Introduction

A fascination with the heavens has characterized humanity since well before recorded history. The precise orientation of structures as ancient as Stonehenge and the great Pyramids of Egypt clearly betray a profound knowledge of stellar configurations on the part of their builders. With the emergence of the high cultures of antiquity – India, China, Sumeria, Egypt, Mesoamerica – astronomy remains a central concern, making it the oldest of the natural sciences. Comprehensive in its scope, it was applied to all areas of human life: the calculation of the calendar; the regulation of agriculture; astrological prognostication and the development of religious cosmologies. Kept alive by Greek and Arab philosopher/mathematicians the systematic observation and study of the heavens passed into Europe, and thence into the modern world. As one of the four mathematical sciences of Pythagoras, astronomy became one of the seven Liberal Arts which formed the basis of the medieval curriculum. The rediscovery of Greek and Arabic manuscripts during the renaissance re-established the importance of astronomy during the earliest days of western science.

In the modern world, the difference between the “hard” science of astronomy and its application to the prediction of human affairs, known as astrology, has hardened into a distinction that the ancients would neither have recognized nor understood. In recent years, however, serious and dedicated researchers have demonstrated the profundity of these ancient sciences. Thus John Michell’s 1973 statement that: “The entire surface of the earth is marked with the traces of a gigantic work of prehistoric engineering,” is gradually being substantiated by the extensive and painstaking research of Michell himself, Alexander Thom, Gerald Hawkins, John Anthony West and others, to the point where Michell could write in his 2001 *A Little History of Astro-Archaeology* that this field is now going “. . . from lunacy to heresy to interesting notion and finally to the gates of orthodoxy.” Over these same

years, his Holiness Maharishi Mahesh Yogi, working with teams of scientists, has shown that the writings of ancient India, known as the *Vedas*, far from being the superstitious uttering of primitive tribesmen, as they are characterized by traditional scholars, are in fact a compendium of profound and highly systematic insights into the deepest structures of both the physical universe and human consciousness, spawning the emerging science of consciousness studies that is now capturing the attention of modern cosmologists and neurophysiologists alike.

Two scientists have been involved in these areas of research for 38 and 32 years. Drs. Heinz Krug and Robert Thurston, both trained as physicists and engineers, have been particularly interested in the branch of Vedic literature known as *jyotish*. Neither astronomy nor astrology is a satisfactory translation of *jyotish*; it is a combination of both of these and a good deal more. In common with the other branches of Vedic literature, *jyotish* proceeds from an understanding of the relationship between microcosmic and macrocosmic realms. Unlike Hellenic and subsequent western forms of astrology, however, *jyotish* does not limit itself merely to the casting of horoscopes and the making of predictions. *jyotish* also includes prescriptions whereby the destiny of the individual can be enhanced and his aspirations fulfilled. To accomplish this, *jyotish* works in co-operation with other branches of Vedic knowledge such as *ayur veda* (medicine), *sthatpatya veda* (architecture), and *gandharva veda* (music). It also incorporates the knowledge of another ancient area of human fascination – precious gems.

The value placed on diamonds, sapphires, rubies, emeralds, etc. throughout history does not depend merely upon their beauty or their scarcity. These stones have been valued since ancient times because of their effects on the individual and the environment when worn, rather than displayed. Krug and Thurston have made a special study of these effects, so much so that in this little book they are able to, as they put it in Chapter One: “For the first time in this

modern age . . . reveal a complete understanding of the secret effects of *jyotish* and *jyotish* gemstones.” They do so primarily from a practical point of view. Rather than a theoretical treatise on cosmology and gemology, *19 Big Secrets About Astro Gems* is a primer into the selection and use of *jyotish* stones, their integration with the *jyotish* birth chart and – one of Krug and Thurston’s specialities – the difference between man-made and “natural” stones. Considering the practical before the theoretical is often a wise course of action. As Maharishi once told me: “If a man has a headache, give him an aspirin. When he is feeling better, then we can give him a tour of the factory.” With Krug and Thurston, the test of their writing will lie in the application of their recommendations.

Life and Teachings of Pythagoras*

Secret 1

The Life Changing Effects of Wearing Gems

As we enter the 21st century, we can reveal for the first time in this modern age, a complete understanding of the secret effects of *Jyotish* and *Jyotish* gemstones.

We shall reveal to you the original descriptions, lost for thousands of years, of a highly advanced Vedic civilization that could change its destiny. Vedic peoples believed that at the core of their physical being was the light of life itself, an ever-resounding vibration of light and sound that creates our universe and each one of us.

Using the highly systematic Sanskrit language, and combining astronomy, astrology and astro-relocation, this ancient Vedic culture preserved the exact formulas used to calculate planetary quantum fields. The resulting science, called *Jyotish* – which is Sanskrit for light – included descriptions of the abilities of gemstones to change a person's destiny based on the cosmic laws governing our universe.

The basic formulas of *Jyotish* describe nine planetary quantum fields representing sound and light, in a spectrum similar to the seven frequency colors of the rainbow (red, orange, yellow, green, blue, indigo and violet) plus one for infra-red (IR) and one for ultraviolet (UV) light. These nine quantum fields are the source of our environment, and influence all life on the planet and our solar system. They govern our lives much more than scientists have previously

believed. But now, several researchers, such as Prof. Fritz Popp in Germany, have confirmed that photons of light are emitted by every living cell.

Real life testimonial

Lab-created ruby 112 carat set in gold

A scientist received a large, 112-carat, lab-created ruby, and from the first day of wearing it experienced clear changes in his life. The gem was meant to create more fame for this scientist, a 50-year-old man who had never been in the lime light. Within hours of wearing the gem for the first time, he and his sister – with her 24-carat ruby – were strolling around a little town and passed an ice cream parlor. It was a sunny spring day, and a local TV station was shooting some footage, looking for nice people buying ice cream. That evening local TV viewers saw brother and sister enjoying their ice creams. Instant fame with a sweet taste!

This was only the beginning, however. In the following months, with the ruby enlivening his mind, he carried out many new, deep discoveries through which he secured even more lasting fame.

Quote

“Astrology is the study of man's response to planetary stimuli. The stars have no conscious benevolence or animosity; they merely send forth positive and negative radiations. Of themselves, these do not help or harm humanity, but offer a lawful channel for the outward operation of cause-effect equilibriums which each man has set into motion in the past.”

Paramahansa Yogananda

Secret 1 Summary

Jyotish, or Vedic Astrology, is an ancient science very compatible with modern science. It is based on how the dynamics of the solar system influence quantum fields.

Solar System Quantum Fields

Secret 2

Use Original Jyotish Rather than Western Astrology

Astronomy, which stands at the origin of modern science, owes an enormous debt to astrology. Some of the earliest western scientists like Galilei and Kepler were actually astrologers. Indeed, at times, Kepler made his living casting horoscopes. It was their fight, in the early 17th century, to make science independent of religious authorities, thus laying the foundation for modern astronomy.

Unfortunately, however, even today, astronomy rejects astrology. Consider the sciences to be very old persons, and you will find it amusing to see the adult and – seemingly – self-sufficient son still struggling for his freedom against his father.

In reality, the father has a wealth of experience that is more than 5000 years old. Therefore we recommend using the original astrology called *Jyotish* (light) or Vedic astrology. Vedic comes from *Veda*, the Sanskrit word for knowledge.

What are the advantages of this original system of astrology?

Jyotish is far more accurate than any western system of astrology. When an individual horoscope is calculated from correct data – such as birth date, birth time and birth place – future predictions can be accurate to within a day. While western astrology tends to focus on descriptions of character of a person, accurate predictions are not its strength. *Jyotish* characterizes life events; it explains the fundamental causal

factors leading to events that occur at specific times in the life of the individual.

The greater accuracy of *Jyotish* arises from its use of the sidereal zodiac, as opposed to the tropical zodiac used by most western astrological systems. The sidereal zodiac comprises the real star constellations that can be seen in the night sky. Apart from some tiny fluctuations, these constellations are immovable over thousands of years.

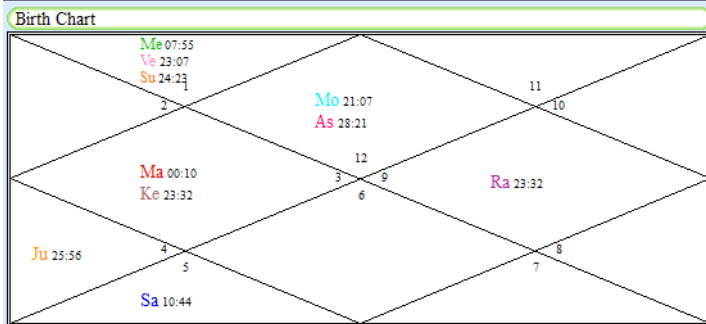

The sidereal and tropical zodiacs coincided about 1,700 years ago – exactly on 5th November, 285 – but since that time the tropical zodiac has slowly drifted away. As a result, today (2011) they are more than 24° apart – exactly 24°00'00" on 4th December, 2009. This is a very large discrepancy; it is responsible for many other astrological inaccuracies. Slowly, over the centuries, western astrology has developed more into a belief system than the accurate science which *Jyotish* has been and still is today.

In fact, western astrology developed from Vedic astrology. Probably the knowledge traveled along ancient trading routes, initially from India to Mesopotamia/Babylonia. It contributed to the foundations of Byzantine and medieval Islamic astrology, before arriving in Greece from where it spread throughout Europe, and later to America. It is very possible, however, that a great deal of the knowledge – probably around 80% to 90% – was lost en route. If one compares Vedic to western astrology, clearly there are some similarities, but the differences are considerable.

There have been several scientific evaluations of the validity of astrology. Unfortunately these have been done on western astrology. These researches have always proven that the claims of western astrology are untrue and in the best cases statistically insignificant.

Now, you may be astonished. We completely agree and we ask those scientists to redo their researches and examine what we call a science, namely Vedic astrology.

Rabindranath Tagore May 7,1861 04:02:00 Calcutta, India 106. Chart only

Vedic Astrology Chart, Janma Kundali

Real life testimonial

The editor of a UK alternative magazine dealing with western astrology obtained an 18-carat blue sapphire that was selected for him by a Vedic astrologer. Within a year he had taken over the magazine as the new owner, and is now distributing his magazine world-wide.

A few months later he started to doubt whether retrograde Mercury had any significance and asked his Vedic astrologer what would be the quickest route to learn Vedic astrology.

Quote

“Everything in life is predictable. Everything can be predicted from one point through Vedic Mathematics, or Jyotish.”

Maharishi Mahesh Yogi, Press Conference, 9th August 2006

Secret 2 Summary

The original Vedic astrology is far more precise for predicting life events and choosing proper gems.

Secret 3

Use Your Individual Birth Chart

No two people are the same. Even twins born only a few seconds or minutes apart will have somewhat different destinies. Their lives, passions, careers and attitudes will differ. You can locate those differences in their individual horoscopes as long as you enter their proper birth time – the exact second of their first breath – accurately to the second. With this first breath an individual starts to interact with the Earth's environment and will continue to do so till the last breath. This is called “Living on Earth”.

From this exact time of birth a Vedic astrologer can calculate the timing of good opportunities for love, success, happiness, money, and career. Once you know the calendar of all those good opportunities ahead of time, you will be able to plan for the changes you wish. With such a unique knowledge you can become the master of your own destiny. Properly chosen gems can help you achieve that. However, a birth stone chosen simply according to your birth month does not have any useful effect. There are only 12 months in a year and 12 zodiac signs, but there are billions of types of people on the planet. So an accurate horoscope has to be more specific; it has to be done individually based on four factors:

- 1) Birth date
- 2) Birth time
- 3) Birth place
- 4) Current place of residence

See Secret 4 to learn more about the influence of your place of residence on your gem selection.

Real life testimonial

19 carat lab-ruby

A beautiful and intelligent 49-year-old German lady was always interested in astrology and gems. She started to collect gems in wonderful boxes at home. When she first showed her collection to her Vedic astrologer, he admired her treasures, but also recommended to start wearing the gems now. Only from wearing gems would the effects start to manifest.

He recommended to her to start with a 24-carat lab-created ruby, which she did. And guess what? Everything turned out nice for her. Her health improved and she got more interesting work tasks which she found very fulfilling.

Quote

“Anyone can be a millionaire, but to become a billionaire, you need an astrologer.”

J. P. Morgan, Famous Banker and Industrialist

Lab-created white sapphire
29 carat

Secret 3 Summary

Every individual is unique. This uniqueness can only be found in an individual horoscope calculated on accurate birth data, including place of residence.

48 carat blue lab-sapphire

Secret 4

Choose Your Destiny with Relocation

When you were born, certain star and planet constellations were visible in the sky. You may have been born at sunrise. This sunrise in the east occurs only at certain places at a given time. All other places had another angle to the Sun. Some had the Sun in the West, some in the zenith straight above, some had the Sun invisible at night.

Dependent on the angle of the Sun, Moon and planets during your birth time, you experience different destinies in different locations on Planet Earth. This actually means moving around on the globe can change your destiny.

We have seen this phenomenon thousands of times; people who have traveled to another place on the globe experience events that could not be read from their original horoscopes based on their place of birth. These new events have occurred simply as a result of the relocation. This becomes very clear once one applies the horoscope based on the new location.

For example, some couples found it difficult having any children in their birthplace, but once they relocated, they had several children. The same applies to career changes, income, wealth, health, happiness – basically all factors of destiny.

Gems allow you to improve your destiny in different places on Earth. They are selected to strengthen positive planetary influences. The angles of Sun, Moon and planets are essential

for choosing the correct gem. These angles vary as you move across the globe. Therefore, at each new location you would need a different gem recommendation.

Unfortunately, 99% of all astrologers today – in 2011 – do not know this secret. Be aware what gems they recommend, and what effect they will have on you! Even better, ask them to review your horoscope, based on your new place of residence, before making a gem recommendation.

Real life testimonial

30 carat Lab-Created Ruby

A 50-year-old, inventive artist had been running his own tattoo studio in California for many years. He found it a little boring, but it earned him a living. A major life change occurred when he got a 29-carat ruby following a Jyotish relocation consultation. It turned out to be very fortunate: his self-confidence increased and he summoned the courage to re-start his life in a new country with several new businesses, new friends, and new life style.

Quote

“But the totality had other plans and one morning I woke up with a realization. And the realization was: ‘I need to move to the west coast of North America.’ Didn’t know why and so I moved. And then later, much later I realized that I needed to be in that energy field for the book and the teaching to come out of me. And then it unfolded there.”

Eckhart Tolle, in an audio entitled, “Touching the Eternal” (Lecture 10, India Trip 2002)

Lab-created emerald 220 carat

Secret 4 Summary

***You have to be in the right place at the right time.
And you have to wear a gem that fits your current
place of residence, not your birthplace.***

Secret 5

Effects of Gems on the Aura

The gem effect is not magic; we would rather call it the latest science. Our lives are governed by quantum energy fields much more than yesterday's science would want us to believe. Knowledge of these fields, their relationship to our bodies, mind and soul, and how they are entangled with the cosmic planetary quantum fields, is the untold secret of selecting the proper gem. It really needs an expert Vedic astrologer, expert with years of training to do it properly.

Traditionally, these quantum fields have been known as *auras*. They are energy fields surrounding the body. Very sensitive persons can see them with their eyes and describe them in various colors. A variety of measuring devices for the aura have also been developed. Some of them can picture the aura in a way very similar to a photograph.

Gems filter the white sunlight and enrich the aura with their specific colors. These colors are connected with the cosmic quantum fields of the Sun, Moon and planets. A gem, when properly selected from one's individual horoscope – including relocation – reconnects one's individual quantum fields to the cosmic quantum fields. This results in a balancing of the quantum fields, thereby warding off negative influences and strengthening the positive.

When the gem is large enough, nearly everybody who wears or holds one can physically feel its vibrational influence. A sort of charging-up effect of the gem occurs over a period of several months. During this time the gem grows more and

more efficient. The overall result then is an improved destiny for the person.

Real life testimonial

The authors of this book regularly test the immediate effects of gems on their clients. The client sits down, relaxed, with his/her hands open on the knees. The gem is then placed in one hand and the client gently grasps the stone with eyes closed. Within 2-3 minutes, nearly everybody has an experience of the gem's vibration emanating up the arms and around the whole body. Some have experiences of vibration in their various chakras, such as the forehead, heart and stomach. Some feel it in their spine. Others get tingles in their feet. Others feel warmth or coldness.

Lab-created white sapphire 29 carat

All these are the immediate effects as the gem re-aligns the individual quantum fields, enlivening the aura and every cell in the body. The intensity of these effects clearly increases with the size of the gem used. We have found from these experiences that the minimum gem size should be 24 carats.

Quote

Sri Yukteswar: *"Mukunda (Yogananda's boyhood name), why don't you get an astrological armlet?"*

Yogananda: *"Should I, Master? I don't believe in astrology."*

Sri Yukteswar: *"It is never a question of belief; the only scientific attitude one can take on any subject is whether it is true. The law of gravitation worked as efficiently before Newton as after him. The cosmos would be fairly chaotic if its laws could not operate without the sanction of human belief."*

From *Autobiography of a Yogi*, Chapter 16. "Outwitting the Stars".

Lab-created ruby 112ct, yellow sapphire 35ct, pearl 18mm

Secret 5 Summary

Gems filter out certain frequencies from white sunlight. When correctly chosen, it improves the individual quantum fields known as aura and creates a better destiny for the individual.

Secret 6

Gems for the Nine Planetary Quantum Fields

The following table connects the solar system dynamics of Sun, Moon, planets and lunar nodes (*Rahu* and *Ketu*, the north and south intersection points of the Moon's orbit with the Ecliptic plane) with their respective jewels and their Sanskrit names:

Weekday	Jewel	Sanskrit	Trans-literated	Heavens	Rainbow
Sunday	Ruby	पद्मराग	padmarāga	Sun	Red
Monday	Pearl	मुक्ता	muktā	Moon	Orange
Tuesday	Red Coral	प्रवाल	pravāla	Mars	Yellow
Wednesday	Emerald	मरकत	marakata	Mercury	Green
Thursday	Yellow Sapphire	पुष्पराग	puṣparāga	Jupiter	Blue
Friday	Diamond	वज्र	vajra	Venus	Indigo
Saturday	Blue Sapphire	महानील	mahānīla	Saturn	Violet
	Hessonite	गोमेदक	gomedaka	Rahu	Ultra-Violet
	Cat's Eye	वैदूर्य	vaidūrya	Ketu	Infra-Red

Correct selection of gems should never be done according to birth month or the Zodiac sign of the Sun. This has no significance for changing the quantum fields.

You must look at your individual birth chart to change your quantum fields and aura and to improve your destiny. See Secret 3. Always use the relocated birth chart.

Real life testimonial

45 carat lab-created emerald

A well-situated 48-year-old English lady tried all sorts of birth stones and never experienced any real effect. She had a Jyotish gem consultation based on her individual birth chart. The recommendation was for an 18-carat emerald which she duly obtained.

Within two weeks she found that her creativity had improved substantially, so much so that she started to design jewelery for the first time. Her designs were totally stunning and beautiful. She

created a new income source for herself and was very happy and fulfilled that she found something very meaningful in her life.

Quote

“There are many types of jewels. Some of the more important ones are vajra (diamond), muktā (pearl), mani (ruby), padmarāga (ruby), marakata (emerald), indranīla (blue sapphire), vaidūrya (cat's eye), puṣparāga (topaz, yellow sapphire), karketana (chrysoberyl), pulaka (garnet), rudhira (carnelian), sphaṭika (quartz crystal) and pravāla (coral).”

Garuḍa Purāṇa as told by Romaharshaṇa, a student of Veda Vyāsa, Chapter on Jewels.

Secret 6 Summary

Get the correct set of gems based on your individual birth chart relocated to your place of residence. The recommendation must be made by a good, experienced Vedic astrologer.

Secret 7

Story of the Creation of Natural Gems

Geologists do not really know how the various naturally-occurring precious gems have been created. They speculate that some types of gems have crystallized out from molten magma under the influence of high pressure and temperature. Yet, they cannot explain why gems occur only in certain deposits rather than being uniformly distributed over the Earth. Moreover, they are aware that these crystallization processes may not have taken millions of years. They may have occurred millions of years ago, but they could have happened fairly quickly – within a few weeks or months.

In lieu of a complete “scientific” explanation it is interesting to note the ancient Vedic tradition on this subject which is found in the *Purāṇas*. It is the best explanation we have found so far, and it is reproduced in its entirety in Appendix 2, below:

An ancient race of very advanced space travelers (called gods) saved Planet Earth from an event that threatened to extinguish all life on the planet. A gigantic asteroid – identified as the demon *Balasura* – was on a path that would have led to a direct impact on the surface of the planet. They attached the asteroid to their space ship in order to alter its course before it moved around the Sun and hit the Earth.

The Earth was saved from the full impact of the asteroid, but the ship was moving too fast and the asteroid came loose, breaking up into several large pieces which did land on the

planet. The result was the creation of deposits of precious stones, of different kinds owing, in each case, to the influence of different natural laws. Such influences, according to the *Purāṇas*, were:

1. One fragment, moving close to the Sun, melted into fluid red magma (appearing like blood). It was then pushed out of orbit and impacted the Earth. Quickly cooling down in the evaporating waters of rivers, these fragments of the asteroid formed the origin of rubies.
2. Other fragments impacted in the oceans forming tiny crystals like molten glass dropped into water. These sharp crystals can be seen in the oceans today and form the seeds for pearls in oysters.
3. Fragments that impacted on ocean shores cooled slowly by the evaporating waters of the nearby ocean, were the origin of blue sapphires.
4. The sound of the impact of other fragments echoing from mountains created such intense pressure that it transformed crystal structures, the origin of cat's eye.

Secret 7 Summary

If you believe in the ancient Vedic Purāṇas then you can read that even the so-called “natural” gems were created a long time ago. They came out of fragments of an asteroid hitting Earth. See Appendix 2.

Secret 8

Out of the Ground or From the Lab?

Gems from the ground are very expensive, due not merely to an intrinsic, material value, but because they are so rare, especially when they are very clean and well colored.

A common myth holds that natural gem stones have been formed during millions of years in the womb of the Earth. But in reality, it takes exactly the same amount of time (3 weeks to 6 months) and temperature (up to 3,500°C) to form a lab created gem as it takes to form a gemstone in the Earth. The same laws of nature apply when crystals are grown in magma or, for example, from the impact of an asteroid. Even crystals within the magma do not take hundreds of years to form, although many stones from the ground may have been formed millions of years ago! It is just really romantic conception of the jewelery industry that helps them sell expensive gems.

Any crystal that has the same geometric structure will resonate the same way. It is simply the atomic lattice that influences and modifies any vibration or electromagnetic fields, including visible light. Based on this knowledge, the major difference between lab-created and natural gems is really the higher purity of the former.

As it is created in a controlled, non-disturbed environment it has less inclusions (foreign crystal material), color zone changes, pressure fractures and other flaws. This really makes the lab-grown crystal more valuable for astrological

purposes. This is due to its perfect symmetrical harmony, supporting coherent quantum fields. Laser light is one example of this. A mined ruby would never create this highly orderly coherent light, and therefore cannot be used to manufacture lasers. Only lab gems support this highly orderly wave function.

Most astrologers know very little about gems because they are not trained gemologists. They have an incorrect viewpoint towards man-made gems, categorizing them all as “imitation” stones, disregarding the wide range of quality found in gems of this sort.

A good lab-grown gem (also called a “created gem”) has exactly the same material, color and chemical composition as the natural gem, without the imperfections found in the “naturally” occurring stones. Our experience clearly shows that such gems have astrological “power”. They change the destiny of the wearers, and do so very quickly in higher carat sizes – 50, 100 or even 200 carats. (See the various testimonials.) On the other hand, many gems of far lower quality are also artificially manufactured; we would call these the true “imitation” stones. While they can appear very similar, often with the same color, for example, these stones are made from different materials with a different crystal lattices, and mostly are of no value for the purposes of *Jyotish*.

Only when carefully selected, therefore, lab-created gems allow individuals to achieve fast improvements in their destiny at an affordable price. One does not have to spend gigantic amounts of money for gems the size of crown jewels. Today, in our technological age, with fast travel by cars and airplanes, natural gems are as useful as donkeys pulling their little cart! Just keep feeding them 1 or 2 carrots.

One further consideration is significant here – the amount of suffering caused by the mining process of natural gems. Hundreds of thousands of poor people and even children have to labor in mines, sometimes under life threatening conditions.

This is well documented in the 2006 movie *Blood Diamond* which is based on real conditions in the natural gem industry. Consider how much negative *karma* you have supported before trying to mitigate your own *karma* with a so-called “natural” gem! This, in itself, is a sufficient reason to prefer a laboratory-grown gem.

Some traditionalists and superstitious in spite of a wealth of real life testimonials still cannot be convinced of the lab-created gems' astrological “power“. The more scientific minded of you please analyze the following comparison chart of emeralds as an example. Measured variations in the chart occur in natural gem deposits the same way they do in the labs.

220 carat laboratory-grown emerald

Natural and Laboratory-Grown Emeralds Compared

Properties	Lab-Created Emeralds	Natural Emeralds
Chemical Composition	$\text{Be}_3\text{Al}_2(\text{SiO}_3)_6$ Beryllium aluminum silicate	$\text{Be}_3\text{Al}_2(\text{SiO}_3)_6$ Beryllium aluminum silicate
Crystallographic Character	Flattened hexagonal prismatic	Hexagonal prismatic habit
Refractive Index	1.570 - 1.576	1.564 - 1.595
Birefringence	0.005 - 0.006	0.005 - 0.007
Optical Character	Uni-axial	Uni-axial
Pleochroism	Green & bluish green	Green & bluish green
Dispersion	0.014	0.014
Hardness Mohs Scale	7.5 – 8.0	7.5 – 8.0
Toughness	Fair to poor, depending on quality	Fair to poor, depending on quality
Cleavage	Imperfect	Imperfect
Specific Gravity	Average 2.76	Average 2.76

Degree of Transparency	Transparent to translucent	Transparent to translucent
Transparency to X-Rays	Opaque	Opaque
X-Ray Fluorescence	None	None
Ultraviolet	Bright Red	Usually none, rarely distinct red
Color Filter Reaction	Bright Red	Bright Red, rarely none
Effect of Heat	Fuses with difficulty to a glass	Fuses with difficulty to a glass
Effect of Acid	Resists all but hydrofluoric	Resists all but hydrofluoric

Real life testimonial

“On 1 December 2000, the United Nations General Assembly adopted, unanimously, a resolution on the role of diamonds in fueling conflict, breaking the link between the illicit transaction of rough diamonds and armed conflict, as a contribution to prevention and settlement of conflicts (A/RES/55/56). In taking up this agenda item, the General Assembly recognized that conflict diamonds are a crucial factor in prolonging brutal wars in parts of Africa, and underscored that legitimate diamonds contribute to prosperity and development elsewhere on the continent.”

“In Angola and Sierra Leone, conflict diamonds continue to fund the rebel groups, the National Union for the Total Independence of Angola (UNITA) and the Revolutionary

United Front (RUF), both of which are acting in contravention of the international community's objectives of restoring peace in the two countries.”

“Rough diamond caches have often been used by rebel forces to finance arms purchases and other illegal activities. Neighboring and other countries can be used as trading and transit grounds for illicit diamonds. Once diamonds are brought to market, their origin is difficult to trace and once polished, they can no longer be identified.”

United Nations, Resolution (A/RES/55/56) adopted by the General Assembly on “The role of diamonds in fueling conflict”, 1st December, 2000.

Quote from the UN Website:

<http://www.un.org/peace/africa/Diamond.html>

Quote

Maharishi Mahesh Yogi throughout his life had taken bold and practical steps to achieve world peace with the creation of “Invincibility for Every Nation” through large meditation groups.

Maharishi accepted the positive effects of lab-created gems as long as they are very close to the original. He inspired scientists to examine them from a scientific viewpoint. Here is a quote from an audio recording on 2nd February, 1969 in Rishikesh, India:

“Question: There are certain stones that men could make in laboratories now, like sapphires and diamonds and emeralds and things like that. Is man helping out somehow in the evolution of rock, the evolution of matter? Do they have a different significance to the ones you find in the rocks, in the caves?”

Maharishi: “Depending on how near the truth is the imitation. (Laughs) How near the truth is the copy. So we can adopt.”

Lab-created yellow sapphire
42 carat

Questioner: "They are completely the same molecules."

Maharishi: "Molecules are the same; electrons may be different. Hmm. Same molecules?"

Questioner: "They can make them identical to the original now."

Maharishi: "Very good. Deeper the knowledge of the basic things, more is the possibilities on these expressed values."

Secret 8 Summary

Gems grown properly in the lab are cheaper, far superior for astrology, available in larger sizes and larger quantities and they do not cause any suffering or hardship for the workers in natural gem mines.

Secret 9

Avoid Treated Natural Gems

Driven by the increasingly lucrative jewel market, the natural gem industry has many dark secrets to hide. Since the beginning of the new millennium, for example, gems are increasingly being treated to make them appear more valuable.

Today 99.9% of rubies in the market are heat-treated. A large proportion of red or pink rubies mined have flaws, purple and black spots and other color variations. Through the process of heating them to nearly melting temperature these flaws disappear. But the result is that the crystal structure of the ruby is destroyed. This effectively converts the ruby crystal into glass at those flawed spots. Heating dissolves the molecular crystal lattice which is so important to create the quantum field effect. So, basically a heat-treated ruby in its qualities is more like red colored glass. It may look pretty but has no astrological effect.

This is the orderly crystal lattice of corundum Al_2O_3 . Aluminum and oxygen atoms form regular patterns. Rubies and sapphires of any color are basically corundum.

Corundum crystal lattice Photo © public domain from Wikipedia

Heat-treated rubies and sapphires on the other hand are similar to glass. It is really cheating to call these items “rubies”. One could save a lot of money by buying red glass instead of heat-treated “rubies”.

The amorphous structure of glass on the right is more like a fluid rather than a regular crystal. Heat-treatment of gems close to their melting temperature usually creates such disorderly structures.

The same story applies to all varieties of colored corundum, like blue and yellow sapphire. Honest gem wholesalers will tell you that today 97% of all blue sapphires are heat-treated to intensify or deepen the color, and to amalgamate any inclusions. Most yellow sapphires on the market are heat-treated as well. But color created by heat-treating often fades within a year or two.

Amorphous structure of glass silica. Photo © public domain from Wikipedia

Green natural emeralds are subject to some of the worst manipulation. Most of them are fracture-filled with plastic resin or green oil with the same refractive index. The fractures are vacuum acid-cleaned and then heat-treated and oiled. The whole process is designed to enhance their appearance and justify their high prices. Actually, it only disguises the heavy flaws of those natural gems and completely disrupts their orderly crystal structure. We would call these processes deceitful.

Also red coral is mostly dyed. The basic material sometimes is white coral or bone or ceramics or glass beads. These dyes actually leach out into clothes and skin. Of course they have no effect on your aura and destiny.

If you want to avoid all those traps, emptying your pockets without delivering any value, why not go for lab-created gems right away? They are designed to have a proper crystal lattice. The best quality of rubies we use, can even support laser light function. This happens only when the crystal lattice is perfect.

Real life testimonial

A 42-year-old English business man spent £6,000 on a 4-carat emerald and felt no effects. He later found out from another jeweler that this gem had been heat-treated and injected with oil. Then he got a second 5-carat natural emerald that cost him £8,000. This still had no effect.

Fed up with all these manipulations, he became our client and purchased a 36-carat lab-created emerald (neither heat-treated, nor oiled). He donated £4,000 towards our research efforts. His business soared like an eagle. He became one of the richest men in his community.

Quote

“A sapphire should never be flung into a fire. The person who does this deed suffers great misfortune.”

Garuḍa Purāṇa as told by Romaharshaṇa, a student of Veda Vyāsa, Chapter on Jewels

Secret 9 Summary

Natural gems are increasingly subject to processing, such as being heat-treated and oiled, and as a result have no astrological benefits. Since 99% of natural gems on the market today have these created faults, it is simpler and cheaper to buy a good lab-created gem with a correct crystal structure.

Secret 10

How to Fulfill Your Desires

There are gems that have a good effect on your destiny and others have a bad effect. Obviously you only want good effects. Most horoscopes suggest the choice of two, three or even four positive gems.

Gems are not just for general well-being but can also be specific to your wishes and desired destiny. By making the right choice you can influence the changes in your destiny. Here free will comes in again. For example, you can choose to have an increase in wealth as a first priority, improved happiness as second priority and improved health as third priority. These priorities should be told to your Vedic astrologer before he chooses the proper gem for you.

In case you cannot afford several gems immediately, we found it to be a very intelligent route to choose increased wealth first. This will put you in a position to acquire more and larger gems to increase your wealth further, and to have all the other positive effects in your life. See Secret 14 for more details.

Even if you call yourself a very spiritual person, be practical and put yourself into a situation where you can afford all those positive effects of many gems. This will include increased spiritual experiences as well.

We want to give you an idea on the pricing of inclusion free, large natural gems. When publishing this book there were two offers for large yellow sapphires in Ebay from Thailand. One

of them was a 101-carat yellow golden natural sapphire offered for sale at \$19 million (£ 12 million). The other one was also a yellow sapphire with 104 carat offered at \$12 million (£7.6 million). Of course both of them are very rare, highest quality gems. They are totally inclusion free.

We are well aware that most of our readers cannot afford such expensive natural gems. Therefore it is interesting to note that we believe, the same astrological effect can be created from lab-created gems with a similar clarity and totally inclusion free. They generally cost less than 0.1% compared to those large natural gems that have been offered on Ebay. With lab-created gems you can afford to get the power of the crown jewels without having to pay a king's ransom.

Real life testimonial

A 47-year-old English mother and property speculator during her brief career had acquired three of her own houses. Before the end of her career she wanted to own five houses altogether. This would give her one house for each of her four children and one of her own.

We analyzed her horoscope for the specific purpose of acquiring more property and recommended a 22-carat lab-created yellow sapphire. She purchased it but did not give us much immediate feedback. On meeting her a year later the first question we asked her: "How many houses do you own now?" To our surprise she answered, "17! Yes, I do own 17 houses now, and now I understand why you had told me a year ago, that I needed to work only for another year. I decided to go into early retirement."

Quote

"A hymn accompanying investiture with an amulet of gold

Gold that was born from Fire, is immortal, has been deposited with mortal creatures. He who knows this, deserves to own this jewel and in extreme old age dies he who wears it.

The men of ancient time with children round them longed for this gold, bright with the Sun's own color, this shall endow thee, as it shines, with splendor, and long shall be the life of him who wears it.

Long life and splendor, let it bring energy and strength to thee. That thou mayst shine among the folk with all the brightness of the gold.”

Atharva Veda 19.26.1 - 3 Translation by Ralph T.H. Griffith, 1895

White lab-sapphire 29 carat

Secret 10 Summary

Be the master of your own destiny. Fulfil all your desires with the proper gems.

Secret 11

Selection Method: Strengthen Positive, Not Negative

Do not fight the darkness – increase the light! Research performed on 5,000 people has shown that it is far better to strengthen positive traits by selecting the right gem for the functionally positive planets. See the Real Life Testimonial below.

81 carat red coral for Mars

A gem always increases the power of the heavenly body with which it is associated. Now, this is not quite true. Actually, the quantum field of the heavenly body isn't changed at all. What is changed by the gem is the way in which the individual's quantum field interacts with the quantum field generated by the heavenly body. That interaction can be positive or negative, and a good Vedic astrologer or *Jyotishi* would see it in an individual horoscope. Only the positive interactions should be strengthened by wearing the correct gems. See the planet and gem table in Secret 6.

The oldest astrology scriptures like the Brihat Pārāshara Horā Shāstra have a clear formula for calculating the power of a heavenly body, like the Sun, Moon, planets or lunar nodes. These are called *graha* in Sanskrit. The power calculation – *bala* in Sanskrit – depends on positions, angles, etc., but one term of the calculation describes the natural power exchange between the heavenly body's quantum field and the quantum field of the individual. This power factor can be increased by wearing a gem.

Arising from the increased power influence of a heavenly body, or *graha*, the whole individual horoscope shifts due to the altered planetary strength. The positive effects from a beneficial *graha* increase when the person wears the correct gem. This will effectively alter his horoscope and consequently his destiny.

Real life testimonial

“CONCLUSION (Harness the pure power of your lucky stars)

My conclusions are based on Vedic scripture, common sense, and a 25 year study of over 5,000 persons using gems for their strong or good planets, as well as others using gems for their bad or weak planets. Gems related to good planets produced good results, while gems for bad planets produced BAD results.”

“I think that some of today's Kali-Yuga (dark age) astrologers are doing a great disservice to the public by prescribing gems for BAD planets, and also telling people that it is OK to use FLAWED gems, in complete contradiction of the Shastras (Vedic scriptures).”

“If it is true that bad planetary gems can harm a person and flawed gems are actually inauspicious, then those who recommend such inferior quality of stones are guilty of inflicting harm on fellow human beings.”

Richard S. Brown, GIA, PG, Founding member of the Planetary Gemmologists Association in his article “Standardization of the Vedic Science of Planetary Gemmology”, 26th April, 1999.

Quote

“The Jyotish gems act SAME as their Grahas (planets) and so the gems should be used for a native's ANUKUL GRAHAS (benefic planets) to harness the benefic influence. The Jyotish gems do not act OPPOSITE of their Grahas and so gems should not be used for a native's PRATIKUL GRAHAS (malefic planets). Thus the malpractice of Pratikul Vad by some confused and irrational astrologers to the detriment even ruination of their misguided clients can be put to an end.”

Pt. Pemmaraju V.R. Rayudu

29 carat white lab-sapphire

Secret 11 Summary

Strengthen positive heavenly influences by wearing the gems for functionally positive planets in your birth chart relocated to your place of residence.

Secret 12

Gem Combinations

Some individual's horoscopes allow only one good gem to be worn, others two, three or even four. If you are able to wear several gems you have a choice as to what you want to achieve with them. A good Vedic astrologer should be able to tell you the specific effects of each gem and its possible side effects, too. By choosing the right gem or gem combinations you can fulfill specific desires that are important to you in your life.

Make sure that you tell those specific wishes to your Vedic astrologer before he chooses the right gem for you. Unfortunately, too many astrologers choose gems from a very superficial perspective, such as, for example the 1-5-9 method. Talk with your Vedic astrologer about the method that he uses and do not accept superficial recommendations. This is an additional rule to the fundamental selection method of Secret 11: *Strengthen Positive, Not Negative*.

If you have moved away from your birth place you also should take care that your astrologer uses only the relocated chart. See Secret 4. If you miss that point you may create a lot of wealth, health and happiness for an imaginary person who doesn't live there any more. You have to create the effect at the place where you are. This means that the gem selection must be based on your relocated chart. Unfortunately, 99% of all Vedic astrologers have neither heard of this nor studied their original literature in Sanskrit. The sage Pārāshara knew this relocation secret, but most of his followers today use wrong translations.

From our clients we have observed that gems work differently when they move around the planet. So now we recommend specific combinations of gems depending on where they are. That means you take off some of your gems when you go on a holiday. All this can be accurately calculated.

Another very important aspect of wearing several gems are possible clashes between the various quantum fields of the gems. These clashes would clearly show up as physical tensions, such as headaches and all sorts of unlucky strokes of destiny.

This too can be calculated in advance, and a good gem recommendation would tell you what gems should not be worn with other gems. It is all based on the *friendship* between the *grahas*, i.e. the Sun, Moon, planets and lunar nodes. This *friendship* depends on relative angles of the *grahas* in your native horoscope. The *graha friendships* stay constant even when moving around the globe. There is a general friendship matrix between each *graha* and each other *graha* and also an individual friendship matrix, specific to the individual's horoscope. Make sure that your astrologer uses this individual friendship matrix only.

Real life testimonial

A US family with South-Asian origins equipped themselves completely with gems including the two parents, who were both medical doctors, and their two children. Each one of them obtained several gems which were chosen specifically, considering their individual horoscopes and their most cherished desires.

They all noticed the immediate effects. The mother received several pay increases, and after about two years was offered one of the highest government jobs in their state. The father was gradually afforded more and more respect by his colleagues, enjoyed great new scientific insights from his research, and became a world renowned authority in his field of medicine

In addition, the children started to do really well in school. The girl got rid of a painful skin disease and consequently developed higher self esteem. After wearing the gems for about four years she managed to skip over one grade in school. The boy, who was not sure about his career before wearing his "lucky gems" as he called them, is now applying for medical school and became famous in his own town. Even the mayor started to talk to this 18-year-old about some of the town's projects. It was all over the newspapers. You can be sure that his parents were extremely proud.

Quote

"That we find a crystal or a poppy beautiful means that we are less alone, that we are more deeply inserted into existence than the course of a single life would lead us to believe."

John Berger, British author

Secret 12 Summary

Use gem combinations to fulfill specific desires. Make sure your astrologer considers all side effects, relocation and planetary friendships, based on your horoscope.

Secret 13

The Square Law: Size Does Matter

Physicists have discovered a square law in many areas involving fields. The achieved power is the square of the amplitude. This applies to all sorts of quantum fields, including light. It also applies to the power of sound developed by a loud speaker.

The experiences of gem wearers show this square law. What does this mean practically?

It means a gem double the size has four times the effect. With triple the size it has nine times the effect. In practical terms, this effect is revealed in the speed with which a gem brings about positive changes in someone's destiny. A 24-carat ruby, for example, is 12 times larger in volume than a 2-carat ruby therefore the effect is $12 \times 12 = 144$ times. That means any positive effect that the 24-carat ruby would bring in 3 days would take more than a year with the 2-carat ruby.

Because of this square law, therefore, we recommend to our clients that they obtain the largest possible gems they can afford. You physically experience the vibration of a large gem when placed in your hand. Larger gems improve your destiny much more quickly.

Many Indian and other Asian astrologers recommend specific gem sizes in terms of *ratti*, which is an old measure of weight. They believe that certain *ratti* sizes bring good luck and other sizes bring bad luck. We believe this is pure superstition. The laws of physics tell us: the larger, the better.

Real life testimonial

A highly spiritual, 60-year-old British man knew from his astrologer that a cat's eye gem would release all previously acquired good karma. He started with a "small" 60-carat lab-created gem which manifested all sorts of business benefits. A year later he got another cat's eye with a 180 carats weight. This did the trick immediately. Within a month he signed the largest contract of his life, increasing his income by a factor of 100, and bringing him a completely new life style.

Quote

*"And, Bold One,
bring in ample
store, rich
jewels to adorn
the ears, for
thou, Good
Lord, art far
renowned."*

Rig Veda 8.78.3
Translation by
Ralph T.H.
Griffith, 1895

220 carat lab-created emerald

Secret 13 Summary

Larger gems do work quicker, sometimes within days rather than years.

Secret 14

Increase the Size Over Time

From our experience with clients we have learned something very simple and practical. You will love this one! As the large lab-created gems create effects very quickly, the simplest way to afford many gems is as follows:

First get a gem which you can afford and which has the specific effect to bring you more money. This “starter gem” will very quickly improve your financial situation, and then you can afford to buy the same gem in larger sizes to create much more wealth. The minimum “starter gem” size should be 24 carats.

Based on your larger wealth, you can now afford all the other gems, those that make you happy, healthy, improve family life, spirituality, etc. We found this to be a very practical and enjoyable sequence. It is far more practical to own ample wealth so that you can buy your most spiritually active gem, rather than long for it for the whole of your life, while you sit and meditate in poverty.

Real life testimonial

A young English entrepreneur of Indian origin found some good ways of earning money on the internet. He got a 36-carat emerald and within days his business really took off. His earnings multiplied many times. Three months later he got another lab-created emerald of 208 carats. According to the

square law this has 33 times the effect of the smaller one.

Lab-created emeralds 220 carat + 45 carat

Now everything in his life is moving forward very quickly. He started to host large international conferences and was invited to the most prestigious events world-wide. A few weeks later, he and his

family moved out from their small two-bedroom suburban house into a stately mansion with three floors, a large park, and two swimming pools located at the best address in his city.

Quote

“Big girls need big diamonds.”

Elizabeth Taylor, English-American actress

29 carat white lab-sapphire

Authors' comment: Diamonds are hard to produce in the labs beyond 5 carat and even those are very expensive. We have found that large lab-created white sapphires have similar destiny improving qualities to diamonds. These can be produced in labs with sizes up to 200 carat at reasonable costs.

Secret 14 Summary

Large gems are very powerful. Therefore it is wise to increase the size gradually to allow the body to get accustomed to it. Don't worry about the costs. The gems will bring the money.

Secret 15

Do Not Have it Too Big

We have found an upper limit for large gems. At around 200 carats the effects of the gems become so intensive that most owners cannot handle them. These over-sized gems can change their owner's destiny in unforeseen ways which are not practical while living on this planet.

In this context, also make sure you do not increase the gem size too quickly. Allow your physiology to adapt to the aura changes gradually. Generally, individuals with a heavier body type can handle larger stones more easily. Slim people should increase their gem sizes in smaller steps.

Real life testimonial

Here is the story of a very embarrassed, rich client from the UK. 600 carats of emerald is definitely tooooooo much! First he purchased a 200-carat gem. Impressed with its brilliance he obtained another 200 carats. Life started to get really amazing. But this man was very greedy; he tested another 200-carat gem.

Here is what happened: He wanted to sign an official document. For that he had to travel 150 miles on the motorway network with his passport and other documents. First he wore the gems around his neck. He then found this was too intense so he put them in the pockets of some trousers at the back of his 7-seater people-carrier.

Now these gems wanted to have fun! The rear door of the vehicle magically opened. A gust of wind took the trousers, the passport, the wallet and 600 carats of precious lab-created emeralds for a flight across the motorway.

When he returned to search for his treasure everything had disappeared completely. After hours of searching he ended up at the local police station reporting the loss of his passport and driving license. He did not dare to mention the gems. Definitely his destiny had changed within minutes. It took another month to get a new passport and driving license. He did bring some good luck to his gem supplier, however; he ordered another emerald, although this one was a mere 200 carats! But he was happy thereafter.

Quote

“May Earth, the Goddess, she who bears her treasure stored up in many a place, gold gems and riches, giver of opulence, grant great possessions to us bestowing them with love and favor.

Earth, bearing folk of many a varied language with diverse rites as suits their dwelling-places pour like a constant cow that never faileth, a thousand streams of treasure to enrich me!”

Atharva Veda 12.1.44 and 45 translation by Ralph T.H. Griffith, 1895

Secret 15 Summary

The upper limit for large gems is 200 carats.

Secret 16

How to Wear Gems

Gems are most effective when worn correctly. The goal is to optimize the interaction between the cosmic and individual quantum fields. For this to occur, the light of the Sun, representing totality, has to shine through the gem onto your skin.

The gem has to be set correctly. The metal setting of the gem should be minimum and the visible area of the gem, both front and back, should be as great as possible. In this way you maximize the Sun light that can shine through the gem and improve your aura, and thus your destiny.

Ask your astrologer what would be the best metal for the gem setting. For some charts this is gold, for others silver or other precious metals.

Also, it is a great advantage to wear clothes that maximize the amount of sunlight penetrating or reflecting from the gem. When you wear dark colors you reduce the sunlight. Wearing light colors, and colors similar to the gem, brings the best benefit.

Red coral and pearl are reflective gems, whereas the rest are sunlight penetrated gems.

The minimum size of a gem we ever recommend to our clients is 24 carats. All of them, without exception, have experienced immediate improvements in their lives. With smaller gems this does not happen so quickly; some improvements could take a

whole life time to occur. Be happy and keep feeding your donkey 1 or 2 carrots for a whole life time!

Flexible pendant setting of large lab-gems

OK, now back to the big boys and girls. You can wear large gems either on a pendant or an arm bangle. It would be impractical to wear them on a finger.

You should never let anyone touch your gemstone as you run the risk of introducing foreign and unwanted frequencies into your gems. This will negatively affect any benefit to you.

Real life testimonial

One of our clients has developed a flexible pendant setting for several gems. Each gem is attached by a single ring or a clasp to the gem

above. This string of gems can actually be extended. One special advantage of this particular setting: the gems don't clash together and do not create scratch marks.

Quote

“As God delights in his own beauty, he must necessarily delight in the creature's holiness which is a conformity to and participation of it, as truly as brightness of a jewel, held in the Sun's beams, is a participation or derivation of the Sun's brightness, though immensely less in degree.”

Jonathan Edwards, theologian, philosopher of British American Puritanism, stimulator of the religious revival "Great Awakening", 1703-1758.

20 mm pearl

Secret 16 Summary

Wear the gem so you maximize the sunlight shining through it. The effect is created from the filtered sunlight touching your skin.

Secret 17

When to Wear Gems

There are astrological phases in your life, called *dasha* in Sanskrit. These phases outline the auspicious and inauspicious periods in your life. Each phase is associated with a *graha* (Sun, Moon, planets, lunar nodes) and brings back that part of your destiny which is connected to the *graha*.

For example, in the Jupiter *dasha* all those elements of your destiny connected to Jupiter are brought to you. When these elements are good and favorable it is advisable to wear the gem yellow sapphire for Jupiter in that life period.

One interesting point about these gems: as they are so large, their power can be focused by holding them in the hand. In this way they have a very special effect on your actions. You are literally holding your destiny in your own hand. Use your power!

Normally, you wear your gems during the light hours of the day. At night you can take them off. Remember, their power unfolds under light.

From time to time it is good to cleanse your gems. You can do that by holding them under running cold water or by placing them in water or milk on the window sill, so that the Sun's and Moon's light waves cleanse the gems.

Real life testimonial

A 24-year-old English lady wanted to get married to her boy friend who she had known for the past five years. He bought her a 150-carat lab-created cat's eye. For some reason, her mother did not reveal the lady's correct birth time at first. Based on that wrong information, her Vedic astrologer prescribed the cat's eye to reduce general fear, etc.

Within four months, her friend, who was a millionaire by then (he also wore large gems) made up his mind and agreed to the marriage. The parents got involved in organizing their wedding at which time the mother found the lady's correct birth time.

Now the astrologer recast the horoscope with the correct birth time and found that it had changed. Now cat's eye was the best gem to attract a good partner. This worked out wonderfully, and three months later they were a happily married couple.

Quote

"These gems have life in them: their colors speak, say what words fail of."

George Eliot, English Novelist

Secret 17 Summary

Wear the gems effectively in sunlight hours, and amplify their power when needed by holding them in your hands.

Secret 18

Relief of Not Wearing the Wrong Gems or Metals

48 carat blue lab-sapphire

Every horoscope has a house of loss. It is the last one of the twelve houses. There are also some other unfortunate houses. The *grahas* (Sun, Moon, planets, lunar nodes) connected to these houses bring about loss and negative experiences. Therefore it is unwise to increase such negative influences.

When someone wears the wrong gems or metals they actually increase bad luck. To get rid of the bad luck, simply remove those gems or metals. This is secret 18.

Real life testimonial

One of our first clients, many years ago was a 55-year-old lady who loved gold jewelery. When we met her she was in an extended period of bad luck. She had a minor car accident with no injuries to anyone, just car damage. Police were called and for some reason (call it destiny) she was very aggressive towards them. She was taken to the police station and locked up for the first time in her life. She was then subsequently

bailed, to appear in court some time later.

After calling us for help we arranged to meet her. She told her whole deplorable story and also told us of some other negative events. For example the day before, she had lost her watch. The morning of the same day her washing machine broke down. Her landlord threatened to cancel her rental agreement. This lady was in a real mess!

We told her not to worry and checked the horoscope. There we found that gold was not good for her. As she was wearing several gold necklaces, rings, broaches and bangles, we suggested that she removed them immediately to escape the bad luck. She did it reluctantly and also ordered a yellow sapphire that would bring her good luck instead.

We met her a second time just before her court case to hand her the 17-carat yellow sapphire. Again she still had some golden jewelery on. We told her that the bad luck would continue with the gold. Now she got the message and removed gold for good. She even refrained from wearing gold-colored shoes.

Lab-created yellow sapphire 36 carat

From that time everything went positively for her. Next day her court case happened and she was completely exonerated. Her lawyer told her she could now sue the police for £15,000 for wrongful arrest. The next day she found the lost watch and had the washing machine repaired. A week later her landlord renewed her rental contract.

The influence of not wearing some metal or gems can also change your destiny very quickly.

Quote

*“My crown is in my heart, not in my head,
Nor decked with diamonds and Indian stones,
Nor to be seen; my crown is called contentment;
A crown it is, that seldom kings enjoy.”*

William Shakespeare from “King Henry the Sixth”, Act 3,
Scene 1

Secret 18 Summary

Do not wear gems or metals that bring you bad luck.

Secret 19

Increase Your Consciousness

It is possible to escape the influence of your horoscope. This is called enlightenment. It is total freedom. Destiny, whether good or bad, does not reach you any more. Sun and Moon and all the planets will be favourable and support whatever you want to achieve in the moment.

To all those who place their attention on enlightenment: Enlightened sages throughout history have declared that *There is no path to enlightenment*. All there is, is a pathless path. That means all you have to achieve, is to realize it for yourself. You cannot learn, how to become enlightened, you can only be it.

Start living in the moment and fulfill your desires rather than anyone else's. Get yourself an astro gem. This will help you change your aspirations and create a sustainable, positive environment around yourself.

To sustain these effects, the only thing left to do is learn to meditate. You can then start to realize and be able to use the amazing powers bestowed upon you, by the increased coherence of your mind and body living in perfect harmony.

The wise of all ages have recommended spiritual practise to achieve enlightenment. Wearing large gems can create a comfortable situation so you may realize enlightenment, but it is not sufficient. You should do some regular practise such as meditation, breathing exercises and yoga, for example.

From our own experience we can confirm to you that enlightenment exists and it can be achieved immediately, in a very easy way. Start living in the moment!

Real life testimonial

There are stages of enlightenment and the highest is called unity consciousness. In this state all the worlds are experienced as oneness and so-called supernatural experiences – in Sanskrit Sidhis – become a natural part of daily living. Such an enlightened one gave this report:

“My Sidhi techniques create the experience whenever I practise them. Each one. Always. Immediately. Even during normal daytime activities Sidhi experiences come about spontaneously. Daily life with Sidhis is absolutely amazing. Be it a bird or a dog whose speech I can spontaneously understand; be it the experience of stars and planets, the sight of past and future, or the vision inside of the body with all its organs; or finding any knowledge through inner light. These experiences have now become a day-to-day reality and I have experienced them in thousands of variations. They have totally changed my life and my vision of what the world is.

The day is full of joy and happiness and my environment notices this. Be it the little doggies who run away from their owners only to walk a bit of the way with me and my friends; be it the small children who feel magically attracted by the happiness that they experience while playing in my vicinity; be it the many people who momentarily lose their memory and simply cannot remember their previous worries. Life is Bliss!”

Another enlightened one gave his report:

“Here are some expressions of living in perfect harmony. Having dreamed about being invisible, I have now been able to fulfill this as I have found a way of deflecting the light from

another's eyes. This is one of the Sidhis of Patañjali. I usually notice this as I walk through the local supermarket. My friends can walk by me without recognizing me.

There are no longer coincidences in my life, just the fulfillment of all my desires. Innocent desires get fulfilled within 24 hours and sometimes immediately. Some of my older desires have now been fulfilled. I am rich beyond my dreams and everyday it increases without work. Daily life is just a playground. I am now getting bliss within bliss. Every day is just one long laugh.

Using Patañjali's Sidhi techniques I am able to visit objects on the microscopic level. I look at atoms everyday, their construction and the electron fog around them. Speaking with physicists I have confirmed my observations far beyond their present day knowledge. They were amazed about the amount of details I could tell them, which no one had researched before.

It is the same story in travelling through the universes using my enlightened mind. It is so much fun. Having the ability to travel from one galaxy to the next I perceive planets, colors, gas clouds and the vast, dark space. I actually pause to watch all these cosmic events happen. At times I perceive my consciousness expanded to the farthest extent of the universe. At the same time I can still focus the attention to any point in the universe and can hear speech and can see peoples living in far distant places and other universes.

These are the domains of an enlightened individual living on Planet Earth today. Why not come and join us with much love.”

Quote

“Do not base your life on the likings and dis-likings or whims of others. What you are in life – whether you enjoy or suffer – it is your own responsibility. Be regular in your meditation and do not postpone for a later date your striving for God consciousness.”

Maharishi Mahesh Yogi

Secret 19 Summary

You have now arrived at Gate 19. This is your portal to Heaven on Earth! Your ticket will be checked shortly.

Appendix 1

Weight Measures

1 carat	= 0.2 gram	
1 ratti	= 0.12125 gram	
1 tola	= 12 masha	= 11.67 gram
1 masha	= 8 ratti	= 0.97 gram

Appendix 2

Cited below, the complete chapter on jewels from the *Garuḍa Purāṇa* as told by Romaharshaṇa, a student of Veda Vyāsa:

Jewels

“A long time back, there used to be a demon named Balāsura. He defeated Indra and the other gods. Balāsura was invincible. Not knowing what to do, the gods arranged a yajna. They then went to Balāsura and asked him for his body so that it might be offered as a sacrifice at the yajna. The demon was generous and he was not going to refuse a request. He gave his body to the gods.

The gods ascended a vimāna (space vehicle) and were traveling through the sky with Balāsura’s body. But the vimāna was moving so fast that Balāsura’s body fell off. It broke into many parts which got scattered throughout the Earth. Wherever a part of the body fell, earth, mountain or garden, that place became a source of jewels and precious stones.

There are many types of jewels. Some of the more important ones are vajra (diamond), muktā (pearl), mani (ruby), padmarāga (ruby), marakata (emerald), indranīla (blue sapphire), vaidūrya (cat’s eye), puṣparāga (topaz, yellow sapphire), karketana (chrysoberyl), pulaka (garnet), rudhira (carnelian), sphaṭika (quartz crystal) and pravāla (coral).

Vajra or hīraka was formed from Balāsura’s bones. Diamonds can be of many colors, coppery, milky-white, blue, golden, yellow and dark. Red and yellow diamonds should be worn only by a king, not by anyone else. A multicolored and round

diamond should not be worn indiscriminately. It can cause great suffering, and due precautions have to be taken before such a diamond is worn as adornment. Even Indra takes care before wearing such a diamond. A hexagonal diamond is extremely rare and brings good fortune. A diamond is valuable because it can cut and mark any other object. But a diamond cannot be cut or marked except by another diamond.

Muktas (pearls) can be obtained from eight different places, from elephants, clouds, boars, conch-shells, fishes, snakes, oysters and bamboos. But oysters are the most common source. Pearls got from bamboos, elephants, fishes, conch-shells and boars are not at all bright. Balāsura's teeth fell into the ocean. There the teeth entered the bodies of oysters and became the seeds for pearls. A pearl which weighs half a tola (weight) is worth 1305 coins. There are several other grades for pearls, the worths being 800, 783, 325, 200, 110, 100, 97, 40, 30, 14, 11 and 9 coins respectively. If you need to polish a pearl, put it inside the stomach of fish. Cover the fish with clay and roast it. The pearl should then be taken out and washed with milk, wine and water. It will become bright and shining. What happens if one suspects that a pearl is not genuine? It should be kept in saline water for a night and then dried. If its color does not fade, it is a genuine pearl.

Balāsura's blood fell into a river. In fact, at first it had not fallen into the river at all, but was retained by the Sun. But Rāvaṇa, king of Lanka, once decided to attack the Sun. And in the process, the Sun dropped Balāsura's blood into a river which came to be known as Rāvaṇagangā. This blood became rubies (padmarāga). Rubies are red. Some of them may be tinged with a little bit of black or blue. A good quality ruby should never be worn with a bad quality ruby. The wearer of a good quality ruby is protected from all misfortunes.

The king of the snakes is Vāsuki. Vāsuki accepted the bile (pitta) that came out of Balāsura's body. The snake was traversing the sky when he was suddenly attacked by Garuḍa. Garuḍa too wanted to possess the bile. While the two were

fighting, the bile fell into the valley of a mountain. This bile gave birth to marakatas (emeralds). Emeralds are generally green in color. The herbs which grow in emerald mines are cures for sorts of poison. A true emerald never fades in color.

Balāsura’s eyes fell on the shores of the ocean. And these eyes became indranīla jewels (sapphires). Sapphires are tinged with blue. A sapphire should never be flung into a fire. The person who does this deed suffers great misfortune. A special sort of sapphire is known as mahānīla. It is dark blue in color and if it is kept immersed in milk, the milk turns blue in color.

Balāsura roared before he died. This roar echoed in a mountain range named Vidura. And from the roar was born a gem known as vaidūrya (cat’s eye), so called because it can be found on the mountain Vidura. Vaidūryas are green or blue in color.

Balāsura’s skin fell on the Himalayas. This skin was the origin of puṣparāga (yellow sapphire). A puṣparāga is light yellow in color. But if a yellow sapphire is also tinged with red, it is known as kuraṇḍaka. And if a yellow sapphire is slightly tinged with blue, it is known as somanaka. A woman who does not have any son will give birth to one if she wears a yellow sapphire.

Another type of jewel is named karketana (hessonite). It originated from Balāsura’s nails. These nails fell into a bed of lotuses and there created this gem. Karketana can be of many colors, red, milky-white, yellow, copper-colored and blue. This jewel becomes brighter if it is wrapped in gold leaf and burnt in a fire. Karketana is a good jewel to wear if one wants to stay healthy or prolong one’s life.”

Appendix 3

Sanskrit Names of Various Gems

Sanskrit	Translit	English	Sanskrit	Translit	English
वज्र	vajra	Diamond	शशिकान्ता	śaśikāntā	Moonstone
इन्द्रनील	indranīla	Sky Sapphire	सौगन्धिक	saugandhika	Lotus-Ruby
मरकत	marakata	Emerald	गोमेदक	gomedaka	Hessonite
कर्केतर	karketana	Chrysoberyl	शङ्ख	śaṅkha	Nacre
पद्मराग	padmarāga	Ruby	महानील	mahānīla	Blue Sapphire
रुधिर	rudhira	Carnelian	पुष्पराग	puṣparāga	Yellow Sapphire
वैदूर्य	vaidūrya	Cat's Eye	ब्रह्ममणि	brahmamaṇi	Topaz
पुलक	pulaka	Garnet	ज्योतीरस	jyotīrasa	Agate
विमलक	vimalaka	Pyrite	सस्यक	sasyaka	Azurite
राजमणि	rājamaṇi	Red Diamond	मुक्ता	muktā	Pearl
स्फटिक	sphaṭika	Rock Crystal	प्रवाल	pravāla	Red Coral
