very much hoped that Harry would take him with them when the excursion was made. As yet, however, the latter had made no proposal of the kind to him, which caused him to feel a little uneasy as to his intentions.

One morning Jack Ryan was descending through a shaft which led from the surface to the lower regions of the pit. He did so by means of one of those ladders which, continually revolving by machinery, enabled persons to ascend and descend without fatigue. This apparatus had lowered him about a hundred and fifty feet, when at a narrow landing-place he perceived Harry, who was coming up to his labors for the day.

“Well met, my friend!” cried Jack, recognizing his comrade by the light of the electric lamps.

“Ah, Jack!” replied Harry, “I am glad to see you. I’ve got something to propose.”

“I can listen to nothing till you tell me how Nell is,” interrupted Jack Ryan.

“Nell is all right, Jack — so much so, in fact, that I hope in a month or six weeks — ”

“To marry her, Harry?”

“Jack, you don’t know what you are talking about!”

“Ah, that’s very likely; but I know quite well what I shall do.”

“What will you do?”

“Marry her myself, if you don’t; so look sharp,” laughed Jack. “By Saint Mungo! I think an immense deal of bonny Nell! A fine young creature like that, who has been brought up in the mine, is just the very wife for a miner. She is an orphan — so am I; and if you don’t care much for her, and if she will have me — ”

Harry looked gravely at Jack, and let him talk on without trying to stop him. “Don’t you begin to feel jealous, Harry?” asked Jack in a more serious tone.

“Not at all,” answered Harry quietly.

“But if you don’t marry Nell yourself, you surely can’t expect her to remain a spinster?”

“I expect nothing,” said Harry.

A movement of the ladder machinery now gave the two friends the opportunity — one to go up, the other down the shaft. However, they remained where they were.

“Harry,” quoth Jack, “do you think I spoke in earnest just now about Nell?”

“No, that I don’t, Jack.”

“Well, but now I will!”

“You? speak in earnest?”

“My good fellow, I can tell you I am quite capable of giving a friend a bit of advice.”

“Let’s hear, then, Jack!”

“Well, look here! You love Nell as heartily as she deserves. Old Simon, your father, and old Madge, your mother, both love her as if she were their daughter. Why don’t you make her so in reality? Why don’t you marry her?”

“Come, Jack,” said Harry, “you are running on as if you knew how Nell felt on the subject.”

“Everybody knows that,” replied Jack, “and therefore it is impossible to make you jealous of any of us. But here goes the ladder again — I’m off!”

“Stop a minute, Jack!” cried Harry, detaining his companion, who was stepping onto the moving staircase.

“I say! you seem to mean me to take up my quarters here altogether!”

“Do be serious and listen, Jack! I want to speak in earnest myself now.”

“Well, I’ll listen till the ladder moves again, not a minute longer.”

“Jack,” resumed Harry, “I need not pretend that I do not love Nell; I wish above all things to make her my wife.”

“That’s all right!”

“But for the present I have scruples of conscience as to asking her to make me a promise which would be irrevocable.”

“What can you mean, Harry?”

“I mean just this — that, it being certain Nell has never been outside this coal mine in the very depths of which she was born, it stands to reason that she knows nothing, and can comprehend nothing of what exists beyond it. Her eyes — yes, and perhaps also her heart — have everything yet to learn. Who can tell what her thoughts will be, when perfectly new impressions shall be made upon her mind? As yet she knows nothing of the world, and to me it would seem like deceiving her, if I led her to decide in ignorance, upon choosing to remain all her life in the coal mine. Do you understand me, Jack?”

“Hem! — yes — pretty well. What I understand best is that you are going to make me miss another turn of the ladder.”

“Jack,” replied Harry gravely, “if this machinery were to stop altogether, if this landing-place were to fall beneath our feet, you must and shall hear what I have to say.”

“Well done, Harry! that’s how I like to be spoken to! Let’s settle, then, that, before you marry Nell, she shall go to school in Auld Reekie.”

“No indeed, Jack; I am perfectly able myself to educate the person who is to be my wife.”

“Sure that will be a great deal better, Harry!”

“But, first of all,” resumed Harry, “I wish that Nell should gain a real knowledge of the upper world. To illustrate my meaning, Jack, suppose you were in love with a blind girl, and someone said to you, ‘In a month’s time her sight will be restored,’ would you not wait till after she was cured, to marry her?”

“Faith, to be sure I would!” exclaimed Jack.

“Well, Jack, Nell is at present blind; and before she marries me, I wish her to see what I am, and what the life really is to which she would bind herself. In short, she must have daylight let in upon the subject!”

“Well said, Harry! Very well said indeed!” cried Jack. “Now I see what you are driving at. And when may we expect the operation to come off?”

“In a month, Jack,” replied Harry. “Nell is getting used to the light of our reflectors. That is some preparation. In a month she will, I hope, have seen the earth and its wonders — the sky and its splendors. She will perceive that the limits of the universe are boundless.”

But while Harry was thus giving the rein to his imagination, Jack Ryan, quitting the platform, had leaped on the step of the moving machinery.

“Hullo, Jack! Where are you?”

“Far beneath you,” laughed the merry fellow. “While you soar to the heights, I plunge into the depths.”

“Fare ye well. Jack!” returned Harry, himself laying hold of the rising ladder; “mind you say nothing about what I have been telling you.”

“Not a word,” shouted Jack, “but I make one condition.”

“What is that?”

“That I may be one of the party when Nell’s first excursion to the face of the earth comes off!”

“So you shall, Jack, I promise you!”

A fresh throb of the machinery placed a yet more considerable distance between the friends. Their voices sounded faintly to each other. Harry, however, could still hear Jack shouting:

“I say! do you know what Nell will like better than either sun, moon, or stars, after she’s seen the whole of them?”

“No, Jack!”

“Why, you yourself, old fellow! still you! always you!” And Jack’s voice died away in a prolonged “Hurrah!”

Harry, after this, applied himself diligently, during all his spare time, to the work of Nell’s education. He taught her to read and to write, and such rapid progress did she make, it might have been said that she learnt by instinct. Never did keen intelligence more quickly triumph over utter ignorance. It was the wonder of all beholders.

Simon and Madge became every day more and more attached to their adopted child, whose former history continued to puzzle them a good deal. They plainly saw the nature of Harry’s feelings towards her, and were far from displeased thereat. They recollected that Simon had said to the engineer on his first visit to the old cottage, “How can our son ever think of marrying? Where could a wife possibly be found suitable for a lad whose whole life must be passed in the depths of a coal mine?”

Well! now it seemed as if the most desirable companion in the world had been led to him by Providence. Was not this like a blessing direct from Heaven? So the old man made up his mind that, if the wedding did take place, the miners of New Aberfoyle should have a merry-making at Coal Town, which they would never during their lives forget. Simon Ford little knew what he was saying!

It must be remarked that another person wished for this union of Harry and Nell as much as Simon did — and that was James Starr, the engineer. Of course he was really interested in the happiness of the two young people. But another motive, connected with wider interests, influenced him to desire it.

It has been said that James Starr continued to entertain a certain amount of apprehension, although for the present nothing appeared to justify it. Yet that which had been might again be. This mystery about the new cutting — Nell was evidently the only person acquainted with it. Now, if fresh dangers were in store for the miners of Aberfoyle, how were they possibly to be guarded against, without so much as knowing the cause of them?

“Nell has persisted in keeping silence,” said James Starr very often, “but what she has concealed from others, she will not long hide from her husband. Any danger would be danger to Harry as well as to the rest of us. Therefore, a marriage which brings happiness to the lovers, and safety to their friends, will be a good marriage, if ever there is such a thing here below.”

Thus, not illogically, reasoned James Starr. He communicated his ideas to old Simon, who decidedly appreciated them. Nothing, then, appeared to stand in the way of the match. What, in fact, was there to prevent it? They loved each other; the parents desired nothing better for their son. Harry’s comrades envied his good fortune, but freely acknowledged that he deserved it. The maiden depended on no one else, and had but to give the consent of her own heart.

Why, then, if there were none to place obstacles in the way of this union — why, as night came on, and, the labors of the day being over, the electric lights in the mine were extinguished, and all the inhabitants of Coal Town at rest within their dwellings — why did a mysterious form always emerge from the gloomier recesses of New Aberfoyle, and silently glide through the darkness?

What instinct guided this phantom with ease through passages so narrow as to appear to be impracticable?

Why should the strange being, with eyes flashing through the deepest darkness, come cautiously creeping along the shores of Lake Malcolm? Why so directly make his way towards Simon’s cottage, yet so carefully as hitherto to avoid notice? Why, bending

towards the windows, did he strive to catch, by listening, some fragment of the conversation within the closed shutters?

And, on catching a few words, why did he shake his fist with a menacing gesture towards the calm abode, while from between his set teeth issued these words in muttered fury, “She and he? Never! never!”

CHAPTER XIV. A SUNRISE

A MONTH after this, on the evening of the 20th of August, Simon Ford and Madge took leave, with all manner of good wishes, of four tourists, who were setting forth from the cottage.

James Starr, Harry, and Jack Ryan were about to lead Nell’s steps over yet untrodden paths, and to show her the glories of nature by a light to which she was as yet a stranger. The excursion was to last for two days. James Starr, as well as Harry, considered that during these eight and forty hours spent above ground, the maiden would be able to see everything of which she must have remained ignorant in the gloomy pit; all the varied aspects of the globe, towns, plains, mountains, rivers, lakes, gulfs, and seas would pass, panorama-like, before her eyes.

In that part of Scotland lying between Edinburgh and Glasgow, nature would seem to have collected and set forth specimens of every one of these terrestrial beauties. As to the heavens, they would be spread abroad as over the whole earth, with their changeful clouds, serene or veiled moon, their radiant sun, and clustering stars. The expedition had been planned so as to combine a view of all these things.

Simon and Madge would have been glad to go with Nell; but they never left their cottage willingly, and could not make up their minds to quit their subterranean home for a single day.

James Starr went as an observer and philosopher, curious to note, from a psychological point of view, the novel impressions made upon Nell; perhaps also with some hope of detecting a clue to the mysterious events connected with her childhood. Harry, with a little trepidation, asked himself whether it was not possible that this rapid initiation into the things of the exterior world would change the maiden he had known and loved hitherto into quite a different girl. As for Jack Ryan, he was as joyous as a lark rising in the first beams of the sun. He only trusted that his gayety would prove contagious, and enliven his traveling companions, thus rewarding them for letting him join them. Nell was pensive and silent.

James Starr had decided, very sensibly, to set off in the evening. It would be very much better for the girl to pass gradually from the darkness of night to the full light of day; and that would in this way be managed, since between midnight and noon she would

experience the successive phases of shade and sunshine, to which her sight had to get accustomed.

Just as they left the cottage, Nell took Harry's hand saying, "Harry, is it really necessary for me to leave the mine at all, even for these few days?"

"Yes, it is, Nell," replied the young man. "It is needful for both of us."

"But, Harry," resumed Nell, "ever since you found me, I have been as happy as I can possibly be. You have been teaching me. Why is that not enough? What am I going up there for?"

Harry looked at her in silence. Nell was giving utterance to nearly his own thoughts.

"My child," said James Starr, "I can well understand the hesitation you feel; but it will be good for you to go with us. Those who love you are taking you, and they will bring you back again. Afterwards you will be free, if you wish it, to continue your life in the coal mine, like old Simon, and Madge, and Harry. But at least you ought to be able to compare what you give up with what you choose, then decide freely. Come!"

"Come, dear Nell!" cried Harry.

"Harry, I am willing to follow you," replied the maiden. At nine o'clock the last train through the tunnel started to convey Nell and her companions to the surface of the earth. Twenty minutes later they alighted on the platform where the branch line to New Aberfoyle joins the railway from Dumbarton to Stirling.

The night was already dark. From the horizon to the zenith, light vapory clouds hurried through the upper air, driven by a refreshing northwesterly breeze. The day had been lovely; the night promised to be so likewise.

On reaching Stirling, Nell and her friends, quitting the train, left the station immediately. Just before them, between high trees, they could see a road which led to the banks of the river Forth.

The first physical impression on the girl was the purity of the air inhaled eagerly by her lungs.

“Breathe it freely, Nell,” said James Starr; “it is fragrant with all the scents of the open country.”

“What is all that smoke passing over our heads?” inquired Nell.

“Those are clouds,” answered Harry, “blown along by the westerly wind.”

“Ah!” said Nell, “how I should like to feel myself carried along in that silent whirl! And what are those shining sparks which glance here and there between rents in the clouds?”

“Those are the stars I have told you about, Nell. So many suns they are, so many centers of worlds like our own, most likely.”

The constellations became more clearly visible as the wind cleared the clouds from the deep blue of the firmament. Nell gazed upon the myriad stars which sparkled overhead. “But how is it,” she said at length, “that if these are suns, my eyes can endure their brightness?”

“My child,” replied James Starr, “they are indeed suns, but suns at an enormous distance. The nearest of these millions of stars, whose rays can reach us, is Vega, that star in Lyra which you observe near the zenith, and that is fifty thousand millions of leagues distant. Its brightness, therefore, cannot affect your vision. But our own sun, which will rise to-morrow, is only distant thirty-eight millions of leagues, and no human eye can gaze fixedly upon that, for it is brighter than the blaze of any furnace. But come, Nell, come!”

They pursued their way, James Starr leading the maiden, Harry walking by her side, while Jack Ryan roamed about like a young dog, impatient of the slow pace of his masters. The road was lonely. Nell kept looking at the great trees, whose branches, waving in the wind, made them seem to her like giants gesticulating wildly. The sound of the breeze in the tree-tops, the deep silence during a lull, the distant line of the horizon, which could be discerned when the road passed over open levels — all these things filled her with new sensations, and left lasting impressions on her mind.

After some time she ceased to ask questions, and her companions respected her silence, not wishing to influence by any words of theirs the girl’s highly sensitive imagination, but preferring to allow ideas to arise spontaneously in her soul.

At about half past eleven o’clock, they gained the banks of the river Forth. There a boat, chartered by James Starr, awaited them. In a few hours it would convey them all to Granton. Nell looked at the clear water which flowed up to her feet, as the waves broke gently on the beach, reflecting the starlight. “Is this a lake?” said she.

“No,” replied Harry, “it is a great river flowing towards the sea, and soon opening so widely as to resemble a gulf. Taste a little of the water in the hollow of your hand, Nell, and you will perceive that it is not sweet like the waters of Lake Malcolm.”

The maiden bent towards the stream, and, raising a little water to her lips, “This is quite salt,” said she.

“Yes, the tide is full; the sea water flows up the river as far as this,” answered Harry.

“Oh, Harry! Harry!” exclaimed the maiden, “what can that red glow on the horizon be? Is it a forest on fire?”

“No, it is the rising moon, Nell.”

“To be sure, that’s the moon,” cried Jack Ryan, “a fine big silver plate, which the spirits of air hand round and round the sky to collect the stars in, like money.”

“Why, Jack,” said the engineer, laughing, “I had no idea you could strike out such bold comparisons!”

“Well, but, Mr. Starr, it is a just comparison. Don’t you see the stars disappear as the moon passes on? so I suppose they drop into it.”

“What you mean to say, Jack, is that the superior brilliancy of the moon eclipses that of stars of the sixth magnitude, therefore they vanish as she approaches.”

“How beautiful all this is!” repeated Nell again and again, with her whole soul in her eyes. “But I thought the moon was round?”

“So she is, when ‘full,’” said James Starr; “that means when she is just opposite to the sun. But to-night the moon is in the last quarter, shorn of her just proportions, and friend Jack’s grand silver plate looks more like a barber’s basin.”

“Oh, Mr. Starr, what a base comparison!” he exclaimed, “I was just going to begin a sonnet to the moon, but your barber’s basin has destroyed all chance of an inspiration.”

Gradually the moon ascended the heavens. Before her light the lingering clouds fled away, while stars still sparkled in the west, beyond the influence of her radiance. Nell gazed in silence on the glorious spectacle. The soft silvery light was pleasant to her eyes, and her little trembling hand expressed to Harry, who clasped it, how deeply she was affected by the scene.

“Let us embark now,” said James Starr. “We have to get to the top of Arthur’s Seat before sunrise.”

The boat was moored to a post on the bank. A boatman awaited them. Nell and her friends took their seats; the sail was spread; it quickly filled before the northwesterly breeze, and they sped on their way.

What a new sensation was this for the maiden! She had been rowed on the waters of Lake Malcolm; but the oar, handled ever so lightly by Harry, always betrayed effort on the part of the oarsman. Now, for the first time, Nell felt herself borne along with a gliding movement, like that of a balloon through the air. The water was smooth as a lake, and Nell reclined in the stern of the boat, enjoying its gentle rocking. Occasionally the effect of the moonlight on the waters was as though the boat sailed across a glittering silver field. Little wavelets rippled along the banks. It was enchanting.

At length Nell was overcome with drowsiness, her eyelids drooped, her head sank on Harry’s shoulder — she slept. Harry, sorry that she should miss any of the beauties of this magnificent night, would have aroused her.

“Let her sleep!” said the engineer. “She will better enjoy the novelties of the day after a couple of hours’ rest.”

At two o’clock in the morning the boat reached Granton pier. Nell awoke. “Have I been asleep?” inquired she.

“No, my child,” said James Starr. “You have been dreaming that you slept, that’s all.”

The night continued clear. The moon, riding in mid-heaven, diffused her rays on all sides. In the little port of Granton lay two or three fishing boats; they rocked gently on

the waters of the Firth. The wind fell as the dawn approached. The atmosphere, clear of mists, promised one of those fine autumn days so delicious on the sea coast.

A soft, transparent film of vapor lay along the horizon; the first sunbeam would dissipate it; to the maiden it exhibited that aspect of the sea which seems to blend it with the sky. Her view was now enlarged, without producing the impression of the boundless infinity of ocean.

Harry taking Nell's hand, they followed James Starr and Jack Ryan as they traversed the deserted streets. To Nell, this suburb of the capital appeared only a collection of gloomy dark houses, just like Coal Town, only that the roof was higher, and gleamed with small lights.

She stepped lightly forward, and easily kept pace with Harry. "Are you not tired, Nell?" asked he, after half an hour's walking.

"No! my feet seem scarcely to touch the earth," returned she. "This sky above us seems so high up, I feel as if I could take wing and fly!"

"I say! keep hold of her!" cried Jack Ryan. "Our little Nell is too good to lose. I feel just as you describe though, myself, when I have not left the pit for a long time."

"It is when we no longer experience the oppressive effect of the vaulted rocky roof above Coal Town," said James Starr, "that the spacious firmament appears to us like a profound abyss into which we have, as it were, a desire to plunge. Is that what you feel, Nell?"

"Yes, Mr. Starr, it is exactly like that," said Nell. "It makes me feel giddy."

"Ah! you will soon get over that, Nell," said Harry. "You will get used to the outer world, and most likely forget all about our dark coal pit."

"No, Harry, never!" said Nell, and she put her hand over her eyes, as though she would recall the remembrance of everything she had lately quitted.

Between the silent dwellings of the city, the party passed along Leith Walk, and went round the Calton Hill, where stood, in the light of the gray dawn, the buildings of the Observatory and Nelson's Monument. By Regent's Bridge and the North Bridge they at last reached the lower extremity of the Canongate. The town still lay wrapt in slumber.

Nell pointed to a large building in the center of an open space, asking, “What great confused mass is that?”

“That confused mass, Nell, is the palace of the ancient kings of Scotland; that is Holyrood, where many a sad scene has been enacted! The historian can here invoke many a royal shade; from those of the early Scottish kings to that of the unhappy Mary Stuart, and the French king, Charles X. When day breaks, however, Nell, this palace will not look so very gloomy. Holyrood, with its four embattled towers, is not unlike some handsome country house. But let us pursue our way. There, just above the ancient Abbey of Holyrood, are the superb cliffs called Salisbury Crags. Arthur’s Seat rises above them, and that is where we are going. From the summit of Arthur’s Seat, Nell, your eyes shall behold the sun appear above the horizon seaward.”

They entered the King’s Park, then, gradually ascending they passed across the Queen’s Drive, a splendid carriageway encircling the hill, which we owe to a few lines in one of Sir Walter Scott’s romances.

Arthur’s Seat is in truth only a hill, seven hundred and fifty feet high, which stands alone amid surrounding heights. In less than half an hour, by an easy winding path, James Starr and his party reached the crest of the crouching lion, which, seen from the west, Arthur’s Seat so much resembles. There, all four seated themselves; and James Starr, ever ready with quotations from the great Scottish novelist, simply said, “Listen to what is written by Sir Walter Scott in the eighth chapter of the Heart of Mid-Lothian. ‘If I were to choose a spot from which the rising or setting sun could be seen to the greatest possible advantage, it would be from this neighborhood.’ Now watch, Nell! the sun will soon appear, and for the first time you will contemplate its splendor.”

The maiden turned her eyes eastward. Harry, keeping close beside her, observed her with anxious interest. Would the first beams of day overpower her feelings? All remained quiet, even Jack Ryan. A faint streak of pale rose tinted the light vapors of the horizon. It was the first ray of light attacking the laggards of the night. Beneath the hill lay the silent city, massed confusedly in the twilight of dawn. Here and there lights twinkled among the houses of the old town. Westward rose many hill-tops, soon to be illuminated by tips of fire.

Now the distant horizon of the sea became more plainly visible. The scale of colors fell into the order of the solar. Every instant they increased in intensity, rose color became red, red became fiery, daylight dawned. Nell now glanced towards the city, of which the outlines became more distinct. Lofty monuments, slender steeples emerged from the gloom; a kind of ashy light was spread abroad. At length one solitary ray struck on the maiden's sight. It was that ray of green which, morning or evening, is reflected upwards from the sea when the horizon is clear.

An instant afterwards, Nell turned, and pointing towards a bright prominent point in the New Town, "Fire!" cried she.

"No, Nell, that is no fire," said Harry. "The sun has touched with gold the top of Sir Walter Scott's monument" — and, indeed, the extreme point of the monument blazed like the light of a pharos.

It was day — the sun arose — his disc seemed to glitter as though he indeed emerged from the waters of the sea. Appearing at first very large from the effects of refraction, he contracted as he rose and assumed the perfectly circular form. Soon no eye could endure the dazzling splendor; it was as though the mouth of a furnace was opened through the sky.

Nell closed her eyes, but her eyelids could not exclude the glare, and she pressed her fingers over them. Harry advised her to turn in the opposite direction. "Oh, no," said she, "my eyes must get used to look at what yours can bear to see!"

Even through her hands Nell perceived a rosy light, which became more white as the sun rose above the horizon. As her sight became accustomed to it, her eyelids were raised, and at length her eyes drank in the light of day.

The good child knelt down, exclaiming, "Oh Lord God! how beautiful is Thy creation!" Then she rose and looked around. At her feet extended the panorama of Edinburgh — the clear, distinct lines of streets in the New Town, and the irregular mass of houses, with their confused network of streets and lanes, which constitutes Auld Reekie, properly so called. Two heights commanded the entire city; Edinburgh Castle, crowning its huge basaltic rock, and the Calton Hill, bearing on its rounded summit, among other monuments, ruins built to represent those of the Parthenon at Athens.

Fine roadways led in all directions from the capital. To the north, the coast of the noble Firth of Forth was indented by a deep bay, in which could be seen the seaport town of Leith, between which and this Modern Athens of the north ran a street, straight as that leading to the Piraeus.

Beyond the wide Firth could be seen the soft outlines of the county of Fife, while beneath the spectator stretched the yellow sands of Portobello and Newhaven.

Nell could not speak. Her lips murmured a word or two indistinctly; she trembled, became giddy, her strength failed her; overcome by the purity of the air and the sublimity of the scene, she sank fainting into Harry’s arms, who, watching her closely, was ready to support her.

The youthful maiden, hitherto entombed in the massive depths of the earth, had now obtained an idea of the universe — of the works both of God and of man. She had looked upon town and country, and beyond these, into the immensity of the sea, the infinity of the heavens.

CHAPTER XV. LOCH LOMOND AND LOCH KATRINE

HARRY bore Nell carefully down the steeps of Arthur's Seat, and, accompanied by James Starr and Jack Ryan, they reached Lambert's Hotel. There a good breakfast restored their strength, and they began to make further plans for an excursion to the Highland lakes.

Nell was now refreshed, and able to look boldly forth into the sunshine, while her lungs with ease inhaled the free and healthful air. Her eyes learned gladly to know the harmonious varieties of color as they rested on the green trees, the azure skies, and all the endless shades of lovely flowers and plants.

The railway train, which they entered at the Waverley Station, conveyed Nell and her friends to Glasgow. There, from the new bridge across the Clyde, they watched the curious sea-like movement of the river. After a night's rest at Comrie's Royal Hotel, they betook themselves to the terminus of the Edinburgh and Glasgow Railway, from whence a train would rapidly carry them, by way of Dumbarton and Balloch, to the southern extremity of Loch Lomond.

"Now for the land of Rob Roy and Fergus MacIvor! — the scenery immortalized by the poetical descriptions of Walter Scott," exclaimed James Starr. "You don't know this country, Jack?"

"Only by its songs, Mr. Starr," replied Jack; "and judging by those, it must be grand."

"So it is, so it is!" cried the engineer, "and our dear Nell shall see it to the best advantage."

A steamboat, the SINCLAIR by name, awaited tourists about to make the excursion to the lakes. Nell and her companions went on board. The day had begun in brilliant sunshine, free from the British fogs which so often veil the skies.

The passengers were determined to lose none of the beauties of nature to be displayed during the thirty miles' voyage. Nell, seated between James Starr and Harry, drank in with every faculty the magnificent poetry with which lovely Scottish scenery is fraught. Numerous small isles and islets soon appeared, as though thickly sown on the bosom of

the lake. The SINCLAIR steamed her way among them, while between them glimpses could be had of quiet valleys, or wild rocky gorges on the mainland.

“Nell,” said James Starr, “every island here has its legend, perhaps its song, as well as the mountains which overshadow the lake. One may, without much exaggeration, say that the history of this country is written in gigantic characters of mountains and islands.”

Nell listened, but these fighting stories made her sad. Why all that bloodshed on plains which to her seemed enormous, and where surely there must have been room for everybody?

The shores of the lake form a little harbor at Luss. Nell could for a moment catch sight of the old tower of its ancient castle. Then, the SINCLAIR turning northward, the tourists gazed upon Ben Lomond, towering nearly 3,000 feet above the level of the lake.

“Oh, what a noble mountain!” cried Nell; “what a view there must be from the top!”

“Yes, Nell,” answered James Starr; “see how haughtily its peak rises from amidst the thicket of oaks, birches, and heather, which clothe the lower portion of the mountain! From thence one may see two-thirds of old Caledonia. This eastern side of the lake was the special abode of the clan McGregor. At no great distance, the struggles of the Jacobites and Hanoverians repeatedly dyed with blood these lonely glens. Over these scenes shines the pale moon, called in old ballads ‘Macfarlane’s lantern.’ Among these rocks still echo the immortal names of Rob Roy and McGregor Campbell.”

As the SINCLAIR advanced along the base of the mountain, the country became more and more abrupt in character. Trees were only scattered here and there; among them were the willows, slender wands of which were formerly used for hanging persons of low degree.

“To economize hemp,” remarked James Starr.

The lake narrowed very much as it stretched northwards.

The steamer passed a few more islets, Inveruglas, Eilad-whow, where stand some ruins of a stronghold of the clan MacFarlane. At length the head of the loch was reached, and

the SINCLAIR stopped at Inversnaid.

Leaving Loch Arklet on the left, a steep ascent led to the Inn of Stronachlacar, on the banks of Loch Katrine.

There, at the end of a light pier, floated a small steamboat, named, as a matter of course, the Rob Roy. The travelers immediately went on board; it was about to start. Loch Katrine is only ten miles in length; its width never exceeds two miles. The hills nearest it are full of a character peculiar to themselves.

“Here we are on this famous lake,” said James Starr. “It has been compared to an eel on account of its length and windings: and justly so. They say that it never freezes. I know nothing about that, but what we want to think of is, that here are the scenes of the adventures in the Lady of the Lake. I believe, if friend Jack looked about him carefully, he might see, still gliding over the surface of the water, the shade of the slender form of sweet Ellen Douglas.”

“To be sure, Mr. Starr,” replied Jack; “why should I not? I may just as well see that pretty girl on the waters of Loch Katrine, as those ugly ghosts on Loch Malcolm in the coal pit.”

It was by this time three o’clock in the afternoon. The less hilly shores of Loch Katrine westward extended like a picture framed between Ben An and Ben Venue. At the distance of half a mile was the entrance to the narrow bay, where was the landing-place for our tourists, who meant to return to Stirling by Callander.

Nell appeared completely worn out by the continued excitement of the day. A faint ejaculation was all she was able to utter in token of admiration as new objects of wonder or beauty met her gaze. She required some hours of rest, were it but to impress lastingly the recollection of all she had seen.

Her hand rested in Harry’s, and, looking earnestly at her, he said, “Nell, dear Nell, we shall soon be home again in the gloomy region of the coal mine. Shall you not pine for what you have seen during these few hours spent in the glorious light of day?”

“No, Harry,” replied the girl; “I shall like to think about it, but I am glad to go back with you to our dear old home.”

“Nell!” said Harry, vainly attempting to steady his voice, “are you willing to be bound to me by the most sacred tie? Could you marry me, Nell?”

“Yes, Harry, I could, if you are sure that I am able to make you happy,” answered the maiden, raising her innocent eyes to his.

Scarcely had she pronounced these words when an unaccountable phenomenon took place. The Rob Roy, still half a mile from land, experienced a violent shock. She suddenly grounded. No efforts of the engine could move her.

The cause of this accident was simply that Loch Katrine was all at once emptied, as though an enormous fissure had opened in its bed. In a few seconds it had the appearance of a sea beach at low water. Nearly the whole of its contents had vanished into the bosom of the earth.

“My friends!” exclaimed James Starr, as the cause of this marvel became suddenly clear to him, “God help New Aberfoyle!”

CHAPTER XVI. A FINAL THREAT

ON that day, in the colliery of New Aberfoyle, work was going on in the usual regular way. In the distance could be heard the crash of great charges of dynamite, by which the carboniferous rocks were blasted. Here masses of coal were loosened by pick-ax and crowbar; there the perforating machines, with their harsh grating, bored through the masses of sandstone and schist.

Hollow, cavernous noises resounded on all sides. Draughts of air rushed along the ventilating galleries, and the wooden swing-doors slammed beneath their violent gusts. In the lower tunnels, trains of trucks kept passing along at the rate of fifteen miles an hour, while at their approach electric bells warned the workmen to cower down in the refuge places. Lifts went incessantly up and down, worked by powerful engines on the surface of the soil. Coal Town was throughout brilliantly lighted by the electric lamps at full power.

Mining operations were being carried on with the greatest activity; coal was being piled incessantly into the trucks, which went in hundreds to empty themselves into the corves at the bottom of the shaft. While parties of miners who had labored during the night were taking needful rest, the others worked without wasting an hour.

Old Simon Ford and Madge, having finished their dinner, were resting at the door of their cottage. Simon smoked a good pipe of tobacco, and from time to time the old couple spoke of Nell, of their boy, of Mr. Starr, and wondered how they liked their trip to the surface of the earth. Where would they be now? What would they be doing? How could they stay so long away from the mine without feeling homesick?

Just then a terrific roaring noise was heard. It was like the sound of a mighty cataract rushing down into the mine. The old people rose hastily. They perceived at once that the waters of Loch Malcolm were rising. A great wave, unfurling like a billow, swept up the bank and broke against the walls of the cottage. Simon caught his wife in his arms, and carried her to the upper part of their dwelling.

At the same moment, cries arose from all parts of Coal Town, which was threatened by a sudden inundation. The inhabitants fled for safety to the top of the schist rocks bordering the lake; terror spread in all directions; whole families in frantic haste rushed towards the tunnel in order to reach the upper regions of the pit.

It was feared that the sea had burst into the colliery, for its galleries and passages penetrated as far as the Caledonian Canal. In that case the entire excavation, vast as it was, would be completely flooded. Not a single inhabitant of New Aberfoyle would escape death.

But when the foremost fugitives reached the entrance to the tunnel, they encountered Simon Ford, who had quitted his cottage. “Stop, my friends, stop!” shouted the old man; “if our town is to be overwhelmed, the floods will rush faster than you can; no one can possibly escape. But see! the waters are rising no further! it appears to me the danger is over.”

“And our comrades at the far end of the works — what about them?” cried some of the miners.

“There is nothing to fear for them,” replied Simon; “they are working on a higher level than the bed of the loch.”

It was soon evident that the old man was in the right. The sudden influx of water had rushed to the very lowest bed of the vast mine, and its only ultimate effect was to raise the level of Loch Malcolm a few feet. Coal Town was uninjured, and it was reasonable to hope that no one had perished in the flood of water which had descended to the depths of the mine never yet penetrated by the workmen.

Simon and his men could not decide whether this inundation was owing to the overflow of a subterranean sheet of water penetrating fissures in the solid rock, or to some underground torrent breaking through its worn bed, and precipitating itself to the lowest level of the mine. But that very same evening they knew what to think about it, for the local papers published an account of the marvelous phenomenon which Loch Katrine had exhibited.

The surprising news was soon after confirmed by the four travelers, who, returning with all possible speed to the cottage, learned with extreme satisfaction that no serious damage was done in New Aberfoyle.

The bed of Loch Katrine had fairly given way. The waters had suddenly broken through by an enormous fissure into the mine beneath. Of Sir Walter Scott’s favorite loch there was not left enough to wet the pretty foot of the Lady of the Lake; all that remained was a pond of a few acres at the further extremity.

This singular event made a profound sensation in the country. It was a thing unheard of that a lake should in the space of a few minutes empty itself, and disappear into the bowels of the earth. There was nothing for it but to erase Loch Katrine from the map of Scotland until (by public subscription) it could be refilled, care being of course taken, in the first place, to stop the rent up tight. This catastrophe would have been the death of Sir Walter Scott, had he still been in the world.

The accident was explicable when it was ascertained that, between the bed of the lake and the vast cavity beneath, the geological strata had become reduced to a thin layer, incapable of longer sustaining the weight of water.

Now, although to most people this event seemed plainly due to natural causes, yet to James Starr and his friends, Simon and Harry Ford, the question constantly recurred, was it not rather to be attributed to malevolence? Uneasy suspicions continually harassed their minds. Was their evil genius about to renew his persecution of those who ventured to work this rich mine?

At the cottage, some days later, James Starr thus discussed the matter with the old man and his son: “Well, Simon,” said he, “to my thinking we must class this circumstance with the others for which we still seek elucidation, although it is no doubt possible to explain it by natural causes.”

“I am quite of your mind, Mr. James,” replied Simon, “but take my advice, and say nothing about it; let us make all researches ourselves.”

“Oh, I know the result of such research beforehand!” cried the engineer.

“And what will it be, then?”

“We shall find proofs of malevolence, but not the malefactor.”

“But he exists! he is there! Where can he lie concealed? Is it possible to conceive that the most depraved human being could, single-handed, carry out an idea so infernal as that of bursting through the bed of a lake? I believe I shall end by thinking, like Jack Ryan, that the evil demon of the mine revenges himself on us for having invaded his domain.”

Nell was allowed to hear as little as possible of these discussions. Indeed, she showed no desire to enter into them, although it was very evident that she shared in the anxieties of her adopted parents. The melancholy in her countenance bore witness to much mental agitation.

It was at length resolved that James Starr, together with Simon and Harry, should return to the scene of the disaster, and endeavor to satisfy themselves as to the cause of it. They mentioned their project to no one. To those unacquainted with the group of facts on which it was based, the opinion of Starr and his friends could not fail to appear wholly inadmissible.

A few days later, the three friends proceeded in a small boat to examine the natural pillars on which had rested the solid earth forming the basin of Loch Katrine. They discovered that they had been right in suspecting that the massive columns had been undermined by blasting. The blackened traces of explosion were to be seen, the waters having subsided below the level of these mysterious operations Thus the fall of a portion of the vast vaulted dome was proved to have been premeditated by man, and by man's hand had it been effected.

"It is impossible to doubt it," said James Starr; "and who can say what might not have happened had the sea, instead of a little loch, been let in upon us?"

"You may well say that," cried the old overman, with a feeling of pride in his beloved mine; "for nothing less than a sea would have drowned our Aberfoyle. But, once more, what possible interest could any human being have in the destruction of our works?"

"It is quite incomprehensible," replied James Starr. "This case is something perfectly unlike that of a band of common criminals, who, concealing themselves in dens and caves, go forth to rob and pillage the surrounding country. The evil deeds of such men would certainly, in the course of three years have betrayed their existence and lurking-places. Neither can it be, as I sometimes used to think, that smugglers or coiners carried on their illegal practices in some distant and unknown corner of these prodigious caverns, and were consequently anxious to drive us out of them. But no one coins false money or obtains contraband goods only to conceal them!

"Yet it is clear that an implacable enemy has sworn the ruin of New Aberfoyle, and that some interest urges him to seek in every possible way to wreak his hatred upon us. He

appears to be too weak to act openly, and lays his schemes in secret; but displays such intelligence as to render him a most formidable foe.

“My friends, he must understand better than we do the secrets of our domain, since he has all this time eluded our vigilance. He must be a man experienced in mining, skilled beyond the most skillful — that’s certain, Simon! We have proof enough of that.

“Let me see! Have you never had a personal enemy, to whom your suspicions might point? Think well! There is such a thing as hatred which time never softens. Go back to recollections of your earliest days. What befalls us appears the work of a stern and patient will, and to explain it demands every effort of thought and memory.”

Simon did not answer immediately — his mind evidently engaged in a close and candid survey of his past life. Presently, raising his head, “No,” said he; “no! Heaven be my witness, neither Madge nor I have ever injured anybody. We cannot believe that we have a single enemy in the world.”

“Ah! if Nell would only speak!” cried the engineer.

“Mr. Starr — and you, father,” said Harry, “I do beg of you to keep silence on this matter, and not to question my poor Nell. I know she is very anxious and uneasy; and I feel positive that some great secret painfully oppresses her heart. Either she knows nothing it would be of any use for us to hear, or she considers it her duty to be silent. It is impossible to doubt her affection for us — for all of us. If at a future time she informs me of what she has hitherto concealed from us, you shall know about it immediately.”

“So be it, then, Harry,” answered the engineer; “and yet I must say Nell’s silence, if she knows anything, is to me perfectly inexplicable.”

Harry would have continued her defense; but the engineer stopped him, saying, “All right, Harry; we promise to say no more about it to your future wife.”

“With my father’s consent she shall be my wife without further delay.”

“My boy,” said old Simon, “your marriage shall take place this very day month. Mr. Starr, will you undertake the part of Nell’s father?”

“You may reckon upon me for that, Simon,” answered the engineer.

They then returned to the cottage, but said not a word of the result of their examinations in the mine, so that to the rest of its inhabitants, the bursting in of the vaulted roof of the caverns continued to be regarded as a mere accident. There was but a loch the less in Scotland.

Nell gradually resumed her customary duties, and Harry made good use of her little visit to the upper air, in the instructions he gave her. She enjoyed the recollections of life above ground, yet without regretting it. The somber region she had loved as a child, and in which her wedded life would be spent, was as dear to her as ever.

The approaching marriage created great excitement in New Aberfoyle. Good wishes poured in on all sides, and foremost among them were Jack Ryan's. He was detected busily practicing his best songs in preparation for the great day, which was to be celebrated by the whole population of Coal Town.

During the month preceding the wedding-day, there were more accidents occurring in New Aberfoyle than had ever been known in the place. One would have thought the approaching union of Harry and Nell actually provoked one catastrophe after another. These misfortunes happened chiefly at the further and lowest extremity of the works, and the cause of them was always in some way mysterious.

Thus, for instance, the wood-work of a distant gallery was discovered to be in flames, which were extinguished by Harry and his companions at the risk of their lives, by employing engines filled with water and carbonic acid, always kept ready in case of necessity. The lamp used by the incendiary was found; but no clew whatever as to who he could be.

Another time an inundation took place in consequence of the stanchions of a water-tank giving way; and Mr. Starr ascertained beyond a doubt that these supports had first of all been partially sawn through. Harry, who had been overseeing the works near the place at the time, was buried in the falling rubbish, and narrowly escaped death.

A few days afterwards, on the steam tramway, a train of trucks, which Harry was passing along, met with an obstacle on the rails, and was overturned. It was then discovered that a beam had been laid across the line. In short, events of this description became so numerous that the miners were seized with a kind of panic, and it required all the influence of their chiefs to keep them on the works.

“You would think that there was a whole band of these ruffians,” Simon kept saying, “and we can’t lay hands on a single one of them.”

Search was made in all directions. The county police were on the alert night and day, yet discovered nothing. The evil intentions seeming specially designed to injure Harry. Starr forbade him to venture alone beyond the ordinary limits of the works.

They were equally careful of Nell, although, at Harry’s entreaty, these malicious attempts to do harm were concealed from her, because they might remind her painfully of former times. Simon and Madge watched over her by day and by night with a sort of stern solicitude. The poor child yielded to their wishes, without a remark or a complaint. Did she perceive that they acted with a view to her interest? Probably she did. And on her part, she seemed to watch over others, and was never easy unless all whom she loved were together in the cottage.

When Harry came home in the evening, she could not restrain expressions of child-like joy, very unlike her usual manner, which was rather reserved than demonstrative. As soon as day broke, she was astir before anyone else, and her constant uneasiness lasted all day until the hour of return home from work.

Harry became very anxious that their marriage should take place. He thought that, when the irrevocable step was taken, malevolence would be disarmed, and that Nell would never feel safe until she was his wife. James Starr, Simon, and Madge, were all of the same opinion, and everyone counted the intervening days, for everyone suffered from the most uncomfortable forebodings.

It was perfectly evident that nothing relating to Nell was indifferent to this hidden foe, whom it was impossible to meet or to avoid. Therefore it seemed quite possible that the solemn act of her marriage with Harry might be the occasion of some new and dreadful outbreak of his hatred.

One morning, a week before the day appointed for the ceremony, Nell, rising early, went out of the cottage before anyone else. No sooner had she crossed the threshold than a cry of indescribable anguish escaped her lips.

Her voice was heard throughout the dwelling; in a moment, Madge, Harry, and Simon were at her side. Nell was pale as death, her countenance agitated, her features

expressing the utmost horror. Unable to speak, her eyes were riveted on the door of the cottage, which she had just opened.

With rigid fingers she pointed to the following words traced upon it during the night: “Simon Ford, you have robbed me of the last vein in our old pit. Harry, your son, has robbed me of Nell. Woe betide you! Woe betide you all! Woe betide New Aberfoyle! — SILFAX.”

“Silfax!” exclaimed Simon and Madge together.

“Who is this man?” demanded Harry, looking alternately at his father and at the maiden.

“Silfax!” repeated Nell in tones of despair, “Silfax!” — and, murmuring this name, her whole frame shuddering with fear and agitation, she was borne away to her chamber by old Madge.

James Starr, hastening to the spot, read the threatening sentences again and again.

“The hand which traced these lines,” said he at length, “is the same which wrote me the letter contradicting yours, Simon. The man calls himself Silfax. I see by your troubled manner that you know him. Who is this Silfax?”

CHAPTER XVII. THE “MONK”

THIS name revealed everything to the old overman. It was that of the last “monk” of the Dochart pit.

In former days, before the invention of the safety-lamp, Simon had known this fierce man, whose business it was to go daily, at the risk of his life, to produce partial explosions of fire-damp in the passages. He used to see this strange solitary being, prowling about the mine, always accompanied by a monstrous owl, which he called Harfang, who assisted him in his perilous occupation, by soaring with a lighted match to places Silfax was unable to reach.

One day this old man disappeared, and at the same time also, a little orphan girl born in the mine, who had no relation but himself, her great-grandfather. It was perfectly evident now that this child was Nell. During the fifteen years, up to the time when she was saved by Harry, they must have lived in some secret abyss of the mine.

The old overman, full of mingled compassion and anger, made known to the engineer and Harry all that the name of Silfax had revealed to him. It explained the whole mystery. Silfax was the mysterious being so long vainly sought for in the depths of New Aberfoyle.

“So you knew him, Simon?” demanded Mr. Starr.

“Yes, that I did,” replied the overman. “The Harfang man, we used to call him. Why, he was old then! He must be fifteen or twenty years older than I am. A wild, savage sort of fellow, who held aloof from everyone and was known to fear nothing — neither fire nor water. It was his own fancy to follow the trade of ‘monk,’ which few would have liked. The constant danger of the business had unsettled his brain. He was prodigiously strong, and he knew the mine as no one else — at any rate, as well as I did. He lived on a small allowance. In faith, I believed him dead years ago.”

“But,” resumed James Starr, “what does he mean by those words, ‘You have robbed me of the last vein of our old mine’?”

“Ah! there it is,” replied Simon; “for a long time it had been a fancy of his — I told you his mind was deranged — that he had a right to the mine of Aberfoyle; so he became more and more savage in temper the deeper the Dochart pit — his pit! —

was worked out. It just seemed as if it was his own body that suffered from every blow of the pickax. You must remember that, Madge?"

"Ay, that I do, Simon," replied she.

"I can recollect all this," resumed Simon, "since I have seen the name of Silfax on the door. But I tell you, I thought the man was dead, and never imagined that the spiteful being we have so long sought for could be the old fireman of the Dochart pit."

"Well, now, then," said Starr, "it is all quite plain. Chance made known to Silfax the new vein of coal. With the egotism of madness, he believed himself the owner of a treasure he must conceal and defend. Living in the mine, and wandering about day and night, he perceived that you had discovered the secret, and had written in all haste to beg me to come. Hence the letter contradicting yours; hence, after my arrival, all the accidents that occurred, such as the block of stone thrown at Harry, the broken ladder at the Yarrow shaft, the obstruction of the openings into the wall of the new cutting; hence, in short, our imprisonment, and then our deliverance, brought about by the kind assistance of Nell, who acted of course without the knowledge of this man Silfax, and contrary to his intentions."

"You describe everything exactly as it must have happened, Mr. Starr," returned old Simon. "The old 'Monk' is mad enough now, at any rate!"

"All the better," quoth Madge.

"I don't know that," said Starr, shaking his head; "it is a terrible sort of madness this."

"Ah! now I understand that the very thought of him must have terrified poor little Nell, and also I see that she could not bear to denounce her grandfather. What a miserable time she must have had of it with the old man!"

"Miserable with a vengeance," replied Simon, "between that savage and his owl, as savage as himself. Depend upon it, that bird isn't dead. That was what put our lamp out, and also so nearly cut the rope by which Harry and Nell were suspended."

"And then, you see," said Madge, "this news of the marriage of our son with his granddaughter added to his rancor and ill-will."

“To be sure,” said Simon. “To think that his Nell should marry one of the robbers of his own coal mine would just drive him wild altogether.”

“He will have to make up his mind to it, however,” cried Harry. “Mad as he is, we shall manage to convince him that Nell is better off with us here than ever she was in the caverns of the pit. I am sure, Mr. Starr, if we could only catch him, we should be able to make him listen to reason.”

“My poor Harry! there is no reasoning with a madman,” replied the engineer. “Of course it is better to know your enemy than not; but you must not fancy all is right because we have found out who he is. We must be on our guard, my friends; and to begin with, Harry, you positively must question Nell. She will perceive that her silence is no longer reasonable. Even for her grandfather’s own interest, she ought to speak now. For his own sake, as well as for ours, these insane plots must be put a stop to.”

“I feel sure, Mr. Starr,” answered Harry, “that Nell will of herself propose to tell you what she knows. You see it was from a sense of duty that she has been silent hitherto. My mother was very right to take her to her room just now. She much needed time to recover her spirits; but now I will go for her.”

“You need not do so, Harry,” said the maiden in a clear and firm voice, as she entered at that moment the room in which they were. Nell was very pale; traces of tears were in her eyes; but her whole manner showed that she had nerved herself to act as her loyal heart dictated as her duty.

“Nell!” cried Harry, springing towards her.

The girl arrested her lover by a gesture, and continued, “Your father and mother, and you, Harry, must now know all. And you too, Mr. Starr, must remain ignorant of nothing that concerns the child you have received, and whom Harry — unfortunately for him, alas! — drew from the abyss.”

“Oh, Nell! what are you saying?” cried Harry.

“Allow her to speak,” said James Starr in a decided tone.

“I am the granddaughter of old Silfax,” resumed Nell. “I never knew a mother till the day I came here,” added she, looking at Madge.

“Blessed be that day, my daughter!” said the old woman.

“I knew no father till I saw Simon Ford,” continued Nell; “nor friend till the day when Harry’s hand touched mine. Alone with my grandfather I have lived during fifteen years in the remote and most solitary depths of the mine. I say WITH my grandfather, but I can scarcely use the expression, for I seldom saw him. When he disappeared from Old Aberfoyle, he concealed himself in caverns known only to himself. In his way he was kind to me, dreadful as he was; he fed me with whatever he could procure from outside the mine; but I can dimly recollect that in my earliest years I was the nursling of a goat, the death of which was a bitter grief to me. My grandfather, seeing my distress, brought me another animal — a dog he said it was. But, unluckily, this dog was lively, and barked. Grandfather did not like anything cheerful. He had a horror of noise, and had taught me to be silent; the dog he could not teach to be quiet, so the poor animal very soon disappeared. My grandfather’s companion was a ferocious bird, Harfang, of which, at first, I had a perfect horror; but this creature, in spite of my dislike to it, took such a strong affection for me, that I could not help returning it. It even obeyed me better than its master, which used to make me quite uneasy, for my grandfather was jealous. Harfang and I did not dare to let him see us much together; we both knew it would be dangerous. But I am talking too much about myself: the great thing is about you.”

“No, my child,” said James Starr, “tell us everything that comes to your mind.”

“My grandfather,” continued Nell, “always regarded your abode in the mine with a very evil eye — not that there was any lack of space. His chosen refuge was far — very far from you. But he could not bear to feel that you were there. If I asked any questions about the people up above us, his face grew dark, he gave no answer, and continued quite silent for a long time afterwards. But when he perceived that, not content with the old domain, you seemed to think of encroaching upon his, then indeed his anger burst forth. He swore that, were you to succeed in reaching the new mine, you should assuredly perish. Notwithstanding his great age, his strength is astonishing, and his threats used to make me tremble.”

“Go on, Nell, my child,” said Simon to the girl, who paused as though to collect her thoughts.

“On the occasion of your first attempt,” resumed Nell, “as soon as my grandfather saw that you were fairly inside the gallery leading to New Aberfoyle, he stopped up the opening, and turned it into a prison for you. I only knew you as shadows dimly seen in the gloom of the pit, but I could not endure the idea that you would die of hunger in these horrid places; and so, at the risk of being detected, I succeeded in obtaining bread and water for you during some days. I should have liked to help you to escape, but it was so difficult to avoid the vigilance of my grandfather. You were about to die. Then arrived Jack Ryan and the others. By the providence of God I met with them, and instantly guided them to where you were. When my grandfather discovered what I had done, his rage against me was terrible. I expected death at his hands. After that my life became insupportable to me. My grandfather completely lost his senses. He proclaimed himself King of Darkness and Flame; and when he heard your tools at work on coal-beds which he considered entirely his own, he became furious and beat me cruelly. I would have fled from him, but it was impossible, so narrowly did he watch me. At last, in a fit of ungovernable fury, he threw me down into the abyss where you found me, and disappeared, vainly calling on Harfang, which faithfully stayed by me, to follow him. I know not how long I remained there, but I felt I was at the point of death when you, my Harry, came and saved me. But now you all see that the grandchild of old Silfax can never be the wife of Harry Ford, because it would be certain death to you all!”

“Nell!” cried Harry.

“No,” continued the maiden, “my resolution is taken. By one means only can your ruin be averted; I must return to my grandfather. He threatens to destroy the whole of New Aberfoyle. His is a soul incapable of mercy or forgiveness, and no mortal can say to what horrid deed the spirit of revenge will lead him. My duty is clear; I should be the most despicable creature on earth did I hesitate to perform it. Farewell! I thank you all heartily. You only have taught me what happiness is. Whatever may befall, believe that my whole heart remains with you.”

At these words, Simon, Madge, and Harry started up in an agony of grief, exclaiming in tones of despair, “What, Nell! is it possible you would leave us?”

James Starr put them all aside with an air of authority, and, going straight up to Nell, he took both her hands in his, saying quietly, “Very right, my child; you have said exactly what you ought to say; and now listen to what we have to say in reply. We shall not let

you go away; if necessary, we shall keep you by force. Do you think we could be so base as to accept of your generous proposal? These threats of Silfax are formidable — no doubt about it! But, after all, a man is but a man, and we can take precautions. You will tell us, will you not, even for his own sake, all you can about his habits and his lurking-places? All we want to do is to put it out of his power to do harm, and perhaps bring him to reason."

"You want to do what is quite impossible," said Nell. "My grandfather is everywhere and nowhere. I have never seen his retreats. I have never seen him sleep. If he meant to conceal himself, he used to leave me alone, and vanish. When I took my resolution, Mr. Starr, I was aware of everything you could say against it. Believe me, there is but one way to render Silfax powerless, and that will be by my return to him. Invisible himself, he sees everything that goes on. Just think whether it is likely he could discover your very thoughts and intentions, from that time when the letter was written to Mr. Starr, up to now that my marriage with Harry has been arranged, if he did not possess the extraordinary faculty of knowing everything. As far as I am able to judge, my grandfather, in his very insanity, is a man of most powerful mind. He formerly used to talk to me on very lofty subjects. He taught me the existence of God, and never deceived me but on one point, which was — that he made me believe that all men were base and perfidious, because he wished to inspire me with his own hatred of all the human race. When Harry brought me to the cottage, you thought I was simply ignorant of mankind, but, far beyond that, I was in mortal fear of you all. Ah, forgive me! I assure you, for many days I believed myself in the power of wicked wretches, and I longed to escape. You, Madge, first led me to perceive the truth, not by anything you said, but by the sight of your daily life, for I saw that your husband and son loved and respected you! Then all these good and happy workmen, who so revere and trust Mr. Starr, I used to think they were slaves; and when, for the first time, I saw the whole population of Aberfoyle come to church and kneel down to pray to God, and praise Him for His infinite goodness, I said to myself, 'My grandfather has deceived me.' But now, enlightened by all you have taught me, I am inclined to think he himself is deceived. I mean to return to the secret passages I formerly frequented with him. He is certain to be on the watch. I will call to him; he will hear me, and who knows but that, by returning to him, I may be able to bring him to the knowledge of the truth?"

The maiden spoke without interruption, for all felt that it was good for her to open her whole heart to her friends.

But when, exhausted by emotion, and with eyes full of tears, she ceased speaking, Harry turned to old Madge and said, “Mother, what should you think of the man who could forsake the noble girl whose words you have been listening to?”

“I should think he was a base coward,” said Madge, “and, were he my son, I should renounce and curse him.”

“Nell, do you hear what our mother says?” resumed Harry. “Wherever you go I will follow you. If you persist in leaving us, we will go away together.”

“Harry! Harry!” cried Nell.

Overcome by her feelings, the girl’s lips blanched, and she sank into the arms of Madge, who begged she might be left alone with her.

CHAPTER XVIII. NELL’S WEDDING

IT was agreed that the inhabitants of the cottage must keep more on their guard than ever. The threats of old Silfax were too serious to be disregarded. It was only too possible that he possessed some terrible means by which the whole of Aberfoyle might be annihilated.

Armed sentinels were posted at the various entrances to the mine, with orders to keep strict watch day and night. Any stranger entering the mine was brought before James Starr, that he might give an account of himself. There being no fear of treason among the inhabitants of Coal Town, the threatened danger to the subterranean colony was made known to them. Nell was informed of all the precautions taken, and became more tranquil, although she was not free from uneasiness. Harry’s determination to follow her wherever she went compelled her to promise not to escape from her friends.

During the week preceding the wedding, no accident whatever occurred in Aberfoyle. The system of watching was carefully maintained, but the miners began to recover from the panic, which had seriously interrupted the work of excavation. James Starr continued to look out for Silfax. The old man having vindictively declared that Nell should never marry Simon’s son, it was natural to suppose that he would not hesitate to commit any violent deed which would hinder their union.

The examination of the mine was carried on minutely. Every passage and gallery was searched, up to those higher ranges which opened out among the ruins of Dundonald Castle. It was rightly supposed that through this old building Silfax passed out to obtain what was needful for the support of his miserable existence (which he must have done, either by purchasing or thieving).

As to the “fire-maidens,” James Starr began to think that appearance must have been produced by some jet of fire-damp gas which, issuing from that part of the pit, could be lighted by Silfax. He was not far wrong; but all search for proof of this was fruitless, and the continued strain of anxiety in this perpetual effort to detect a malignant and invisible being rendered the engineer — outwardly calm — an unhappy man.

As the wedding-day approached, his dread of some catastrophe increased, and he could not but speak of it to the old overman, whose uneasiness soon more than equaled his own. At length the day came. Silfax had given no token of existence.

By daybreak the entire population of Coal Town was astir. Work was suspended; overseers and workmen alike desired to do honor to Simon Ford and his son. They all felt they owed a large debt of gratitude to these bold and persevering men, by whose means the mine had been restored to its former prosperity. The ceremony was to take place at eleven o'clock, in St. Giles's chapel, which stood on the shores of Loch Malcolm.

At the appointed time, Harry left the cottage, supporting his mother on his arm, while Simon led the bride. Following them came Starr, the engineer, composed in manner, but in reality nerved to expect the worst, and Jack Ryan, stepping superb in full Highland piper's costume. Then came the other mining engineers, the principal people of Coal Town, the friends and comrades of the old overman — every member of this great family of miners forming the population of New Aberfoyle.

In the outer world, the day was one of the hottest of the month of August, peculiarly oppressive in northern countries. The sultry air penetrated the depths of the coal mine, and elevated the temperature. The air which entered through the ventilating shafts, and the great tunnel of Loch Malcolm, was charged with electricity, and the barometer, it was afterwards remarked, had fallen in a remarkable manner. There was, indeed, every indication that a storm might burst forth beneath the rocky vault which formed the roof of the enormous crypt of the very mine itself.

But the inhabitants were not at that moment troubling themselves about the chances of atmospheric disturbance above ground. Everybody, as a matter of course, had put on his best clothes for the occasion. Madge was dressed in the fashion of days gone by, wearing the "toy" and the "rokelay," or Tartan plaid, of matrons of the olden time, old Simon wore a coat of which Bailie Nicol Jarvie himself would have approved.
